WHAT WE DO: OUR MISSION

USDA’s Office of the Executive Secretariat (OES) serves the Office of the Secretary of Agriculture by managing the official correspondence of the Immediate Office of the Secretary, maintaining the official records of the Office of the Secretary, and assisting the Office of the Secretary with special projects.

WHO WE ARE: OUR WORKFORCE

All of OES’ 24 employees are based in Washington, DC. OES employs professionals to prepare and store records for the Secretary’s office. Their goals include: effectively & efficiently processing, analyzing, and distributing Secretarial correspondence, providing first class service to all customers & stakeholders, and managing official records of the Secretary.

WHO WE SERVE: OUR CONSTITUENTS

OES’ primary constituents are the Office of the Secretary and Deputy Secretary. In managing the Secretary’s correspondence, OES works with all USDA agencies and other Federal departments as well as stakeholders and the general public.

KEY UPCOMING DECISIONS

In late FY2016, OES initiated a Lean Six Sigma (LSS) assessment of the organization’s processes and procedures in order to streamline and incorporate updated technological solutions. The result of the LSS is designed to assist USDA with the selection of a new correspondence management system in the first quarter of FY2017 to handle the approximately one million pieces of mail received annually. USDA’s mail volume doubled between FY2013-FY2016.

BUDGET HIGHLIGHTS FY 2016

- OES is funded through USDA’s Working Capital Fund (WCF);
- In FY 2016, OES’ budget was nearly $3.3 million to support correspondence management of one million pieces of mail and management the Secretary’s official records
I. Organizational Overview

USDA’s Office of the Executive Secretariat (OES) serves the Office of the Secretary (OSEC) of Agriculture by managing the official correspondence of the Immediate Office of the Secretary, maintaining the official records of the OSEC, and assisting the OSEC with special projects.

Agency’s Mission/Strategic Plan

OES Goals:
- Effectively and efficiently process, analyze, and distribute Secretarial correspondence;
- Provide first class service to all customers and stakeholder;
- Ensure agencies provide timely and high quality correspondence for the Secretary and deputy Secretary;
- Manage the Official Records of the Office of the Secretary in accordance with all legal, statutory, and regulatory requirements

Key mission delivery performance measures

Correspondence management
OES manages the correspondence, documents, and records of the Secretary of Agriculture. OES is a valuable resource not just for the Secretary and immediate staff, but for the whole Department. OES ensures that all USDA officials are included in the process of drafting documents for the Secretary through a managed system of reviews and clearances. This includes reviewing incoming letters, emails, and faxes from the public, members of Congress, Governors, other Federal officials, and everyone else who writes the Secretary. OES then works with other agencies to respond in an appropriate and timely manner.

Additionally, OES ensures that Federal Register notices, memorandums, reports, and all other documents prepared for the Secretary are fully vetted and prepared correctly for the Secretary’s review and signature.

Maintenance of official documents
OES collects and maintains the official records of the Office of the Secretary of Agriculture. These records are a valuable resource and serve as the historical evidence of the Department’s organization, functions, policies, decisions, procedures, and operation.

Assistance with special projects
In response to requests by the Office of the Secretary, OES assists with a number of special projects, including the processing of Presidential proclamation, processing and acknowledgment of gifts received by the Secretary, the drafting of a range of social correspondence for signature by the Secretary, and the provision of writing and editing services for a variety of departmental administrative reports.
Since FY2014, OES’ mail volume has nearly doubled from 525,194 to an estimated 994,000 in FY 2016. Approximately 60 percent of all mail arrives electronically and the remainder in hard copy via the postal service.

Organization’s History

The first Office of the Executive Secretariat at USDA was established in 1971. For the next 20 years, USDA’s correspondence was managed by the Executive Secretariat and an Executive Correspondence and Records unit within the Office of Operations.

In May 1990, Secretary Yeutter chartered the Executive Correspondence Management Task Force to review the entire system and provide recommendations for improvements. The results of the Task Force’s Executive Correspondence Management Study of September 1990. Based on the Study’s recommendations, Secretary Madigan created the present Office of the Executive Secretariat.

There is statutory requirement for all Cabinet departments to maintain an Executive Secretariat. The Federal Records Act require that the records of the Office of the Secretary/Deputy Secretary (OSEC), which are significantly composed of correspondence, be managed appropriately.

According to the Federal Records Act of 1950 (FRA),

The head of each Federal agency shall establish and maintain an active, continuing program for the economical and efficient management of records of the agency. The program, among other things shall provide for: (1) effective controls over the creation and over the maintenance and use
A record has been defined by the FRA as all books, papers, photographs, and other materials made or received by an agency of the United States Government. As of July 11, 2016, the Federal Records Modernization Act of 2016 (also known as H.R. 5709) was introduced to the House by Congressman Mark Meadows. The goal of this act is to update the FRA. Those updates include providing penalties for the destruction of records and to improve record keeping accountability. The Federal Records Modernization Act of 2016 has been sent to the House of Representative’s Committee on Oversight and government reform for review.

Enterprise Workforce Data

![Workforce FY 2009-FY 2016](image)
United States Department of Agriculture
2016 Presidential Transition
Office of the Executive Secretariat (OES)

- OES has 24 FTEs
- Currently, OES has 19 full time employees and is recruiting for two branch chiefs, a correspondence analyst and document control specialist. The staff is composed of writer/editors, program liaisons who work with each agencies, correspondence analysts and document control specialist whose duties include entering incoming correspondence, analyzing and assigning correspondence to subject matter experts and records management professionals.
- Only 2% of the OES workforce is retirement eligible within the next year
- All OES employees are based in Washington, DC.
II. Policies and Regulations

Statutory Authorities

There is statutory requirement for all Cabinet departments to maintain an Executive Secretariat. The Federal Records Act require that the records of the Office of the Secretary/Deputy Secretary (OSEC), which are significantly composed of correspondence, be managed appropriately.

Important Policies and Regulations

N/A

Overview of the policy/regulation review process

OES works directly with the Secretary’s office and with Senior Policy Officials such as Under Secretaries and other Departmental Organizations to review and clear Secretarial document. In addition, OES handles the signature/auto-pen process for Office of the Secretary and provides regular reports on the status of correspondence to Departmental Officials.

GAO and OIG Audits

OES has no OIG or GAO audit findings

III. Congressional Relations and Issues

Overview

The House of Representatives is currently considering 2016 modernizations of the Federal Records Act. Any updates to the Act would affect OES’ process and procedures for both correspondence and records management. It is unclear whether this bill will be enacted prior to January.

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

OES conducts business with other Federal Executive Secretariats through information sharing and the need to coordinate joint signatures between Secretaries.
In managing Secretarial correspondence, OES works with every USDA agency and staff office to create timely responses to inquiries from the White House, Congressional offices, stakeholders and the general public. Agency and staff office subject matter experts prepare the responses to inquiries and OES reviews, clears and prepares materials for the Secretary and Deputy Secretary.

OES is conducting a Lean Six Sigma business improvement process to review and streamline processes and procedures during the first quarter of FY2017. As a part of the process, agencies and staff offices procedures and operations will be included in the review process to inform process review and selection of a new correspondence management system in the second quarter of FY2017.

**Stakeholder group overview**

N/A

**Recent engagement with stakeholder groups**

OES conducts quarterly meetings and training sessions with agency Correspondence Officers, prepares weekly reports on correspondence for agencies, staff offices and the Secretary’s office and daily conversations with agencies on priority correspondence. The next quarterly meeting for Correspondence Officers is set for January 2017.

**V. Top Issues**

**Hot topics**

OES is currently conducting a Lean Six Sigma project to streamline processes and procedures which will be implemented in the first quarter of FY2017. The current correspondence management system has been in use for over a decade. The current configuration does not take advantage of current technological advances that would assist in streamlining OES operations.

**Timeline**

A new correspondence management system for OES. Two possible systems are under consideration. The timeline for choosing the system is within the second quarter of FY2017.

Office of Small and Disadvantaged Business Utilization Fact Sheet

WHAT WE DO: OUR MISSION

The mission of the Office of Small and Disadvantaged Business Utilization (OSDBU) is to provide maximum opportunity for Small, Small Disadvantaged, Small Women-Owned Business, HUBZone, and Service Disabled Veteran Owned Small Business to participate in USDA’s contracting program. The OSDBU serves as USDA’s central point of contact for general inquiries from industry, and the Small Business Administration (SBA).

WHO WE ARE: OUR WORKFORCE

- OSDBU is located in Washington, DC
- OSDBU currently employs eight staff employees, including the Director (political appointee)

WHO WE SERVE: OUR CONSTITUENTS

KEY UPCOMING DECISIONS

- Rural Small Business Connections Events: This is Secretary Vilsack’s vision regarding Maintaining & Creating Wealth in Rural America. OSDBU will host at least 2 events a year. Location to be determined. The target audience will consist of small farmers, small rural businesses to provide information and technical assistance of doing business with the government.
- Memorandum of Understandings to Chambers of Commerce (U.S. Hispanic Chamber of Commerce, US Black Chamber of Commerce, US Women Chamber of Commerce, etc): Objectives are designed to stimulate interest doing business with USDA. Est. time –December, 2016
- Partnership Agreements with USDA Buying Agencies: Re-establish partnerships between agencies & OSDBU. (Participate in OSDBU’s Vendor Outreach Sessions, small business events, etc.) Est. time – December 2016.

BUDGET HIGHLIGHTS FY 2016

- Personnel Comp $946,425
- Personnel Benefit $281,927
- Other Services $104,000

FY 2016 Budget Authority

- Personnel Comp: 21%
- Personnel Benefit: 8%
- Other: 71%
I. Organizational Overview

Agency’s Mission/Strategic Plan

The mission of the Office of Small and Disadvantaged Business Utilization (OSDBU) is to provide maximum opportunity for Small, Small Disadvantaged, Small Women-Owned Business, HUBZone, and Service Disabled Veteran Owned Small Business to participate in USDA’s contracting program. The OSDBU serves as USDA’s central point of contact for general inquiries from industry, and the Small Business Administration (SBA).

OSDBU works to ensure that USDA contracting staffs and program offices are aware of small business goal responsibilities and agencies small business utilization rates and status. OSDBU will provide ongoing reports to agencies regarding their small business utilization.

The Director of OSDBU and OSDBU staff will actively intervene with USDA agencies program policy, and contracting offices to ensure opportunities for small and underutilized businesses in requirements for goods and services. OSDBU advocates on behalf of the small businesses on program issues.

Key mission delivery performance measures

OSDBU is responsible for reporting the Department’s small business achievements. Every year, SBA sets small business goals for federal government agencies. The Small Business Act establishes a government-wide goal in which each federal agency must adhere to. The government-wide goals are as follows: small business (SB)-23%; small disadvantaged businesses (SDB)-5%; women-owned small businesses (WOSB)-5%; service-disabled veteran-owned small businesses (SDVOSB)-3%, and HUBZone small businesses-3%. USDA has received an “A” rating for the past three years.

The Director of OSDBU regularly provides small business goal achievement information to USDA’s Subcabinet, Agency Heads, Deputy Administrators for Management, and Heads of Contracting Activities. The Director will provide one-on-one goal accomplishment status meetings with USDA Agency Heads twice per year to assess all business accomplishments and plans for increased small business participation. OSDBU staff will monitor agencies small business performance closely and provide alerts on an ongoing basis to agency contracting staffs.

Data Quality of Small Business Contracting: The Federal Procurement Data System-Next Generation (FPDS-NG) is used for a variety of purposes supporting the mission of OSDBU. Downloads from FPDS permit OSDBU staff to compare and analyze current trends and to make comparisons of current year information with prior year data. This provides the staff with opportunities to highlight negative trends or to isolate problem areas for appropriate corrective action.

The sample chart below represents the eleven buying agencies within USDA and both dollar amount obligated as well as percentages of each socio-economic goal.
Organization’s History

OSDBU was established at USDA on June 26, 1979, 7 C.F.R. § 2.37. OSDBU provides leadership to the Department to attain its federally mandated small business goals for USDA’s contracting portfolio.

USDA in consultation with the Small Business Committee of the House of Representatives and the General Accountability Office strengthened the reporting of the OSDBU Director to the Secretary to ensure compliance with Section 15(k) of the Small Business Act.

Biographies of career staff in key leadership positions

Michelle Warren
Deputy Director, Office of Small and Disadvantaged Business Utilization
202-720-7835, Michelle.Warren@dm.usda.gov

In October 2010, Michelle Warren was assigned Program Manager in the Office of Small and Disadvantaged Business Utilization (OSDBU) within U.S. Department of Agriculture (USDA). In December 2015, Ms. Warren was appointed Deputy Director in OSDBU and still holds that position. It is her responsibility to provide maximum opportunities for small businesses to participate in USDA contracting activities. Michelle coordinates and participates in events all over the country with high level USDA officials and others to promote federal contracting opportunities for small businesses.

She began her Federal career with USDA, in 1988, as a Federal Market News Reporter within the Agriculture Marketing Service (AMS).

In 1992, Ms. Warren served as the Contracting Officer for AMS’s Commodity Procurement Branch, responsible for the supervision of purchasing teams handling programs which relates to the purchasing and administration of contracts for fresh and processed fruits and vegetables.

specialty crops, and other assigned commodities for distribution to the National School Lunch Program and other Food Assistance Programs.

Mrs. Warren is a graduate of Virginia State University located in Petersburg, VA with a Bachelor of Science degree in Agricultural Business and Economics.

Biographies of political staff in key leadership positions

Henry Bennett  
Director, Office of Small and Disadvantaged Business Utilization  
202-720-7117, Henry.Bennett@dm.usda.gov

Hank Bennett was appointed as the U.S. Department of the Agriculture's Director of the Office of Small and Disadvantaged Business Utilization (OSDBU) in May of 2016.

During President Obama's Administration, from 2009-2015, more than 53% of USDA's total procurement dollars (more than $39 billion) were spent on products and services from Small and Disadvantaged Businesses (more than $20 billion). As Director of OSDBU, Mr. Bennett is responsible for ensuring that the Department’s purchasing agencies continue to engage small businesses - the "engines that drive the Nation’s economy" - so that USDA continues to be a leader, and one of the Federal government’s top performing departments in utilizing small and disadvantaged businesses.

Mr. Bennett has extensive experience working with a diverse range of small businesses. For over a decade, he has assisted hundreds of businesses with their financial goals, helped them develop and implement strategic plans, and walked with them through continued growth. These small and disadvantaged businesses now employ thousands throughout the country. Further, he has widespread experience in researching, analyzing, and preparing findings and recommendations on ways to act on organizational policy, regulations and management structure that impact the small business community.

Prior to joining the USDA, Mr. Bennett was part of a team that started a community bank in Tulsa, OK. Among other roles, he served as the bank's Board Secretary, Community Reinvestment Act Officer and a Senior Lender. He developed and managed a large loan portfolio, of which more than half of the loans were to women, minority and veteran owned small businesses, non-profit organizations and churches.

Mr. Bennett has also served at the Democratic National Committee, worked in several roles for Mayor Alvin Brown of Jacksonville, FL, and served for several other Democratic legislators and organizations.

Office of Small and Disadvantaged Business Utilization (OSDBU)

- OSDBU employs a workforce of 8 employees of which the following are full-time and part-time
  - Full-time: 8 employees
  - Part-time: 0
- The office consists of a Director, Deputy Director, Office Manager and 5 Program Analysts
- OSDBU on occasion will hire an intern during the summer.
- Of our total workforce, 2 are eligible to retire within the next year
- Our headquarters is located in Washington, D.C

II. Policies and Regulations

Statutory Authorities

The Office of Small and Disadvantaged Business Utilization (OSDBU) was created as part of amendments to the Small Business Act, 15 U.S.C. § 644(k).

OSDBU was established at USDA on June 26, 1979, 7 C.F.R. § 2.37. OSDBU provides leadership to the Department to attain its federally mandated small business goals for USDA’s contracting portfolio.

Important Policies and Regulations

USDA provides several Departmental Regulations (DR) in accordance to OSDBU which include:

DR 5090-001, USDA Small Business Programs – Full Small Business Participation and Clearance Process for Contracts Not Set-aside or Reserved for Small Business Participation
DR 5090-002, Annual Program Goals
DR 5090-003, Annual Procurement Forecast Requirements
DR 5090-005, Contracting with Service Disabled Veteran-Owned Small Businesses
DR 5080-001, USDA and the AbilityOne Program: Increasing Achievements and Setting Department Goals

Overview of the policy/regulation review process

The OSDBU Director provides guidance and notifications to USDA agency heads for small business program requirements such as goal development, forecast updates, regulatory changes. OSDBU staff meets with Agency Deputy Administrators for Management, Heads of Contracting Activity, Agency CIO’s and Agency Small Business Specialists/Coordinators to brief them on small business goal achievement and the requirements of various small business socio-economic programs. They are advised of their roles and responsibilities for implementing these requirements as outlined in laws and regulations.
Although SBA sets federal mandated goals, they also give goals to individual federal government agencies. USDA is one of the top three federal agencies that achieve the mandated small business goals. Due to methodology used to establish the individual goals, the OSDBU Director and Senior Leadership from the Assistant Secretary for Administration’s office will have top-level meetings with SBA’s Goaling Team to negotiate the Department’s goals for the next fiscal year.

**GAO and OIG Audits**

In late May of 2016 GAO began an audit of USDA’s OSDBU at the request of the Chair of the House Committee on Small Business. Almost all other federal departments’ and agencies’ OSDBUs are undergoing the same audit. While this audit is not a regular, recurring occurrence, it is certainly not unusual or unexpected. Similar audits were conducted by GAO in 1995, 2003 and 2011, all at the request of the Chair of the House Committee on Small Business, and all focusing on very similar issues and objectives. The objectives of the current audit are:

- Assess whether the OSDBU director reports to the head or deputy of the head of the agency as defined in the National Defense Authorization Act revisions; and
- Determine the functions conducted by the OSDBUs at selected federal agencies.

OSDBU Director Henry Bennett, Deputy Director Michelle Warren, and Program Specialist Roxanne Lane participated in the entrance conference with Deputy ASA Malcom Shorter and the GAO audit team on June 15th, 2016. Based on previous audits, GAO anticipates concluding the audit and returning the report sometime during the second or third quarter of calendar year 2017. In the interim, GAO communicates with USDA’s OSDBU office for any questions, requests for additional information, and any other item or action it needs to develop their report.

In previous audits the GAO found that USDA was not in compliance with the section of the Small Business Act that requires the OSDBU Director to report directly to the Secretary of the Deputy Secretary. Instead, USDA had previously designated the ASA as the OSDBU Director, who then delegated nearly all authority to the lower-ranking Director in the OSDBU office. That lower-ranking official would report to the ASA, who would in turn report to the Deputy Secretary.

At the entrance conference for the current audit USDA clarified that it has altered the reporting structure and responsibilities to comply with the requirements of the law. The OSDBU Director now has the full authority, as described in the law, and reports directly to the Deputy Secretary. USDA also discussed the various roles and responsibilities of the OSDBU office, and how they implement the various laws, statutes, and regulations related to OSDBU.

SBA will sporadically audit buying offices within federal agencies. OSDBU is physically not involved in these audits, but it typically receives notification prior to the audits and once the audit has concluded.
III. Congressional Relations and Issues

Overview

N/A

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

OSDBU works closely with the Small Business Administration (SBA) to cooperatively determine the Department’s small and disadvantaged business goals and initiatives.

OSDBU regularly attends SBA Procurement Advisory Council (PAC) and Subcommittees meetings addressing the formulation of small business procurement policy initiatives.

OSDBU actively participates in the Federal OSDBU Directors’ Council to address proposed small business policy issues and initiatives from Federal-wide and Agency perspectives and provides input to the Council and the SBA.

OSDBU recently signed an MOU with the National Gay and Lesbian Chamber of Commerce (NLGCC), August 2016 and will actively participate in various future functions.

OSDBU or agency representatives along with other federal agencies participates and support Business-to-Business Matchmaking Events scheduled throughout the year across the country.

Stakeholder group overview

OSDBU regularly meets with SBA’s Procurement Center Representative (PCR) to discuss the clearance process for contracts over $150,000 that are not planned to be set-aside for small businesses.

OSDBU regularly meets in person or via telephone or email to small businesses to discuss their capability statements and directing them to the appropriate contracting office.

OSDBU staff meets with Agency Deputy Administrators for Management, Heads of Contracting Activity, Agency CIO’s and Agency Small Business Specialists/Coordinators to brief them on small business goal achievement and the requirements of various small business socio-economic programs. They are advised of their roles and responsibilities for implementing these requirements.
OSDBU holds quarterly meetings with headquarter Agency Small Business Specialists and expand the time and scope of each session to concentrate on enhanced small business participation. These meetings are used to update the Specialists on the latest regulations, policies and directives that impact the small business communities.

OSDBU regularly attends SBA Procurement Advisory Council (PAC) and Subcommittees meetings addressing the formulation of small business procurement policy initiatives.

OSDBU actively participates in the Federal OSDBU Directors’ Council to address proposed small business policy issues and initiatives from Federal-wide and Agency perspectives and provides input to the Council and the SBA.

OSDBU participates in the AbilityOne Subcommittee meetings with USDA’s Ability One Chairperson, Lisa Willusz.

**Recent engagements with stakeholder group**

During the year, individual USDA agencies as well as OSDBU will host small business events throughout the country. These events will be based on a national, regional, and localized needs.

OSDBU hosted Rural Small Business Events located in Billings, MT. Tallahassee, FL, Pittsburgh, PA and Kansas City, MO during fiscal year 2016. The purpose of these events is to broaden small business access to contract opportunities, stimulate small business ownership and economic growth, to create jobs and results in improving the quality of life across America. Stakeholders include: USDA agency representatives, SBA, Chambers of Commerce, and PCR’s.

**V. Top Issues**

**Hot Topics**

Each year the Director of OSDBU and leadership from the Assistant Secretary for Administration’s office actively convene with SBA’s high level representatives to discuss targeted federal goals for USDA. The Department continues to be a Federal leader when it comes to procurement from small and disadvantaged vendors and has traditionally exceeded 50 percent in terms of procurement dollars going to those vendors. Negotiations with SBA are taking place now to establish goals for the next year.

Re-Establish MOU’s with various Chambers of Commerce, including: the US Hispanic, US Black, and Pan Asian Chambers of Commerce. The purpose of this agreement is designed to stimulate interest in doing business with USDA. It also involves improving communications and outreach activities between the Chambers and OSDBU.
MOU with the National Gay and Lesbian Chamber of Commerce

The National Gay and Lesbian Chamber of Commerce (NGLCC) is the business advocate and direct link between LGBT-owned businesses, corporations and government. The NGLCC is the only national not-for-profit advocacy organization specifically dedicated to expanding the economic opportunities and advancements of the LGBT business community. With more than 29,000 members, 140 corporate partners, and 62 local, state, and international affiliate chambers, NGLCC is the largest business development and economic advocacy organization in the world.

In July 2016, USDA executed an MOU with the NGLCC to encourage increased interaction with the LGBT business community, particularly as it relates to government contracting. With the signing of this MOU USDA became the largest government department to partner with the NGLCC. It puts USDA on the cutting edge of government agencies formally developing relationships with the LGBT business community. The MOU is non-binding and requires no funding from either party. It effectively serves the purpose of beginning a more formal relationship between USDA’s contracting authorities and the NGLCC leadership.

Timeline-2017

January – Determine date of Small Business Awards Program in June: OSDBU will need a location, participants, and plaques associated with the winners.
Begin planning Rural Small Business Events-locations and dates: OSDBU will seek locations within Strike Force states around the country.
February – Vendor Outreach Session (Rear of cafeteria): Make sure representatives from USDA’s procuring activities will participate.
April – SDVOSB Program: OSDBU will need a location and participants.
May – Small Business Coordinator Meeting: OSDBU will need a date an agenda.
June – Small Business Awards Program: OSDBU needs to make sure the program runs smoothly and all that is involved, for example: security, speakers, plaques, etc.

**Appendix B: State Fact Sheets (FSA Only)**
WHO WE ARE: OUR MISSION AREA

FFAS is comprised of the Farm Service Agency (FSA), the Foreign Agricultural Service (FAS) and the Risk Management Agency (RMA). FFAS provides a safety net for farmers and ranchers by providing commodity payments, farm loans, disaster assistance, and crop insurance. Facilitating foreign trade, capacity building and developing new markets bolsters American farm incomes and connects American agriculture to the rest of the world. FFAS also contributes to global food security, conservation and stability into the marketplace. FFAS’s unique footprint includes more than 2,100 state and county offices in the U.S. and over 90 overseas offices.

WHO WE ARE: OUR WORKFORCE

- FAS – 1,257 employees
- FSA – 12,266 employees, including 399 temporary and 555 intermittent employees
- RMA – 475 full time employees

WHO WE SERVE: OUR CONSTITUENTS

FFAS serves U.S. farmers, ranchers and rural communities directly, as well as beneficiaries in emerging global markets such as schoolchildren, farmers and agribusinesses. We partner with NGOs, the private sector, insurance providers and others to further our impact.

KEY UPCOMING DECISIONS

- Implement a FSA IT strategy that reflects the results of a third-party assessment (MITRE Report) and analysis of alternative recommendations.
- Develop agricultural trade policy agenda, assessing status of TPP, TTIP, trade enforcement and relationship with China.
- Determine whether administrative changes will be made to ARC-County yield calculations or data sets used. This will likely be an early issue raised by stakeholders.

BUDGET HIGHLIGHTS FY 2016

FFAS’ total budget authority is approximately $15,923 billion.

- FAS - 79% is mandatory spending for P.L. 480 and CCC-funded programs
- FSA - 86% is mandatory spending
- RMA - 99.4% is mandatory spending for the costs of the FCIC
I. **Organizational Overview**

Organizational Chart

The Farm and Foreign Agriculture Agency (FFAS) oversees three agencies; Foreign Agriculture Service (FAS), Farm Service Agency (FSA) and Risk Management Agency (RMA). Deputy Under Secretary Alexis Taylor (political) is delegated the duties of Under Secretary and leads the mission area. Chief of Staff to the mission area is Lesly Weber McNitt (Political) and Deputy Chief of Staff is Jane Beard Kadish (political) and both report directly to Deputy Under Secretary Taylor. Deputy Under Secretary Lanon Baccam (political) oversees the two domestic FFAS agencies, FSA and RMA, while Deputy Under Secretary Jonathan Cordone (political) oversees FAS.
Biographies for career and political staff in key leadership positions

Alexis Taylor
Deputy Under Secretary, Farm and Foreign Agriculture Service (Political)
202-720-3111, alexis.taylor@osec.usda.gov

Alexis Taylor was delegated the duties of the Under Secretary for the FFAS mission area by Agriculture Secretary Tom Vilsack in March 2016.

In her previous role as Deputy Under Secretary, Alexis oversaw the department's international activities. She had key responsibilities in international trade policy and export assistance programs, and coordinated USDA's role in international food assistance.

Alexis Taylor was formerly the Chief of Staff for FFAS where she worked to implement provisions of the 2014 Farm Bill.

Before joining USDA, she served as the legislative advisor to Congressman Leonard Boswell of Iowa, a member of the House Agriculture Committee, and later to Senator Max Baucus of Montana, a senior member of the Agriculture Committee and Chairman of the Finance Committee. During her time in Congress, Alexis negotiated key provisions of the 2008 Farm Bill, as well as the Senate version of the 2012 Farm Bill which was ultimately enacted into law as the 2014 Farm Bill.

Alexis served in the United States Army Reserves from 1998 to 2006. During her time in the Reserves she did one tour in Iraq with the 389th Combat Engineer Battalion.

Alexis is a graduate of Iowa State University and grew up on her family farm in Iowa which has been in her family for over 150 years.

Lanon Baccam
Deputy Under Secretary, Farm and Foreign Agriculture Service (Political)
202-720-3111, lanon.baccam@osec.usda.gov

Lanon Baccam is Deputy Under Secretary for Farm and Foreign Agricultural Services (FFAS) and oversees the domestic programs within the FFAS mission area (Farm Service Agency and Risk Management Agency). He also serves as the USDA Military Veterans Agricultural Liaison. This position, created by the 2014 Farm Bill, is responsible for connecting veterans with opportunities in the field of agriculture, providing information to returning veterans about programs and services available to them through USDA, and advocating for veterans’ interests within the Department.

Baccam previously served as the Director of Scheduling and Advance in the Office of the Secretary at the USDA. Baccam planned, prepared, and implemented Secretary Vilsack’s vision at USDA.

Prior to his role as Director, Baccam served in several other capacities at USDA, including as special assistant in the Foreign Agricultural Service, executive assistant to the Secretary, and
United States Department of Agriculture
2016 Presidential Transition
Farm and Foreign Agricultural Services Mission Area (FFAS)

dehy director of scheduling. Before joining the Administration in 2011, Baccam worked in
Iowa state government and on several statewide and national political campaigns.

Baccam is a military veteran and spent eight years in the U.S. Army and Iowa National Guard
and was deployed to Afghanistan in 2004-2005. During his time in the Army, Baccam held
leadership roles as a unit movement officer and served as a Combat Engineer in charge of
explosive demolitions at a Provincial Reconstruction Team base in Kandahar, Afghanistan.

Baccam is a graduate of Drake University in Des Moines, Iowa and a native of Mt. Pleasant,
Iowa. Baccam currently lives in Washington, DC with his wife, Alissa Brammer, and their new
daughter, Freya.

Jonathan Cordone
Deputy Under Secretary, Farm and Foreign Agriculture Service (Political)
202-720-3111, jonathan.cordone@osec.usda.gov

Jonathan Cordone is the Deputy Under Secretary for Farm and Foreign Agricultural Services
(FFAS), overseeing the Foreign Agriculture Service (FAS). In this role, Cordone leads the
Department's international activities, including key responsibilities for trade policy and export
assistance, as well as food aid, international economic development, and trade capacity building.

Previously, Cordone served as USDA's Principal Deputy General Counsel, the Department's
second highest ranking attorney. He came to USDA from the U.S. Senate Committee on
Agriculture, Nutrition, and Forestry where he was the Deputy Staff Director and Chief Counsel
under the leadership of Sen. Debbie Stabenow (D, MI).

During his time on the Committee, Cordone played a key role in the enactment of the
Agriculture Act of 2014, often referred to as the Farm Bill. He also helped lead inquiries into the
collapse of the futures firms, MF Global and Peregrine Financial, as well as the purchase of
Smithfield Foods by China's Shuanghui Group. Throughout his time on the Committee, he
worked closely with the U.S. Trade Representative on disputes and pending multilateral
negotiations in Europe, the Pacific Region, and the World Trade Organization.

During his more than 15 years in public service, Mr. Cordone also served in the Obama
Administration as the Senior Vice President and General Counsel of the Export-Import Bank of
the United States and as the General Counsel of the U.S. House of Representatives Committee
on Energy and Commerce under then-Chairman Rep. John Dingell (D, MI), where he
coordinated all legislative matters under the Committee's broad jurisdiction.

Jonathan began his career practicing law in New York and Connecticut, working on complex
transactions involving project finance, leveraged leasing and lending, and earned his B.A. from
Mary Washington College in Virginia and his J.D. from the University of Connecticut School of
Law. He is a native of Trumbull, Connecticut and currently resides in the District of Columbia.
Lesly Weber McNitt
Chief of Staff, Farm and Foreign Agriculture Service (Political)
202-720-6214, lesly.mcnitt@osec.usda.gov

Lesly Weber McNitt is Chief of Staff of Farm and Foreign Agricultural Services at USDA, the mission area comprised of Risk Management Agency, Farm Service Agency and Foreign Agricultural Service. She previously served as Chief of Staff of the Farm Service Agency (FSA). She joined FSA from Farm Journal Foundation, where she was Director of Government Relations and Program Development. In that role she was responsible for advancing the Foundation’s advocacy initiatives, developing new programs, and building strategic partnerships. Lesly also oversaw the Foundation’s Farm Team program and managed the Farm Journal Forum, the Foundation’s annual policy conference. Prior to joining Farm Journal Foundation, Lesly was a legislative associate with Oldaker Belair & Wittie, LLP, where she managed a diverse portfolio of issues including financial services, federal appropriations, Native American Indian affairs, and education.

Lesly graduated cum laude from The George Washington University’s Elliott School of International Affairs with a B.A. in International Affairs and a concentration in International Politics. She also earned her Master of Professional Studies in Legislative Affairs at The George Washington University’s Graduate School of Political Management, graduating summa cum laude. She lives in Washington, D.C. where she is active in her local community.

Jane Beard Kadish
Deputy Chief of Staff, Farm and Foreign Agriculture Service (Political)
202-720-2797, jane.kadish@osec.usda.gov

Jane Beard Kadish is Deputy Chief of Staff of Farm and Foreign Agricultural Services at USDA, the mission area comprised of Risk Management Agency, Farm Service Agency and Foreign Agricultural Service. Kadish joined USDA after serving a year as Chief of Staff at start-up media company Fusion, where in this role she built operations for the company. Kadish previously worked the 2014 Election Cycle for EMILY’s List, managing the executive office to achieve fundraising objectives. Kadish worked on trade policy for the Senate Finance Committee under the Chairmanship of Senator Max Baucus. During her time on the Senate Finance Committee she contributed in a key role to Committee mark up and bill passage of the 2011 Free Trade Agreements with Colombia, Panama and South Korea. Following this, she worked in former Senator Max Baucus’ personal office and worked on key trade, healthcare and tax reform legislative efforts.

A native of Montana, Kadish graduated from the University of Montana studying International Business.
United States Department of Agriculture
2016 Presidential Transition
Farm and Foreign Agricultural Services Mission Area (FFAS)

Phil Karsting
Administrator, Foreign Agriculture Service (Political)
202-720-3935, Phil.karsting@fas.usda.gov

Phil Karsting was appointed administrator of the Foreign Agricultural Service in May 2013. He previously served more than 22 years on Capitol Hill, most recently as chief of staff to Senator Herb Kohl (D-Wis.), then-chairman of the Senate Appropriations Subcommittee on Agriculture, Rural Development and Related Agencies. Phil's prior Capitol Hill assignments included serving as senior analyst on the Democratic staff of the Senate Budget Committee where he handled issues relating to agriculture, rural development, housing, telecommunications, energy and the environment. He also served as legislative assistant to the late Senator Jim Exon (D-Neb.). He served on the Senate Bi-partisan Chiefs of Staff steering committee and in 2013 he led training seminars in Liberia for Liberian congressional staff on behalf of the National Democratic Institute.

Phil began his association with American agriculture working in his family's farm supply business in rural Nebraska. He received a bachelor's degree in Agricultural Economics from the University of Nebraska-Lincoln. He is also a graduate of the French Culinary Institute in New York City.

Val Dolcini
Administrator, Farm Service Agency (Political)
202-720-6215, val.dolcini@wdc.usda.gov

Val Dolcini was selected to serve as the Administrator for the Farm Service Agency in September 2014. He previously served as State Executive Director of the California Farm Service Agency, a position he was appointed to in 1999 by President Bill Clinton and again in 2009 by President Obama. Dolcini also served as the acting Farm Service Agency Administrator in 2011.

As Administrator, Dolcini is responsible for overseeing the administration of farm commodity and conservation programs, farm loan programs, and certain disaster programs. Dolcini also serves as the executive vice president of the Commodity Credit Corporation.

Dolcini has many years of public and private leadership experience. Prior to joining the Obama Administration, he managed public outreach activities for Accenture LLC, a global consulting firm. In that position, he strategized with business teams about relationship development and consulted on a wide range of political matters.

He previously served in a senior staff position for the Governor and Lieutenant Governor of California, as well as members of the U.S. House of Representatives.

A fifth-generation Californian and a native of Davis, Calif., Dolcini has served on numerous non-profit boards and commissions in his community. He received his bachelor’s degree in
history from San Francisco State University and a juris doctorate from Golden Gate University School of Law.

Brandon Willis
Administrator, Risk Management Agency (Political)
202-690-2803, Brandon.willis@rma.usda.gov

Prior to Willis’ appointment as Administrator, RMA in 2013, Willis served as Senior Advisor to Agriculture Secretary Tom Vilsack on Title I Commodity programs, farm legislation matters and disaster assistance. In August 2009 he was appointed as Deputy Administrator of Farm Programs for USDA’s Farm Service Agency (FSA).

Prior to his appointment as Deputy Administrator, he was a confidential assistant in USDA’s Office of the Undersecretary for Farm and Foreign Agricultural Services.

Before joining USDA Willis served as the Agriculture Legislative Assistant for U.S. Senator Max Baucus (2006-2009). During this time, he worked on the Food, Conservation, and Energy Act of 2008. In 2005, he worked as a graduate assistant at the National Agricultural Law Center. Willis earned his bachelor's degree in crop and soil science from Utah State University in Logan, Utah, and his law degree from the University of Wyoming in Laramie, Wyo. In 2009, he completed his master's degree in agricultural law from the University of Arkansas. He grew up on a third generation sheep ranch in northern Utah and managed his family's raspberry farm, Bursting Berries.

Overview of Agency Programs and Operations

Farm and Foreign Agricultural Services Overview - The Farm and Foreign Agricultural Services (FFAS) is one of 7 mission areas within the Department of Agriculture. Its major operational responsibilities include administering and providing oversight responsibilities for the development and implementation of critical USDA farm safety-net and farm credit programs. These programs assist America’s farmers and ensure that agriculture continues to provide the foundation for prosperity in rural areas as well as being a critical element of the Nation’s economy. Sixteen million Americans are employed directly in agriculture, or in agriculture related industries. Fourteen percent of all manufacturing jobs are related to food processing and food manufacturing. FFAS also oversees and facilitates international market access and opportunities for U.S. agriculture through various trade programs and high-level government negotiations. In addition, FFAS promotes and provides development assistance in developing countries to support trade and enhanced global food security.

FFAS Mission Statement – FFAS is comprised of the Farm Service Agency (FSA), the Foreign Agricultural Service (FAS) and the Risk Management Agency (RMA). FFAS provides a safety net for farmers and ranchers by providing commodity payments, farm loans, disaster assistance, and crop insurance. Facilitating foreign trade, capacity building and developing new markets
bolsters farm incomes and connects American agriculture to the rest of the world. FFAS also contributes to global food security, conservation and stability into the marketplace. FFAS’s unique footprint includes more than 2100 state and county offices in the US and more than 90 overseas offices.

**FFAS and USDA Strategic Goals** - The FFAS mission area contributes to multiple USDA Strategic Goals. Specifically, *assist rural communities*, the FFAS mission area: (1) supports a strong financial safety net including providing access to credit for farmers and ranchers who are temporarily unable to obtain commercial credit such as beginning farmers and ranchers; and (2) promotes the vitality of rural America by improving access to international markets, providing credit guarantees for U.S. farm exports, and supports industry efforts to develop new markets. In support of *ensuring private working lands are preserved*, the FFAS area: (1) protects watershed health to ensure clean and abundant water; and (2) enhances soil quality to maintain international acceptance of new technologies, and promotes sustainable, productive agricultural systems and trade in developing countries to enhance global food security. In support of the *promotion of agricultural production and biotechnology exports*, the FFAS area: (1) links U.S. agricultural to the world by enhancing export opportunities and global food security through the implementation of sound trade promotion and policies, and (2) addressing food security challenges by building food and market systems that expand trade and economic growth through food assistance programs.

The work of the FFAS mission areas is carried out by its three agencies, the Farm Service Agency (FSA), the Risk Management Agency (RMA), and the Foreign Agricultural Service (FAS). These agencies are responsible for carrying out major legislatively mandated programs in support of USDA and FFAS’s missions and goals supporting American farmers and ranchers.

**Farm Service Agency Major Programs** –

**Agricultural Risk Coverage and Price Loss Coverage**

In 2015, FSA enrolled 1.76 million farms in the Agriculture Risk Coverage (ARC) and Price Loss Coverage (PLC) programs by conducting an educational campaign. ARC and PLC are a part of the farm safety-net and provide assistance only when there are year-to-year crop revenue and/or commodity price downturns. The ARC and PLC programs have provided over $5.2 billion in financial assistance to producers for the 2014 crop year. USDA estimates an additional $8 billion in financial assistance will provided under the ARC and PLC programs for the 2015 crop year.

**Margin Protection Program for Dairy**

In addition, more than half of all dairy farms in the U.S. – over 23,000 – have enrolled in the Margin Protection Program for Dairy (MPP-Dairy). This voluntary program provides financial assistance to participating farmers when the margin – the difference between the price of milk and feed costs – falls below the coverage level selected by the producer. The MPP-Dairy offers dairy producers catastrophic coverage for an annual $100 administrative fee and various levels of buy-up coverage for an additional premium.
Marketing Assistance Loans and Loan Deficiency Payments

FSA provides producers marketing assistance loans (MALs) and loan deficiency payments (LDPs). MALs are 9-month low-interest loans that provide producers interim financing at harvest time to meet cash flow needs without having to sell their commodities when market prices are typically at harvest-time. This allows the producers some flexibility in determining when it is best to market their crops. LDPs are available to eligible producers when the commodity market price is less than the commodity loan rate, as established by USDA. LDP’s allow the producer to forgo the MALs in order to receive the difference between the loan rate and the market rate for the applicable commodity. The MAL and LDP coupled with ARC/PLC are part of the farm-safety net, and provide producers with needed financial assistance when the commodity market prices are depressed. These programs help to sustain the economic viability in rural America and to ensure the orderly marketing of commodities.

Livestock Disaster Program
The 2014 Farm Bill indefinitely extended the FSA’s livestock disaster programs and the Tree Assistance Program. Since passage of the 2014 Farm Bill, these disaster programs have paid producers over $6 billion dollars to recover from natural disasters, including drought, flood, fire, freeze, tornadoes, pest infestation, and other calamities.

Organic Certification Cost Share Programs

The Organic Certification Cost Share Program (OCCSP) and Agricultural Management Assistance Program (AMA) assist certified organic operations in defraying the costs associated with organic certification. In an effort to enhance the OCCSP delivery and improve direct outreach, USDA decided to transition the program from AMS to FSA. This transition is underway and the Federal Register notice announcing the transfer of program responsibilities is scheduled to be release early, November.

Under both programs, organic operations may receive up to 75 percent of their certification costs, not to exceed $750 per certification scope. The OCCSP is available to organic producers and handlers of crops, livestock and wild crops in all 50 States and several territories. The AMA is available to certified organic producers—only crop and livestock operators—in sixteen states designated by Congress.

Historically, the programs were administered through AMS under grants initiated with State Departments of Agriculture. FSA is continuing this practice in addition to now offering producers and handlers the ability to apply for OCCSP through local FSA county offices. This initiative complements FSA’s work on local foods and specialty crops and its expanding assistance to organic farmers and ranchers.
United States Department of Agriculture
2016 Presidential Transition
Farm and Foreign Agricultural Services Mission Area (FFAS)

Farm Loan Programs

FSA provides access to low-interest loans to farmers and ranchers, including new and beginning, underserved and veteran farmers and ranchers. The demand for farm loans has increased in recent years. The number of direct operating loans has risen from 13,000 to 14,000 in the mid-2000’s, to 22,000 to 24,000 in the last three years. Direct ownership loans have increased as well, from about 3,000 in the mid-2000’s to about 5,500 over the last three years. The change in guaranteed operating and ownership loans has not been as significant but demand for them has been strong as well. FSA’s actual program funding in support of these loans increased from $5.23 billion in FY 2014 to $5.68 billion in FY 2015, with enacted program funding for FY 2016 at $6.4 billion.

Conservation Reserve Program

FSA also provides tools and program support for America’s farmers and ranchers to be good stewards of the land. USDA is experiencing record demand from producers interested in participating in the CRP. The 2016 CRP general and grassland sign-ups were the most selective enrollment periods in CRP’s 30-year history with a record high Environmental Benefits Index cut-off. CRP enrollment is close to 24 million acres and is protecting more than 170,000 stream miles with riparian forest and grass buffers, enough to go around the world 7 times.

Commodity Operations

FSA’s Commodity Operations division purchases and delivers processed commodities under various domestic distribution programs, such as the National School Lunch, Commodity Supplemental Food, Food Distribution on Indian Reservations, and Disaster Assistance Programs. In addition, Commodity Operations purchases and delivers commodities to foreign countries under Titles II and III of Public Law 480, the Food for Progress Program, and Section 416(b) of the Agricultural Act of 1949, through private voluntary agencies, World Food program, and government-to-government transfers.

Biofuel Infrastructure Partnership (BIP)

The one-time Biofuel Infrastructure Partnership (BIP) grants were published and implemented on June 16, 2015, through a NOFA. BIP provided grants to States to expand the ethanol market through infrastructure development, including the installation of blender pumps and tanks.

Farm-to-Fleet

USDA has worked with the United States Navy on a joint initiative, Farm-to-Fleet, since December 2013. It makes biofuel blends part of regular, operational fuel purchases by incorporating the acquisition of biofuel blends into regular Department of Defense domestic solicitations for jet engine and marine diesel fuels.

Bridges to Opportunity (BTO)

BTO enables a holistic and streamlined customer service experience in FSA county offices. Services are expanding to all FSA County Offices by January 2017. BTO supplies staff with a customer relationship management information technology application and customizable
information resource bundles to provide every FSA customer with a meaningful summary of his or her visit, additional resources and referrals to local partners. Many of those resources and referrals span other USDA agencies, such as NRCS, RD, AMS, and RMS, and APHIS, allowing all of USDA to leverage FSA’s strong relationships with its nearly two million customers.

Supporting the Next Generation of Agriculture

FSA houses the cross-Departmental collaboration to support new and beginning farmers and ranchers and to support land tenure access. The effort brings together staff from across the USDA to share information and coordinate policies, programs, and services for the next generation of agriculture and the transitioning generation. The new farmer and land tenure coordinators, career FSA employees, lead these collaborations, serving as both a coordinators between agencies and as advisors to Department leaders on the issues. Through this connection, and in partnership with representatives from each new farmer serving entity, USDA is able to work across silos, packaging our programs (so that new customers get a seamless experience of USDA customer service), and supporting a holistic USDA approach to supporting the next generation.

Acreage and Crop Reporting Streamlining Initiative (ACRSI)

A joint FSA and Risk Management Agency IT system has been developed to replace duplicative crop reporting of common acreage information by producers to both agencies and their crop insurance provider, saving time and potentially reducing inadvertent data reporting errors.

ACRSI was piloted in the spring of 2015 in 30 counties in Iowa and Illinois. The agencies used lessons learned from the spring pilot to expand statewide reporting in incremental phases to 15 States and all counties in those States in the fall of 2015. For spring crops in 2016, RMA and FSA expanded ACRSI nationwide for 13 crops. Those crops were alfalfa, corn, cotton, Conservation Reserve Program, fallow, grass, oats, peanuts, rice, rye, sorghum, soybeans, and wheat. This captured over 93% of all reported acres.

The 2015 pilots and expansion in 2016, both starting prior to the peak reporting period that occurs annually in mid-July, have been important in providing the agencies and insurance companies with results that are being used in this post-peak reporting period to analyze what worked, what did not, and how to improve the process for producers and all stakeholders going forward. Stakeholder engagement is at the highest level the initiative has seen, which is fostering more effective solutions and progress.

The FSA/RMA Joint Policy Team have implemented data standards and reporting protocols that will ensure an effective data sharing process between FSA, RMA, and insurance companies. RMA and FSA IT systems are currently being enhanced in preparation for the 2016 fall acreage reporting period and data sharing through ACRSI. RMA and FSA will continue to build on lessons learned in preparation for future acreage reporting periods.

ACRSI is a demonstrably important system to USDA. Its use is providing data gathering and reporting efficiencies for producers, insurance companies, and USDA.
Risk Management Agency Major Programs – The Federal crop insurance program is a critical component of the farm safety net that protects producers from a wide range of risk caused by natural disasters, as well as the risks of price fluctuations. Currently, about 80 percent of risk protection is provided by “revenue insurance,” which protects against losses due to low yields, low prices, or a combination of low yields and prices.

The crop insurance program is designed to ensure that farmers and ranchers effectively manage their risk through difficult periods, helping to maintain America’s food supply and the sustainability of small, limited resource, socially disadvantage and other traditionally underserved farmers. Since 2009, farmers have collected approximately $63 billion in crop insurance indemnities. For the 2015 crop year, the Federal crop insurance programs provided about $100 billion in risk protection or about $68.7 billion in (normalized) risk protection. Throughout 2015 RMA continued the initiatives set forth by the 2014 Farm Bill, including expansion of Supplemental Coverage Option (SCO) and Stacked Income Protection Plan (STAX), making available the Yield Exclusion Option for producers, and rolling out Whole Farm Revenue Protection, which is available in every county in the U.S. in 2016.

Organics Price Election

The Risk Management Agency (RMA) has supported the organic sector through the following changes in crop insurance policies:

- In 2011, for the first time ever, RMA began offering crop insurance for organic producers based on organic market prices. For the 2016 crop year, RMA offered 57 organic price elections. For the 2017 crop year, RMA will offer 73 organic price elections.
- In 2014, RMA eliminated the historical 5% surcharge on organic policy premiums for all crops.
- In 2014, RMA added a new Contract Price Addendum (Contract Price Option) that allows organic producers who receive a contract price for their crop to get a crop insurance guarantee that better reflects the actual value of their crop. In 2016, RMA expanded the Contract Price Option to recognize price incentives for crops in transition to organic certification, providing risk management tools at prices closer to the actual market value of the crops. The CPA is available for 73 different crop types, covering the majority of insurable crops.

As a result of these changes, RMA organic insurance policies increased over 92 percent and insured organic acres increased more than 114 percent between 2008 and 2015. RMA insured 3,555 organic policies on 486,831 acres in 2008; and in 2015, RMA insured 6,833 policies on 1,043,403 acres. This data includes both certified organic and transition to organic.
Whole-Farm Revenue Protection

The WFRP insurance policy, new in 2015, became available in all states and counties nationwide beginning in 2016. This policy allows producers to insure their whole farm revenue with coverage levels of 50 to 85 percent. Although the policy is available for all farms, it was specifically developed for diversified farms that tend to sell to direct, local or regional, and farm-identity preserved markets, such as organic. Organic producers meeting the requirements of the National Organic Program may use their organic prices to value their commodities under this federal crop insurance policy.

Local/Regional Ag Production Support

RMA recognizes the growth of local and regional food systems, and aims to support producers engaged in local and regional markets. We value the collaboration with the Know Your Farmer, Know Your Food (KYF2) team to better serve beginning farmers and ranchers and operators of smaller farms, many of whom get their start in farmers markets, CSAs, and other direct markets in their local communities. We also know that as local and regional food systems mature, the demand for local food is expanding beyond direct markets and into major grocery stores, restaurants, and schools, often through the work of food hubs and other intermediaries.

RMA works with Know Your Farmer, Know Your Food (KYF2) to improve programs for these producers, make sure we are reaching the right audiences. The following achievements and priorities are particularly significant, and will continue to be focus areas for the future:

- Key RMA staff serve on the KYF2 Management Team and Taskforce to coordinate efforts across USDA.
- RMA's Whole Farm Revenue Protection (WFRP) is tailored for any farm with up to $8.5 million in insured revenue, including farms with specialty or organic commodities (both crops and livestock), or those marketing to local, regional, farm-identity preserved, specialty, or direct markets. WFRP allows producers to insure their organic commodities at organic prices reflective of the market where they sell the products, including local and specialty markets. RMA continues to make updates to the WFRP policy and procedures in response to questions received, in order to help producers, agents, and loss adjusters who use, sell or service WFRP insurance. The number of WFRP policies nearly doubled in 2016 from 2015 to 2,131 policies earning premium and liability also more than doubled to a total of nearly $2.3 billion in 2016. (Numbers as of Sept. 30, 2016)
- Risk Management Education projects encourage the formation of partnerships with public and private organizations to inform farmers about risk management strategies. Topics include food safety, local food marketing and branding, and promotion of the WFRP.
- RMA and KYF2 provide education and outreach to farmers selling in local and regional markets about risk management options to increase usage of WFRP and other relevant programs and strategies.
Organic Production Survey - Report To Congress

The Risk Management Agency provides a report to Congress annually in May, pursuant to Section 508(c)(6)(D) of the Federal Crop Insurance Act, as amended by Section 11023 of the Agricultural Act of 2014:

“The Corporation shall submit to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate an annual report on progress made in developing and improving Federal crop insurance for organic crops, including:

i. the numbers and varieties of organic crops insured;
ii. the progress of implementing the price elections required under this subparagraph, including the rate at which additional price elections are adopted for organic crops;
iii. the development of new insurance approaches relevant to organic producers; and
iv. any recommendations the Corporation considers appropriate to improve Federal crop insurance coverage for organic crops.”

This annual report transmits information on the progress made in developing and improving Federal crop insurance for organic crops and plans to continue the Organic Production Survey on an annual or biannual basis and the use of AMS data to expand the number of organic price elections available is prepared by the Product Management Division and sent to Congress. RMA works with AMS on attaining the current pricing information necessary to publish the report.

Foreign Agriculture Service Major Programs – FAS administers a variety of programs that are designed to facilitate access to the international markets and thereby help to support a competitive U.S. agricultural system. FAS also carries out activities that promote productive agricultural systems in developing countries and contribute to increased trade and enhanced global food security. Working bilaterally and with international organizations, FAS encourages the development of transparent and science-based regulatory systems that allow for the safe development and use of the agricultural goods derived from new technologies and works to eliminate sanitary and phytosanitary barriers.

Negotiating Trade Deals
FAS works with other USDA agencies, the Office of the U.S. Trade Representative, and others in the Federal government to monitor and negotiate new trade agreements and enforce existing trade agreements. The United States has free trade agreements (FTA) with 20 countries around the world that expand export opportunities for U.S. food and agricultural producers. FAS advised on the recently concluded negotiations on the Trans-Pacific Partnership (TPP). This agreement will create new opportunities for trade in a dynamic region where populations and purchasing power are increasing, enhancing the demand for American agricultural exports.
Organic Equivalency

FAS also supported the creation of five organic equivalency agreements that help both farmers and consumers benefit from international organic markets worth more than $35 billion. These markets include Canada, the European Union, Switzerland, Japan and South Korea.

Market Development Program

FAS’s Market Development Programs include the establishment of partnerships with private sector cooperator organizations, which support the development, maintenance and expansion of commercial export markets for U.S. agricultural commodities and products. In 2015, almost 1,000 U.S. companies and organizations participated in 21 USDA endorsed trade shows in 16 countries. Onsite sales totaled an estimated $421 million and the total value of the agricultural exports resulting from participation in foreign food and agricultural trade shows in 2015 was $1.52 billion.

Market Access Program

The Market Access Program (MAP) provides funds to participating organizations to cover a portion of the cost of carrying out overseas marketing and promotional activities, such as consumer promotions. MAP participants include nonprofit agricultural trade organizations, State-regional trade groups, cooperatives and private companies that qualify as small businesses.

Foreign Market Development Program

The Foreign Market Development (FMD) Program, also known as the Cooperator Program, helps create, expand and maintain long-term export markets for U.S. agricultural products. Under the program, FAS partners with U.S. agricultural producers and processors, who are represented by non-profit commodity or trade associations called “cooperators,” to promote U.S. commodities overseas. The FMD program focuses on generic promotion of U.S. commodities, rather than consumer-oriented promotion of branded products. Preference is given to organizations that represent an entire industry or are nationwide in membership and scope.

Quality Samples Program

The Quality Samples Program (QSP) provides funding to assist private entities to furnish samples of U.S. agricultural productions to foreign importers in order to overcome trade and marketing obstacles. The program, which is carried out under the authority of the CCC Charter Act, provides foreign importers with a better understanding and appreciation of the characteristics of U.S. agricultural products.

Export Credit Guarantee Program (GSM-102)

The GSM-102 program provides estimated $5.5 billion in credit guarantees to encourage financing of commercial exports of U.S. agricultural products. By reducing financial risk to lenders, credit guarantees encourage exports to buyers in countries — mainly developing countries — that have sufficient financial strength to have foreign exchange available for scheduled payments.
Facility Guarantee Program
The Facility Guarantee Program (FGP) is designed to boost sales of U.S. agricultural products in countries where demand may be limited due to inadequate storage, processing, handling, or distribution capabilities. The program provides credit guarantees to facilitate the financing of manufactured goods and U.S. services to improve or establish agriculture-related facilities in emerging markets.

Food for Progress Program
The Food for Progress Program helps developing countries and emerging democracies modernize and strengthen their agricultural sectors. U.S. agricultural commodities donated to recipient countries are sold on the local market and the proceeds are used to support agricultural, economic or infrastructure development programs. Food for Progress has two principal objectives: to improve agricultural productivity and to expand trade of agricultural products.

The McGovern – Dole International Program
The McGovern–Dole International Food for Education and Child Nutrition Program helps support education, child development and food security in low-income, food-deficit countries around the globe. The program provides for the donation of U.S. agricultural commodities, as well as financial and technical assistance, to support school feeding and maternal and child nutrition projects. The key objective of the McGovern-Dole Program is to reduce hunger and improve literacy and primary education, especially for girls.

The Norman E. Borlaug International Fellowship Program
The Norman E. Borlaug International Agricultural Science and Technology Fellowship Program promotes food security and economic growth by providing training and collaborative research opportunities to fellows from developing and middle-income countries. Borlaug fellows are generally scientists, researchers or policymakers who are in the early or middle stages of their careers.

The Cochran Fellowship Program
The Cochran Fellowship Program provides short-term training opportunities to agricultural professionals from middle income countries, emerging markets and emerging democracies. Cochran fellows come to the United States, generally for 2-3 weeks, to work with U.S. universities, government agencies and private companies. They receive hands-on training to enhance their technical knowledge and skills in areas related to agricultural trade, agribusiness development, management, policy and marketing.

United States Department of Agriculture
2016 Presidential Transition
Farm and Foreign Agricultural Services Mission Area (FFAS)

FSA Budget and Staffing Highlights:

FSA’s FY2016 enacted funding level of $1.52 billion supports federal and non-federal staffing to administer its discretionary and mandatory programs. In FY2016, FSA’s funding sources include direct appropriations ($1.2 billion), credit reform transfers ($310 million) and reimbursements ($77 million). Of the $1.52 billion appropriated to FSA, approximately 93 percent funds salaries and benefits, rent and IT expenses with remaining funding supporting operating expenses such as supplies, printing, postage, transportation and equipment. While FSA has taken significant steps during the past few years to reduce its operating expenses by streamlining operations through administrative efficiencies, there are still a number of operational expenses that are not controlled by FSA such as mandatory Departmental expenses (Greenbook charges), travel expenses related to compliance visits and county office rent expenses for more than 2,100 USDA County Offices. In FY2017 and FY 2018, FSA anticipates a substantial increase in county office rent expenses due to the renewal of leases that have expired or will expire in FY2017 and FY2018. Most of these leases are expected to have significant increases because they have not had rent adjustments in many years. FSA projects an increase in County Office rent expenses of $5 million in FY2017 and $11.6 million in FY2018 for approximately 700 leases.

RMA Budget and Staffing Highlights:

The RMA Agency budget represents the Salaries and Expenses (S&E) (discretionary funds), which pay for the administrative and operating costs to achieve the RMA mission, goals, and objectives. The budget includes the Federal Crop Insurance Corporation (FCIC) Program (mandatory funds), which include the Premium Subsidy (amount the Federal government is contributing towards the insurance premiums), Delivery Expense (amount to reimburse the Approved Insurance Provider (AIP; company) for Administrative and Operating Expenses (A&O)), Underwriting Gain (amount the FCIC and AIPs share on gains and losses), and Producer Premium (portion of the policies that the producers pay). RMA pays for indemnities or losses on crop insurance from the combination of Producer paid premium and premium subsidy.

RMA employs a workforce of approximately 475 employees. Approximately 23 percent are eligible to retire within the next year. The RMA headquarters is located in Washington, D.C., which houses 19 percent of our workforce. In addition to the headquarters location, RMA has 10 regional offices and 5 regional compliance offices throughout the country. About 81 percent of the RMA total workforce are stationed outside of Washington, DC.

FAS Budget and Staffing Highlights:

FAS employs a total workforce of approximately 1257 employees. Of the permanent career workforce, 23 percent of Civil Service and 35 percent of Foreign Service are eligible to retire through calendar year 2017. FAS headquarters is located in Washington, D.C. which houses 65 percent of the workforce. FAS has 93 overseas offices covering 171 countries to work directly on behalf of our constituents and with foreign entities.
II. Top Issues/Hot Topics

Timeline

- January 2017

- **MIDAS Project**
  Per findings from the MITRE Corporation’s independent third-party assessment, the analysis of alternatives for the MIDAS platform will be complete in December 2016 and available for review in January 2017.

- **Report to Congress: International Food Aid Report**
  Required by H. Report 114-205. The Committee directs FSA to make publicly available reports detailing U.S. Commodities purchased for international food aid. The Committee also directs FSA to include the amount, value, destination, and type of commodity shipped by U.S. port of origin. This is an annual report prepared by Commodity Operations.

- **National Food and Agriculture Council (NFAC)**
  On January 1, 2017 FSA will become Chair of NFAC, a position that rotates each year to one of the three members: FSA Administrator, NRCS Chief, and RD Deputy Under Secretary for Operations and Management. The council was established to approve or deny office actions (e.g., closures, consolidations), particularly when multiple agencies occupy the same field office. The council is also a forum to discuss leveraging resources, such as sharing vehicles for outreach visits to customers.

  FSA will recommend to the NRCS and RD members priorities it wants the council to address in 2018. Among the items that FSA intends to recommend is that lead responsibility for StrikeForce not rotate with the NFAC Chair position but be continuously housed in RD. Rotating the lead agency of StrikeForce each year, causes the loss of momentum and continuity among coordinators and leads located in the identified states and counties.

- **Report to Congress: Changes to Cropland Report**
  Required by SEC. 11014 of the Agricultural Act of 2014 (P.L. 113-79). Not later than January 1, 2015, and each January 1 thereafter through January 1, 2018, the Secretary shall submit to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate, a report that describes the cropland acreage in each applicable county and State as of the date of submission of the report; and the change in cropland acreage from the preceding year in each applicable county and State. This is an annual report prepared by Farm Programs.
United States Department of Agriculture
2016 Presidential Transition
Farm and Foreign Agricultural Services Mission Area (FFAS)

- **February**
  - **Commodity Classic**
    This is one of the largest conventions that is farmer-focused and farmer-led. USDA staff, more specifically FSA senior leadership, has served as presenters and to provide significant program updates to a wide variety of commodity groups that attend the Commodity Classic. The convention also provides FSA with an opportunity to meet with multiple commodity groups and their respective leaderships to hear about specific issues, initiatives and challenges in their respective industries.

  - **USDA Ag Outlook Forum** (February 23-24)
    This forum is hosted by USDA’s Office of Chief Economist. Several Agency senior staff attend in support of several agency-wide programs.

  - **Request for Applications (RFA) Announcement – Risk Management Education**

- **March 2017**
  - **Secretarial Appointments to FSA’s County Committees**
    March 1 deadline.

  - **Report to Congress: Quarterly IT Report and Briefing**
    Explanatory Statement. The Secretary is directed to continue briefings for the Committees regarding all IT projects and activities related to farm program delivery. This is a quarterly report due March 30 and June 30 and is prepared by Office of Chief Information Officer, followed-up with a scheduled briefing.

  - **USDA National Ag Week** (March 4 – 10)

- **April 2017**
  - **Report to Congress: Farm Programs IT Operations Report**
    This is an annual report prepared by Office of Chief Information Officer.

  - **Report to Congress: Quarterly Loan and Grant Program Budget Report**
    Required by H. Report 114-205. The Committee directs the Department, through the Office of Budget and Program Analysis, to provide quarterly reports to the Committees on Appropriations of the House of Representatives and the Senate on the status of obligations and funds
availability for the loan and grant programs provided. The Committee further directs that if an estimate of loan activity for any program funded in Titles I and III of this bill indicates that a limitation on authority to make commitments for a fiscal year will be reached before the end of that fiscal year, or in any event whenever 75 per centum of the authority to make commitments has been utilized, the Secretary shall promptly notify the Committees in writing. This is a quarterly report prepared by Farm Loan Programs, or more often as required.

- **Report to Congress: Farm Bill Funding Status Report**
  Required by H. Report 113-468. On October 1, 2014, and every quarter thereafter until the funds are expended; the Committee directs the Secretary to provide a status report on the obligations and outlays and expects that the Committee will be notified if there are any significant deviations from the plan. The Committee reminds the Secretary that funding is not available to hire new full-time equivalent staff at FSA. As such, this funding should not be used for that purpose. (The original plan was sent to the Chair and Ranking Members of the House and Senate Agriculture Appropriation Committees on August 1, 2014.) This is a quarterly report due January 1 and April 1 prepared by Office of the Chief Financial Officer.

- **Publish FRN announcing U.S. WTO quantity safeguard trigger levels**
  - May 2017

- **Report to Congress: Commodity Credit Corporation Report**
  Required by H. Report 114-205. The Committee directs the Secretary to provide a report on November 15 and May 16 on planned uses of funding under the authorities of Section 4 and Section 11 of the Commodity Credit Corporation Charter Act.

- **Report to Congress: Farm Programs IT Plan for Expenditures Report**
  Required by Omnibus Act and Explanatory Statement. (Paraphrased) That not more than 50% of the funding made available under this heading for information technology related to farm program delivery, may be obligated until the Secretary submits to the Committees on Appropriations a plan for expenditure that (1) identifies for each project/investment over $25,000, (2) demonstrates each project/investment and (3) has been reviewed by GAO and approved by the Committees of Appropriations of both Houses of Congress.
United States Department of Agriculture  
2016 Presidential Transition  
Farm and Foreign Agricultural Services Mission Area (FFAS)

- **June 2017**

  - **Field Office Leases Redistribution Among Service Center Agencies**
    Complete the transfer of the acquisition and management of 200 leases from FSA to the Natural Resources Conservation Service no later than June 30, thereby completing Phase II of the agreement by the Service Center Agencies to redistribute leases according to the actual office footprint of each agency. A date for the Phase III transfer of the final 200 leases is to be determined. The Phase I transfer of 200 leases is to occur in December 2016.

  - **Report to Congress: Quarterly IT Report and Briefing**
    This is a quarterly report due March 30 and June 30 and is prepared by Office of Chief Information Officer.

  - **China Strategic and Economic Dialogue (S&ED) (DATE TBD)**
    The China S&ED is a high-level dialogue for the United States and China to discuss a wide range of regional and global strategic and economic issues between both countries.

**Mission Area Issues**

**FSA:**

**COMMODITY CREDIT CORPORATION (CCC) AUDIT**

CCC as a corporation has been audited since the early 1990’s. While the corporation has a long history of clean audits, its audits have never been without challenge due to the complexity of accounting for farm programs, each with unique qualifications and terms. The corporation’s programs change with each new farm bill, and the corporation is challenged to meet the need of providing timely financial assistance to producers so they may finance their operations.

The auditor, KPMG, gave the FY 2015 CCC financial statements a disclaimer. The disclaimer defined ten notice of findings and recommendations to address. The findings are predominantly related to CCC’s ability to justify programmatic balances, including USAID grant balances; and its ability to provide evidential documentation to support financial transactions.

The auditor, KPMG gave the FY2015 CCC financial statements a disclaimer. To assist with the development of corrective action plans and to prepare for the FY2016 audit, CCC contracted with consultants specializing in audit readiness. The USDA Office of Chief Financial Officer (OCFO) provided a seasoned Senior Executive Service resource to serve as FSA’s Deputy Chief Financial Officer (CFO). He is focusing his attention primarily on overseeing the CCC FY2016 audit process. KPMG, who is also conducting the FY2016 audit, has agreed to add an additional audit partner to assist with conducting the engagement. CCC hired a senior project manager to
manage the audit process, including development of processes and procedures to address issues identified in the 2015 audit. The FY2016 audit opinion is expected in early November 2016.

INFORMATION TECHNOLOGY

- MIDAS: In April 2016, an independent third-party assessment of the MIDAS platform was completed by MITRE Corporation. As a result of the assessment of FSA’s use of a single, commercial-off-the-shelf platform, FSA is conducting an analysis of alternatives (AoA) to assess the current solution and to thoughtfully identify and determine if it should move to a viable alternative. As part of this, comprehensive plans to effectively transition between the major customer relationship management components (e.g., Farm Records, Business Partner) that serve as a centralized source for all customer information and consolidate both land and producer information, and the new solution, will have to be defined and executed. The AoA and recommendation to address MITRE Corporation’s assessment will be complete in December 2016 and available for review in January 2017.

- Acreage and Crop Reporting Streamlining Initiative (ACRSI): A joint FSA and Risk Management Agency IT system has been developed to replace duplicative crop reporting of common acreage information by producers to both agencies and their crop insurance provider, saving time and potentially reducing inadvertent data reporting errors. Currently, FSA is exploring critical project decisions concerning policy, infrastructure, and system stability in fully-defining enhancements for the spring 2017 reporting period, the heaviest crop period.

ACRSI was piloted in the spring of 2015 in 30 counties in Iowa and Illinois. The agencies used lessons learned from the spring pilot to expand statewide reporting in incremental phases to 15 States and all counties in those States in the fall of 2015. For spring crops in 2016, RMA and FSA expanded ACRSI nationwide for 13 crops. Those crops were alfalfa, corn, cotton, fallow, grass, oats, peanuts, rice, rye, sorghum, soybeans, and wheat. This captured over 93% of all reported acres.

The FSA/RMA Joint Policy Team have implemented data standards and reporting protocols that will ensure an effective data sharing process between FSA, RMA, and insurance companies. RMA and FSA IT systems are currently being enhanced in preparation for the 2016 fall acreage reporting period and data sharing through ACRSI.

- Bridges to Opportunity (Bridges): Bridges, which is expanding to all FSA County Offices by January 2017, is a customer service platform that provides every FSA customer with a required Receipt for Service that gives a meaningful summary of his or her visit, and additional resources and referrals to other USDA agencies and local partners. Leveraging FSA’s relationships with its nearly two million customers, Bridges is working with USDA agencies and non-federal partners to provide farmers and ranchers with information on topics that include organic production, beginning farmer resources, integrated pest management, disaster assistance, conservation practices, agricultural education courses,
loans, grants, and other information and financial assistance that can benefit and grow farming and ranching operations.

In FY 2016, FSA reprogrammed $5.6M within Salary and Expenses (S&E) IT Non-Farm Programs Delivery to the USDA Service and Outreach to Agricultural Communities investment (Major IT investment FSA-124) to further expand Bridges. Bridges began as a pilot in October 2014. This reprogramming enabled FSA to renew the existing IT software licenses that expired in July 2016, supporting nationwide expansion to over 10,500 users in all State and FSA County Offices by early 2017. The nationwide expansion results in a significant cost savings on a per user basis due to a bulk discount agreement with the software vendor.

• Connectivity: To ensure sufficient bandwidth over the long-term needed to support the changing application and data requirements of FSA programs, County Office staff, and farmer and rancher customers, USDA’s Client Technology Services (CTS) provided a Service Center Agency (SCA) Telecommunications Modernization plan for FSA, Natural Resources Conservation Service, and Rural Development. The plan provides a long-term strategy for continuous site monitoring and scheduled upgrades to services utilizing higher bandwidth. A procurement using the General Services Administration’s, Network Services 2020 (NS2020) Services Agreement, is expected to be awarded in FY 2017.

Through FY 2015 and FY 2016, the initial phase of the USDA plan to upgrade a total of 1,038 sites from 1.5MB T1 lines to 10 MB Ethernet connections, increasing bandwidth up to 567 percent was implemented. This completed the upgrade of 70% of sites. Site installation costs were funded through the USDA Optimized Computing Environment (OCE) investment. Recurring monthly circuit charges will be funded by the SCA base budget. This OCE investment in VoIP technology allows for the consolidation of communications traffic, thereby resulting in a reduction in the number of voice lines. The reduced voice line costs will significantly offset the increased network costs. After deployment, USDA expects overall telecommunications costs for the SCAs to decrease. CTS will continually monitor sites upgraded during the initial phase of the SCA Telecommunications Modernization initiative to assess network utilization and confirm the upgraded connection is sufficient.

For the sites that were not prioritized in the initial phase due to various factors, such as sites geographically located in areas where upgraded telecommunications infrastructure is not yet commercially available, CTS is working with providers to improve the telecommunications infrastructure and bandwidth through technologies previously unavailable for installation at these sites. Implementation will be done on a rolling schedule, which will enable the SCA’s to continually review the new communication services, and install them in areas with the highest demand.
AGRICULTURE RISK COVERAGE COUNTY (ARC-County) YIELDS

The ARC-County program provides revenue loss coverage at the county-level. ARC-County payments are issued when the actual county crop revenue of a covered commodity is less than the ARC-County guarantee for the covered commodity.

USDA National Agricultural Statistics Service (NASS) surveys the primary growing regions for a crop and publishes yields at a county-level only if there are enough surveys returned. Given the wide swath of counties and number of covered commodities, many counties did not have any or had incomplete sets of county-level published yields. When NASS county-level yields were not available, FSA worked with RMA to aggregate unpublished yield data for crop insurance participants and used this RMA data if there were sufficient results (at least 25% of reported acreage and at least 5 farms). These two sets of county-level yield data only provided about 43,000 yields, but represent an area such that about 90% of the base acres are in counties that had NASS or RMA county-level yields. If the county-level data was not available, NASS district-level data (aggregate data covering a group of counties) was used, with discretion for the state committee to be able to adjust them based on knowledge of the county relative to the others in the district. If none of these data sets were available, the FSA state committee was delegated responsibility for setting the appropriate yield using whatever sources or expert opinion it could find. The limited data available and lack of county specific data explains why for some less common crops in a state, there may be a group of counties with the same yield (e.g. a district yield) or even the same yield for the entire state in cases where there was not even district level data.

FSA currently uses the following data cascade to determine yields based on the level of available data from producers: (1) NASS county level data, (2) RMA data, (3) FSA State Committee (NASS district level data is provided for guidance).

While FSA has received a handful of internal and external requests to substitute yields based on expert opinion, these have been in relation to yields established using NASS or RMA county-level data. Since the established data cascade does not provide for discretion to change yields when county-level data is available, FSA has not granted these requests.

There are two significant challenges to providing flexibility to override data with expert opinion from the State committee or others. First, if the yields were part of the benchmark years, that would be changing data that was examined by producers when they made their one-time program elections and potentially re-open that decision. Second, in an analogous situation where FSA overrode NASS survey data related to Conservation Reserve Program soil rental rates, the USDA Office of Inspector General found that FSA had acted improperly and the agency had to subsequently revise the rental rates using the data.

CONSERVATION RESERVE PROGRAM (CRP) ENROLLMENT

The most recent general signup period in 2016 was one of the most selective sign-up periods in CRP’s 30-year history, with a record high Environmental Benefits Index cut-off and the lowest-
percentage of applications accepted. The high bar means that the per-acre conservation benefits are being maximized and that acres enrolled address multiple conservation priorities simultaneously. A nationwide acreage limit was established for this program in the 2014 Farm Bill, capping the total number of acres that may be enrolled at 24 million for FY2017 and FY2018. At the same time, USDA has experienced a record demand from farmers and ranchers interested in participating in this voluntary program partly due to low commodity prices. The 24 million acre cap has led the agency to batch continuous offers, and pursue a strategy of stacking benefits when possible and prioritizing the most environmentally sensitive land.

As of July 2016, 23.9 million acres were enrolled in CRP, with 1.7 million acres set to expire this fall. Over three million acres have been offered for enrollment this year across the three main categories within CRP, with FSA receiving over 26,000 offers to enroll more than 1.8 million acres during the general enrollment period, and over 4,600 offers to enroll more than one million acres in the new CRP Grasslands program.

Coming off a record-setting 2015 continuous enrollment of over 860,000 acres, more than 624,000 acres already have been accepted for 2016 in the CRP continuous enrollment, triple the pace of last year. This was the most competitive selection process in the history of the CRP program; FSA will enroll 411,000 acres in general enrollment and 101,000 acres in the new CRP Grasslands program. The continuous CRP signup includes a number of important programs and initiatives:

- Multiple wetland and duck nesting initiatives that help to improve water quality and provide habitat in the Midwest and throughout the U.S.
- Upland bird habitat initiative that gives landowners a way to use a small portion of their land to create a bird habitat while continuing to farm in the Midwest, South, and throughout the U.S.
- Longleaf pine initiative that helps to restore in the Southeast some of the most diverse forest ecosystems in the world by providing habitat for important species while also protecting soil and water quality
- State Acres for Wildlife Enhancement (SAFE) restores vital habitat to meet high-priority State wildlife conservation goals
- Highly Erodible Lands Initiative (HELI) offers a practical solution to create wildlife habitat while protecting cropland that is highly susceptible to erosion (with an erosion index over 20)
- Pollinator Habitat, which enhances honey bee and native pollinator populations throughout the country
- Conservation Reserve Enhancement Program (CREP) targets high-priority conservation concerns identified by a State, whereby federal funds are supplemented with non-federal funds to address those concerns. These partnerships range from agreements to help protect water quality, such as the one that protects the New York City drinking water supply, to those with broader wildlife and wildlife concerns from the Midwest to Hawaii.
PEANUTS

Following passage of the 2014 Farm Bill, market changes—combined with unintended consequences from the new farm bill—encouraged peanut production. These factors included softening prices for many competing crops like cotton, corn and soybeans, but also three elements of the new ARC-PLC program: 1) a separate payment limit for peanuts in addition to other commodities (peanuts has a separate $125,000 payment limit), 2) a generous reference price that resulted in substantial 2014-crop peanut PLC payments, and 3) a requirement that generic base acres be planted to a covered commodity in order to trigger a payment, which encourages peanut planting due to the relatively high reference price.

Data from USDA indicate that peanut production has indeed increased under the 2014 Farm Bill. Peanut planted acres increased 20 percent in 2015, with peanut production estimated at about 3.1 million tons, up significantly from 2014. Production in 2016 is forecast at close to 3.2 million tons.

The large supply of 2015-crop peanuts had initially led USDA to expect significant quantities of peanuts (that were placed as collateral under the Marketing Assistance Loan program) to be forfeited to the Commodity Credit Corporation (CCC) as the loans matured in the summer of 2016.

As of late September, no 2015-crop forfeitures have yet occurred. This is largely due to strong demand—particularly from China—and the resulting strong redemption rate. It is unclear whether China will be a large buyer in future years. USDA expects that with continued strong interest in peanut plantings, 2016-crop forfeitures in the summer of 2017 may again loom as a potential issue.

SUGAR

USDA manages the U.S. supply of sugar to maintain prices at or above support levels through domestic marketing allotments, by restricting imports and by selling to bioenergy producers if there is excess sugar in the market. USDA is mandated to operate the program at no cost to the extent practicable. Two major issues have affected the industry in 2016 and may well remain issues in 2017:

- **National Labelling Law and the Genetically Modified Beet Crop**—Virtually all of the U.S. beet crop is genetically modified (GM), and data collected by FSA indicate that the demand for beet sugar has declined relative to cane sugar (which is non-GM). This unprecedented dichotomy in the sugar market between beet and cane sugar has increased the likelihood of FY16 beet sugar loan forfeitures. The new national labelling law, which will not be fully enacted for two years, is expected to curb the movement away from beet sugar, especially by manufacturers using multiple GM inputs in their production lines who will find it too expensive to go 100 percent GM free.
• **Common Market Situation with Mexico**—Under NAFTA, Mexico was allowed unlimited duty-free access to the U.S. sugar market, which hindered USDA’s ability to control sugar supplies and resulted in large FY 2013 forfeitures. Subsequently, the U.S. filed an anti-dumping/countervailing duty (AD/CVD) case against Mexico. To avoid retaliatory tariffs, Mexico and the U.S. government in December 2014 signed two “suspension agreements.” The “AD agreement” sets minimum prices for two types of Mexican sugar (*raw*, which is of lower grade, and *refined*, which is suitable for food use) entering the United States. The “CVD agreement” set the maximum quantity Mexico may ship to the U.S. in a fiscal year and further sets the maximum quantity of refined sugar that Mexico can ship. The U.S. sugar industry is seeking to revamp these agreements, largely due to unforeseen changes in the marketplace (see below). Mexico is currently the leading foreign source of U.S. sugar, supplying almost 40 percent of total U.S. sugar imports. Any changes to the agreements will have important ramifications for the U.S. sugar industry.

**DISASTER PROGRAMS**

FSA administers multiple disaster programs, including the Livestock Forage Disaster Program (LFP), Livestock Indemnity Program (LIP), the Emergency Assistance for Livestock, Honey Bees, and Farm-raised Fish (ELAP), and the Tree Assistance Program (TAP).

Disaster payments nationwide processed from 2012 to 2016, as of August 31, 2016, for Livestock Forage Program (LFP), LIP, TAP, and ELAP. A total of over $6.2 billion were issued for these programs.

USDA also expanded the Noninsured Crop Disaster Assistance Program (NAP) to include buy-up protection, similar to buy-up provisions offered under crop insurance. FSA also administers the Emergency Conservation Program, which is available to repair conservation structures.

**MARGIN PROTECTION PROGRAM for DAIRY (MPP-DAIRY)**

Milk prices continue to run lower than a year ago. However, dairy price projections see an increase throughout the rest of the year; the margin for June is $5.75 per cwt, which is $0.02 per cwt lower than the May margin and $2.40 per cwt lower than June 2015. The June all-milk price increased $0.30 per cwt from May to $14.80 per cwt. Continued increases in milk production and other factors including low world market prices, increased milk supplies and inventories, and slower demand are affecting dairy prices. The trade picture for U.S. dairy producers is not optimistic. Imports were higher and exports lower in 2015 than the previous year and early results in 2016 have led to projections for another year of higher imports and lower exports. Strong increases in European milk production and slower sales into leading importers’ markets, like China, have increased competition in world markets. The strong U.S. dollar has reduced U.S. exports and encouraged U.S. imports of butter and cheese in recent months. That relationship is expected to continue through the rest of 2016. The FSA national office will mail
out 2017 annual coverage election reminder postcards to MPP-Dairy program participants. Before the end of the extended annual sign-up period on December 16, 2016, a reminder letter will be mailed to dairy operations that have not enrolled.

All final USDA prices for milk and feed components required to determine the national average margin for May/June 2016 were released on July 29, 2016. Dairy producers who enrolled at the $6 through $8 margin trigger coverage level have received payments totaling approximately $11.2 million in financial assistance as of August, the largest payment since the program began in 2014.

Signup for 2017 coverage began July 1, 2016, and the signup deadline of September 30, 2016, has been extended to December 16, 2016, to encourage program participation and allow more time to make coverage elections. Dairy operations that participated in coverage year 2016 are required to participate in the MPP-Dairy program through 2018 with at least catastrophic level coverage.

**FARM LOAN PROGRAMS**

Three consecutive years of reduced commodity prices and farm incomes have depleted working capital, contributing to an increased demand for non-real estate credit. In the Kansas City and Chicago Federal Reserve districts, surveys of lenders indicate that demand among farm customers seeking non-real estate credit in 2016 approached levels not experienced since the 1990s. While farms overall have strong balance sheets with low debt-to-asset ratios, a majority of the farm debt is held by farms with over $500,000 in farm sales. These larger farms, which tend to be more indebted, are more likely to face liquidity constraints. Continuing declines in net cash and net farm income and modest declines in farmland values have increased loan renewals and extensions and the demand for short-term operating loans, and also led to some loan repayment problems. While overall credit conditions appear manageable, a continuation of lower farm incomes and further deterioration of farmers’ working capital will likely result increased demand for both direct and guaranteed loans.

The FY2017 budget provides funding for about a $6.7 billion loan level for direct and guaranteed loans for farm ownership, farm operating, conservation, emergency, and other farm loan programs. This is a higher level than the $6.4 billion budget for FY 2016 and $5.6 billion in actual obligations for FY2015. The FY2017 program levels will cost about $81.3 million in budget authority, which is a 17 percent increase above the $69.6 million in budget authority for FY2016. This is due in part to the increase in beginning farmer assistance and stress in select sectors of the agriculture economy. Under the continuing resolution, farm loans will be operating under a percentage of the FY2016 budget and may request an advance on the rest of the fiscal year funds.
United States Department of Agriculture  
2016 Presidential Transition  
Farm and Foreign Agricultural Services Mission Area (FFAS) 

Foreign Agricultural Services 

CHINA ISSUES SUMMARY 

China is forecast to be our top agricultural export market in 2017, bringing in over $20 billion a year in sales. We are engaged on a number of issues in China, any of which may require senior leadership intervention during the first half of 2017. The China Strategic and Economic Dialogue (S&ED), which will take place in the United States (location TBD) in June 2017, is an appropriate forum to discuss these issues. If earlier engagement is required (which could be the case for beef market access and the China Food Safety Law), the first scheduled opportunity for new USDA leadership would be a bilateral meeting on the sidelines of the January 22 G-20 Agriculture Ministers meeting in Berlin, Germany. 

- **Beef Market Access:** Progress has been made on regaining access to the Chinese beef market, but several steps are still required. If discussions continue past the November 2016 Joint Commission on Commerce and Trade (JCCT) meeting, then FAS OA and FFAS engagement with Ministry of Agriculture General Administration of Quality Supervision, Inspection and Quarantine (AQSIQ) will be critical in the first six months of 2017. 

- **China Poultry:** If the proposed rule for China’s market access request for poultry is released before the end of 2016, a great deal of public discussion, Hill requests and engagement with industry/media is likely to ensue well into 2017. 

- **Poultry/Avian Influenza:** China has refused to engage productively on its ban on all U.S. poultry exports, despite written and verbal requests from Secretary Vilsack, on top of repeated attempts by APHIS to engage China technically. Possible intervention by FFAS may be needed in early 2017 if there is no progress towards lifting the ban following the November JCCT meeting in WDC. 

- **Biotech/Approvals and Regulatory Reform:** Continuous engagement by FFAS and applicable staff members will be needed to move China from verbal commitments to actions on biotech reforms, as well as on movement on products in the approval pipeline. 

- **China Food Safety Law:** On October 1, 2015, China’s new Food Safety Law went into effect. To enforce the Law, China has drafted and implemented an unprecedented number of new food regulations. The numerous drafts of the Law and additional, newly imposed measures create great uncertainty for U.S. exporters, and new USDA leadership may need to engage with Chinese counterparts if newly enacted regulations negatively impact U.S. exports.
Rice Protocol. United States and China have initialed a protocol that would allow U.S. milled rice to be shipped to China, but we are awaiting final signature. Only facilities that APHIS inspects and deems compliant with the protocol would be eligible to ship to China. USDA is pushing to sign the protocol in fall 2016, when there will be multiple opportunities to engage high level Chinese officials.

WTO LITIGATION

We are involved in several WTO disputes currently. Key cases:

- Offensive: China agricultural subsidies, India Avian Influenza (AI), China poultry Anti-Dumping and Countervailing Duty Measures (AD/CVD), Indonesia licensing

- Defensive: Country of Origin Labeling (COOL), Argentina beef

- Brazil: Operational policies need to be reviewed in light of recently established WTO disciplines and these will be reconciled with older more limiting disciplines related to the Brazil WTO negotiated settlement.

ARGENTINA LEMONS RULE

An APHIS proposed rule was published on May 10, 2016 with an extended comment period through August 10, 2016 that would allow the importation of fresh lemons from a region in northwest Argentina into the continental U.S. This proposed rule is very sensitive for the U.S. citrus industry. Argentina began a formal WTO dispute over citrus and first requested a formation of a WTO panel in December 2012, but so far has preferred to find a technical solution rather than begin litigating the case by making the second request for a panel.

BIOTECH. A rapidly evolving U.S. domestic biotechnology regulatory environment has combined with trade barriers in key importers to create many challenges for U.S. exports of products of biotechnology. Initiatives are ongoing to address trade barriers in third-country import markets (e.g., China, EU), improve science-based decision making and policies globally, and ensure market access for emerging technologies.

- TPP This high-standard agreement opens markets and will support expansion of U.S. agricultural exports, increase farm income, generate more rural economic activity, and promote job growth. TPP Signatories include Australia, Brunei, Canada, Chile, Japan, Malaysia, Mexico, New Zealand, Peru, Singapore, and Vietnam – these countries represent nearly 40% of global GDP. A U.S. International Trade
Commission report showed that the Trans-Pacific Partnership will increase U.S. exports by $57.2 billion annually by 2032 if TPP is passed. A report by the Farm Bureau found $8.5 billion in total additional farm receipts from the implementation of TPP ($5.8 billion for livestock, $2.7 billion for crops), and $4.4 billion in additional net farm income. In April 2016, more than 200 agricultural groups wrote House and Senate leadership citing the economic requesting approval of TPP by Congress this year. Kansas cattle, wheat, corn, sorghum, and soybean, as well as Michigan bean cattle, corn, pork, and soybean groups signed the letter. Recently, the Administration submitted the required draft Statement of Administrative Action. USTR continues work on an implementing bill for submission to Congress.

- **TTIP.** On July 12, 2013, the United States and the European Union began the first round of negotiations in pursuit of a comprehensive, trans-Atlantic free trade agreement. The EU is the world’s largest importer of agricultural products and food. TTIP negotiations are ongoing and in early October the 15th round of negotiations took place in New York.

- **ISRAEL.** The United States and Israel have an Agreement on Certain Aspects of Trade in Agricultural Products (ATAP) that has been extended several times. There are negotiations underway to develop an improved permanent agreement, including to reduce tariffs on U.S. agricultural exports.

- **CUBA.** There is much interest in strengthening ties with Cuba, but there are significant legal constraints on what we can do as a government. Our primary focus for the first half of 2017 is to work with State Department on established a USDA presence in Havana, building on work begun in 2016. If such a position is approved for placement in early 2017 and current legislation is changed to allow the use of USG market development funds in Cuba, new USDA leadership might want to travel to Cuba in March or April to commemorate the one year anniversary of the 2016 U.S. – Cuba Memorandum of Understanding and highlight bilateral “accomplishments.”

**REGIONAL, BILATERAL AND MULTI-LATERAL ENGAGEMENTS IN 2017.**

- **G-20.** Germany is leading the G-20 this year and they plan on hosting a meeting of Agriculture Ministers on January 22, 2017. USDA has the lead for the United States in the planning, which can be handled at the staff level. We will need to identify a USDA head of delegation to represent at the meeting. Attendees will depend on the topic put forth by Germany in the Draft Declaration. (NOTE: The G-20 Agriculture Deputies Meeting will take place in December in Germany (location TBD).

- **U.S. – Canada Consultative Committee on Agriculture.** We have a number of technical issues with Canada that are usually discussed in this forum which is
required to meet at least once, per year. The next CCA will take place in Washington, sometime between February and May.

- **G-7 Agriculture Ministerial.** This is tentatively scheduled for March – April 2017; the G-7 Ministerial is scheduled for May 26-27, 2017 in Italy.

**CANADA DAIRY.** The U.S. dairy industry has pressed for action on Canada’s dairy policies that restrict U.S. access. We are working to do everything we can to stop new trade restrictive policies from being implemented. If that fails, we are developing a WTO litigation strategy, which might be ready in early 2017.

**MEXICO SUGAR.** U.S. sugar policy is complicated in the best of times, with frequent calls from stakeholders for intervention to increase or reduce imports. The Department of Commerce is currently renegotiating terms of access for Mexico under the suspension agreement, which is adding to the complexity of overall management of the sugar program.

**MEXICO POTATOES.** Market access for U.S. potatoes has been blocked for 14 years, most recently by a series of national legal injunctions filed by Mexico’s potato industry. While gaining access is a priority, the plan for achieving this goal is evolving. USTR and APHIS have been leading on this issue.

**WTO MINISTERIAL.** The WTO will have a Ministerial meeting in November or December, and the United States is already under pressure to reform its agricultural policies. Internal strategic decisions will be made in the first half of 2017 that will shape the U.S. approach to this meeting.

**AGRICULTURAL TRADE MISSIONS.** ATMs proposed to Asia (ethanol only-November) and Brazil (May) are pending and additional review/analysis is needed to identify any other feasible ATMs for FY 2017.

**FACILITY GUARANTEE PROGRAM**
A final rule was published September 22, 2016 with request for comments. The deadline for comments is March 21, 2017. Comments need to be evaluated, and if needed, policy and regulatory changes addressed.

**EXPORT CREDIT GUARANTEE PROGRAM (GSM) OUTREACH**
Office of Trade Programs Credit Operations staff will continue to conduct outreach to new foreign and domestic banks to expand GSM registrations.

**MARKET DEVELOPMENT PROGRAM ALLOCATIONS**
FY 2017 program applications were submitted in May 2016, were reviewed and funding recommendations made in September. Program funding announcements for FY 2017
Market Access Program (MAP), Foreign Market Development Program (FMD), Emerging Markets Program (EMP), Technical Assistance for Specialty Crop Program (TASC) and Quality Samples Program (QSP) funds, will begin in October 2016, and programs with rolling applications will continue to be allocated through summer 2017.

GLOBAL FOOD SECURITY ACT (GFSA)
Passed on July 20, the Strategy is due to Congress October 1, 2016. USDA has played a major role in the development of the whole-of-government strategy and the indicators for success. USDA needs a lead agency to coordinate and synthesize all of USDA’s programs. FAS plays that role, which at times requires a high-level, political entity.

SUSTAINABLE DEVELOPMENT GOALS (SDGS)
Since the passage of the SDGs in 2015, governments, international organizations, private voluntary organizations and agricultural think tanks are aligning their strategies to fulfill these high level, but loosely defined goals (e.g., “life on earth” and “climate action.”). Many of the goals relate to agriculture, food security or other areas where USDA has jurisdiction, and FAS, as the lead international agency, has to coordinate USDA’s input.

TRADE CAPACITY BUILDING
Alongside the agenda of passing trade laws, FAS is heavily involved in advancing the capacity of countries to meet their international commitments. Acts such as the African Growth and Opportunity Act specifically commit the U.S. government to helping the member countries strengthen their SPS systems.

GAO and OIG Audits

**FAS**

- In its February 6, 2014, audit report on the “Section 632(a) Transfer of Funds from USAID to USDA for Afghanistan” (50601-0002-16), OIG recommended that FAS fully implement a formal monitoring and evaluation process and a grants management structure, and implement the recommendations outlined in a 2010 Acuity consulting firm review. This report can be found on the USDA OIG’s website at [http://www.usda.gov/oig/webdocs/50601-0002-16.pdf](http://www.usda.gov/oig/webdocs/50601-0002-16.pdf).

- In its March 28, 2013, audit report on the “Effectiveness of the Foreign Agricultural Service’s Recent Efforts to Implement Measurable Strategies Aligned to the Department’s Trade Promotion and Policy Goals” (50601-0001-22), OIG found that the measurable goals and objectives included in FAS’s Strategic Plan do not present the whole picture of how FAS’s actions are affecting the global market for American agricultural goods, and that FAS has not updated its Country Strategy Statements, USDA’s Global Market Strategy, or the corresponding performance measures in the Department’s Performance and Accountability Report to align with
the goals and objectives contained in the FAS Strategic Plan. This report can be found on the USDA OIG’s website at http://www.usda.gov/oig/webdocs/50601-0001-22.pdf.

FSA

- Farm Program Modernization: Farm Service Agency Needs to Demonstrate the Capacity to Manage IT Initiatives

- USDA Farm Programs: Farmers Have Been Eligible for Multiple Programs and Further Efforts Could Help Prevent Duplicative Payments

- International Food Aid: Better Agency Collaboration Needed to Assess and Improve Emergency Food Aid Procurement System

- Farm Programs: Changes Are Needed to Eligibility Requirements for Being Actively Involved in Farming

- Farm Programs: Additional Steps Needed to Help Prevent Payments to Participants Whose Incomes Exceed Limits

- Farm Programs: USDA Needs to Do More to Prevent Improper Payments to Deceased Individuals

- Food Assistance: Briefing on U.S. Department of Agriculture's Food Assistance Procurement Process

- Disaster Assistance: USDA and SBA Could Do More to Help Aquaculture and Nursery Producers

RMA

United States Department of Agriculture
2016 Presidential Transition
Farm and Foreign Agricultural Services Mission Area (FFAS)

WHAT WE DO: OUR MISSION

FSA administers farm commodity, crop and livestock disaster assistance, credit, energy, environmental, and conservation programs for farmers and ranchers; procures and arranges transport for international food aid; issues licenses to warehouse operators and enters into storage agreements with individuals and companies; and is responsible for the coordination of budgetary and fiscal matters of the Commodity Credit Corporation. Key programs include Farm Ownership and Operating Loans, Biomass Crop Assistance, Agriculture Risk Coverage, Price Loss Coverage, Margin Protection-Dairy, Conservation Reserve, Livestock Forage Disaster, and Non-Insured Crop Disaster Assistance Programs.

WHO WE ARE: OUR WORKFORCE

As of October 3, 2016:

- 12,266 total employees, including 954 temporary employees
- Located in Headquarters and 2,175 State and County Offices

WHO WE SERVE: OUR CONSTITUENTS

In service of farmers, ranchers and rural landowners, FSA administers programs supporting economic stability; conservation and environmental programs protecting and restoring farms, ranches and grasslands. FSA also serves warehouse operators under the U.S. Warehouse Act.

KEY UPCOMING DECISIONS

- Ensure that the FY 2018 budget submission reflects policy priorities and provides adequate resources for program delivery
- Work with Congress on optimizing the county office footprint and policy priorities for Farm Programs and Farm Loan Programs
- Implement an IT strategy reflecting audit findings and MITRE Report recommendations

BUDGET HIGHLIGHTS FY 2016

- Total budget authority of about $13.1 billion with 86 percent (about $11.3 billion) in mandatory (CCC) funding and 14 percent (about $1.8 billion) in discretionary funding.
- About $1.6 billion for Salaries and Expenses, including transfers from credit reform accounts.
- About $70 million to support $6.4 billion in loan level for Farm Loan Programs, $722 million higher than the FY2015 loan level.
- About $108 million for the Emergency Conservation Program to assist with federally-declared disasters.

2016 Presidential Transition  
Farm Service Agency (FSA)

I. Organizational Overview

Agency’s Mission/Strategic Plan

Mission Statement

To serve our nation’s farmers and ranchers professionally, efficiently, equitably, and in a manner that is customer, taxpayer, and employee friendly.

Goals and Objectives

Strategic Goal 1: Provide a financial safety net for America’s farmers and ranchers to sustain economically viable agricultural production
Objective 1.1: Provide Access to Capital
Objective 1.2: Support Economic Viability

Strategic Goal 2: Increase stewardship of America’s natural resources while enhancing the environment
Objective 2.1: Provide Resource Stewardship Opportunities on Private Lands
Objective 2.2: Target Natural Resource Needs to Maximize Benefits

Strategic Goal 3: Ensure commodities are procured and distributed effectively and efficiently to increase food security
Objective 3.1: Enhance Procurement Practices for Commodity Purchases and Deliveries
Objective 3.2: Protect the Interests of Commodity Owners
Objective 3.3: Improve the Quality and Security of Commodities Purchased for Food Assistance Programs

Strategic Goal 4: Accomplish our mission by effectively managing people and service capabilities
Objective 4.1: Invest in the Workforce
Objective 4.2: Increase Operational Effectiveness
Objective 4.3: Provide Consistently Outstanding and Equitable Customer Service

Strategic Plan

Farm Service Agency Strategic Plan, Fiscal Year 2016-2018 Update

1 2016 Targets as established by the 2016 President’s Budget. Results are as of August 31, 2016. The results are not expected to change by more than a tenth of one percent when complete FY2016 becomes available.
2 Based on Socially Disadvantaged Farmers per the 2007 Agriculture Census; the 2012 census will be factored in during the next USDA Strategic Plan revision. Socially disadvantaged Farmers are defined in the Consolidated Farm and Rural Development Act (CONACT) to mean a farmer or rancher who is a member of a group whose members have been subjected to racial, ethnic, or gender prejudice because of their identity as members of a group without regard to their individual qualities.
3 CRP enrollment is constrained by a provision in the 2014 Farm Bill that reduces the maximum CRP acreage authorized.

1 Conservation Reserve Program enrollment is constrained by a provision in the 2014 Farm Bill that reduces the maximum CRP acreage authorized.
2 New measure created during FY2015. This is the number of farms enrolled in PLC, ARC-CO, and ARC-Individual combined.

Organization’s History

The Farm Service Agency (FSA) was established on October 13, 1994, pursuant to the Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994, Public Law (P.L.) 103-354, as amended by the Federal Agriculture Improvement and Reform Act of 1996, P.L. 104-127. The predecessor agencies to FSA includes portions of the Agricultural Stabilization and Conservation Service (ASCS) [Farm Programs and Conservation Programs] and the Farmers Home Administration (FmHA) [Farm Credit Programs].

FSA administers certain programs authorized by the Agricultural Act of 2014 (P.L. 113-79), commonly called the 2014 Farm Bill, the Consolidated Farm and Rural Development Act (CONACT), and other statutes.
Biographies of career staff in key leadership positions

**Chris Beyerhelm**  
**Associate Administrator for Operations and Management and Lead for USDA Land Tenure Initiative**  
202-690-2056, Chris.Beyerhelm@wdc.usda.gov

Chris Beyerhelm was selected to serve as the Associate Administrator for Operations and Management in March 2015. In this position, Beyerhelm is responsible for overseeing the Farm Service Agency’s budget, finance, administrative, management and internal control functions.

Beyerhelm previously served as Deputy Administrator for Farm Loans Programs where he oversaw a $20 billion loan portfolio and managed the direct and guaranteed lending programs at FSA.

Prior to that, Beyerhelm worked as the Assistant Deputy Administrator for Farm Loan Programs. After graduating with a bachelor's degree in business administration from Simpson College in Indianola, Iowa, Beyerhelm began working with FSA where he has served in various capacities for the past 35 years.

Before coming to Washington, D.C., he served as Farm Loan Chief for the Iowa Farm Service Agency from 1991 to 2006.

Beyerhelm grew up in Iowa and now resides in Virginia with his wife Barb. They have two adult children and nine grandchildren.

**Brian S. Garner, Sr.**  
**Director of the Office of Civil Rights**  
202-401-7197, Brian.Garner@wdc.usda.gov

Brian S. Garner, Sr., was selected to serve as the Director of the Office of Civil Rights for the Farm Service Agency in March 2013.

He is responsible for providing leadership and direction in the development and implementation of civil rights policies, programs and procedures while managing equal employment opportunity issues, enforcing civil rights compliance and administering all fact-finding, investigative and resolution processes related to discrimination complaints.

Prior to coming to FSA, Garner served as Chief of the Program Investigations Division in the USDA Office of the Assistant Secretary for Civil Rights, where he conducted civil rights complaint investigations throughout the United States. Before that, he worked as Chief of the Compliance and Program Analysis Branch for the Farm Service Agency, where he processed program complaints alleging discrimination.
A retired U.S. Marine, Garner spent 23 years serving his country as an instructor, recruiter, inspector and leader. The culmination of his military service resulted in the awarding of the Meritorious Service Medal for sustained exemplary performance.

Born and raised in Camden, N.J., Garner received his Bachelor of Arts Degree from Regent College. He and his wife reside in Southern Maryland and have two adult children and four grandchildren.

Joy Harwood
Director of the Economic Policy Analysis Staff
202-720-0053, Joy.Harwood@wdc.usda.gov

Joy Harwood is director of the Economic and Policy Analysis Staff (EPAS), a position she has held since March 2006. Her staff offers current insights into the market and policy issues affecting commodity programs, the farm credit situation, and the Conservation Reserve Program (CRP), and is frequently called upon to brief policy officials on a wide variety of topics. EPAS analysts contribute to the monthly interagency process that produces USDA's monthly World Agricultural Supply and Demand Estimates report. EPAS is also responsible for tracking foreign investment in agricultural land under the Agricultural Foreign Investment Disclosure Act and managing the Federal Register and regulatory process for the agency.

Prior to moving to FSA, Harwood spent 19 years at USDA's Economic Research Service (ERS), where she served as deputy director for Market Outlook from 2001 to 2006, and chief of ERS's Field Crops Branch from 1996 to 2000. Earlier in her career, she managed ERS's risk management research project where she helped analyze and assist in the development of revenue insurance and other new programs for the USDA's Risk Management Agency.

Harwood is a five-time recipient of the Secretary's Honor Award, one of the highest awards given by the Secretary of Agriculture. In 1996, she was named "USDA Economist of the Year." She co-taught the USDA Graduate School course, "Understanding USDA's Farm Programs" over a 10-year period with her husband, Craig Jagger, who was chief economist for the House Committee on Agriculture until his retirement. Harwood worked for Senator Robert Dole as a Legis Fellow during the 1990 Farm Bill Debate, was acting Associate Administrator of the Risk Management Agency during the summer of 1998, and was on detail to the International Trade Commission in 2004.

A native of Illinois, Harwood grew up on a corn and soybean farm that has been in her family since the 1840s. She earned her bachelor's degree in agricultural economics from the University of Illinois, and master's and doctorate degrees in agricultural economics from Cornell University. Harwood and her husband have two daughters and reside in Maryland.
Radha Sekar  
**Director of the Office of Budget and Finance**  
202-720-0159, Radha.Sekar@wdc.usda.gov

Radha Sekar was selected to serve as the Chief Financial Officer (CFO) for the Farm Service Agency in April 2015.

As the CFO, Sekar serves as the principal fiscal officer for FSA, providing advice on all financial management and budgetary matters, including the availability of appropriations and allocation of all other federal funding, audit issues, financial management initiatives, and any matters that could affect the financial resources of FSA.

In her new capacity, Sekar oversees a $30 billion budget in borrowing authority for CCC-financed programs, a multi-billion-dollar budget for FSA discretionary programs and a domestic and international credit program portfolio of $28 billion. Prior to accepting the CFO position, Sekar served as CFO and Chief Management Officer for the Immigration and Customs Enforcement (ICE) at the Department of Homeland Security.

Sekar is a federal senior executive and former partner in a major public accounting firm with more than 20 years of experience in financial management, human capital management, leadership development, and organizational change. She is a graduate of State University of New York at Buffalo with a Master of Business Administration degree and a bachelor’s degree in computer science. She is also a chartered accountant (similar to a certified public accountant) in India and holds a bachelor’s degree in mathematics from the University of Madras, India.

Sekar is a native of India and resides in Washington, D.C., with her family.

Robert Stephenson  
**Director, Office of Business and Program Integration**  
202-720-4019, Robert.Stephenson@wdc.usda.gov

Robert Stephenson is the Agency’s Director for the Office of Business and Program Integration for the Farm Service Agency. He also serves as the Secretary for Commodity Credit Corporation (CCC) which funds most of the USDA commodity, export, and some of conservation programs. As Director, Mr. Stephenson provides leadership and oversight for key Agency-wide programs and areas including appeals, annual and strategic planning, audits, cooperative agreements, enterprise risk management, investigations, litigation, operations review and analysis, and performance reporting.

From 1991 through 2014, Mr. Stephenson served as Deputy Director then later served as the Director of the FSA’s Conservation and Environmental Programs Division (CEPD). He managed key agency programs and areas including the Conservation Reserve Program, Conservation Reserve Enhancement Program, Emergency Conservation Program, Voluntary Public Access and Habitat Incentive Program, Biomass Crop Assistance Program, and hazardous waste activities of the agency and CCC.
Mr. Stephenson previously served as Deputy Director of the Southwest Area, Staff Assistant in the Midwest Area, hearing officer with the Agency’s Appeals Staff, and County Executive Director of the Decatur County office in Indiana. During the 2014 Farm Bill debate, he was detailed to the U.S. House of Representatives where he served on the Committee on Agriculture and worked on the Conservation, Credit, Research, and Energy Titles.

In 2015, he received USDA’s Abraham Lincoln Honor Award and in 1997, 2000, and 2003, he received USDA Honor Awards for Excellence. He is a 2000 graduate of the Federal Executive Institute’s Leadership for a Democratic Society Program and received the Vice President’s Hammer Award in 1999.

Stephenson currently owns the family farm where he was raised. After graduating from the Indiana University School of Business, he returned to his family’s farm until he joined the Department of Agriculture in 1984.

**Darren Ash**
**Chief Information Officer**
202-720-5320, [Darren.Ash@wdc.usda.gov](mailto:Darren.Ash@wdc.usda.gov)

Darren Ash was selected to serve as the Chief Information Officer (CIO) for the Farm Service Agency in March 2016.

As CIO, he sets and leads the strategic direction for FSA’s Information Technology Services Division while working in partnership with numerous USDA agencies to provide information resources for policy and decision making. In this position, Ash provides guidance and oversight to technology and business system’s modernization projects as well as development and acquisition of new information technology systems and services for the agency.

Prior to this position, Ash served nearly nine years as the CIO for the U.S. Nuclear Regulatory Commission (NRC). He also served as NRC's Chief Freedom of Information Act Officer, senior agency official for Records Management, and senior accountable official for Open Government. As CIO, he co-chaired the senior-level IT Investment Board with the Chief Financial Officer and was a member of NRC’s Executive Resources Board.

Ash worked as the Department of Transportation's (DOT) Associate Chief Information Officer for IT Investment Management from 2005 to 2007. For close to two years, he led DOT’s information assurance and security, privacy, enterprise architecture, capital planning, and information resource management activities. Ash began his government career with the Internal Revenue Service where he supported the agency's modernization program, with a focus on project management, economic analyses, and capital planning.

A native of California, Ash received a Bachelor of Arts degree in international studies from The American University, a Master of Public Administration from Syracuse University and a Master of Science in information systems technology. He and his family reside in Potomac, Maryland.
Mark Rucker  
Deputy Administrator for Management  
202-720-3834, Mark.Rucker@wdc.usda.gov

Mark Rucker was selected to serve as the Deputy Administrator for Management for the Farm Service Agency in December 2012. In this position Rucker is responsible for the oversight of the Acquisition Management Division, the Emergency Preparedness Division, the Human Resource Division and the Management Services Division. He also manages the Homeland Security functions for the Farm Service Agency.

Rucker previously served as the Logistics and Facility Division Director for USDA’s Food and Nutrition Service (FNS) where he planned, implemented and coordinated logistical support to regional and field offices. In this role he also provided leadership over real property, space utilization, minor construction, personal security and fleet management. At various times while with FNS Rucker served as the Acting Deputy Administrator for Management, Acting Civil Rights Division Director and Property Management Branch Chief.

Prior to joining to USDA, Rucker served with the U. S. Marine Corps where he retired in 2001 after serving 23 years as a Logistics and Quality Assurance Officer and Supply Administration and Operations Chief. In those positions he planned and directed the work of several branches, managed property control procedures and improved communication processes. Rucker received a meritorious service medal award for improving morale by developing a strong team atmosphere that developed a high level of performance.

A native of Queens, N.Y., Rucker received his Bachelor of Arts Degree in Workforce Education and Development from Southern Illinois University and his Master of Arts Degree in Human Resource Management from National University.

Thomas Mulhern  
Human Resources Director  
202-260-9025, Thomas.mulhern@wdc.usda.gov

Thomas Mulhern is the Director of Human Resources for the Farm Service Agency and the Risk Management Agency. He has served in this role since May 2015.

As the director, Mulhern serves as the senior advisor and official for FFAS-wide human resources and human capital programs and management. He also functions as the primary overseer for all policies and regulations as set forth by the mission statement, the Department, Executive Orders, Office of Personnel Management, Office of Management and Budget and other federal agencies, ensuring a customer centric and results-oriented mission area.

Mulhern joins FFAS with 30 years of federal employment in human resources. Recently, he served four years as the Director of Human Resources for the Department of the Interior, where he was responsible for overall human capital programs for the Department’s 70,000 plus workforce. Prior to that, Mulhern worked at the Department of Homeland Security as the Deputy Chief Human Capital Officer for Immigration and Customs Enforcement and as
Administrative Appeals Officer for the Transportation Security Administration. He also served 18 years in the Department of Justice, United States Marshals Service. He entered federal service as a Presidential Management Intern.

Mulhern earned a Bachelor of Art degree in education from Bloomsburg University of Pennsylvania and has a Master of Art degree in labor relations from the Indiana University of Pennsylvania School of Labor and Industrial Relations. He taught high school courses in economics, government and AP history in Loudoun County public schools. Mulhern is a native of Rockville, Maryland and currently resides in Germantown, Maryland with his wife Katie and three children.

Sandra G. Wood
Acting Deputy Administrator for Commodity Operations
Assistant Deputy Administrator, Commodity Operations
202-720-3571, Sandra.Wood@wdc.usda.gov

Sandra Wood is the Assistant Deputy Administrator and acting Deputy Administrator for Commodity Operations. In this position, Wood provides policy and operational guidance to the Commodity Operations Division in Washington, D.C. and the Kansas City Commodity Office.

In 2006, Wood became a Branch Chief in the Commodity Operations Division, the organization that she has broad responsibility for now and which began her career in international food aid. She became the Assistant Deputy Administrator for Commodity Operations in 2008, assuming in January 2009 the Acting Deputy Administrator position for which she held in interim for six months.

Wood began her Federal government career at the Farm Service Agency (FSA) in the Virginia FSA County Operations Trainee Program and progressed into other positions, including; County Executive Director and then District Director with oversight for eighteen counties. During this tenure, she was also an Equal Opportunity, Civil Rights and Sexual Harassment facilitator providing training across the state and nationally; a Virginia State Civil Rights Coordinator; she obtained Farm Loan approval authority, and was a National Advanced Facilitator for District Directors, facilitating training and development for District Directors across the country.

Wood attended Saint Paul’s College receiving a Bachelor of Science degree in Business Administration, concentrating in the field of Management. She is also a 2000 graduate of the Graduate School’s Executive Leadership Program.
Bradley Karmen
Assistant Deputy Administrator for Farm Programs
202-720-4635, Brad.Karmen@wdc.usda.gov

Bradley Karmen was selected to serve as the Assistant Deputy Administrator for Farm Programs in USDA’s Farm Service Agency, a career Senior Executive Service position, in November 2015. In this position, he is responsible for developing and implementing policies relating to federal farm programs.

Upon graduation from George Washington University with a Master of Business Administration degree, Karmen began his career at USDA, which has now spanned more than 36 years. He is a veteran of implementing six farm bills, dating back to 1985. Karmen has been selected for numerous details over the years: the Senate Committee on Agriculture, Nutrition and Forestry in 2010; the Office of the USDA Chief Economist in 2008; and was selected as a LEGIS Congressional Fellow at the House Agriculture Committee in 1994. In 1998, Karmen spent three weeks in China studying China’s oilseed sector.

Karmen is a six-time recipient of the Secretary's Honor Award, the highest award given by the Secretary of Agriculture. He lives in Lovettsville, Virginia on his wife’s family farm and has three daughters and a son.

James Radintz
Deputy Administrator for Farm Loans Programs
202-720-4671, Jim.Radintz@wdc.usda.gov

James F. (Jim) Radintz was appointed Deputy Administrator for Farm Loans Programs in the USDA’s Farm Service Agency (FSA) in September 2015. In this position, Radintz oversees a $23.6 billion loan portfolio and provides leadership, management and direction to the direct and guaranteed lending programs. This includes management of annual authorizations of over $6 billion in new loans and loan guarantees, and a portfolio of direct and guaranteed loans of $21 billion.

Prior to this position, Radintz served as Assistant Deputy Administrator for Farm Loans Programs where he assisted the Deputy Administrator in providing leadership, policy direction, and management of credit origination, underwriting, and portfolio management for FSA farm lending in all 50 states, Puerto Rico and Pacific Protectorates.

Radintz is a three-time recipient of the Secretary's Honor Award, one of the highest awards given by the Secretary of Agriculture. He was recognized with an individual honor award from the Secretary for “Personal and Professional Excellence” in 2013.

Radintz grew up on a family farm in Iredell County, North Carolina. He graduated summa cum laude with a Bachelor’s degree in agriculture from North Carolina State University and received a Master’s of Business Administration (MBA) in financial management from Virginia Tech. He is also a graduate of the Federal Executive Institute and completed the Senior Executive Fellows Program at Harvard University. Radintz’s 35-year federal career includes
United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

service as a county supervisor in USDA field offices, and as Senior Loan Officer, Branch
Chief, and Director of Loan Making.

Isabel Benemelis
Deputy Chief, Public Affairs Branch, Office of External Affairs
202-720-7809, Isabel.benemelis@wdc.usda.gov

Isabel M. Benemelis is a communications specialist with 28 years of experience in public
affairs, Hispanic and specialty media outreach, and radio and television production. She is
Deputy Chief of Public Affairs at the USDA Farm Service Agency’s Office of External Affairs,
serving as liaison to USDA’s Office of Communications for clearance of communications materials and responds to sensitive media and public inquiries. She has been
with FSA since 2008 and helped develop communications strategies and materials for
implementation of the last two Farm Bills. Benemelis is also division lead on a multilingual
effort to comply with the Department of Justice’s mandate to improve access to services for
people with limited English proficiency.

Prior to coming to USDA, Benemelis worked at the Department of the Interior’s
Communications Office for five years, where she served as media relations specialist, Hispanic
media outreach coordinator, and content manager for Interior’s website.

Benemelis acquired valuable crisis communication experience as assistant director of the
Public Information Office at the Fairfax County Police Department where she managed high-
profile cases such as the Mohammed/Malvo “DC Sniper” and the Mir Aimal Kasi “CIA
Shooter” cases that garnered international media attention.

Her leadership experience and knowledge of broadcast media applications were well used
while serving as vice president of programming for the Hispanic Communications Network, a
producer of NPR-style programming designed to educate and empower the nation’s Latino
population. Other broadcast experience includes six years as a radio producer for the United
States Information Agency’s Voice of America division and four years as an associate
producer of PBS feature documentaries and series on foreign affairs.

Benemelis received a Bachelor of Science degree from the Georgetown University School of
Foreign Service and also attended Georgetown University for graduate work in Latin American
Studies. A native Spanish speaker born in Camaguey, Cuba, she has lived in the Washington,
D.C., metro area since 1971 and currently resides in Potomac Falls, Virginia with her husband
and their three West Highland Terriers.

J. Latrice Hill
Assistant to Deputy Administrator for Field Operations
202-690-1700, Latrice.hill@wdc.usda.gov

J. Latrice Hill serves as an Assistant to the Deputy Administrator of Field Operations, where
she is Director of the Farm Service Agency’s (FSA) Office of Program Education and
Stakeholder Engagement. In this position, Hill provides outreach policy and guidance to FSA leadership and field staff located in FSA's 2,100 offices.

In 2011, Hill was selected as the Outreach Program Lead in the Field Operations Division, issuing the first ever established policy for program outreach. Hill was later selected as Director of Outreach in 2013.

Hill began her federal career as a clerk with FSA. She later served in the positions of loan officer and district outreach coordinator where she was responsible for determining feasibility, assessing financial situations and risks, approving and servicing borrower farm loan accounts for six counties. With a strong background in communications and passion for serving others, Hill was later selected to serve as the FSA State Public Relations & Outreach Specialist, overseeing outreach activities in 71 counties.

In that position, Hill received several awards and recognition for her collaborations and work with rural farmers and students as well as being appointed by two US Secretaries of Agriculture to serve on the National Advisory Committee for Beginning Farmers and Ranchers for three two-year terms.

Hill continues to be an active volunteer in the community and is a member of numerous organizations.

A native of Mississippi, Hill received her bachelor's degree in Business Administration from Belhaven University in Jackson, Mississippi.

**Biographies of political staff in key leadership positions**

**Val Dolcini**  
**Administrator**  
202-720-6215, Val.Dolcini@wdc.usda.gov

Val Dolcini was selected to serve as the Administrator for the Farm Service Agency in September 2014. He previously served as State Executive Director of the California Farm Service Agency, a position he was appointed to in 1999 by President Bill Clinton and again in 2009 by President Obama. Dolcini also served as the acting Farm Service Agency Administrator in 2011.

As Administrator, Dolcini is responsible for overseeing the administration of farm commodity and conservation programs, farm loan programs, and certain disaster programs. Dolcini also serves as the executive vice president of the Commodity Credit Corporation.

Dolcini has many years of public and private leadership experience. Prior to joining the Obama Administration, he managed public outreach activities for Accenture LLC, a global consulting firm. In that position, he strategized with business teams about relationship development and
consulted on a wide range of political matters.

He previously served in a senior staff position for the Governor and Lieutenant Governor of California, as well as members of the U.S. House of Representatives.

A fifth-generation Californian and a native of Davis, California, Dolcini has served on numerous non-profit boards and commissions in his community. He received his Bachelor’s degree in history from San Francisco State University and a juris doctorate from Golden Gate University School of Law.

Mike Schmidt
Associate Administrator for Policy and Programs
202-720-6215, Mike.Schmidt@wdc.usda.gov

Mike Schmidt was selected to serve as the Associate Administrator for Policy and Programs in August 2015. In this position, Schmidt is responsible for overseeing the Farm Service Agency’s policy and activities related to farm programs, farm loan programs, commodity operations and external affairs.

Schmidt previously served as Deputy Administrator for Farm Programs where he oversaw all FSA Farm Programs under the Production Emergencies and Compliance Division, Conservation and Environmental Programs Division and Price Support Division.

Prior to joining FSA, Schmidt served as acting Chief of Staff and Senior Advisor in USDA’s Marketing and Regulatory Programs mission area. He also spent a year as acting Chief of Staff for the USDA Grain Inspection Packers and Stockyards Administration (GIPSA).

Before coming to USDA, Schmidt worked seven years on Capitol Hill in various capacities, including Legislative Assistant and Senior Legislative Assistant for Senator Russ Feingold, where he advised the Senator on agriculture, telecommunications, and transportation and science issues. In 2004, Schmidt was awarded the Congressional Science Fellowship sponsored by the American Society of Agronomy, Crop Science Society of America, and Soil Science Society of America in the Office of Senator Charles Schumer, where he was the Legislative Assistant for agriculture.

Schmidt received his undergraduate degrees in Environmental Science and Biology from Virginia Tech and a Master’s of Science degree in Public Understanding of Environmental Change from the University College London.

Brad Pfaff
Deputy Administrator for Farm Programs
202-720-3175, Brad.pfaff@wdc.usda.gov

Brad Pfaff was appointed deputy administrator for Farm Programs in the USDA’s Farm Service Agency in January 2016. In this position, Pfaff oversees all FSA programs under the Production Emergencies and Compliance Division, Conservation and Environment Programs
United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

Division, and Price Support Division. Prior to his appointment, he served six years as the FSA State Executive Director in Wisconsin. Before joining USDA, Pfaff served on the staff of a Wisconsin U.S. Senator and a Wisconsin member of the U.S. House of Representatives. Pfaff received a Bachelor of Science degree in Public and Environmental Administration from the University of Wisconsin-Green Bay and a Masters of Public Administration degree from George Mason University. Raised on a dairy farm in western Wisconsin, he and his wife are the proud parents of two children.

Gregory Diephouse
Deputy Administrator for Field Operations
202-720-8202, Gregory.diephouse@wdc.usda.gov

The White House appointed Greg Diephouse to be the Farm Service Agency’s Deputy Administrator for Field Operations in June 2013.

Diephouse has served in multiple capacities in the Obama Administration, including a nine-month detail as a Senior Advisor to the Acting Federal Chief Performance Officer in the White House Office of Management and Budget. In that position he helped track and implement key recommendations of the President's Jobs Council and staffed a working group comprised of former U.S. Senators and Senior White House personnel that was statutorily charged with publishing recommendations to streamline paperwork requirements for Executive Nominations.

Diephouse’s appointments at USDA include leading the Office of Executive Secretariat through a transformation process that yielded an 85 percent reduction in overdue secretarial correspondence. He also served as Chief of Staff to the Assistant Secretary for Administration, helping to launch the Secretary's Blueprint for Stronger Services and managing the response to the Civil Rights Assessment conducted and published by Jackson Lewis.

Prior to moving to Washington, D.C., Diephouse served more than four years as an executive in the state of Illinois, most notably as Director of Strategic Planning at the Illinois Department of Human Services.

Diephouse earned both an MBA and an MPP from the University of Chicago and spent the first two and a half years of his career volunteering in Chicago and Honduras.

Todd Atkinson
Acting Director of External Affairs
202-720-9933, Todd.Atkinson@wdc.usda.gov

Todd Atkinson was appointed in May 2013 as the Acting Director for the Office of External Affairs for the Farm Service Agency. In this capacity he oversees the offices of Public Affairs, FOIA and Legislative Affairs.

Previously, Atkinson served as senior policy advisor and chief of staff to the FSA Administrator and senior policy advisor to the Under Secretary for Farm and Foreign Affairs.
Agricultural Services. Prior to joining USDA, Atkinson was appointed to the Office of Policy for the Environmental Protection Agency where he was the EPA representative on the President’s Biofuels Interagency Working Group. He also served on the Obama Presidential Transition Team for the Department of Energy and the nomination preparation teams for Energy Secretary Steven Chu and Interior Secretary Ken Salazar.

In February 2007, Atkinson became one of the first policy advisors and an early developer of the Obama for America energy and environment agenda, as well as the agriculture and transportation committees.

Beginning his career in 1985 at the Bureau of Legislative Affairs at the Illinois Department of Transportation, Atkinson has worked for 20 years on the staff of three U.S. Senators from Illinois, including four years as senior policy advisor on energy, environment, agriculture and transportation for then-Senator Barack Obama during his tenure on the Senate Environment and Public Works Committee. Atkinson is a 2012 recipient of the USDA Secretary’s Award and the 2011 FSA Administrator’s Award for reforming the Biomass Crop Assistance Program established in the 2008 Farm Bill.

Atkinson has an MBA from the University of Maryland and an undergraduate degree from the University of Illinois in Urbana. A native of Bethany, Ill., Atkinson’s family farm was homesteaded by his great-great-great-grandfather in 1843 in Shelby County, Ill.

---

1/ The FY 2015 and FY 2016 Appropriation Acts limited spending on information technology for farm program delivery, including MIDAS to $132.3 million in FY 2015 and $129.6 million in FY 2016

2/ The 2014 Farm Bill moved the source of funding for disaster programs from the Agricultural Disaster Relief Trust Fund to CCC
United States Department of Agriculture  
2016 Presidential Transition  
Farm Service Agency (FSA)

Salaries & Expenses - FSA’s FY2016 enacted funding level of $1.52 billion supports federal and non-federal staffing to administer its discretionary and mandatory programs. In FY2016, FSA’s funding sources include direct appropriations ($1.2 billion), credit reform transfers ($310 million) and reimbursements ($77 million). Of the $1.52 billion appropriated to FSA, approximately 93 percent funds salaries and benefits, rent and IT expenses with remaining funding supporting operating expenses such as supplies, printing, postage, transportation and equipment. While FSA has taken significant steps during the past few years to reduce its operating expenses by streamlining operations through administrative efficiencies, there are still a number of operational expenses that are not controlled by FSA such as mandatory Departmental expenses (Greenbook charges), travel expenses related to compliance visits and county office rent expenses for more than 2,100 USDA County Offices. In FY2017 and FY2018, FSA anticipates a substantial increase in county office rent expenses due to the renewal of leases that have expired or will expire in FY2017 and FY2018. Most of these leases are expected to have significant increases because they have not had rent adjustments in many years. FSA projects an increase in County Office rent expenses of $5 million in FY2017 and $11.6 million in FY2018 for approximately 700 leases.

Farm Loans – FSA has seen the demand for farm loans rise in recent years. Tighter credit markets and recent declines in the farm economy both contribute to this increased demand. The number of direct operating loans has risen from 13,000 to 14,000 in the mid-2000’s, to 22,000 to 24,000 in the last three years. Direct ownership loans have increased as well, from about 3,000 in the mid-2000’s to about 5,500 over the last three years. The change in guaranteed operating and ownership loans has not been as great, but demand has remained strong in those areas as well. FSA has strived to meet the overall demand but has concentrated on the targeted
groups of new, beginning and socially disadvantaged farmers and ranchers through a number of initiatives. Even with the overall decline in the current farm economy, borrowers have maintained a low default and delinquency rate for both ownership and operating loans, resulting in lower subsidy\(^1\) rates than in previous years. FSA has also been able to make more funding available for direct operating and ownership loans at a reduced budget cost by raising the borrower rate by 0.5 percent, to a total of 1 percentage point above the applicable Treasury rate. Together with the relatively low default rate, FSA has been able to increase the loan level available while reducing the appropriated funding needed to support these increased loan levels.

Commodity Credit Corporation (CCC) – CCC is a wholly-owned Government corporation created in 1933, and federally chartered in 1948. Its mission is to assist in stabilizing, supporting, and protecting farm income and prices, help maintain balanced and adequate supplies of agricultural commodities, help in the orderly distribution of these commodities, and assist in the conservation of soil and water resources. The CCC has no operating personnel. To accomplish its mission, multiple USDA agencies have delivered CCC programs for more than 80 years. Today, CCC activities are carried out primarily by the personnel of FSA. The Foreign Agricultural Service, the Natural Resources Conservation Service, and other USDA agencies and offices also carry out CCC activities. FSA also provides accounting services, budget execution, preparation of financial statements, and systems development for CCC.

---

\(^1\) The subsidy rate reflects the net present value cost for each dollar of credit assistance. It is comprised of four components—defaults, net of recoveries; interest; fees; and all other.
Enterprise Workforce Data

1/ Outside of the National Capital Region, FSA has Headquarters employees located in Kansas City, St. Louis, and Salt Lake City. FSA also has Headquarters employees based in other locations across the United States. For example, in FY 2016, there were 83 employees working remotely in other locations.

2/ The table below reflects the Field Offices (total State Office Federal (GS) and County Office Non-Federal (CO) actual staff year usage history).

United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

Current Workforce by Location

Field Offices, 91%
Headquarters, 9%

Workforce by Program Area

Commodity Operations: 2%
Farm Loan Programs: 29%
Production, Emergencies, Compliance: 25%
Price Support: 9%
Conservation and Environmental: 36%
As of October 3, FSA employs a total workforce of 12,266 employees, comprised of Federal and non-Federal (County) staff. These employees include permanent and temporary, full time and part time, and intermittent staff. Note that the workforce of 12,635 is individual employees and not staff years. Federal staff are employed under Title 5 of the Code of Federal Regulations and non-Federal (County) staff are employed under Title 7.

- FSA: 12,266 employees
  - FSA full-time, permanent: 11,279
  - FSA part-time, permanent: 33
  - FSA full-time, temporary: 372
  - FSA part-time, temporary: 27
  - FSA full-time, intermittent: 555 (on-call 20 hrs or less per week)

The breakdown by Federal and non-Federal (County) follows:

- Federal: 4,142 employees
  - Federal full-time, permanent: 4,078
  - Federal part-time, permanent: 5
  - Federal full-time, temporary: 59

- Non-Federal (County): 8,124 employees
  - County full-time, permanent: 7,201
  - County part-time, permanent: 28
  - County full-time, temporary: 313
  - County part-time, temporary: 27
  - County full-time, intermittent: 555 (on-call 20 hrs or less per week)

- About 28 percent of Federal employees and 21 percent of County Office permanent employees are eligible to retire within the next year.

- About 9 percent of all employees are in the Headquarters locations of Washington, D.C., Kansas City, St. Louis, and Salt Lake City.

- FSA has 2,124 County Offices and 51 State Offices including Puerto Rico; where 91 percent of the workforce are located.

- About 93 percent of Staff Years are used to directly implement FSA Farm Programs, Farm Loan Programs, and Commodity Operations.

- About 55 percent of all FSA employees are Program Technicians and 10 percent are either Loan Technicians or Specialists.

- The State Executive Director (SED) is a Schedule C political position appointed by and who serves at the pleasure of the President. This position reports to the Deputy
United States Department of Agriculture  
2016 Presidential Transition  
Farm Service Agency (FSA)

Administrator for Field Operations. The SED oversees FSA operations and agricultural policy implementation in the State, works with the State Committee to administer FSA programs and County Office operations, develops and maintains stakeholder relationships with customers and other agencies (Federal, State, Tribal, and local). Other duties include representing the President, Secretary, and Administrator, managing Federal and County staffing levels, managing the State’s budget allotment, overseeing personnel operations within the State, managing all FSA program areas, providing oversight, support and assistance to County Offices, directing Outreach, Public Affairs, and intergovernmental relations activities, and coordinating and communicating with commodity groups and other agricultural stakeholders.

- **FSA State Committees (STC)** were established under the Soil Conservation and Domestic Allotment Act, 16 USC 590h, as amended. The STCs are Schedule A political positions, appointed by the Secretary and serve at the pleasure of the Secretary for such term as he may establish. Currently, STCs are appointed for terms of one year, beginning in January. Subject to the approval of the Secretary, members are reappointed annually. STCs are considered Special Government Employees (18 USC 202), who serve less than 130 days in any 365-day period. The STCs report to the Deputy Administrator for Field Operations and are the supervisory authority for County Committees in the State. STCs hear program and County Office personnel appeals and complaints, make program decisions in certain areas, maintain cooperative relationships with the agricultural community in their states, and keep the Secretary and FSA informed of issues affecting producers. Generally, STCs meet for one to three days per month to hear appeals and make program decisions. They maintain a collaborative relationship with the SED, who is responsible for overall, day-to-day management of FSA operations in the State.

- **FSA County Committees (COC)** were established under the Soil Conservation and Domestic Allotment Act, 16 USC 590h. Eligible producers elect COC members to three-year terms. Currently, there are 7,672 elected voting members and 1,015 non-voting advisors serving on FSA County Committees nationwide. COC’s are under the general supervision of the State Committee and are the eyes and the ears of the local agricultural community and have knowledge of agricultural trends. COCs hire the County Executive Director to manage the County Office and provide general oversight of office operations. COC’s hear producers’ and employees’ appeals, and also set program policy as required by the National and State office. The COC is tasked with ensuring efficient and orderly operations of the County Office. Generally, the COC meets one day per month to hear appeals and make program decisions, such as income safety-net loans and payments, including setting county average yields for price support commodities, incentive, indemnity and disaster payments for some commodities.

The Advisors on the COC are needed to be a voice for minority and women farmers and ranchers when there is an absence of elected or appointed socially disadvantaged (SDA) members. Minority and women farmers and ranchers represent a large portion of the farm population in many jurisdictional areas, but some communities are unable to elect a candidate to the Committee in the annual voting process. Public Law 107-171 granted the Secretary the authority to appoint one additional voting member to a County Committee to
United States Department of Agriculture  
2016 Presidential Transition  
Farm Service Agency (FSA) 

ensure the inclusion of SDA farmers and ranchers. The appointed member serves for one year. The Secretary appointed 78 voting SDA members for 2016.

The State Committees and County Committees provide input on the administration of FSA programs, including commodity price support loans and payments, conservation programs, disaster payments, and emergency programs.

County Committee members are a critical component of the day-to-day operations of FSA. County Committees help deliver and provide outreach for FSA Farm Programs at the local level. Farmers who serve on Committees help decide the kind of programs their counties will offer. They provide input on how to improve program delivery and they work to make FSA agricultural programs serve the needs of local farmers and ranchers, and help local farmers and ranchers know what programs are available.

- Temporary employees perform an important role in staffing offices when there are changes in permanent staff rosters, personnel emergencies or an employee’s need for extended time off, and where an office structure cannot support staffing a permanent position. As an aging workforce continues to separate from the rolls, short-term temporary employees are important to filling employment gaps.

In addition, temporary employees perform a significant role in FSA’s delivery of programs, such as during surges in activity when disasters and program sign-up periods occur. The success of FSA’s 2014 Farm Bill implementation and service to producers was made possible, in part, due to the assistance of additional temporary employees hired with additional funding made available through Title I administrative funding. States had the flexibility to meet 2014 Farm Bill workload demands through the use of temporary full-time and temporary intermittent (hourly) employees and additional County Committee meeting time. Beginning with FY2017, most of the Title I administrative Farm Bill funding has been expended and while some of the Farm Bill workload still remains, FSA has begun to reduce its temporary workforce. Without the Title I funding to maintain FSA’s temporary workforce, FSA will have an adjustment to make to sustain a high level of responsiveness to Title I program delivery and service to producers associated with key programs such as Agriculture Risk Coverage, Price Loss Coverage, Margin Protection-Dairy; an expanding workload to administer Marketing Assistance Loans, Farm Storage Facilities Loan Program, and the Non-Insured Crop Disaster Assistance Program.

- Of the Federal workforce, 33 percent are under a bargaining unit in Headquarters offices and in 13 States where a bargaining unit has been formed. The non-Federal County employees are represented by an employee association, the National Association of FSA County Office Employees (NASCOE). This association has exclusive rights to represent FSA County employees and can negotiate working conditions, similar to a union. They have those rights as they were formed in 1958, prior to Federal employees obtaining the right to engage in collective bargaining through labor organizations under Executive Order 10988, “Employee-Management Cooperation in the Federal Sector.” Other Federal employee associations that are recognized by FSA and are provided consultative (not negotiation) opportunities are National
To address the budget reductions stipulated in the Budget Control Act of 2012, FSA received authority to offer Voluntary Separation Incentive Payments (VSIP) and Voluntary Early Retirement Authority (VERA) between June, 2012, and November, 2013. These authorities have not been used since 2013.

VERA: 164 employees separated  
VSIP: 247 employees separated

In addition, due to budgetary limitations, FSA imposed a hiring freeze during November, 2012, to June, 2014.

While staffing reduction levels were achieved, the use of overtime and comp time increased due to the workload levels. Farm Loan Programs workload was rising, and has continued to rise as the number of loans and their required servicing has increased. With the use of VERA and VSIP, there was also a loss of employees with institutional knowledge of FSA programs. This created gaps in the distribution of a trained and experienced workforce.

The hiring freeze was lifted in the spring of 2014 and FSA Headquarter and State and County Offices were able to hire up to their funded staffing levels. Since that time, FSA maximized efforts to rehire permanent positions vacated during the hiring freeze.

II. Policies and Regulations

Statutory Authorities

• Agricultural Act of 2014 (2014 Farm Bill)—The 2014 Farm Bill, signed on February 7, 2014, remains in force through the 2018 crop year—and in the case of some provisions, beyond. It introduced several new Title I programs, including the Agriculture Risk Coverage and Price Loss Coverage (ARC/PLC) programs and the Margin Protection Program for Dairy (MPP-Dairy), and streamlined several conservation programs. Most FSA farm programs are authorized by Title I (commodities); Title II (conservation); Title IX (Biomass Crop Assistance Program, Feedstock Flexibility Program); and Title XII (Non-Insured Crop Disaster Assistance Program).

• Consolidated Farm and Rural Development Act (CONACT)—The CONACT provides authority for the farm operating, farm ownership, and emergency loans offered by FSA’s Farm Loan Programs. A sizeable proportion of FSA direct loans are reserved, by statute, for beginning and socially disadvantaged (by race, ethnicity, or gender) farmers and ranchers. The CONACT is permanent legislation and does not expire; however, it was most recently modified in Title V of the 2014 Farm Bill. The CONACT was signed into law in 1972, but stems from legislation originally enacted in 1961.
• **U.S. Warehouse Act (USWA)**—USWA provides the authority for Commodity Operations to license warehouse operators who store agricultural products. Warehouse operators that apply must meet USDA standards. Application is voluntary. Applicants agree to be licensed under the USWA, observe the rules for licensing, and pay associated user fees. USWA was originally enacted in 1916; it does not expire.

• **Commodity Credit Corporation Charter Act**—The CCC Charter Act, as amended, provides authority to assist agricultural producers through loans, purchases, payments, and other operations. The Charter Act also authorizes the sale of agricultural commodities to other government agencies and to foreign governments and the donation of food to domestic, foreign, or international relief agencies. The CCC has the authority to borrow up to $30 billion from the Treasury at any one time. These funds are used to implement the programs authorized under the CCC Charter Act and various other statutes, including the 2014 Farm Bill (largely Title I and II programs). The CCC Charter Act dates to 1948; it does not expire.

**Important Policies and Regulations**

Since September 1, 2015, FSA has published the following regulations and notices of funds availability (NOFA); there are currently no FSA regulations open for comment or pending clearance with the Office of Management and Budget (OMB). (Note: Only a few of the following rules were designated as significant by the OMB’s Office of Information and Regulatory Affairs, however all of the other rules listed below were high priority or substantive policy rules):

• The **Payment Limits and Payment Eligibility; Actively Engaged in Farming** final rule was published and implemented on December 16, 2015. The final rule was designated as significant. The final rule implemented changes as required by the 2014 Farm Bill.

• The **Agriculture Priorities and Allocations System** final rule was published and implemented on October 22, 2015. This rulemaking initiative was unique in that it is not a traditional FSA program, it is a USDA rule that was delegated to FSA many years ago. It was part of a larger initiative to establish consistent government-wide regulations for the Federal Priorities and Allocations System. The final rule was designated as significant. The final rule implemented the Defense Production Act.

• The **Environmental Policies and Procedures Compliance with the National Environmental Policy Act** and Related Authorities final rule was published and implemented on August 3, 2016. When the proposed rule was published, it was designated as significant; however, the final rule was designated as not significant in part because there were only 24 comments on the proposed rule. The final rule updated and consolidated the previously separate FSA regulations into one and included additional categorical exclusions to allow FSA staff to focus on priority environmental reviews. This was the first update of the regulations in approximately 30 years.
The Margin Protection Program for Dairy (MPP-Dairy) final rule was published and implemented on April 13, 2016. The final rule was designated as not significant. It implemented changes to MPP-Dairy to address intergenerational transfers in response to comments received on a previous final rule published in 2014. The 2014 final rule implemented the new MPP-Dairy program authorized in the 2014 Farm Bill, it was designated as significant.

The one-time Cotton–Ginning Cost-Share (CGCS) Program Payments to Cotton Producers was published and implemented on June 6, 2016, through a NOFA. The CGCS Program provided payments to eligible, financially distressed cotton producers to assist with expanding and maintaining the domestic marketing of cotton.

The one-time Biofuel Infrastructure Partnership (BIP) grants were published and implemented on June 16, 2015, through a NOFA. BIP provided grants to States to expand the ethanol market through infrastructure development, including the installation of blender pumps and tanks.

USDA has worked with the United States Navy on a joint initiative, Farm-to-Fleet, since December 2013. It makes biofuel blends part of regular, operational fuel purchases by incorporating the acquisition of biofuel blends into regular Department of Defense domestic solicitations for jet engine and marine diesel fuels.

The Farm Storage Facility Loan (FSFL) Program; Portable Storage Facilities and Reduced Down Payment for FSFL Microloans final rule was published and implemented on April 29, 2016. It implemented several changes to the existing FSFL program to provide additional options that farmers had been requesting and added a microloan option for loans up to $50,000. The final rule was designated as not significant and the changes made by it did not require a proposed rule.

The Direct Farm Ownership Microloan final rule was published on January 21, 2016. The final rule (with the opportunity for public comment) was designated as not significant. Prior to this rule, microloans had only been available for direct farm operating loans.

The new Highly Fractionated Indian Land (HFIL) Loan Program final rule was published on December 1, 2015. The final rule, which implemented changes authorized by the 2014 Farm Bill, was designated as not significant. Under this program, FSA can establish a revolving fund to lend to qualified “intermediary” tribal entities, who can then re-lend to tribal members seeking to purchase fractionated land interests.
On average over the past five years, FSA published approximately 28 regulations and notices annually in the Federal Register. This total includes new regulations, changes to existing regulations, and a variety of program notices, including occasional NOFAs, environmental review notices, information collection notices, and other program announcements. New regulations generally implement new requirements of the current farm bill or other legislation.

Between 2008 through 2016, FSA has published an average of slightly more than 2 “new” regulations and NOFAs per year; the remaining regulations revise existing programs. Approximately 50 percent of the “new” regulations published each year have been designated as significant or economically significant by OMB’s Office of Information and Regulatory Affairs.

In years in which FSA is implementing a farm bill, the volume of “new” and significant or economically significant regulations increases. In 2014, FSA published 10 regulations associated with major new farm bill program actions (e.g., ARC/PLC, MPP-Dairy, Adjusted Gross Income and Payment Limits). In 2015, there were five farm bill regulations and in 2016, there was one farm bill regulation. Four NOFAs were all associated with farm bill implementation.

**Overview of the policy/regulation review process**

Many FSA regulations are implemented in response to farm bills. Due to the nature of FSA regulations and the legislative exemptions that are provided for certain rulemaking requirements, FSA is often able to expedite rulemaking (in other words, in many cases, the rule can be published as a “final” rule and skip the “proposed” rule step).

Program staffs identify when a regulation is required and work closely with FSA’s Economic and Policy Analysis Staff (EPAS) regarding regulation development and analysis of costs and benefits. EPAS’s Regulatory Review Group works closely with program staffs on required documents and closely coordinates with all USDA and external reviewers, including the Office of Management and Budget and agencies involved in interagency review. FSA also has a close working relationship with the USDA Office of the General Counsel and the USDA Office of Budget and Program Analysis; FSA program staff and policy officials work with them regarding questions that arise in the implementation of new programs or changes to existing programs.

At the same time that regulations are being developed and moving through the legal and policy clearance process, many other activities are in process. Program staff are working with IT/automation staff to develop program software to be used by the county offices (e.g., signup and payment software). In addition, program staff (generally in Farm Programs and Farm Loan Programs) are working to develop detailed handbooks and directives that provide implementation directions consistent with the associated regulation and underlying law. Upon publication of a Federal Register document announcing a new farm bill program, a “rollout” package is often released, which includes a news release (typically announcing a signup period) and the posting of handbooks and additional FSA webpage content (involving new web pages “going live” or being updated).

2016 Presidential Transition
Farm Service Agency (FSA)

GAO and OIG Audits

**GAO Audits**

- Farm Program Modernization: Farm Service Agency Needs to Demonstrate the Capacity to Manage IT Initiatives

- USDA Farm Programs: Farmers Have Been Eligible for Multiple Programs and Further Efforts Could Help Prevent Duplicative Payments

- International Food Aid: Better Agency Collaboration Needed to Assess and Improve Emergency Food Aid Procurement System

- Farm Programs: Changes Are Needed to Eligibility Requirements for Being Actively Involved in Farming

- Farm Programs: Additional Steps Needed to Help Prevent Payments to Participants Whose Incomes Exceed Limits

- Farm Programs: USDA Needs to Do More to Prevent Improper Payments to Deceased Individuals

- Food Assistance: Briefing on U.S. Department of Agriculture's Food Assistance Procurement Process

- Disaster Assistance: USDA and SBA Could Do More to Help Aquaculture and Nursery Producers
United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

OIG Audits

- Farm Service Agency Livestock Forage Program, issued December, 2014.

- Farm Service Agency Noninsured Crop Disaster Assistance Program, issued October 2014.

- Fiscal Year 2012 Farm Service Agency Farm Assistance Program Payments, issued July, 2013.

- Fiscal Year 2011 Farm Service Agency Farm Assistance Program Payments, issued May, 2012.

- 2008 Farm Bill’s Changes to Payment Limitation, issued June, 2012.

Other Audits and Reports

Farm Service Agency: A Clear Path Forward to Providing the Highest Level of Customer Service, issued August, 2016. As directed by the Consolidated and Further Continuing
United States Department of Agriculture  
2016 Presidential Transition  
Farm Service Agency (FSA)

Appropriations Act of 2015, the Farm Service Agency contracted with the National Academy of Public Administration (NAPA) to conduct an independent review of its workload analysis methods and determine a clear path forward to ensure the agency continues to provide the highest level of customer service. The report was published by NAPA in September, 2016. [http://www.napawash.org/2016/1819-farm-service-agency-a-clear-path-forward-to-providing-the-highest-level-of-customer-service.html](http://www.napawash.org/2016/1819-farm-service-agency-a-clear-path-forward-to-providing-the-highest-level-of-customer-service.html)

III. Congressional Relations and Issues

Overview

MIDAS Project

As part of the corrective action plan to address the USDA OIG’s findings in its review of the MIDAS project, USDA requested an independent third-party assessment. MITRE Corporation conducted this assessment and completed its report in April, 2016. FSA has regularly met with Congressional staff, OMB and GAO to discuss the project’s progress and obtain further guidance and direction. FSA has briefed MITRE’s findings to staff of the Senate and House Appropriations Committees and the Senate Agricultural Committee, as well as to GAO and OMB.

Staffing and County Office Structure

Since FY 2010, FSA has experienced significant reductions in available Federal (GS) and Non-federal (CO) permanent full-time equivalent (FTE) staffing levels to staff FSA State and County Offices. These reductions have been a result of decreases in available Agency budget levels. From FY 2010 to FY 2016, FSA State GS total and CO permanent and temporary FTE staffing levels decreased approximately 20 percent. Congressional restrictions on the Agency’s office structure have further limited FSA’s ability to respond to changing customer needs and program delivery activities. Several years of these limitations have constrained FSA’s ability to close or restructure County Office operations, and has resulted in approximately 500 of 2,145 County Offices being currently staffed with 2 or fewer permanent employees.

In 2012, FSA successfully carried out a plan to streamline operations and enhance customer service through the closure of 125 field offices. However, a subsequent plan to close 250 additional offices was criticized by Congress in 2015 for insufficiently describing the rationale, impact, and cost savings. The 2014 Farm Bill imposed a moratorium on further office closures and directed FSA to undertake a workload analysis. The Appropriations Act of 2015 directed FSA to contract with the National Academy of Public Administration (NAPA) to undertake an independent review of the Agency’s staffing models and “determine a clear path forward to ensure the Agency continues to provide the highest level of customer service.” The NAPA report, completed in August 2016, concluded that the staffing models currently used by FSA and those proposed for development, had a sound framework with some recommended changes. Future analysis and plans that FSA may develop to adjust the Agency’s field office footprint will reference the recommendations on this issue in the NAPA report.
2014 Farm Bill

The United States Congress has expressed interest in the provisions and subsequent programs of the 2014 Farm Bill described below. The 2014 Farm Bill authorizes and funds Farm Programs through 2018. It is very likely that the next Farm Bill is being discussed in both the House and Senate Agriculture Committees; hearings are anticipated to begin as early as spring 2017.

- Cottonseed

Many Congressional members, both House and Senate, have urged USDA’s Secretary to designate cottonseed as an “other oilseed” for eligibility purposes under the Agriculture Risk Coverage (ARC) and Price Loss Coverage (PLC) programs. Copies of any related correspondence are available upon request.

It’s been determined that USDA does not have the authority to add cottonseed as an “other oilseed” for purposes of the Agriculture Risk Coverage (ARC) and Price Loss Coverage (PLC) programs. Commodity Credit Corporation authority was used to provide $300 million in one-time assistance to the cotton industry through the Cotton Ginning Cost Share Program.

- Loan Limits and Farm Loan Funding

Loan limits have been a recent discussion with Congressional members of the House and Senate Agricultural Committees. The concern is that the current loan limits in FSA’s Direct and Guaranteed Programs are restricting farmers and ranchers from maintaining and expanding their farm operations. Members are suggesting that loan limits be increased.

FSA has seen an increase in demand for farm loans and, while FSA loan limits work for most of borrowers, for many producers loan limits have not kept pace with the cost of farming, particularly increases in the costs of farm land and equipment. A change to FSA loan limits requires a statutory change. Additionally, without there also being an increase in program levels, an increase in loan limits would result in fewer, larger loans, thereby reducing the number of producers that FSA could currently and potentially assist.

Margin Protection Program for Dairy (MPP-Dairy)

This voluntary risk management program for dairy producers offers protection to them when the difference between the national all milk price and the national average feed cost (the production margin) falls below a certain dollar amount selected by the producer.

Many Congressional members have expressed concerns about dairy farmers being hit extremely hard by low farm milk prices that have resulted in sharply reduced incomes. Copies of any related correspondence are available upon request. They are interested in regional pricing to account for higher feed costs, such as in the northeast, where inputs such as labor, energy and transportation are more expensive. The statute authorizes only national pricing. Factors contributing to lower prices include U.S. milk production has increased almost two
percent above last year’s level, the European Union’s decision to remove its milk production quotas and the loss of their export market to Russia, and an increase in production in other major milk-producing countries.

- **Agriculture Risk Coverage County (ARC-County)**

  Congressional members have expressed concerns about yields and data, in particular by the North Dakota delegation.

**Other FSA concerns, issues, and comments:**

- **Conservation Reserve Program (CRP)**

  The most recent CRP general signup period in 2016 was one of the most selective sign-up periods in CRP’s 30-year history. An updated nationwide acreage limit was established for this program in the 2014 Farm Bill, capping the total number of acres that may be enrolled at 24 million for FY2017 and FY2018. At the same time, USDA has experienced a record demand from farmers and ranchers interested in participating in this voluntary program, partly due to low commodity prices.

  Calls have been received from several Congressional members on issues that include the status of payments, lack of guidance, mid-contract management, continuous CRP acres, and CRP general signup.

- **Disaster Designations**

  The Secretary is authorized to designate counties as disaster areas to make emergency loans available to producers suffering losses in those counties and in counties that are contiguous to a designated county. In addition to emergency loan eligibility, other emergency assistance programs, such as FSA disaster assistance programs, have historically used disaster designations as an eligibility trigger. FSA administers four types of disaster designations: USDA Secretarial disaster designation, Presidential major disaster and Presidential emergency declarations, FSA Administrator’s Physical Loss Notification; and Quarantine designation by the Secretary under the Plant Protection Act or animal quarantine laws.

  Calls have been received from Congressional members, primarily asking about specific counties in their district and/or state that have been designated a disaster. Rep. Elise Stefanik (NY) and Tom O’Brien, Clerk for House Committee on Appropriations, have expressed concerns over the accuracy of the drought monitor. There also have been questions about to what a Secretarial Disaster Designation gives a State or County access.

- **Emergency Conservation Program (ECP)**

  ECP is a cost-share program that provides emergency funding and technical assistance to farmers and ranchers to rehabilitate farmland damaged by natural disasters and to
implement emergency water conservation measures in periods of severe drought. The availability of funding is determined by Congress annually.

Calls from several Congressional members concerning a lack of funding and payment statuses in their Congressional districts and/or State.

</table>

Engagement activity is included in the table provided above.

The co-location of NRCS, FSA, and RD in state and field offices allows for deepened collaboration with RD’s community economic development field staff in these agencies and enables USDA to bring well-coordinated assistance to unserved or underserved farmers and ranchers in rural areas. FSA’s partnership with RD on microloan programs for beginning and minority farmers has resulted in increased access to credit amongst local food-related cooperatives. This access to credit improves the viability of small and beginning farmers, resulting in a more stable product stream for food hub cooperatives and natural food retail cooperatives, particularly in target regions where local food is a key regional economic driver.
United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

V. Top Issues

Hot Topics

The following are key policy and operations issues:

Information Technology

- MIDAS: In April 2016, an independent third-party assessment of the MIDAS platform was completed by MITRE Corporation. As a result of the assessment of FSA’s use of a single, commercial-off-the-shelf platform, FSA is conducting an analysis of alternatives (AoA) to assess the current solution and to thoughtfully identify and determine if it should move to a viable alternative. As part of this, comprehensive plans to effectively transition between the major customer relationship management components (e.g., Farm Records, Business Partner) that serve as a centralized source for all customer information and consolidate both land and producer information, and the new solution, will have to be defined and executed. The AoA and recommendation to address MITRE Corporation’s assessment will be complete in December 2016 and available for review in January 2017.

- Acreage and Crop Reporting Streamlining Initiative (ACRSI): A joint FSA and Risk Management Agency IT system has been developed to replace duplicative crop reporting of common acreage information by producers to both agencies and their crop insurance provider, saving time and potentially reducing inadvertent data reporting errors. Currently, FSA is exploring critical project decisions concerning policy, infrastructure, and system stability in fully-defining enhancements for the spring 2017 reporting period, the heaviest crop period.

ACRSI was piloted in the spring of 2015 in 30 counties in Iowa and Illinois. The agencies used lessons learned from the spring pilot to expand statewide reporting in incremental phases to 15 States and all counties in those States in the fall of 2015. For spring crops in 2016, RMA and FSA expanded ACRSI nationwide for 13 crops. Those crops were alfalfa, corn, cotton, fallow, grass, oats, peanuts, rice, rye, sorghum, soybeans, and wheat. This captured over 93% of all reported acres.

The FSA/RMA Joint Policy Team have implemented data standards and reporting protocols that will ensure an effective data sharing process between FSA, RMA, and insurance companies. RMA and FSA IT systems are currently being enhanced in preparation for the 2016 fall acreage reporting period and data sharing through ACRSI.

- Bridges to Opportunity (Bridges): Bridges, which is expanding to all FSA County Offices by January 2017, is a customer service platform that provides every FSA customer with a required Receipt for Service that gives a meaningful summary of his or her visit, and additional resources and referrals to other USDA agencies and local partners. Leveraging FSA’s relationships with its nearly two million customers, Bridges is working with USDA agencies and non-federal partners to provide farmers and ranchers with information on topics that include organic production, beginning farmer resources, integrated pest management,
disaster assistance, conservation practices, agricultural education courses, loans, grants, and other information and financial assistance that can benefit and grow farming and ranching operations.

In FY 2016, FSA reprogrammed $5.6M within Salary and Expenses (S&E) IT Non-Farm Programs Delivery to the USDA Service and Outreach to Agricultural Communities investment (Major IT investment FSA-124) to further expand Bridges. Bridges began as a pilot in October 2014. This reprogramming enabled FSA to renew the existing IT software licenses that expired in July 2016, supporting nationwide expansion to over 10,500 users in all State and FSA County Offices by early 2017. The nationwide expansion results in a significant cost savings on a per user basis due to a bulk discount agreement with the software vendor.

- **Connectivity:** To ensure sufficient bandwidth over the long-term needed to support the changing application and data requirements of FSA programs, County Office staff, and farmer and rancher customers, USDA’s Client Technology Services (CTS) provided a Service Center Agency (SCA) Telecommunications Modernization plan for FSA, Natural Resources Conservation Service, and Rural Development. The plan provides a long-term strategy for continuous site monitoring and scheduled upgrades to services utilizing higher bandwidth. A procurement using the General Services Administration’s, Network Services 2020 (NS2020) Services Agreement, is expected to be awarded in FY 2017.

Through FY 2015 and FY 2016, the initial phase of the USDA plan to upgrade a total of 1,038 sites from 1.5MB T1 lines to 10 MB Ethernet connections, increasing bandwidth up to 567 percent was implemented. This completed the upgrade of 70% of sites. Site installation costs were funded through the USDA Optimized Computing Environment (OCE) investment. Recurring monthly circuit charges will be funded by the SCA base budget. This OCE investment in VoIP technology allows for the consolidation of communications traffic, thereby resulting in a reduction in the number of voice lines. The reduced voice line costs will significantly offset the increased network costs. After deployment, USDA expects overall telecommunications costs for the SCAs to decrease. CTS will continually monitor sites upgraded during the initial phase of the SCA Telecommunications Modernization initiative to assess network utilization and confirm the upgraded connection is sufficient.

For the sites that were not prioritized in the initial phase due to various factors, such as sites geographically located in areas where upgraded telecommunications infrastructure is not yet commercially available, CTS is working with providers to improve the telecommunications infrastructure and bandwidth through technologies previously unavailable for installation at these sites. Implementation will be done on a rolling schedule, which will enable the SCA’s to continually review the new communication services, and install them in areas with the highest demand.

**Staffing and County Office Structure**

Since FY 2010, FSA has experienced significant reductions in available Federal (GS) and Non-federal (CO) permanent full-time equivalent (FTE) staffing levels to staff FSA State and
United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

County Offices. These reductions have been a result of decreases in available Agency budget levels. From FY 2010 to FY 2016, FSA State GS total and CO permanent and temporary FTE staffing levels decreased approximately 20 percent. This includes base temporary staffing that FSA has traditionally used to implement Farm Bill programs and to respond to disasters. These levels were reduced significantly in FY 2017.

Congressional restrictions on the Agency office structure have further limited FSA’s ability to respond to changing customer needs and program delivery activities. Several years of these limitations has constrained FSA’s ability to close or restructure County Office operations, and has resulted in approximately 500 of 2,145 County Offices currently being staffed with 2 or fewer permanent employees. The Appropriations Act of 2015 directed FSA to contract with the National Academy of Public Administration (NAPA) to undertake an independent review of the Agency’s staffing models and "determine a clear path forward to ensure the Agency continues to provide the highest level of customer service." The NAPA report, completed in August 2016, concluded that the staffing models currently used by FSA and those proposed for development, have a sound framework with some recommended changes. Future analysis and plans that FSA may develop to adjust the Agency’s field office footprint will reference the recommendations on this issue in the NAPA report.

Historically, FSA’s State GS and CO permanent FTE staffing level distribution has been primarily based on core mandatory program workload activities. The previous FSA work measurement/workload system was replaced in 2008 with a managerial cost accounting (MCA) model, which is developing workload analytics. While not yet finalized, the staffing model determined by NAPA to be sound will be used as a factor in making recommendations regarding staffing levels and reallocations, but not necessarily determining them. Until the staffing model is fully developed, FSA continues to review workload activities and distribute available staffing resources to best respond to workload needs within available staffing and budgetary resources.

**Commodity Credit Corporation (CCC) Audit**

CCC as a corporation has been audited since the early 1990’s. While the corporation has a long history of clean audits, its audits have never been without challenge due to the complexity of accounting for farm programs, each with unique qualifications and terms. The corporation’s programs change with each new farm bill, and it is challenged to meet the need of providing timely financial assistance to producers so they may finance their operations.

The auditor, KPMG, gave the FY 2015 CCC financial statements a disclaimer. The disclaimer defined ten notice of findings and recommendations to address. The findings are predominantly related to CCC’s ability to justify programmatic balances, including USAID grant balances; and its ability to provide evidential documentation to support financial transactions.

To assist with the development of corrective action plans and to prepare for the FY 2016 audit, CCC has contracted with consultants specializing in audit readiness The USDA Office of the Chief Financial Officer has provided a seasoned Senior Executive Service resource to serve as
FSA’s Deputy CFO. He is focusing his attention primarily on overseeing the CCC FY 2016 audit process. KPMG, who is also conducting the FY 2016 audit, has agreed to add an additional audit partner to assist with conducting the engagement. CCC has hired a senior project manager to manage the audit process, including development of processes and procedures to address issues identified in the FY 2015 audit. The FY2016 audit opinion is expected in early November 2016.

**Agriculture Risk Coverage County (ARC-County) Yields**

The ARC-County program provides revenue loss coverage at the county level. ARC-County payments are required to be paid when the actual county crop revenue of a covered commodity is less than the ARC-County guarantee for the covered commodity.

FSA conducted an extensive educational outreach campaign to inform producers about the new programs. Prior to enrollment, producers were given the opportunity to reallocate their base acres and update yields. In 2015, program elections were processed for 1.76 million farms in the ARC and PLC programs. These programs have provided over $5.3 billion in financial assistance to producers for the 2014 crop year. USDA estimates an additional $8 billion in financial assistance will be provided under the ARC and PLC programs for the 2015 crop year.

USDA National Agricultural Statistics Service (NASS) surveys the primary growing regions for a crop and publishes yields at a county-level only if there are enough surveys returned. Given the wide swath of counties and number of covered commodities, many counties did not have any or had incomplete sets of county-level published yields. When NASS county-level yields were not available, FSA worked with RMA to aggregate unpublished yield data for crop insurance participants and used this RMA data if there were sufficient results (at least 25% of reported acreage and at least 5 farms). These two sets of county-level yield data only provided about 43,000 yields, but represent an area such that about 90% of the base acres are in counties that had NASS or RMA county-level yields. If the county-level data was not available, NASS district-level data (aggregate data covering a group of counties) was used, with discretion for the state committee to be able to adjust them based on knowledge of the county relative to the others in the district. If none of these data sets were available, the FSA state committee was delegated responsibility for setting the appropriate yield using whatever sources or expert opinion it could find. The limited data available and lack of county-specific data explains why for some less common crops in a state, there may be a group of counties with the same yield (e.g. a district yield) or even the same yield for the entire state in cases where there was not even district-level data.

From the onset, the data requirements, especially for the ARC-County program, were large considering it is a nationwide program covering 21 commodities that requires 5 years of benchmark yields and the current crop year’s yield for each calculation. In the end, FSA established nearly 100,000 separate crop/county yields in order to implement 2014 ARC-County in fall 2015. Because ARC-County is a county-based program, payments will vary by county.
There are two significant challenges to providing flexibility to override data with expert opinion from the State committee or others. First, if the yields were part of the benchmark years, that would be changing data that was examined by producers when they made their one-time program elections and potentially re-open that decision. Second, in an analogous situation where FSA overrode NASS survey data related to Conservation Reserve Program soil rental rates, the USDA Office of Inspector General found that FSA had acted improperly and the agency had to subsequently revise the rental rates using the data.

**Conservation Reserve Program (CRP) Enrollment**

The most recent CRP general signup period in 2016 was one of the most selective sign-up periods in CRP’s 30-year history, with a record high Environmental Benefits Index cut-off and the lowest-percentage of applications accepted. The high bar means that the per-acre conservation benefits are being maximized and that acres enrolled address multiple conservation priorities simultaneously. An updated nationwide acreage limit was established for this program in the 2014 Farm Bill, capping the total number of acres that may be enrolled at 24 million for FY2017 and FY2018. At the same time, USDA has experienced a record demand from farmers and ranchers interested in participating in this voluntary program partly due to low commodity prices. The 24 million acre cap has led the agency to batch continuous offers, and pursue a strategy of stacking benefits when possible and prioritizing the most environmentally sensitive land.

As of July 2016, 23.9 million acres were enrolled in CRP, with 1.7 million acres set to expire this fall. Over three million acres have been offered for enrollment this year across the three main categories within CRP, with FSA receiving over 26,000 offers to enroll more than 1.8 million acres during the general enrollment period, and over 4,600 offers to enroll more than one million acres in the new CRP Grasslands program.

Coming off a record-setting 2015 continuous enrollment of over 860,000 acres, more than 624,000 acres already have been accepted for 2016 in the CRP continuous enrollment, triple the pace of last year. This was the most competitive selection process in the history of the CRP program; FSA will enroll 411,000 acres in general enrollment and 101,000 acres in the new CRP Grasslands program. The continuous CRP signup includes a number of important programs and initiatives:

- Multiple wetland and duck nesting initiatives that help to improve water quality and provide habitat in the Midwest and throughout the U.S.

- Upland bird habitat initiative that gives landowners a way to use a small portion of their land to create a bird habitat while continuing to farm in the Midwest, South, and throughout the U.S.

- Longleaf pine initiative that helps to restore in the Southeast some of the most diverse forest ecosystems in the world by providing habitat for important species while also protecting soil and water quality
United States Department of Agriculture  
2016 Presidential Transition  
Farm Service Agency (FSA)

- State Acres for Wildlife Enhancement (SAFE) restores vital habitat to meet high-priority State wildlife conservation goals

- Highly Erodible Lands Initiative (HELI) offers a practical solution to create wildlife habitat while protecting cropland that is highly susceptible to erosion (with an erosion index over 20)

- Pollinator Habitat, which enhances honey bee and native pollinator populations throughout the country

- Conservation Reserve Enhancement Program (CREP) targets high-priority conservation concerns identified by a State, whereby federal funds are supplemented with non-federal funds to address those concerns. These partnerships range from agreements to help protect water quality, such as the one that protects the New York City drinking water supply, to those with broader wildlife and wildlife concerns from the Midwest to Hawaii.

**Peanuts**

Following passage of the 2014 Farm Bill, market changes—combined with unintended consequences from the new farm bill—encouraged peanut production. These factors included softening prices for many competing crops like cotton, corn and soybeans, but also three elements of the new ARC-PLC program: 1) a separate payment limit for peanuts in addition to other commodities (peanuts has a separate $125,000 payment limit), 2) a generous reference price that resulted in substantial 2014-crop peanut PLC payments, and 3) a requirement that generic base acres be planted to a covered commodity in order to trigger a payment, which encourages peanut planting due to the relatively high reference price.

Given that Marketing Assistance Loans on harvested peanuts are available for $355 per ton and that peanuts can be forfeited in lieu of repaying the loan, the large supply of 2015-crop peanuts had initially led USDA to expect significant quantities of peanuts to be forfeited to the Commodity Credit Corporation (CCC) as the loans matured in the summer of 2016.

As of late September, no 2015-crop forfeitures have yet occurred. This is largely due to strong demand—particularly from China—and the resulting strong redemption rate. It is unclear whether China will be a large buyer in future years. USDA expects that with continued strong interest in peanut plantings, 2016-crop forfeitures in the summer of 2017 may again loom as a potential issue.

**Sugar**

USDA manages the U.S. supply of sugar to maintain prices at or above support levels through domestic marketing allotments, by restricting imports and by selling to bioenergy producers if there is excess sugar in the market. USDA is mandated to operate the program at no cost to the extent practicable. Two major issues have affected the industry in 2016 and may well remain issues in 2017:
United States Department of Agriculture  
2016 Presidential Transition  
Farm Service Agency (FSA)

- National Labelling Law and the Genetically Modified Beet Crop—Virtually all of the U.S. beet crop is genetically modified (GM), and data collected by FSA indicate that the demand for beet sugar has declined relative to cane sugar (which is non-GM). This unprecedented dichotomy in the sugar market between beet and cane sugar has increased the likelihood of FY16 beet sugar loan forfeitures. The new national labelling law, which will not be fully enacted for two years, is expected to curb the movement away from beet sugar, especially by manufacturers using multiple GM inputs in their production lines who will find it too expensive to go 100 percent GM free.

- Common Market Situation with Mexico—Under NAFTA, Mexico was allowed unlimited duty-free access to the U.S. sugar market, which hindered USDA’s ability to control sugar supplies and resulted in large FY 2013 forfeitures. Subsequently, the U.S. sugar industry filed an anti-dumping/countervailing duty (AD/CVD) case against Mexican sugar. To avoid countervailing and anti-dumping duties, Mexico and the U.S. government in December 2014 signed two “suspension agreements.” The “AD agreement” sets minimum prices for two types of Mexican sugar (raw, which is of lower grade, and refined, which is suitable for food use) entering the United States. The “CVD agreement” set the maximum quantity Mexico may ship to the U.S. in a fiscal year and further sets the maximum quantity of refined sugar that Mexico can ship. The U.S. sugar industry is seeking to revamp these agreements, largely due to unforeseen changes in the marketplace (see below). Mexico is currently the leading foreign source of U.S. sugar, supplying almost 40 percent of total U.S. sugar imports. Any changes to the agreements will have important ramifications for the U.S. sugar industry.

Because there are no restrictions in the suspension agreements on who can buy the lower-priced Mexican raw sugar, U.S. cane refiners, which require raw sugar to produce refined sugar, lost market share to new U.S. “melt stations” (the “unforeseen change” noted above). Melt stations are able to take Mexican raw sugar, liquefy it, and then process it to make it suitable for human consumption more cheaply than typical U.S. cane refiners. (Compared to refined cane sugar, melt station product is lower quality food grade sugar). U.S. cane refiners, finding raw sugar supplies inadequate to meet their sales orders, convinced USDA to increase raw sugar import access by 200,000 tons on May 17, 2016—60,000 tons to Mexico and 140,000 tons to tariff-rate quota countries. Mexico was upset that it did not receive the full 200,000-ton access, but as of late September, had shipped approximately 30,000 tons of its 60,000-ton share to a Louisiana raw cane refiner.

Meanwhile, U.S. beet processors are upset that USDA added more sugar to the market at a time when they had substantial stocks left to sell (in large part associated with the GM sugar issue noted above). In addition, cane refiners are still facing shortages of raw sugar as evidenced by FY 2016 ending stocks falling well below normal levels. The group that petitioned the Department of Commerce to investigate AD/CVD charges against Mexico—“the Coalition” (composed of cane refiners and beet processors)—is seeking to revamp the AD and CVD suspension agreements.
The Coalition has proposed changing the CVD suspension agreement to require Mexico to ship mostly raw sugar to the U.S. and only to cane refiners who crystallize sugar (five U.S. companies). Mexico is unlikely to accept these conditions and, in contrast to the U.S. industry, is pleased with the suspension agreements. Although the agreements limit Mexico’s exports, they have supported Mexican grower prices and will likely do so in the future. Mexico has stated that there is no need to again renegotiate the CVD suspension agreement and that they are in full compliance.

The Coalition, in contrast, is expected to press the Department of Commerce to void the CVD suspension agreement if Mexico does not accept the proposed conditions (e.g., shipment of mostly raw sugar and only to cane refiners who crystallize sugar). If the CVD suspension agreement is voided, Commerce will be compelled to investigate whether the AD agreement is causing price suppression, and if their finding is positive, Commerce may also void the AD agreement. Commerce cited FY 2013 forfeitures as proof of price suppression when it assigned duties on Mexican sugar in the pre-suspension agreement period to compensate for damages caused to the domestic industry by Mexican imports. Beet processors have threatened forfeitures in the summer of 2016 in part because doing so would demonstrate price suppression. As of late September, however, no sugar forfeitures have occurred yet this year.

If Mexico fails to agree to the terms offered by the Commerce/Coalition, then the Coalition will likely push for the termination of both the AD and CVD suspension agreements. USDA is consulting with Commerce on alternative solutions and continues to monitor the sugar supply. If the AD and CVD agreements are terminated, Commerce would impose pre-suspension agreement duties on Mexican sugar, which would price Mexican sugar out of the U.S. market. Mexico’s response is unknown but, prior to the suspension agreements, Mexican officials had threatened to pursue retaliatory trade measures if duties are once again applied. The Department of Commerce continues to work with USDA to develop a path forward that is at least minimally acceptable to all parties.

**Disaster Programs**

FSA administers multiple disaster programs, which are regularly at the top of the hot topics list due to their value to producers and rural communities following disasters that occur year round in varying geographic areas throughout the nation.

Under the 2014 Farm Bill, FSA implemented the Livestock Forage Disaster Program (LFP), Livestock Indemnity Program (LIP), the Emergency Assistance for Livestock, Honey Bees, and Farm-raised Fish (ELAP), and the Tree Assistance Program (TAP). Payments for these programs were retroactive back to October 1, 2011. Disaster payments for these programs from 2012 to 2016, as of August 31, 2016, for Livestock Forage Program (LFP), LIP, TAP, and ELAP, total of over $6.2 billion for eligible losses under these programs.
As required by 2014 Farm Bill, in 2015, USDA expanded the Noninsured Crop Disaster Assistance Program (NAP) to include buy-up protection, similar to buy-up provisions offered under crop insurance.

FSA also administers the Emergency Conservation Program, which is a cost-share program that provides emergency funding and technical assistance to farmers and ranchers to rehabilitate farmland damaged by natural disasters and to implement emergency water conservation measures in periods of severe drought. The availability of funding is determined by Congress annually. Subject to funds availability, locally-elected members of FSA County Committees are authorized to implement ECP for all disasters except drought, which is authorized by the FSA National Office. The County Committees determine land eligibility based on site inspections of damaged land and the type and extent of the damage.

**Margin Protection Program for Dairy (MPP-Dairy)**

This voluntary risk management program for dairy producers offers protection to them when the difference between the national all milk price and the national average feed cost (the production margin) falls below a certain dollar amount selected by the producer. Many Congressional members have expressed concerns about dairy farmers being hit extremely hard by low farm milk prices that have resulted in sharply reduced incomes. They are interested in regional pricing to account for higher feed costs, such as in the northeast, where inputs such as labor, energy and transportation are more expensive. The statute authorizes only national pricing.

Milk prices continue to run lower than a year ago. However, dairy price projections see an increase throughout the rest of the year. Continued increases in milk production and other factors including low world market prices, increased milk supplies and inventories, and slower demand, are affecting dairy prices. The trade picture for U.S. dairy producers is not optimistic. Imports were higher and exports lower in 2015 than the previous year and early results in 2016 have led to projections for another year of higher imports and lower exports. Strong increases in European milk production and slower sales into leading importers’ markets, like China, have increased competition in world markets. The strong U.S. dollar has reduced U.S. exports and encouraged U.S. imports of butter and cheese in recent months. That relationship is expected to continue through the rest of 2016.

All final USDA prices for milk and feed components required to determine the national average margin for May/June 2016 were released on July 29, 2016. Dairy producers who enrolled at the $6 through $8 margin trigger coverage level have received payments totaling approximately $11.2 million in financial assistance as of August, the largest payment since the program began in 2014.

Signup for 2017 coverage began July 1, 2016, and the signup deadline of September 30, 2016, has been extended to December 16, 2016, to encourage program participation and allow more time to make coverage elections. Dairy operations that participated in coverage year 2016 are required to participate in the MPP-Dairy program through 2018 with at least catastrophic level coverage.
As of March 2016, producers and milk handlers now also have the option to accept premium payments from dairy milk handlers, and milk handlers can deduct their share of the premium payment on a monthly basis through producers’ milk checks.

USDA has worked with industry to make this program work better for producers by allowing intergenerational transfer of dairy operations and creating the opportunity to transfer institutional knowledge of the dairy business on to a new generation of dairy producers.

**County Office Leases**

FSA is responsible for the acquisition, disposal, administration, and operations management of the facilities and real property assets for FSA, the Risk Management Agency (RMA), and Foreign Agricultural Service (FAS), which are located with the Farm and Foreign Agricultural Mission Area. FSA is also responsible for directing programs and developing policies and procedures covering real property management, including acquisition, disposal, administration, and operations management of facilities and real property assets utilized by FSA State and County Offices, RMA and FAS.

Currently, there are approximately 200 leases in holdover status and over the next three years an additional 1,200 leases are scheduled to expire. A holdover lease is a tenancy that is created when the tenant (i.e., the USDA in this case) continues to occupy the premises beyond the expiration date of the lease term. Holdover tenancies often lead to friction between the landlord and the Government as the Government has no contractual right to occupy the premises. The General Services Administration (GSA) has directed all agencies to eliminate lease holdovers. Failure to eliminate holdovers could result in USDA losing its delegated leasing authority granted by GSA.

To reduce holdover leases and, thereby, mitigate the threat of USDA losing its delegated leasing, there is an agreement by FSA, the Natural Resources Conservation Service (NRCS), and Rural Development (RD), also known as the Service Center Agencies (SCA) of USDA, to redistribute according to their actual footprint in field offices the lease portfolio. FSA manages, 1,736 direct leases, representing 70% of the SCA’s lease portfolio. FSA leasing contracting officers are responsible for an average of 72 leases each, whereas GSA recommends a ratio of 35 to 40 leases per contracting officer.

Under the new plan agreed to by the SCAs, FSA will manage 44% of the portfolio, NRCS will manage 51% of the portfolio, and RD will manage the remaining 5%. To accomplish the portfolio rebalancing, FSA will transfer a net of 600 leases to NRCS. This transfer will be achieved in three phases:

- **Phase I** transfer of 200 by December 2016
- **Phase II** transfer of 200 leases by June 2017
- **Phase III** transfer of the final 200 leases at a date to be determined later
If this redistribution schedule is not followed, the number of holdover leases may increase and threaten USDA’s leasing authority delegated by GSA. FSA would also need to increase staffing or contractor support.

**Farm Loan Programs**

Three consecutive years of reduced commodity prices and farm incomes have depleted farmers’ working capital, contributing to an increased demand for non-real estate credit. In the Kansas City and Chicago Federal Reserve districts, surveys of lenders in 2016 indicate that demand among farm customers seeking non-real estate credit approached levels unseen since the 1990s. While farms overall have strong balance sheets with low debt-to-asset ratios, a majority of the farm debt is held by farms with more than $500,000 in farm sales. These larger farms, which tend to be more indebted, are more likely to face liquidity constraints. Continuing declines in net cash and net farm income and modest declines in farmland values have increased loan renewals and extensions and the demand for short-term operating loans, and also led to some loan repayment problems. A continuation of lower farm incomes and further deterioration of farmers’ working capital will likely increase the demand for both direct and guaranteed loans.

The FY 2017 budget requested funding for a $6.7 billion loan level for direct and guaranteed loans for farm ownership, farm operating, conservation, emergency, and other farm loan programs. This is a higher level than the $6.4 billion budget for FY 2016 and $5.6 billion in actual obligations for FY2015. The FY2017 program levels will cost about $81.3 million in budget authority, which is a 17 percent increase above the $69.6 million in budget authority for FY2016. This is due in part to the increase in beginning farmer assistance and stress in certain sectors of the agriculture economy. Under the Continuing Resolution, Farm Loans will be operating under a percentage of the FY 2016 budget, but FSA may request an advance on the rest of the fiscal year funds.

**Organic Certification Cost Share Programs**

The Organic Certification Cost Share Program (OCCSP) and Agricultural Management Assistance Program (AMA) assist certified organic operations in defraying the costs associated with organic certification. Beginning with FY 2017, administration of the programs transfers to FSA from the Agricultural Marketing Service (AMS).

Under both programs, organic operations may receive up to 75 percent of their certification costs, not to exceed $750 per certification scope. The OCCSP is available to organic producers and handlers of crops, livestock and wild crops in all 50 States and several territories. The AMA is available to certified organic producers—only crop and livestock operators—in sixteen states designated by Congress.

Historically, the programs were administered through AMS under grants initiated with State Departments of Agriculture. FSA is continuing this practice in addition to now offering producers and handlers the ability to apply for OCCSP through local FSA county offices. FSA sees this initiative as complementing its work on local foods and specialty crops and
broadening its customer base. Overall, FSA has worked on expanding assistance to organic farmers and ranchers.

The cost share programs have been historically underutilized, with many eligible operations not participating. While the overall amount reimbursed to organic producers and handlers continues to increase each year, dollars remain unspent. By utilizing the FSA State and county office structure, USDA plans to increase awareness of the program through improved outreach, as well as taking advantage of operational efficiencies at the field level. Organic producers will also be made aware of other FSA programs that may be of benefit to their operations, including microloans, Noninsured Crop Disaster Assistance, Farm Storage Facility Loans, and Conservation Reserve Program.

FSA will provide State Departments of Agriculture the option to continue to administer the program cooperatively, should they so choose. Program enrollment will be offered at the county and State office levels in all 50 States, working closely with any interested State cooperators to coordinate outreach efforts and to ensure proper oversight, particularly to prevent duplicate payments. FSA has demonstrated success in similar cooperative programs, such as the Conservation Reserve Enhancement Program, and it anticipates similar success with the organic certification cost share programs.

Timeline

Reports, Issues, Events

January 2017

- **MIDAS Project**
  Per findings from the MITRE Corporation’s independent third-party assessment, the analysis of alternatives for the MIDAS platform will be complete in December 2016 and available for review in January 2017.

- **Report to Congress: International Food Aid Report**
  Required by H. Report 114-205. The Committee directs FSA to make publicly available reports detailing U.S. Commodities purchased for international food aid. The Committee also directs FSA to include the amount, value, destination, and type of commodity shipped by U.S. port of origin. This is an annual report prepared by Commodity Operations.

- **National Food and Agriculture Council (NFAC)**
  On January 1, FSA will become Chair of NFAC, a position that rotates each year to one of the three members: FSA Administrator, NRCS Chief, and RD Deputy Under Secretary for Operations and Management. The council was established to approve or deny office actions (e.g., closures, consolidations), particularly when multiple agencies occupy the same field office. The council is also a forum to discuss leveraging resources, such as sharing vehicles for outreach visits to customers.

- **Report to Congress: Changes to Cropland Report**
Required by SEC. 11014 of the Agricultural Act of 2014 (P.L. 113-79). Not later than January 1, 2015, and each January 1 thereafter through January 1, 2018, the Secretary shall submit to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate, a report that describes the cropland acreage in each applicable county and State as of the date of submission of the report; and the change in cropland acreage from the preceding year in each applicable county and State. This is an annual report prepared by Farm Programs.

- **Direct Loan System**
  Planned change to enable Farm Loan Programs’ front-line loan officials to view online all the loan making and servicing transactions associated with a customer’s loan. This change migrates data off old, mainframe technology.

- **Bridges to Opportunity**
  Planned systems’ expansion to 20 additional States, completes nationwide implementation. Training to be provided to field staff.

- **National Leadership Training**
  Planned for the second quarter.

- **Continuing Education for Appraisers**
  Planned for the second quarter.

- **National Price Support Training**
  Planned for the second quarter.

- **One-USDA Web TA 2.4 Training**
  Planned for the second quarter.

- **State Warrant Officers’ Training**
  Planned for the second quarter.

- **Customer Service Training for Contracting Officers, Contracting Officers’ Representatives and Project Managers**
  Planned for the second quarter.

**February 2017**

- **Margin Protection Program for Dairy**
  Planned 4.0 release: Adds automatic transfer of receivables to the National Receipts and Receivables System on October 1 of each year. Program regulations mandate the debt collection be initiated for participants that have not paid the requisite administrative fee and/or premium by September 30 of the applicable coverage year. This effort ensures that receivables are established timely for all participants not in compliance with program requirements.
• FSA Farm+
  Planned 2.0 release: Adds major functional improvements, including field level data extensions allowing tenant access, sub-field depiction and measurement functions in the geospatial display with the ability to add attribute data, and geospatial file format additions to the export function.

• Workforce Diversity and Career Opportunities in Food and Agriculture

• National Association of Conservation Districts

• USDA Outlook Forum

March 2017

• Secretarial Appointments to FSA’s County Committees
  March 1 deadline.

• Report to Congress: Quarterly IT Report and Briefing
  The Secretary is directed to continue briefings for the Committees regarding all IT projects and activities related to farm program delivery. This is a quarterly report due March 30 and June 30 and is prepared by Office of Chief Information Officer, followed-up with a scheduled briefing.

• USDA National Ag Week Observations

April 2017

• Report to Congress: Farm Programs IT Operations Report
  This is an annual report prepared by Office of Chief Information Officer.

• Report to Congress: Quarterly Loan and Grant Program Budget Report
  Required by H. Report 114-205. The Committee directs the Department, through the Office of Budget and Program Analysis, to provide quarterly reports to the Committees on Appropriations of the House of Representatives and the Senate on the status of obligations and funds availability for the loan and grant programs provided. The Committee further directs that if an estimate of loan activity for any program funded in Titles I and III of this bill indicates that a limitation on authority to make commitments for a fiscal year will be reached before the end of that fiscal year, or in any event whenever 75 per centum of the authority to make commitments has been utilized, the Secretary shall promptly notify the Committees in writing. This is a quarterly report prepared by Farm Loan Programs, or more often as required.

• Report to Congress: Farm Bill Funding Status Report
  Required by H. Report 113-468. On October 1, 2014, and every quarter thereafter until the funds are expended; the Committee directs the Secretary to provide a status
report on the obligations and outlays and expects that the Committee will be notified if there are any significant deviations from the plan. The Committee reminds the Secretary that funding is not available to hire new full-time equivalent staff at FSA. As such, this funding should not be used for that purpose. (The original plan was sent to the Chair and Ranking Members of the House and Senate Agriculture Appropriation Committees on August 1, 2014.) This is a quarterly report due January 1 and April 1 prepared by Office of the Chief Financial Officer.

- **State Executive Director Orientation and Training**
  Planned for third quarter.

- **State Executive Director, Administrative Officer and Executive Officer Annual Training**
  Planned for third quarter.

- **National Leadership Training**
  Planned for the third quarter.

- **Continuing Education for Appraisers**
  Planned for the third quarter.

- **Regional Outreach and Communications Training**
  Planned for the third quarter.

- **State Warrant Officers’ Training**
  Planned for the third quarter.

- **Customer Service Training for Contracting Officers, Contracting Officers’ Representatives and Project Managers**
  Planned for the third quarter.

- **One-USDA Web TA 2.4 Training**
  Planned for the third quarter.

- **Other One-USDA Training for Other Departmental Applications**
  Planned for the third quarter.

- **One-USDA Onboarding Training**
  Planned for the third quarter.
May 2017

- **Report to Congress: Commodity Credit Corporation Report**
  Required by H. Report 114-205. The Committee directs the Secretary to provide a report on November 15 and May 16 on planned uses of funding under the authorities of Section 4 and Section 11 of the Commodity Credit Corporation Charter Act. This bi-annual report is prepared by Office of the Chief Financial Officer.

- **Report to Congress: Farm Programs IT Plan for Expenditures Report**
  Required by Consolidated Appropriations Act, 2016. (Paraphrased) That not more than 50% of the funding made available under this heading for information technology related to farm program delivery, may be obligated until the Secretary submits to the Committees on Appropriations a plan for expenditure that (1) identifies for each project/investment over $25,000, (2) demonstrates each project/investment and (3) has been reviewed by GAO and approved by the Committees of Appropriations of both Houses of Congress. This is an annual report prepared by Office of Chief Information Officer.

- **Margin Protection Program for Dairy**
  Planned 5.0 release: Creates new billing service. Program regulations mandate that outstanding administrative fees and premiums be paid by September 30 of the applicable coverage year. This effort will notify all participants of the outstanding amounts in advance of debts being created.

June 2017

- **Field Office Leases Redistribution Among Service Center Agencies**
  Complete the transfer of the acquisition and management of 200 leases from FSA to the Natural Resources Conservation Service no later than June 30, thereby completing Phase II of the agreement by the Service Center Agencies to redistribute leases according to the actual office footprint of each agency. A date for the Phase III transfer of the final 200 leases is to be determined. The Phase I transfer of 200 leases is to occur in December 2016.

- **Report to Congress: Quarterly IT Report and Briefing**
  This is a quarterly report due March 30 and June 30 and is prepared by Office of Chief Information Officer.

- **Common Processing System**
  Planned 3.2 release: Forfeitures and settlements for all commodities other than cotton and soybeans. Provides functionality for basic settlement and basic forfeiture, and is to create alignment so that all commodities in the release are handled consistently.

- **FSA Farm+**
  Planned 3.0 release: Adds significant new capabilities.
• National Appraisal Tracking System
  Planned new application for Farm Loan Program officials to process and track property appraisals needed in the loan making process.

• National Land Access Conference
  A senior USDA official has been requested to speak.

2017 FSA Employee Association Events

Budget permitting, FSA senior managers make every effort to attend employee association events, or stagger attendance to ensure coverage at meetings and DC.

Cross-Cutting Initiatives

New/Beginning Farmers and Ranchers

- FSA is tailoring programs to be more flexible and responsive to the needs of producers, and by enhancing customer service offerings to be effective, modern, and truly “one-stop-shopping.” Examples include targeted outreach of FSA program waivers for beginning farmers and ranchers and farm loan programs that are available to beginning farmers. Over 200 FSA offices are providing enhanced service through “Bridges to Opportunity” – a service that connects producers, including beginning farmers and ranchers, with the resources, programs, events and partners to assist and support their farming aspirations. All FSA offices will participate in the service in early 2017.

- Four of five regional New and Beginning Farmer Coordinators were hired to work across the National Food and Agriculture Council (NFAC) agencies: FSA, NRCS and RD. They are to analyze barriers and partner with organizations to connect new and beginning farmers to USDA. These coordinators are headquartered in Georgia, Kentucky, New Mexico, and Virginia, and serve six states.

- In FY 2016, FSA announced 55 cooperative agreement awards totaling $2.5 million for outreach to underserved producers and new and beginning farmers to assist in their utilizing FSA programs.

Land Tenure

In October, 2015, a USDA Land Tenure Initiative Working Group was formed to address the challenges of access to land, capital, and technical assistance, with a particular focus on the challenges to new and beginning farmers and ranchers, as well as economic development in rural communities. Three months prior, the Beginning Farmers and Ranchers Advisory Committee provided a report with more than 50 recommendations to address these challenges. USDA agencies have made significant progress to assess and implement the Advisory Committee’s recommendations and adapted them where possible.

Know Your Farmer, Know Your Food (KYF2)

FSA recognizes the growth of local and regional food systems, and aims to support those farmers, ranchers and other food producers engaged in local and regional markets. This segment of agriculture is a vibrant growth area that is drawing young people back to rural communities, generating jobs, and improving quality of life in rural and urban communities. We value the collaboration between FSA’s New Farmer work and the Know Your Farmer, Know Your Food (KYF2) team to better serve new and beginning farmers and ranchers, many of whom get their start in farmers markets, CSAs, and other direct markets in their local communities.

We also know that as local and regional food systems mature, the demand for local food is expanding beyond direct markets and into major grocery stores, restaurants, and schools. In
recent years, FSA has developed new programs and adapted services and credit processes to meet the needs of local and regional food system stakeholders. Below are some examples of Know Your Farmer, Know Your Food (KYF2) activities.

**Building staff capacity to serve local and regional food systems stakeholders and other non-traditional producer audiences**

- Key FSA staff serve on the KYF2 Management Team and Taskforce to coordinate efforts across USDA.
- FSA Outreach offers field trainings for FSA staff to support their field outreach efforts that target producer segments, including new and beginning farmers, non-traditional, small-scale, niche and organic producers. FSA also encourages local and regional outreach efforts at farmers markets, coops and food hubs to further improve awareness of FSA support to these local producer communities.
- FSA’s Bridges to Opportunity service bridges the gap between agricultural producers and a broad range of agriculture resources provided by USDA and partners beyond FSA’s traditional loan and commodity programs. Bridges to Opportunity provides packages of agriculture resources directly to customers and offers referrals to relevant partners. The service is scheduled to have nationwide reach by early 2017. Partnerships across USDA agencies and with nonfederal partners are critical to the success of this project. A strong Know Your Farmer, Know Your Food partnership will expand the resource offerings available through the service, conduct outreach to new audiences, and enhance field office staff ability to respond to new stakeholders, including beginning farmers and ranchers, urban agriculture producers, direct marketing farmers, and those working on access to healthy foods in institutions and communities.
- FSA has created a new Outreach Coordinator position to support agriculture in urban areas. The position, based in Brooklyn, New York City, is tasked with working across the wide range and diversity of agriculture happening within all the NYC boroughs to support urban producers through the various loans and farm programs FSA offers.

**Increasing access to credit for smaller farms and those working in local and regional food systems**

- FSA Microloan Programs has approved nearly 22,000 microloans (as of September 2016) since 2013. The microloans offer more flexible access to credit and serve as an attractive loan alternative for smaller farm operations and others working in local and regional food systems. The focus of Microloans is on the financing needs of small, beginning farmer, niche and non-traditional farm operations, such as truck farms, farms participating in direct marketing and sales such as farmers’ markets, CSA’s (Community Supported Agriculture), restaurants and grocery stores, or those using hydroponic, aquaponic, organic and vertical growing methods. FSA has Direct Farm Ownership Microloans and Farm Operating Microloans, and the program recently expanded to include a Guarantee Microloan program. KYF2 builds awareness and conducts outreach about these Microloan programs across USDA and through partnerships and presentations to key audiences.
FSA updated the Farm Storage Facility Loan program to include more commodities and allow it to help finance portable storage structures, portable equipment, and storage and handling trucks. This will help FSA better serve fruit and vegetable farmers and others who need to get crops safely and efficiently to local farmers’ markets, schools, restaurants, food hubs, and retail stores.

FSA continues to review and tailor commodity support and risk management programs to consider small scale production, organic and direct market pricing, and non-traditional production.

Understanding uptake in programs among nontraditional farmers (specialty crops) and beginning, limited resource, veterans, and historically disadvantaged farmers, all of whom are very active in local and regional markets

FSA launched the Microloan program in response to suboptimal credit availability for underserved farmers. Based on published summary statistics, participation rates among targeted groups in different states appear to be uneven. FSA is working with researchers in ERS, FSA, and the White House Social and Behavioral Sciences Team to conduct a field experiment investigating the factors affecting take up of these loans by underserved farmers in southern Strike Force states: Understanding Uptake Decisions for Microloans among Small-Scale Farmers in the United States (extension of an existing ERS Policy Effectiveness Grant).

Organic Agriculture

FSA has expanded and adapted numerous programs to support the growing organic sector. In 2015, retail sales of organic food and fiber reached $43 billion.

In FY2017, USDA Agricultural Marketing Service transferred the administration of USDA’s two organic certification cost share programs to the FSA. The Organic Certification Cost Share Program (OCCSP) and the Agricultural Management Assistance Organic Certification Cost Share Program (AMA) help organic producers to offset certification costs. Where states are still interested in administering OCCSP and AMA, they will still have the opportunity to administer it in their state. FSA will announce early in FY2017 details on how and when we will offer this program through our offices, increasing customer access and participation in the program. Organic producers will experience uniformity in the program throughout the country.

Place-Based Initiatives (Local Communities)

StrikeForce for Rural Growth and Opportunity

USDA’s StrikeForce Initiative addresses specific challenges associated with rural poverty in 25 states and Puerto Rico, across 970 counties, parishes, and boroughs.
United States Department of Agriculture
2016 Presidential Transition
Farm Service Agency (FSA)

- StrikeForce aims to create self-sustaining, long-term economic development in persistent poverty rural communities by increasing investment through intensive outreach and stronger partnership with community leaders, businesses, and foundations. StrikeForce seeks to improve food security by increasing access to safe and nutritious foods.

**Bridges to Opportunity (Bridges)**

Bridges’ services, which are expanding to all FSA County Offices by January 2017, is a customer-relationship management information technology application providing every FSA customer with a required Receipt for Service that gives a meaningful summary of his or her visit, and additional resources and referrals to other USDA agencies and local partners. Leveraging FSA’s relationships with its nearly two million customers, Bridges is working with USDA agencies and non-federal partners to provide farmers and ranchers with information on topics that include organic production, beginning farmer resources, integrated pest management, disaster assistance, conservation practices, agricultural education courses, loans, grants, and other financial assistance that can benefit and grow farming and ranching operations.

**Climate Change**

FSA has been involved in two efforts relating to climate change: USDA Building Blocks for Climate Smart Agriculture and Forestry and USDA Climate Hubs.

Announced by USDA in 2015, the Building Blocks are a plan to reduce by 2% net greenhouse gas (GHG) emissions by 2025 through various USDA actions that will help farmers, ranchers, forestland owners, and rural communities respond to climate change. The actions are grouped into ten “building blocks” and FSA, jointly with NRCS, is responsible for tracking and making progress on the Conservation of Sensitive Lands building block.

FSA must report annually on whether annual milestones associated with this building block have been achieved. The four milestones have been achieved, as reported in mid-2016:

<table>
<thead>
<tr>
<th>Action</th>
<th>Lead USDA Agency(s)</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enroll 40,000 additional high-carbon acres annually in wetland and riparian buffer practices</td>
<td>FSA</td>
<td>118k new acres of riparian forest buffer and wetlands were signed up under the Conservation Reserve Program (CRP) in FY2016.</td>
</tr>
<tr>
<td>Provide technical assistance funding to Forest Service for States to hire additional foresters in the Chesapeake Bay area</td>
<td>FSA</td>
<td>FSA provided support to Chesapeake Bay-area states to hire several additional foresters, who are currently providing outreach to encourage adoption of riparian forest buffers.</td>
</tr>
</tbody>
</table>
Provide outreach funds for State foresters | FS, FSA | As a result of an agreement with FSA, the Forest Service held workshops earlier in FY2016 to train outreach foresters who are conducting riparian forest buffer assessments.  

Complete organic soils outreach study | FSA, NRCS | FSA and NRCS collaborated with ERS and the Center for Behavioral and Experimental Agri-Environmental Policy Research (CBEAR) to ascertain whether CRP participation by producers growing crops on organic soils is affected by different types of targeted outreach. In early FY2017, the results will be available to analyze.

Use of CRP makes major contributions to reducing climate change. In 2013, for example, it resulted in the equivalent of a 45 million metric ton net reduction in atmospheric CO2 from sequestration, reduced fuel use, and nitrous oxide emissions avoided by not applying fertilizer. Carbon sequestration helps offset the release of GHG from other sources into the atmosphere. CRP sequesters more carbon on private lands—38 million metric tons carbon dioxide equivalent (CO2)—than any other federally-administered program. The total reduction in GHG is equivalent to removing 8.7 million cars from the road for one year.

STATE PROFILE

Alaska is larger than the combined area of the next three largest states, Texas, California, and Montana. Farmers have been here since the early 1900’s, but in many ways Alaska is still a pioneer state, with a lack of essential infrastructure to support agriculture. There are currently approximately 800 farms and ranches in Alaska. However, interest in local food, farmer’s markets and local production is increasing rapidly, and with it a demand for FSA loans and programs. Alaska farmers face many challenges, but the future looks bright! In FY 2015, FSA delivered nearly $1.9 million in federal program payments and loans to Alaska farmers and ranchers.

STATE PROGRAM DELIVERY STRUCTURE

• **State Office Address**: Alaska State Office, 800 W Evergreen, Ste. 216 Palmer, AK 99645
• **Service Center Structure** – There are 2 FSA Service Centers servicing the State of Alaska
• **Employee Profile**
  o Total County Non-Federal and Federal Permanent employees as of September 1, 2016:
    ▪ County Non-Federal Permanent: 4
    ▪ Federal Permanent: 5
• **Program Participation**: These programs had the highest activity levels for FY15 in Alaska:
  o Conservation Program $690,378 (CRP $619,517, GRP $70,861)
  o Commodity Program $325,544 (Commodity Loans $12,753, RTCP $313,791)
  o Disaster Assistance $236,636 (NAP $20,188, LIP $216,448)
• **Farm Loan Programs Profile**:
  o FY15 Direct Loan Program: 15 operating loans, including 10 loans to beginning farmers and 9 loans to targeted underserved producers $466,120
  o FY15 Microloans: 8 Loans $169,590

HOT TOPICS

• **Farm Loan Programs** are our highest priority. Alaska has high numbers of beginning farmers and we promote microloans and other loan programs to a wide audience of new producers.
• **Reimbursement Transportation Cost Payment Program for Geographically Disadvantaged Farmers and Ranchers (RTCP)**. This program, which assists Alaska producers reduce high production costs, reaches a diverse group of growers, across sectors, size of operations, and geography. Many RTCP applicants have had no previous contact with FSA, so it’s also an important outreach tool to introduce new producers to other important FSA programs that may support their operations.
• **Local and Regional Food**. Only 5% of the food consumed by Alaskans is produced here. FSA programs help increase local food production, which can support the economy, health and security of local communities. Alaska FSA is increasing outreach efforts to beginning farmers and Alaska Native villages located in remote areas off of the road system. There are 229 federally recognized Tribes in Alaska.
Danny Consenstein, STATE EXECUTIVE DIRECTOR

Danny Consenstein is the State Executive Director of the Alaska Farm Service Agency. He has over 30 years of experience with government, non-profits and private sector consulting, helping Alaska communities grow and thrive. Under his leadership, Alaska FSA is reaching out to beginning farmers and collaborating with other agencies, partners and local communities to build a stronger, more secure food system.

STATE PROFILE

Agriculture in Alabama is a major, diverse industry, accounting for approximately 40% of the state GDP and employing roughly 580,000 people. Alabama’s top commodities include: soybeans, cotton, corn, peanuts and wheat. The FSA in Alabama provides support to over 179,000 farms within the State and has approximately 20,400,000 million acres of farm land participating in FSA programs. Additionally, farmland represents roughly 60.5% of Alabama’s total available acreage (33,548,172 total acres) for the State. Alabama FSA supports the USDA mission to ensure a healthy, stable, accessible and affordable food supply, while employing roughly one in eight Alabama residents in agriculture related jobs.

STATE PROGRAM DELIVERY STRUCTURE

In bullet point form, provide the following information:

- **State Office Address:** Alabama FSA Office, 4121 Carmichael Road, Suite 600, Montgomery, AL 36106
- **Service Center Structure** – There are 45 service centers serving 67 counties in the State of Alabama.
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: **138**
    - Federal Permanent: **55**
- **Program Participation**: These programs has the highest activity levels for FY 2015 in Alabama.
  - Commodity Loans (including upland cotton) 185 Applications $78 Million
  - Conservation Reserve Program 8,460 Applications $14.5 Million
  - Disaster Assistance Programs 1,286 Applications $21.2 Million
- **Farm Loans Programs Loan Profile**: As of September 13, 2016, Alabama FSA has made the following loans for a total of **1,056** loans for a total dollar amount of **$118,397,235**.
  - Direct OL – 558/$21,532,998
  - Microloan OL – 307/$9,635,220
  - Direct FO – 50/$10,367,650
  - Emergency – 5/$1,478,400
  - Guaranteed OL – 34/$9,264,443
  - Guaranteed FO – 102/$66,118,524

HOT TOPICS

Three Key Issues of Concern

- Currently, Alabama’s GS and CO employees currently eligible or will be eligible for retirement within the next five years is roughly 25% of the workforce. Thus, management must concentrate on employee retention rates, cross training, and incentives for increased employee morale.
- Increasing the number of Full Time Employees (FTE) on both the federal and county side would alleviate stress and possible problems, as indicated on COR IPIA reviews.
- Increased budget for outreach activities allows for outreach to targeted groups, promotional/informational items, and attendance at large events we normally cannot attend due to budgetary restraints.

Three Initiatives of Importance

- Increase the number of military veterans that participate in FSA programs.
- Continue the established SED Advisory Board, which consists of both GS and CO employees.
- Continue cross training and county office shadowing of GS employees (STO personnel).
DANIEL ROBINSON, STATE EXECUTIVE DIRECTOR

Daniel Robinson serves as State Executive Director (SED) for the Alabama Farm Service Agency. He also previously served under the Clinton Administration as the SED for Alabama FSA from 1998-2001. Prior to his current appointment, he served in various FSA positions from 1970 – 2001. Robinson briefly retired in 2001 but returned to work with agriculture producers’ through employment with the Alabama Dept. of Ag. & Industries from April 2003 until October 2009, as the Assistant Marketing Director. He has received numerous accolades for his service including a Certificate of Appreciation (COA) from Secretary Tom Vilsack in 2016, COA from Vice President Al Gore (2000), and countless more. Robinson holds a B.S. in Ag. Ed. from Alabama A & M University in Normal, AL.

STATE PROFILE

Arkansas has a diverse landscape and climate that produces a wide variety of agricultural products. Number one in rice production, Arkansas is also a major exporter of soybeans, cotton, poultry and feed grains. There are approximately 49,350 farms statewide and 97 percent of Arkansas’ farms are family-owned. Agriculture and forestry encompass more than 95 percent of Arkansas’ land resources, with 6.2 million acres devoted to crops, 8.3 million acres of livestock and hay, and 18.8 million acres of forest land. Farm Service Agency supports the mission of serving Arkansas agricultural producers to strengthen economic stability in our rural communities.

STATE PROGRAM DELIVERY STRUCTURE

• Arkansas State FSA Office, 700 West Capitol, Room 3416, Little Rock, AR 72201
• Service Center Structure – There are 52 FSA offices servicing 75 counties in the state of Arkansas
• Employee Profile
  • Total County Non-Federal and Federal Permanent employees as of September 6, 2016:
    • County Non-Federal Permanent: 159
    • Federal Permanent: 98
• Program Participation: These farm programs had the highest level of activity for 2015 in Arkansas
  • ARCPLC 25,185 Enrollment Contracts $213.8 Million
  • MAL’s & LDP’s 1,198 MAL & LDP Applications $135.8 Million
  • Disaster Assistance 3,477 Applications $20.2 Million
  • CRP Program 330 Applications $16.9 Million
• Farm Loans Programs Loan Profile: The Arkansas Farm Service Agency has implemented a Participation Farm Ownership Policy. With its implementation, Arkansas has been able to obligate more Farm Ownership Loans in the past two fiscal years than in the past. In the process, Arkansas has been able to “assist more with less” and lead farmers to commercial lenders. As of 9/15/16, Arkansas State FSA obligated the following loans:

<table>
<thead>
<tr>
<th>Loan Type</th>
<th>Number of Loans</th>
<th>Loan Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direct Operating</td>
<td>741 Loans</td>
<td>$56,062,858</td>

<td>$110,307,190</td>
</tr>
<tr>
<td>Direct Ownership</td>
<td>116 Loans</td>
<td>$19,099,604</td>
</tr>
</tbody>
</table>

HOT TOPICS

• Evaluation of staffing needs, program and loan portfolios, and agricultural customer needs will be necessary.
• Implementation of the Limited English Proficiency initiative will continue, as FSA Outreach to a new and diverse rural community is ever changing. Focus should remain on reaching agricultural producers across the state of Arkansas.
LINDA NEWKIRK STATE EXECUTIVE DIRECTOR

Linda Newkirk serves as State Executive Director for the Arkansas Farm Service Agency. Newkirk started working for ASCS (predecessor to FSA) in 1977 and worked continually in the Arkansas State Office in various sections of the Agency during the years. For 10 years prior to becoming SED, Newkirk worked with the Arkansas State Committee and all program appeals and relief cases.

STATE PROFILE

Arizona has a strong and rich history in agriculture, its historical economic core was once the five C’s: cotton, climate, cattle, citrus, and copper. In Arizona, 33,613 farmers operate 20,005 farms on 26.2 million acres; the average farm is 1,312 acres. Approximately 50% of Arizona producers are Native American with small operations. (2012 Ag Census) Arizona has a year round growing period (320 days). Yuma is the winter lettuce capital of the world. Arizona’s top commodities are Lettuce, Alfalfa, Cattle/Calves, Dairy, and Cotton.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office** is located at 230 N 1st Avenue, Suite 506; Phoenix, Arizona
- **Service Center Structure:** There are eight (8) FSA offices serving Arizona’s 15 Counties
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of September 12, 2016: 49
    - County Non-Federal Permanent: 27
    - Federal Permanent: 22
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Arizona:
  - Disaster Assistance Program $30.6 Million—Livestock Forage Program Lead program
  - Commodity Program Payments $24.5 Million—Cotton Transition Assistance Program and Loan Deficiency Payments Lead programs
- **Farm Loans Programs Loan Profile:** In FY 2015, Arizona obligated $16.2 Million in Direct and Guaranteed Operating and Farm Ownership Loans.
  - Guaranteed Operating
    - 3 Loans
    - $1.97 Million
  - Guaranteed Ownership
    - 12 Loans
    - $5.5 Million
  - Direct Ownership
    - 220 Loans
    - $6.3 Million
  - Direct Ownership
    - 9 Loans
    - $1.7 Million
  - Microloans
    - 27 Loans
    - $689,200

HOT TOPICS

- Retirement of 3-4 senior staffers in the State Office is expected between December 2016-July 2017.
- The future of cotton remains a top issue - Upland Cotton decreased 42% from 2014 to 2015; in 2016 the acreage increased compared to 2015 but still falls short of 2013 and 2014 planting. Pima Cotton (ELS) has been steady over the last few years, between 15-17,500 acres. Many Arizona Pima Cotton (ELS) Producers are monitoring the Welspun Egyptian cotton scandal. Especially as companies look for a domestic and high quality alternative to Egyptian cotton.
- If the water level in Lake Mead goes below 1,075 feet there would be significant triggers as agreed to by various parties of the Central Arizona Project (CAP), of which Arizona while the keeper has the least legal rights. The first tier of individuals to experience water rations would be farmers.
GLORIA MONTAÑO GREENE, STATE EXECUTIVE DIRECTOR

Gloria Montaño Greene serves as State Executive Director for the Arizona Farm Service Agency. Gloria has extensive experience in policy, management, advocacy, organizing, and intergovernmental affairs. Gloria previously served as Chief of Staff to Congressman Raúl M. Grijalva, Director of the National Association of Latino Elected and Appointed Officials (NALEO) DC Office, and Business Manager for AARP's multicultural department. Gloria is originally from Arlington, Arizona, a rural community.

STATE PROFILE

With 76,400 farms and ranches, California's agriculture is a $54 billion dollar industry and contributes over $100 billion to the state's economic growth. California's top commodities include: milk, almonds, grapes, over 400 miscellaneous crops and cattle. California has the most diverse agriculture in the United States. Over a third of the country’s vegetables and two-thirds of the country’s fruits and nuts are grown in California. The Farm Service Agency in California sees over 100,000 farmers each year in Service Centers located around the State and takes acreage reports for approximately 18 million acres for participation in FSA programs in the State.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** 430 G St. Davis, CA 95616
- **Service Center Structure:** There are 30 County Offices serving 58 counties.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 165
    - County Non-Federal Permanent: 104
    - Federal Permanent: 61
- **Program Participation:** These programs hold the highest activity for FY 2015 in California
  - Agricultural Risk Coverage and Price Loss Coverage 8,661 Contract 21.9 Million
  - Disaster Assistance Program 4,567 Applications 81.7 Million
  - Marketing Assistance Loans 1,178 Applications 233.3 Million
- **Farm Loans Programs Loan Profile:** 722 guaranteed loans made to 580 borrowers
  - FSA CA has 2042 direct loans made to 1302 borrowers, 159 are emergency loans made to 84 borrowers.
  - Also for direct loans, an estimated 200 microloans were made to 180 borrowers.

HOT TOPICS

- With the decrease in number of temporary staffing, CA will struggle to keep with the demand for assistance.
- In 2013, President Obama and Secretary Vilsack announced $5 million in ECP funds for farmers and ranchers who want to build or improve water sources for their livestock. The funds went quickly and the need for additional funds will continue into 2017. There is a great need for a full time archeologist in the Southwest to handle and process cultural resource surveys.
- Extensive outreach has been done with Hispanic, African American, and Hmong farmers that should continue in future years.
Oscar Gonzales, STATE EXECUTIVE DIRECTOR

Oscar Gonzales serves as State Executive Director for the California Farm Service Agency. Oscar previously served as Secretary Vilsack’s Deputy Chief of Staff and also served as the Deputy Director of Intergovernmental Affairs, Acting Deputy Assistant Secretary for Congressional Relations, and Deputy Assistant Secretary for Administration. Before USDA, Oscar worked for the UFW Foundation working on immigration, water, worker’s rights, and agricultural issues. Gonzales was the Director of the National Hispanic Environmental Council from 2004-2006. Gonzales also worked with inner city youth and on community empowerment issues at the Corporation for National Service, Building-Up Los Angeles, the California Community College Foundation, and the Constitutional Rights Foundation.

STATE PROFILE

Colorado Farm Service Agency serves over 55,000 customers involved in farm and ranch operations in 64 counties in Colorado, through 39 local and regional offices. With grass acreage a top use of acres within the state, livestock is a major commodity. Colorado other major commodities include Wheat, Corn, Mixed Forage, Sorghum and Alfalfa. Colorado agriculture is proud of the growing opportunities through the production of Potatoes, Fruits and Vegetables. Colorado is also a home to a growing number and volume of marketing through Colorado Farmers Markets. Colorado FSA supports the FSA mission of maintaining an economical viable food, fiber, fuel producing infrastructure in rural Colorado.

STATE PROGRAM DELIVERY STRUCTURE

- **Address of State Office**: Colorado FSA Office, Denver Federal Center, Bldg. 56, Room 2760, Denver, CO 80225-0426
- **Service Center Structure**: There are 39 FSA County or Regional Offices serving 64 counties in Colorado.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees: 146
    - County Non-Federal Permanent: 106
    - Federal Permanent: 40
- **Program Participation**: These programs had the highest activity levels for FY 2015 in Colorado:
  - Conservation Reserve Program 11,740 Contracts $69.8 Million
  - ARC/PLC Programs $55.5 Million
  - Non-Insured Crop Disaster Assistance Program $6.2 Million
- **Farm Loans Programs Loan Profile**: Colorado FSA provided record levels of funding to Colorado producers in 2016.
  - Direct Operating 376 loans $22.1 million
  - Guaranteed Operating 85 loans $16.8 million
  - Direct Ownership 100 loans $19.5 million
  - Guaranteed Ownership 79 loans $37.1 million
  - Microloans 62 loans $1.5 million
  - Farm Storage 15 loans $1 million

HOT TOPICS

- As Colorado is a headwater state, a major issue is the cost of water and availability of water for agricultural use versus population growth around the state.
- Current 24 million enrollment cap on Conservation Reserve Program (CRP) acreage has limited the voluntary enrollment of acreage in the program, creating a situation for increased wind erosion and loss of wildlife habitat for endangered species.
- Current immigration policies have limited availability of laborers needed for many agricultural operations, from fruit and vegetable growers to dairy operations, seasonal to long term.
Leland Swenson, STATE EXECUTIVE DIRECTOR

Leland Swenson serves as State Executive Director for the Colorado Farm Service Agency. Leland served as President of the National Farmers Union from 1988 – 2002; following that service, he assisted a number of organizations with leadership transition and government relations. Leland has also held Presidential and Secretarial appointments to the 21st Century Commission on Production Agriculture and the USDA Agricultural Policy Advisory Committee on Trade. Swenson served in the United States Air Force and Army National Guard.

STATE PROFILE

Agriculture contributes $3.5 billion to the economy in Connecticut. The number of farms and diversity of farmers has increased in the state. The last Census of Agriculture showed an increase of 22% in the number of farms, 8% increase in farmland, and a 30% increase in the number of women owning and operating the farm. Our top five agricultural products are greenhouse and nursery, dairy, eggs, vegetables, and cigar tobacco.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Connecticut State Office, 344B Merrow Rd, Tolland, CT 06084
- **Service Center Structure:** There are five FSA offices serving eight counties in Connecticut.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of Oct. 18, 2016:
    - County Non-Federal Permanent Ceiling: 11; 8 on board
    - Federal Permanent Ceiling: 10; 9 on board
- **Program Participation:** These programs had the highest activity levels for FY 2015 in CT:
  - **ARC/PLC** $652,912
  - **Disaster Assistance Programs** $862,987
  - **MPP Dairy** 89 participants
- **Farm Loans Programs Loan Profile:** The Farm Service Agency has seen a great interest in the new microloan program, which fits in with the types of new and beginning farmer needs from the census. As of Sept. 14, 2016, we had approved of 25 loans for $2,815,980.
  - Direct – 4 for $130,000
  - Guaranteed – 10 loans for $2,404,500
  - Microloans – 11 loans for $281,480

HOT TOPICS

- Dairy producers continue to face tight margins and are struggling to remain viable. Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
- Personnel – CT shares two positions with MA and RI, the Farm Loan Chief and State Outreach Coordinator. The three states should convene a meeting with both positions to understand the management structure and establish expectations.
- Bridges to Opportunity – CT was a leader in the development and implementation of Bridges to Opportunity. A staff meeting to review and get up to speed on the program would be helpful as it is launched nationally, likely with CT involvement.
BRYAN HURLBURT, STATE EXECUTIVE DIRECTOR

Bryan P. Hurlbut has served as the State Executive Director for the Connecticut Farm Service Agency since 2013. Prior to serving at FSA, he was serving in the Connecticut House of Representatives where he was elected to four consecutive terms. He served as the Vice Chair of the Environment Committee and House Co-chair of the Appropriations Sub-Committee. Bryan was widely recognized by agricultural and conservation groups for his efforts to open opportunities for Connecticut grown agriculture. He was also the Managing Director of the Juice Bar Electric Vehicle Charging Station Company.

STATE PROFILE

Delaware has more than 8,400 farms encompassing over 508,000 acres of cropland, contributing to a sector that supports 1 in 11 jobs nationwide. Agricultural product sales added over $1.2 billion to Delaware’s economy in 2015 and provided consumers throughout the region with a variety of food products. Delaware’s top agricultural products include poultry, corn, soybeans, wheat, processing beans, sweet corn, peas, and other fruits and vegetables.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: Delaware State FSA Office, 1221 College Park Dr., Suite 201, Dover, DE 19904
- **Service Center Structure**: There are 3 FSA offices servicing 3 counties in the state of Delaware.
- **Employee Profile**:
  - Total county non-federal and federal permanent employees as of August 6, 2016: 19
  - County non-federal permanent: 10
  - Federal permanent: 9
- **Farm Program Participation**: Key program activities for FY2015 included:
  - Ag Risk Coverage/Price Loss Coverage Programs: 3769 contracts, Payments TBD after 10/1/16
  - Conservation Reserve Program/CREP: 462 contracts, $544,000
  - Farm Storage Facility Loans: 25 loans, $2,338,134 principal
  - Marketing Assistance Loans: 25 loans disbursed, $2,338,134 principal paid
- **Farm Loan Programs Loan Profile**: The Farm Service Agency saw an influx of new loans in FY 2016 with a total obligation for farm operating loans of $1,339,250 and farm ownership Loans of $15,460,000. Loan commitments as of September 9, 2016 consisted of:

HOT TOPICS

- Due to the tremendous increase in poultry house construction loans, the number of environmental assessments completed for FLP has soared in the past 3 fiscal years. Limited staffing, unprecedented loan volume, increased interest and involvement from the general public in environmental issues, and difficulties in coordinating environmental reviews with various state agencies have contributed to delays in loan processing.
- Current funding levels for Guaranteed and Direct Loans are not keeping pace with the increased demand for Farm Loan Programs, due to low commodity prices and the local poultry house construction boom.
Robert Walls, STATE EXECUTIVE DIRECTOR

Robert (Bob) Walls serves as State Executive Director for the Delaware Farm Service Agency. A lifetime resident of Delaware, Bob has dedicated his entire career to the field of Agriculture. Previously he worked for O.A. Newton & Son for 28 years, overseeing all aspects of the Irrigation and Farm Equipment Division. Bob then started Walls Irrigation, Inc., a small business specializing in agricultural irrigation systems where he served as Owner and President. Bob was elected to the Delaware State House of Representatives for the 33rd District, where he served on the House Small Business Caucus and chaired the House Agriculture Committee for two years.

**STATE PROFILE**

Most of Florida’s commodity crops are grown in North Central Florida and the Panhandle, so this is where most of Florida’s workload exists. Also, this is where most of Florida’s highly erodible soils exist, so this is where almost all of our CRP is administered. Central Florida and South Florida are, by and large, areas where disasters drive FSA’s workload, so the workload in these areas consists mostly of disaster relief and loans.

**STATE PROGRAM DELIVERY STRUCTURE**

- **Address of State Office:** Florida State Office, 4440 N.W. 25th Place, Suite 1, Gainesville, FL 32606
- **Service Center Structure** – There are 30 FSA offices serving 67 counties in the state of Florida. In addition, Florida is the State Office for the Virgin Islands with one office serving the three islands.
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: 66
    - Federal Permanent: 43
- **Program Participation:**
  - ARCPLC: 10,808 Enrolled Farms,
  - NAP: 3,272 Applications
  - TAP: 731 Applications
- **Farm Loans Profile:** Current and Pending Obligations for fiscal year 2016 (thru July 31, 2016): 442 loans totaling approximately $50,000,000.

- **HOT TOPICS**

- Livestock Indemnity Program (LIP): There are too many Florida panthers living in too small of a geographic area in southwest Florida. As a result, ranchers are losing an inordinate number of cattle.
- The farm economy is down across the board, so the farm loan business has skyrocketed as farmers find they can’t receive credit elsewhere. Consequently, FL’s delinquency rate may increase in 2017.
- FSA Florida is working with the Florida citrus industry and RMA to make changes to the standard crop insurance policy to include the damages of citrus greening. Discussions will continue into 2017.
Rick Dantzler, STATE EXECUTIVE DIRECTOR

Rick Dantzler is a third generation Floridian. He was elected to the Florida House of Representatives in 1982 and the Florida Senate in 1990. In 1998 he ran for governor, ultimately becoming the Democratic nominee for lieutenant governor. He is a lawyer and mediator. In his free time, he enjoys fishing, hunting, playing golf and writing. The author of three books, his writings fall under the genre of historical fiction. He is a graduate of the University of Florida where he received his undergraduate and law degrees. He and his wife of 32 years have two daughters.

**STATE PROFILE**
Agriculture in Georgia contributes approximately $74.35 billion annually to Georgia’s economy. Recently reported Farm Gate Value for the state was $14 billion. One in seven Georgians works in agriculture, forestry, or related fields. In 2015, there were 40,500 farms in Georgia encompassing 9.3 million acres of land. The average farm size was 230 acres. Georgia is perennially the number one state, or near the top, in the nation in the production of peanuts, broilers (chickens), pecans, rye, and spring onions. We are also at or near the top when it comes to cotton, watermelon, peaches, eggs, blueberries, sweet corn, bell peppers, tomatoes, onions, cantaloupes, and cabbage. Producers across the state raise cattle, horses, goats, sheep, hogs, poultry, and alligators.

**STATE PROGRAM DELIVERY STRUCTURE**
- **State Office Address**: Georgia State FSA Office, 355 E. Hancock Ave., Stop 100, Athens, GA 30601
- **Service Center Structure**: There are 66 FSA offices servicing 159 counties in the state of Georgia.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of September 14, 2016: 297
    - County Non-Federal Permanent: 226
    - Federal Permanent: 71
- **Program Participation**: These programs recorded the highest activity levels for FY 2015 in Georgia:
  - Marketing Assistance Loans
    - 4,745 Applications
    - $577.5 Million
  - Cotton Transition Assistance Prog.
    - 29,938 Applications
    - $493 Million
  - Disaster Assistance Programs
    - 7,776 Applications
    - $26.3 Million
  - Loan Deficiency Payments
    - 18,060 Applications
    - $18.1 Million
  - Conservation Reserve Prog.
    - 11,029 Applications
    - $17.5 Million
- **Farm Loan Programs Loan Profile**: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/12/16, Georgia State FSA made the following loans:
  - **Direct Operating**: 460 Loans
    - $33.3 Million
  - **Guaranteed Operating**: 158 Loans
    - $61.6 Million
  - **Direct Ownership**: 38 Loans
    - $6.7 Million
  - **Guaranteed Ownership**: 42 Loans
    - $20.4 Million
  - **Microloans**: 121 Loans
    - $3.5 Million
  - **Emergency**: 3 Loans
    - $0.4 Million

**HOT TOPICS**
- **Peanut Marketing Assistance Loan (MAL) Processing** – Problems with the CLPS application when processing Marketing Assistance Loans although CLPS is fully functional, errors continue to be encountered, prohibiting peanut MAL activity in the county offices.
- **Georgia’s Employment (FSA) Diversity** – Georgia employment diversity as recorded in the Farm Service Agency (FSA) Employee Demographics Relative to NASS’s Census of Agriculture Primary Operator Demographics is, and will continue to be in the near future, a major challenge, as we are lacking in diversity at the Program Technician (PT) and County Executive Director (CED) position levels. Existing policy and procedures greatly hampers the enhancement of diversity at these two levels (PT and CED) and is relatively nonexistent.
- **New Farmer Outreach and Education** – Coordination of strategic events and trainings for new and beginning farmers and ranchers, as well as significant outreach and assistance to military veterans. Georgia houses one of the nation’s five New/Beginning Farmer Coordinators.
FRED HARRISON, JR., STATE EXECUTIVE DIRECTOR

Fred Harrison, Jr., serves as State Executive Director for the Georgia Farm Service Agency. Harrison, prior to this appointment, served as a member of the Georgia State FSA Committee for four years. Before joining FSA, the Alumnus and Dean Emeritus for Fort Valley State University (FVSU), College of Agriculture, Home Economics and Allied Programs, provided 32 years of senior leadership and policy development to agriculture, both in Georgia and nationally—he served at FVSU from 1983-2004, and he spent 10 years at the University of Georgia as Extension Specialist for Personnel and Staff Development, and as Assistant Professor of Extension Education.

STATE PROFILE
Farm Service Agency Hawaii and the Pacific Basin serves a diverse mix of predominantly small and minority producers with highly diversified crops ranging from temperate to tropical vegetable, fruit, nuts, fish and livestock. Hawaii also serves as a base for national and international seed companies with ongoing hybrid and GMO seed research and replication of desirable varieties and lines. On the other side, serving three (3) US Territories (Guam, Commonwealth of the Northern Mariana Islands and American Samoa) and three (3) independent COMPAC nations (Republic of the Marshall Islands, Federated States of Micronesia and Palau) in the Western Pacific, FSA staff is required to be able to navigate unique jurisdictional boundaries, customs and business models which makes for dynamic delivery of services.

STATE PROGRAM DELIVERY STRUCTURE
- **Address of State Office** 300 Ala Moana Blvd, Room 5-108, P.O. Box 50065 Honolulu, HI 96850
- **Service Center Structure** There are 6 Service Centers serving 7 counties and 11 individual islands
- **Employee Profile** County Non-Federal and Federal Permanent employees as of August 6, 2016:
  - County Non-Federal Permanent: 12
  - Federal Permanent: 16
- **Farm Programs Participation** Severe storms were limited in scope in 2015 and the drought conditions in the State of Hawaii began to subside; thus, there was some leveling and even decline in requests for disaster assistance. Highlights of program participation include:
  - Noninsured Crop Disaster Program 1,440 applications $932,931
  - Reimbursement of Transportation Costs Payment Program 410 applications $886,000
  - Livestock Forage Program 114 applications $283,404
- **Farm Loan Programs Loan Profile** Specializing in loans to minorities & women totaling $8.6 Million
  - Direct Operating Loans 117 Loans $2,133,710 including Microloans 83 Loans $1,255,900
  - Guaranteed Operating Loans $111,000 & Guaranteed Farm Ownership 11 Loans $6,372,429
  - Emergency Loans 2 Loans $55,000

HOT TOPICS
- Farm Service Agency (FSA) has an opportunity to more fully participate in a confluence of the Hawaii Governor’s goal to increase local food production, coupled with Hawaii Legislative initiatives and business decisions currently playing out in the state. It is likely the number of small family farms will exponentially increase in the coming years, challenging FSA’s staffing resources.
- Successive retirement of senior State Office staff has and will likely continue to result in critical knowledge gaps despite on-going efforts to transmit information, train and prepare the balance of staff.
DIANE L. LEY, STATE EXECUTIVE DIRECTOR

Diane L. Ley is the State Executive Director for the USDA Farm Service Agency (FSA) in Hawaii and the Pacific Basin and is responsible for the Agency’s delivery of credit, disaster assistance and conservation programs for farmers and ranchers. A former vegetable farmer, Ley previously held executive positions in agriculture with the State of Hawaii, the County of Hawaii and the Hawaii Farm Bureau. Diane L. Ley plans to leave her position at the end of November 2016.

STATE PROFILE

Rural Iowa is home to 88,637 farms across 30.6 million acres. Iowa’s top agricultural products include corn, hogs, soybeans, cattle and eggs. All told, sales of farm products contributed nearly $31 billion to Iowa’s economy in 2014. Iowa agriculture contributes to a sector that nationwide supports one in 11 jobs. Iowa is a leader in grain, and livestock processing. Iowa is the nation’s top ethanol producer, and number 2 in wind energy.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: 10500 Buena Vista CT, Des Moines, IA 50322
- **Service Center Structure**: There are 97 County offices serving 99 counties in Iowa
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: 468
    - Federal Permanent: 122
- **Program Participation for 2015**
  - there were 151,368 farms enrolled in the ARC/PLC program
  - 6,132 Marketing Assistance Loans for $439,450,429
  - 2016 CRP-107,046 contract on 1,689,287 acres, total dollars paid of $393,895,853
- **Farm Loans Programs Loan Profile**
  - Direct Loans; 4,549 accounts, $633 million. This includes; 2,108 operating loans; Microloans 531 loans; 3,027 farm ownership loans; 75 Emergency loans
  - Guaranteed Loans; $789 million; 1,204 operating loans - $207 million; 1,707 farm ownership loans - $582 million

HOT TOPICS

- Low commodity prices, high input cost and negative profit margins are limiting commercial credit and have created financial stress in agriculture increasing demand for our FLP programs further leveraging our human resources in administering supervised credit and all FSA programs. Near record flooding on major rivers and tributaries causing infrastructure and crop and livestock losses has added to devastating losses to many in the agricultural community.
- The Congress mandated Conservation Reserve Program acre cap will be reached in early FY2017 creating a very volatile situation impacting the agriculture economy along with environmental and conservation compliance issues.
- Water quality issues brought to the forefront by the largest water municipality in the state filing a law suit against counties impacting agricultural land drainage as source point pollution will have far reaching implications on millions of cropland acres - funding is needed by the USDA to be able to work with producers to address and solve water quality issues.
John Whitaker, STATE EXECUTIVE DIRECTOR

John R. Whitaker serves as State Executive Director (SED) of the USDA Farm Service Agency in Iowa. Before being named to this position, he served 7 years in the Iowa House of Representatives (2003-2009) and was Assistant Minority Leader from 2005-2006 and Assistant Majority Leader from 2007-2009. In the Iowa Legislature, he served on several committees including; Agriculture, Transportation, Natural Resources, Environmental Protection, Public Safety. John also served 10 years (1993-2002) on the Van Buren County Board of Supervisors, and 9 years as President of the Iowa Farmers Union.

**STATE PROFILE**

Production agriculture and related agricultural businesses, when combined, are the largest industry in Idaho, accounting for 20% of output/sales, 14% of jobs and 16% of the State’s GDP in 2015. Of the 38,000 farms in Idaho, 21,000 have enrolled over 3.0 million base acres to participate in one or more FSA program offering revenue protection, conservation or disaster programs. Idaho ranks in the top ten nationally in the production of potatoes, trout, alfalfa, barley, sugar beets, wheat, peas, lentils, milk, cheese, hops, mint and cattle. This diversity and productivity is due to significant irrigation water in the South and ample rainfall in the North.

**HOT TOPICS**

- **National:** As commodity prices decrease, demand for Conservation Reserve Program contracts increase. Unfortunately, the 24 million acre cap reduces availability of contracts that could assist producers and expand our conservation footprint. In the last sign-up approximately 25% of the contracts offered were accepted, down from an average of over 90% in previous sign-ups.
- **Conservation Reserve Enhancement Program Demand:** As adjudication expands and cut back in allotments increase, demand for Conservation Reserve Enhancement Program will increase. The program is very “workload” intensive for our employees. Stakeholders have asked for an increase in rental rates in order to attract acres.
- **Shared Management Constraints:** As demand for FSA services increase due to lower prices and FTEs continue at the same levels, increase shared management will be required. However a lack of vehicles, and alternative transportation (NRCS vehicles) will limit our ability to provide adequate services.
MARK SAMSON, STATE EXECUTIVE DIRECTOR

Samson has worked in the wheat industry for the majority of his career, serving as assistant director of Western Wheat Associates (now U.S. Wheat Associates) in Washington, D.C., administrator for the Idaho Wheat Commission and vice president for the U.S. Wheat Associates’ for South Asia in Singapore and vice president for Europe, the Middle East, East and North Africa in Egypt and the Netherlands. Earlier in his career he worked for Morrison Knudsen in Alaska and Saudi Arabia, the Idaho Department of Economic Development and Commerce and has owned his own international trading and consulting firm. He has a MS in Ag Econ from the U of I and has worked with numerous Ag groups in Idaho.

STATE PROFILE

Agriculture in Illinois is the major industry, boasting the most farms and highest number of farmers in the nation. Approximately one million people in Illinois are employed in the food and agriculture industry which contributes over $199 billion to the state’s economic growth. Illinois’ top commodities include: corn, soybeans, hogs, cattle and dairy products. Illinois leads the nation in pumpkin and horse radish production. More than 95% of farms in Illinois produce corn, its top commodity. The Farm Service Agency in Illinois sees over 150,000 farmers each year in Service Centers located around the State and takes acreage reports for approximately 25.9 million acres for participation in FSA programs in the State.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: Illinois State FSA Office, 3500 Wabash Avenue, Springfield, IL 62711-8287
- **Service Center Structure** – There are 84 full time and 9 part time FSA Offices service 102 Illinois counties.
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of September 21, 2016: **519**
    - County Non-Federal Permanent: **421**
    - Federal Permanent: **98**
- **Program Participation**: These programs had the highest activity levels for FY 2015 in Illinois:
  - Conservation Reserve Program: 46,403 Contracts, $300.3 Million
  - Marketing Assistance Loans: 2,071 Loans, $155.3 Million
  - Farm Storage Facility Loans: 158 Loans, $20.9 Million
- **Farm Loan Programs Loan Profile**: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/21/16, Illinois State FSA made the following loans:
  - Direct Operating: 178 Loans, $14.2 Million
  - Guaranteed Operating: 139 Loans, $41.3 Million
  - Direct Ownership: 289 Loans, $48.9 Million
  - Guaranteed Ownership: 274 Loans, $117.6 Million
  - Microloans: 88 Loans, $2.0 Million
  - Emergency: 1 Loan, $.20 Million

HOT TOPICS

- A large percentage of FSA Illinois employees are eligible to retire. Leadership will need to be cognizant of the fact that numerous employees could retire, taking years of FSA experience with them, draining our FSA knowledge. Succession planning, whether formal or informal, is imperative.
ILLINOIS FSA STATE OFFICE FACT SHEET

SCHERRIE GIAMANCO, STATE EXECUTIVE DIRECTOR

Scherrie Giamanco serves as State Executive Director for the Illinois Farm Service Agency. Giamanco began her career with Illinois FSA in 1993 with the Office of Intergovernmental Affairs Midwest Disaster Liaison. She then served as Price Support Chief Program Specialist previous to her selection to serve as the State Executive Director for USDA, Farm Service Agency. Prior to joining FSA, Giamanco was Illinois Special Projects director in economic development, agriculture and rural issues with the Illinois office of U.S. Senator Paul Simon.

STATE PROFILE

Agriculture has a rich heritage in Indiana and contributes an estimated $25 billion a year to the state’s economy. The agriculture industry involves more than production agriculture, which includes the raising of livestock, poultry or crops. It also includes manufacturing, wholesale, storage, support services, tourism, and retail operations. From corn and soybean production across the state, to rolling pastureland in the south, to specialty crop production in southwestern Indiana, 83% of our land is dedicated to farms and forests; 245,000 jobs are supported by agriculture; 19.4 million acres of land is in farms and forests; and the average size farm is 245 acres. The top five commodities by value of sales are: Corn ($4 billion); Soybeans ($2.9 billion); Hogs ($1.2 billion); Poultry ($1.1 billion); and Dairy ($660 million). Indiana ranks 10th in the nation in agricultural sales.

STATE PROGRAM DELIVERY STRUCTURE

- **Address of State Office:** 5981 Lakeside Blvd, Indianapolis, IN 46278
- **Service Center Structure:** There are 75 FSA offices servicing 92 counties in the state of Indiana.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of September 2016:
    - County (CO) Non-Federal Permanent: 277
    - Federal (GS) Permanent: 64
- **Program Participation:**
  - ARC-CO Payments: $153 million with 103,000 participating farms
  - Conservation Reserve Program: 35,423 contracts on 236,158 acres totaling $36.8 million in annual rental payments
  - Farm Storage Facility Loans: 486 loans with a balance of over $25 million
  - Commodity Loans: 1,820 loans issued for $174.9 million
  - Non-Insured Crop Disaster Assistance Program: $1.23 million
- **Farm Loans Programs Loan Profile:**
  - Direct Operating, 173 loans, $11.6 million
  - Guaranteed Operating, 192 loans, $42.5 million/Guaranteed Ownership, 231 loans, $110.9 million
  - Direct Ownership, 154 loans, $28.8 million
  - Microloans, 61 loans, $1.5 million

HOT TOPICS

- Indiana has utilized an outstanding temporary workforce in implementing the 2014 Farm Bill from 2014 to October 2016. Due to a FY17 budget uncertainty, our baseline temporary ceilings have been decreased and could dramatically impact delivery and customer service.
- In the next 5 years, Indiana FSA has 29 Federal employees and 105 County employees who can retire. Dealing with the knowledge transfer and the inability to effectively plan for these retirements poses a challenge.
- Dairy producers continue to face tight margins and are struggling to remain viable. Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
JULIA A. WICKARD, STATE EXECUTIVE DIRECTOR

Wickard was appointed by President Barack Obama in August 2009. Before her federal service, Wickard served as the Executive Vice President of the Indiana Beef Cattle Association. She also has worked for Indiana Farm Bureau Inc. and served eight years as Deputy Director in the Office of the Commissioner of Agriculture. She has worked for two Members of Congress in Washington DC, and she serves on several agricultural and community boards and commissions. Wickard is a Purdue University graduate with a bachelor’s degree in agricultural communications and political science. Wickard, her husband, Chris, and their two children, Jordyn and Jacob, reside in Hancock County on their 100-year homesteaded family farm where they raise Registered Angus Cattle and operate a corn, soybean, hay operation with her family.

STATE PROFILE

Agriculture is the largest economic driver in Kansas, valued at more than $62 billion and accounting for 43 percent of the state’s total economy. 88.9 percent of the more than 46 million acres in Kansas is devoted to farming, and 86% of those farms and ranches are family-owned. While Kansas agriculture covers everything from grain commodities to fruit orchards to poultry, Kansas has always held the number one spot in the nation for wheat production. Kansas also ranks first in grain sorghum production and third in cattle production, with over 16 million acres of pastureland used for animal grazing. Other top-ranked agricultural products in Kansas are hay, corn, soybeans, hogs, milk, cotton, and sheep.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: Kansas State FSA Office, 3600 Anderson Ave, Manhattan, KS  66503
- **Service Center Structure**: There are 96 FSA Offices serving 182,000 ag producers in 105 counties
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: **474**
    - County Non-Federal Permanent: 373
    - Federal Permanent: 101
- **Program Participation**: These programs had the highest activity levels for 2015 in Kansas:
  - Conservation Reserve Program: 38,905 Applications $98 Million
  - Disaster Assistance Programs: 25,661 Applications $194.1 Million
  - Marketing Assistance Loans: 329 Loans $35.9 Million
- **Farm Loans Programs Loan Profile**: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/29/16, Kansas State FSA made the following loans:
  - Direct Operating: 614 Loans $52 Million
  - Guaranteed Operating: 144 Loans $32 Million
  - Direct Ownership: 389 Loans $62 Million
  - Guaranteed Ownership: 150 Loans $69 Million
  - Microloans: 186 Loans $4 Million
  - Emergency: 2 Loans $.5 Million

HOT TOPICS

- Demand for credit assistance from USDA is exceeding the available funds
- A high percentage of employees are reaching retirement eligibility, which will result in high anticipated turnover during the next two years.
ADRIAN J. POLANSKY, STATE EXECUTIVE DIRECTOR

Polansky was appointed SED of USDA’s Farm Service Agency in Kansas by President Barack Obama in July 2009. He served in the same capacity from 1993 to 2001 under the Clinton Administration. Polansky, a native Kansan, brings a lifetime of agriculture experience to USDA. He served as secretary of the Kansas Department of Agriculture from February 2003 to July 2009, and owns a 1,900-acre family farm and wholesale farm seed company, both in Belleville, Kansas. Polansky graduated from Kansas State University in 1972 with a Bachelor of Science degree in agronomy, and has received many honors and awards, including the Kansas State University 2011 Distinguished Alumnus Award and 2006 College of Agriculture Distinguished Service Award.

STATE PROFILE

From a booming broiler sector and iconic products such as bourbon to dedicated education and research, Kentucky agriculture is a big deal. The Bluegrass State boasts 76,500 farms across 13 million acres of land. These farms raise the state’s top commodities, including broilers for meat, which brought $866.6 million to the economy in 2012, along with corn, horses and mules, soybeans, and cattle and calves. Kentucky is home to 1.1 million beef cows and takes the title as the largest producer of beef cattle east of the Mississippi River, and the eighth-largest in the nation. Kentucky FSA’s dedicated team of professionals in each of our service centers are committed to serving the farm community and supporting the USDA mission.

STATE PROGRAM DELIVERY STRUCTURE

• Kentucky State Office Address: 771 Corporate Dr., Ste. 205, Lexington, KY 40503
• Service Center Structure: There are 64 Service Centers serving 120 counties
• Employee Profile:
  o Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 325
    ▪ County Non-Federal Permanent: 219
    ▪ Federal Permanent: 106
• Program Participation: These three programs had the highest participation for FY 2015 in KY
  Conservation Reserve Program 20,989 Applications $41.9 Million
  Disaster Assistance Programs 941 Applications $18.8 Million
  Commodity Program Payments 156,020 Payments $45.8 Million
• Farm Loans Programs Loan Profile:
  Guaranteed Loans 388 Loans $74.5 Million
  Direct Loans 2,844 Loans $89.0 Million
  Microloans 473 Loans $9.1 Million

HOT TOPICS

• Conservation Reserve Program (CRP) cover requirements on land coming out of contract will drastically reduce the number of enrolled acres in Kentucky.
**John W. McCauley, STATE EXECUTIVE DIRECTOR**

John W. McCauley serves as State Executive Director for the Kentucky Farm Service Agency. Prior to joining the Obama administration, John owned and managed JWM Consulting Service. In that role, he covered the U.S. representing the agricultural chemical industry on legislative and regulatory issues. He is the former chairman of the Southern Crop Production State Affairs Committee and a past national president of the Association of Structural Pest Control Regulatory Officials. He served under two Kentucky governors and on the staff of former U.S. Senator Walter D. Huddleston.

STATE PROFILE

Louisiana is known throughout the world for the diversity of its food, its population and its culture. Louisiana agriculture is certainly reflective of the State! Whether it is rice grown on the coastal prairies of the Southwest, sugar cane grown along the banks of the Bayou Teche, vegetable, nursery and timber operations in the Southeast, or the livestock, feed grain and cotton produced in the Northern half of the State, Louisiana agriculture is big business and provides significant contributions to the State, particularly in rural areas. FSA proudly provides Louisiana producers with risk-management tools (Agriculture Risk Coverage and Price Loss Coverage Program, Noninsured Crop Disaster Assistance Program, Marketing Assistance Loans, etc.) and capital investment opportunities through both the Direct and Guaranteed Loan Programs.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Louisiana State FSA Office, 3737 Government Street, Alexandria, LA 71302
- **Service Center Structure:** There are 37 FSA offices servicing 64 parishes in Louisiana
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of August 12, 2016: 183
    - County Non-Federal Permanent: 109
    - Federal Permanent: 74
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Louisiana:
  - Conservation Reserve Program: 4,701 contracts, $21,148,014
  - Price Support: $223,000,000
- **Farm Loans Programs Loan Profile:**
  - Direct Operating: 459 loans for $23.1 Million
  - Guaranteed Operating: 139 loans for $56.66 Million
  - Microloans: 230 loans for $6.8 Million
  - Direct Farm Ownership: 9 loans for $1.65 Million
  - Guaranteed Farm Ownership: 13 loans for $7.68 Million

HOT TOPICS

- The circumstances of economics, combined with flood related losses experienced during crop years 2015 and 2016, have seriously affected the economic health of all agricultural sectors. When considering the loss of on-farm income due to lower yields, crop quality and commodity prices, along with the loss of equity due to depleted cash reserves and declining equipment values, many producers will have difficulty reaching a positive cash flow in 2017 and FSA loan programs will be paramount to their success.
Craig A. McCain, STATE EXECUTIVE DIRECTOR

Craig A. McCain serves as State Executive Director for the Louisiana Farm Service Agency. McCain served for nearly 25 years as the County Executive Director in three FSA offices in Louisiana before serving as District Director for three years. McCain has served on several National Task Forces, which were responsible for writing FSA policy and developing software applications. He has also participated in the development and presentation of a number of National and State training sessions. During his tenure as SED over the past two and one-half years, McCain has greatly expanded outreach efforts in the State of Louisiana, both by forming new partnerships and renewing and strengthening existing partnerships.

STATE PROFILE

Massachusetts agriculture contributes over $492 million annually to the state’s economy, ranks 5th nationally in direct market sales and 1st in the percentage of farms practicing Community Sustained Agriculture. With great diversity in both crops and in the nature of farming enterprises, Massachusetts has some of the best quality agricultural land in the country with 7,755 farms on over 523,000 acres. 80% of our farms are family-owned, 95% qualify as “small farms” under $250,000 in sales, and more new farms are beginning operations each year. Challenges for farmers include high input costs and contending with one of the highest farmland values in the U.S at $10,600 per acre.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Massachusetts State FSA Office, 445 West Street, Amherst, MA 01002
- **Service Center Structure:** There are 7 FSA offices servicing 14 counties in the Commonwealth.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of October 2, 2016: **32**
  - County Non-Federal Permanent: 15
  - Federal Permanent: 17
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Massachusetts:
  - Disaster Assistance Programs: 26 Applications, $620,007
  - Noninsured Assistance: 203 Applications, $180,855
  - Direct & Counter Cyclical: 55 Applications, $79,552
- **Farm Loans Programs Loan Profile:** As of 8/31/2016, Massachusetts FSA made the following loans:
  - Direct OL: 45 Loans, $2.16 Million
  - Guaranteed OL: 6 Loans, $2.275 Million
  - Direct FO: 5 Loans, $884,000

HOT TOPICS

- In southeastern Massachusetts, market prices for cranberries generally remain below the cost of production. Many growers are FSA loan customers and loan staff continue to monitor and assist during these challenging times.
- A frost/freeze early in the year, followed by sustained drought conditions over the 2016 growing season, led to significant losses among all crop types. Peaches and other tree crops were substantially impacted by the frost/freeze and dairy and livestock producers suffered considerably under the drought. Massachusetts dairy farmers already have high input costs and the latest crisis only further threatens the industry’s viability.
JONATHAN D. NIEDZIELSKI, STATE EXECUTIVE DIRECTOR

Jon Niedzielski serves as State Executive Director for the Massachusetts Farm Service Agency. Niedzielski previously was Deputy Chief of Staff and District Director for Congressman John W. Olver, MA-01. During 20 years as a Congressional aide, he lead Mr. Olver’s constituent services and economic development teams and acted as his principal district representative. Niedzielski also served on the board of Common Capital Inc., a nonprofit community development institution providing both capital and technical assistance to small businesses in western and central Massachusetts.

</table>
Maryland’s agricultural production is as diverse as the state and second to none in its importance to the state’s economy, environment, food supply and quality of life. Maryland’s agriculture includes poultry, grain, livestock and equines, forests and nurseries, orchards and vineyards, dairy and ice cream, vegetables and fruit. Special emphasis is placed on the Chesapeake Bay production of fish, crabs, and oysters. FSA programs directly affect the Chesapeake Bay and continuing to support bay health. Maryland FSA supports the USDA mission and helps ensure a healthful, stable, accessible and affordable food supply.

**STATE PROGRAM DELIVERY STRUCTURE**

- **State Office Address:** Maryland State FSA Office, 339 Busch’s Frontage Rd., Annapolis, MD. 21409
- **Service Center Structure:** There are 20 FSA offices servicing 23 counties in the state of Maryland.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of September 9, 2016, = 77
    - County Non-Federal Permanent: 56
    - Federal Permanent: 21
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Maryland:
  - Conservation Reserve Program  5915 Applications  $10.7 Million
  - Disaster Assistance Program    16 Applications    $174,912  
  - Marketing Assistance Loans    102 Applications    $9.9 Million

- **Farm Loans Programs Loan Profile:** The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $15.2 Million in Direct and Guaranteed Operating (OL) and Farm Ownership (FO).
  As of 7/31/16, Maryland State FSA made the following loans:
  - Direct Operating  43 Loans  $2.5 Million  Guaranteed Ownership  15 Loans  $8.6 Million
  - Guaranteed Operating  3 Loans  $276,000  Microloans  13 Loans  $272,000
  - Direct Ownership  16 Loans  $3.5 Million

**HOT TOPICS**

- Class II Environmental Reviews – Poultry loans dominate the Eastern Shore of Maryland and require a Class II Environmental Assessment prior to loan approval. Resistance to agriculture, and agricultural products, is being applied from outside organizations such as Waterkeeper’s Alliance, Food and Water Justice Program, Food and Water Watch, and Earth Justice, as well as area citizens. Numerous FOIA requests have been filed, local meetings held by concerned residents complaining about poultry operations being planned in their area, and Congressional representatives have been contacted by these groups and citizens. This continues to be a volatile situation on Maryland’s Eastern Shore. Examples of this situation include One Haul Farms (Katie Winstead) and Galen Horst farms. Both of these cases remain very active on the radar of Maryland FSA.
Linda Slacum serves as State Executive Director for the Maryland Farm Service Agency. Linda has been with FSA almost 34 years, serving as a County Program Assistant in an Indiana County office before coming home to Maryland. Since returning to Maryland she has also served as a Program Assistant and later, a County Executive Director, Executive Officer, and SED.

STATE PROFILE

Maine is blessed with a diversity of agriculture. The top crops are: potatoes, dairy, eggs, apples, aquacultural products, corn, hay, small grains, and we are the world’s largest producer of wild low bush blueberries. The growth in vegetable production has resulted in an increase in local farmers markets providing locally grown fresh food to the people of Maine. Maine FSA services beginning and existing producers with low interest loans and programs that support stability within a high risk industry that is critical to the nation’s security and future success.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Maine FSA State Office, 927 Illinois Ave, Suite 2, Bangor, ME 04401
- **Service Center Structure:** There are 13 County Service Centers which cover all 16 counties
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of September 21, 2016:
    - County Non-Federal Permanent: 21 (allocation is 24 – 3 positions flexed to GS)
    - Federal Permanent: 34 (allocation is 31 – 3 positions flexed from CO)
- **Program Participation:** The top programs in Maine include the following:
  - Marketing Assistance Loans (MAL) - $428,860 – 14 loans (Barley, Oats, and Soybeans)
  - Conservation Reserve Program (CRP) - $418,834 – 7933.7 acres – 330 contracts
  - Emergency Conservation Program/Emergency Forest Restoration Program (ECP/EFRP) - $96,146
  - Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish (ELAP) - $26,076
- **Farm Loans Programs Loan Profile:**
  - **Direct Program:** 325 borrowers with $35.9 M outstanding principal and interest, delinquency rate is 9.79%. Loan profile as of August 31, 2016:
    - Operating (OL): 515 loans (24 youth, 98 MLs) - $15 M
    - Emergency (EM): 11 loans - $1 M
  - **Guaranteed Program:** 68 borrowers with $23 M in principal outstanding, delinquency rate is 3.05%.
    - Loan profile as of August 31, 2016, is:
      - Operating (OL) - 27 loans - $5 M
      - Farm Ownership (FO) - 72 loans - $18 M

HOT TOPICS

- **Rapid reduction in dairy farms** due to increased costs of production and low milk pricing. Maine has a state program that has slowed this loss some. Other New England states have no state programs and have lost larger percentages of dairy farms than Maine. We continue to use all of our servicing tools available to assist those farmers who are working to stay viable during this challenging period.
- **Potential drought developing** - FSA has been part of the Maine Emergency Management Agency (MEMA) Drought Task Force for the past three months. The National Geological Survey has presented facts in regards to our ground water situation and compared it to the drought that took place in the sixties. Unless we have a large snow pack this winter and rains next spring, we may be headed into a long term drought condition.
- **Transition of personnel:** One of the largest challenges facing Maine FSA is the transition of personnel due to retirements. This loss of institutional knowledge along with the lack of experienced people in lower leveled jobs will leave the agency in a very difficult situation.
Donovan E. Todd, III, MAINE FSA STATE EXECUTIVE DIRECTOR

Don Todd received a BS degree from the University of Maine at Orono in May of 1975. He worked for USDA, FmHA from 1974-1989. From 1989-1994 he was General Manager for Sebasticook Packers Inc. in Corrina, Maine. Mr. Todd was a self-employed licensed potato broker from 1994-2005, and also served on the Maine Potato Board from 1989-2005, and was President of the board for two years. Mr. Todd was a self-employed carpenter from 2005 through August 2009. Mr. Todd was appointed as Maine State Executive Director for Farm Service Agency in August 2009 and received the Administrators Award for Management Excellence in 2015 after being nominated by his employees.

Vacant Seat – intent is to fill with representative of aquaculture industry after election
Michigan farmers grow and raise more than 300 varieties of food/commodities on nearly 10 million acres of farm land, making it the second most diverse agriculture industry in the nation. Of Michigan’s 51,600 farms, 98% are family owned. Yet, Michigan agriculture contributes $101 billion to the state’s economy and employs about 923,000 Michiganders. Michigan is the country’s top producer of dry black and cranberry beans, blueberries, tart cherries, pickling cucumbers, squash, and many species of floriculture. Michigan’s major crops include milk, corn, soybeans, vegetables, fruit, cattle, hogs, poultry and sugar beets. Michigan FSA proudly supports the producers in this state’s diverse agriculture economy.

### STATE PROGRAM DELIVERY STRUCTURE

- **Address:** Michigan Farm Service Agency, 3001 Coolidge Road, Suite 350, East Lansing, MI 48823
- **Service Center Structure:** Forty-nine FSA Service Centers serve 83 Michigan counties.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of Aug. 6, 2016: 256
  - County Non-Federal Permanent: 184
  - Federal Permanent: 72
- **Program Participation:** Top farm programs in Michigan for 2015:
  - Ag. Risk / Price Loss Coverage: 49,854 Contracts
  - Disaster Assistance: 1,312 Participants
  - Conservation Reserve Program: 166,621 Acres
  - Commodity Loans: 602 Loans
  - Farm Storage Facility Loans: 22 Loans
- **Farm Loans Programs Loan Profile:** 865 farm loans, totaling $118.8 million in FY 2015.
  - Direct Operating: 356 Loans $22.8 million
  - Guaranteed Operating: 109 Loans $21.8 million
  - Direct Ownership: 170 Loans $26.5 million
  - Guaranteed Ownership: 135 Loans $45.7 million
  - Microloan: 92 Loans $1.9 million
  - Emergency: 3 Loans $.149 million

### HOT TOPICS

- The Lenawee County FSA Service Center is under a full internal audit and reconciliation due to numerous errors discovered during a target review by the COR of CRP contracts and payments.
- Experience level of the county office staffs is a short-term concern due to recent and continuing personnel turnover. A strong training plan, focus on mentorship, and close monitoring is recommended until all new personnel are fully trained and integrated.
- The agriculture economy in Michigan is struggling more than in previous years due to shifts in the market. This is especially true for the dairy industry. A greater demand for direct farm loans, guaranteed loans, and commodity loans are expected.
CHRISTINE WHITE, STATE EXECUTIVE DIRECTOR

Christine White was appointed USDA Farm Service Agency State Executive Director in July, 2009. From 2003 to 2009, she had served as Michigan Department of Agriculture Deputy Director for Policy as well as other duties. White started her career with the Farm Service Agency first as a County Executive Director then as a District Director before being appointed State Executive Director in 1995 until 2001. In addition, White served a brief period as Administrative Officer for the Animal Plant Health Inspection Service’s Michigan Office. White has a Bachelor of Arts from St. Mary’s College of Notre Dame, Indiana.

STATE PROFILE

Agriculture in Minnesota is a major industry. Minnesota’s top commodities include corn, soybeans, wheat, alfalfa, and sugar beets. Minnesota leads the nation in turkey production, sugar beet production, and sweet corn for processing. Over 1.1 million acres are enrolled in the Conservation Reserve Program (CRP). The Farm Service Agency in Minnesota serves over 80,000 producers each year in Service Centers around the State. Annually, County Office staff accept acreage reports for approximately 21.7 million acres for participation in FSA programs. Minnesota FSA supports USDA’s mission to deliver timely, effective programs and services to farmers and ranchers and ensure a stable and affordable food supply.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Minnesota State FSA Office, 375 Jackson Street, Suite 400, St. Paul, MN 55101
- **Service Center Structure:** There are 74 FSA offices serving 87 counties in the state of Minnesota
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of August 14, 2016:
    - County Non-Federal Permanent: 324
    - Federal Permanent: 109
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Minnesota:
  - Conservation Reserve Program: 53,973 Applications, $114.5 Million
  - Disaster Assistance Programs: 1,867 Applications, $8.2 Million
  - Marketing Assistance Loans: 3,536 Loans, $323.8 Million
- **Farm Loan Programs Loan Profile:** As of September 6, 2016, Minnesota State FSA made the following loans:
  - Direct OL: 613 Loans, $49.2 Million
  - Guaranteed OL: 303 Loans, $133.2 Million
  - Guaranteed FO: 327 Loans, $93.2 Million
  - Direct FO: 179 Loans, $35.8 Million
  - Microloans: 216 Loans, $5.3 Million
  - Emergency: 3 Loans, $.4 Million

HOT TOPICS

Key issues in Minnesota include the following:

- **Buffer Initiative/CREP:** Negotiations continue to move forward with MN BWSR to rollout a new CREP impacting 54 counties in the southwestern part of the state. The Governor’s buffer initiative will impact workload in County Offices as producers research methods to meet the requirements.
- **Urban Agriculture:** Increasing awareness of FSA programs available to urban producers using ongoing relationships with partners and food hubs to identify potential participants. This ensures a source for direct market data and provides maximum benefits to new and beginning farmers.
- **Declining Farm Prices:** Farm families who are unable to repay annual operating loans or term debt payments will find it difficult to secure 2017 annual operating loans to timely purchase inputs at a discounted rate. This will further strain FSA’s ability to meet continued increase for loan fund demands without increased program funding.
GRANT HERFINDAHL, STATE EXECUTIVE DIRECTOR

Grant Herfindahl, the State Executive Director (SED) for Minnesota is a family farmer from Benson in
West Central Minnesota. He has a BA in Social Science from the University of Minnesota, Morris and
also attended Augustana College, Sioux Falls, SD and the University of Oslo, Norway. He was a policy
fellow at the University of Minnesota’s Humphrey Institute and is active in state and local civic affairs.
He has over 20 years of experience as a FSA County Executive Director (CED) in Meeker, Pope and
Douglas counties in Minnesota. In February of 2016, he was selected as State Executive Director for
Minnesota.

STATE PROFILE

Agriculture is a vital part of Missouri’s economy, and is home to nearly 100,000 farms located on more than 28 million acres and the agriculture industry employees a quarter million Missourians. Missouri is also a hub for the bioscience industry and home to 3,500 bioscience-related firms, including the headquarters for Monsanto and Boehringer Ingelheim Vetmedica, among others. Its top commodities are soybeans, cattle/calves, corn, hogs and broilers, but Missouri agriculture is very diverse with rice, cotton and fruit and vegetable production. Annually, Missouri FSA provides service to over 61 thousand farmers and acreage reports for over 15 million acres.

STATE PROGRAM DELIVERY STRUCTURE

- **Address of State Office**: Missouri State FSA Office, Parkade Center Suite 235, 601 Business Loop 70 West, Columbia, MO  65203
- **Service Center Structure**: There are 94 FSA offices servicing 114 counties in the state of Missouri.
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 429
    - County Non-Federal Permanent: 324
    - Federal Permanent: 105
- **Program Participation**: These programs had the highest activity levels for FY 2015 in Missouri:
  - Conservation Reserve Program (annual payments) 37,693 Contracts $105.3 Million
  - Marketing Assistance Loans 1,353 Loans $94.8 Million
  - Livestock Forage Disaster Assistance (LFP) 6,891 Applications $37.7 Million
- **Farm Loans Programs Loan Profile**: In Fiscal Year 2015, Missouri’s farm loan team provided nearly $72 million in assistance to Missouri’s farmers and ranchers. The following is a profile of our loan portfolio as of September 15, 2016:
  - Direct Operating 485 Loans $24.9 Million
  - Guaranteed Operating 238 Loans $54.4 Million
  - Direct Ownership 275 Loans $42.9 Million
  - Guaranteed Ownership 338 Loans $119.9 Million
  - Emergency 1 Loan $248 Thousand

HOT TOPICS

- Ag financial outlook and subsequent mental health issues facing the agriculture producers in our state, especially with new and beginning farmers, is becoming a major issue.
- The percent of our workforce eligible for retirement over the next 5 years is substantial, which will create a need to determine how to train and regain the institutional knowledge lost when those career employees leave.
- The challenge for new and beginning farmers and non-traditional customers finding the resources they need. We have had increased efforts for outreach in Missouri, including the rollout of Bridges to Opportunity as a pilot state and a StrikeForce designation.
Mark Cadle, STATE EXECUTIVE DIRECTOR

Mark Cadle serves as the State Executive Director for the Missouri Farm Service Agency. Cadle has been with FSA since 1993, most recently serving as a County Executive Director over Gentry and Worth Counties, shared management offices in Northwest Missouri. Prior to his employment with FSA, he worked for as a District Representative, for Congresswoman Pat Danner. His family farm produces corn, soybeans and beef cattle. His son is the 7th generation of the Cadle family to live and farm in Worth County, Mo.

STATE PROFILE

Agriculture is Mississippi's number one industry, employing approximately 29% of the state's workforce. Agriculture in Mississippi is considered a 7.4 billion-dollar industry. There are approximately 37,100 farms in the state covering 10.9 million acres. The average size farm in Mississippi is 294 acres. All 82 counties receive a significant contribution through various aspects of Agriculture. For fiscal year 2016, Mississippi Farm Service Agency (FSA) certified 4,799,541.77 acres participating in programs. Mississippi FSA continues to support USDA's mission to assist in ensuring a healthful, stable, accessible and safe supply of food and fiber.

STATE PROGRAM DELIVERY STRUCTURE

- **Address of State Office**: Mississippi FSA State Office, 6311 Ridgewood Rd, Ste. W100 Jackson, MS 39211
- **Service Center Structure**: There are 63 FSA Offices servicing 82 counties in the state of Mississippi.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of August 3, 2016: **251**
    - County Non-Federal Permanent: 173
    - Federal Permanent: 78
- **Program Participation**:
  - Conservation Reserve Program: $44,312,164
  - Commodity Loans: $38,972,738
  - Farm Storage Facility Loans: $1,503,809
- **Farm Loans Programs Loan Profile**: As of September 21, 2016, MS FSA made the following loans:
  - Direct Loans: 502, $20,901,155.91
  - Beginning Farmer: 247, $12,636,775.91
  - Socially Disadvantaged: 168, $5,741,381.00
  - Guaranteed: 108, $87,383,033.41
  - Beginning Farmer: 62, $51,636,587.00
  - Socially Disadvantaged: 18, $14,144,370.00

HOT TOPICS

- **Staffing**: Approximately 30% of Mississippi's FSA current staff is eligible for retirement and the state has had difficulty recruiting diverse staff.
- **Actively Engaged**: Mississippi is among the highest states in the number of producers that were directly affected by the new Actively Engaged rule.
MICHAEL R. SULLIVAN, STATE EXECUTIVE DIRECTOR

Okolona’s Mike R. Sullivan serves as State Executive Director for the Mississippi Farm Service Agency. Sullivan has over 45 years of experience as a full-time farmer operating a third generation 2,000-acre row crop, poultry, cattle and timber business with his brother. He has experience in real estate sales for agricultural and economic development projects, holds a bachelor’s degree in Agricultural Economics from Mississippi State University and is a member of the Mississippi Farm Bureau, Mississippi Cattlemen’s Association, and National Cattlemen’s Beef Association, along with a number of other civic and charitable organizations throughout the country.

STATE PROFILE

Agriculture is Montana’s largest industry. Montana is the third largest producer of wheat and the sixth largest producer of beef cattle. We are also a leading producer of alfalfa hay, pulse crops and honey. Montana is a geographically very large, disaster prone state where even in a good year, it is likely that parts of the State will be too dry. That, combined with distance and remoteness, makes delivering FSA programs challenging and costly. Our critical priorities are serving those we have always served, producers on our seven (7) Indian Reservations and non-traditional producers. The strength of FSA is our county offices, especially our Program Technicians who do a great job for our producers.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: 10 East Babcock Ave., 5th Floor, Bozeman, MT 59715
- **Service Center Structure**: There are 48 Service Centers servicing 56 counties in Montana.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: **220**
    - County Non-Federal Permanent: **158**
    - Federal Permanent: **62**
- **Program Participation**: These programs had the highest activity levels for FY 2015 in Montana:
  - Conservation Reserve Program: 9,954 contracts $55.4 Million
  - Marketing Assistance Loans: 948 loans $53.2 Million
  - Livestock Forage Program: 1,243 payments $11.4 Million
- **Farm Loans Programs Loan Profile**: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/29/16, Montana State FSA made the following loans:
  - Direct Operating: 332 Loans $25.9 Million
  - Guaranteed Operating: 121 Loans $32.6 Million
  - Direct Ownership: 50 Loans $10.7 Million
  - Guaranteed Ownership: 78 Loans $39.9 Million
  - Microloans: 65 Loans $1.5 Million
  - Emergency: 2 Loans $0.1 Million

HOT TOPICS

- Supporting the county offices with heavy Loan Deficiency Program/Marketing Assistance Loans, Farm Loan Program and livestock program activity.
- Working with the Tribes to implement new policies to expand service to the Reservations.
- Completion and implementation of the Conservation Reserve Enhancement Program proposal for the Upper Clark Fork River Basin.
Bruce Nelson, STATE EXECUTIVE DIRECTOR

Bruce Nelson, a 4th generation Montana farmer, has been FSA State Executive Director 1993-2000, 2009-2011 and since 2012. From April 2011-July 2012, he served as FSA Administrator. Bruce has also been Chief of Staff to Governor Brian Schweitzer, Construction Project Manager for Zoot Construction, Chief of Staff to Congressman Pat Williams and Vice-President & President of Triangle N Farm, Inc., his family’s farm near Fort Benton. He graduated from Fort Benton High School and has a BA in Political Science from the University of Montana. Bruce and his wife Nancy, a Family & Consumer Science teacher at Belgrade Middle School, live in Bozeman and have three grown children.

STATE PROFILE

North Carolina is one of the most agriculturally diverse states. Gross sales of agricultural products totaled over 11.6 billion dollars in 2015 with the top commodities being broilers, hogs, turkeys, tobacco, and eggs. There are over 4.5 million acres of crops reported to FSA with the top crops in acreage being soybeans, corn, wheat, cotton, tobacco, peanuts, and sweet potatoes. North Carolina ranks #1 in the production of sweet potatoes, tobacco, poultry, and eggs; and #2 in Christmas trees, hogs and pigs, and turkeys. North Carolina FSA Service Centers provides service to approximately 49,000 farm operations each year.

STATE PROGRAM DELIVERY STRUCTURE

- State Office Address: NC State FSA Office, 4407 Bland Road, Suite 190, Raleigh, NC 27609
- Service Center Structure: There are 72 FSA offices servicing 100 counties in the state of NC.
- Employee Profile:
  - Total County Non-Federal and Federal Permanent employees as of 7/23/16: 330
    - County Non-Federal Permanent: 259
    - Federal Permanent: 71
- Program Participation
  - NAP: 6,308 applications
  - ARCPLC: 51,949 applications
  - CRP: 5,599 contracts
  - Commodity Loans: 841 applications
  - Loan Deficiency Payments: 2521 payments
- Farm Loan Programs Loan Profile: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership (FO) Loans, the highest ever in Agency history. As of 9/19/16, North Carolina FSA obligated the following loans:
  - Direct Operating: 405 loans ($29,820,670)
  - Guaranteed Operating: 88 loans ($20,337,490)
  - Guaranteed Ownership: 96 loans ($58,377,057)
  - Direct Ownership: 35 loans ($6,064,200)
  - Emergency: 68 loans ($6,992,610)
  - *Microloans: 131 loans ($3,279,320)

*(These figures included in Direct OL numbers)

HOT TOPICS

- Reduced farm income and its effect on program participation and loan repayment ability.
BOB ETHERIDGE, STATE EXECUTIVE DIRECTOR

Bob Etheridge has served as State Executive Director of the NC Farm Service Agency since 2014. In 1978, Etheridge was elected to the NC House of Representatives, serving as Chairman of the House Appropriations Committee from 1984-1988. In 1988, Etheridge was elected as State Superintendent of Public Education. In 1996, Etheridge was elected to Congress from NC’s second district. He served fourteen years in Congress. Etheridge served on the House Agriculture Committee 12 years, and Ways and Means Committee 2 years. In the spring of 2011, Etheridge was appointed by Governor Beverly Purdue to monitor federal stimulus recovery funding, and identify and secure funding for victims of natural disasters. He also owns and operates a farm in Harnett County.

**STATE PROFILE**

Agriculture is North Dakota’s leading industry. One in four North Dakotan’s are employed in agriculture. ND’s top commodities include: forage, spring wheat, durum, soybeans, corn, canola, barley, flax, sunflowers, pinto beans, dry peas and lentils. In 2015, North Dakota FSA served 32,670 farm operators in in Service Centers located around the state and took acreage reports on more than 28.8 million acres.

**STATE PROGRAM DELIVERY STRUCTURE**

- **State Office Address:** North Dakota State FSA Office, 1025 28th Street South, Fargo, ND 58103.
- **Service Center Structure:** There are 51 FSA offices serving 53 counties in North Dakota.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 312
    - County Non-Federal Permanent: 218
    - Federal Permanent: 94
- **Program Participation:** These programs had the highest activity levels for FY 2015 in North Dakota:
  - Marketing Assistance Loans 1,746 loans $183 million
  - ARC/PLC 57,663 farms enrolled $195.1 million (FY14)
  - NAP 3,473 NAP Policies $163,984
  - CRP 23,680 contracts $68.8 million
  - 1.5 million CRP acres
- **Farm Loans Programs Loan Profile:** As of 9/15/16, North Dakota State FSA made the following:
  - Direct Operating 486 Loans $42.9 Million
  - Guaranteed Operating 338 Loans $118.6 Million
  - Direct Ownership 88 Loans $16.5 Million
  - Guaranteed Ownership 116 Loans $75.1 Million
  - Microloans 37 Loans $1 Million
  - Emergency 8 Loans $.5 Million

**HOT TOPICS**

- Backlog of wetland technical determinations from NRCS. This jeopardizes conservation compliance for producers to be eligible for FSA and RMA benefits.
- Every fiscal year North Dakota FSA exhausts all farm loan allocations. With lower commodity and livestock prices and our emphasis on beginning farmers, North Dakota FSA has seen historic levels of funding requests.
- North Dakota continues to produce over one million barrels of oil from the Bakken region of the state. Very high competitive wages, cost of living and demand for employees with skill sets similar to FSA have been a challenge for western North Dakota. Recruitment, relocation, and retention incentives have been authorized, and have been successful.
Aaron Krauter, STATE EXECUTIVE DIRECTOR

Aaron Krauter serves as the North Dakota Farm Service Agency (FSA) State Executive Director (SED) since 2009. Previously Aaron and his wife operated a 3,000-acre no-till farm operation at Regent. He also served in the North Dakota State Senate for twenty years. Aaron has been active in many organizations such as the North Dakota Farmers Union, NDSU Extension Advisory Council, NDSU Agronomy Seed Farm, Dakota Pride Cooperative and Hettinger County Crop Improvement and Livestock Improvement Association.

STATE PROFILE
The State of Nebraska has 49 million acres of land, about 45 million of which is used for agriculture. Of that, about 21.6 million is used for crops, with corn at 9 million acres and soybeans at 5 million acres leading the way, followed by wheat with 1.4 million acres and alfalfa with 700,000. Corn and soybeans are predominantly found in the eastern and central parts of the state, while crops that are conducive to a more arid climate can be found in the west, including millet, dry edible beans and sugar beets. Nebraska is second in the nation for cattle and calves, generally leads the nation in beef exports and cash receipts from meat animals and is usually about third in the nation for cash receipts from farm marketings.

STATE PROGRAM DELIVERY STRUCTURE
- **State Office Address:** Nebraska USDA FSA State Office, 7131 A St., Lincoln, NE 68510
- **Service Center Structure:** There are 71 service centers across the state, 23 of which are Type 1 offices, serving 93 counties.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of July 31, 2016: 422
    - County Non-Federal Permanent: 308
    - Federal Permanent: 114
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Nebraska:
  - Conservation Reserve Program: 22,756 contracts $61.9 million
  - Livestock Assistance Programs (LFP, LIP and ELAP): 124 applications $14 million
- **Farm Loan Programs Loan Profile:** For FY 2016 through Sept. 30, Nebraska FSA had made $337.8 million in farm loans to Nebraska producers through 2,214 direct and guaranteed loans. Sixty-six percent of these loans were beginning farmer loans.
  - Direct Operating: 1,527 loans - $105.8 million
  - Direct Ownership: 302 loans - $64.2 million
  - Microloans: 286 loans - $5.7 million
  - Guaranteed Ownership: 201 loans - $115.6 million
  - Guaranteed Operating: 174 loans - $52 million

HOT TOPICS
- Of the 422 county non-federal and federal permanent employees at Nebraska FSA, a quarter have reached retirement eligibility. Many of these are county executive directors or others in key leadership roles. Identifying, and then properly training, other existing FSA personnel to assume these positions as they are vacated is critical; and as we move folks up, we need to be prepared to recruit quality candidates from outside FSA into the entry-level agency positions.
- With the current state of the agricultural economy expected to remain in a downturn, our offices will continue to be taxed with high workload volume related to farm loan needs as traditional banks shy away from the farm loan process. In addition, with low corn prices and an expected large crop, offices will see increased traffic related to marketing assistance loans and/or LDPs and commodity certificates.
Dan Steinkruger, STATE EXECUTIVE DIRECTOR

Dan Steinkruger is the State Executive Director, a position he has held since 2009. He moved into that role after serving in the Nebraska State FSA Office as the Production and Compliance Programs chief for 15 years. He has been with agency in Nebraska for his entire career, serving in other roles that include programs specialist and Cass County executive director. Dan has announced his retirement effective Jan. 3, 2017.

New Hampshire agriculture has changed over the years. Today’s industry is quite diverse, encompassing many crop, livestock, and specialty products. The value of New Hampshire’s agriculture industry is approximately $1.5 billion. This includes $336 million in direct sales of agricultural and other horticultural products and services, and $1.2 billion in sales related to agritourism. New Hampshire’s agricultural exports total over $94 million annually, including dairy, animal, and horticultural products. Top crops in New Hampshire include ornamental horticulture, vegetables, apples, maple syrup, berries, and Christmas trees.

**STATE PROGRAM DELIVERY STRUCTURE**

- **Address of State Office**: NH State FSA Office, 53 Pleasant St., Rm. 1601, Concord, NH 03301
- **Service Center Structure** – There are 5 FSA offices, serving 10 counties in the State of NH.
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: **20**
    - County Non-Federal Permanent: **11**
    - Federal Permanent: **9**

  - Disaster Assistance Programs: $163,004
  - Farm Storage Facility Loans: $11,795
- **Farm Loans Programs Loan Profile**:
  - Direct Loans: 35 loans $1,967,230
  - Guaranteed Loans: 3 loans $1,485,034

**HOT TOPICS**

- The state has suffered from drought conditions in both 2015 and 2016. In 2016, the southern and eastern portion of the state has reached the D3 level on the National Drought Monitor. It does not appear from the forecast that this will be changing anytime soon. Lack of feed from the drought and low milk prices have created a perfect storm for dairy producers. Reports are that the drought has also affected New Hampshire’s vegetable and fruit industry. Wells are going dry, and irrigation ponds are drying up. Weather forecasts add to the fear that NH could go into the winter, and ground freeze, without a recharge of ground water, leading to additional empty wells.
Bruce R. Cilley, Sr., STATE EXECUTIVE DIRECTOR

Bruce Cilley, Sr., serves as State Executive Director for the New Hampshire Farm Service Agency. For the past 25 years, Cilley has been involved in the farrier industry as President and Owner of a farrier supply company. Cilley also served from 2002-2004 on the Farrier Industry Assoc. Board of Directors at the national level. Bruce Cilley served in the US Army during the Vietnam conflict.

STATE PROFILE

New Jersey’s diverse Agricultural Industry earns its moniker “Garden State”. New Jersey ranks in the top ten nationally in crops ranging from Blueberries, cranberries, peaches, cucumbers, sweet corn, peppers, greens and spinach, tomatoes, eggplant, squash, snap beans, cabbage, nursery and floriculture (our State’s leading dollar volume commodity), wine production and others. There are 9,100 farms in New Jersey encompassing three quarter of a million acres of production. Our farm gate values exceed $1 billion. The total food industry in New Jersey surpasses $100 billion. Aquaculture, Equine, dairy, poultry, and other livestock round out our diverse agrarian sector.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** New Jersey State FSA Office, 300 Clocktower Drive, Suite 202, Hamilton Square, NJ 08690
- **Service Center Structure:** NJ has 6 FSA field offices servicing 21 counties
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: **35**
    - County Non-Federal Permanent: 19
    - Federal Permanent: 16
- **Program Participation:** Programs in NJ with the highest levels of activity in 2016
  - **Non-Insured Crop Disaster Assistance Program** 3175 policies (1069 buy-up) $984,000 indemnities paid
  - **Emergency Forest Restoration Program** 300 applications approved  $1.56 million earned
  - **ARC/PLC 2015 enrollment** 2521 contracts $1.2 million paid
- **Farm Loans Programs Loan Profile:** New Jersey’s portfolio as of September 21, 2016
  - **Direct Operating** 376 Loans $18.7 Million
  - **Guaranteed Operating** 43 Loans $8.5 Million
  - **Direct Ownership** 91 Loans $9.5 Million

HOT TOPICS

- All FSA senior staff including the Farm Loan Chief, the Executive Officer, and our only District Director are retirement eligible and could retire at any time. At the same time, half of our field offices and our Program team are impacted by retirements.
Paul Hlubik, STATE EXECUTIVE DIRECTOR

Paul Hlubik serves as State Executive Director for New Jersey Farm Service Agency. Hlubik has served the Farm Service Agency in various career, elected, and appointed positions since 1987. He has served as State Executive Director through two consecutive administrations. Hlubik is a graduate of the University of Delaware, with a degree in Agriculture Business Management, focusing on Agriculture Policy. He is the founder, owner, and operator of Backacres Farms, growing hay and grain across three NJ counties.

STATE PROFILE

New Mexico Farm Service Agency consists of 24 county offices servicing 32 agricultural producing counties. Through customer service and outreach initiatives stands to assist all producers with emphasis on those deemed as historically underprivileged and underserved or socially disadvantaged. With dedication and enthusiasm New Mexico FSA employees are pleased to provide excellent customer service and support, ensuring New Mexico remains one of the top producers in dairy, beef, hay, pecans and chile among so many other valuable commodities.

STATE PROGRAM DELIVERY STRUCTURE

- State Office - New Mexico FSA Office, 6200 Jefferson, NE Suite 211, Albuquerque, NM 87109
- Service Center Structure – 24 FSA Offices servicing 33 counties in the State of New Mexico.
- Employee Profile
  - Total County Non-Federal and Federal Permanent employees as of September 22, 2016:
    - County Non-Federal Permanent: 46
    - Federal Permanent: 30
- Program Participation: The following programs had the highest activity levels for FY 2016 in New Mexico:
  - Disaster Assistance Program 8,042 Applications $50,949,461
  - Conservation Reserve Program 3,003 Applications $17,498,859
  - Cotton Transition Assistance Program 1,524 Applications $2,567,950
- Farm Loans Programs Loan Profile: As of September 7, 2016, New Mexico State FSA made the following loans:
  - Loan Type | Number of Loans | Amount
  - Direct Operating | 230 | $10.7 Million
  - Guaranteed Operating | 18 | $4.6 Million
  - Direct Ownership | 64 | $9.9 Million
  - Guaranteed Ownership | 32 | $14.7 Million
  - Microloans Operating | 95 | $2.7 Million
  - Microloans Ownership | 2 | $42 Thousand

HOT TOPICS

- Clarity and commitment to enhancing the process of establishing grazing loss percentages in western states for drought conditions, to better meet the needs of all producers affected.
- Increased awareness and accessibility of FSA loans and programs through outreach initiatives to all producers statewide.
MOLLY MANZANARES, STATE EXECUTIVE DIRECTOR

Molly Manzanares has served the New Mexico Farm Service Agency for nearly 17 years with 14 served on State Committee. She grew up in a cattle ranching family and attended both New Mexico State University and University of New Mexico. After marrying Antonio J. Manzanares they began their own sheep ranching operation and operate one of the last remaining herded bands in the state. With 4 successful children, the Manzanares family has remained active in agriculture since the early 1980’s in Los Ojos, NM.

STATE PROFILE

There are approximately 4,100 Nevada farms and ranches with almost 6 million acres of land dedicated to farming and ranching. The state’s farms and ranches are relatively large in terms of land. The average size of a Nevada farm is 1,429 acres – more than twice the national acreage (421 acres). Nevada’s land use consists of pastureland; crop land; and the remaining is designated for other uses. Annual cash receipts from all agricultural in Nevada in 2012 were $716 million. Alfalfa hay is the leading cash crop of the state. Much of the hay is sold to dairy operations in surrounding states. Cow/calf operations fill our pasture lands. Dairy farming is also a substantial industry. Additional crops produced in Nevada include potatoes, barley, winter and spring wheat, corn, oats, onions, garlic and honey. Smaller acreages of mint, and a variety of fruits and vegetables are grown throughout the state.

STATE PROGRAM DELIVERY STRUCTURE

- FSA STO 1365 Corporate Blvd, Reno, NV 89502
- Service Center Structure – Six County Offices serving sixteen Counties in Nevada and three Counties in California.
- Employee Profile
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: 11
    - CO FTE: 12
    - Federal Permanent: 11
    - GS FTE: 13
- Program Participation: Highlight the top three to five 2015 programs in your State. Amount paid in programs are as follows; 508 LFP applications totaling $27,270,226.00, 306 NAP applications totaling $1,167,867.00 and GRP totaling $8,073,978
- Farm Loans Programs Loan Profile: Direct Farm Loans portfolio is $18 million consisting of 203 borrowers with a mix of real estate, term and operating type loans and emergency loans. The Guaranteed Loan portfolio is $42 million consisting of 127 loans mainly for real estate with some term and operating loans. The Farm Loans is staffed out of three offices: Fallon, Winnemucca and Elko with the Farm Loan Chief being located in the Reno State Office.

HOT TOPICS

1. How to service the 5th largest geographical land mass, to include 10 Native American Tribal Reservations with 25 FTE’s, which are mostly new and inexperienced employees.
2. Nevada has been experiencing moderate to extreme droughts conditions for the past 15 years. Both underground and surface water shortages continue to grow and impact ranchers and producers now and for the foreseeable future. This impacts delivery of FSA programs, specifically NAP and FLP. The new normal for Nevada is drought.
3. Approximately 86% of the land in NV is managed by various federal agencies and departments including BLM, FS, and the DoD. With each agency or department having their own land practices, it makes it difficult for the FSA to implement its programs. For instance, if the FSA wants to implement ECP under an emergency situation, we often have to wait for lengthy authorizing practices such as environmental assessments that make it very challenging for our producers.
Clint Koble, STATE EXECUTIVE DIRECTOR

Clint Koble was born and raised on a farm/ranch in North Dakota and he received his Bachelor of Arts Degrees in Political Science and History from the University of North Dakota in 1974. Before coming to the FSA in 2009, Clint was the Executive Director of the Nevada Rural Development Council and worked with rural communities. Since coming to the USDA Clint has worked diligently on Cultural Transformation, Strategic Planning, StrikeForce and restructuring COFs. He has put forth great efforts in addressing underserved sectors in NV’s agriculture, particularly Organics and Conservation Districts.

KEY STAKEHOLDERS

- Ranchers/producers-We service our customers
- Employees-We support our employees through engagement
- STC/COC-the regulatory body of FSA NV
- State and Local colleges-FSA NV can draw from the labor pool
- Bureau of land management-Most of NV is BLM land, so relationship is critical
- NRCS-FSA needs and works with agency
- RD-maintain relationship to help the same customers we serve
- Cooperative extension-build relationship with FSA, they can help train customers
- NDOW-Partner
- Nevada State and Federal representatives-drought declaration
- DAFO-Support our mission in NV
- DAFB-Support Loans initiatives
- Other SED’s-Draw from experience
- Other EO/AO-Draw from Experiences
- Other State FSA offices-Draw from Experiences
- OGC-Ensure we conduct business by policy
- Office of Ethics-Ensure all parties are held accountable
- Office of Civil Rights and EEO-equality

STATE PROFILE

New York State is home to more than 35,000 farms and agriculture contributes more than $37.6 billion to the state's economy. Agriculture in New York is diverse, however the top commodity by far is dairy, which accounts for nearly half the state's total agricultural sales. New York ranks third nationally for milk production, and is a leading state for dairy processing. Other leading commodities include apples, grapes, other fruits and vegetables, corn, soybeans, alfalfa, and maple syrup. In recent years New York has had much growth in farm beverages, urban agriculture and direct marketing through farmers markets, CSAs and on-farm sales. Beyond acreage reporting, NY FSA serves farmers throughout the state with loans, price supports, disaster assistance, and conservation incentives.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: New York State FSA Office, 441 S. Salina St., Suite 536, Syracuse, NY 13202
- **Service Center Structure**: There are 39 FSA offices servicing 62 counties in the state of New York.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of September 21, 2016: 182
    - County Non-Federal Permanent: 112
    - Federal Permanent: 70
- **Program Participation**: These programs had the highest activity levels for FY 2015 in New York:
  - Marketing Assistance Loans: 407 Loans, $29.9 Million
  - Conservation Reserve Program: 2350 Applications, $4.1 Million
  - Disaster Assistance Programs: 4633 Applications, $2.4 Million
  - Farm Storage Facility Loans: 213 Loans, $2.1 Million
- **Farm Loans Programs Loan Profile**: For the FY 2015, New York State had the following totals:
  - Direct Operating: 223 Loans, $10.9 Million
  - Guaranteed Operating: 75 Loans, $17.4 Million
  - Direct Ownership: 40 Loans, $7.3 Million
  - Guaranteed Ownership: 56 Loans, $23.3 Million
  - Microloans: 70 Loans, $1.6 Million

HOT TOPICS

- New York City – a new full time FSA employee should be on board to begin to work with urban farmers and educate producers at the hundreds of farmers markets about FSA and our programs. This employee is the first in the nation to be dedicated entirely to urban agriculture.
- Overall Staffing – In the past three months New York has experienced tremendous staff turnover due to retirements and resignations. This will continue for the next three months. Positions of notable concern is the Farm Loan Chief, Farm Loan Specialist, and a number of County Executive Directors.
- Program Outreach and Delivery - The state sees huge growth potential in NAP, FSFL and the Microloan programs given the diversification of the state and the revised standards making these programs more farmer friendly for Northeast agriculture.
JAMES BARBER, STATE EXECUTIVE DIRECTOR

James Barber has been the New York State Executive Director since July 2009. Jim is a 5th generation farmer from the Schoharie Valley. His wife, Cindy, and family members continue to operate a diversified vegetable and crop operation that works 200 acres planting over 80 different crops for direct sales at their farm stand and farmer markets. Prior to working at FSA, Jim worked as a Special Assistant at New York State Ag and Markets.

STATE PROFILE

Agriculture in Ohio is a major industry. One in seven Ohioans are employed in the food and agriculture industry which contributes over $98 billion to the state’s economic growth. Ohio’s top commodities include: soybeans, corn, wheat, tomatoes, cucumbers, grapes, Swiss cheese and egg production. More than 32% of farms in Ohio produce soybeans, its top commodity. The Farm Service Agency in Ohio sees over 50,000 farmers each year in Service Centers located around the State and takes acreage reports for approximately 9.6 million acres for participation in FSA programs in the State. Ohio FSA supports the USDA mission and helps ensure a healthful, stable, accessible and affordable food supply.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Ohio State FSA Office, 200 N High Street, Rm 540 Columbus, OH 43215
- **Service Center Structure:** There are 66 FSA offices servicing 88 counties in the state of Ohio.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of September 22, 2016: 319
    - County Non-Federal Permanent: 259
    - Federal Permanent: 60
- **Program Participation:** *The below programs had the highest activity levels for FY 2015 in Ohio.*
  - Conservation Reserve Program: 44,641 Applications, $46.4 Million
  - Disaster Assistance Programs: 686 Applications, $2.4 Million
  - Marketing Assistance Loans: 1,160 Loans, $101.1 Million
- **Farm Loans Programs Loan Profile:** The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating and Farm Ownership Loans, the highest ever in Agency history. The Ohio State FSA made the following number of loans below:
  - Direct Operating: 316 Loans
  - Guaranteed Farm Ownership: 497 Loans
  - Guaranteed Operating: 77 Loans
  - Microloans: 117 Loans
  - Direct Farm Ownership: 200 Loans

HOT TOPICS

- An analysis of FSA’s current workforce indicates that 56% of the workforce is over 50 years of age. Additionally, 14% of the current workforce is already eligible to retire. Analyzing data from the last 5 years, the average length of time between an employee becoming eligible and actual retirement is 3.9 years. Of the employees currently eligible to retire, 47% of them exceed that threshold, thereby posing a higher risk of attrition.
- While overall financial conditions remain strong, farm financial risk indicators such as the debt-to-asset ratio are expected to rise, reflecting increased financial pressure. Declining farm sector assets primarily result from a modest decline in farmland value as well as higher debt. Equity is expected to erode by 4.8 percent, the first drop since 2009. This situation has increased loan renewals and extensions and the demand for short-term operating loans, and led to some loan repayment problems. While overall credit conditions appear manageable, a continuation of lower farm incomes and further deterioration of working capital will likely have adverse effects.
**STEVEN MAURER, STATE EXECUTIVE DIRECTOR**

Steven Maurer serves as State Executive Director for the Ohio Farm Service Agency. Maurer previously was the chief of the Division of Natural Areas and Preserves, and also served as the State Executive Director for USDA Farm Service Agency in Ohio from 1993-2001. Prior to that, Maurer was the director of the Ohio Department of Agriculture from 1986-1991. Steven Maurer is a veteran of foreign war, former mayor of Botkins, OH and former member of the Ohio Senate, serving from 1981 to 1984. He represented the 12th District which encompassed much of West-Central Ohio.

STATE PROFILE

Agriculture in Oklahoma is diverse and significant to the economy with a $40 billion annual impact. The agricultural industry is the #4 employer of Oklahomans. Oklahoma's top commodities include: wheat, cattle, soybeans, corn, rye, cotton, canola, sorghum, and broilers. More than 63% of all harvested farm acres in Oklahoma are in wheat, its top commodity. The Farm Service Agency in Oklahoma sees over 250,000 owners, operators and borrowers each year and has over 13 million acres of cropland reported in our 66 county offices across the State. Oklahoma FSA supports the USDA mission and helps ensure a healthful, stable, accessible and affordable food supply.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Oklahoma State FSA Office, 100 USDA, Suite 102, Stillwater, OK 74074
- **Service Center Structure:** There are 66 FSA offices serving 77 counties in the state of Oklahoma
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of September 19, 2016:
    - County Non-Federal Permanent: 205
    - Federal Permanent: 124
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Oklahoma:
  - Livestock Forage Program: 17,326 Applications, $163.9 Million
  - Conservation Reserve Program: 508 Applications, $5.1 Million
  - ARC/PLC Program: 47,847 Applications, $73.2 Million
- **Farm Loans Programs Loan Profile:** The Farm Service Agency saw monumental funding milestones in FY 2015. As of 9/19/16, Oklahoma State FSA made the following loans:
  - Direct Operating: 1,216 Loans, $70.6 Million
  - Guaranteed Operating: 133 Loans, $46.7 Million
  - Direct Ownership: 723 Loans, $124 Million
  - Guaranteed Ownership: 105 Loans, $43.4 Million
  - Microloans: 396 Loans, $11.5 Million
  - Emergency: 3 Loans, $0.2 Million

HOT TOPICS

- Loan servicing will continue to be a top priority as the year progresses with low commodity and cattle prices paired with high input costs for producers. Within the first 30-60 days of the new administration, current status as well as how to move forward will need to be assessed.
TERRY PEACH, STATE EXECUTIVE DIRECTOR

Terry Peach served in 2016 as Oklahoma SED. He is the third generation to operate his family’s homestead in Mutual, OK. He earned a B.S. in Agricultural Education from Oklahoma State University. Peach started his own businesses: W.W.H. Farm & Ranch Supply and Woodward Hull. He served as Oklahoma SED for USDA Farm Service Agency from 1993-2000 and as Oklahoma Secretary and Commissioner of Agriculture from 2003-2011. Peach received numerous professional and service awards including the Distinguished Service Award for Outstanding Leadership and Management, Honorary State and National FFA degrees, and OK Wheat Commission Staff of Life Award. Terry retired from Oklahoma FSA in October 2016.

STATE PROFILE
Agriculture in Oregon is extremely diverse due to the unique climate and rich soils. 40,000 predominantly family owned farms produce more than 220 commercially grown crops. Oregon is the leading producer in the nation of some of the world’s highest quality hay, potatoes, onions, pears, berries, cherries, hazelnuts, wheat, grass seed, Christmas trees, hops, snap beans and mint, to name only a few. Oregon is a national leader in the nursery industry, marketing products nationwide. In addition, Oregon is well known for producing high quality meat and dairy products. Oregon is internationally known for its wines and microbrews, as well as a variety seafood, harvesting the largest amount of Dungeness crab in the nation.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** 7620 SW Mohawk St., Tualatin, Oregon, 97062
- **Service Center Structure:** There are 23 FSA offices serving 36 counties in the state of Oregon.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of September 13: 104
    - County Non-Federal Permanent: 60
    - Federal Permanent: 44

- **Program Participation:** The following programs have highest activity levels in Oregon.
  - 2015 Disaster Assistance Programs
    - 3277 Applications
    - $62.2 Million
  - 2015 Conservation Programs
    - 6843 Contracts
    - $38.1 Million
  - 2016 Commodity Program and Loans
    - 6236 Applications
    - $23.6 Million

- **Farm Loan Programs Loan Profile:**
  - Direct Operating: 201 loans $12 Million
  - Direct Ownership: 66 loans $14.8 Million
  - Emergency Loans: 0 loans $0
  - Microloans: 55 loans $1.5 Million
  - Guaranteed Operating: 65 loans $18.8 Million
  - Guaranteed Ownership: 55 loans $21.3 Million

HOT TOPICS

- **Availability of funds:** Ensuring that producers who need financing, receive financing. New and established producers have increased need due to downturn in commodity prices.
- **Higher demand for CRP than the statutory acreage cap allowed:** resulted in a reduced enrollment for Oregon producers in which only 30% of those who applied were accepted in Signup 49.
- **Dairy producers continue to face tight margins and are struggling to remain viable.** Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
PHIL WARD, STATE EXECUTIVE DIRECTOR

Phil Ward was appointed Oregon FSA State Executive Director in June of 2014. Prior to that he served as Director of two state agencies: the Oregon Department of Water Resources (WRD) from 2004-2014 and the Oregon Department of Agriculture (ODA) from 1999-2003. Ward also spent two years (1997-1999) as Executive Vice President of the Oregon Farm Bureau, the state’s largest farm organization. He began his professional career as a High School Agriculture instructor, and was named Oregon’s Outstanding Young Agriculture Teacher in 1983. Ward is a fifth generation Oregonian and lives on a piece of the home farm south of Independence, with his wife Pam and a Chocolate Labrador named Huck.

STATE PROFILE

Pennsylvania’s 59,000 farm families continue to be the stewards of more than 7.7 million acres of farmland. With $7.5 billion in cash receipts annually from production agriculture, Pennsylvania farmers and agribusiness are the leading economic driver in our state. In addition to production agriculture, the industry also raises revenue and supplies jobs through support services such as food processing, marketing, transportation, and farm equipment. In total, production agriculture and agribusiness contributes nearly $75 billion to Pennsylvania’s economy.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address:** Pennsylvania State FSA Office, 359 East Park Dr., Suite 1, Harrisburg, PA 17111
- **Service Center Structure:** There are 37 FSA offices servicing 67 counties in the state of Pennsylvania.
- **Employee Profile:**
  - Total County Non-Federal and Federal Permanent employees as of September 13, 2016: **189**
    - County Non-Federal Permanent: 132
    - Federal Permanent: 57
- **Program Participation:** These programs had the highest activity levels for FY 2015 in Pennsylvania:
  - Conservation Reserve Program: 25,265 Applications, $20.2 Million
  - Marketing Assistance Loans: 279 Applications, $16.1 Million
  - Agricultural Risk Coverage/Price Loss Coverage: 23,083 Applications, $15.2 Million
- **Farm Loans Programs Loan Profile:** The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/19/16, Pennsylvania State FSA made the following loans:
  - Direct Operating: 486 Loans, $33.1 Million
  - Guaranteed Operating: 62 Loans, $8.2 Million
  - Direct Ownership: 78 Loans, $17.3 Million
  - Guaranteed Ownership: 33 Loans, $11.6 Million
  - Microloans: 103 Loans, $2.3 Million
  - Emergency: 0 Loans, $0 Million

HOT TOPICS

- The dairy industry represents over 40% of the agricultural economy and contributes nearly $7 billion to Pennsylvania’s economy annually. Approximately 7,000 dairy farms producing over 10.8 billion pounds of milk bring local revenue to neighboring businesses and support over 60,000 jobs across the state. Dairy producers continue to face tight margins and are struggling to remain viable. Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
Bill L. Wehry, STATE EXECUTIVE DIRECTOR

Bill L. Wehry was named as the Farm Service Agency’s Pennsylvania State Executive Director on June 30, 2009. Bill’s background includes a blend of production agriculture and public service. From 2003 to 2009, Bill served as the Deputy Secretary for Agriculture and Consumer Protection for the Pennsylvania Department of Agriculture (PDA). Bill is no stranger to FSA. For six years he served as a member of Pennsylvania's State Committee, with four of the six including appointments as Committee Chairman.

STATE PROFILE

Agriculture in Puerto Rico constitute about 808 million, or about 0.8%, of the island gross domestic product (GDP). Puerto Rico imports 85% of it food even though most of the island is fertile. Puerto Rico’s top commodities include: plantains, bananas, coffee, citric, vegetables, poultry, nursery, greenhouse crops and milk and other dairy product from cows. The FSA in Puerto Rico sees over 13,160 farmers each year in Service Centers located around the state across 584,988 cuerdas (cda). Note: 1 cda = 0.97 acre. Puerto Rico FSA supports the USDA mission and helps ensure a helpful, stable, accessible and affordable food supply.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: 654 Munoz Rivera Ave., 654 Plaza, Suite 829, San Juan, PR 00918
- **Service Center Structure**: There are 9 FSA Offices serving 78 counties in Puerto Rico.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: 0
    - Federal Permanent: 43
- **Program Participation**: These programs had the highest activity levels for FY 2015 in Puerto Rico:
  - Noninsured Crop Disaster Assistance Program (NAP) 377 Applications $541,820
  - Milk Income Loss Contract 1,372 Applications $955,088
  - Geographically Disadvantaged Farmer & Ranchers 389 Applications $846,837
- **Farm Loan Programs Loan Profile**:
  - Direct Operating 42 Loans $3.3 Million
  - Guaranteed Operating 11 Loans $1.8 Million
  - Direct Ownership 22 Loans $2.6 Million
  - Guaranteed Ownership 14 Loans $13.9 Million
  - Microloans 99 Loans $2.1 Million

HOT TOPICS

Puerto Rico has been in a declining economic environment for many years. The stagnant economy forced a succession of governments to take out loans to cover budget deficits. Due to Puerto Rico’s bankruptcy, commercial lenders have increased the down payment requirements (now at 25 to 30 percent) on agricultural loans to help mitigate their default risk. The higher down payment requirements by commercial lenders, will increase demand by producers for FSA’s loan programs since they will no longer be able to obtain commercial credit for their farming operations.
JEAN PIERRE GIULIANI, STATE EXECUTIVE DIRECTOR

Jean Pierre Giuliani was appointed to serve as the Puerto Rico Farm Service Agency (FSA) State Executive Director (SED) in June 2016. Before his FSA, including Farm Loan Officer, Farm Loan Manager, Acting Farm Program Director and District Director.

Mr. Giuliani holds a bachelor's degree in Agricultural Science and a master's degree in Agricultural Education from the University of Puerto Rico in Mayaguez.

STATE PROFILE

Welcome to the Ocean State! Rhode Island is the smallest state in size in the U.S. Its distances North to South are 48 miles and East to West 37 miles. RI has more than 400 miles of scenic coastline, and more than 100 public and private beaches. All Rhode Islanders live within a 30-minute drive to the Atlantic Ocean or Narragansett Bay. Farmland covers 10% of the state’s total area. The top agricultural commodities are greenhouse and nursery, dairy, sweet corn, aquaculture (seafood), and apples. Farmers grow potatoes mostly in the southeastern region of the state. Milk is the second most important source of agricultural income for the state of RI. The annual fish catch for the state is about $85 million.

STATE PROGRAM DELIVERY STRUCTURE

- **Address of State Office:** Rhode Island State Office, 60 Quaker Lane, Suite 62 Warwick, RI 02886
- **Service Center Structure:** There is one County Office servicing 5 Counties in the State of RI
- **Employee Profile:** Total County Non-Federal and Federal Permanent Employees as of 8/6/16:
  - County Non-Federal Permanent: 3 On Board; 1 CED position vacant
  - Federal Permanent: 6 On Board
- **Program Participation:**
  - NAP 5 Applications $19,432
  - CRP 1 Application $ 2,065
  - ARC/PLC 16 Applications $17,559
  - MPP 11 Applications $ 931
  - TAAF 135 Applications $ 5,851
- **Farm Loans Programs Loan Profile:** In FY16, 30 Loan Applications were received. 3 loans are currently in process.
  - **Direct Operating** 9 Loans $610,150
  - **Direct Ownership** 2 Loans $390,000
  - **Guaranteed Operating** N/A
  - **Guaranteed Ownership** 1 Loan $120,000
  - **Microloans** 9 Loans $160,000
  - **Emergency** N/A

HOT TOPICS

- Dairy producers continue to face tight margins and are struggling to remain viable. Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
GEORGE E GOULART, JR, STATE EXECUTIVE DIRECTOR

George Goulart, Jr. is a native of Little Compton, RI. He grew up on a dairy farm, and after graduating high school, opened his own tree and landscape business. He eventually transitioned the farm, and operated a successful nursery and tree service for 39 years. Mr. Goulart also served as the Town Tree Warden for 34 years. He has dedicated many years to FSA, as a Rhode Island County Committee Member and Chairing the Rhode Island State Committee where he served until his appointment as State Executive Director in 2016.

STATE PROFILE

Agribusiness is South Carolina’s number one industry. Agriculture and Forestry in SC have a $41.7 Billion impact and account for more than 212,000 jobs. South Carolina’s top commodities include: cotton, corn, peanuts, soybeans, wheat, chickens, and turkeys. Also, although Georgia is known as the peach state, SC produces more peaches on an annual basis. The Farm Service Agency in South Carolina sees over 25,000 producers each year in Service Centers located around the State and takes acreage reports for over 1.7 million acres for participation in 19 FSA programs in the State. SC FSA supports the USDA mission and helps ensure a healthful, stable, accessible and affordable food supply.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: SC FSA State Office, 1927 Thurmond Mall, Suite 100 Columbia, SC 29201
- **Service Center Structure**: There are 34 FSA offices serving 46 counties in the state of SC
- **Employee Profile**:  
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 142  
    - County Non-Federal Permanent: 99  
    - Federal Permanent: 43
- **Program Participation**: These programs had the highest activity levels for FY2015 in SC:
  - Marketing Assistance Loans: 245 loans, $11.8 Million  
  - Cotton Transition Assistance Program: 8278 Applications, $11.4 Million  
  - Loan Deficiency Payments: 4683 Applications, $8.5 Million
- **Farm Loans Programs Loan Profile**: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $115.6 Million in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO). As of 9/21/16, our highest year ever, SC FSA made the following loans:
  - Direct Operating: 247 Loans, $28.1 Million  
  - Guaranteed Operating: 89 Loans, $29.2 Million  
  - Direct Ownership: 32 Loans, $5.8 Million  
  - Guaranteed Ownership: 70 Loans, $37.0 Million  
  - Microloans: 72 Loans, $1.6 Million  
  - Emergency: 135 Loans, $14.2 Million

HOT TOPICS

- Successional workforce planning is a tremendous objective needed for maintaining effective and responsive FSA business operations in SC. Organizational and Successional Planning for future staffing needs have been given serious consideration this year. Over 50% of existing FLP staff in SC will become eligible for full retirement by the end of December 2017. Actions are needed now to provide for the orderly departure of these staff members from the People’s Agency so that customer service is not adversely impacted during the transition period and what is a lengthy re-staffing process.
WILFRED L. PACE, STATE EXECUTIVE DIRECTOR

Wilfred L. Pace serves as State Executive Director for the SC Farm Service Agency. Pace is a conservation and agricultural professional who previously served as a dedicated Natural Resources Conservationist and Environmental Manager for over 37 years with USDA’s Natural Resource Conservation Service. He is a resident of Orangeburg, South Carolina where he has served land users and agrarian communities across South Carolina and many other states in the Southeast. Pace is a native of Lumber City, Georgia and a 1981 graduate of Fort Valley State University in Fort Valley, Georgia where he received a Bachelor of Science Degree in Agriculture Education.

STATE PROFILE

Agriculture is South Dakota’s number one industry. In South Dakota agriculture represents not only a career, but more importantly a way of life. Ninety-eight percent of South Dakota farms are family owned and operated. Today the agricultural industry in South Dakota has a $25.6 billion annual economic impact. More than 20 million acres of cropland and 25 million acres of grassland foster 20% of South Dakota’s economic activity. South Dakota's top commodities include: corn, soybeans, wheat, forage, and sunflowers. Value added agriculture and production capacity enable South Dakota to engage in the global agricultural industry. The average South Dakota producer produces enough food to feed 155 people. The Farm Service Agency in South Dakota provides service each year to 90,000 customers throughout the state.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: South Dakota State FSA Office, 200 4th Street SW, Room 308, Huron, SD 57350
- **Service Center Structure**: There are 55 FSA offices servicing 66 counties in the state of South Dakota.
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of September 21, 2016: 334
    - County Non-Federal Permanent: 229
    - Federal Permanent: 105
- **South Dakota FSA Farm Program Statistics for FY2015**
  - Commodity Loans & Program Payments: $147.6 Million
  - Disaster Assistance Programs: $43.9 Million
  - Conservation Programs: $78.1 Million
- **Farm Loans Programs Loan Profile**: The South Dakota farm loan portfolio is comprised of approximately 75% of new and beginning farmers and ranchers. In FY 2016, South Dakota FSA obligated over $224 Million in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO).
  - Direct Operating: 877 Loans, $57.5 Million
  - Guaranteed Operating: 157 Loans, $37.4 Million
  - Direct Ownership: 187 Loans, $38.6 Million
  - Guaranteed Ownership: 162 Loans, $84.5 Million
  - Microloans: 192 Loans, $5.7 Million

HOT TOPICS

- Organizations and producers are dissatisfied with FSA’s Conservation Reserve Program (CRP) mid-term management practices, specifically, the perceived wastefulness associated with the burning of residue as a basic mid-term management requirement of CRP acres.
- Producers and agricultural organizations are generally dissatisfied with the use of administrative county yields for the Agricultural Risk Coverage County Level (ARC-CO) option rather than physical location county yields to determine revenue loss.
CRAIG SCHAUNAMAN, STATE EXECUTIVE DIRECTOR

Craig Schaunaman serves as State Executive Director for the South Dakota Farm Service Agency. Schaunaman has been actively involved in agriculture for over 30 years. Beginning in 1977, Schaunaman farmed with both his father and brother. For the last 24 years Schaunaman and his brother have operated a farming partnership near the Aberdeen area. From 1988-1998 he was elected to five consecutive terms in the South Dakota House of Representatives where he served as the House Minority Leader and House Whip. Schaunaman has served on numerous state and local boards including Heartland Grain Fuels, Dakota Fuels, Aberdeen Development Corporation, South Dakota State FSA Committee, South Dakota Wheat Incorporated Board, and the Brown County Drainage Board. Schaunaman attended Aberdeen Central High School and Northern State University.

STATE PROFILE

In Tennessee the Farm Service Agency delivers farm loans, farm programs, conservation incentives, price supports, and disaster assistance in 59 county offices and 8 farm loan teams across the state. Tennessee’s top commodities include soybeans, cattle and calves, broilers, and corn. Our employees are dedicated to delivering vital programs and quality services to all of Tennessee’s 77,300 working farms. FSA-administered programs benefit all Americans by providing stability for our agricultural producers thus ensuring a safe and abundant supply of food.

STATE PROGRAM DELIVERY STRUCTURE

- **Tennessee State FSA Office**, 801 Broadway, 579 US Courthouse, Nashville, TN 37203
- **Service Center Structure** – There are 59 FSA offices servicing 95 counties in the state of Tennessee
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 258
    - County Non-Federal Permanent: 189
    - Federal Permanent: 69
- **Program Participation**: ACR/PLC 31,684 Contracts >$7 million
  - CRP >$14 million
  - ECP >$1,000,000

  - Guaranteed FO 59 Loans $36.6 Million
  - Guaranteed OL 70 Loans $24.8 Million
  - Microloans 258 Loans $6.2 Million
  - Direct FO 133 Loans $21.3 Million

HOT TOPICS

- Numerous producers signed up for CRP and Grassland, but only a few acres were accepted.
GENE DAVIDSON, STATE EXECUTIVE DIRECTOR

Eugene Davidson has served as Tennessee State Executive Director for the Farm Service Agency since 2009. Davidson, from Adams, Tennessee, is a founding member of Davidson Grain and Equipment, a pioneer in modern conservation practices that protect the environment and preserve local soil. Davidson was elected to the Tennessee House of Representatives in 1975 and served there until 2006. During his service in the House, Davidson was named chairman of the Agriculture Committee for four years and chairman of the Education Committee for eighteen years. He also served as Majority Leader for one term. After joining FSA, Davidson retired from actively farming; however, he still continues to work with his son Johnathan in the cattle business.

STATE PROFILE

From 2009 to 2015, USDA Texas Farm Service Agency delivered $11.7 billion in federal farm program payments and loans to Texas farmers and ranchers. During Fiscal Year 2015, Texas FSA delivered nearly $2.2 billion statewide, including $1.1 billion in commodity loans and program payments, $611 million in disaster assistance, $313 million in farm loans, and nearly $126 million in Conservation incentives and emergency funding. Texas has more than 240,000 farm operations and leads the nation in the value of cotton, cattle, sheep, goats, wool, and mohair. According to the 2014 Organic Survey, Texas ranked among the top 10 states for organic sales.

STATE PROGRAM DELIVERY STRUCTURE

- **Texas FSA State Office Address**: 2405 Texas Avenue South, College Station, Texas 77840
- **Service Center Structure**: There are 173 FSA service centers serving 254 counties in Texas
- **Total County Non-Federal and Federal Permanent employees ceiling**:
  - County Non-Federal Permanent: 488
  - Federal Permanent: 190
- **2015 Program Participation**: Delivered $2.2 billion in federal farm program payments and loans
  - Commodity Loans - $750 million in Commodity Loans made to eligible Texas producers
  - Livestock Forage Program (LFP) - Texas had 174 counties trigger for 2015 LFP benefits, paying nearly $573 million to eligible livestock producers; From 2011-2014, Texas FSA paid a total of $1.1 billion in LFP benefits, nearly 160,000 requests
  - Guaranteed loan program: $167.3 million representing 421 guarantees
  - Conservation Reserve Program - 19,745 contracts on more than 3 million acres in Texas; paid nearly $118 million in CRP incentives, cost-share, and rental payments
- **Farm Loans Programs Loan Profile**:
  - Direct and Guaranteed Loan portfolio as of August 31, 2016
    - $835 million, 5,415 borrowers
  - Total direct and guaranteed lending 2009 – 2016: $1.8 billion
    - Guaranteed: $962.9 million; Microloans: $33.5 million; Emergency: $30.1 million

HOT TOPICS

- Vacancies, ceilings, and significant retirement-eligible workforce creates critical need to address staffing and training of new employees.
- Year-round crop reporting is problematic for Texas producers because it affects their eligibility to participate in most of FSA’s major programs. Additionally if producers miss the reporting date, late filing fees are charged. For example Agriculture Risk Coverage (ARC) and Price Loss Coverage (PLC) - Producers report crops as planted on generic acres for program benefits under ARC/PLC program, but many of these crop acres will not have been planted at all or not planted in a manner to expect to carry a crop to harvest.
JUDITH A. CANALES, STATE EXECUTIVE DIRECTOR

Judith A. Canales serves as State Executive Director for the Texas Farm Service Agency. Canales previously served as Acting Deputy Under Secretary for USDA Rural Development. In 2009, President Barack Obama appointed Canales as Administrator for the Rural Business-Cooperative Service at USDA Rural Development. Former President Bill Clinton appointed Canales as Deputy State Director for Texas Rural Development. She was Acting Associate Administrator for Rural Business and Cooperative Service in Washington, D.C. Canales is a native of Uvalde, Texas, and maintains a residence in Eagle Pass, Texas.

STATE PROFILE

Utah’s agriculture can be described in one word: diverse. Whether producing top agricultural commodities such as cattle and dairy products or adopting management programs to improve the health of rangelands and watersheds, the Beehive State covers all aspects of the industry. Utah boasts 18,200 farms, covering 11 million acres of land, with the average farm size totaling 677 acres. Over three-quarters of Utah's agricultural income is generated by livestock and livestock products. Beef cattle and milk lead the way in this sector. However, hogs, sheep, honey, and turkeys also contribute to the economy. While hay is Utah's largest crop, wheat, barley, corn, apples, cherries, and peaches are also commercially grown and sold.

STATE PROGRAM DELIVERY STRUCTURE

• **State Office Address**: Utah State FSA Office, 125 S State Street, Rm 3202, Salt Lake City, UT 84138
• **Service Center Structure**: There are 19 FSA offices servicing 29 counties in the state of Utah.
• **Employee Profile**:
  o Total County Non-Federal and Federal Permanent employees as of August 6, 2016: **77**
    ▪ County Non-Federal Permanent: 42
    ▪ Federal Permanent: 35
• **Program Participation**: These programs had the highest activity levels for FY 2016 in Utah:
  o Disaster Assistance Programs $27.9 million
  o Conservation Reserve Program $5.7 million
  o Marketing Assistance Loans $1.1 million
• **Farm Loans Programs Loan Profile**: Utah Farm Service Agency continued to see near all-time high levels of new loan activity in FY 2016 with total Direct and Guaranteed loan obligations through Mid-September at $62.5 million.
  o Direct Operating Loans 498 loans totaling $19.8 million
  o Microloans 149 loans total $3.5 million
  o Guaranteed Operating Loans 39 loans totaling $10.2 million
  o Direct Ownership Loans 64 loans totaling $29.9 million
  o Guaranteed Ownership Loans 49 loans totaling $22.3 million

HOT TOPICS

• Utah is anticipating a high retirement rate over the next couple of years and it is imperative to begin training replacements.
MARK GIBBONS, STATE EXECUTIVE DIRECTOR

Mark Gibbons currently owns and operates Gibbons Brothers Dairy located in Lewiston, Utah, with his family. Mark has also been President of the Dairy Producers of Utah, President of the Governors Agriculture Advisory Board, and has been involved with Western States Dairy Producers Trade Association, Utah State FFA Foundation Board and various other farm-related committees. He spends a lot of his time working for farmers and trying to improve the future for producers and the agricultural industry.

STATE PROFILE

Virginia’s agricultural production is one of the most diverse in the nation. The top Virginia commodities are broilers, cattle, milk, turkeys, greenhouse/nursery, soybeans, corn, all other animals, hay, tobacco, eggs, winter wheat, cotton lint, hogs, apples, fresh tomatoes, summer potatoes, grapes, cotton seed and peanuts totaling $4,142,000,000. Virginia has 46,000 farms with the average size of 179 acres. FSA is the Virginia agricultural safety net which provided $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. Virginia FSA also paid $96 million in commodity loans, conservation, and loan deficiencies.

STATE PROGRAM DELIVERY STRUCTURE

State Office Address: Virginia FSA State Office, 1606 Santa Rosa Road, Richmond, VA 23229
Service Center Structure: There are 41 service centers serving 97 counties
Employee Profile: Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
  • County Non-Federal Permanent: 136 and Federal Permanent: 51
Program Participation:
  • Over 12-thousand individuals / entities reported having a share of a crop on nearly 38-thousand farms with 2.62 million acres of cropland.
  • FSA Virginia payed $96-million to those producers, supplying $77-million for commodity loans, $5 million in Conservation Reserve Program (CRP) payments, and $4 million in Loan Deficiency Payments (LDPs).
Farm Loans Programs Loan Profile: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/21/16, Virginia State FSA made the following loans:

HOT TOPICS

• The Chesapeake Bay Restoration continues to be a critical environmental issue in Virginia. Through a $1 million funding initiative, Virginia will work with our state partners (DCR, VASWCD and the DoF) to help farmers establish riparian forest buffers along the watershed.

• Due to changes in NRCS status spot checks wetlands and WC HEL violations have become a focus. To address these issues FSA will spend quite a bit of staff time researching and processing violations through MIDAS and the appeals process.

• Small and mid-sized dairies in Virginia are challenged. With approximately 25 dairies across the state that have struggled to stay afloat throughout the past year, the Virginia FSA loan program provided $1.9 million in emergency loans that the dairy industry used to remain in business. Supporting this industry in the coming years will continue to be a challenge.
Jewel H. Bronaugh, Ph.D., STATE EXECUTIVE DIRECTOR

Jewel H. Bronaugh, Ph.D., most recently served as the Dean of the College of Agriculture at Virginia State University. Dr. Bronaugh led the development of the strategic vision and plan for the Extension and Research divisions and the academic departments of Agriculture, Family and Consumer Sciences, and Hospitality Management. She developed robust partnerships with other universities; local, state and federal agencies; and organizations across Virginia to offer competitive educational programs to students and diverse stakeholders. At VSU, Dr. Bronaugh provided leadership for more than 120 employees and 24 grant projects. She was responsible for $8.3 million in federal and state funds and $4.2 million in grant funds. Previously, she served as the Associate Administrator for Extension programs in the School of Agriculture. In her prior role as a 4-H Youth Development Specialist, her research focused on developing and delivering programs to address issues of bullying among today’s youth.

STATE PROFILE

FSA Vermont is a major source of agricultural credit in the state, managing a loan portfolio of over $185 million, two thirds of which supports the state’s $2 billion dairy industry. Loans for maple operations are second at 15% and growing underscoring the fact that Vermont produces nearly half of the nation’s maple syrup. FSA Vermont has also aided the dairy and maple sectors through the Emergency Conservation Program (ECP) to help repair damage after major storm events, including Tropical Storm Irene in 2011.

HOT TOPICS

• Dairy producers continue to face tight margins and are struggling to remain viable. Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
• New strict state agricultural water quality regulations will be finalized by the end of 2016 and many dairy farms will be required to implement costly repairs to meet them causing further stress at a time of low milk prices.
• With fully one third of FSA Vermont employees eligible to retire, navigating the loss of experienced staff while providing necessary loan and program assistance to our farmer customers will be a challenge.

STATE PROGRAM DELIVERY STRUCTURE

- **Vermont State Office**, 356 Mountain View Drive, Ste. 104, Colchester, VT 05446
- **Service Center Structure** – There are 9 service centers serving 14 counties
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: 20
    - Federal Permanent: 25
- **Program Participation**: FSA Vermont made $3.8 million in program payments in 2016, with nearly $2.8 million of the total from over 1900 contracts in the ARC/PLC program. While MPP-Dairy enrollment totaled nearly 600 of the state’s 800 dairy farmers, the program has not made significant payments. FSA Vermont also made nearly $500,000 in CREP payments on over 400 contracts on over 2800 acres.
- **Farm Loans Programs Loan Profile**: FSA Vermont’s current loan portfolio is $185.9 million, with approximately 740 borrowers. As of September 19, 2016 225 loans totaling $31.9 million had been made, 146 direct for $11.9 million and 79 guaranteed for $20 million.
ROBERT PAQUIN. STATE EXECUTIVE DIRECTOR

Bob Paquin of Shelburne was appointed State Executive Director of the USDA Farm Services Agency in Vermont on August 10, 2009 after a long career working with Senator Patrick Leahy since 1977 as a Legislative Assistant in Washington and then Vermont as director of the Montpelier office. Bob has worked on several Farm Bills, on many Vermont conservation issues and co-drafted legislation on Lake Champlain, the Connecticut River, the Northern Forest and the Green Mountain National Forest. Bob is a native of St. Albans, Vermont, holds Bachelor and Master’s Degrees from the University of Vermont and has studied at the London School of Economics.

KEY STAKEHOLDERS

Dairy farmers, maple producers, fruit and vegetable growers and their representative organizations are key stakeholders.

- Vermont Agency of Agriculture—Main disaster or crisis response partner
- University of Vermont Extension—(USDA cooperative agreement) (RMA grant recipient) (USDA grant)
- Women’s Ag Network (WAgN)—(USDA grant recipient)
- Vermont Chapter/Farmer Veteran Coalition—Outreach partner to veterans
- NOFA of Vermont—Outreach partner to organic growers
- Vermont Feed Dealers Association—Outreach partner on feed issues
- Farmers Watershed Alliance—water quality/conservation compliance
- Champlain Valley Farmers Coalition—water quality/conservation compliance
- Vermont Association of Conservation Districts—Outreach CREP/water quality
- Vermont Land Trust—Outreach partner on CREP/water quality
- Vermont Housing and Conservation Board—Farm viability partner
- Vermont Vegetable & Fruit Growers Association—Outreach to growers

STATE PROFILE

Agriculture is big business in Washington. The state’s $49 billion food and agriculture industry employs approximately 160,000 people and contributes 13% percent to the state’s economy. Rich soils, diverse climates and large-scale irrigation make Washington one of the most productive growing regions in the world. Washington’s 37,249 farms produce over 300 crops on approximately 18,000,000 acres of crop and grazing lands. Washington’s top commodities include: apples, milk, wheat, potatoes, cattle and calves. The Farm Service Agency in Washington serves over 27,500 farmers and ranchers who participate in FSA programs across the state.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office**: Washington State FSA Office, 316 W. Boone Ave., Suite 568, Spokane, WA 99201
- **Service Center Structure**: There are 25 FSA offices servicing 39 counties in the state. 8 of the offices are shared-management serving two or more counties and 8 are single county offices.
- **Employee Profile**: 
  - Total County Non-Federal and Federal permanent employees as of August 6, 2016: **110**
  - County Non-Federal permanent: **68** Federal permanent: **42**
- **Program Participation**: These programs had the highest payment activity in FY2015 in WA.
  - 2014 ARC/PLC: 9,500 Contracts $92.3 Million
  - Conservation Reserve Program: 11,200 Contracts $71.5 Million
  - 2015 Livestock Disaster Programs: 1,500 Producers $12.8 Million
- **Farm Loans Programs Loan Profile**: As of 9/15/16, Washington State FSA made the following loans:
  - Direct Operating: 934 Loans $45.5 Million
  - Direct Ownership: 376 Loans $59.2 Million
  - Guaranteed Operating: 58 Loans $15.5 Million
  - Guaranteed Ownership: 221 Loans $67 Million
  - Microloans: 129 Loans $2.6 Million
  - Emergency: 22 Loans $2.57 Million

HOT TOPICS

- Agriculture in Washington suffers from a shortage of labor and is reliant upon the migrant labor workforce from picking to processing agricultural products. Agriculture has actively engaged in promotion of immigration reform as a means to add stability to the agricultural workforce.
- Declining commodity and livestock prices will be a driving force in 2017; anticipate increased farm loan demand and financial challenges to newer and beginning farmers as credit continues to tighten, particularly in the grain, hay, and livestock sectors.
- Washington agriculture is highly dependent upon export markets for both bulk commodities and processed food products. Trade agreements, labor disagreements at W. Coast ports, and Endangered Species Act (ESA) challenges to the Columbia and Snake river dams continue to affect all agricultural sectors that depend upon reliable transportation, strong trading relationships, and a reputation as a reliable supplier of quality food and agriculture products.
JUDITH “JUDY” OLSON, STATE EXECUTIVE DIRECTOR

Judy Olson serves as the State Executive Director for the Washington Farm Service Agency. Olson previously served as the Eastern Washington Director for U. S. Senator Patty Murray from 1997-2009. Olson is a fourth generation wheat farmer in Eastern Washington and has been an active farming partner for over 40 years. She was the first woman to be elected as President of both the Washington Association of Wheat Growers (1991) and the National Association of Wheat Growers (1994).

STATE PROFILE

Wisconsin is a very diverse and strong agriculture state. Agriculture contributes $88.3 billion annually to our state’s economy and provides 413,500 jobs or 11.9% of the state’s employment. The dairy industry alone contributes $43.4 billion to Wisconsin’s economy annually. Wisconsin ranks nationally #1 in cheese, #2 in major vegetable, and #3 in potato production. The Wisconsin Farm Service Agency works with over 111,000 producers on 9.4 million reported acres. Providing loans, disaster assistance, and working with conservation programs to ensure agriculture remains the number one industry in WI. Wisconsin FSA is dedicated to providing excellent service and delivering quality and accessible farm bill programs.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Address**: WI State FSA Office, 8030 Excelsior Drive, Suite 100, Madison, WI 53717
- **Service Center Structure**: There are 55 FSA offices serving 72 counties in the state of Wisconsin
- **Employee Profile**:
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016:
    - County Non-Federal Permanent: 241
    - Federal Permanent: 100
- **Program Participation**: These Programs had the highest activity levels for FY 2015 in Wisconsin and returned the most in payments.
  - Agriculture Risk Coverage-County: 75,102 farms enrolled $226 million
  - Conservation Reserve Program: 231,413 acres enrolled $25 million
  - Marketing Assistance Loans: 849 applications $74.1 million
  - Milk Margin Protection Program: 5797 farms enrolled $101,917 for 2016
  - Emergency Livestock Assistance Program: 25 applications $314,307
- **Farm Loans Programs Loan Profile**: The WI Farm Service Agency obligated $391 Million in Direct and Guaranteed Loans in FY2015. As of 09/13/16, Wisconsin State FSA obligated $372.4 Million, as follows:
  - Direct OL: 634 Loans $41.3 Million
  - Guaranteed OL: 226 Loans $63.0 Million
  - Direct FO: 197 Loans $34.8 Million
  - Guaranteed FO: 400 Loans $228.2 Million

HOT TOPICS

- Retirement and management turnover. 37% of WI FSA employees will be eligible to retire in the next 5 years. Over 60% of Wisconsin’s managers, including District Directors, State Specialists and County Directors are eligible for retirement.
- Dairy producers continue to face tight margins and are struggling to remain viable. Producers do not see the Dairy Margin Protection Program (MPP) as an effective protection of their margins and profitability.
- Wisconsin has a very large and healthy farm loan portfolio. With the current commodity and dairy prices the Farm Loan Program will need to remain a top priority for the agency to ensure the viability of the program and Wisconsin’s farmers. While at the same time dealing with a fairly new farm loan staff.
PATRICIA EDELBURG, STATE EXECUTIVE DIRECTOR

Patricia Edelburg serves as the State Executive Director for the Wisconsin Farm Service Agency. Edelburg was appointed to the position in April of 2016. Prior to becoming the SED, she also served on the Wisconsin FSA State Committee from 2010-2016. Patty and her husband own and operate a 130 cow registered Holstein farm in Central WI. She has served on the state board of directors for the Wisconsin Farmers Union from 2004-2016 as well as numerous committees to help influence dairy and agriculture policy.

West Virginia FSA State Office Fact Sheet

STATE PROFILE

West Virginia has a thriving Agricultural industry. In 2015, the National Agricultural Statistic Service lists the number of farms in West Virginia as 20,900 with a total of 3,600,000 acres of land with an average of 172 acres per farm. Over 90% of these farms are considered small farms and are family owned and operated. West Virginia’s top commodities by percent include: Meat animals 29%, Broilers 26%, Poultry 18%, Corn and Hay 8%, Dairy products 3%, Soybeans and wheat 2%, other crops 14%. West Virginia FSA supports the USDA mission and helps ensure a healthful, stable, accessible and affordable food supply.

STATE PROGRAM DELIVERY STRUCTURE

State Office Address: 1550 Earl L Core Road, Morgantown, WV 26505
Service Center Structure: There are 23 FSA offices servicing 55 counties in the state of West Virginia.
Employee Profile: Total County Non-Federal and Federal Permanent employees as of September 21, 2016: 89
  County Non-Federal Permanent: 49
  Federal Permanent: 40

Program Participation: These programs had the highest activity levels for FY 2015 in West Virginia:
  Marketing Assistance Loans $1.9 Million
  Livestock Indemnity Program $1 Million
  Conservation Reserve Program $992,000
  Noninsured Assistance Program $88,000
  Agriculture Risk Coverage/Price Loss Coverage Program $1.2 Million

Farm Loans Programs Loan Profile: The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $29.4 Million in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/21/16, West Virginia State FSA made the following loans:
  Direct Operating 464 Loans $13.6 Million Direct Ownership 72 Loans $10.9 Million
  Guaranteed Operating 5 Loans $560,000 Guaranteed Ownership 7 Loans $2.8 Million
  Loans to Veterans 44 Loans $2.3 Million Microloans 215 Loans $4.4 Million

HOT TOPICS

- Continued Emergency Conservation Program work in flood affected counties from the West Virginia June 2016 Disaster Declaration.
  - ECP active in 11 counties
  - Over $2 million estimated for disaster cleanup with practices including: debris removal, reseeding, fence, conservation structures.
  - County Office staff are performing the onsite inspections
  - Over 5,000 farms have been affected
- Chesapeake Bay Riparian Forest Buffer initiative requires continued work and diligence.
  - WV Conservation Reserve Enhancement Program agreement originally signed April 2002
  - $1 million of special interest funds provided by FSA in 2011
  - The state of West Virginia contribute 20% ($200,000) to finalize the agreement for the program.
  - Modified agreement must be signed by the WV Governor and USDA prior to final implementation, this is targeted to be signed fall 2016.
Richard “Rick” Snuffer II, STATE EXECUTIVE DIRECTOR

Richard "Rick" V. Snuffer II has 37 years of service with USDA. Rick's career in West Virginia began with ASCS as a County Operations Trainee in 1980. Since that time he has served as County Executive Director in two counties, Automation Coordinator for 20 years, State Outreach and Communications Coordinator. He graduated Magna Cum Laude from West Virginia University in 1977 with a B.S. in Animal Science and Agriculture. He is also well known for his farming enterprise Snuffer and Sons Angus Farms. He has served as a member of the Raleigh County Board of Education since 2003. He is married to Peggy Livengood.

STATE PROFILE

Most people associate Wyoming with the famous bucking bronco that adorns its license plate. In fact, cowboys help make cattle production by far its largest agricultural commodity in the state. The state’s economy revolves around minerals, agriculture and tourism. The agricultural sector yield annually exceeds one billion dollars. The production of cattle and calves provides over three-fourth of the state’s total agricultural production. Sheep and lambs are also important, followed by dairy products and honey. Wyoming has over 810,000 sheep and ranks second in the nation for wool production. Irrigation is vital to Wyoming Agriculture; hay is considered the most important crop to the economy followed by sugar beets, barley, and wheat. FSA served this wide variety of agricultural operations across a sparsely populated state by providing nearly $117 million in federal program payments and loans.

STATE PROGRAM DELIVERY STRUCTURE

- **Address of State Office:** Wyoming State Office, 951 Werner Ct Ste 130 Casper, WY 82601
- **Service Center Structure:** There are 17 FSA offices servicing 22 counties.
- **Employee Profile**
  - Total County Non-Federal and Federal Permanent employees as of August 6, 2016: 70
    - County Non-Federal Permanent: 43
    - Federal Permanent: 27
- **Program Participation:** These programs had the highest activity levels for FY 2015 in WY.
  - *Conservation Reserve Program* 1,161 Applications $5.5 Million
  - *Disaster Assistance Programs* 2,757 Applications $70 Million
  - *Marketing Assistance Loans* 18 Loans $10.3 Million
- **Farm Loans Programs Loan Profile:** The Farm Service Agency saw monumental funding milestones in FY 2015, obligating $5.6 Billion in Direct and Guaranteed Operating (OL) and Farm Ownership Loans (FO), the highest ever in Agency history. As of 9/1/16, Wyoming State FSA made the following loans:
  - **Direct Operating** 81 Loans $4.3 Million
  - **Guaranteed Operating** 17 Loans $4.6 Million
  - **Direct Ownership** 24 Loans $6.3 Million
  - **Guaranteed Ownership** 16 Loans $12 Million
  - **Microloans** 9 Loans $316,490
  - **Emergency** 4 Loans $417,470

HOT TOPICS

- **County Office Staffing** – Eight of the 17 County Offices have two or less employees, making it difficult to administer all the programs especially during disaster situations.
- **Farm Loan staffing** – Four of the six Farm Loan Officers and the Farm loan Chief are or will be eligible to retire by April of 2017. Wyoming has three Farm Loan Trainees on board now with one to two years left on their training period. With the agriculture economy declining loan activity is already increasing and by spring 2017 a surge in work load is expected.
Gregor Goertz, STATE EXECUTIVE DIRECTOR

Gregor Goertz was appointed to serve as the State Executive Director for Wyoming FSA in August of 2009. He previously served on the FSA State Committee 1995 — 2005, serving four years as Chairman. Goertz was instrumental in starting the Slater Wind Energy Association (an association of landowners) in 2007 to promote renewable energy in the area and has continued to serve as Chairman. He served on the Platte County ASCS Committee in the early 80’s and served one term as Platte County Commissioner from 1986-1991 along with founding the Wheatland Area Development Corporation. The Goertz family maintains 6,000 acres of cropland and 19,000 acres of grassland in Southeastern Wyoming running 330 bred cows, retaining all of the calves over as yearlings selling the majority of them as grass fat. In 2000 they certified the farmland as organic and by 2005 the farm and livestock were 100% certified organic. In 2004, Gregor and his wife Cindy started Wyoming Pure Natural Beef, a direct marketing beef company, with their children.

WHAT WE DO: OUR MISSION

Since 1953, the Foreign Agricultural Service (FAS) has been linking U.S. Agriculture to the World to Enhance Export Opportunities and Global Food Security. FAS serves as the USDA’s coordinator for international activities working to improve foreign market access for U.S. products and operates programs designed to build new markets and improve the competitive position of U.S. agriculture in the world, e.g., McGovern-Dole Food for Education, Food for Progress, Borlaug and Cochran Fellowship Programs, Market Access Program, and the Technical Assistance for Specialty Crops (TASC) program.

WHO WE ARE: OUR WORKFORCE

FAS’s core functions are carried out by about ~1250 highly professional staff stationed in Washington, DC and in 93 overseas offices covering 171 foreign countries with a cadre of about ~750 Civil Service Employees, 150 Foreign Service Officers and 350 Locally Employed Staff.

WHO WE SERVE: OUR CONSTITUENTS

FAS collaborates across the U.S. government and partners with the private sector NGOs and others to link U.S. agriculture to the world, to further the economic prosperity of rural America and U.S. farmers, ranchers, fishermen, foresters and agribusinesses, and to provide global food security.

KEY UPCOMING DECISIONS

The top three policy decisions in the first 30-60 days of the new administration:

- Development of an agricultural trade policy agenda, e.g., trade enforcement system, engaging with China, participating in the WTO Ministerial, assessment of TPP (with USTR).
- Implementation of the new Global Food Security Act (with State and USAID).
- Sugar policy, evaluation of potential for forfeitures, expanding access to market, or engaging in negotiations with Mexico as well as preparation for market adjustment decisions mandated for April (potentially with USDA/FSA, USTR and Commerce).

BUDGET HIGHLIGHTS FY 2016

FAS’ FY 2016 total budget authority consists of $2.744 billion to facilitate access to international markets.

- Discretionary funding provides about 15 percent for the S&E and McGovern-Dole.
- Mandatory programs consist of about 79 percent for the P.L. 480 and CCC-funded programs.
- Reimbursements account for about 6 percent.

FY 2016 Budget Authority

- Salaries & Expense (incl. CCC GSM S&I)
- McGovern-Dole*
- P.L. 480**
- CCC-Funded Programs
- Reimbursements

* The Act provides $5 million for local and regional procurement.
** Administered primarily by USAID.
I. Organizational Overview

Agency’s Mission/Strategic Plan

The Mission and Vision Statement of FAS is: Linking U.S. Agriculture to the World to Enhance Export Opportunities and Global Food Security. The FAS Strategic Plan includes the following Goals and Objectives:

Strategic Goal: Increase U.S. food and agricultural exports by $10 billion by end-year 2018.

- Trade Promotion (Supports USDA Goal 1: Assist rural communities to create prosperity so they are self-sustaining, repopulating, and economically thriving” under USDA Strategic Objective 1.2: “Increase agricultural opportunities by ensuring a robust safety net, creating new markets, and supporting a competitive agricultural system.”)
  - Objective 1.1: Increase effectiveness of FAS market development programs and outreach activities
  - Objective 1.2: Manage FAS credit programs to yield the greatest benefit to U.S. agriculture
  - Objective 1.3: Maintain a global market intelligence information system that supports policy and program objectives

- Trade Policy (Supports USDA Goal 1: Assist rural communities to create prosperity so they are self-sustaining, repopulating, and economically thriving” under USDA Strategic Objective 1.2: “Increase agricultural opportunities by ensuring a robust safety net, creating new markets, and supporting a competitive agricultural system.”)
  - Objective 2.1: Negotiate and enforce market-expanding trade agreements for U.S. exporters of agricultural, fish, and forest products
  - Objective 2.2: Prevent or resolve foreign Technical Barriers to Trade (TBT) or Sanitary/Phyto-Sanitary (SPS) measures that hinder U.S. agricultural exports
  - Objective 2.3: Pursue the development of rules-based international systems that facilitate global trade

- Trade Capacity Building and Food Security (Supports USDA Goal 3: Help America promote agricultural production and biotechnology exports as America works to increase food security” under USDA Strategic Objective 3.1: “Ensure U.S. agricultural resources contribute to enhanced global food security”).
  - Objective 3.1: Address food security challenges by building food and market systems that expand trade and economic growth through food assistance programs
  - Objective 3.2: Enhance partner countries’ capacity for agricultural development and participation in international trade through USDA-led technical assistance and training
Management Initiatives (Supports USDA Goal 5)
- Initiative I: Engage employees to transform FAS into a model agency
- Initiative II: Provide civil rights services to Agriculture employees and customers
- Initiative III: Improve outreach and collaboration efforts to increase access to FAS programs and services
- Initiative IV: Re-engineer FAS business processes to increase performance, efficiency, and alignment
- Initiative V: Recruit and hire skilled, diverse individuals to meet the program needs of FAS
- Initiative VI: Enhance collaboration and coordination on critical issues through enterprise governance

Key mission delivery performance measures

Organization’s History

FAS was created in 1953 to focus on foreign market development for U.S. agricultural commodities. The FAS is the USDA’s lead agency in international activities to develop foreign markets for U.S. agriculture. FAS is also responsible for improving foreign market access for U.S. products by collecting and analyzing data on world agricultural production, policy, and trade competition. It also publishes information to U.S. farming and business interests on agricultural commodities in the global market. The FAS also administers USDA export credit guarantees and food aid programs.
Biographies of career staff in key leadership positions

Bryce Quick  
**Associate Administrator, Chief Operating Officer**  
202-720-2706, Bryce.Quick@fas.usda.gov

Bryce Quick joined FAS in March 2011 as the Associate Administrator and Chief Operating Officer. He led the budget division in cleaning up the financial system which has increased data integrity and compliance with several regulations not adhered to in the past. Under his leadership, the IT division has moved to a “single technology platform” which has reduced operating costs and made it possible for the entire Agency to share data more efficiently. Mr. Quick introduced the concept of Enterprise Governance and FAS has adopted it as a way to facilitate communication and decision making across the Agency. In July 2014, Secretary Vilsack named Bryce as Acting Deputy Under Secretary for Farm and Foreign Agricultural Services. Prior to joining FAS, Bryce served in several roles at FSIS, beginning in 2001 as Director of Congressional and Public Affairs, then as Assistant Administrator for Public Affairs, Education, and Outreach, before becoming the Agency’s Deputy Administrator. Prior to his service at USDA, Mr. Quick worked as a legislative aide in the office of the Honorable Pat Roberts from 1995 to 2001, and in the office of the Honorable Thomas S. Foley from 1990 to 1995, where he served as a professional staff member for the House Committee on Agriculture. Mr. Quick earned his Bachelor of Arts degree in Political Science from Brigham Young University.

Jason Hafemeister  
**Acting Associate Administrator**  
202-720-9084, Jason.Hafemeister@fas.usda.gov

Jason is from California’s beautiful central coast. He grew up in town (San Luis Obispo) but starting in junior high and through college did seasonal labor in the Salinas valley produce fields. Jason moved back east in 1991 and started work at FAS as part of the team negotiating the WTO’s Uruguay Round agreement. In eight years at FAS and then seven years at USTR he was responsible for a number of trade policy initiatives, including serving as the lead agriculture negotiator for China’s accession to the WTO, the CAFTA-DR, and the Doha Round negotiations. Jason left government in 2007 and worked for six years in private sector consulting on agricultural market and policy analysis. He returned to government in 2013, landing in USDA’s Office of the Chief Economist as the senior trade economist, then came to FAS in 2014 serving as the agency’s Trade Policy Coordinator and trade counsel to the Under-Secretary. He moved to his current position in 2016. Jason went to college at the University of California in Berkeley, graduate school at the University of California in San Diego, and law school at Georgetown. Jason is married and has two young children.
Allison A. Thomas  
**Acting Associate Administrator**  
202-690-8108, Allison.Thomas@fas.usda.gov

Allison A. Thomas is the Acting Associate Administrator of FAS responsible for overseeing FAS food security efforts and trade promotion programs. She most recently served as the FAS Chief of Staff. Allison began her career with FAS in 1999 as a summer intern. In addition to serving as Chief of Staff, other FAS positions held include Policy Advisor, Director, and International Economist. As a Policy Advisor, Allison worked at the U.S. Embassy in Nairobi, Kenya to strengthen agriculture and trade development relations with East African countries. She also served as the Director of Mission Support Operations and worked at the U.S. Embassy in Kabul, Afghanistan as the USDA Deputy Coordinator in charge of management and oversight of USDA reconstruction and stabilization efforts and worked closely with USG partners on coordination of efforts. As an International Economist, she worked on bilateral and multi-lateral trade issues with Western and Eastern European countries.  
Allison obtained a B.S. in Agricultural Economics from Southern University and A&M College in Baton Rouge, Louisiana and a M.S. in Agricultural Economics from the University of Arkansas in Fayetteville, Arkansas.

Jocelyn G. Brown  
**Deputy Administrator, Office of Capacity Building and Development**  
202-690-1779, Jocelyn.Brown@fas.usda.gov

Jocelyn G. Brown is the Deputy Administrator in FAS’s Office of Capacity Building and Development. In this position she oversees USDA’s international food and technical assistance programs, and numerous technical assistance projects that promote U.S. government food security and trade capacity building goals. Ms. Brown assumed this position in December 2014. Before serving as Deputy Administrator, Ms. Brown covered trade policy issues for Asia, Africa and the Middle East. She was also heavily involved in the development of USDA’s food security policy for the G8 and G20 negotiations. From 1998-2006, she worked with the Food and Agriculture Organization of the United Nations and the Inter-American Institute for Cooperation in Agriculture. Prior to coming to USDA in 1998, she worked the District of Columbia Control Board. She was a Peace Corps volunteer in Peshawar, Pakistan from 1988-1990.  
Ms. Brown holds an MBA with a concentration in international development from George Washington University and graduated magna cum laude from Harvard University in American Literature. Ms. Brown is married with three children. In her free time she enjoys reading, knitting, cycling, and swimming.
Jeanne F. Bailey  
Deputy Administrator, Office of Country and Regional Affairs  
202-720-4129, Jeanne.Bailey@fas.usda.gov

In January 2016, Jeanne assumed the position of Deputy Administrator for the Office of Country and Regional Affairs (OCRA). Jeanne leads the program area that provides strategic leadership and analysis on key countries and regions of the world to advance consistent and mutually-reinforcing strategies for U.S. agricultural, trade policy, foreign policy, and national security interests. OCRA serves as an agricultural policy liaison and coordinator both within FAS and USDA, as well as with foreign government officials and other U.S. government agencies.

Before moving to OCRA, Jeanne was the Director for the Office of Trade Programs’ Cooperator Programs Division. Other Washington-based assignments include supporting FAS’s overseas offices throughout the Western Hemisphere as Area Director in the Office of Foreign Service Operations, and working on multilateral trade policy issues in the International Trade Policy program area. A career Foreign Service Officer, Jeanne has served in Hanoi, Vietnam (2009-2013); Monterrey, Mexico (2001-2003); Mexico City, Mexico (1997-2001); and Paris, France (1992-1996). An Illinois native, Jeanne is a graduate of the University of Illinois at Champaign-Urbana, where she completed her MS and BS degrees in Agricultural Economics and Agriculture, respectively.

Robert Macke  
Deputy Administrator, Office of Agreements and Scientific Affairs  
202-720-4434, Robert.Macke@fas.usda.gov

Bob Macke is the Deputy Administrator leading the Office of Agreements and Scientific Affairs (OASA), the principal trade policy unit of FAS. The work of OASA and its partners enables several billion dollars of additional U.S. agricultural exports each year by preventing, reducing or eliminating trade barriers imposed by foreign governments. Bob has been with FAS since 1987, serving as Agricultural Attaché in Seoul, Korea from 1990 to 1993. Since that time he has worked in the trade policy arena at FAS, and has been in his current position since January 2015. He is the Designated Federal Official for the Secretary’s private sector Agricultural Policy Advisory Committee, and oversees the operation of six Agricultural Trade Advisory Committees.

Bob was raised in central Ohio. He earned his Bachelor's Degree in Foreign Affairs from the University of Cincinnati, spent three years building schools in rural Africa with the Peace Corps, and returned to earn his Master's Degree in Agricultural and Resource Economics from The Ohio State University. He is married and has two sons, who are both currently in college.
Daniel B. Whitley  
Deputy Administrator, Office of Global Analysis  
202-720-6301, Daniel.Whitley@fas.usda.gov

Daniel Whitley is the Deputy Administrator of the Office of Global Analysis (OGA). In this capacity he is responsible for leading FAS analysis on the global agricultural supply and demand situation. In addition, OGA routinely conducts impact analysis on trade policy issues. Daniel oversees the publishing of over 100 annual reports on commodity markets, international agricultural production, and trade policy. Daniel began his professional career with USDA in 1997 with the Economic Research Service. He started with FAS in 2001 and has worked in several capacities including senior economist, Deputy-Director of Trade Analysis, and Director of Civil Rights. In 2006, Daniel was selected as a Brookings Fellow and worked in the United States Senate on Farm Bill issues. Daniel is a Louisiana native and holds a bachelor’s degree in Agricultural Economics from Southern University in Baton Rouge and a Master’s Degree in Agricultural Economics from Louisiana State University. He lives in Washington, DC with his wife and two sons.

Mark Slupek  
Acting Deputy Administrator, Office of Trade Programs  
202-720-1169, Mark.Slupek@fas.usda.gov

Mark Slupek, as the Acting Deputy Administrator for the Office of Trade Programs (OTP), is responsible for leading the administration of programs that support private sector development of foreign markets for agricultural products, including the Market Access Program, the Foreign Market Development Cooperator Program, the Emerging Markets Program, the Technical Assistance for Specialty Crops Program, and the Quality Samples Program. Further, OTP manages the Export Credit Guarantee Program, the Facility Guarantee Program, the Dairy Export Incentive Program, two trade assistance programs for the textile industry, and import programs for sugar and dairy. OTP also conducts agribusiness trade missions, provides exporter assistance, and supports selected international food shows. OTP consists of four divisions and employs about 100 staff. Mark has worked with FAS’s market development programs since 1997. Prior to being named Acting Deputy Administrator in January 2016, he served as Director of the Program Operations Division, Deputy Director of the Processed Products Division, and Deputy Director of the Marketing Operations Staff. Long ago, Mark spent four years in the Fruit and Vegetable Program Area of USDA’s Agricultural Marketing Service. He attended Virginia Tech and Old Dominion University and holds a Masters Degree in Economics. He currently lives in Stafford, Virginia, with his wife and three children.
Bobby Richey, Jr.
Deputy Administrator, Office of Foreign Service Operations
202-720-9207, Bobby.Richey@fas.usda.gov

Bobby Richey assumed the duties of Deputy Administrator in the Office of Foreign Service Operations in May, 2016. The Office of Foreign Service Operations is responsible for managing the FAS’s Foreign Service Corps of 130 officers, mentoring 30 Foreign Service trainees, and overseeing about 350 foreign nationals working in FAS’s 93 offices around the world. He joined FAS in 1986. Bobby has served at the U.S. Mission to the European Union, and in the U.S. Embassies in Mexico City and Berlin. Immediately prior to his current assignment, Bobby served as Counselor for Agricultural Affairs at the U.S. Embassy in Bangkok. In this role, he covered USDA’s interests not only in Thailand, but also Burma and Laos. Bobby earned a Bachelor of Science degree in agricultural economics from Texas Tech University in 1984 and a Master of Science degree in agricultural economics from Iowa State University in 1986. He grew up on a family cotton farm near Lubbock, Texas and married Larry Allen in 2013.

Ellen Dougherty
Director, Public Affairs and Executive Correspondence
202-720-0328, Ellen.Dougherty@fas.usda.gov

Ellen Dougherty is Director of Public Affairs and Executive Correspondence. In his capacity, she leads the team that manages FAS’s communications and outreach activities, including media and stakeholder relations, speechwriting, and digital communications. In addition, she oversees the staff that manages the agency’s Freedom of Information Act and executive correspondence functions. Ellen joined FAS as Deputy Director of Public Affairs in 2010 and assumed the Director’s position in April 2016. She served 5 years as Public Affairs Director for the National Agricultural Statistics Service, spearheading the award-winning national outreach campaign for the 2007 Census of Agriculture, among other efforts. Prior to entering federal service, Ellen spent most of her career in the private sector, directing public affairs and communications programs for the U.S. Grains Council, the National Corn Growers Association and the National Association of Conservation Districts. She also served as partner in the public affairs firm Mission Strategies, Inc., providing strategic and creative consulting services to a range of corporate, non-profit and government clients. Ellen is a graduate of Saint Josephs’ University in Philadelphia with B.A. in English, a minor in Political Science and a concentration in Latin America Studies. She completed her Master’s degree coursework at the Indiana University-Bloomington School of Journalism.
Chris Church
Director, Legislative Affairs Office
202-720-6830, Chris.Church@fas.usda.gov

Chris joined FAS’s Legislative Affairs Office in 2002 and has served as Director since 2008. While at FAS, Chris also served a detail on the House Agriculture Committee Staff. Previous USDA service includes several years in the Legislative Affairs Office at the Food Safety Inspection System.

Chris earned his Bachelor’s degree at Catholic University of America and his Master’s degree at the University of Maryland.

Adriano Vasquez
Director, Office of Civil Rights
202-720-8907, Adriano.Vasquez@fas.usda.gov

Adriano Vasquez is the Director for the FAS Office of Civil Rights. A multi-faceted, team oriented leader who consistently provides sound and timely advice on matters relating to the application of anti-discrimination statutes in federal employment.

Mr. Vasquez served in the military from 1984-2005, and served in various EEO positions in USAG Redstone, IMCOM Korea, and USAG Daegu. In 2014 he became the EEO Branch Manager for USDA’s Rural Development mission area.

In addition to active certifications from the Justice Center of Atlanta and the Department of Defense Equal Opportunity Management institute. Mr. Vasquez earned his Bachelor of Arts degree in 2004 and received his Master of Science degree in Human Resource Management from the University of Maryland, University College in 2013. Adriano currently resides in Gainesville Virginia, with his wife Donghee and three children, Joshua, Adrian and Marie.

Healy was raised on a hog and grain farm in southeastern South Dakota. He earned a degree in Political Science from the University of South Dakota.

Biographies of political staff in key leadership positions

Phil Karsting
Administrator
202-720-3935, Phil.Karsting@fas.usda.gov

Phil Karsting was appointed Administrator of the Foreign Agricultural Service in May 2013. He previously served more than 22 years on Capitol Hill, most recently as chief of staff to Senator Herb Kohl (D-Wis.), then-chairman of the Senate Appropriations Subcommittee on Agriculture, Rural Development and Related Agencies. Phil’s prior Capitol Hill assignments included serving as senior analyst on the Democratic staff of the Senate Budget Committee where he handled issues relating to agriculture, rural development, housing, telecommunications, energy and the environment. He also served as legislative assistant to the late Senator Jim Exon (D-Neb.). He served on the Senate Bipartisan Chiefs of Staff steering committee and in 2013 he led training seminars in Liberia for Liberian congressional staff on behalf of the National Democratic Institute. Phil began his association with American agriculture working in his family's farm supply business in rural Nebraska. He received a bachelor’s degree in Agricultural Economics from the University of Nebraska-Lincoln. He is also a graduate of the French Culinary Institute in New York City.

Adam Healy
Chief of Staff
202-690-8064, Adam.Healy@fas.usda.gov

Adam Healy serves as the Chief of Staff of FAS. Prior to joining the department in 2015, he served on the staff of the Senate Banking, Housing, and Urban Affairs Committee where he advised former Chairman Tim Johnson (D-South Dakota) on international trade and finance issues, including the reauthorizations of the Export-Import Bank and Defense Production Act, trade promotion, and export controls. Healy served as liaison and advisor on issues impacting rural and Native American communities, including economic inclusion, financial services, access to capital, mortgage finance, and affordable housing.

Before joining the Banking Committee staff, Healy led the National Telecommunications Cooperative Association’s outreach and advocacy efforts before the U.S. Senate. At NTCA, he focused on rural access to broadband and funding for USDA’s Rural Utilities Service programs.

* a/ The Act provided $5 million from within McGovern-dole for local and regional procurement
* b/ FY 2016 includes funding for General Provision 748 and CCC reimbursement for BEHT
* c/ CCC-funded programs, except BEHT and other programs

### Other key items pertaining to funding:

1. FAS has requested an increase of $3,600,000 for International Cooperative Administrative Support Services (ICASS). ICASS was established by Public Law 104-208 (U.S. Department of State Appropriations Act) in 1996. The ICASS system is the principal means by which The U.S. Department of State (DoS) provides and shares the cost of common administrative
United States Department of Agriculture
2016 Presidential Transition
Foreign Agricultural Service (FAS)

support at its more than 200 diplomatic and consular posts overseas with FAS and all other foreign affairs agencies. Under the Chief of Mission’s authority, FAS relies on its base funding to maintain continuous administrative support services for overseas offices provided by DoS and the U.S. Agency for International Development (USAID). Under ICASS regulations, participating agencies are required to pay their portion of these “platform” costs. The anticipated expansion of the ICASS platform will increase the direct and indirect ICASS costs for FAS. Specifically, transitioning most of HR/OE into ICASS, conversion of Information Management Systems positions into ICASS, revision of the Global Information Technology Management count methodology and the backlog of ICASS positions to be filled. Based the DoS’s final statement for FY 2016 actual of $15.5 million, FAS has estimated FY 2017 at $17.3 (11.6 percent) a $1.8 million increase over 2016.

2. Costs for the Capital Security Cost Sharing (CSCS) Program have decreased over the past 2 years. DoS implemented the CSCS under the authority of Section 604 of the Secure Embassy Construction and Counterterrorism Act of 1999, as amended. The law authorizes the Secretary of State to determine the cost share amount allocable to each agency to support safe, secure, and in some cases new, U.S. diplomatic facilities. It applies to all agencies with overseas personnel under chief of mission authority. Agencies are required to pay their cost share in advance each year following guidance developed by DoS and reviewed by the Office of Management and Budget. The required contributions provided by FAS fund the construction of new U.S. Government facilities (i.e. Embassies and Consulates) and maintenance of existing facilities through-out the world. Following the September 11, 2012, attack on U.S. government facilities in Benghazi, Libya, DoS convened an independent Benghazi Accountability Review Board (ARB). Based on current discrepancies, FAS costs for CSCS are anticipated to decrease by $1.027 million.

3. In terms of reimbursements, FAS collaborates in joint activities with agencies such as DoS, USAID, ARS, APHIS. FAS reimbursables are administered for the following spend categories: ICAS, CSCS, APHIS, DAM administrative services, Greenbook Working Capital Fund and translation services. These services are provided by Department of State for overseas protection and support. This also includes administrative assistance for FSA, DAM and OCFO for departmental costs. Satellite imagery services are rendered for the following agencies: NRCS, APHIS, ARS, RMA, NAS and FS. FAS uses programs such as the McGovern-Dole, Cochran and Borlaug Fellowship Programs in cooperation with FAS, ARS and U.S. Universities to help support education, child development and food security in low-income, food-deficit countries around the globe. The programs offer scientific training and research in the U.S. to potential leaders from eligible countries related to short and long-term, market development as well as trade capacity building. These reimbursements may also cover technical workshops, meetings, conferences, training, travel, administrative costs and other fees.
Enterprise Workforce Data

**Workforce FY 2009-FY 2016**

- Headquarters*
- Overseas Posts**
- Total Staff

* Includes Schedule B/Term Employees
** Includes Locally Employed Staff

**Grade Level Distribution**

- GS 5-7, 3%
- GS 8-12/FO/FP, 27%
- GS 13-15/FO/FP, 66%
- ES/SES/FE, 3%

Distribution includes Schedule B/Term employees: GS 8-12 = 6.3% and GS 13-15 = 11.5%

ES/SES = Executive Service/Sr Exec Service
FE = Senior Foreign Service Officer
FO/FP = Foreign Service Officer
Highlights of the current FAS workforce are as follows:

- FAS employs a total workforce of approximately 1257 employees (1251 Full-time and 6 Part-time)
- FAS employs about 480 career civil service personnel
- FAS employs about 165 Foreign Service Officers (including 31 FSO Trainees)
- FAS employs about 252 Schedule B or Limited Term employees
- FAS employs about 337 Locally Employed Staff (LES) overseas
- FAS employs no seasonal and no temporary employees
- Of the permanent career workforce, 23 percent of Civil Service and 35 percent of Foreign Service are eligible to retire through calendar year 2017
- FAS headquarters is located in Washington, D.C. which houses 65 percent of the workforce
- FAS has 93 overseas offices covering 171 countries to work directly on behalf of our constituents and with foreign entities
- 35 percent of the FAS workforce are stationed overseas (8 percent Foreign Service Officers and 27 percent Locally Employed Staff)
- 62 percent of the Civil Service employees are unionized (AFSCME)
- 100 percent of Foreign Service employees are unionized (AFSA)
- FAS has 7 Mission Critical Occupations covering 81 percent of the workforce
II. Policies and Regulations

Statutory Authorities

The Foreign Agricultural Service was established on March 10, 1953, by Secretary's Memorandum No. 1320, “Revised Administrative Grouping of Department Agencies,” Supplement 1. Section 602 of Public Law 83-690, approved August 28, 1954, authorized the Secretary of Agriculture to appoint overseas agricultural attachés. FAS’s duties were consolidated in Title V of the Agricultural Trade Act of 1978, as amended. Secretary's Memorandum No. 1020-39, “Organization of the Department; Assignments and Reassignments of Functions,” dated September 30, 1993, transferred the functions of the former Office of International Cooperation and Development to FAS.

Title V of the Agricultural Trade Act of 1978, most recently amended in 2008, states that the Administrator of FAS is given the power to “exercise such functions and perform such duties related to foreign agriculture,” and may also be assigned other duties by law or by the Secretary of Agriculture (Title V, section 502 (b)). Additionally, the Administrator is responsible for oversight of FAS, the General Sales Manager, and the Agricultural Attaché Service (Title V, section 502 (c)).

Specifically, 7 USC §5693, mandates: “The Service shall assist the Secretary in carrying out the agricultural trade policy and international cooperation policy of the United States by

1. Acquiring information pertaining to agricultural trade;
2. Carrying out market promotion and development activities;
3. Providing agricultural technical assistance and training; and
4. Carrying out the programs authorized under this chapter, the Food for Peace Act (7 U.S.C. 1691 et. seq.), and other Acts.” (Title V, section 503)

USDA Departmental Regulation 1051-002 (December 2004) states that FAS’s responsibilities “include, but are not limited to, the responsibility to coordinate the carrying out by Department agencies of their functions involving foreign agriculture policies and programs and their operations and activities in foreign areas; acting as a liaison on these matters and functions relating to foreign agriculture with the Department of State, the United States Trade Representative, the U.S. Agency for International Development and foreign governments; conducting functions of the Department relating to the World Trade Organization, and legislation affecting international agricultural trade; and administering and directing the Department’s programs in international development, technical assistance and training carried out under the Foreign Assistance Act of 1961, as amended.”

Since 2010, the U.S. Agency for International Development (USAID) has also used its authority under the Foreign Assistance Act of 1961 (FAA) to initiate cash-based food assistance in response to international crises under the Emergency Food Security Program (EFSP) as a complement to Food for Peace Act (FFPA, also known as P.L. 480) Title II emergency in-kind food aid donations. In July 2016, EFSP was permanently authorized by the Global Food Security Act (P.L. 114-153, Title II, section 201).
There are six food assistance programs that are administered either by the Foreign Agricultural Service of the U.S. Department of Agriculture (USDA) or USAID. They are the P.L. 480, Section 416(b) program, the Food for Progress Act of 1985, the McGovern-Dole International Food for Education and Child Nutrition Program, the USDA Local and Regional Food Aid Procurement program, and the Emergency Food Security Program.

Statutory Authorities:

1. USDA Local and Regional Food Aid Procurement Program
   a. Section 3206 of the Food, Conservation, and Energy Act of 2008, as amended by the Agricultural Act of 2014
   b. 7 CFR Part 1590

2. McGovern-Dole International Food for Education and Child Nutrition Program
   a. Section 3107 of the Farm Security and Rural Investment Act of 2002
   b. 7 CFR Part 1599

3. Food for Progress Program
   a. Food for Progress Act of 1985
   b. 7 CFR Part 1499

4. GSM-102 Export Credit Guarantee Program
   b. 7 CFR Part 1493

5. Market Access Program
   a. Section 203 of the Agricultural Trade Act of 1978
   b. 7 CFR Part 1485

6. Foreign Market Development Cooperator Program
   b. 7 CFR Part 1484

7. Facility Guarantee Program
   b. 7 CFR Part 1493

8. Technical Assistance for Specialty Crops Program
   a. Section 3205 of the Farm Security and Rural Investment Act of 2002
   b. 7 CFR Part 1487

Important Policies and Regulations

The list below includes regulations that have either been deemed significant by the Office of Information and Regulatory Affairs (OIRA) or are significant to the programs of FAS.

1. USDA Local and Regional Food Aid Procurement (LRP) Program, 7 CFR Part 1590, RIN 0551-AA87 (Significant), published July 1, 2016.
FAS releases 3-4 regulations per year. FAS has only received one significant designation by OIRA in the last year and that was for the USDA Local and Regional Food Aid Procurement Program.

2014 Farm Bill Flexibilities on Food Assistance

USDA - The 2014 Farm Bill authorizes a $80 million annual USDA local and regional procurement (LRP) program for each of fiscal years 2014 through 2018. Based on a successful pilot LRP program funded in the 2008 Farm Bill, the LRP program authorized in 2014 will operate on annual appropriations. In FY 2016, $5 million was provided to be used in conjunction with McGovern-Dole programs. Grants have been awarded to the World Food Program for LRP programs in Laos and Rwanda, and to World Vision for an LRP program in Mozambique.

USAID - The 2014 Farm Bill extends the current authority for USAID’s Food For Peace (PL 480 Title II) through 2018 and increases flexibility by increasing the maximum allowable cash assistance available to 20 percent. By increasing the amount of cash available to support Food for Peace, USAID is able to reduce monetization of donated food to fund capacity building projects, purchase more food locally and regionally, and help disaster victims access food in their local markets. USAID reports that in 2014, the flexibility allowed food assistance to reach an additional 600,000 people.

Overview of the policy/regulation review process

FAS works closely with Departmental officials to ensure we are following the Department’s regulatory procedures. FAS generally implements programs through regulations. FAS provides thoughtful consideration when preparing documents associated with the regulatory process. When additional detail is required FAS provides detailed NOFAs, cost benefit analysis, civil rights impact analyses and frameworks. FAS utilizes several documents to assist in implementing the programs such as, the Food Assistance Programs Guidebook (McGovern Dole, FFPr and LRP), sample templates, applications and eligibility and application requirements for U.S. and Foreign financial institutions (GSM-102 and FGP), as well as compliance review guides, and program evaluations requirements (MAP, FMD, and TASC). Program area experts within FAS identify when a regulation or a change in a regulation is required. The program area experts in collaboration with the Regulatory Officer in the Office of the Chief Operating Officer work with the Office of the Administrator, Public Affairs Office, and the Office of Civil Rights. The program area experts and the Regulatory Office also works with the Office of the General Counsel, Office of the Under Secretary for Farm and Foreign Agricultural Services, Office of Communications, Office of Congressional Relations, Office of the Chief Information Officer, Office of Budget and Program Analysis, and the Office of Management and Budget. FAS utilizes various means and methods to implement the programs throughout FAS. FAS communicates with the Department on the programs through Communication plans. The programs are implemented within the agency once the regulations have become effective by publication in the
Federal Register. FAS then communicates with the public through news releases and announcements on the FAS website.

GAO and OIG Audits

In its February 6, 2014, audit report on the “Section 632(a) Transfer of Funds from USAID to USDA for Afghanistan” (50601-0002-16), OIG recommended that FAS fully implement a formal monitoring and evaluation process and a grants management structure, and implement the recommendations outlined in a 2010 Acuity consulting firm review. This report can be found on the USDA OIG’s website at http://www.usda.gov/oig/webdocs/50601-0002-16.pdf.

In its March 28, 2013, audit report on the “Effectiveness of the Foreign Agricultural Service’s Recent Efforts to Implement Measurable Strategies Aligned to the Department’s Trade Promotion and Policy Goals” (50601-0001-22), OIG found that the measurable goals and objectives included in FAS’s Strategic Plan do not present the whole picture of how FAS’s actions are affecting the global market for American agricultural goods, and that FAS has not updated its Country Strategy Statements, USDA’s Global Market Strategy, or the corresponding performance measures in the Department’s Performance and Accountability Report to align with the goals and objectives contained in the FAS Strategic Plan. This report can be found on the USDA OIG’s website at http://www.usda.gov/oig/webdocs/50601-0001-22.pdf.

III. Congressional Relations and Issues

Overview

The House Committee on Agriculture and the Senate Committee on Agriculture, Nutrition and Forestry have jurisdiction and provide oversight relating to foreign agriculture, foreign food or commodity assistance, foreign trade and marketing issues, and the operation of FAS. Most FAS programs are authorized by these two committees though multi-year farm bill legislation.

In addition, the House Foreign Affairs Committee shares some jurisdictional authority with the House Agriculture committee over FAS foreign food assistance and capacity building programs. The House and Senate Appropriations Committees and their Agriculture Subcommittees have the responsibility for funding the programs and activities of FAS and oversight of the expenditure of FAS funds. The agricultural appropriators also fund USAID’s Food for Peace Programs via a pass through of funds, approximately $1.5 billion annually, appropriated to USDA.

Although they have no direct jurisdictional responsibility for FAS programs, the Senate Committee on Finance and the House Committee on Ways and Means have jurisdiction generally over international trade, a key focus of the FAS mission. FAS often participates in briefings and hearings before the trade committees with colleagues from the Office of the U.S. Trade Representative before the trade committees.

The 2014 Farm Bill authorizes most FAS programs through 2018. The new Administration will likely face farm bill hearings as early as spring 2017 as Congress gears-up to consider
reauthorization. The new Administration will have the opportunity to weigh in on any changes regarding the efficiency and effectiveness of existing programs or ideas for new programs.

FAS operates complementary farm bill-authorized trade promotion programs, including the Market Access Program (MAP), Foreign Market Development (FMD), and the Emerging Market Program (EMP). These programs have broad support among the agriculture committees and among agricultural trade associations. In the past, these programs have received some criticism from a few fiscally-focused members, often outside the agricultural community. Annual funding through the Commodity Credit Corporation (CCC) for the programs is: MAP - $200 million; FMD - $35 million, and EMP - $10 million. A program for the horticulture sector, the Technical Assistance for Specialty Crops, funded annually at $9 million, enjoys broad support.

FAS’ farm bill-authorized food assistance and capacity building programs also garner broad support among members of the House and Senate agriculture committees and private voluntary organizations (PVOs) that are implementing partners. The McGovern-Dole International Food for Education and Child Nutrition Program administered by FAS enjoys universal support in Congress. Annual appropriations have been close to $200 million annually. The Food for Progress (FFPr) program administered by FAS supports agricultural development projects in developing countries with funds generated by monetization of donated U.S. commodities. The issue of the costs versus benefits of monetization will likely be raised during farm bill consideration in Congress. FFPr funding through CCC is projected at $175 million for fiscal year 2017.

U.S. cargo preference laws require that a percentage of U.S. government cargo, including international food aid, be transported on U.S.-flag vessels. The intention of cargo preference is to ensure a merchant marine capable of providing sealift capacity in times of war or national emergency. The U.S. Department of Transportation’s Maritime Administration (MARAD) is responsible for implementing the U.S. cargo preference program. The Senate Committee on Science, Commerce, and Transportation and the House Committee on Transportation and Infrastructure have jurisdiction over MARAD and U.S. cargo preference laws. Legislative efforts to increase or decrease cargo preference requirements should be expected to continue in the 115th Congress. Maritime interests, strongly support existing cargo preference requirements. Humanitarian groups and the GAO have highlighted cargo preference’s increased cost to food assistance shipments, which cuts into the volume of potential food assistance.

U.S. policy towards Cuba is an issue that the next Congress will continue to address. There is strong support in the U.S. agriculture community for the establishment of USDA’s presence in the U.S. Embassy in Cuba and enactment of statutory changes to allow for credit financing of exports and ending a prohibition on the use of FAS marketing programs.
United States Department of Agriculture
2016 Presidential Transition
Foreign Agricultural Service (FAS)

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

External Partnerships

- State Department: coordinate on policy concerns and operational issues impacting overseas offices and personnel, provide funding for technical assistance programs, collaborate on White House initiative on Historically Black Colleges and Universities
- National Security Council: collaborate on a breadth of topics that range from country specific and regional issues as well as broad topics (such as trade, climate change, and global food security initiatives). NSC serves as convening body of interagency coordination
- United States Trade Representative: coordinate to set priorities for engagement with foreign trading partners on a number of issues: trade agreements, enforcement of trade agreements, negotiation strategies, etc. Also work together to select advisors of the agricultural policy advisory committee and trade advisory committees.
- U.S. Agency for International Development: FAS provides technical assistance on various aspects of agriculture and food security, collaborates with Land-Grant Universities and Minority Serving Institutions (HSIs, Tribal Colleges), as well as on White House initiative on Historically Black Colleges and Universities.
- Other Independent Foreign Assistance Agencies (Millennium Challenge Corporation, U.S. Trade and Development Agency): coordinate on agricultural development and food security policy.
- Equal Employment Opportunity Commission: Employment related issues
- Department of Justice: Oversight of Title VI applications to trade and development programs
- Minority Serving Institutions (MSI): agency-led outreach on issues and programs not in collaboration with other USG Departments
- Department of Commerce: collaboration on trade, exports and sugar issues.
- International Organizations: World Trade Organization (WTO), United Nations (UN) and its underlying organizations such as World Food Programme, UNESCO, UNCTAD, UNICEF and the Food and Agriculture Organization (FAO), and International Fund for Agricultural Development (IFAD) on issues regarding trade and exports, and Sustainable Development Goals, institutional issues, and global threats to food security.
- Private Voluntary Organizations: attend conferences, coordinate food aid implementation and address global food security issues
- American Foreign Service Association and American Federation of State, County, and Municipal Employees: unions and bargaining units

Internal Partnerships

- FAS partners with RD’s Community Economic Development (CED) Division, which serves as USDA’s national technical resource on cooperative development to educate and provide technical assistance to select international delegations. Cooperatives play a key role in developing local and regional food systems that support farmers and help grow rural
economies - providing more opportunities for farmers and ranchers, more choices for consumers, and more jobs. Moreover, RD’s CED staff implements regional plans and financing strategies where local food has served as an economic driver in many of its target unserved and underserved communities in the U.S. Many of these regional plans aim to expand local food businesses and manufacturing to help exporters develop and maintain global markets, which opens further opportunities for collaboration with FAS.

- Animal and Plant Health Inspection Service (APHIS): collaborates on technical issues impacting trade and trade policy (i.e. animal health, plant health, biotechnology, international standard setting bodies, etc.), and trade capacity building programs
- Food Safety and Inspection Service (FSIS): works with experts on technical matters concerning meat and poultry trade
- U.S. Codex office: cooperates on capacity building programs in Latin America, Asia and Africa
- National Institute of Food and Agriculture (NIFA): is a conduit to the land-grant universities
- USDA Research, Education and Economics Mission Area (REE): Agricultural Research Service, the Economic Research Service and the National Agricultural Statistics Service, to provide market information technical assistance and policy guidance on food security issues
- USDA Natural Resources and Environment Mission Area (NRE): climate change issues and capacity building
- Rural Development: strengthening rural economies in emerging markets and developing countries
- Human Resources: customer of Marketing and Regulatory Programs/APHIS (MRP/APHIS)
- Management Services: customer of Farm Service Agency/Management Services Division (FSA/MSD)
- Financial Management: customer of APHIS/Financial Management Division (APHIS/FMD)
- Personnel Security: customer of Farm Service Agency/Emergency Preparedness Division (FSA/EPD)
- Procurement: customer of Farm Service Agency/Acquisition Management Division (FSA/AMD) and Department of the Interior/Interior Business Center (DOI/IBC)
- Information Technology: customer of USDA Office of the Chief Information Officer/Client Technology Services (USDA OCIO/CTS) and the Department of State for overseas IT services (DoS)
- OASCR: compliance oversight

**Stakeholder group overview**

FAS regularly consults with external stakeholders, including customers, partners, cooperators, trade associations, private voluntary organization (PVO) implementers, technical and policy experts on food and agricultural trade, agro-industry, research and academia, regarding our programs’ effectiveness. Below is a chart depicting the external stakeholders and their purpose, broken out by FAS Pillars. Examples include advisory committees, cooperators, commodity boards, and private voluntary organizations. Such groups play an active and prominent role in FAS organizational activities and programs. FAS regularly consults with stakeholders and seeks validation of all goals, objectives and performance measures from employees and the public.

Recent engagements with stakeholder group

**ICC-IA.** The Intradepartmental Coordination Committee on International Affairs (ICC-IA) was established by Departmental Regulation (DR) 1051-02 of December 22, 2004. The purpose of the committee is to share information across the Department about what individual agencies are doing internationally, coordinate the Department’s external messages to individual countries at formal meetings of international organizations, and address specific topics in which the Department plays a role. The FAS Administrator chairs the ICC-IA, which meets quarterly. The last meeting was held on July 20, 2016.

**APAC/ATAC.** The last Washington-based meeting was held on June 28, 2016, and no additional meetings are currently scheduled. Given that the membership term for 14 of the 157 current advisors will end on January 20, 2017, additional advisors will be chosen before the end of the year.

V. **Top Issues**

**Hot Topics**

**China issues summary.** China is forecast to be our top agricultural export market in 2017, bringing in over $20 billion a year in sales. We are engaged on a number of issues in China, any of which may require senior leadership intervention during the first half of 2017. The China Strategic and Economic Dialogue (S&ED), which will take place in the United States (location TBD) in June 2017, is an appropriate forum to discuss these issues. If earlier engagement is required (which could be the case for beef market access and the China Food Safety Law), the first scheduled opportunity for new USDA leadership would be a bilateral meeting on the sidelines of the January 22 G-20 Agriculture Ministers meeting in Berlin, Germany.

- **Beef Market Access:** Progress has been made on regaining access to the Chinese beef market, but several steps are still required. If discussions continue past the November 2016 Joint Commission on Commerce and Trade (JCCT) meeting, then FAS OA and FFAS engagement with the Ministry of Agriculture and Administration of Quality, Supervision, Inspection, and Quarantine will be critical in the first 6 months of 2017.

- **China Poultry:** If the proposed rule for China’s market access request for poultry is released before the end of 2016, a great deal of public discussion, Hill requests and engagement with industry/media is likely to ensue well into 2017.

- **Poultry/Avian Influenza:** China has refused to engage productively on its ban on all U.S. poultry exports, despite written and verbal requests from Secretary Vilsack, on top of repeated attempts by APHIS to engage China technically. Possible intervention by FFAS may be needed in early 2017 if there is no progress via the November JCCT.
Biotech/Approvals and Regulatory Reform: Continuous engagement by FFAS and lower levels will be needed to move China from verbal commitments to actions on biotech reforms, as well as on movement on products in the approval pipeline.

China Food Safety Law: On October 1, 2015, China’s new Food Safety Law went into effect. To enforce the Law, China has drafted and implemented an unprecedented number of new food regulations. The numerous drafts of the Law and additional, newly imposed measures create great uncertainty for U.S. exporters, and new USDA leadership may need to engage with Chinese counterparts if newly enacted regulations negatively impact U.S. exports.

Rice Protocol: United States and China have initialed a protocol that would allow U.S. milled rice to be shipped to China, but we are awaiting final signature. Only facilities that APHIS inspects and deems compliant with the protocol would be eligible to ship to China. USDA is pushing to sign the protocol in fall 2016, when there will be multiple opportunities to engage high level Chinese officials.

WTO litigation. We are involved in several WTO disputes currently. Key cases:

Offensive: China agricultural subsidies, India Avian Influenza, China poultry Anti-Dumping and Countervailing Duty Measures, Indonesia licensing

Defensive: Country of Origin Labeling, Argentine beef

Brazil: Operational terms for the program contained in the Brazil settlement need to be reviewed in light of recently established WTO disciplines on Export Credits. Some of the new disciplines are less restricting and will be reconciled with older more limiting disciplines related to the Brazil WTO negotiated settlement.

Argentina lemons rule. An APHIS proposed rule was published on May 10, 2016 with an extended comment period through August 10, 2016 that would allow the importation of fresh lemons from a region in northwest Argentina into the continental U.S. This proposed rule is very sensitive for the U.S. citrus industry. Argentina began a formal WTO dispute over citrus and first requested a formation of a WTO panel in December 2012, but so far has preferred to find a technical solution rather than begin litigating the case by making the second request for a panel.

Food and Agriculture Organization Ministerial in July 2017. This is a biennial meeting to set the budget and program of work for the next 2 years.
Biotech. A rapidly evolving U.S. domestic biotechnology regulatory environment has combined with trade barriers in key importers to create many challenges for U.S. exports of products of biotechnology. Initiatives are ongoing to address trade barriers in third-country import markets (e.g., China, EU), improve science-based decision making and policies globally, and ensure market access for emerging technologies.

Organic Equivalency. FAS assisted the Agricultural Marketing Service in implementing organic equivalency agreements with five other nations that help both farmers and consumers benefit from international organic markets worth more than $35 billion. These markets include Canada, the European Union, Switzerland, Japan and South Korea.

Trans-Pacific Partnership. This high-standard agreement opens markets and will support expansion of U.S. agricultural exports, increase farm income, generate more rural economic activity, and promote job growth. TPP Signatories include Australia, Brunei, Canada, Chile, Japan, Malaysia, Mexico, New Zealand, Peru, Singapore, and Vietnam – these countries represent nearly 40% of global GDP. A U.S. International Trade Commission report showed that the Trans-Pacific Partnership will increase U.S. exports by $57.2 billion annually by 2032 if TPP is passed. A report by the Farm Bureau found $8.5 billion in total additional farm receipts from the implementation of TPP ($5.8 billion for livestock, $2.7 billion for crops), and $4.4 billion in additional net farm income. In April 2016, more than 200 agricultural groups wrote House and Senate leadership citing the economic requesting approval of TPP by Congress this year. Kansas cattle, wheat, corn, sorghum, and soybean, as well as Michigan bean cattle, corn, pork, and soybean groups signed the letter. Recently, the Administration submitted the required draft Statement of Administrative Action. USTR continues work on an implementing bill for submission to Congress.

Transatlantic Trade and Investment Partnership. On July 12, 2013, the United States and the European Union began the first round of negotiations in pursuit of a comprehensive, trans-Atlantic free trade agreement. The EU is the world’s largest importer of agricultural products and food. TTIP negotiations are ongoing and in early October the 15th round of negotiations took place in New York.

Cuba. There is much interest in strengthening ties with Cuba, but significant legal constraints on what we can do as a government. Our primary focus for the first half of 2017 is to work with State Department on establishing a USDA presence in Havana, building on work begun in 2016. If USDA foreign service officer position is approved for placement in early 2017 and current legislation is changed to allow the use of USG market development funds in Cuba, new USDA leadership may also want to travel to Cuba in March or April to commemorate the one year anniversary of the 2016 USDA – Cuba Ministry of Agriculture Memorandum of Understanding and highlight bilateral “accomplishments.”
Regional, Bilateral and Multi-lateral Engagements in 2017.

- **G-20.** Germany is leading the G-20 this year and they plan on hosting a meeting of Agriculture Ministers on January 22. USDA has the lead for the United States in the planning, which can be handled at the staff level. We will need to identify a USDA head of delegation to represent at the meeting. Attendees will depend on the topic put forth by Germany in the Draft Declaration. (NOTE: The G-20 Agriculture Deputies Meeting will take place in December in Germany (location TBD).

- **U.S. – Canada Consultative Committee on Agriculture.** We have a number of technical issues with Canada that are usually discussed in this forum which is required to meet at least once, per year. The next CCA will take place in Washington, sometime between February and May.

- **G-7 Agriculture Ministerial.** This is tentatively scheduled for March – April 2017; the G-7 Ministerial is scheduled for May 26-27 in Italy.

**Canada dairy.** The U.S. dairy industry has pressed for action on Canada’s dairy policies that restrict U.S. access. We are working to do everything we can to stop new trade restrictive policies from being implemented. If that fails, we are developing a WTO litigation strategy, which might be ready in early 2017.

**Mexico.**

- **Sugar.** U.S. sugar policy is complicated in the best of times, with frequent calls from stakeholders for intervention to increase or reduce imports. The Department of Commerce is currently renegotiating terms of access for Mexico under the suspension agreement, which is adding to the complexity of overall management of the sugar program.

- **Potatoes.** Market access for U.S. potatoes has been blocked for 14 years, most recently by a series of national legal injunctions filed by Mexico’s potato industry. While gaining access is a priority, the plan for achieving this goal is evolving. USTR and APHIS have been leading on this issue. There is no indication when access might be granted, and the next steps are in the hands of Mexico’s Secretariat of Agriculture, Livestock, Rural Development, Fisheries, and Food (SAGARPA).
Haiti Peanuts. In December 2015 USDA signed an agreement with the World Food Programme (WFP) to provide commodities, including up to 1180 tons of packaged dry-roasted peanuts, to WFP to carry out a one-year project in Haiti under the McGovern-Dole Program in Haiti. In April 2016, numerous civil society members raised objections since peanuts are grown by Haitian farmers. The U.S. interagency concluded that the U.S. Ambassador needed official Haitian government confirmation to ship the donation, which FAS received on October 18, 2016.

Global Food Security Act (GFSA). Passed on July 20, with the Global Food Security Strategy submitted to Congress October 1, 2016. USDA has played a major role in the development of the whole-of-government strategy and the indicators for success. USDA needs a lead agency to coordinate and synthesize all of USDA’s programs. FAS plays that role, which at times requires a high-level, political entity.

WTO Ministerial. The WTO will have a Ministerial meeting in November or December of 2017, and the United States is already under pressure to reform its agricultural policies. Internal strategic decisions will be made in the first half of 2017 that will shape the U.S. approach to this meeting.

Israel. The United States and Israel have an Agreement Concerning Certain Aspects of Trade in Agricultural Products (ATAP) that has been extended several times. There are negotiations underway to develop an improved permanent agreement, including reducing tariffs on U.S. agricultural exports.

Pima Agriculture Cotton Trust Fund and Agriculture Wool Apparel Manufacturers Trust Fund. Authorized under the 2014 Farm Bill. Applications will be coming in from 2017 beneficiaries and USDA will be issuing payments.

Agribusiness Trade Missions. ATMs proposed to Asia (ethanol only-November) and Brazil (May) are pending and additional review/analysis is needed to identify any other feasible ATMs for FY 2017.

Facility Guarantee Program. A final rule was published September 22, 2016 with request for comments. The deadline for comments is March 21, 2017. Comments need to be evaluated, and if needed, policy and regulatory changes addressed.

USA Branding at USDA-endorsed trade shows. Recent trade shows have included new and consistent USA signage. This roll-out of USA Branding will continue through FY 2017.

Export Credit Guarantee Program (GSM) outreach. Office of Trade Programs’ Credit Operations staff will continue to conduct outreach to new foreign and domestic banks to expand GSM registrations.
Unified Export Strategy (UES) system upgrade. The FAS IT subcommittee has approved funding to conduct research and analysis to enhance financial integration between the UES and FSA system. The project requires Management Council concurrence and would begin to be implemented in FY 2017.

Market Development Program Allocations. FY 2017 program applications were submitted in May 2016, were reviewed and funding recommendations made in September. Program funding announcements for FY 2017 Market Access Program (MAP), Foreign Market Development Program (FMD), Emerging Markets Program (EMP), Technical Assistance for Specialty Crop Program (TASC) and Quality Samples Program (QSP) funds, will begin in October 2016, and programs with rolling applications will continue to be allocated through summer 2017.

Country Strategy Support Fund. FY 2017 Country Strategy Support Funds (CSSF) have been received, reviewed and will be allocated to FAS overseas posts, starting in October, and continuing until all available funding is utilized.

Sustainable Development Goals (SDGs): Since the passage of the SDGs in 2015, governments, international organizations, private voluntary organizations and agricultural think tanks are aligning their strategies to fulfill these high level, but loosely defined goals (e.g., “life on earth” and “climate action.”). Many of the goals relate to agriculture, food security or other areas where USDA has jurisdiction, and FAS, as the lead international agency, has to coordinate USDA’s input.

Trade Capacity Building: Alongside the agenda of passing trade laws, FAS is heavily involved in advancing the capacity of countries to meet their international commitments. Acts such as the African Growth and Opportunity Act specifically commit the U.S. government to helping the member countries strengthen their SPS systems.

Civil Rights.
- Agency Head Report – annual self-assessment on the civil rights programs per agency.
- Civil Rights Automation Project – the Office of Civil Rights is starting the process to automate its work process to streamline operations while increasing the data to improve analysis as well as service delivery throughout the Agency.

FAS Global Attaché Conference: FAS will propose to convene its overseas Embassy heads of office (about 100 Foreign Service Officers) in Washington DC in July, 2017 to meet with new USDA leadership and hear Administration priorities and concerns. This conference will be schedule to coincide with the annual meeting of the U.S. Agricultural Export Development Council, which is comprised of non-profit U.S. food and agriculture groups.
Hatched and Raised. When reopening their markets to U.S. poultry from highly pathogenic avian influenza (HPAI) closures, Korea and South Africa began requiring that U.S. poultry meat be produced from U.S. birds hatched and raised within the United States. Although less than 5-percent of U.S. turkey meat is produced from Canadian poult (chicks), all U.S. turkey exporters are required to certify that they are not using Canadian poult. To re-open these two markets USDA negotiators worked closely with representatives from the USA Poultry and Egg Export Council (USAPEEC) and the National Turkey Federation (NTF) to develop a market access strategy to immediately open the markets in the short-term by implementing an Export Verification (EV) program administered by USDA’s Agricultural Marketing Service (AMS). The AMS/EV program allows turkey producers and processors to meet the “origin” requirement. The NTF supported the EV program as a market opening measure but has subsequently raised concerns to FAS.

Planet Aid. Washington, DC’s NBC affiliate and the Center for Investigative Reporting published accounts of USDA’s relationship with Planet Aid, alleging that USDA gave “over $130 million” to an “international fugitive” affiliated with Planet Aid. The reports allege that funds were diverted to benefit a Danish organization called the Teachers Group, of which at least three members have been convicted of fraud or embezzlement. FAS granted $132 million to PAI over the past 12 years under the FFPr and McGovern-Dole programs. FAS requested the Office of the Inspector General to investigate further into this matter.

Timeline

September
- Facilities Credit Guarantee Program announced 9/22/16
- Americas Food and Beverage Trade Show, continued expansion of USA common branding at USDA endorsed trade shows

October
- MAP & FMD allocations announced
- McGovern-Dole International Food for Education and Child Nutrition, Local and Regional Procurement and the Food for Progress FY 2017 notice of funds availability announced
- Priorities for the Cochran and Borlaug Fellowship Programs announced
- CSSF allocations completed
- USDA Endorsed Trade Shows for 2017 and 2018 finalized and announced
- SIAL Paris Trade Show, continued expansion of USA common branding at USDA endorsed trade shows.
- World Food Prize ceremony – the week closest to October 17
United States Department of Agriculture
2016 Presidential Transition
Foreign Agricultural Service (FAS)

- 462 Report for FY 2016 – a report containing statistical data on the FAS federal workforce along with information concerning pre-complaint counseling and the status, processing and disposition of complaints under EEOC Regulation 29 C.F.R. § 1614.602 (and covered by 29 C.F.R. § 1614.603(b)).

November
- EMP, TASC & QSP allocations announced, estimated November/January/June
- Ethanol Trade Mission Support, Asia destination to be determined
- Agribusiness Trade Mission to Egypt (decision pending)
- Food and Hotel China (Shanghai), continued expansion of USA common branding at USDA endorsed trade shows
- U.S. Agriculture Export Development Council (USAEDC) Workshop, presentation of competitor studies, trade show working group meeting
- World Food Programme Major Executive Board in Rome
- Food Assistance Convention in London
- Food Aid Consultative Group consultations
- MD 715 Report for FY 2016 and FY 2017 – a report on the status for establishing an EEOC affirmative program of equal employment opportunity under Section 717 of the Title VII (Part A) and effective affirmative action programs under Section 501 of the Rehabilitation Act (Part B).

December
- SIAL Middle East, continued expansion of USA common branding at USDA endorsed trade shows

January
- Beginning of seasonal cycle of strategic stakeholder engagement, January-April
- Civil Rights Automation Project
- MGD, LRP, FFPr proposals due

February
- Continued expansion of USA common branding at USDA endorsed trade shows:
  - Gulfood Trade Show (Dubai), Supermarket Trade Show (Japan), Fruit Logistica (Germany), and BioFach Trade Show (Germany)
- Second World Food Programme Executive Board
March

- Continued expansion of USA common branding at USDA endorsed trade shows: FOODEX (Japan), VIV Asia (Thailand), and Food Ingredients China.

April

- Notification of FY 2018 MAP/FMD/EMP/TASC/QSP funding availability
- Continued expansion of USA common branding at USDA endorsed trade shows: Food and Hotel Vietnam, and Seafood Expo Global (Brussels)
- Payments due to Beneficiaries under Pima and Wool Trust Fund programs.
- Publish Federal Register Notice announcing U.S. WTO quantity safeguard trigger levels
- MGD, LRP and FFPr awards decided

May

- Continued expansion of USA common branding at USDA endorsed trade shows: HOFEXS (Hong Kong), SIAL Canada, Seoul Food & Hotel, SIAL China, and Food & Hospitality Africa.
- Agribusiness Trade Mission to Brazil (decision pending)

June

- UES Submission (MAP/FMD/EMP/TASC/QSP cooperator program application)
- China Strategic and Economic Dialogue (S&ED) (No date confirmed yet): The China S&ED is a high-level dialogue for the United States and China to discuss a wide range of regional and global strategic and economic issues between both countries.
Appendix A: Acronyms

Commonly used acronyms:

OA  Office of the Administrator
COO  Chief Operating Officer
OASA  Office of Agreements & Scientific Affairs
OCRA  Office of Country & Regional Affairs
OGA  Office of Global Analysis
OTP  Office of Trade Programs
OCBD  Office Capacity Building & Development
OFSO  Office of Director General of the Foreign Service
AFSA  American Foreign Service Association
AFSCME  American Federation of State, County, and Municipal Employees
FSO  Foreign Service Officer
LES  Locally Employed Staff
MGD  McGovern-Dole Program
FFPr  Food for Progress Program
MAP  Market Access Program
FMD  Foreign Market Development Program
EMP  Emerging Markets Program
TASC  Technical Assistance for Specialty Crops Program
QSP  Quality Samples Program
WHAT WE DO: OUR MISSION

The Risk Management Agency (RMA), through the Federal Crop Insurance Corporation (FCIC), provides crop insurance to American farmers and ranchers. There are 17 private-sector insurance companies that sell and service the policies. RMA develops and approves the premium rates, administers premium and expense subsidies, approves and develops products, and reinsures the private companies who deliver the program on behalf of the FCIC. RMA also sponsors educational and outreach programs and seminars on the general topic of risk management.

WHO WE ARE: OUR WORKFORCE

- RMA employs about 475 full time employees located at headquarters in Washington, DC, and throughout the country in 10 regional offices and 5 regional compliance offices.

WHO WE SERVE: OUR CONSTITUENTS

- RMA serves America’s farmers and ranchers by making available effective and market-based crop insurance.
- Crop insurance is delivered through a public-private partnership with approved insurance providers.

KEY UPCOMING DECISIONS

- President’s Budget – Recent budget plans have proposed cuts to the federal crop insurance program. Decisions will be made about whether these proposals will continue to be included in future budget plans.
- The Standard Reinsurance Agreement has not been renegotiated since 2010. Decisions will need to be made about future renegotiations.

BUDGET HIGHLIGHTS FY 2016

- Overall budget authority of $11.95 billion.
- 0.6 percent is discretionary spending for the Salaries and Expenses (S&E) of RMA.
- 99.4 percent is mandatory spending for the costs of the Federal crop insurance program (FCIC).
- Mandatory spending fluctuates due to changes in prices and weather.

FY 2016 Budget Authority

- 1% Salaries & Expenses
- 99% Federal Crop Insurance Corporation

FCIC includes Premium Subsidy, Delivery Expenses, Underwriting Gain, and Farmer Premium.
I. Organizational Overview

Mission Statement
Serving America’s agricultural producers through effective, market-based risk management tools to strengthen the economic stability of agricultural producers and rural communities.

RMA 2015-2018 Strategic Plan:

Strategic Goal 1 Increase the availability and effectiveness of Federal Crop Insurance as a Risk Management Tool while enhancing and protecting the soundness of the program

Outcome 1.1 American agricultural producers are better protected against the inherent risks of weather and price fluctuations.
Outcome 1.2 Rural communities’ income is enhanced through indemnity payments to local producers who suffer insured losses.
Outcome 1.3 American taxpayers are confident of an actuarially sound insurance program.

Strategic Goal 2 Ensure a fair and effective Risk Management Product Delivery System

Outcome 2.1 All producers have access to risk management products and information.
Outcome 2.2 Compliance with Federal Civil Rights statutes is ensured.
Outcome 2.3 Approved Insurance Providers, their agents and adjusters treat all producers fairly.

Strategic Goal 3 Educate stakeholders to ensure knowledge of and access to Risk Management Tools and Products

Outcome 3.1 Producers are knowledgeable of risk management tools and products.
Outcome 3.2 Educational resources are leveraged through partnerships with other governmental and nongovernmental entities.
Outcome 3.3 Producers have access to regionalized risk management education and information through RMA regional offices.

Strategic Goal 4 Safeguard the integrity of the Federal Crop Insurance Program

Outcome 4.1 Taxpayers are assured their tax dollars are used efficiently and effectively.
Outcome 4.2 Insurance fraud, waste, and abuse are deterred, detected, and addressed.
Outcome 4.3 Approved Insurance Providers, their agents, and adjusters fully comply with the Standard Reinsurance Agreement and all applicable statues and regulations.
United States Department of Agriculture
2016 Presidential Transition
Risk Management Agency (RMA)

**Strategic Goal 5** Create an RMA for the 21st Century that is high-performing, efficient, and adaptable

**Outcome 5.1** RMA is recognized as an Equal Employment Opportunity Commission (EEOC) “Model Employer.”

**Outcome 5.2** RMA resources are used efficiently.

**Outcome 5.3** RMA ranked in top ten of best places to work in USDA.

**Key mission delivery performance measures**

| **Goal 1: Increase the availability and effectiveness of Federal Crop Insurance as a risk management tool while enhancing and protecting the soundness of the program.** |
|---|---|---|---|---|---|---|
| 1.1 The annual normalized value of risk protection provided to agricultural producers through the Federal Crop Insurance program. USDA Strategic Plan Performance Measure | $56.3B | $62.1B | $66.0B | $67.9B | $68.7B | $63.3B |
| 1.2 The annual actual value of risk protection provided to agricultural producers through the Federal Crop Insurance program. | $110.9B | $116.20 | $122.8B | $109.5B | $100.3B | $100.3B |
| 1.3 The percentage of pasture, range-land, and forage (PRF) crop value insured in counties with Federal crop insurance PRF programs. | 4.80% | 6.60% | 7.40% | 7.20% | 7.40% | 8.9% |
| 1.4 Increase the number of beginning farmers who are receiving crop insurance incentives (cumulative)(New measure starting in 2015) | NA | NA | NA | NA | 15,098 | 14,075 |
### Goal 2: Ensure a fair and effective risk management product delivery system.

5.7 Earned Value of Emerging Information Technology Architecture (EITA) -- Maintain CPI and SPI indicators within 0.91 to 1.09

Congress first authorized Federal crop insurance in the 1930s along with other initiatives to help agriculture recover from the combined effects of the Great Depression and the Dust Bowl. The Federal Crop Insurance Corporation (FCIC) was created in 1938 to carry out the program. Throughout much of its history the FCIC was administered by the Farmers Home Administration (FmHA). The Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994, [Public Law (P.L.) 103-354] merged portions of FmHA and the Agricultural Stabilization and Conservation Service (ASCS) to create the Consolidated Farm Service Agency (CFSA). At this time the FCIC was placed under the administration of the CFSA.

The Risk Management Agency (RMA) was established under provisions of the Federal Agriculture Improvement and Reform Act of 1996 (1996 Act), P.L. 104-127, enacted April 4, 1996. This Act required that the Secretary establish within the Department an independent office responsible for supervision of the FCIC. RMA provides administration and oversight of programs authorized under the Federal Crop Insurance Act (7 U.S.C. §§ 1501-1524) including a variety of actuarially sound crop and livestock insurance products and funding for risk management education programs.

Since the 1930s, Federal crop insurance has been the primary product provided by the FCIC/RMA and consists of various alternatives designed to improve the economic stability of agriculture. Legislation over the past two decades, including the 2014 Farm Bill, has prompted significant program growth and the development of many large and complex new programs. RMA continuously strives to provide adequate risk protection for our Nation’s agricultural producers and to identify and address concerns about Federal crop insurance.

RMA monitors, evaluates, reviews and updates risk management products; reviews and implements private sector products approved by the FCIC Board of Directors (Board) to be reinsured by FCIC; and ensures proper delivery of these products to agricultural producers. Risk management products
can help producers protect themselves from yield risks, market risks, or both. Private sector individuals (or groups) who have specific ideas in mind as to what type of risk management insurance products are needed for their crops or livestock can develop insurance products to be considered for approval by the Board. Section 508(h) of the Federal Crop Insurance Act (Act) allows private parties to develop insurance products that are: (1) in the best interests of producers, (2) follow sound insurance principles and (3) are actuarially appropriate. RMA also has authority to develop new products and enhancements to existing products. Examples of recent enhancements to the crop insurance program include the Supplemental Coverage Option, the Stacked Income Protection Program, expanded Whole Farm Revenue Protection, new and expanded beginning farmer and rancher provisions, Actual Production History Yield Exclusion Options, coverage level and enterprise units by irrigation practice provisions, improved and expanded coverage for organic producers, expanded forage options, conservation compliance requirements, and trend adjusted Actual Production History. Education and non-insurance risk management assistance initiatives and tools further contribute to the producers’ ability to protect their financial stability. Through the use of these tools, agricultural producers have available, a cost-effective means of managing their risk and are able to contribute to a rural economy that is self-sustaining, repopulating, and economically thriving.
Organizational Chart

The Risk Management Agency serves America’s agricultural producers through effective, market-based risk management tools to strengthen the economic stability of agricultural producers and rural communities.

Supersedes RMA chart dated August 25, 2006
Biographies of career staff in key leadership positions

Michael Alston
Associate Administrator
202-690-2533, Michael.Alston@rma.usda.gov

Michael Alston has served as the Associate Administrator of the USDA’s Risk Management Agency (RMA) and Deputy Manager for the FCIC Board since 2013. Mr. Alston brings extensive years of experience within RMA, as well as with other federal agencies.

Mr. Alston’s strong program knowledge and leadership experience has provided guidance for many years within the agency, and for all of its key programs. He has served as the Deputy Administrator of the Insurance Services Division, and as the RMA Associate Deputy Administrator for Compliance. Previous to these positions, Mr. Alston oversaw crop insurance operations in Illinois, Indiana, Michigan, and Ohio as the Director of the RMA Springfield Regional Office.

Prior to joining USDA Mr. Alston worked as a Supervisory Special Agent for the Drug Enforcement Administration (DEA) and State Department. Mr. Alston is a graduate of OPM’s Federal Executive Institute and has completed the program for Senior Managers in Government at Harvard University’s John F. Kennedy School of Government in 2015.

A native of Michigan, Mr. Alston holds a Bachelor’s Degree from Michigan State University.

Robert Ibarra
Deputy Administrator for Insurance Services
202-260-8286, Robert.Ibarra@rma.usda.gov

Robert began his Federal crop insurance career in 1993 as a Risk Management Specialist and has served as Deputy Director in the Valdosta, Georgia and Jackson, Mississippi Regional Offices. In 2011, Robert was selected to the position of Supervisory Program Manager in the Risk Management Services Division in Washington, DC and has served as Director of the Division from February 2012 through February 2015.

Robert’s background includes a Master of Science degree in Management from Florida State University with a major in Risk Management and Insurance, a Master of Public Administration degree from Valdosta State University in Public Sector Management, and a Bachelor’s degree from the Valdosta State University in Economics.

Richard Flournoy
Deputy Administrator for Product Management
202-690-2369, Richard.Flournoy@rma.usda.gov

Richard was raised on a cotton, peanut, corn, and timber farm in Camilla, Georgia. He attended Abraham Baldwin Agricultural College and the University of Georgia for his undergraduate studies
and received his law degree from Mercer University. Following law school, he earned a Master of Laws degree in Agricultural and Food Law from the University of Arkansas School of Law.

Prior to this position, Richard served as Chief of Staff of RMA where he oversaw and coordinated day to day operations of the agency including interaction with Congressional offices and House and Senate Agricultural Committee staff, briefing the Under Secretary and Deputy Under Secretary in FFAS, and coordinating with NRCS and FSA to implement Conservation Compliance provision of the Farm Bill. Prior to serving as Chief of Staff, Richard served as Special Assistant to the Administrator. In this capacity, he served as liaison for the Administrator to RMA staff and coordinated implementation of the 2014 Farm Bill.

Richard and his wife, Michelle, recently welcomed their first child, Alice Josephine, on Labor Day.

Heather Manzano  
Deputy Administrator for Compliance  
202-720-2832, Heather.Manzano@rma.usda.gov

Heather Manzano is the Deputy Administrator for Compliance with the Risk Management Agency, located in Washington, DC. Heather began her Federal crop insurance career in 1992 as a student intern and became a permanent employee upon graduation from college in 1994. Heather has served in several different capacities within the Risk Management Agency including Civil Rights Compliance Officer, Associate Deputy Administrator for Insurance Services, and Director for the Special Investigations Branch. In 2014, Heather was selected to the position of Deputy Administrator for Compliance.

Under Heather’s leadership, Compliance developed a new review and sampling methodology for improper payments which resulted in a sharp decline in the agency’s improper payment rate. Heather also worked with a consultant to redesign Compliance’s performance reviews of the AIPs to ensure the integrity and accountability of our industry partners.

Heather’s background includes a Bachelor’s degree from The George Washington University with a major in International Economics and a minor in Spanish. Heather can read and write fluently in Spanish.

Biographies of political staff in key leadership positions

Brandon Willis  
Administrator  
202-690-2803, Brandon.Willis@rma.usda.gov

Prior to Willis’ appointment as Administrator in 2013, Willis served as Senior Advisor to Agriculture Secretary Tom Vilsack on Title I Commodity programs, farm legislation matters and disaster assistance. In August 2009 he was appointed as Deputy Administrator of Farm Programs for USDA's Farm Service Agency (FSA).
Prior to his appointment as Deputy Administrator, he was a confidential assistant in USDA’s Office of the Undersecretary for Farm and Foreign Agricultural Services.

Before joining USDA Willis served as the Agriculture Legislative Assistant for U.S. Senator Max Baucus (2006-2009). During this time, he worked on the Food, Conservation, and Energy Act of 2008. In 2005, he worked as a graduate assistant at the National Agricultural Law Center. Willis earned his bachelor's degree in crop and soil science from Utah State University in Logan, Utah, and his law degree from the University of Wyoming in Laramie, Wyo. In 2009, he completed his master's degree in agricultural law from the University of Arkansas. He grew up on a third generation sheep ranch in northern Utah and managed his family's raspberry farm, Bursting Berries.

Tim Gannon
Associate Administrator
202-690-2533, Tim.Gannon@rma.usda.gov

Tim Gannon has served as Associate Administrator for RMA since January 2015. In this position, Tim has lead major efforts resulting in a stronger crop insurance program and a more streamlined government. He has focused on an agency effort to evaluate and implement continued improvements to program integrity and ramping up the Acreage Crop Streamlining Initiative from a limited pilot in 30 counties in Iowa and Illinois in 2015 to a 50 state process in Spring 2016.

Prior to this appointment, Tim served as Director of Advance for Secretary Vilsack. In this capacity, he oversaw planning and implementation of the Secretary’s domestic and international travel and worked with employees across the Department and around the country to build events highlighting the important role USDA plays in the lives of all Americans. He began his USDA career in Rural Development helping implement the American Recovery and Reinvestment Act Business and Industry Loan Program which helped extend over $1 billion in credit to businesses in Rural America. He grew up in Mingo, IA, where his parents raise corn and beans on the farm that has been in the family for over 100 years. He earned his Bachelor’s Degree in Global Studies at the University of Iowa. Tim and his wife Liz currently reside in Washington, DC.

Pat Engel
Director of Congressional and External Affairs
202-720-8812, Patricia.Engel@rma.usda.gov

Pat Engel, who joined USDA in 2008 as Director of Congressional and External Affairs for the Risk Management Agency, is a specialist in third party stakeholder relations, an executive consultant in government and public affairs. Formerly with Amplify Public Affairs, LLC, in Washington, DC. Pat leveraged her expertise in rural and agricultural issues to provide third party stakeholder management to rural and agricultural groups as well as supporting Amplify’s (formerly IDI) corporate clients.

Ms. Engel has prior service with the United States Department of Agriculture with the Risk Management Agency, which runs a nationwide crop insurance program. Prior to relocation to the D.C. area, Pat was the Assistant Director of Student Services at the Bronx campus of Monroe
College where she helped design an educationally viable, cost-effective student tutoring center. In addition, as a fully licensed teacher, provided special education services in child and adult reading remediation.

Ms. Engel attended schools in New York City, and holds an undergraduate degree in Political Science from the Herbert H. Lehman College of the City University of New York.

In the 2008 farm bill congress accelerated collection of premium by shifting the due date from November to August. That caused a spike in collections in 2013 when we collected in November 2012 (beginning of FY 2013) and again in August of 2013 (end of FY 2013).
The RMA Agency Budget table represents the Salaries and Expenses (S&E) (discretionary funds), which pay for the administrative and operating costs to achieve the RMA mission, goals, and objectives.

The RMA Agency Budget table also includes the Federal Crop Insurance Corporation (FCIC) Program (mandatory funds), which include the Premium Subsidy (amount the Federal government is contributing towards the insurance premiums), Delivery Expense (amount to reimburse the Approved Insurance Provider (AIP; company) for Administrative and Operating Expenses [A&O]), Underwriting Gain (amount the FCIC and AIPs share on gains and losses), and Producer Premium (portion of the policies that the producers pay). RMA pays for indemnities or losses on crop insurance from the combination of Producer paid premium and premium subsidy.

The FCIC provides an actuarially sound risk management program that protects against agricultural production losses due to unavoidable causes such as drought, excessive moisture, hail, wind, hurricane, tornado, lightening, and insects. The FCIC mandatory funds support RMA’s mission to serve America’s agricultural producers through effective, market-based risk management tools and solutions to strengthen the economic stability of agricultural producers and rural communities.

RMA employs a workforce of approximately 475 employees of which the following are full-time and part-time:

- Full-time: 474 employees
- Part-time: 1 employee

Approximately 36 percent of the workforce is unionized.

Of our total workforce, approximately 23 percent are eligible to retire within the next year.

Our headquarters is located in Washington, D.C., which houses 19 percent of our workforce.

RMA has 10 regional offices and 5 regional compliance offices throughout the country.

81 percent of the employees are stationed outside of Washington, DC.
II. Policies and Regulations

Statutory Authorities

Important Policies and Regulations

- So far this year, RMA has published the following rules. All of these rules were published to meet the needs of policy holders and to finalize implementation of the 2014 Farm Bill, address issues of double cropping, and revise the procedures for the Federal Crop Insurance Corporation Board of Directors
  - General Administrative Regulations; Subpart V - Submission of Policies, Provisions of Policies and Rates of Premium, Final Rule (Published Aug 12, 2016) – This final rule amended existing procedures for submitting policies to the Federal Crop Insurance Corporation Board of Directors. This finale rule was designated not significant.
  - Common Crop Insurance Regulations, Basic Provisions (Double Cropping and Practical to Replant), Final Rule with Comments (Published June 22, 2016). This final rule provided greater flexibility in determining double crop eligibility. In addition, the regulation changed the definition of “practical to replant.” This finale rule was designated not significant.
  - General Administrative Regulations; Catastrophic Risk Protection Endorsement; Area Risk Protection Insurance Regulations, Basic Provisions, (2014 Farm Bill) Final rule (Published June 30, 2016). This final rule implemented multiple provisions of the 2014 Farm Bill. This finale rule was designated economically significant.
  - Common Crop Insurance Provisions, Texas Citrus Crop Insurance Provisions Final rule (Published June 13, 2016). This final rule amended the Texas Citrus Fruit policy to provide policy changes to better meet the needs of policyholders, to clarify existing policy provisions, and to reduce vulnerability to program fraud, waste, and abuse for the 2018 and succeeding crop years. This finale rule was designated not significant.

Overview of the policy/regulation review process

- RMA administers its programs by reinsuring Approved Insurance Providers (AIPs) who sell and service crop insurance for America’s farmers and ranchers under a Standard Reinsurance Agreement (SRA) that contains the contractual obligations that affect the conduct of AIPs, agents and loss adjusters. RMA also issues procedural directives in the
form of underwriting, loss adjustment and administrative procedural handbooks AIPs, agents and loss adjusters must follow in administering the programs reinsured by RMA.

- RMA also has general regulatory provisions related to various program matters, most notably related to actual production yields, debt management, appeals process, standards for approval of SRAs, sanctions, preemption, ineligibility, requests for interpretations, and submissions of policies or plans of insurance by private parties. These regulations affect all participants in the Federal crop insurance program and may only be changed through the regulatory process.

- Many of the crop insurance policies are codified in regulation. RMA determines a need for a change to an existing regulation or for a new regulation. RMA solicits feedback from stakeholders with respect to whether changes to policy provisions are necessary. Once a change is warranted or a pilot policy needs to be codified, RMA prepares a draft of the rule and a determination is made regarding the type of rule—Proposed Rule, Final Rule or Final Rule with Comment. Changes to policy provisions are generally published as Final Rule with Comment. All changes must be made by the deadlines contained in the published policies. Therefore, changes must be made by specified dates known as the “contract change date.” There are pilot programs and approved policies submitted by private entities under section 508(h) of the Federal Crop Insurance Act that are not codified but whose terms and conditions are binding on the AIPs and insureds.

III. Congressional Relations and Issues

Overview

RMA maintains communications with Congress Members and Senators through the Office of Congressional Relations (OCR). Most Congressional inquiries fall into three categories: inquiries on behalf of constituents, general questions about the program, and inquiries regarding ideas for legislation.

RMA has provided briefings to Congress in recent years on Presidents’ budget requests and progress of Farm Bill implementation. Particular items of interest include:

- Crop Insurance Industry Health
- Improper Payments
- Conservation Compliance
- Separate Enterprise Units by Practice
- Cotton Revenue
- Commission for Specialty Crop Agents
- Organic Price Elections and Specialty Crops
- Farm Bill Studies
- Rice Revenue
- Tobacco Program Changes
- Dry Bean Revenue
- Acreage and Crop Reporting Streamlining Initiative (ACRSI)
- Double Cropping
IV. Internal and External Stakeholders

Stakeholder group overview

Stakeholder groups are varied. RMA enjoys good relationships with the commodity groups. They have contacted RMA on a regular basis and invite the agency to participate in annual meetings. The agency also invites them to participate in meetings held in Washington, D.C.

RMA fosters good communication through website material, special emailings outlining special issues, and frequent announcements through bulletins or memorandums. In addition, these stakeholders continually engage with the agency through its controlled
correspondence system, which allows the agency to formally respond to questions on policy or to provide the agency’s position on certain issues.

Other stakeholder groups, minority farmer groups, and specialty crop groups have contact with RMA through issue emails, notifications, website announcements and regional website announcements.

### Recent engagements with stakeholder group

RMA contact with stakeholder groups is ongoing. Currently, the most contact has occurred with wheat growers in the northwest, corn growers, specialty crop groups and organic farmer groups. Another example of grower group interaction has been through the FCIC Board of Directors (Board). Specialty crop groups have introduced concepts to the FCIC Board in order to develop insurance products for particular crops with no coverage available. Examples of insurance products that have been developed through this process include corn, olives, livestock, tart cherries, blueberries, etc.

### V. Top Issues

#### Hot Topics

**CURRENT CROP INSURANCE UPDATES AND PILOT PROGRAM**

**Organics**: The Risk Management Agency (RMA) has supported the organic sector through the following changes in crop insurance policies:

In 2011, for the first time ever, RMA began offering crop insurance for organic producers based on organic market prices. For the 2016 crop year, RMA offered 57 organic price elections. For the 2017 crop year, RMA will offer 73 organic price elections.
In 2014, RMA eliminated the historical 5% surcharge on organic policy premiums for all crops.

In 2014, RMA added a new Contract Price Addendum (Contract Price Option) that allows organic producers who receive a contract price for their crop to get a crop insurance guarantee that better reflects the actual value of their crop. In 2016, RMA expanded the Contract Price Option to recognize price incentives for crops in transition to organic certification, providing risk management tools at prices closer to the actual market value of the crops. The CPA is available for 73 different crop types, covering the majority of insurable crops.

As a result of these changes, RMA organic insurance policies increased over 92 percent and insured organic acres increased more than 114 percent between 2008 and 2015. RMA insured 3,555 organic policies on 486,831 acres in 2008; and in 2015, RMA insured 6,833 policies on 1,043,403 acres. This data includes both certified organic and transition to organic.

The Whole-Farm Revenue Protection (WFRP) insurance policy, new in 2015, became available in all states and counties nationwide beginning in 2016. This policy allows producers to insure their whole farm revenue with coverage levels of 50 to 85 percent. Although the policy is available for all farms, it was specifically developed for diversified farms that tend to sell to direct, local or regional, and farm-identity preserved markets, such as organic. Organic producers meeting the requirements of the National Organic Program may use their organic prices to value their commodities under this federal crop insurance policy.

**RMA Local/Regional:** RMA recognizes the growth of local and regional food systems, and aims to support producers engaged in local and regional markets. We value the collaboration with the Know Your Farmer, Know Your Food (KYF2) team to better serve beginning farmers and ranchers and operators of smaller farms, many of whom get their start in farmers markets, CSAs, and other direct markets in their local communities. We also know that as local and regional food systems mature, the demand for local food is expanding beyond direct markets and into major grocery stores, restaurants, and schools, often through the work of food hubs and other intermediaries.

RMA works with Know Your Farmer, Know Your Food (KYF2) to improve programs for these producers, make sure we are reaching the right audiences. The following achievements and priorities are particularly significant, and will continue to be focus areas for the future:

- Key RMA staff serve on the KYF2 Management Team and Taskforce to coordinate efforts across USDA.
- RMA’s Whole Farm Revenue Protection (WFRP) is tailored for any farm with up to $8.5 million in insured revenue, including farms with specialty or organic
commodities (both crops and livestock), or those marketing to local, regional, farm-identity preserved, specialty, or direct markets. WFRP allows producers to insure their organic commodities at organic prices reflective of the market where they sell the products, including local and specialty markets. RMA continues to make updates to the WFRP policy and procedures in response to questions received, in order to help producers, agents, and loss adjusters who use, sell or service WFRP insurance. The number of WFRP policies nearly doubled in 2016 from 2015 to 2,131 policies earning premium and liability also more than doubled to a total of nearly $2.3 billion in 2016. (Numbers as of Sept. 30, 2016)

- Risk Management Education projects encourage the formation of partnerships with public and private organizations to inform farmers about risk management strategies. Topics include food safety, local food marketing and branding, and promotion of the WFRP.
- RMA and KYF2 provide education and outreach to farmers selling in local and regional markets about risk management options to increase usage of WFRP and other relevant programs and strategies.

**RMA Reports to Congress:** The Risk Management Agency provides a report to Congress annually in May, pursuant to Section 508(c)(6)(D) of the Federal Crop Insurance Act, as amended by Section 11023 of the Agricultural Act of 2014:

“The Corporation shall submit to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate an annual report on progress made in developing and improving Federal crop insurance for organic crops, including:

i. the numbers and varieties of organic crops insured;

ii. the progress of implementing the price elections required under this subparagraph, including the rate at which additional price elections are adopted for organic crops;

iii. the development of new insurance approaches relevant to organic producers; and

iv. any recommendations the Corporation considers appropriate to improve Federal crop insurance coverage for organic crops.”

This annual report transmits information on the progress made in developing and improving Federal crop insurance for organic crops and plans to continue the Organic Production Survey on an annual or biannual basis and the use of AMS data to expand the number of organic price elections available is prepared by the Product Management Division and sent to Congress. RMA works with AMS on attaining the current pricing information necessary to publish the report.
STANDARD REINSURANCE AGREEMENT (SRA)
The Standard Reinsurance Agreement (SRA) and the Livestock Price Reinsurance Agreement (LPRA) are cooperative financial assistance agreements between the Federal Crop Insurance Corporation (FCIC) and an insurance company. FCIC is a government corporation within USDA authorized to carry out programs of the Federal Crop Insurance Act.
The SRA and LPRA establish the terms under which FCIC provides reinsurance and subsidies on eligible crop insurance contracts sold by the insurance company. The SRA and LPRA have not been renegotiated since 2010. Decisions will need to be made about future renegotiations.

ACREAGE AND CROP REPORTING STREAMLINING INITIATIVE (ACRSI)
The Acreage Crop Reporting Streamlining Initiative (ACRSI) replaces duplicative crop reporting of common acreage information by producers to both the Farm Service Agency (FSA) and Risk Management Agency (RMA). ACRSI is a joint effort among producers, FSA, RMA, and the crop insurance industry. The project has made significant progress since the enactment of the 2014 Farm Bill. ACRSI was piloted in the spring of 2015 in 30 counties in Iowa and Illinois. FSA and RMA drew upon information gleaned from the initial pilot to expand ACRSI into 15 States in the fall of 2015.
For spring 2016, RMA and FSA expanded ACRSI nationwide for 13 crops and into all 50 states. Those crops were alfalfa, corn, cotton, FSA-Conservation Reserve Program land, fallow, grass, oats, peanuts, rice, rye, sorghum, soybeans, and wheat. This covers 90 percent of all reported acres. Barley and rapeseed/canola were added in the fall of 2016. As with any new initiative, there have been challenges for FSA, RMA, and the AIPs. Not every AIP has made the IT investments and changes needed and their participation is at varying levels which means agents and producers have varying experiences. However, all parties are actively engaged to address concerns. Throughout each phase of the pilot, RMA analyzes what worked (or did not work) and draws upon these experiences to make adjustments to improve the process.

FALLING NUMBERS IN WHEAT

Over the last couple years, issues involving quality adjustment for wheat have arisen across the country – particularly in the Pacific Northwest. RMA has made some changes to address the issues, but some of the more recent requests by producers most likely would not be in the interest of the crop insurance program.

A producer’s yield is a major factor in whether a crop insurance indemnity will be paid under a production based crop insurance policy. Generally under a production based policy, a producer that has a yield that exceeds their historical average will not receive a crop insurance payment. However, there are times when a producer may have an above average yield, but the quality is low. In this situation, the crop has reduced value even though there is an above average yield. The crop insurance program recognizes this and will adjust the yield to recognize that while the yield was above average, the crop’s value is really more equivalent to a crop with a lower yield – this is what is known as quality adjustment. RMA has established policy to address different types of quality issues.
One type of quality adjustment provided for wheat is known as falling numbers. Falling numbers is a test to determine the milling quality of wheat and measure starch content.

Due to high yields in the Pacific Northwest region this year, farmers are requesting that these adjustments be applied to their production for claims purposes, but excluded from their production history record for future insurance guarantee purposes. In other words, they want the quality discounts in order to receive an indemnity payment in the current crop year, but they do not want the discounts to reduce their historical production going forward because it could reduce their insurance guarantee in future years. Changing this procedure based on these inquiries would result in disparate treatment between producers with payable claims and those without. Changing this procedure would also result in disparate treatment of other producers for virtually all other commodities and past years where quality has been an issue for other crops and areas. Lastly, establishing a production history on a basis different than how claims are paid would run contrary to how the program has operated and would violate general principles of insurance – namely that the program must operate in an actuarially sound manner.

While low yields caused by drought in recent years have an impact on growers’ APH approved yields, in many counties in the Pacific Northwest, wheat growers are able to exclude one or more of these very low yields through the use of the Actual Production History Yield Exclusion, an option for producers created by the 2014 Farm Bill. Additionally, RMA’s existing procedures have other available options, such as the 60 percent Yield Substitution, 10 percent yield limitation and Trend-Adjusted APH yields, that producers can utilize to mitigate the impact any low year may have on their overall APH average yield.

While RMA sympathizes with wheat producers who are struggling with low prices and poor quality wheat, RMA does not believe it would be fair to change a longstanding process midyear. Crop insurance compensates producers for quality losses by utilizing a formula that reduces a producer’s historical production history and triggering a crop insurance payment. The process used to establish a producer’s production history has been used by thousands of producers for over 20 years for virtually all crops insured under the Federal crop insurance program as most provide coverage for poor quality. Allowing producers in one situation to not adjust yields would not be fair to all the producers nationwide whose yields have been adjusted due to quality issues.
CONSERVATION COMPLIANCE

A 2014 Farm Bill provision mandates that all FCIC paid premium subsidy is subject to Highly Erodible Land and Wetland conservation compliance requirements, which originated in the 1985 Farm Bill. The 2014 Farm Bill also added a number or new exemptions, rules, and deadlines for Federal crop insurance policies. Conservation Compliance is a provision that is carried out as a joint effort between 3 agencies – RMA, FSA, and NRCS. Conservation compliance implementation has gone well. Due to the efforts of RMA, NRCS, FSA, and the crop insurance industry, few crop insurance customers owe full premium due to failure to certify compliance with highly erodible land and wetland conservation requirements. In fact, with nearly 100% of crop insurance policies now on file with RMA (over 500,000 producers), RMA estimates that for the first year of implementation (2016) less than one percent of crop insurance customers owe full premium for not timely filing certification. However, there is always the possibility of being confronted with a sympathetic story of someone who was not aware of the requirements and did not file timely for reinsurance year 2016.

Key Points:

- During the first year of implementation of conservation compliance for crop insurance, over 99 percent of crop insurance participants certified in a timely manner.
- USDA, along with the insurance companies and stakeholders, made a tremendous effort to ensure that all producers knew about these new requirements. Anyone that had not certified compliance received at least two letters, one phone call, and received a crop insurance contract with the requirement. More than 50,000 letters were mailed and over 25,000 calls were made before the June 1, 2015, deadline.
- In addition to outreach efforts aimed at helping farmers certify to conservation compliance, significant flexibility was given to those who may, for a handful of reasons, not have been able to timely file certifications, including exemptions for new producers, new entities, and where extenuating circumstances made certifying compliance difficult.
- Since June 1, 2015, RMA has provided over 12,000 exemptions for new producers, new entities or those who are new to USDA, and FSA has approved 38 producers who faced extenuating circumstances associated with certifying compliance.
- The department continues to work through specific cases to ensure no producer is unfairly denied premium subsidy.
- The NRCS has been able to service determination requests from persons subject to compliance for the first time due to the recoupling of crop insurance to conservation compliance with little reported issues. The legislation mandated priority technical assistance for these customers. If a determination results in a potential violation, it is important to note that producers will not lose premium subsidy until all administrative appeal rights are exhausted.
United States Department of Agriculture  
2016 Presidential Transition  
Risk Management Agency (RMA)

**Timeline**

On an annual basis, RMA participates (speaking role) in several industry meetings and conference in support of RMA related programs. These meetings and conferences occur throughout the year.

**January 2017**
- No key decisions or significant program issues; however RMA staff could support annual conferences/meetings.

**February 2017**
- Request for Applications (RFA’s) Risk Management Education

**March, 2017**
- No key decisions or significant program issues; however RMA staff could support annual conferences/meetings.

**April, 2017**
- OIG Audit Report 05601-0005-31 titled, RMA’s Utilization of Contracted Data Mining Results
  Report is expected to issue in April.

**May, 2017**
- No key decisions or significant program issues; however RMA staff could support annual conferences/meetings.

**June 2017**
- Formal Approval of the AIPs for the 2018 reinsurance
  The approval of the AIP Standard Reinsurance Agreements are completed in June to become effective July 1, 2017, the beginning of the 2018 reinsurance year.

No key decisions are expected during the first six months from the Office of Product Management. However, routine program maintenance will continue. This includes:
- Issuing new price elections, which are projected prices that are used to value lost production due to an insurable loss;
- Revising premium rates based on recently-accumulated loss experience; and
- Revising prevented planting factors based on the most recent data.

These revisions are published through “actuarial documents,” issued by RMA in accordance with certain contractual deadlines. The deadlines vary by crop, but include the following: *January 31, April 30, June 30, August 31,* and *November 30.*

Appendix A: Acronyms
WHO WE ARE: OUR MISSION AREA

Food, Nutrition and Consumer Services works to harness the Nation's agricultural abundance to end hunger and improve health in the United States. The Food and Nutrition Service (FNS) administers federal domestic nutrition assistance programs and the Center for Nutrition Policy and Promotion (CNPP) links scientific research to the nutrition needs of consumers through science-based dietary guidance, nutrition policy coordination, and nutrition education.

WHO WE ARE: OUR WORKFORCE

- FNS currently has almost 1,600 employees located in the national office in Alexandria, VA and seven regional offices.
- CNPP has 29 staff located in Alexandria, VA.

WHO WE SERVE: OUR CONSTITUENTS

FNCS provides evidence-based dietary recommendations for all Americans over two. In addition, FNCS programs serve about 1 in 4 Americans who participate in 1 or more of the 15 domestic food and nutrition programs that provide children and needy families better access to food and a more healthful diet.

KEY UPCOMING DECISIONS

- FNS will need to begin the process of implementing two SNAP rules finalized in late 2016: photo EBT and enhanced retailer standards.
- FNCS’ lease for its Headquarters in Alexandria, Va., is set to expire in May 2017. Estimates for either renovation of the current space or for relocation to a new space total about $18 million.

BUDGET HIGHLIGHTS FY 2016

- Total FNCS budget authority is $110b, of which 94% is mandatory.
- SNAP benefits continue to decrease due to over 1m fewer participants in FY 2016. As of 9/1/2016, SNAP benefits are on track to total $2b less than FY 2015.
- CNPP funds are provided through the FNS Nutrition Programs Administration Account (3.29% of the account).

Kevin W. Concannon
Under Secretary for Food, Nutrition and Consumer Services
202-720-7711, Kevin.Concannon@osec.usda.gov

Kevin W. Concannon was nominated by President Obama and Secretary Vilsack and confirmed by the U.S. Senate in July 2009 to serve as Under Secretary for Food, Nutrition and Consumer Services (FNCS) in the United States Department of Agriculture (USDA).

Under Secretary Concannon has had a lengthy and distinguished career in public service. Over the past 25 years, he has served as Director of State Health and Human Services departments in Maine, Oregon, and Iowa. He has led FNCS during the deepest economic recession in 70 years while promoting better access to anti-hunger programs, implementing stronger nutrition science-based meal and food package programs in WIC and child nutrition, supporting improved administration and staffing, and elevating nutrition education and job training through SNAP.

He has served in a number of national organizations, including serving as President of the American Public Welfare Association, President of the National Association of State Mental Health Program Directors, trustee of the American Public Human Services Association, and a board member of the American Humane Association.

He has received a number of awards, including the Lifetime Human Services Award from the American Public Human Services Association in 2007, 2012 Catholic Charities USA Keep the Dream Alive Award, 2012 National WIC Association Leadership Award, and 2015 Board Award from the Congressional Hunger Center.

He is a native of Portland, Maine, and a graduate of Saint Francis Xavier University, Nova Scotia with both Bachelor of Arts and Master of Social Work degrees. He has continued his studies at the University of Southern Maine and the University of Connecticut Graduate School of Social Work. He was awarded a Doctor of Laws Degree honoris causa by Saint Francis Xavier University in 2013.

Concannon has taught graduate courses at the University of Connecticut, Portland State University, Oregon, and the University of Iowa as Adjunct Professor of Social Work.

Dr. Katie Wilson
Deputy Under Secretary for Food, Nutrition and Consumer Services
202-720-7711, Katie.Wilson@osec.usda.gov

Deputy Under Secretary Wilson has a passion for child nutrition and has dedicated her career to improving nutrition program access to all children as well as ensuring the offering of quality food throughout those programs. She has spent 23 years as a school nutrition director in three public schools districts in Wisconsin and five years as the Executive Director for the National Food Service Management Institute and assistant professor at the University of Mississippi.
United States Department of Agriculture
2016 Presidential Transition
Food, Nutrition and Consumer Services Mission Area (FNCS)

She served as president of the School Nutrition Association in 2008-2009 and has shared her expertise domestically and internationally as a board member, invited speaker, guest lecturer, professor of record, and/or peer reviewer for numerous allied organizations, industries, and colleges and universities in the field of nutrition, child health, and food service management. Dr. Wilson has also served on the LaCrosse, Wisconsin (WI) Habitat for Humanity board.

Deputy Under Secretary Wilson holds a Bachelor’s of Science Degree in Dietetics from the University of WI–Stout, a Master’s Degree in Food Science and Nutrition from the University of WI–Stout, and a Doctoral Degree in Foodservice and Lodging Management from Iowa State. She is also credentialed as a School Nutrition Specialist.

Wilson has received peer-nominated awards throughout her career, these include the 1995 WI School Nutrition Director of the Year Award, 1998 FAME Special Achievement Award, USDA Best Practice Awards, Bulls Eye School Nutrition Marketing Awards, 2010 WI Star Advocate, and the 2014 FAME Friend of Child Nutrition Award.

Audrey Rowe
Administrator for the Food and Nutrition Service (FNS)
703-305-2060, Audrey.Rowe@fns.usda.gov

Audrey Rowe is the Administrator for the Food and Nutrition Service (FNS) at the U.S. Department of Agriculture (USDA) in Washington, D.C. FNS provides children and needy families with better access to food and a more healthful diet through its 15 nutrition assistance programs and nutrition education efforts.

She brings to the Federal government over 20 years of experience in human services policy development, fiscal management, program design, service delivery and marketing with a particular focus on vulnerable populations, low income women, children and youth.

Previously, Rowe served as Deputy Administrator for Special Nutrition Programs at FNS, leading the effort to pass the Healthy, Hunger-Free Kids Act of 2010, the legislative centerpiece of First Lady Michelle Obama’s Let’s Move! initiative to end childhood obesity in a generation.

Rowe has extensive experience working on issues related to FNS programs. Her leadership has included roles as Human Resources Administrator in New Haven, Connecticut, and Social Services Commissioner for the State of Connecticut and the District of Columbia. In addition, she served as Executive Vice President and Chief Operating Officer for the National Urban League.

In private industry, Rowe served as Senior Vice President and Managing Director for the Children and Family Services division for Affiliated Computer Service (ACS), formerly Lockheed Martin IMS. In this capacity, she spearheaded industry leadership in the realms of child support payment processing and enforcement and the electronic dissemination of public assistance benefits, including implementing Electronic Benefit Transfer (EBT) programs in over 20 states. Additionally, Rowe was appointed Senior Vice President for Public Affairs where she
managed the corporation’s government relations, philanthropy and community relations programs.

Rowe is a graduate of Federal City College and was a fellow at the John F. Kennedy School of Government Institute of Politics at Harvard University.

Angela Tagtow, MS, RD, LD  
Executive Director, Center for Nutrition Policy and Promotion  
703-305-7600, Angela.Tagtow@cnpp.usda.gov

Appointed in July 2014, Angela Tagtow is the Executive Director for the Center for Nutrition Policy and Promotion (CNPP) at the U.S. Department of Agriculture (USDA) in Washington, D.C. CNPP works to improve the health and well-being of Americans by developing and promoting dietary guidance that links scientific research to the nutrition needs of consumers. Specifically, the Center oversees the state-of-the-art systematic nutrition research reviews of the Nutrition Evidence Library, population-based nutrition and economic analyses, the Dietary Guidelines for Americans, the national iconic symbol for healthy eating MyPlate and consumer-based nutrition education resources, and innovative digital tools for consumers. As a registered dietitian, Tagtow brings to the Federal government almost 25 years of experience in food and nutrition policy, public health nutrition, surveillance systems, research, professional and consumer communication, social marketing, training and education.

Tagtow holds a M.S. degree in Family and Consumer Sciences Education from Iowa State University and a B.A. degree in Dietetics and Chemistry from the University of Northern Iowa.

Telora T. Dean  
Associate Administrator and Chief Operating Officer  
703-305-2062, Telora.Dean@fns.usda.gov

Telora T. Dean is the Associate Administrator and Chief Operating Officer (AA/COO) for USDA’s Food and Nutrition Service (FNS). Dean shares full responsibility with the Agency’s Administrator for the development, design, operation and improvement of the strategies and systems that create and deliver the Agency’s programs and internal/external services through a $100B program and operations portfolio. As the AA/COO, she ensures the proper balance between efficiencies, effectiveness and results and creates maximum value for customers, stakeholders and taxpayers.

Prior to becoming the AA/COO, Dean served as the Deputy Administrator for Management. In that role, she was the executive lead for the Office of Management (OM) and effected a unified operation to deliver outstanding administrative services. She managed the full complement of components comprising FNS’ management operations—Human Resources, Acquisition Management, Logistics and Facilities Management, Information Systems and Employee Engagement Initiatives.
Prior to joining FNS, Dean provided executive leadership to a number of USDA agencies. As the Farm and Foreign Agricultural Service’s Chief Human Capital Officer, she was responsible for the overall administration, coordination and evaluation of human resource functions for three mission area agencies, supporting a customer base of over 16,000 employees nationally and abroad. During her tenure as Rural Development’s Acting Deputy Administrator for Management, Dean was an executive principal in providing direction and oversight to a $628M annual budget and a $38B loan portfolio to support efficient program delivery and services to rural America.

Dean holds a bachelor’s degree from Alabama Agriculture and Mechanical University and a master’s degree from Marymount University. She counts Harvard University, American University and the Brookings Institution as organizations in her accomplished executive toolkit.

Yvette Jackson
Associate Administrator for Regional Operations and Support
703-305-2064, Yvette.Jackson@fns.usda.gov

Yvette Jackson is the Associate Administrator for Regional Operations and Support for USDA Food and Nutrition Service (FNS). As Associate Administrator, she is responsible for seven Regional Offices and three offices at FNS Headquarters. The Regional Offices provide oversight of program operations and technical assistance to State and local partners who administer the Agency’s 15 nutrition assistance programs. The Headquarters Offices are responsible for retailer management, coordinating disaster relief during local and national emergencies, and providing oversight of state computer systems implementation. Collectively, Jackson is responsible for about 57% of the Agency’s workforce.

Prior to her appointment as Associate Administrator, Jackson served as the Regional Administrator for the Mid-Atlantic Regional Office of FNS.

Jackson brings over 35 years of experience with Federal and State agencies including the Social Security Administration, where she served as the Deputy Commissioner for Finance, Assessment and Management and the Chief Financial Officer; and the Pennsylvania Department of Public Welfare, where she served in several senior executive positions, including Deputy Secretary for Income Maintenance Programs.

Jackson formerly served as both the FNS Administrator and the Deputy Administrator for the Food Stamp Program, where she was instrumental in preserving the national nutrition safety net during welfare reform. In addition to her extensive public service experience, she was the National Health and Human Services Practice Lead for BearingPoint, a global IT and business consulting firm that provided services to Federal, State and local human service agencies.

She holds a Bachelor of Social Welfare from Temple University and a Master of Social Work from Rutgers University.
Jessica Shahin
Associate Administrator for Supplemental Nutrition Assistance Program
703-305-2022, Jessica.Shahin@fns.usda.gov

Jessica Shahin is the Associate Administrator for Supplemental Nutrition Assistance Program (SNAP) (formerly known as the Food Stamp Program) for USDA’s Food and Nutrition Service (FNS).

Shahin has over 20 years of experience with SNAP at the State and Federal levels. She served on the original Texas Electronic Benefit Transfer Team as Director of Information Management for the Department of Human Services, was Executive Assistant to the Deputy Commissioner for client self-support programs and was later named Director of Interagency Policy for the agency’s Office of Government Relations. In this capacity, she developed an expertise for effective integration of various human service programs in both policy and management.

Beginning in January 2004, Shahin served as Acting Associate Administrator and Deputy Associate Administrator for the Food Stamp Program/SNAP. She became Associate Administrator for SNAP in January 2009.

Shahin received a master’s degree in Social Work from the University of Texas at Austin and taught public policy for several years as an adjunct professor at the school.

Diane M. Kriviski
Deputy Administrator for Supplemental Nutrition and Safety Programs
703-305-2052, Diane.Kriviski@fns.usda.gov

Diane M. Kriviski is the Deputy Administrator for the Supplemental Nutrition and Safety (SNAS) Programs for USDA’s Food and Nutrition Service (FNS). She is responsible for administration of USDA’s food distribution programs including USDA Foods for school lunches, the Food Distribution Program on Indian Reservations, the Commodity Supplemental Food Program, and the Emergency Food Assistance Program. Kriviski is also responsible for USDA’s Supplemental Food Programs Division including the Special Supplemental Nutrition Program for Women, Infants and Children (WIC); WIC and Senior Farmers’ Market Nutrition programs; and the Office of Food Safety. These programs are part of the nutrition safety net that FNS provides to children and needy families through better access to food, a more healthful diet, and nutrition education.

Kriviski has served FNS for over 30 years at all levels of the organization. Early in her career, she worked with various FNS programs while in the Child Nutrition Division and Food Distribution Division as a grant officer, assisting in the creation of the Senior Farmers’ Market Nutrition Program and awarding of the first grants to help implement WIC EBT.

Kriviski has also held key positions in Financial Management, serving as Acting Chief Financial Officer and Budget Officer, as well as Deputy Budget Officer. In that capacity, she provided leadership in the development and submission of the FNS annual fiscal budget for its 15 nutrition programs.
assistance programs, totaling over $60B at that time. Prior to her current position, Kriviski served as the Deputy Associate Administrator for Special Nutrition Programs at FNS, helping to lead the effort to implement the Healthy, Hunger-Free Kids Act of 2010, the legislative centerpiece of First Lady Michelle Obama’s Let’s Move! initiative.

Cindy Long  
Deputy Administrator for Child Nutrition Programs  
703-305-2054, Cindy.Long@fns.usda.gov

Cindy Long is the Deputy Administrator for Child Nutrition Programs (CN) for USDA’s Food and Nutrition Service. She is responsible for all aspects of Federal administration of the Child Nutrition programs, including the National School Lunch Program, School Breakfast Program, Child and Adult Care Food Program, Summer Food Service Program, and the Fresh Fruit and Vegetable Program. These programs provide over $20B in nutrition assistance to children and families. In this role she has led FNS’ implementation of the Healthy, Hunger-Free Kids Act, the most significant restructuring of these programs in decades and a legislative centerpiece of the Administration’s nutrition initiatives. She has also led a major restructuring of Child Nutrition program staff and resource management.

Long has served FNS in various positions since joining the agency in 1991. Prior to joining the Child Nutrition programs in 2008, she served in the Office of Analysis, Nutrition and Evaluation (now known as OPS) providing leadership to FNS research and analysis efforts in support of all of the domestic nutrition assistance programs. She began her Federal government career in 1988 with the Office of Management and Budget.

Long possesses a MPA in Public Policy and Economics from Princeton University’s Woodrow Wilson School of Public and International Affairs, and a BA in Economics from the University of Notre Dame.

Richard Lucas  
Deputy Administrator for Policy Support  
703-305-2017, Richard.Lucas@fns.usda.gov

Richard Lucas is the Deputy Administrator for Office of Policy Support (OPS) for USDA’s Food and Nutrition Service (FNS). In that capacity, he is responsible for research and analysis that informs policymaking for, and management of, the Federal nutrition assistance programs. These programs, including the Supplemental Nutrition Assistance Program (SNAP), the school meals programs, and the WIC program, are currently budgeted at over $100 billion annually and serve one in four Americans in the course of a year.

Lucas’s team in OPS includes professionals from a wide range of disciplines, including economists, statisticians, program evaluators, sociologists, and nutritionists. They work closely with policymakers and program officials to find answers to critical questions to make nutrition assistance programs more effective; estimate cost and participation impacts of legislative, budgetary and regulatory changes; evaluate the impacts of programs and program components on
food security, diet quality, and other outcomes; analyze extant data to better target strategies and track performance; and demonstrate and test potential program improvements.

Lucas has worked at FNS since 1994 and holds degrees from Brown University and Stanford University.

Cristina Chiappe
Deputy Administrator for Management
703-305-2030, Cristina.Chiappe@fns.usda.gov

Cristina Chiappe serves as the Deputy Administrator for Management for USDA’s Food and Nutrition Service (FNS). She oversees all aspects of human capital management, acquisition management, operations and facilities, and information management in an agency with an annual budget of $110 billion.

Chiappe came to FNS from USDA’s Rural Development (RD) in January of 2015 as part of a developmental assignment for the Senior Executive Service (SES) Candidate Development Program (CDP) to serve as Director of Human Resources, Deputy Chief Information Officer, Associate Deputy Chief Financial Officer, and as Chief Staff Officer to the Chief Operating Officer. She also served with 23 other Federal executives as the USDA representative on the White House Advisory Council on SES Reform, which resulted in the 2016 Executive Order: “Strengthening the Senior Executive Service.”

At RD, Chiappe served on various leadership roles in operations and management for RD and Departmental Management. As the Chief of Staff in the Rural Housing Service (RHS), she provided direct oversight in the daily operations of an agency with an annual program funding of $26B, an annual administrative budget of $30M, and a Centralized Servicing Center with a loan portfolio of $100B. As the Director of Program Support, she led the centralization of RD’s technical support functions and the centralization of the Single-Family Housing guaranteed loan program which strategically leveraged staff resources and infused $60B of capital into rural America. Additionally, Chiappe has served as Senior Policy Advisor in the Rural Housing Service, Special Assistant to the Assistant Secretary for Civil Rights, and Special Assistant to the Assistant Secretary for Administration.

In addition to the SES CDP, Chiappe has completed the Federal Executive Institute, American University’s Executive Leadership Program and Harvard Law School’s Program on Negotiation for Executives. She holds a B.A. and M.Ed. from the University of Virginia.

David G. Burr
Chief Financial Officer
703-605-3220, David.Burr@fns.usda.gov

David Burr is the Chief Financial Officer (CFO) for USDA’s Food and Nutrition Service (FNS). He was named FNS’ CFO in September of 2011. In this capacity, he is responsible for
United States Department of Agriculture
2016 Presidential Transition
Food, Nutrition and Consumer Services Mission Area (FNCS)

overseeing the administration and ensuring the fiscal integrity of approximately $110B in program grants and $400M in administrative funding.

The majority of Burr’s Federal career has been with FNS. In June 2010, he was the Director of the Program Accountability and Administration Division of the Supplemental Nutrition Assistance Program (SNAP). Prior to assuming this position, for approximately 10 years, he served as FNS’ Budget Director where he coordinated budget formulation and execution, as well as program data administration for all of the domestic nutrition assistance programs. Burr began his career with FNS as an economist, developing program participation and cost forecasts primarily in support of financial management. Before joining FNS, he served as an operation research analyst with the Naval Air Systems Command for four years.

Burr is a graduate of West Virginia University and studied economics at the graduate level at Virginia Polytechnic Institute and State University.

Kimberly Jackson
Chief Information Officer
703-605-4318, Kimberly.Jackson@fns.usda.gov

Kimberly Jackson is the Chief Information Officer (CIO) for USDA’s Food and Nutrition Service (FNS). Jackson manages and executes a $60M infrastructure and operations and maintenance budget with over 62 Federal staff years supporting the FNS vision of ending hunger and improving nutrition in America.

As CIO, Jackson leads forward-thinking and innovative strategic technology planning and operational delivery, providing value to FNS customers and stakeholders through technology services and mission-enabling capabilities. Jackson positions FNS to achieve mission success through delivery of cost effective emerging technologies, and strategic procurement of hardware, software, and solutions.

Prior to becoming CIO, Jackson served as the Chief Technology Officer (CTO) for the Office of Biometric Identity Management (OBIM) in the DHS National Protection and Programs Directorate (NPPD). As CTO, she served as OBIM’s senior IT official working to ensure compliance with Federal policy related to IT systems management, enterprise architecture, and data management. Jackson leveraged emerging technologies to recommend improvements to major enterprise applications, identify tools to optimize IT system performance, and develop and promote collaborative/joint technology solutions to improve services to enhance mission effectiveness.

Jackson is a graduate of the DHS SES Candidate Development Program, a DHS Level III Program Manager, a certified Project Management Professional® and a graduate of the Federal Executive Institute. She holds a Master of Business Administration from the University of Maryland and a Bachelor of Arts from the University of Virginia.
United States Department of Agriculture

Food, Nutrition and Consumer Services Mission Area (FNCS)

**Robin D. Bailey Jr.**  
**Regional Administrator, Southeast Regional Office**  
404-562-1800, Robin.Bailey@fns.usda.gov

Robin D. Bailey Jr. has over 29 years of faithful service to America in various senior levels in the Department of the Air Force and the U.S. Department of Agriculture. As USDA’s Food and Nutrition Service (FNS) Regional Administrator for the Southeast (SERO), he provides executive direction and leadership while orchestrating the execution of all 15 Federal nutrition programs, which provide annual benefits in excess of $25 billion through cooperating State agencies in Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee.

Bailey most recently served as Deputy Administrator for Management and Information Technology for FNS in the National Office. In this role, he provided executive oversight of Information Technology, Human Resources, Contract Management, Logistics and Facility Services. Prior to FNS, he served as Director of Human Resources Management, U.S. Forest Service, in Albuquerque, New Mexico, where he led over 600 personnel who provided Human Resources Management policy and operational services for approximately 50,000 permanent, temporary and seasonal employees.

Bailey is an Air Force veteran and served as an Air Force Civilian in a wide range of leadership positions, including the Civilian Deputy and Staff Director to the 96th Air Base Wing Commander, Eglin Air Force Base, Fla. In this capacity, he co-led more than 5,000 men and women in providing essential base operating support and services for more than 20,000 personnel, six wings, and 50 associate units at the Department of Defense’s largest installation.

Bailey holds a Master of Arts in Communication from the University of Oklahoma. He was selected as a member of the Senior Executive Service in 2009 and appointed by the Secretary of Agriculture as an Executive Resources Board Member in 2013.

**Darlene L. Barnes**  
**Regional Administrator, Mountain Plains Regional Office**  
303-844-0300, Darlene.Barnes@fns.usda.gov

Darlene Barnes was named Regional Administrator for USDA’s Food and Nutrition Service (FNS) Mountain Plains Region (MPRO) in February 2004, after serving as Deputy Regional Administrator since June 1998.

As Regional Administrator, Barnes oversees administration of the nutrition assistance programs in a 10-state region comprising Colorado, Iowa, Kansas, Missouri, Montana, Nebraska, North Dakota, South Dakota, Utah and Wyoming. Located in these states are 30 tribal organizations that she works with to administer the Federal nutrition assistance programs. Barnes manages a staff of 110 FNS employees and provides leadership, oversight and technical assistance for a budget of over $6.5B annually.
Her USDA career began in 1976 with the Rural Electrification Administration. She then continued with the Department at the National Information Technology Center and the Animal and Plant Health Inspection Service (APHIS). Barnes joined FNS in 1990, in governmental and public affairs at the National Office. Under her leadership, FNS’ Public Affairs staff won the Public Relations Society of America’s 1997 Silver Anvil Award for its Team Nutrition grassroots information campaign.

Barnes studied communications at Northern Virginia Community College, the University of Maryland and Colorado State University. She is a graduate of the Federal Executive Institute’s senior leadership program, “Leadership for a Democratic Society.” She helped sponsor the Excellence in Government Awards program, which recognizes public servants at the Federal, State and local levels.

Barnes is an avid volunteer with nutrition assistance organizations and, in June 2012, received the USDA “Unsung Hero” award from Secretary Tom Vilsack, who characterized the honorees as “excellent representatives of the 100,000 USDA employees.”

She has been a member of Hunger Free Colorado and provided leadership for the first Hunger Summit in Colorado. She is the former chair and current executive committee member of the Colorado Federal Executive Board.

**Patricia Dombroski**  
**Regional Administrator, Mid-Atlantic Regional Office**  
609-259-5025, Patricia.Dombroski@fns.usda.gov

Patricia Dombroski is the Administrator of USDA’s Food and Nutrition Service (FNS) Mid-Atlantic Region (MARO). In that capacity, she provides leadership for 15 domestic nutrition assistance programs in six states, the District of Columbia, Puerto Rico and the Virgin Islands. Benefit and administrative funds for MARO nutrition programs exceed $12 billion and reach close to 30 million people each month.

Prior to her current position, Dombroski served as Deputy Regional Administrator for MARO. Dombroski has had the unique opportunity to direct all of the Agency’s assistance programs throughout her tenure with FNS. She has served as MARO Director of the WIC Program, the Food Stamp Program (now known as the Supplemental Nutrition Assistance Program) and the Special Nutrition Programs. Dombroski also led the agency’s largest field office, managing more than 15,000 food stamp retailers and the Federally-operated Summer Food Service Program in the state of New York.
United States Department of Agriculture  
2016 Presidential Transition  
Food, Nutrition and Consumer Services Mission Area (FNCS)  

Tim English  
Regional Administrator, Midwest Regional Office  
312-353-6663, Tim.English@fns.usda.gov  

Tim English is the Regional Administrator of the Midwest Region (MWRO) of USDA’s Food and Nutrition Service (FNS). Under his leadership, MWRO provides oversight of program operations and technical assistance to State and local partners who administer the Agency’s 15 nutrition assistance programs. He oversees the administration of these Federal nutrition assistance programs with nutritional benefits and services valued at over $15 billion in Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin. English commits his talents and energies to creating positive change in programs serving our nation’s most vulnerable low income families and elderly.

Prior to his appointment as Regional Administrator, English served as Deputy Regional Administrator from June 2010 to January 2013, providing leadership in program operations. From March 2003-June 2010, he served as MWRO Supplemental Nutrition Assistance Program (SNAP) Director and was responsible for overseeing SNAP operations in the Midwest region.

He is a graduate of Northern Illinois University, as well as a graduate of the American University School of Public Affairs Key Executive Leadership Certificate Program in Washington, D.C.

William E. Ludwig  
Regional Administrator, Southwest Regional Office  
214-290-9800, Williams.Ludwig@fns.usda.gov  

William “Bill” Ludwig is the Regional Administrator of USDA’s Food and Nutrition Service’s (FNS) Southwest Region (SWRO). He oversees 15 Federal nutrition assistance programs in Arkansas, Louisiana, New Mexico, Oklahoma, Texas and 26 tribal organizations with a regional budget of nearly $14 billion.

His mission is to ensure that children throughout the region have access to safe, nutritious and balanced meals. Ludwig is a strong advocate of partnerships, which he believes are critical to accomplishing the region’s mission of reaching the youngest and most vulnerable populations.

During his tenure, Ludwig has built a solid network of more than 300 partner organizations at the Federal, State, Tribal and local levels. These connections have resulted in a greater awareness of FNS’ programs and have generated a variety of innovative ways to provide healthy food to families and children at-risk of hunger.

Ludwig believes in leaning forward and stretching across barriers to help those in need, whether they are in an urban or rural community, through programs such as the WIC/Medical Model, the Community Eligibility Program, the Summer Food Service Program and Mobile Farmers Markets.
United States Department of Agriculture
2016 Presidential Transition
Food, Nutrition and Consumer Services Mission Area (FNCS)

Staying connected is important to the business of fighting hunger, so in conjunction with his travel throughout the region, he and his team have developed creative ways to keep their audiences informed through social media, e-newsletters and partner calls.

Ludwig earned his Bachelor of Arts from Louisiana State University and Master’s in Business Administration from Louisiana Tech University.

Jesus Mendoza Jr.
Regional Administrator, Western Regional Office
415-705-1337, Jesus.Mendoza@fns.usda.gov

Jesus Mendoza Jr. serves as the Regional Administrator for USDA’s Food and Nutrition Service (FNS), Western Regional Office (WRO). In this capacity, Mendoza provides leadership, oversight and technical assistance for 15 Federal nutrition assistance programs operating within eight states (Alaska, Arizona, California, Hawaii, Idaho, Nevada, Oregon, and Washington) three territories (American Samoa, Commonwealth of the Northern Mariana Islands, and Guam) and 35 tribal organizations. Mendoza leads a 88 person staff and oversight of a budget exceeding $20 billion.

Mendoza began his career with FNS Western Regional Office in 2002 as a Program Specialist with the Special Nutrition Programs (SNP) and served as SNP Section Chief and Regional Director and Deputy Regional Administrator prior to his current position. Before joining the Agency, Mendoza served as Program Officer for International Planned Parenthood and worked for the World Wildlife Fund, Latin America and Caribbean Region offices. Mendoza also served in the Peace Corps in Ecuador and Morocco and in the U.S. Army.

Mendoza earned a Bachelor’s degree in Political Science from Southwest Texas State University and Master’s degree in International Development Project Management from Clark University in Worcester, Mass.

Kurt Messner
Regional Administrator, Northeast Regional Office
617-565-3670, Kurt.Messner@fns.usda.gov

Kurt Messner is the Regional Administrator for USDA’s Food and Nutrition Service (FNS), Northeast Regional Office (NERO). In this role, he is responsible for the implementation of the Agency’s 15 nutrition assistance programs throughout the Northeast Region, which include the six states of New England and the state of New York. Working in partnership with State and local organizations and providing technical assistance to these partners, NERO oversees the administration of the full range of FNS programs.

Messner began his career at FNS as the Director of Financial Management at NERO in 2007. In that role, he was responsible for fiscal oversight of FNS programs, and administrative and organizational support. Before joining FNS, Messner served as the Regional Director of Operations and the Deputy Regional Director for Housing with the U.S. Department of Housing and Urban Development (HUD) in Boston. Messner was appointed Deputy Regional
Administrator for NERO in May 2013 and served as Acting Regional Administrator beginning in May 2014.

Messner has been nominated for two Excellence in Government Awards from the Greater Boston Federal Executive Board – in 1995 as a member of a team recognized for their work with workforce planning and development, and again in 2001 for Federal Employee of the Year. Messner received a HUD Secretary Representative’s award in 2001 for outstanding achievement and contribution to the Agency’s mission; and in 2006 he received a Massachusetts Governor’s Special Recognition Award for his contributions to the Gulf Relief efforts related to Hurricane Katrina.

Messner holds a B.S. in Business Management and M.B.A. from Regis University. He has also completed the Executive Leadership Program at Harvard University’s Kennedy School of Government.

Overview of Agency Programs and Operations

The Food, Nutrition and Consumer Services (FNCS) works to harness the Nation's agricultural abundance to end hunger and improve health in the United States. Its agencies administer federal domestic nutrition assistance programs and the Center for Nutrition Policy and Promotion, which links scientific research to the nutrition needs of consumers through science-based dietary guidance, nutrition policy coordination, and nutrition education. FNCS achieves this through its two agencies: the Food and Nutrition Service and the Center for Nutrition and Policy Promotion.

The Food and Nutrition Service (FNS) works with partners to provide food and nutrition education to people in need in a way that inspires public confidence and supports American agriculture.

In pursuit of its mission, FNS executes an annual Agency Priorities Plan consisting of multi-year goals and current year objectives that align to our Agency Priorities. FNS uses these objectives as the basis for a corporate priority-setting process that promotes focused and effective management of scarce administrative resources to key initiatives.

FNS’ ongoing responsibilities and performance objectives are captured in USDA’s Strategic Plan 2014-2018. The FNS Agency Priorities Plan (APP) uses USDA’s Strategic Goals 4 and 5 as an organizing structure and consists of multi-year goals and current year objectives that align to the Agency Priorities, support the Department’s Strategic plan, and comply with the Government Performance and Results Modernization Act of 2010 (GPRAMA). The operational foundation for the FNS plan consists of five organizing priorities.

- **Agency Priority 1: Help Americans Eat Smart and Maintain a Healthy Weight**
  FNS works to support and encourage healthy diets through science-based guidance and strong nutrition standards and education.
Areas of focus include: increases in the average Healthy Eating Index; Healthy People 2020 Health Indicators; Healthy eating and healthy weight program measures; Implementation of the Agricultural Act of 2014 and the Healthy, Hunger-Free Kids Act of 2010 (HHFKA) provisions; Implementation of nutrition education and obesity prevention strategies; and communication and promotion strategies that support the overall priorities.

The Center for Nutrition Policy and Promotion (CNPP) works to improve the health and well-being of Americans by developing and promoting dietary guidance that links the best evidence-based scientific research to the nutrition needs of consumers.

CNPP carries out its mission to improve the health of Americans by: serving as the Federal authority on evidence-based food, nutrition and economic analyses that inform policy and programs; translating science into actionable food and nutrition guidance for all Americans; and leading national communication initiatives that apply science-based messages to advance consumers’ dietary and economic knowledge and behaviors. Major projects include the Dietary Guidelines for Americans, MyPlate, SuperTracker, the Healthy Eating Index, and the Nutrition Evidence Library.

- **Agency Priority 2: Preserve Public Trust in FNS Programs**
  Reflects USDA’s zero tolerance policy for fraud, waste or abuse in nutrition assistance programs.

  Areas of focus include: Compliance with Federal requirements; National School Lunch Program (NSLP) improper payment rate; Supplemental Nutrition Assistance Program (SNAP) trafficking (retailer and client); Child Nutrition (CN)/Women, Infants and Children (WIC) reauthorization; SNAP quality control; Reauthorization of Farm Bill programs; and communications strategies designed to increase public trust.

- **Agency Priority 3: FNS is an Efficient, High Performing and Adaptable Organization**
  Efforts to ensure employees are competent, engaged, and challenged to develop and implement innovative solutions to today’s challenges.

  Areas of focus include: Employee Engagement; Recruitment and Retention Strategies; Talent Management; USDA’s Blueprint for Stronger Service; Process Improvement; and Office of Information Technology (OIT) Operational Framework.

- **Agency Priority 4: Reduce Food Insecurity by Helping Feed Those in Need**
  Emphasizes efforts to keep nutrition programs in reach of vulnerable populations including young people, the elderly, and those with disabilities.

  Areas of focus include: Implementation of Farm Bill provisions; Implementation of SNAP Employment and Training Programs; Increases in Summer meals programs participation; Retention of participation of children after age 1 in WIC; Communicating messages
regarding program access; Food Distribution Program on Indian Reservations (FDPIR) administrative funding; Food Safety Training; Farmers’ Market Nutrition Program (FMNP) Participation Barriers; Able-Bodied Adults Without Dependents (ABAWD) Policies; and Community Engagement Strategies.

- **Agency Priority 5: Civil Rights: Ensuring Access, Equality and Respect in FNS Programs and Activities**
  
  FNS’ commitment to oversight of civil rights laws, policies and directives related to nutrition programs is reflected in this priority.

  Areas of focus include: Compliance Reviews; Voluntary Resolution Agreements; Internal Program Complaint Processing; and Equal Employment Opportunity (EEO) Compliance and Training.

**Supplemental Nutrition Assistance Program**

SNAP offers nutrition assistance to millions of eligible, low-income individuals and families and provides economic benefits to communities. SNAP is the largest program in the domestic hunger safety net. Eligible recipients are provided a monthly allotment of benefits via debit card to use to purchase food at authorized stores. FNS works with state partners, who administer the program at the state and local level based on Federal rules, and the retail community to ensure proper program administration and program integrity. FNS is directly responsible for authorizing retail stores to redeem program benefits and monitoring them to ensure adherence to program requirements. In addition to certifying households for eligibility and issuing benefits, SNAP state agencies deliver nutrition education to participants to help them purchase healthy food on a tight budget. SNAP employment and training services are provided to eligible participants to assist them with building skills for in demand jobs so they can transition to self-sufficiency.

**Child Nutrition Programs**

The Food and Nutrition Service administers several programs that provide healthy food to children. These programs are administered by state agencies, each of these programs helps fight hunger and obesity by reimbursing organizations such as schools, child care centers, and after-school programs for providing healthy meals to children.

  - **National School Lunch Program**

    The National School Lunch Program is a federally assisted meal program operating in public and nonprofit private schools and residential child care institutions. It provides nutritionally balanced, low-cost or free lunches to children each school day. The program was established under the National School Lunch Act, signed by President Harry Truman in 1946.
School Breakfast Program (SBP)
SBP provides cash assistance to states to operate nonprofit breakfast programs in schools and residential childcare institutions. The Food and Nutrition Service administers the SBP at the Federal level. State education agencies administer the SBP at the state level, and local school food authorities operate the Program in schools.

Child and Adult Care Food Program (CACFP)
CACFP provides aid to child and adult care institutions and family or group day care homes for the provision of nutritious foods that contribute to the wellness, healthy growth, and development of young children, and the health and wellness of older adults and chronically impaired disabled persons.

Summer Food Service Program
The Summer Food Service Program ensures that low-income children continue to receive nutritious meals when school is not in session.

Fresh Fruit and Vegetable Program (FFVP)
FFVP can be an important tool in our efforts to combat childhood obesity. The Program has been successful in introducing school children to a variety of produce that they otherwise might not have the opportunity to sample. The various partnerships that FNS and state agencies have developed in the public and private sectors, as well as the dedicated work of school administrators, have contributed to the overall success and acceptance of the program. FFVP is consistent with and supports the National Academy of Medicine’s recommendations to provide healthier snack choices in schools.

Special Milk Program
The Special Milk Program provides milk to children in schools and childcare institutions who do not participate in other Federal meal service programs. The program reimburses schools for the milk they serve. Schools in the National School Lunch or School Breakfast Programs may also participate in the Special Milk Program to provide milk to children in half-day pre-kindergarten and kindergarten programs where children do not have access to the school meal programs.

Supplemental Nutrition and Safety Programs
Food Distribution Division (FDD) is responsible for: USDA Foods in the National School Lunch Program, The Emergency Food Assistance Program (TEFAP), and the Food Distribution Program on Indian Reservations (FDPIR), the Commodity Supplemental Food Program (CSFP), and USDA Foods Disaster Assistance.

Commodity Supplemental Food Program (CSFP)
CSFP works to improve the health of low-income elderly persons at least 60 years of age by supplementing their diets with nutritious USDA Foods. Women, infants, and children who were certified and receiving CSFP benefits as of February 6, 2014, can continue to receive assistance until they are no longer eligible under the program rules in effect on
February 6, 2014. Through CSFP, USDA distributes both food and administrative funds to participating states and Indian Tribal Organizations.

- **Food Distribution Program on Indian Reservations (FDPIR)**
  FDPIR is a Federal program that provides USDA foods to low-income households, including the elderly, living on Indian reservations, and to Native American families residing in approved service areas near reservations or in Oklahoma.

- **Nutrition Services Incentive Program (NSIP)**
  The Food and Nutrition Service purchases USDA Foods for distribution through NSIP, a nutrition program for the elderly administered by the Department of Health and Human Service's Administration for Community Living.

- **The Emergency Food Assistance Program (TEFAP)**
  TEFAP supplements the diets of low-income Americans, including elderly people, by providing them with emergency food and nutrition assistance. Under TEFAP, USDA foods are made available by the U.S. Department of Agriculture to states. States provide the food to local agencies that they have selected, usually food banks, which in turn, distribute the food to soup kitchens and food pantries that directly serve the public.

- **Schools/USDA Foods Programs**
  USDA's Schools/Child Nutrition Programs support American agricultural producers by providing cash reimbursements for meals served in schools, but also by providing nutritious, USDA-purchased food to the programs: National School Lunch Program (NSLP); Child and Adult Care Food Program (CACFP); and the Summer Food Service Program (SFSP).

- **Women, Infants, and Children (WIC)**
  The Special Supplemental Nutrition Program for Women, Infants, and Children - better known as the WIC Program - serves to safeguard the health of low-income pregnant, postpartum and breastfeeding women, infants, & children up to age 5 who are at nutritional risk. WIC provides nutritious foods to supplement diets, information on healthy eating, breastfeeding promotion and support, and referrals to health care.

- **Farmers’ Market Nutrition Program (FMNP)**
  The WIC Farmers’ Market Nutrition Program (FMNP) provides WIC participants with coupons to purchase fresh, unprepared, locally grown fruits and vegetables from local farmers' markets.

- **Senior Farmers’ Market Nutrition Program (SFMNP)**
  The Senior Farmers’ Market Nutrition Program provides low-income seniors with coupons that can be exchanged for eligible foods at farmers’ markets, roadside stands, and community supported agriculture programs.
## Budget and Staffing Summary

### Food, Nutrition and Consumer Services Mission Area

**Budget Authority FY 2009- FY 2016**

(Dollars in Thousands)

II. Top Issues/Hot Topics

Timeline

Winter 2017: TBD - Health and Medicine Division Study -- First “short” report is expected to address Part 1 of the study being conducted on the process to update the Dietary Guidelines for Americans

January 2017:

- **Summer Electronic Benefit Transfer (EBT) Project Awards:** Since summer 2011, USDA has supported the Summer Electronic Benefit Transfer for Children (SEBTC) projects, which reach low income families in areas where there are limited numbers of sites eligible to serve summer meals. FNS expects that appropriators will provide over $20 million to continue Summer EBT demonstrations in FY 2017. Decisions will need to be made in January 2017 regarding the states and tribal organizations receiving grants to operate summer EBT projects in summer 2017.

- **National Academy of Medicine (NAM) WIC Food Package Report:** The Healthy, Hunger Free Kids Act of 2010 requires a comprehensive review of the WIC food package at least every ten years to ensure that it conforms to current nutrition science, public health concerns, and cultural eating patterns. In late 2014, FNS contracted with the NAM to convene an expert panel and conduct the next review. The panel’s report could be released as early as January 2017, though it could take several months longer. The report will be highly scrutinized by Congress and other program stakeholders, who will likely be interested to know FNS’ plans to consider regulatory changes in WIC based on the report soon after its release.

- **SNAP Retailer Eligibility Standards Rule:** The final rule changes the standards for participating SNAP retailers and is scheduled to be published by the end of calendar year 2016 with an effective date of one year following publication. A substantial education and technical assistance program for SNAP retailers will be conducted to ensure that authorized retailers are able to comply with the new standards by the effective date. Plans for this effort will need to begin shortly after publication of the final rule, potentially as early as January 2017. Stakeholders may raise concerns about the new standards.

- **SNAP Quality Control, Establishment of a National Quality Control (QC) error rate for FY 2016:** FNS will begin working with states to pull a new sample of FY 2016 cases and complete case reviews to establish a national QC error rate for FY 2016. A change in approach (from a two tier to a one tier review) is being instituted for FY 2016 based on changes that needed to be incorporated in the QC system to assure a sound QC system; there will be no state error rates for FY 2016, only the national error rate. These reviews will require significant state cooperation and Federal access to case documentation and state systems. The 2016 national error rate will be announced in June, 2017.
- **USDA Food Plans** – December Cost of Food Report is released. CNPP publishes monthly updates to the various USDA food plans to reflect changes in the costs of the food packages.

**February 2017:**

- **Child Nutrition (CN) Program Integrity Final Rule:** The Healthy, Hunger-Free Kids Act (HHFKA) of 2010 includes statutory changes to further enhance the integrity of the CN Programs. In March 2016, FNS published a proposed rule to codify these changes as well as several recommendations from recently conducted management evaluations and USDA Office of Inspector General (OIG) audits of state agencies operating CN Programs. Policy decisions will be needed on key issues in February 2017 to finalize drafting and clearance of the rule by June 2017.

- **USDA Food Plans** – January Cost of Food Report is released

**March 2017:**

- **USDA Food Plans** – February Cost of Food Report is released

**April 2017:**

- **FNCS Park Office Center Lease Re-Competition:** The lease for Park Office Center, the location of FNCS’ National Office, in Alexandria, VA expires in May 2017. A General Services Administration (GSA)-led competition to replace that lease is currently underway. Results of that competition are expected to be known in the second quarter of FY 2017. Costs associated with execution of a new lease are estimated to be approximately $17 million. While funding to support those costs is essentially dependent on full year FY 2017 appropriations action, some potential alternative funding options have been identified. No later than April 2017, FNCS will need to assess its financial situation and finalize its funding strategy.

- **USDA Food Plans** – March Cost of Food Report is released

**May 2017:**

- **USDA Food Plans** – April Cost of Food Report is released

- **Announcement of Farm to School Grant Awards:** Each year, USDA awards up to $5 million in competitive grants to assist eligible entities (school districts, state and local agencies, Tribal nations, agricultural producers, and non-profit organizations) in implementing farm to school programs that improve access to local foods in eligible schools. They can support training, operations, planning, purchasing equipment, developing school gardens, developing partnerships, and implementing farm to school programs. Applications for the FY 2017 grants are due in December 2016; announcement of awards is scheduled for May 2017.
June 2017:

- **USDA Food Plans** – May Cost of Food Report is released

**Mission Area Issues**

**SNAP Quality Control (QC):** To establish a national QC error rate for FY 2016, FNS staff will work with states to pull a new sample of FY 2016 cases and complete case reviews. State agencies must grant Federal reviewers access to the documentation and State systems necessary to complete these case reviews. States must continue to report FY 2016 case results to FNS as an opportunity to review internal procedures to ensure that all state QC reviewers are operating in accordance with program rules and the QC system for FY 2017 is sound. This review will begin in early 2017.

**Child Nutrition Reauthorization (CNR):** Congress may take up and pass CNR during the “lame duck” session at the end of 2016. If it does not, the legislative discussion on this may continue into 2017. However, the programs continue to operate despite the lapse of the legislation.

**Child Nutrition Program Integrity Rule:** The Healthy, Hunger-Free Kids Act (HHFKA) of 2010 includes statutory changes to further enhance the integrity of the Child Nutrition (CN) Programs. In March 2016, FNS published a proposed rule to codify these changes as well as several recommendations from recently conducted management evaluations and USDA Office of Inspector General (OIG) audits of state agencies operating CN Programs. The final rule is scheduled to be published June 2017. Policy decisions will be needed on key issues in February 2017 to finalize drafting and clearance of the rule by this date.

**Farm to School:** Consistent with the Healthy Hunger-Free Kids Act of 2010 and USDA’s Know Your Farmer, Know Your Food Task Force, FNS has improved access to local foods in schools through grants, technical assistance, and research. In addition to maintaining these efforts, FNS is expanding its focus to other programs, and the implementation of new meal standards in the Child and Adult Care Food program in FY17 provides opportunities to highlight local foods program.

**Office of Community Food Systems:** While USDA has been engaged in farm to school efforts for a number of years, the Healthy Hunger-Free Kids Act of 2010 specifically directed the Department to improve access to local foods in schools through grants, technical assistance, and research. The Office of Community Food Systems (OCFS) operates the USDA Farm to School Grant Program (FY17 awards will be made in May 2017), administers and disseminates information from the USDA Farm to School Census, and provides a host of technical assistance and training. OCFS works closely with the Department’s Know Your Farmer, Know Your Food
Task Force to coordinate and collaborate on issues related to local and regional foods and to highlight Farm to School Census data on the KYF2 Compass Map website.

**Summer Meals for Children:** FNS has a long history of working towards increasing the number of children served by summer meals. While planning for this is already underway, these efforts will need to continue during the first part of 2017 to ensure that the summer of 2017 is successful in meeting the needs of children.

**National Academy of Medicine Review of the Process to Develop the Dietary Guidelines for America’s:** For CNPP, the most immediate issue is the study being conducted by the Health and Medicine Division of the National Academy of Medicine. Once the study is complete, USDA, in partnership with HHS, will need to determine how to manage the study findings in the context of initiating the next revision of the Dietary Guidelines for 2020.

**GAO and OIG Audits**

### GAO Audits

- **WIC Program: Improved Oversight of Income Eligibility Determination Needed (GAO-13-290)**
  - **Date Issued:** March 8, 2013
  - **Hyperlink to audit:** [http://www.gao.gov/assets/660/652480.pdf](http://www.gao.gov/assets/660/652480.pdf)
  - **Audit Objectives:** Audit request made by the House Committee on Education and the Workforce and the Senate Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies. GAO assessed: (1) how do state and local criteria for determining WIC income eligibility vary; (2) to what extent are individuals who would otherwise be ineligible for WIC deemed eligible due to their participation in other programs; and (3) how does USDA assist and monitor state determination of WIC income eligibility.
  - **Audit Summary:** GAO reviewed Federal laws and regulations; analyzed USDA’s national data from 2010, recent survey findings, and monitoring reports; reviewed WIC policy manuals from 10 states chosen to provide population size and geographic diversity; and interviewed Federal, state, and local officials. GAO recommended that USDA develop a timeline for reviewing its monitoring reports to assess national program risks and target assistance. USDA agreed with GAO’s recommendation. FNS staff developed a process to use an automated report to identify areas in need of correction or improvement that were found during WIC Management Evaluations conducted across the country. Using the output report, FNS will assess the frequency of Management Evaluation findings in each policy and program area nationwide and
respond by providing policy clarification, training, or other corrective actions to states. The report went into production on November 1, 2013, and FNS reported that staff will review the reports quarterly.

- **Current Status**: Closed

- **School Lunch**: Implementing Nutrition Changes Was Challenging and Clarification of Oversight Requirements Is Needed (GAO-14-104)
  - **Date Issued**: February 27, 2014
  - **Audit Objectives**: Request made by the House Committee on Education and the Workforce. GAO assessed: (1) lunch participation trends; (2) challenges School Food Authorities’ (SFAs) faced implementing the changes, if any; and (3) USDA’s assistance with and oversight of the changes.
  - **Audit Summary**: To address these areas, GAO used several methods, including review of Federal laws, regulations, and guidance; analysis of USDA’s lunch participation data; a national survey of state child nutrition program directors; and site visits to eight school districts selected to provide variation in geographic location and certain school district and food service characteristics. To improve program integrity, GAO recommends that USDA clarify the need to document noncompliance issues found during state reviews of SFAs and complete efforts to assess states’ assistance needs related to oversight of financial management. USDA generally agreed with GAO’s recommendations.
  - **Current Status**: Closed

- **School-Meals Programs**: USDA Has Enhanced Controls, but Additional Verification Could Help Ensure Legitimate Program Access (GAO-14-262)
  - **Date Issued**: June 16, 2014
  - **Audit Objectives**: GAO began this work on the initiative of the Comptroller General. GAO assessed: (1) steps taken to help identify and prevent ineligible beneficiaries from receiving benefits in school-meal programs; and (2) what opportunities exist to strengthen USDA’s oversight of the school-meals programs.
  - **Audit Summary**: GAO reviewed the National School Lunch Program policies, interviewed program officials, and randomly selected a non-generalizable sample that included 25 of 7.7 million approved household applications from 25 of 1,520 school districts in the Dallas, Texas, and Washington, D.C., regions. GAO performed limited eligibility testing using civilian Federal-employee payroll data from 2010 through 2013 due to the unavailability of other data sources containing nonFederal employee income. GAO also conducted interviews with households. Ineligible households were
referred to the Inspector General. GAO recommends that the Secretary of Agriculture develop a pilot program to explore the feasibility of using computer matching to identify households with income that exceeds program-eligibility thresholds for verification, and explore the feasibility of verifying a sample of categorically eligible households.

- **Current Status:** Open

**School Meal Programs: Implications of Adjusting Income Eligibility Thresholds and Reimbursement Rates by Geographic Differences (GAO-14-557)**

- **Date Issued:** August 7, 2014
- **Hyperlink to audit:** [http://www.gao.gov/assets/670/664689.pdf](http://www.gao.gov/assets/670/664689.pdf)
- **Audit Objectives:** This audit request was from Representative Sam Farr. The objectives were: (1) what are the available data sources that could be used to adjust for cost-of-living differences for household income eligibility and for variations in food, labor, and other costs for USDA school reimbursement rates; and (2) what are the advantages and disadvantages of using such data sources for making adjustments for income eligibility and reimbursement rates.

- **Audit Summary:** No recommendations included in this report. GAO looked at a variety of methods by which to identify geographic differences in living costs and the potential for using them to adjust: (1) income eligibility thresholds; and (2) reimbursement rates for schools. They also examined the extent to which states and localities can make adjustments for geographic differences in costs by using existing program rules. GAO reviewed relevant laws, regulations, and literature; analyzed available data sources and methods; and interviewed knowledgeable experts.

- **Current Status:** Closed

**Supplemental Nutrition Assistance Program (SNAP): Enhanced Detection Tools and Reporting Could Improve Efforts to Combat Recipient Fraud (GAO-14-641)**

- **Date Issued:** August 21, 2014
- **Audit Objectives:** This audit request was from Senator Jeff Sessions. The audit objectives were: (1) how has USDA addressed the issues raised in its IG report on SNAP fraud; (2) how does USDA determine SNAP’s payment error rate and to what extent is payment error due to participant fraud; and (3) how many SNAP benefits continue to be vulnerable to trafficking.

- **Audit Summary:** GAO reviewed: (1) how selected state agencies combat SNAP recipient fraud; (2) the effectiveness of certain state fraud detection tools; and (3) how FNS oversees state anti-fraud efforts. GAO reviewed relevant Federal laws, regulations, guidance, and documents; interviewed officials in 11 states; interviewed
Federal officials; tested fraud detection tools using fiscal year 2012 program data; and monitored websites for potential trafficking online. Although results are not generalizable to all States, the 11 states, selected based on various criteria including the size of their SNAP recipient household population and their payment error rates, served about a third of SNAP recipient households. GAO recommends, among other things, that FNS reassess current financial incentives and detection tools and issue guidance to help States better detect fraud and report on their anti-fraud efforts. FNS is working on the corrective actions resulting from this audit report.

• **Nutrition Assistance – Additional Guidance Could Assist States in Addressing Online Sale of Infant Formula (GAO-15-94)**
  - **Date Issued:** January 12, 2015
  - **Audit Objectives:** GAO did this work in response to a request made by the Chairs of House Committee on Education and the Workforce and the House Subcommittee on Early Childhood, Elementary, and Secondary Education, as well as another member of Congress. The key questions to be addressed by their audit were: 1) how does USDA determine the amount of formula to provide to participating infants; 2) what is known about the extent to which participants sell WIC formula online; and 3) what steps has USDA taken to prevent and address the online sale of WIC formula.
  - **Audit Summary:** GAO recommended that USDA require state agencies to inform WIC participants that selling WIC formula is against program rules and describe in their state plans how they identify attempted sales. GAO also recommended that USDA assess online sales, including techniques states can use to monitor them. USDA agreed with GAO’s recommendations.
  - **Current Status:** One recommendation was closed and two remain open. FNS’ latest update to move toward closure was provided to GAO on July 18, 2016.

  - **Date Issued:** May 18, 2015
  - **Hyperlink to audit:** [http://gao.gov/assets/670/669688.pdf](http://gao.gov/assets/670/669688.pdf)
  - **Audit Objectives:** GAO did this work in response to a request made by the Chairs of House Committee on Education and the Workforce, as well as the Chairs of the subcommittees on Higher Education and Workforce Training; Health, Employment, Labor, and Pensions; Workforce Protections; and Early Childhood, Elementary, and Secondary Education. The key questions to be addressed by their audit were: 1) how do agencies define regulatory guidance and what processes and criteria are used to
determine whether to issue guidance or undertake rulemaking; 2) what similarities and differences exist between the agencies policies, processes, and practices for developing and using regulatory guidance; and 3) how do the agencies ensure that their departmental guidance is current and transparent.

- **Audit Summary:** GAO made recommendations to four departments, and specific to USDA recommended that it strengthen the use of internal controls in guidance production processes and improve online guidance dissemination. USDA generally agreed with this recommendation.

- **Current Status:** Open. However, FNS provided information needed to close the USDA recommendation to GAO on July 22, 2016, and is currently waiting for GAO to update the status of the recommendation on their public website.

**School Nutrition: USDA Has Efforts Underway to Help Address Ongoing Challenges Implementing Changes in Nutrition Standards (GAO-15-656)**

- **Date Issued:** October 14, 2015
- **Audit Objectives:** GAO did this work in response to a request made by the Chair of the Committee on Education and Workforce. The key questions to be addressed by their audit were: 1) what challenges, if any, are the School Food Authorities (SFAs) GAO visited previously for the January 2014 report (GAO-14-104) dealing with currently, and as they continue to implement school lunch changes; 2) what challenges, if any, have these SFAs faced while implementing the changes to the nutrition standards for school breakfasts and the new nutrition standards for competitive foods; and 3) what actions has USDA taken to assist SFAs in implementing the school food requirements, such as helping schools mitigate any challenges related to food cost and waste.

- **Audit Summary:** GAO made no new recommendations to USDA as this was a follow-up to the GAO-14-104 report in which they recommended that USDA clarify the need to document noncompliance issues found during state reviews of SFAs and complete efforts to assess states' assistance needs related to oversight of financial management.

- **Current Status:** Closed

**OIG Audits**

- **Analysis of FNS’ Supplemental Nutrition Assistance Program Fraud Prevention and Detection Efforts (27002-0011-13)**
  - **Date Issued:** September 28, 2012
Audit Objectives: Initially, OIG’s audit objectives were to determine whether funds were used properly by analyzing SNAP-related databases at Federal and state levels for anomalies and signs of fraud, waste, and abuse; and to compare 10 selected states’ SNAP recipient databases to the Social Security Administration’s Death Master File. Subsequent to the December 2011 House Agriculture Committee’s Subcommittee on Department Operations, Oversight, and Credit’s hearing on SNAP fraud, the audit scope was expanded to include an evaluation of the adequacy of FNS and state tools used to prevent and detect SNAP fraud, and whether the states were using the tools provided.

Audit Summary: OIG concluded that, given the size and complexity of SNAP, the low rate of data anomalies identified was a notable achievement and the States had made significant progress resolving the questioned recipients identified in their matches. OIG also stated that, since SNAP participation has reached record levels, even incremental improvements in fraud detection and prevention can have a meaningful impact on SNAP program integrity. The report contained nine recommendations.

Current Status: This audit will be resolved upon the development of an action plan on next steps for the National Accuracy Clearinghouse (NAC) project. The NAC pilot project report was signed by the Secretary and delivered to Congress on May 10, 2016. FNS is preparing a letter to all States detailing next steps. Estimated completion date – October 31, 2016.

Food and Nutrition Service Financial Statements for Fiscal Year 2012 and 2011 (27401-0002-21)

Audit Objectives: To determine whether: (1) the financial statements present fairly, in all material respects, in accordance with accounting principles generally accepted in the United States of America, the assets, liabilities, and net position, net cost, changes in net position, and combined budgetary resources; (2) the internal control objectives over financial reporting were met; and (3) the Food and Nutrition Service complied with laws and regulations for those transactions and events that could have a direct and material effect on the comparative financial statements. OIG also determined whether the Management Discussion and Analysis was materially consistent with the information in the comparative financial statements.

Audit Summary: The report contains an unqualified opinion on the financial statements, as well as the results of our assessment of the Food and Nutrition Service’s internal controls over financial reporting and compliance with laws and regulations. FNS’ comparative financial statements for fiscal years 2012 and 2011,
including the accompanying notes, present fairly, in all material respects, the financial position of FNS, as of September 30, 2012, and 2011, and its net costs, changes in net position, and budgetary resources for the years then ended, in conformity with accounting principles generally accepted.

- **Current Status:** Closed

- **National School Lunch Program – Food Service Management Company (FSMC) Contracts (27601-0001-23)**
  - **Date Issued:** January 3, 2013
  - **Hyperlink to audit:** [https://www.usda.gov/oig/webdocs/27601-0001-23.pdf](https://www.usda.gov/oig/webdocs/27601-0001-23.pdf)
  - **Audit Objectives:** The objectives of the audit were: (1) assess the effectiveness of any controls implemented by FNS and selected state agencies as a result of previous audits; (2) determine whether SFAs that signed fixed-price-per-meal contracts are receiving the full benefit and value of all donated foods provided to FSMCs, and (3) determine whether SFAs that signed cost-reimbursable contracts with FSMCs are receiving all purchase rebates.
  - **Audit Summary:** This audit was conducted based on an inquiry from Congresswoman DeLauro. Overall, OIG reported the following: FNS needs to enhance its management oversight and controls of SFAs that contract with FSMCs; FNS needs to improve its monitoring of SFAs’ oversight for FSMC purchase discounts and rebates; FNS did not ensure full credit was given for USDA-donated foods; and FNS needs to improve reviews of State Agency FSMC contracts.
  - **Current Status:** FNS completed all corrective actions that resulted from the 15 recommendations in the audit report. The procurement tool associated with many of the recommendations was released for implementation nationwide in School Year 2016-2017. The request for final action and closure for the remaining open recommendations (1, 2, 7, 8, 11, 12, 13, and 15) was submitted to OCFO for approval on August 15, 2016.

- **Vendor Management in the Food and Nutrition Service’s Special Supplemental Nutrition Assistance Program for Women, Infants and Children (WIC) (27601-0038-CH)**
  - **Date Issued:** March 29, 2013
  - **Hyperlink to audit:** [https://www.usda.gov/oig/webdocs/27601-0038-CH.pdf](https://www.usda.gov/oig/webdocs/27601-0038-CH.pdf)
  - **Audit Objectives:** The overall objectives of the audit were to evaluate FNS’ implementation of new regulations intended to improve the integrity of vendor management, and to assess the certification of participants as eligible. As part of this, OIG assessed the state agencies’ implementation of vendor compliance
investigations; their accountability, control, and security over food instruments; and how they made determinations of participant eligibility.

- **Audit Summary:** OIG did not identify any material findings associated with participant eligibility. However, OIG reported that FNS needs to strengthen guidance and oversight of state agencies’ vendor monitoring and enforcement activities. FNS does not ensure that all retail vendors disqualified from SNAP are disqualified from WIC. FNS has completed all corrective actions resulting from the nine recommendations in the audit report.

- **Current Status:** Closed

- **Overlap and Duplication in the Food and Nutrition Service’s Nutrition Programs**
  (27001-0001-10)
  - **Date Issued:** June 13, 2013
  - **Hyperlink to audit:** [https://www.usda.gov/oig/webdocs/27001-0001-10.pdf](https://www.usda.gov/oig/webdocs/27001-0001-10.pdf)
  - **Audit Objectives:** OIG evaluated the potential for duplication and overlap in the five largest FNS nutrition assistance programs, accounting for 99 percent of FNS’ total program budget related to FYs 2012 through 2006.
  - **Audit Summary:** Although this audit did not document a single area of unnecessary overlap or duplication in any of FNS’ programs, OIG recommended that FNS determine and document the requirements for conducting a study and to identify and determine the extent to which overlap and duplication may exist in FNS’ nutritional assistance programs. OIG also recommended that FNS determine whether it had the resources necessary to conduct the assessment of the potential overlap of its nutrition programs or whether additional funding will be necessary to complete the assessment.
  - **Current Status:** Closed

- **FNS: Controls for Authorizing Supplemental Nutrition Assistance Program Retailers**
  (27601-0001-31)
  - **Date Issued:** July 31, 2013
  - **Audit Objectives:** This audit was initiated by OIG in April 2012 to evaluate FNS’ controls for authorizing SNAP retailers; specifically to assess FNS controls over the retailer authorization process, and to evaluate the Agency’s actions to strengthen its processes to prevent the authorization of previously disqualified owners.
  - **Audit Summary:** This audit report contains 20 recommendations. OIG reports that FNS should comprehensively review its policies and procedures, seek legislative change to retain a portion of retailer penalties; require background checks for retailers; strengthen internal guidance; make improvements to its automated retailer data system; create and strengthen safeguards for high-risk stores; and require more
supervisory reviews. FNS should also review the owners identified to determine if they need to be penalized or disqualified from SNAP.

- **Current Status:** Six of the twenty recommendations remain open, but are in the process of being addressed. Closure of two of the recommendations hinges on the rulemaking process, which pushes the estimated completion date of closure out to October 2017.

- **Food and Nutrition Service Financial Statements for Fiscal Year 2013 – 2012 (27401-0003-21)**
  - **Date Issued:** December 6, 2013
  - **Audit Objectives:** To examine the Food and Nutrition Service’s financial statements for FY 2013 and 2012.
  - **Audit Summary:** The report contains an unqualified opinion on the financial statements, as well as the results of our assessment of the Food and Nutrition Service’s internal controls over financial reporting and compliance with laws and regulations. OIG determined that the agency’s financial statements for the FY 2013 and 2012 present fairly, in all material respects, FNS’ financial position as of September 30, 2013 and 2012, and that they conform with accounting principles generally accepted.
  - **Current Status:** Closed

- **State Agencies’ Food Costs for the Food and Nutrition Service’s Special Supplemental Nutrition Program for Women, Infants and Children (WIC) (27004-0001-22)**
  - **Date Issued:** September 25, 2014
  - **Audit Objectives:** OIG’s goal was to conduct an audit survey of states to evaluate factors that impact the FNS WIC program’s costs, including average food costs and costs per participant. Additionally, OIG wanted to gain an understanding of FNS and State oversight activities in monitoring program costs.
  - **Audit Summary:** OIG found that FNS can strengthen its oversight of state agency cost containment practices and recommended that FNS coordinate with Medicaid. OIG also recommended that FNS should take more effective measures in cost containment policies. The audit report contained six recommendations for FNS. FNS developed a national WIC cost containment strategy that requires state agencies to implement a vendor peer group system, competitive price criteria, and allowable reimbursement levels in a manner that ensures the WIC Program pays authorized vendors competitive prices for supplemental foods. It also requires state agencies to ensure that vendors who derive more than 50 percent of their annual food sales
revenue from WIC food instruments do not cause higher food costs for the program than do other vendors. All of these requirements are codified in program regulations found at 7 CFR 246.12.

- **Current Status:** All recommendations but one are closed. The open recommendation is pending completion of an Economic Research Service (ERS) study. FNS is working with ERS on its update of the 2005 report, Interstate Variation in WIC Food Package Costs: The Role of Food Prices, Caseload Composition, and Cost-Containment Practices. This study, which examines the degree to which food prices, caseloads, and the implementation of various cost containment measures influence state agencies’ food package costs, was delayed and is now estimated to be completed by the Fall of 2017.

- **Food and Nutrition Service Financial Statements for Fiscal Years 2014 and 2013 (OIG 27401-0004-21)**
  - **Date Issued:** November 14, 2014
  - **Audit Objectives:** To determine whether: 1) the comparative financial statements were presented fairly, in all material respects, in accordance with accepted principles; 2) the internal control objectives over financial reporting were met; 3) FNS complied with laws and regulations for transactions and events that could have a direct and material effect to the financial statements; and 4) the information presented in Management’s Discussion and Analysis was materially consistent with the information in the comparative financial statements.
  - **Audit Summary:** The Food and Nutrition Service received an unqualified opinion from the OIG’s audit of the FNS comparative financial statements.
  - **Current Status:** Closed

- **National School Lunch and School Breakfast Program Error Rates (OIG 27601-0001-41)**
  - **Date Issued:** May 5, 2015
  - **Hyperlink to audit:** [https://www.usda.gov/oig/webdocs/27601-0001-41.pdf](https://www.usda.gov/oig/webdocs/27601-0001-41.pdf)
  - **Audit Objectives:** To evaluate the methods FNS used to lower the error rates for NSLP and SBP. OIG sought to determine if FNS, State agencies, and SFAs had adequate controls to: 1) ensure children met the eligibility requirements, and 2) meal claims were supported and accurately reimbursed.
  - **Audit Summary:** OIG recommended that FNS consult with the Office of the General Counsel to determine its regulatory authority to require households to submit income documentation with school meals applications. Based on this determination, FNS should then take the appropriate actions to revise the programs’ documentation
requirements. Additionally, OIG recommended that FNS should clarify criteria for identifying questionable applications and provide guidance and training for cafeteria fund management.

- Current Status: Closed

**SNAP Error Rates (OIG 27601-0002-41)**

- **Date Issued:** September 23, 2015
- **Hyperlink to audit:** [https://www.usda.gov/oig/webdocs/27601-0002-41.pdf](https://www.usda.gov/oig/webdocs/27601-0002-41.pdf)
- **Audit Objectives:** To determine if FNS and States have controls in place to ensure the integrity of SNAP error rate determination.
- **Audit Summary:** OIG recommended that FNS should consider changing quality control (QC) from a two-tier process reliant on state error rates to a one-tier process in which FNS or a third party reviews cases, and establishes a timeline for making this change, if cost beneficial. OIG also recommended that FNS needs to reiterate policies regarding the proper use of error review committees, QC staff’s variable treatment of error cases, and issue guidance to states on appropriate use of private consultants. Lastly, they recommended that FNS should amend and enforce policies to ensure error rates are accurate and determined if they are in compliance with regulations.
- **Current Status:** Open. Management decision agreement reached on all recommendations as of June 30, 2016. Four recommendations are closed and the remaining recommendations are on track to be closed by December 31, 2016.

**Healthy, Hunger-Free Kids Act (HHFKA) of 2010 – Controls Over Food Service Account Revenue (OIG 27601-0001-22)**

- **Date Issued:** September 28, 2015
- **Audit Objectives:** To evaluate the controls that FNS has in place to ensure that SFAs comply with the food service account revenue requirements outlined in Sections 205 and 206 of HHFKA. In addition, OIG sought to evaluate FNS’ compliance with the requirements outlined in Section 307 of that Act regarding indirect food costs.
- **Audit Summary:** OIG recommended that FNS needs to redesign controls to provide reasonable assurance that SFAs comply with the paid lunch equity and non-program food revenue requirements of sections 205 and 206, and that their reports are on time and complete. Additionally, they recommended that FNS needs to supply SFAs with updated guidance concerning indirect costs. Lastly, OIG recommended that FNS needs to establish a date for publishing the annual paid lunch price report.
- **Current Status:** Open. Action request currently being finalized for submission to the Office of the Chief Financial Officer by October 31, 2016.
United States Department of Agriculture
2016 Presidential Transition
Food, Nutrition, and Consumer Services

- **Food and Nutrition Service Financial Statements for Fiscal Years 2015 and 2014 (OIG 27401-0005-21)**
  - **Date Issued:** November 5, 2015
  - **Audit Objectives:** To determine whether: 1) FNS’ comparative financial statements were presented fairly, in all material respects, in accordance with generally accepted accounting principles; 2) FNS met internal control objectives over financial reporting; 3) transactions and events with direct and material effect on the financial statements were compliant with applicable laws and regulations; and 4) the information presented in the Management’s Discussion and Analysis was materially consistent with the information in the comparative financial statements.
  - **Audit Summary:** The Food and Nutrition Service received an unqualified opinion from the OIG’s audit of the FNS comparative financial statements.
  - **Current Status:** Closed

- **SNAP Administrative Costs (OIG 27601-0003-22)**
  - **Date Issued:** September 29, 2016
  - **Hyperlink to audit:** Not yet available
  - **Audit Objectives:** To evaluate FNS’ controls over SNAP administrative costs, with a specific focus on whether states with county-administered programs were effectively and efficiently controlling costs and minimizing variances.
  - **Audit Summary:** Though a final report is pending issuance, it is expected that OIG will recommend the following: 1) that FNS could be more proactive in analyzing and containing variances in SNAP costs-per-case; 2) that FNS regional offices have different procedures for conducting financial reviews and risk assessments; and 3) that weaknesses in state and county financial management controls and a lack of effective FNS oversight led to inaccurate program financial reporting and questioned costs.
  - **Current Status:** Pending publication of final audit report. FNS officials are currently preparing a formal response to OIG’s official draft report that will be included in its entirety as an attachment to OIG’s final report.

- **FNS Controls Over SNAP Benefits for Able-Bodied Adults Without Dependents (ABAWD) (OIG 27601-00032-31)**
  - **Date Issued:** September 29, 2016
  - **Hyperlink to audit:** Not yet available
  - **Audit Objectives:** To determine whether FNS’ oversight of state agency controls is adequate to ensure that only eligible ABAWDs are receiving SNAP benefits.
Audit Summary: Though a final report is pending issuance, it is expected that OIG will recommend the following: 1) FNS conduct a study to identify the most troublesome areas for states and develop best practices for implementing the complex ABAWD provisions; 2) FNS review regulations to verify that the agency is consistently implementing laws regarding SNAP age limits; and 3) FNS ensure that valid, complete, and timely information is included in the Management Evaluation System (MEMSNext Generation).

Current Status: Pending publication of final audit report. FNS officials are currently preparing a formal response to OIG’s official draft report that will be included in its entirety as an attachment to OIG’s final report.
WHAT WE DO: OUR MISSION

The Center for Nutrition Policy and Promotion (CNPP) works to improve the health and well-being of Americans by developing and promoting dietary guidance that links scientific research to the nutrition needs of consumers. Major projects include the Dietary Guidelines for Americans, MyPlate, SuperTracker, Healthy Eating Index, and the Nutrition Evidence Library. CNPP is within USDA’s Food, Nutrition and Consumer Services (FNCS) mission area.

WHO WE ARE: OUR WORKFORCE

Staff of 29 dietitians, nutritionists, nutrition scientists, analysts, educators, communicators, economists, public health experts, visual information specialists, librarians and administrative assistants are all located at FNCS HQ in Alexandria, VA.

WHO WE SERVE: OUR CONSTITUENTS

CNPP resources are used by consumers, health professionals, nutrition educators, Federal agencies, and other stakeholders serving the public. Its nutrition policy guidance serves as the foundation for sister agency Food and Nutrition Service (FNS) in its program areas for low-income populations.

BUDGET HIGHLIGHTS FY 2016

- CNPP operates under four Congressional mandates and receives no direct Congressional appropriations.
- Staff salaries, benefits and administrative funds are provided through USDA’s Food and Nutrition Service Nutrition Programs Administration Account (NPA).
- See the Budget Highlights for CNPP’s NPA allocation (3.29% of total FNS NPA Account).
United States Department of Agriculture
2016 Presidential Transition
Center for Nutrition Policy and Promotion (CNPP)

I. Organizational Overview

Agency’s Mission/Strategic Plan

The U.S. Department of Agriculture’s (USDA) Center for Nutrition Policy and Promotion (CNPP) works to improve the health and well-being of Americans by developing and promoting dietary guidance that links the best evidence-based scientific research to the nutrition needs of consumers. CNPP carries out its mission to improve the health of Americans by:

- Serving as the Federal authority on evidence-based food, nutrition and economic analyses that inform policy and programs.
- Translating science into actionable food and nutrition guidance for all Americans.
- Leading national communication initiatives that apply science-based messages to advance consumers’ dietary and economic knowledge and behaviors.

Major projects include the Dietary Guidelines for Americans, MyPlate, SuperTracker, the Healthy Eating Index, and the Nutrition Evidence Library. CNPP is within USDA’s Food, Nutrition and Consumer Services (FNCS) mission area.

The mission and work of CNPP shows a clear connection to USDA’s overall Department-level strategies:

**USDA Strategic Plan (Goal 4):**
Ensure that all of America’s children have access to safe, nutritious, and balanced meals.
- Improve access to nutritious food.
- Promote a healthy diet and physical activity behaviors.

**CNPP Specific Goals and Objectives:**

**Goal 1:** Serve as the Federal authority on evidence-based food, nutrition and economic analyses that inform policy and programs.

- **Objective 1.1.** Ensure the integrity, capacity and rigor of the methodology used to conduct food and nutrition systematic reviews and economic analyses.
- **Objective 1.2.** Apply quality advancement strategies to food, nutrition and economic analytic methodologies.

**Goal 2:** Translate science into actionable food and nutrition guidance for all Americans.

- **Objective 2.1.** In collaboration with HHS, develop, publish and promote the 2015 and 2020 Dietary Guidelines for Americans.
Objective 2.2. Develop scientific reviews and analyses of evidence for the birth to 24 month and pregnant women populations and integrate into the 2020 Dietary Guidelines for Americans.

Goal 3: Lead national communication initiatives that apply science-based messages to advance consumers’ dietary and economic knowledge and behaviors.

Objective 3.1. Integrate proactive consumer messages and tools across dynamic communication platforms.

Objective 3.2. Expand capacity to amplify consumer message reach and penetration through partnerships.

Objective 3.3. Implement evaluation mechanisms to measure message penetration, consumer awareness, and diet quality.

CNPP’s mission, vision, goals, priorities, and values exemplify its commitment to performance that meet the needs of the American public - driving greater integration and collaboration for greater impact. Strategies, such as the distribution of countless electronic and print materials, allow CNPP to influence healthy diets and physical activity behaviors of Americans. CNPP’s resources are widely used by consumers, health professionals, nutrition educators, Federal agencies, and other stakeholders serving the public.

Key mission delivery performance measures

CNPP and USDA’s Food and Nutrition Service (FNS) are the two agencies that comprise the FNCS mission area. FNS and CNPP work collaboratively to help Americans “Eat Smart,” which is a strategic priority for FNS.

The areas and strategies by which CNPP contributes to meeting and achieving key performance targets are as follows:

- CNPP administers the development of the Dietary Guidelines for Americans (Dietary Guidelines) which provides the basis for all Federal food and nutrition policy and education initiatives, including MyPlate, the National School Lunch and School Breakfast Programs, the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), the Child and Adult Care Food Program (CACFP), and SNAP-Ed in the Supplemental Nutrition Assistance Program (SNAP).

- The Dietary Guidelines is designed for nutrition educators, health professionals and policy makers who, in turn, design education, outreach, and guidance based on the recommendations. These “information multipliers” magnify the reach of the Guidelines to consumers in schools, communities, food service, and health care settings; on food labels; and in many other venues.
• All Federal dietary guidance for the public is required to be consistent with the Dietary Guidelines, which provides scientific basis for the government to speak in a consistent and uniform manner.

• CNPP provides the scientific basis for the SNAP. The Thrifty Food Plan (TFP) is the basis for maximum SNAP allotments, and the TFP ensures that recipients have the resources to purchase a healthful diet at a low cost.

• CNPP produces the Healthy Eating Index (HEI), a measure of how well the diets of Americans conform to the Dietary Guidelines. The FNS uses the HEI to measure the extent to which the diets of the low-income population follow the Dietary Guidelines.

Organization’s History

The Center for Nutrition Policy and Promotion (CNPP) was established in December 1994 pursuant to a Memorandum of Understanding between two USDA mission areas: (1) Research, Education, and Economics (REE) and (2) Food, Nutrition and Consumer Services (FNCS). Together with FNS, CNPP reports to the Office of the Under Secretary for FNCS.

The creation of CNPP came at a time when the American public was becoming increasingly aware of the importance of diet, yet was receiving conflicting nutrition messages. CNPP, therefore, has served as a touchstone where the public was assured that the nutrition guidance they received would be based on sound research and analysis.
Organizational Chart

United States Department of Agriculture
2016 Presidential Transition
Center for Nutrition Policy and Promotion (CNPP)

CNPP Chart Dated March 10, 2014
Biographies of career staff in key leadership positions

Jackie Haven, MS, RD
Deputy Director, Center for Nutrition Policy and Promotion
703-305-7600, Jackie.Haven@cnpp.usda.gov

Jackie Haven is the Deputy Director of USDA’s Center for Nutrition Policy and Promotion (CNPP) where she directs USDA’s programs to set national nutrition policy, and design and implement innovative and effective science-based national nutrition promotion and outreach programs, to improve the health of all Americans. Ms. Haven is responsible for the development and implementation of the Dietary Guidelines for Americans, and supporting programs, including USDA’s Nutrition Evidence Library, the Healthy Eating Index, and the USDA Food Plans. She provides oversight for the design and implementation of USDA’s MyPlate food icon, the ChooseMyPlate.gov website, USDA’s award-winning SuperTracker, and the associated multi-modal, multi-year Dietary Guidelines consumer communications campaign. Under the MyPlate public-private partnerships initiative, she is leading a challenge to community and research organizations, educators, healthcare providers, and the media, to help magnify the reach of Dietary Guidelines nutrition messages by creatively working in ways that promote healthy eating practices and increase physical activity.

Ms. Haven has been with USDA for over 20 years. She holds an M.S. degree in clinical nutrition from New York University and a B.A. in psychology and marketing from the State University of New York at Albany.

Colette Rihane, MS, RD
Director, Office of Nutrition Guidance and Analysis
703-305-7600, Colette.Rihane@cnpp.usda.gov

Colette Rihane serves as the Director of the Office of Nutrition Guidance and Analysis within USDA’s Center for Nutrition Policy and Promotion (CNPP) where she oversees the process for developing the Dietary Guidelines for Americans having served as USDA’s lead Co-Executive Secretary to the 2015 Dietary Guidelines Advisory Committee (DGAC). Other major activities performed under her supervision include evaluation of the scientific evidence used to inform policy development through CNPP’s Nutrition Evidence Library, creation of USDA Food Patterns, updating of USDA’s Food Plans including the Thrifty Food Plan which forms the basis for SNAP allotments, releasing the annual Expenditures on Children by Families report, measuring diet quality through the Healthy Eating Index, and ensuring consistency of Dietary Guidance messaging across USDA and the U.S. Department of Health and Human Services (HHS).

Ms. Rihane has been with USDA for 16 years. She holds a M.S. degree in nutrition from the Texas Woman’s University and a B.S. degree in dietetics from The Florida State University. She is a 22-year veteran, retired Chief Master Sergeant, of the United States Air Force in the medical specialties field.
Brooke Hardison, MPH
Director, Office of Nutrition Marketing and Communications
703-305-7600, Brooke.Hardison@cnpp.usda.gov

Brooke Hardison is the Director of the Office of Nutrition Marketing and Communications within USDA’s Center for Nutrition Policy and Promotion. She directs teams engaged in communications, public affairs and nutrition education activities. Ms. Hardison is responsible for leading the Center’s nutrition marketing efforts, including promotion of MyPlate – the national iconic symbol for healthy eating – as well as consumer-based nutrition education resources and innovative digital tools available through the Center’s website, ChooseMyPlate.gov. Prior to joining the Center, Ms. Hardison served as the senior communications advisor and spokesperson for USDA’s nutrition assistance and education programs, including the Supplemental Nutrition Assistance Program (SNAP), the National School Lunch and School Breakfast programs, the Special Supplemental Nutrition Program for Women, Infants and Children (WIC), and the Dietary Guidelines for Americans.

Ms. Hardison started her Federal career as a Presidential Management Fellow at the National Institutes of Health in 2005 and has been with USDA for 4 years. She holds a Master of Public Health (MPH) degree from Temple University in Philadelphia where she focused on health communications, and a B.A. in social sciences and public health from the Johns Hopkins University in Baltimore.

Biographies of political staff in key leadership positions

Angela Tagtow, MS, RD, LD
Executive Director, Center for Nutrition Policy and Promotion
703-305-7600, Angela.Tagtow@cnpp.usda.gov

Appointed in July 2014, Angela Tagtow is the Executive Director for the Center for Nutrition Policy and Promotion (CNPP) at the U.S. Department of Agriculture (USDA) in Washington, D.C. CNPP works to improve the health and well-being of Americans by developing and promoting dietary guidance that links scientific research to the nutrition needs of consumers. Specifically, the Center oversees the state-of-the-art systematic nutrition research reviews of the Nutrition Evidence Library, population-based nutrition and economic analyses, the Dietary Guidelines for Americans, the national iconic symbol for healthy eating MyPlate and consumer-based nutrition education resources, and innovative digital tools for consumers. As a registered dietitian, Tagtow brings to the Federal government almost 25 years of experience in food and nutrition policy, public health nutrition, surveillance systems, research, professional and consumer communication, social marketing, training and education.

Ms. Tagtow holds a M.S. degree in family and consumer sciences education from Iowa State University and a B.A. degree in dietetics and chemistry from the University of Northern Iowa.

- CNPP operates under four Congressional mandates and receives no direct Congressional appropriations.
  - The Agricultural Act of 2014, Section 4204 (H.R. 2642; Public Law 113–79, also known as the 2014 Farm Bill)
  - The Food and Nutrition Act of 2008, as amended
  - Consolidated Appropriations Act of 2001 (Public Law 106-554; H. R. 5658, Section 515(a) of the Treasury and General Government Appropriations Act for Fiscal Year 2001, also known as the Data Quality Act or Information Quality Act)
- Staff salaries, benefits and administrative funds are provided through the FNS Nutrition Programs Administrations Account and Child Nutrition.
- See the FNS Budget Highlights for CNPP’s NPA allocation (3.29% of total FNS NPA Account).
**Enterprise Workforce Data**

- CNPP employs a workforce of 29 employees made up of dietitians, nutritionists, nutrition scientists, analysts, educators, communicators, economists, public health experts, visual information specialists, librarians and administrative staff. The following is a breakdown of those who are full-time and part-time—
  - Full-time: 28 employees
  - Part-time: 1 employee
- CNPP does not hire seasonal employees.
- CNPP does not employ temporary employees.
- Of our total workforce, 5 employees (17%) are eligible to retire within the next year.
- Our headquarters is located in Alexandria, VA, which houses 93% of our workforce.
- CNPP has no regional offices.
II. Policies and Regulations

Statutory Authorities

The mission and goals of CNPP are implicitly authorized by several statutes:

**Organic Act of 1862** established USDA. The Act was amended in 1977 to include “human nutrition” as a subject area.

**National Agricultural Research, Extension, and Teaching Policy Act of 1977** (see p. 69) identified USDA as the lead agency in the Federal Government for food and agricultural sciences, including human nutrition.

**National Nutrition Monitoring and Related Research Act of 1990** (Public Law 101-445, Section 301 [7 U.S.C. 5341], Title III-October 22, 1990) (NNMRRA) requires the Secretaries of USDA and HHS to publish jointly every 5 years the *Dietary Guidelines for Americans*. The Act requires that any Federal agency proposing to issue guidance on the *Dietary Guidelines* to the general public submit it for review by the Secretaries of USDA and HHS to ensure that it is consistent with the *Dietary Guidelines for Americans*.

https://www.gpo.gov/fdsys/pkg/STATUTE-104/pdf/STATUTE-104-Pg1034.pdf

The **Agricultural Act of 2014**, Section 4204 (H.R. 2642; Public Law 113–79, also known as the 2014 Farm Bill (February 7, 2014) amended section 301(a) of the NNMRA by adding the following: “(3) Pregnant women and young children.—Not later than the 2020 report and in each report thereafter, the Secretaries shall include national nutritional and dietary information and guidelines for pregnant women and children from birth until the age of 2.”

**Federal Advisory Committee Act of 1972** (Public Law 92-463, 5 U.S.C. Appendix 1) (FACA) formally allowed the Federal Government to recognize the merits of seeking the advice and assistance of our nation’s citizens and also sought to assure that advisory committees provide advice that is relevant, objective and open to the public while acting promptly to complete their work and comply with reasonable cost controls and recordkeeping requirements.

http://www.gsa.gov/portal/mediaId/128410/fileName/FACA-Statute-2013.action
Consolidated Appropriations Act of 2001 (Public Law 106-554; H. R. 5658, Section 515(a) of the Treasury and General Government Appropriations Act for Fiscal Year 2001, also known as the Data Quality Act or Information Quality Act) ensures the maximization of quality, objectivity, utility, and integrity of information (including all scientific evidence, data and statistical information) applied to Federal policies and guidance being developed and disseminated. 

http://www.regulationwriters.com/library/DQA.pdf
https://www.whitehouse.gov/sites/default/files/omb/fedreg/reproducible2.pdf

The Food and Nutrition Act of 2008, as amended, was enacted to strengthen the agricultural economy; to help to achieve a fuller and more effective use of food abundances; to provide for improved levels of nutrition among low-income households through a cooperative Federal-State program of food assistance to be operated through normal channels of trade; and for other purposes.

Important Policies and Regulations

1. Significant policies/regulations finalized within the last year:

2. Policies/regulations open for comment or pending clearance with OMB: None

3. Number of new regulations released per year (on average) and the percent deemed significant/economically significant by the Office of Information and Regulatory Affairs (OIRA): None

Overview of the policy/regulation review process

The updating and release of the Dietary Guidelines for Americans is required under the 1990 National Nutrition Monitoring and Related Research Act (NNMRA), which states that every 5 years, the United States Department of Agriculture (USDA) and the Department of Health and Human Services (HHS) must jointly publish a report containing nutritional and dietary information and guidelines for the general public. The NNMRA requires that the Dietary Guidelines be based on the preponderance of current scientific and medical knowledge. Considered voluntary Federal guidance, not regulation, the Dietary Guidelines is not subject to the Federal rulemaking process.

The Dietary Guidelines builds from the previous edition with revisions based on the Scientific Report of the Dietary Guidelines Advisory Committee and consideration of Federal agency and public comments. The Dietary Guidelines is designed for policy makers, and nutrition and health professionals to help all individuals ages 2 years and older.
and their families consume a healthy, nutritionally adequate diet. The information in the Dietary Guidelines is used in developing Federal food, nutrition, and health policies and programs. It also is the basis for Federal nutrition education materials designed for the public and for the nutrition education components of USDA and HHS food programs. The Dietary Guidelines is intended to help prevent disease not treat disease.

Staff from agencies within USDA (CNPP, FNS, ARS, FSIS, REE, NIFA, AMS) and HHS (ODPHP, FDA, CDC, NIH, NIDDK, NHLBI, IHS, ODS, OA) collaborate very closely during each Dietary Guidelines revision process. This revision occurs every 5 years and can be defined as a 3-stage process which includes the Advisory Committee’s review of scientific knowledge current at the time, Federal scientists translating that science into sound food-based guidance to promote health, and then having nutrition communication specialists translating guidance into actionable messages and materials for consumers. For each revision period, the Agency’s trade the role of who is in the administrative lead. For the 2015-2020 Dietary Guidelines for Americans, HHS’s Office of Disease Prevention and Health Promotion was in the administrative lead and for the upcoming 2015-2020 Dietary Guidelines for Americans, USDA’s Center for Nutrition Policy and Promotion will be in the administrative lead. The administrative lead assumes the role of ensuring that the Federal Advisory Committee Act and other authorities are adhered to, performs all administrative tasks related to supporting Committee operations, and bears the responsibility for funding the activities related to developing the Dietary Guidelines. Plans for the next Dietary Guidelines update process will be underway in 2017 (creating the Charter for the Committee, establishing an inter-agency MOU, etc.). When compared to historical timelines, it is anticipated that the next Committee would need to be in place in 2018 in order for the 2020-2025 Dietary Guidelines for Americans to be released in 2020.

III. Congressional Relations and Issues

Overview

Congress has shown interest in the Dietary Guidelines for Americans (Dietary Guidelines or Guidelines), developed and published jointly by USDA’s Center for Nutrition Policy and Promotion (CNPP) and Department of Health and Human Services (HHS) Office of Disease Prevention and Health Promotion (ODPHP). CNPP staff have conducted and continue to conduct briefings with Congressional staff upon request. Interest, particularly
on the House side, has focused largely on the scope of the *Dietary Guidelines*, as well as the process and evidence used to formulate the *Guidelines*. The House and Senate Agriculture and Appropriations Committees have asked to be briefed by CNPP staff on the *Dietary Guidelines* prior to future release.

The Consolidated and Further Continuing Appropriations Act, 2015 included a rider addressed to USDA, appropriating $1 million to be given to the Health and Medicine Division of the National Academy of Medicine (formerly known as the Institute of Medicine) to conduct an independent study on the process of developing the *Dietary Guidelines*. The study is now under way and is expected to be completed by the end of calendar year 2017.

### Initiative | Nature of Relationship | List of Agencies Involved
--- | --- | ---
Interagency Committee on Human Nutrition Research (ICHNR) with three subcommittees on:  
- Dietary Guidance  
- Dietary Reference Intakes  
- National Nutrition Research Roadmap  
Co-led by USDA and HHS. Parent Committee meets 1-2 times per year. Subcommittees meet at least two times per year or more as needed. | ODPHP, HRSA, ACL, NIDDK, FDA, CDC, IHS, OWH, NHLBI  
USDA representation: CNPP, FNS, ARS, NAL, NIFA, FSIS, ERS, AMS  
HHS representation: OASH, ODPHP, OSG, NIH, FDA, CDC  
Other: DoD, USAID

**Healthy Eating Index (HEI)**  
The HEI is a measure of diet quality that assesses conformance to the *Dietary Guidelines for Americans*. USDA’s primary use of the HEI is to monitor the diet quality of the U.S. population and the low-income subpopulation. Collaborations occur at least twice per month. | Updates are made in collaboration with partners at HHS-NIH-NCI

Cross-Agency Nutrition Program Coordination | Led by the Centers for Disease Control and Prevention (CDC), quarterly calls to update on and coordinate among Federal nutrition programs. | USDA-CNPP, FNS and HHS-CDC

Cross-Agency Consumer Nutrition Communication Working Group | Led by the Food and Drug Administration (FDA), monthly calls to update on and coordinate consumer communication. | USDA-CNPP and HHS-FDA, CDC, ODPHP

**MyPlate, MyState**  
Through MyPlate, MyState, USDA is working to make the connection between healthy eating and more than 160,000 farmers and ranchers nationwide that are selling into local markets through grocery stores, local restaurants, schools and other institutions, farmers markets, farm stands and community supported agriculture (CSA) programs. CNPP supports the USDA Know Your Farmer, Know Your Food Initiative, which coordinates the Department’s work to develop strong local and regional food systems. | USDA-CNPP, FNS, AMS, and KYF2

Union representation for all FNCS bargaining unit employees | The American Federation of Government Employees (AFGE) and the National Treasury Employees Union (NTEU) are the recognized. AFGE is the largest federal  
NTEU represents 150,000 workers in 31 departments and agencies
Stakeholder group overview

CNPP manages a Nutrition Communicators Network comprised of organizations across sectors who work with the agency to help promote MyPlate and the *Dietary Guidelines for Americans*. The Network consists of:

- National Strategic Partners
- Community Partners
- MyPlate Campus Ambassadors

Additionally, CNPP also periodically engages with diverse stakeholders represent nutrition and health organizations, public health and medical practitioners and other health professionals, nutrition researchers, non-government organizations, foundations and the private sector.

Recent engagements with stakeholder group

- National Strategic Partners receive a bi-monthly Digest Email alerting to availability of new resources, and other announcements. Partner sharing webinars occur every other month. An in-person partner meeting occurs twice per year.
- Community Partners receive a monthly Digest Email of new resource alerts and announcements.
- Campus Ambassadors receive a monthly Digest Email of new resource alerts and announcements.

V. Top Issues

Hot Topics

As noted in the Overview above, CNPP’s hot topics are related to the *Dietary Guidelines for Americans* and related Congressional interest. The most immediate issue is the study being conducted by the Health and Medicine Division of the National Academy of Medicine. Once the study is complete, USDA, in partnership with HHS, will need to determine how to manage the study findings in the context of initiating the next revision of the Dietary Guidelines for 2020.

WHAT WE DO: OUR MISSION
The Food and Nutrition Service (FNS) works with partners to provide food and nutrition education to people in need in a way that inspires public confidence and supports American agriculture. Programs such as the National School Lunch and Breakfast Programs, the Supplemental Nutrition Assistance Program (SNAP), and Women, Infants and Children (WIC), are among our 15 nutrition assistance programs that aim to increase food security for children and low-income people. We assist expecting mothers, infants and children in child care and schools, local farmers markets and supermarkets, and low-income families turning to food banks for assistance. These investments support health care, education, and a competitive workforce. FNS is within USDA’s Food, Nutrition and Consumer Services (FNCS) mission area.

WHO WE ARE: OUR WORKFORCE
- FNS currently has authorized over 1,500 employees.
- The employees are located at the National Office in Alexandria, Va., and seven Regional Offices in Massachusetts, New Jersey, Georgia, Texas, Illinois, Colorado, and California.

WHO WE SERVE: OUR CONSTITUENTS
FNS works with State agencies that manage school lunch and breakfast programs, WIC offices, farmers markets, SNAP, food banks, Indian reservations, and emergency and disaster relief food programs

KEY UPCOMING DECISIONS
- FNS will need to begin the process of implementing two SNAP rules finalized in late 2016: photo EBT and enhanced retailer standards.
- FNS’ lease for its Park Office Center Headquarters in Alexandria, Va., is set to expire in May 2017. Estimates for either renovation of the current space or for relocation to a new space total about $18 million.

BUDGET HIGHLIGHTS FY 2016
- Almost 94 percent of FNS funding is provided for the mandatory entitlement programs – SNAP and the Child Nutrition Programs. SNAP funding totaled almost $81 billion in FY 2016 and CNP funding totaled about $22 billion.
- WIC is FNS’ largest discretionary program with budget authority of about $6.4 billion in FY 2016.
- SNAP benefits continue to decrease due to over a million fewer participants in FY 2016 as compared to the year before. As of September 1, SNAP benefits are on track to total about $2 billion less than was spent in FY 2015.
I. **Organizational Overview**

**Agency’s Mission/Strategic Plan**

**USDA’s Food and Nutrition Service (FNS) Mission Statement:** We work with partners to provide food and nutrition education to people in need in a way that inspires public confidence and supports American agriculture.

In pursuit of its mission, FNS executes an annual Agency Priorities Plan consisting of multi-year goals and current year objectives that align to our Agency Priorities. FNS uses these objectives as the basis for a corporate priority-setting process that promotes focused and effective management of scarce administrative resources to key initiatives.

FNS’ ongoing responsibilities and performance objectives are captured in USDA’s [Strategic Plan 2014-2018](#). The FNS Agency Priorities Plan (APP) uses USDA’s Strategic Goals 4 and 5 as an organizing structure and consists of multi-year goals and current year objectives that align to the Agency Priorities, support the Department’s Strategic plan, and comply with the Government Performance and Results Modernization Act of 2010 (GPRAMA). The operational foundation for the FNS plan consists of five organizing priorities.

- **Agency Priority 1: Help Americans Eat Smart and Maintain a Healthy Weight**
  FNS works to support and encourage healthful diets through science-based guidance and strong nutrition standards and education.

  Areas of focus include: increases in the average Healthy Eating Index; Healthy People 2020 Health Indicators; Healthy eating and healthy weight program measures; Implementation of the Agriculture Act of 2014 and the Healthy, Hunger-Free Kids Act of 2010 (HHFKA) provisions; Implementation of nutrition education and obesity prevention strategies; and communication and promotion strategies that support the overall priorities.

- **Agency Priority 2: Preserve Public Trust in FNS Programs**
  Reflects USDA’s zero tolerance policy for fraud, waste or abuse in nutrition assistance programs.

  Areas of focus include: Compliance with Federal requirements; National School Lunch Program (NSLP) improper payment rate; Supplemental Nutrition Assistance Program (SNAP) trafficking (retailer and client); Child Nutrition (CN)/Women, Infants and Children (WIC) reauthorization; SNAP quality control; Reauthorization of Farm Bill programs; and communications strategies designed to increase public trust.
Agency Priority 3: FNS is an Efficient, High Performing and Adaptable Organization

Efforts to ensure employees are competent, engaged, and challenged to develop and implement innovative solutions to today’s challenges.

Areas of focus include: Employee Engagement; Recruitment and Retention Strategies; Talent Management; USDA’s Blueprint for Stronger Service; Process Improvement; and Office of Information Technology (OIT) Operational Framework.

Agency Priority 4: Reduce Food Insecurity by Helping Feed Those in Need

Emphasizes efforts to keep nutrition programs in reach of vulnerable populations including young people, the elderly, and those with disabilities.

Areas of focus include: Implementation of Farm Bill provisions; Implementation of SNAP Employment and Training Programs; Increases in Summer meals programs participation; Retention of participation of children after age 1 in WIC; Communicating messages regarding program access; Food Distribution Program on Indian Reservations (FDPIR) administrative funding; Food Safety Training; Farmers’ Market Nutrition Program (FMNP) Participation Barriers; Able-Bodied Adults Without Dependents (ABAWD) Policies; and Community Engagement Strategies.

Agency Priority 5: Civil Rights: Ensuring Access, Equality and Respect in FNS Programs and Activities

FNS’ commitment to oversight of civil rights laws, policies and directives related to nutrition programs is reflected in this priority.

Areas of focus include: Compliance Reviews; Voluntary Resolution Agreements; Internal Program Complaint Processing; and Equal Employment Opportunity (EEO) Compliance and Training.

Key mission delivery performance measures

In support of USDA’s Strategic Plan, FNS provides data on the performance measures shared below with USDA’s Office of Budget and Analysis (OBPA) and the Office of Management and Budget on a quarterly basis. These key performance indicators are included in budget tan sheets which are publicly available annually.
Organization’s History

FNS was established August 8, 1969, by Secretary's Memorandum No. 1659 and Supplement 1 pursuant to the authority contained in 5 U.S.C. 301 and the Reorganization Plan No. 2 of 1953. FNS is the Federal Agency responsible for managing the 15 domestic nutrition assistance programs. Its mission is to increase food security and reduce hunger in partnership with cooperating organizations by providing children and other low-income Americans access to food, a healthful diet, and nutrition education.

Over the past half-century – beginning with the National School Lunch Program in 1946 – the Nation has gradually built an array of nutrition assistance programs designed to help the most vulnerable populations meet their food needs. Taken together, these programs form a nationwide safety net supporting low-income families and individuals in their efforts to escape food insecurity and hunger and achieve healthy, nutritious diets. Currently, the programs administered by FNS touch the lives of one in four Americans over the course of a year.
Biographies of career staff in key leadership positions

Telora T. Dean
Associate Administrator and Chief Operating Officer
703-305-2062, Telora.Dean@fns.usda.gov

Telora T. Dean is the Associate Administrator and Chief Operating Officer (AA/COO) for USDA’s Food and Nutrition Service (FNS). Dean shares full responsibility with the Agency’s Administrator for the development, design, operation and improvement of the strategies and systems that create and deliver the Agency’s programs and internal/external services through a $100B program and operations portfolio. As the AA/COO, she ensures the proper balance between efficiencies, effectiveness and results and creates maximum value for customers, stakeholders and taxpayers.

Prior to becoming the AA/COO, Dean served as the Deputy Administrator for Management. In that role, she was the executive lead for the Office of Management (OM) and effected a unified operation to deliver outstanding administrative services. She managed the full complement of components comprising FNS’ management operations—Human Resources, Acquisition Management, Logistics and Facilities Management, Information Systems and Employee Engagement Initiatives.

Prior to joining FNS, Dean provided executive leadership to a number of USDA agencies. As the Farm and Foreign Agricultural Service’s Chief Human Capital Officer, she was responsible for the overall administration, coordination and evaluation of human resource functions for three mission area agencies, supporting a customer base of over 16,000 employees nationally and abroad. During her tenure as Rural Development’s Acting Deputy Administrator for Management, Dean was an executive principal in providing direction and oversight to a $628M annual budget and a $38B loan portfolio to support efficient program delivery and services to rural America.

Dean holds a bachelor’s degree from Alabama Agriculture and Mechanical University and a master’s degree from Marymount University. She counts Harvard University, American University and the Brookings Institute, as organizations in her accomplished executive toolkit.

Yvette Jackson
Associate Administrator for Regional Operations and Support
703-305-2064, Yvette.Jackson@fns.usda.gov

Yvette Jackson is the Associate Administrator for Regional Operations and Support for USDA’s Food and Nutrition Service (FNS). As Associate Administrator, she is responsible for seven Regional Offices and three offices at FNS Headquarters. The Regional Offices provide oversight for program operations and technical assistance to State and local partners who administer the Agency’s 15 nutrition assistance programs. The Headquarters Offices are responsible for retailer management, coordinating disaster relief during local and national emergencies, and providing
oversight of State computer systems implementation. Collectively, Jackson is responsible for about 57% of the Agency’s workforce.

Prior to her appointment as Associate Administrator, Jackson served as the Regional Administrator for the Mid-Atlantic Regional Office of FNS.

Jackson brings over 35 years of experience with Federal and State agencies including the Social Security Administration, where she served as the Deputy Commissioner for Finance, Assessment and Management and the Chief Financial Officer; and the Pennsylvania Department of Public Welfare, where she served in several senior executive positions, including Deputy Secretary for Income Maintenance Programs.

Jackson formerly served as both the FNS Administrator and the Deputy Administrator for the Food Stamp Program, where she was instrumental in preserving the national nutrition safety net during welfare reform. In addition to her extensive public service experience, she was the National Health and Human Services Practice Lead for BearingPoint, a global IT and business consulting firm that provided services to Federal, State and local human service agencies.

She holds a Bachelor of Social Welfare from Temple University and a Master of Social Work from Rutgers University.

Jessica Shahin
Associate Administrator for Supplemental Nutrition Assistance Program
703-305-2022, Jessica.Shahin@fns.usda.gov

Jessica Shahin is the Associate Administrator for Supplemental Nutrition Assistance Program (SNAP) (formerly known as the Food Stamp Program) for USDA’s Food and Nutrition Service (FNS).

Shahin has over 20 years of experience with SNAP at the State and Federal levels. She served on the original Texas Electronic Benefit Transfer Team as Director of Information Management for the Department of Human Services, was Executive Assistant to the Deputy Commissioner for client self-support programs and was later named Director of Interagency Policy for the agency’s Office of Government Relations. In this capacity, she developed an expertise for effective integration of various human service programs in both policy and management.

Beginning in January 2004, Shahin served as Acting Associate Administrator and Deputy Associate Administrator for the Food Stamp Program/SNAP. She became Associate Administrator for SNAP in January 2009.

Shahin received a master’s degree in Social Work from the University of Texas at Austin and taught public policy for several years as an adjunct professor at the school.
Diane M. Kriviski
Deputy Administrator for Supplemental Nutrition and Safety Programs
703-305-2052, Diane.Kriviski@fns.usda.gov

Diane M. Kriviski is the Deputy Administrator for the Supplemental Nutrition and Safety (SNAS) Programs for USDA’s Food and Nutrition Service (FNS). She is responsible for administration of USDA’s food distribution programs including USDA Foods for school lunches, the Food Distribution Program on Indian Reservations, the Commodity Supplemental Food Program, and the Emergency Food Assistance Program. Kriviski is also responsible for USDA’s Supplemental Food Programs Division including the Special Supplemental Nutrition Program for Women, Infants and Children (WIC); WIC and Senior Farmers’ Market Nutrition programs; and the Office of Food Safety. These programs are part of the nutrition safety net that FNS provides to children and needy families through better access to food, a more healthful diet, and nutrition education.

Kriviski has served FNS for over 30 years at all levels of the organization. Early in her career, she worked with various FNS programs while in the Child Nutrition Division and Food Distribution Division as a grant officer, assisting in the creation of the Senior Farmers’ Market Nutrition Program and awarding of the first grants to help implement WIC EBT.

Kriviski has also held key positions in Financial Management, serving as Acting Chief Financial Officer and Budget Officer, as well as Deputy Budget Officer. In that capacity, she provided leadership in the development and submission of the FNS annual fiscal budget for its 15 nutrition assistance programs, totaling over $60B at that time. Prior to her current position, Kriviski served as the Deputy Associate Administrator for Special Nutrition Programs at FNS, helping to lead the effort to implement the Healthy, Hunger-Free Kids Act of 2010, the legislative centerpiece of First Lady Michelle Obama’s Let’s Move! initiative.

Cindy Long
Deputy Administrator for Child Nutrition Programs
703-305-2054, Cindy.Long@fns.usda.gov

Cindy Long is the Deputy Administrator for Child Nutrition Programs (CN) for USDA’s Food and Nutrition Service. She is responsible for all aspects of Federal administration of the Child Nutrition programs, including the National School Lunch Program, School Breakfast Program, Child and Adult Care Food Program, Summer Food Service Program, and the Fresh Fruit and Vegetable Program. These programs provide over $20B in nutrition assistance to children and families. In this role she has led FNS’ implementation of the Healthy, Hunger-Free Kids Act, the most significant restructuring of these programs in decades and a legislative centerpiece of the Administration’s nutrition initiatives. She has also led a major restructuring of Child Nutrition program staff and resource management.

Long has served FNS in various positions since joining the agency in 1991. Prior to joining the Child Nutrition programs in 2008, she served in the Office of Analysis, Nutrition and Evaluation (now known as Office of Policy Support) providing leadership to FNS research and analysis.
United States Department of Agriculture  
2016 Presidential Transition  
Food and Nutrition Service (FNS)

efforts in support of all of the domestic nutrition assistance programs. She began her Federal government career in 1988 with the Office of Management and Budget.

Long possesses a MPA in Public Policy and Economics from Princeton University’s Woodrow Wilson School of Public and International Affairs, and a BA in Economics from the University of Notre Dame.

Richard Lucas  
Deputy Administrator for Policy Support  
703-305-2017, Richard.Lucas@fns.usda.gov

Richard Lucas is the Deputy Administrator for Office of Policy Support (OPS) for USDA’s Food and Nutrition Service (FNS). In that capacity, he is responsible for research and analysis that informs policymaking for, and the management of the Federal nutrition assistance programs. These programs, including the Supplemental Nutrition Assistance Program (SNAP), the school meals programs, and the WIC program, are currently budgeted at over $100 billion annually and serve one in four Americans in the course of a year.

Lucas’s team in OPS includes professionals from a wide range of disciplines, including economists, statisticians, program evaluators, sociologists, and nutritionists. They work closely with policymakers and program officials to find answers to critical questions to make nutrition assistance programs more effective; estimate cost and participation impacts of legislative, budgetary and regulatory changes; evaluate the impacts of programs and program components on food security, diet quality, and other outcomes; analyze extant data to better target strategies and track performance; and demonstrate and test potential program improvements.

Lucas has worked at FNS since 1994 and holds degrees from Brown University and Stanford University.

Cristina Chiappe  
Deputy Administrator for Management  
703-305-2030, Cristina.Chiappe@fns.usda.gov

Cristina Chiappe serves as the Deputy Administrator for Management for USDA’s Food and Nutrition Service (FNS). She oversees all aspects of human capital management, acquisition management, operations and facilities, and information management in an agency with an annual budget of $110 billion.

Chiappe came to FNS from USDA’s Rural Development (RD) in January of 2015 as part of a developmental assignment for the Senior Executive Service (SES) Candidate Development Program (CDP) to serve as Director of Human Resources, Deputy Chief Information Officer, Associate Deputy Chief Financial Officer, and as Chief Staff Officer to the Chief Operating Officer. She also served with 23 other Federal executives as the USDA representative on the White House Advisory Council on SES Reform, which resulted in the 2016 Executive Order: “Strengthening the Senior Executive Service.”
At RD, Chiappe served on various leadership roles in operations and management for RD and Departmental Management. As the Chief of Staff in the Rural Housing Service (RHS), she provided direct oversight in the daily operations of an agency with an annual program funding of $26B, an annual administrative budget of $30M, and a Centralized Servicing Center with a loan portfolio of $100B. As the Director of Program Support, she led the centralization of RD’s technical support functions and the centralization of the Single-Family Housing guaranteed loan program which strategically leveraged staff resources and infused $60B of capital into rural America. Additionally, Chiappe has served as Senior Policy Advisor in the Rural Housing Service, Special Assistant to the Assistant Secretary for Civil Rights, and Special Assistant to the Assistant Secretary for Administration.

In addition to the SES CDP, Chiappe has completed the Federal Executive Institute, American University’s Executive Leadership Program and Harvard Law School’s Program on Negotiation for Executives. She holds a B.A. and M.Ed. from the University of Virginia.

David G. Burr  
Chief Financial Officer  
703-605-3220, David.Burr@fns.usda.gov

David Burr is the Chief Financial Officer (CFO) for USDA’s Food and Nutrition Service (FNS). He was named FNS’ CFO in September of 2011. In this capacity, he is responsible for overseeing the administration and ensuring the fiscal integrity of approximately $110B in program grants and $400M in administrative funding.

The majority of Burr’s Federal career has been with FNS. In June 2010, he was the Director of the Program Accountability and Administration Division of the Supplemental Nutrition Assistance Program (SNAP). Prior to assuming this position, for approximately 10 years, he served as FNS’ Budget Director where he coordinated budget formulation and execution, as well as program data administration for all of the domestic nutrition assistance programs. Burr began his career with FNS as an economist, developing program participation and cost forecasts primarily in support of financial management. Before joining FNS, he served as an operation research analyst with the Naval Air Systems Command for four years.

Burr is a graduate of West Virginia University and studied economics at the graduate level at Virginia Polytechnic Institute and State University.

Kimberly Jackson  
Chief Information Officer  
703-605-4318, Kimberly.Jackson@fns.usda.gov

Kimberly Jackson is the Chief Information Officer (CIO) for USDA’s Food and Nutrition Service (FNS). Jackson manages and executes a $60M infrastructure and operations and maintenance budget with over 62 Federal staff years supporting the FNS vision of ending hunger and improving nutrition in America.
As CIO, Jackson leads forward-thinking and innovative strategic technology planning and operational delivery, providing value to FNS customers and stakeholders through technology services and mission-enabling capabilities. Jackson positions FNS to achieve mission success through delivery of cost effective emerging technologies, and strategic procurement of hardware, software, and solutions.

Prior to becoming CIO, Jackson served as the Chief Technology Officer (CTO) for the Office of Biometric Identity Management (OBIM) in the DHS National Protection and Programs Directorate (NPPD). As CTO, she served as OBIM’s senior IT official working to ensure compliance with Federal policy related to IT systems management, enterprise architecture, and data management. Jackson leveraged emerging technologies to recommend improvements to major enterprise applications, identify tools to optimize IT system performance, and develop and promote collaborative/joint technology solutions to improve services to enhance mission effectiveness.

Jackson is a graduate of the DHS SES Candidate Development Program, a DHS Level III Program Manager, a certified Project Management Professional® and a graduate of the Federal Executive Institute. She holds a Master of Business Administration from the University of Maryland and a Bachelor of Arts from the University of Virginia.

Robin D. Bailey Jr.
Regional Administrator, Southeast Regional Office
404-562-1800, Robin.Bailey@fns.usda.gov

Robin D. Bailey Jr. has over 29 years of faithful service to America in various senior levels in the Department of the Air Force and the U.S. Department of Agriculture. As USDA’s Food and Nutrition Service (FNS) Regional Administrator for the Southeast (SERO), he provides executive direction and leadership while orchestrating the execution of all 15 Federal nutrition programs, which provide annual benefits in excess of $25 billion through cooperating State agencies in Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee.

Bailey most recently served as Deputy Administrator for Management and Information Technology for FNS in the National Office. In this role, he provided executive oversight of Information Technology, Human Resources, Contract Management, Logistics and Facility Services. Prior to FNS, he served as Director of Human Resources Management, U.S. Forest Service, in Albuquerque, New Mexico, where he led over 600 personnel who provided Human Resources Management policy and operational services for approximately 50,000 permanent, temporary and seasonal employees.

Bailey is an Air Force veteran and served as an Air Force Civilian in a wide range of leadership positions, including the Civilian Deputy and Staff Director to the 96th Air Base Wing Commander, Eglin Air Force Base, Fla. In this capacity, he co-led more than 5,000 men and women in providing essential base operating support and services for more than 20,000 personnel, six wings, and 50 associate units at the Department of Defense’s largest installation.
Bailey holds a Master of Arts in Communication from the University of Oklahoma. He was selected as a member of the Senior Executive Service in 2009 and appointed by the Secretary of Agriculture as an Executive Resources Board Member in 2013.

Darlene L. Barnes  
Regional Administrator, Mountain Plains Regional Office  
303-844-0300, Darlene.Barnes@fns.usda.gov

Darlene Barnes was named Regional Administrator for USDA’s Food and Nutrition Service (FNS) Mountain Plains Region (MPRO) in February 2004, after serving as Deputy Regional Administrator since June 1998.

As Regional Administrator, Barnes oversees administration of the Supplemental Nutrition Assistance Program (SNAP); school lunch and breakfast programs; the Summer Meals Program; Women, Infants and Children (WIC); and 10 other nutrition assistance programs in a 10-state region comprising Colorado, Iowa, Kansas, Missouri, Montana, Nebraska, North Dakota, South Dakota, Utah and Wyoming. Located in these states are 30 tribal organizations that she works with to administer the Federal nutrition assistance programs. Barnes manages a staff of 110 FNS employees and provides leadership, oversight and technical assistance for a budget of over $6.5B annually.

Her USDA career began in 1976 with the Rural Electrification Administration. She then continued with the Department at the National Information Technology Center and the Animal and Plant Health Inspection Service (APHIS). Barnes joined FNS in 1990, in governmental and public affairs at the National Office. Under her leadership, FNS’ Public Affairs staff won the Public Relations Society of America’s 1997 Silver Anvil Award for its Team Nutrition grassroots information campaign.

Barnes studied communications at Northern Virginia Community College, the University of Maryland and Colorado State University. She is a graduate of the Federal Executive Institute’s senior leadership program, “Leadership for a Democratic Society.” She helped sponsor the Excellence in Government Awards program, which recognizes public servants at the Federal, state and local levels.

Barnes is an avid volunteer with nutrition assistance organizations and, in June 2012, received the USDA “Unsung Hero” award from Secretary Tom Vilsack, who characterized the honorees as “excellent representatives of the 100,000 USDA employees.”

She has been a member of Hunger Free Colorado and provided leadership for the first Hunger Summit in Colorado. She is the former chair and current executive committee member of the Colorado Federal Executive Board.
Patricia Dombroski
Regional Administrator, Mid-Atlantic Regional Office
609-259-5025, Patricia.Dombroski@fns.usda.gov

Patricia Dombroski is the Administrator of USDA’s Food and Nutrition Service (FNS) Mid-Atlantic Region (MARO). In that capacity, she provides leadership for 15 domestic nutrition assistance programs in six states, the District of Columbia, Puerto Rico and the Virgin Islands. Benefit and administrative funds for MARO nutrition programs exceed $12 billion and reach close to 30 million people each month.

Prior to her current position, Dombroski served as Deputy Regional Administrator for MARO. Dombroski has had the unique opportunity to direct all of the Agency’s assistance programs throughout her tenure with FNS. She has served as MARO Director of the WIC Program, the Food Stamp Program (now known as the Supplemental Nutrition Assistance Program) and the Special Nutrition Programs. Dombroski also led the agency’s largest field office, managing more than 15,000 food stamp retailers and the Federally-operated Summer Food Service Program in the State of New York.

Tim English
Regional Administrator, Midwest Regional Office
312-353-6663, Tim.English@fns.usda.gov

Tim English is the Regional Administrator of the Midwest Region (MWRO) of USDA’s Food and Nutrition Service (FNS). Under his leadership, MWRO provides oversight of program operations and technical assistance to state and local partners who administer the Agency’s 15 nutrition assistance programs. He oversees the administration of these Federal nutrition assistance programs with nutritional benefits and services valued at over $15 billion in Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin. English commits his talents and energies to creating positive change in programs serving our nation’s most vulnerable low income families and elderly.

Prior to his appointment as Regional Administrator, English served as Deputy Regional Administrator from June 2010 to January 2013, providing leadership in program operations. From March 2003-June 2010, he served as MWRO Supplemental Nutrition Assistance Program (SNAP) Director and was responsible for overseeing SNAP operations in the Midwest region.

He is a graduate of Northern Illinois University, as well as a graduate of the American University School of Public Affairs Key Executive Leadership Certificate Program in Washington, D.C.

William E. Ludwig
Regional Administrator, Southwest Regional Office
214-290-9800, Williams.Ludwig@fns.usda.gov

William “Bill” Ludwig is the Regional Administrator of USDA’s Food and Nutrition Service’s (FNS) Southwest Region (SWRO). He oversees 15 Federal nutrition assistance programs in
Arkansas, Louisiana, New Mexico, Oklahoma, Texas and 26 tribal organizations with a regional budget of nearly $14 billion. These programs include the Supplemental Nutrition Assistance Program; the National School Lunch and School Breakfast Programs; the Special Supplemental Food Program for Women, Infants and Children (WIC); and other nutrition assistance programs.

His mission is to ensure that children throughout the region have access to safe, nutritious and balanced meals. Ludwig is a strong advocate of partnerships, which he believes are critical to accomplishing the region’s mission of reaching the youngest and most vulnerable populations.

During his tenure, Ludwig has built a solid network of more than 300 partner organizations at the Federal, State, Tribal and local levels. These connections have resulted in a greater awareness of FNS’ programs and have generated a variety of innovative ways to provide healthy food to families and children at-risk of hunger.

Ludwig believes in leaning forward and stretching across barriers to help those in need, whether they are in an urban or rural community, through programs such as the WIC/Medical Model, the Community Eligibility Program, the Summer Food Service Program and Mobile Farmers Markets.

Staying connected is important to the business of fighting hunger, so in conjunction with his travel throughout the region, he and his team have developed creative ways to keep their audiences informed through social media, e-newsletters and partner calls.

Ludwig earned his Bachelor of Arts from Louisiana State University and Master’s in Business Administration from Louisiana Tech University.

Jesus Mendoza Jr.
Regional Administrator, Western Regional Office
415-705-1337, Jesus.Mendoza@fns.usda.gov

Jesus Mendoza Jr. serves as the Regional Administrator for USDA’s Food and Nutrition Service (FNS), Western Regional Office (WRO). In this capacity, Mendoza provides leadership, oversight and technical assistance for 15 Federal nutrition assistance programs operating within eight states (Alaska, Arizona, California, Hawaii, Idaho, Nevada, Oregon, and Washington) three territories (American Samoa, Commonwealth of the Northern Mariana Islands, and Guam) and 35 tribal organizations. Mendoza leads an 88 person staff and oversight of a budget exceeding $20 billion.

Mendoza began his career with FNS Western Regional Office in 2002 as a Program Specialist with the Special Nutrition Programs (SNP) and served as SNP Section Chief and Regional Director and Deputy Regional Administrator prior to his current position. Before joining the Agency, Mendoza served as Program Officer for International Planned Parenthood and worked for the World Wildlife Fund, Latin America and Caribbean Region offices. Mendoza also served in the Peace Corps in Ecuador and Morocco and the U.S. Army.
Mendoza earned a Bachelor’s degree in Political Science from Southwest Texas State University and Master’s degree in International Development Project Management from Clark University in Worcester, Mass.

**Kurt Messner**
**Regional Administrator, Northeast Regional Office**
617-565-3670, Kurt.Messner@fns.usda.gov

Kurt Messner is the Regional Administrator for USDA’s Food and Nutrition Service (FNS), Northeast Regional Office (NERO). In this role, he is responsible for the implementation of the Agency’s 15 nutrition assistance programs throughout the Northeast Region, which include the six states of New England and the state of New York. Working in partnership with state and local organizations and providing technical assistance to these partners, NERO oversees the administration of the full range of FNS programs.

Messner began his career at FNS as the Director of Financial Management at NERO in 2007. In that role, he was responsible for fiscal oversight of FNS programs, and administrative and organizational support. Before joining FNS, Messner served as the Regional Director of Operations and the Deputy Regional Director for Housing with the U.S. Department of Housing and Urban Development (HUD) in Boston. Messner was appointed Deputy Regional Administrator for NERO in May 2013 and served as Acting Regional Administrator beginning in May 2014.

Messner has been nominated for two Excellence in Government Awards from the Greater Boston Federal Executive Board – in 1995 as a member of a team recognized for their work with workforce planning and development, and again in 2001 for Federal Employee of the Year. Messner received a HUD Secretary Representative’s award in 2001 for outstanding achievement and contribution to the Agency’s mission; and in 2006 he received a Massachusetts Governor’s Special Recognition Award for his contributions to the Gulf Relief efforts related to Hurricane Katrina.

Messner holds a B.S. in Business Management and M.B.A. from Regis University. He has also completed the Executive Leadership Program at Harvard University’s Kennedy School of Government.
Audrey Rowe  
**Administrator for the Food and Nutrition Service**  
703-305-2060, Audrey.Rowe@fns.usda.gov

Audrey Rowe is the Administrator for USDA’s Food and Nutrition Service (FNS) in Washington, D.C. FNS provides children and needy families with better access to food and a more healthful diet through its 15 nutrition assistance programs and nutrition education efforts.

She brings to the Federal government over 20 years of experience in human services policy development, fiscal management, program design, service delivery and marketing with a particular focus on vulnerable populations, low income women, children and youth.

Most recently, Rowe served as Deputy Administrator for Special Nutrition Programs at FNS, leading the effort to pass the Healthy, Hunger-Free Kids Act of 2010, the legislative centerpiece of First Lady Michelle Obama’s *Let’s Move!* initiative to end childhood obesity in a generation.

Rowe has extensive experience working on issues related to FNS programs. Her leadership has included roles as Human Resources Administrator in New Haven, Connecticut, and Social Services Commissioner for the State of Connecticut and the District of Columbia. In addition, she served as Executive Vice President and Chief Operating Officer for the National Urban League.

In private industry, Rowe served as Senior Vice President and Managing Director for the Children and Family Services division for Affiliated Computer Service (ACS), formerly Lockheed Martin IMS. In this capacity, she spearheaded industry leadership in the realms of child support payment processing and enforcement and the electronic dissemination of public assistance benefits, including implementing Electronic Benefit Transfer (EBT) programs in over 20 states. Additionally, Rowe was appointed Senior Vice President for Public Affairs where she managed the corporation’s government relations, philanthropy and community relation programs.

Rowe’s publications include:

- The Feminization of Poverty: An Issue for the 90’s, Yale University Journal of Law and Feminism, Fall 1991

Rowe is a graduate of Federal City College and was a fellow at the John F. Kennedy School of Government Institute of Politics at Harvard University.

Workforce by Program Area

- NPA: 55%
- CNPP: 21%
- Child Nutrition: 17%
- WIC: 4%
- SNAP: 2%
- CAP: 0%
The following enterprise workforce data (as of September 1, 2016) covers FNS and the Center for Nutrition Policy and Promotion (CNPP).

- FNCS has 1,568 full-time employees, 7 part-time employees and one intermittent employee for a total workforce of 1,576.
- Of the total FNCS workforce, 16.7% are eligible to retire within the next year.
- The FNCS Headquarters Office is located in Alexandria, VA which houses 42% of the total number of employees to include:
  - 670 FNS employees; and
  - 29 CNPP employees.
- The Retailer Operations Division (ROD) has 235 employees located throughout the United States. ROD works to achieve the FNS mission by effectively authorizing, investigating, and sanctioning retailers thereby ensuring the stewardship of SNAP funds and inspiring public confidence.
- FNS has seven Regional Offices that work with state and community partners to increase food security and reduce hunger, while focusing on increasing awareness and access to our programs to under-served populations:
  - The Mid-Atlantic Regional Office is located in Robbinsville, NJ and has 108 employees;
  - The Midwest Regional Office is located in Chicago, IL and has 84 employees;
  - The Mountain Plains Regional Office is located in Denver, CO and has 101 employees;
  - The Northeast Regional office is located in Boston, MA and has 89 employees;
  - The Southeast Regional Office is located in Atlanta, GA and has 97 employees;
  - The Southwest Regional Office is located in Dallas, TX and has 75 employees; and
  - The Western Regional Office is located in San Francisco, CA and has 88 employees.
- FNCS has 1,151 employees in 13 mission critical occupations.
II. Policies and Regulations

Statutory Authorities

The legal authority for most nutrition assistance programs administered by FNS derives from the following statutes:

- The Food and Nutrition Act of 2008 as amended (FNA), governing SNAP and some food distribution programs;
- The Richard B. Russell National School Lunch Act of 1946 as amended (NSLA), governing the school meals programs, the Child and Adult Care Food Program, and the Fresh Fruit and Vegetable Program;
- The Child Nutrition Act of 1966 as amended (CNA), governing the WIC program, the Special Milk Program, and some aspects of the school meals programs;
- The Emergency Food Assistance Act of 1983 (EFAA), which authorizes The Emergency Food Assistance Program;
- The Agriculture and Consumer Protection Act of 1973 (ACPA), which authorizes the Commodity Supplemental Food Program;
- Agriculture and Food Act of 1981 (AFA), which authorizes distribution of surplus commodities; and
- Farm Security and Rural Investment Act of 2002 (FSRIA), which authorizes the Senior Farmers’ Market Nutrition Program.

Each FNS program is reauthorized through the Farm Bill process, which covers the FNA, EFAA, ACPA, AFA, and FSRIA, or the Child Nutrition reauthorization process, which covers the NSLA and CNA. The Agricultural Act of 2014 reauthorized FNA programs through fiscal year 2018. The Healthy, Hunger-Free Kids Act of 2010 reauthorized most provisions of the NSLA and CNA through fiscal year 2015. Though this reauthorization has now lapsed, the NSLA and CNA programs continue to operate under their permanent authorities and with the appropriation of funding.

Important Policies and Regulations

Below is a list of regulations which were finalized within the last year, are open for comment or are pending clearance with OMB:
## United States Department of Agriculture  
### 2016 Presidential Transition  
### Food and Nutrition Service (FNS)

**Finalized within the last year (8/1/2015 – 7/31/2016)**

### WIC

|-----------------------------------------------------------------------|-----------------|----------------------------------------------------------------------------------------|

Since 2006, FNS has released an average of 8 new regulations (i.e., regulations where no prior stage of rulemaking for the same rule was released in earlier years) annually. Of these rules, 49.4% were deemed significant/economically significant by OMB’s Office of Information and Regulatory Affairs (OIRA).
Overview of the policy/regulation review process

Federal nutrition assistance programs operate as partnerships between FNS and the state and local organizations that interact directly with program participants. States voluntarily enter into agreements with the Federal Government to operate programs according to Federal standards in exchange for funding:

- **Supplemental Nutrition Assistance Program (SNAP)** enables low-income households to improve their diets by increasing food purchasing power using benefits that are redeemed at retail grocery stores across the country. SNAP benefits can also be redeemed at farmers’ markets; the number of markets and direct marketing farmers authorized to accept SNAP has grown substantially in recent years. State agencies operate the program according to national eligibility and benefit standards set by Federal law and regulations. They also provide nutrition education to clients, and are responsible for ensuring integrity in certification and benefit issuance. FNS has the lead in managing retailers authorized to redeem benefits, to ensure that they operate the program effectively and with integrity. Benefits are 100 percent Federally-financed, while administrative costs are shared between the Federal and state governments. The Food Distribution Program on Indian Reservations (FDPIR), an alternative to SNAP providing foods directly to low-income households living on Indian reservations, and to American Indian households residing in other approved areas. Puerto Rico, American Samoa, and the Commonwealth of the Northern Mariana Islands (CNMI) receive block grant funds to provide nutrition assistance in lieu of SNAP.

- **Child Nutrition Programs (CNP):** The major goal of these programs – the National School Lunch (NSLP), School Breakfast (SBP), Child and Adult Care Food (CACFP), Summer Food Service (SFSP), and Special Milk (SMP) Programs – is to support schools, private nonprofit organizations and child care institutions in meeting the nutritional needs of the children and adults they serve.

  The programs provide reimbursement to state and local governments and private nonprofit organizations for meals and snacks served to children in schools, child care institutions, and after-school care programs; the program also supports meals served in adult day care centers. FNS provides cash and commodities on a per-meal basis to offset the cost of food service at the local level, as well as a significant portion of state and local administrative expenses. FNS also provides training, technical assistance, and nutrition education. Payments are substantially higher for meals served free or at a reduced price to children from low-income families; nearly 90 percent of program funding supports service to low-income children. In addition, the Fresh Fruit and Vegetable Program provides free fresh fruits and vegetables to school children in selected schools in low-income areas during the school day.

- **Special Supplemental Nutrition Program for Women, Infants and Children (WIC):** WIC’s major objective is to address the nutrition needs of low-income pregnant, breastfeeding and postpartum women, infants and children up to five years of age who are found to be at nutritional risk. WIC provides funding to states for foods containing
nutrients determined by research to be lacking in the target group’s diet, health care referrals, and nutrition education, along with administrative costs. States operate the program pursuant to plans approved by FNS. WIC is augmented in some localities by the Farmers’ Market Nutrition Program, which provides WIC participants with coupons to purchase fresh produce at farmers markets.

- **Commodity Assistance Programs**: These programs provide domestically-produced, high quality foods, some of which are in surplus, for use in the Child Nutrition Programs and for distribution to food banks and other emergency feeding organizations. In addition, the Commodity Supplemental Food Program (CSFP) provides food packages to low-income elderly, while the Senior Farmers’ Market Nutrition Program provides this same population with coupons to purchase fresh produce at farmers markets. USDA also purchases and distributes food commodities for assistance in major disasters or emergencies when other food supplies are not readily available.

FNS is responsible for implementing statutory requirements that set national program standards for eligibility and benefits, providing Federal funding to state and local partners, and for conducting monitoring and evaluation activities to make sure that program structures and policies are properly implemented and effective in meeting program missions. State and local organizations are responsible for delivering benefits efficiently, effectively, and in a manner consistent with federal regulations. An exception to this approach is the authorization and monitoring of SNAP retailers; FNS sets national policies and manages the operational aspects of retailer participation in the Program.

Regulations are thus largely focused on adjusting state requirements for administering the programs, including changes to eligibility standards and benefit levels or standards, integrity and other operational requirements. Because the authorizing statutes are fairly prescriptive, regulations typically change in response to the reauthorization process, and regulatory review and revision outside of statutory change is usually integrated into reauthorization implementation.

Nutrition assistance policy issues generally reflect efforts to balance competing imperatives – access to and nutritional content of program benefits, accuracy and integrity of program administration, and budgetary costs. FNS identifies policy and operational priorities for regulatory change through its ongoing interactions with state partners and local cooperators in the process of program administration, as well as interactions with key stakeholder and advocacy organizations such as the American Public Human Services Association, the School Nutrition Association, the American Commodity Distribution Association, and the National WIC Association. Because of the size, costs, and high public profile of these programs, the policy and regulatory change process can be contentious.
GAO and OIG Audits

**GAO Audits**

- **WIC Program: Improved Oversight of Income Eligibility Determination Needed (GAO-13-290)**
  - **Date Issued:** March 8, 2013
  - **Hyperlink to audit:** [http://www.gao.gov/assets/660/652480.pdf](http://www.gao.gov/assets/660/652480.pdf)
  - **Audit Objectives:** Audit request made by the House Committee on Education and the Workforce and the Senate Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies. GAO assessed: (1) how do state and local criteria for determining WIC income eligibility vary; (2) to what extent are individuals who would otherwise be ineligible for WIC deemed eligible due to their participation in other programs; and (3) how does USDA assist and monitor state determination of WIC income eligibility.
  - **Audit Summary:** GAO reviewed federal laws and regulations; analyzed USDA’s national data from 2010, recent survey findings, and monitoring reports; reviewed WIC policy manuals from 10 states chosen to provide population size and geographic diversity; and interviewed federal, state, and local officials. GAO recommended that USDA develop a timeline for reviewing its monitoring reports to assess national program risks and target assistance. USDA agreed with GAO’s recommendation. FNS staff developed a process to use an automated report to identify areas in need of correction or improvement that were found during WIC Management Evaluations conducted across the country. Using the output report, FNS will assess the frequency of Management Evaluation findings in each policy and program area nationwide and respond by providing policy clarification, training, or other corrective actions to states. The report went into production on November 1, 2013, and FNS reported that staff will review the reports quarterly.
  - **Current Status:** Closed

- **School Lunch: Implementing Nutrition Changes Was Challenging and Clarification of Oversight Requirements Is Needed (GAO-14-104)**
  - **Date Issued:** February 27, 2014
  - **Audit Objectives:** Request made by the House Committee on Education and the Workforce. GAO assessed: (1) lunch participation trends; (2) challenges School Food Authorities’ (SFAs) faced implementing the changes, if any; and (3) USDA’s assistance with and oversight of the changes.
Audit Summary: To address these areas, GAO used several methods, including review of federal laws, regulations, and guidance; analysis of USDA’s lunch participation data; a national survey of state child nutrition program directors; and site visits to eight school districts selected to provide variation in geographic location and certain school district and food service characteristics. To improve program integrity, GAO recommends that USDA clarify the need to document noncompliance issues found during state reviews of SFAs and complete efforts to assess states’ assistance needs related to oversight of financial management. USDA generally agreed with GAO’s recommendations.

Current Status: Closed

- School-Meals Programs: USDA Has Enhanced Controls, but Additional Verification Could Help Ensure Legitimate Program Access (GAO-14-262)
  - Date Issued: June 16, 2014
  - Audit Objectives: GAO began this work on the initiative of the Comptroller General. GAO assessed: (1) steps taken to help identify and prevent ineligible beneficiaries from receiving benefits in school-meal programs; and (2) what opportunities exist to strengthen USDA’s oversight of the school-meals programs.
  - Audit Summary: GAO reviewed the National School Lunch Program policies, interviewed program officials, and randomly selected a non-generalizable sample that included 25 of 7.7 million approved household applications from 25 of 1,520 school districts in the Dallas, Texas, and Washington, D.C., regions. GAO performed limited eligibility testing using civilian federal-employee payroll data from 2010 through 2013 due to the unavailability of other data sources containing nonfederal employee income. GAO also conducted interviews with households. Ineligible households were referred to the Inspector General. GAO recommends that the Secretary of Agriculture develop a pilot program to explore the feasibility of using computer matching to identify households with income that exceeds program-eligibility thresholds for verification, and explore the feasibility of verifying a sample of categorically eligible households.
  - Current Status: Open

- School Meal Programs: Implications of Adjusting Income Eligibility Thresholds and Reimbursement Rates by Geographic Differences (GAO-14-557)
  - Date Issued: August 7, 2014
Audit Objectives: This audit request was from Representative Sam Farr. The objectives were: (1) what are the available data sources that could be used to adjust for cost-of-living differences for household income eligibility and for variations in food, labor, and other costs for USDA school reimbursement rates; and (2) what are the advantages and disadvantages of using such data sources for making adjustments for income eligibility and reimbursement rates.

Audit Summary: No recommendations included in this report. GAO looked at a variety of methods by which to identify geographic differences in living costs and the potential for using them to adjust: (1) income eligibility thresholds; and (2) reimbursement rates for schools. They also examined the extent to which states and localities can make adjustments for geographic differences in costs by using existing program rules. GAO reviewed relevant laws, regulations, and literature; analyzed available data sources and methods; and interviewed knowledgeable experts.

Current Status: Closed

Supplemental Nutrition Assistance Program (SNAP): Enhanced Detection Tools and Reporting Could Improve Efforts to Combat Recipient Fraud (GAO-14-641)

Audit Objectives: This audit request was from Senator Jeff Sessions. The audit objectives were: (1) how has USDA addressed the issues raised in its IG report on SNAP fraud; (2) how does USDA determine SNAP’s payment error rate and to what extent is payment error due to participant fraud; and (3) how many SNAP benefits continue to be vulnerable to trafficking.

Audit Summary: GAO reviewed: (1) how selected state agencies combat SNAP recipient fraud; (2) the effectiveness of certain state fraud detection tools; and (3) how FNS oversees state anti-fraud efforts. GAO reviewed relevant federal laws, regulations, guidance, and documents; interviewed officials in 11 states; interviewed federal officials; tested fraud detection tools using fiscal year 2012 program data; and monitored websites for potential trafficking online. Although results are not generalizable to all States, the 11 states, selected based on various criteria including the size of their SNAP recipient household population and their payment error rates, served about a third of SNAP recipient households. GAO recommends, among other things, that FNS reassess current financial incentives and detection tools and issue guidance to help states better detect fraud and report on their anti-fraud efforts. FNS is working on the corrective actions resulting from this audit report.

Current Status: Open
United States Department of Agriculture
2016 Presidential Transition
Food and Nutrition Service (FNS)

  - **Date Issued:** January 12, 2015
  - **Audit Objectives:** GAO did this work in response to a request made by the Chairs of House Committee on Education and the Workforce and the House Subcommittee on Early Childhood, Elementary, and Secondary Education, as well as another member of Congress. The key questions to be addressed by their audit were: 1) how does USDA determine the amount of formula to provide to participating infants; 2) what is known about the extent to which participants sell WIC formula online; and 3) what steps has USDA taken to prevent and address the online sale of WIC formula.
  - **Audit Summary:** GAO recommended that USDA require state agencies to inform WIC participants that selling WIC formula is against program rules and describe in their state plans how they identify attempted sales. GAO also recommended that USDA assess online sales, including techniques states can use to monitor them. USDA agreed with GAO’s recommendations.
  - **Current Status:** One recommendation was closed and two remain open. FNS’ latest update to move toward closure was provided to GAO on July 18, 2016.

  - **Date Issued:** May 18, 2015
  - **Hyperlink to audit:** [http://gao.gov/assets/670/669688.pdf](http://gao.gov/assets/670/669688.pdf)
  - **Audit Objectives:** GAO did this work in response to a request made by the Chairs of House Committee on Education and the Workforce, as well as the Chairs of the subcommittees on Higher Education and Workforce Training; Health, Employment, Labor, and Pensions; Workforce Protections; and Early Childhood, Elementary, and Secondary Education. The key questions to be addressed by their audit were: 1) how do agencies define regulatory guidance and what processes and criteria are used to determine whether to issue guidance or undertake rulemaking; 2) what similarities and differences exist between the agencies policies, processes, and practices for developing and using regulatory guidance; and 3) how do the agencies ensure that their departmental guidance is current and transparent.
  - **Audit Summary:** GAO made recommendations to four departments, and specific to USDA recommended that it strengthen the use of internal controls in guidance production processes and improve online guidance dissemination. USDA generally agreed with this recommendation.
United States Department of Agriculture
2016 Presidential Transition
Food and Nutrition Service (FNS)

- **Current Status:** Open. However, FNS provided information needed to close the USDA recommendation to GAO on July 22, 2016, and is currently waiting for GAO to update the status of the recommendation on their public website.

- **School Nutrition: USDA Has Efforts Underway to Help Address Ongoing Challenges Implementing Changes in Nutrition Standards (GAO-15-656)**
  - **Date Issued:** October 14, 2015
  - **Audit Objectives:** GAO did this work in response to a request made by the Chair of the Committee on Education and Workforce. The key questions to be addressed by their audit were: 1) what challenges, if any, are the School Food Authorities (SFAs) GAO visited previously for the January 2014 report (GAO-14-104) dealing with currently, and as they continue to implement school lunch changes; 2) what challenges, if any, have these SFAs faced while implementing the changes to the nutrition standards for school breakfasts and the new nutrition standards for competitive foods; and 3) what actions has USDA taken to assist SFAs in implementing the school food requirements, such as helping schools mitigate any challenges related to food cost and waste.
  - **Audit Summary:** GAO made no new recommendations to USDA as this was a follow-up to the GAO-14-104 report in which they recommended that USDA clarify the need to document noncompliance issues found during state reviews of SFAs and complete efforts to assess states' assistance needs related to oversight of financial management.
  - **Current Status:** Closed

**OIG Audits**

- **Analysis of FNS’ Supplemental Nutrition Assistance Program Fraud Prevention and Detection Efforts (27002-0011-13)**
  - **Date Issued:** September 28, 2012
  - **Audit Objectives:** Initially, OIG’s audit objectives were to determine whether funds were used properly by analyzing SNAP-related databases at Federal and state levels for anomalies and signs of fraud, waste, and abuse; and to compare 10 selected states’ SNAP recipient databases to the Social Security Administration’s Death Master File. Subsequent to the December 2011 House Agriculture Committee’s Subcommittee on Department Operations, Oversight, and Credit’s hearing on SNAP fraud, the audit scope was expanded to include an evaluation of the adequacy of FNS and state tools used to prevent and detect SNAP fraud, and whether the states were using the tools provided.
United States Department of Agriculture
2016 Presidential Transition
Food and Nutrition Service (FNS)

- Audit Summary: OIG concluded that, given the size and complexity of SNAP, the low rate of data anomalies identified was a notable achievement and the states had made significant progress resolving the questioned recipients identified in their matches. OIG also stated that, since SNAP participation has reached record levels, even incremental improvements in fraud detection and prevention can have a meaningful impact on SNAP program integrity. The report contained nine recommendations.

- Current Status: This audit will be resolved upon the development of an action plan on next steps for the National Accuracy Clearinghouse (NAC) project. The NAC pilot project report was signed by the Secretary and delivered to Congress on May 10, 2016. FNS is preparing a letter to all States detailing next steps. Estimated completion date – October 31, 2016.

- Food and Nutrition Service Financial Statements for Fiscal Year 2012 and 2011 (27401-0002-21)
  - Date Issued: November 23, 2012
  - Audit Objectives: To determine whether: (1) the financial statements present fairly, in all material respects, in accordance with accounting principles generally accepted in the United States of America, the assets, liabilities, and net position, net cost, changes in net position, and combined budgetary resources; (2) the internal control objectives over financial reporting were met; and (3) the Food and Nutrition Service complied with laws and regulations for those transactions and events that could have a direct and material effect on the comparative financial statements. OIG also determined whether the Management Discussion and Analysis was materially consistent with the information in the comparative financial statements.
  - Audit Summary: The report contains an unqualified opinion on the financial statements, as well as the results of our assessment of the Food and Nutrition Service’s internal controls over financial reporting and compliance with laws and regulations. FNS’ comparative financial statements for fiscal years 2012 and 2011, including the accompanying notes, present fairly, in all material respects, the financial position of FNS, as of September 30, 2012, and 2011, and its net costs, changes in net position, and budgetary resources for the years then ended, in conformity with accounting principles generally accepted.
  - Current Status: Closed

- National School Lunch Program – Food Service Management Company (FSMC) Contracts (27601-0001-23)
  - Date Issued: January 3, 2013

**Audit Objectives:** The objectives of the audit were: (1) assess the effectiveness of any controls implemented by FNS and selected state agencies as a result of previous audits; (2) determine whether SFAs that signed fixed-price-per-meal contracts are receiving the full benefit and value of all donated foods provided to FSMCs, and (3) determine whether SFAs that signed cost-reimbursable contracts with FSMCs are receiving all purchase rebates.

**Audit Summary:** This audit was conducted based on an inquiry from Congresswoman DeLauro. Overall, OIG reported the following: FNS needs to enhance its management oversight and controls of SFAs that contract with FSMCs; FNS needs to improve its monitoring of SFAs’ oversight for FSMC purchase discounts and rebates; FNS did not ensure full credit was given for USDA-donated foods; and FNS needs to improve reviews of state Agency FSMC contracts.

**Current Status:** FNS completed all corrective actions that resulted from the 15 recommendations in the audit report. The procurement tool associated with many of the recommendations was released for implementation nationwide in School Year 2016-2017. The request for final action and closure for the remaining open recommendations (1, 2, 7, 8, 11, 12, 13, and 15) was submitted to OCFO for approval on August 15, 2016.

- **Vendor Management in the Food and Nutrition Service’s Special Supplemental Nutrition Assistance Program for Women, Infants and Children (WIC) (27601-0038-CH)**
  - **Date Issued:** March 29, 2013
  - **Hyperlink to audit:** https://www.usda.gov/oig/webdocs/27601-0038-CH.pdf
  - **Audit Objectives:** The overall objectives of the audit were to evaluate FNS’ implementation of new regulations intended to improve the integrity of vendor management, and to assess the certification of participants as eligible. As part of this, OIG assessed the state agencies’ implementation of vendor compliance investigations; their accountability, control, and security over food instruments; and how they made determinations of participant eligibility.
  - **Audit Summary:** OIG did not identify any material findings associated with participant eligibility. However, OIG reported that FNS needs to strengthen guidance and oversight of state agencies’ vendor monitoring and enforcement activities. FNS does not ensure that all retail vendors disqualified from SNAP are disqualified from WIC. FNS has completed all corrective actions resulting from the nine recommendations in the audit report.
  - **Current Status:** Closed
Overlap and Duplication in the Food and Nutrition Service’s Nutrition Programs (27001-0001-10)
- Date Issued: June 13, 2013
- Audit Objectives: OIG evaluated the potential for duplication and overlap in the five largest FNS nutrition assistance programs, accounting for 99 percent of FNS’ total program budget related to FYs 2012 through 2006.
- Audit Summary: Although this audit did not document a single area of unnecessary overlap or duplication in any of FNS’ programs, OIG recommended that FNS determine and document the requirements for conducting a study and to identify and determine the extent to which overlap and duplication may exist in FNS’ nutritional assistance programs. OIG also recommended that FNS determine whether it had the resources necessary to conduct the assessment of the potential overlap of its nutrition programs or whether additional funding will be necessary to complete the assessment.
- Current Status: Closed

FNS: Controls for Authorizing Supplemental Nutrition Assistance Program Retailers (27601-0001-31)
- Date Issued: July 31, 2013
- Audit Objectives: This audit was initiated by OIG in April 2012 to evaluate FNS’ controls for authorizing SNAP retailers; specifically to assess FNS controls over the retailer authorization process, and to evaluate the Agency’s actions to strengthen its processes to prevent the authorization of previously disqualified owners.
- Audit Summary: This audit report contains 20 recommendations. OIG reports that FNS should comprehensively review its policies and procedures, seek legislative change to retain a portion of retailer penalties; require background checks for retailers; strengthen internal guidance; make improvements to its automated retailer data system; create and strengthen safeguards for high-risk stores; and require more supervisory reviews. FNS should also review the owners identified to determine if they need to be penalized or disqualified from SNAP.
- Current Status: Six of the twenty recommendations remain open, but are in the process of being addressed. Closure of two of the recommendations hinges on the rulemaking process, which pushes the estimated completion date of closure out to October 2017.
• **Food and Nutrition Service Financial Statements for Fiscal Year 2013 – 2012 (27401-0003-21)**
  - **Date Issued:** December 6, 2013
  - **Audit Objectives:** To examine the Food and Nutrition Service’s financial statements for FY 2013 and 2012.
  - **Audit Summary:** The report contains an unqualified opinion on the financial statements, as well as the results of our assessment of the Food and Nutrition Service’s internal controls over financial reporting and compliance with laws and regulations. OIG determined that the agency’s financial statements for the FY 2013 and 2012 present fairly, in all material respects, FNS’ financial position as of September 30, 2013 and 2012, and that they conform with accounting principles generally accepted.
  - **Current Status:** Closed

• **State Agencies’ Food Costs for the Food and Nutrition Service’s Special Supplemental Nutrition Program for Women, Infants and Children (WIC) (27004-0001-22)**
  - **Date Issued:** September 25, 2014
  - **Audit Objectives:** OIG’s goal was to conduct an audit survey of states to evaluate factors that impact the FNS WIC program’s costs, including average food costs and costs per participant. Additionally, OIG wanted to gain an understanding of FNS and state oversight activities in monitoring program costs.
  - **Audit Summary:** OIG found that FNS can strengthen its oversight of state agency cost containment practices and recommended that FNS coordinate with Medicaid. OIG also recommended that FNS should take more effective measures in cost containment policies. The audit report contained six recommendations for FNS. FNS developed a national WIC cost containment strategy that requires state agencies to implement a vendor peer group system, competitive price criteria, and allowable reimbursement levels in a manner that ensures the WIC Program pays authorized vendors competitive prices for supplemental foods. It also requires state agencies to ensure that vendors who derive more than 50 percent of their annual food sales revenue from WIC food instruments do not cause higher food costs for the program than do other vendors. All of these requirements are codified in program regulations found at 7 CFR 246.12.
  - **Current Status:** All recommendations but one are closed. The open recommendation is pending completion of an Economic Research Service
(ERS) study. FNS is working with ERS on its update of the 2005 report, Interstate Variation in WIC Food Package Costs: The Role of Food Prices, Caseload Composition, and Cost-Containment Practices. This study, which examines the degree to which food prices, caseloads, and the implementation of various cost containment measures influence state agencies’ food package costs, was delayed and is now estimated to be completed by the Fall of 2017.

- **Food and Nutrition Service Financial Statements for Fiscal Years 2014 and 2013 (OIG 27401-0004-21)**
  - **Date Issued:** November 14, 2014
  - **Audit Objectives:** To determine whether: 1) the comparative financial statements were presented fairly, in all material respects, in accordance with accepted principles; 2) the internal control objectives over financial reporting were met; 3) FNS complied with laws and regulations for transactions and events that could have a direct and material effect to the financial statements; and 4) the information presented in Management’s Discussion and Analysis was materially consistent with the information in the comparative financial statements.
  - **Audit Summary:** The Food and Nutrition Service received an unqualified opinion from the OIG’s audit of the FNS comparative financial statements.
  - **Current Status:** Closed

- **National School Lunch and School Breakfast Program Error Rates (OIG 27601-0001-41)**
  - **Date Issued:** May 5, 2015
  - **Hyperlink to audit:** [https://www.usda.gov/oig/webdocs/27601-0001-41.pdf](https://www.usda.gov/oig/webdocs/27601-0001-41.pdf)
  - **Audit Objectives:** To evaluate the methods FNS used to lower the error rates for NSLP and SBP. OIG sought to determine if FNS, state agencies and SFAs had adequate controls to: 1) ensure children met the eligibility requirements, and 2) meal claims were supported and accurately reimbursed.
  - **Audit Summary:** OIG recommended that FNS consult with the Office of the General Counsel to determine its regulatory authority to require households to submit income documentation with school meals applications. Based on this determination, FNS should then take the appropriate actions to revise the programs’ documentation requirements. Additionally, OIG recommended that FNS should clarify criteria for identifying questionable applications and provide guidance and training for cafeteria fund management.
  - **Current Status:** Closed
• SNAP Error Rates (OIG 27601-0002-41)
  o Date Issued: September 23, 2015
  o Hyperlink to audit: https://www.usda.gov/oig/webdocs/27601-0002-41.pdf
  o Audit Objectives: To determine if FNS and states have controls in place to ensure the integrity of SNAP error rate determination.
  o Audit Summary: OIG recommended that FNS should consider changing quality control (QC) from a two-tier process reliant on state error rates to a one-tier process in which FNS or a third party reviews cases, and establishes a timeline for making this change, if cost beneficial. OIG also recommended that FNS needs to reiterate policies regarding the proper use of error review committees, QC staff’s variable treatment of error cases, and issue guidance to states on appropriate use of private consultants. Lastly, they recommended that FNS should amend and enforce policies to ensure error rates are accurate and determined if they are in compliance with regulations.
  o Current Status: Open. Management decision agreement reached on all recommendations as of June 30, 2016. Four recommendations are closed and the remaining recommendations are on track to be closed by December 31, 2016.

• Healthy, Hunger-Free Kids Act (HHFKA) of 2010 – Controls Over Food Service Account Revenue (OIG 27601-0001-22)
  o Date Issued: September 28, 2015
  o Audit Objectives: To evaluate the controls that FNS has in place to ensure that SFAs comply with the food service account revenue requirements outlined in Sections 205 and 206 of HHFKA. In addition, OIG sought to evaluate FNS’ compliance with the requirements outlined in Section 307 of that Act regarding indirect food costs.
  o Audit Summary: OIG recommended that FNS needs to redesign controls to provide reasonable assurance that SFAs comply with the paid lunch equity and non-program food revenue requirements of sections 205 and 206, and that their reports are on time and complete. Additionally, they recommended that FNS needs to supply SFAs with updated guidance concerning indirect costs. Lastly, OIG recommended that FNS needs to establish a date for publishing the annual paid lunch price report.
  o Current Status: Open. Action request currently being finalized for submission to the Office of the Chief Financial Officer by October 31, 2016.
United States Department of Agriculture
2016 Presidential Transition
Food and Nutrition Service (FNS)

- **Food and Nutrition Service Financial Statements for Fiscal Years 2015 and 2014 (OIG 27401-0005-21)**
  - **Date Issued:** November 5, 2015
  - **Audit Objectives:** To determine whether: 1) FNS’ comparative financial statements were presented fairly, in all material respects, in accordance with generally accepted accounting principles; 2) FNS met internal control objectives over financial reporting; 3) transactions and events with direct and material effect on the financial statements were compliant with applicable laws and regulations; and 4) the information presented in the Management’s Discussion and Analysis was materially consistent with the information in the comparative financial statements.
  - **Audit Summary:** The Food and Nutrition Service received an unqualified opinion from the OIG’s audit of the FNS comparative financial statements.
  - **Current Status:** Closed

- **SNAP Administrative Costs (OIG 27601-0003-22)**
  - **Date Issued:** September 29, 2016
  - **Hyperlink to audit:** Not yet available
  - **Audit Objectives:** To evaluate FNS’ controls over SNAP administrative costs, with a specific focus on whether states with county-administered programs were effectively and efficiently controlling costs and minimizing variances.
  - **Audit Summary:** Though a final report is pending issuance, it is expected that OIG will recommend the following: 1) that FNS could be more proactive in analyzing and containing variances in SNAP costs-per-case; 2) that FNS regional offices have different procedures for conducting financial reviews and risk assessments; and 3) that weaknesses in state and county financial management controls and a lack of effective FNS oversight led to inaccurate program financial reporting and questioned costs.
  - **Current Status:** Pending publication of final audit report. FNS officials are currently preparing a formal response to OIG’s official draft report that will be included in its entirety as an attachment to OIG’s final report.

- **FNS Controls Over SNAP Benefits for Able-Bodied Adults Without Dependents (ABAWD) (OIG 27601-00032-31)**
  - **Date Issued:** September 29, 2016
  - **Hyperlink to audit:** Not yet available
  - **Audit Objectives:** To determine whether FNS’ oversight of state agency controls is adequate to ensure that only eligible ABAWDs are receiving SNAP benefits.
United States Department of Agriculture
2016 Presidential Transition
Food and Nutrition Service (FNS)

Audit Summary: Though a final report is pending issuance, it is expected that OIG will recommend the following: 1) FNS conduct a study to identify the most troublesome areas for states and develop best practices for implementing the complex ABAWD provisions; 2) FNS review regulations to verify that the agency is consistently implementing laws regarding SNAP age limits; and 3) FNS ensure that valid, complete, and timely information is included in the Management Evaluation System (MEMSNext Generation).

Current Status: Pending publication of final audit report. FNS officials are currently preparing a formal response to OIG’s official draft report that will be included in its entirety as an attachment to OIG’s final report.

III. Congressional Relations and Issues

Overview

FNS issues are a consistent topic of discussion in Congress, not only in the committees of jurisdiction or appropriations, but in the Committee on Ways and Means, Oversight and Government Reform, and the Budget. The Supplemental Nutrition Assistance Program (SNAP) has been the subject of 17 hearings during the 114th Congress before the House Agriculture Committee as part of a top to bottom review of the program. SNAP has been a major discussion point in Speaker Ryan’s Task Force on Poverty, Opportunity, & Upward Mobility (Poverty Task Force) and the Budget Committees “Blueprint” in 2015 and 2016; specifically calls to establish block grants and change Able-Bodied Adults Without Dependents (ABAWD) waivers.

FNS programs are expected to remain a major point of interest in the 115th Congress. In addition to the issues raised below, Congress will be working on the passage of the next Farm Bill and will most likely need to continue work on the reauthorization of Child Nutrition (CN) and Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) programs.

Below are focus topics that have been raised recently and also expected to be raised in the 115th Congress.

Focus Topics: Supplemental Nutrition Assistance Program

- **Block Grant:** The discussion of block granting SNAP has been a consistent theme on Capitol Hill but gained more attention in the 2014 Budget Blueprint by then House Budget Committee Chairman Paul Ryan. The 2016 Budget Resolution as well as the Poverty Task Force created by Speaker Ryan, call for SNAP to be block granted.

- **ABAWDs (Able Bodied Adults Without Dependents) and Work Requirements:** The 1996 welfare reform legislation P.L. 104-193, 110 STAT 2015 limited SNAP benefits for ABAWDs who did not meet the work requirements to three months over a
three year time period. However, states have the option to request waivers of the time limit for areas, or the entire state due to high unemployment.

- **SNAP Quality Control:** The SNAP error rate is a measure of whether SNAP benefit amounts are correct. The error rate is the combination of the rate of payments that are too high (overpayments) as well as the rate of payments that are too low (underpayments), not the difference between the two. Recent findings from USDA reviews indicate that bias is present in some state SNAP quality control processes. Bias means that steps were taken to influence the presence of an error or the amount of an error before state data were submitted to USDA for review. The USDA Office of Inspector General also conducted a review in 2015, and FNS has come to an agreement on all 19 recommendations in that report. As a result of the bias, FNS has withheld performance bonuses to states for 2015, and is doing a complete overhaul of the system in 2016. The Department of Justice is currently investigating states for possible False Claim Act violations. Both the House and Senate Agriculture Committees have requested that USDA provide regular updates on the status of the error rates and the performance bonuses.

- **SNAP Retailer Standards Rule:** The Agricultural Act of 2014 P.L. 113-79, 128 STAT 649, commonly known as the 2014 Farm Bill, requires USDA to put in place new regulations to ensure that retailers that accept SNAP carry both a wider array of healthy food options and more choices within each option. While complex, essentially the proposed rule means that a store that chooses to accept SNAP will have to stock a greater variety and quantity of healthy food choices. A bipartisan, bicameral group of Members of Congress and the National Association of Convenience Stores were strongly opposed to the proposed rule. Appropriations committee staff inserted language in the fiscal year (FY) 2017 House and Senate Agriculture Appropriations bill limiting FNS’ ability to implement the proposed rule as written. FNS anticipates releasing the final rule by the end of calendar year 2016.

- **SNAP Online Purchase Pilots:** The Agricultural Act of 2014 P.L. 113-79, 128 STAT 649 mandated a pilot be conducted to test the feasibility and implications of allowing retail food stores to accept SNAP benefits through online transactions. In September, FNS released a Request for Volunteers to seek retailers to participate in this effort. This will be a small pilot, initially involving up to 5 online retailers in three states. The goal is to ensure that there is a foundational infrastructure to run SNAP transactions online in a safe and secure manner. Retailers will be selected by the end of calendar year 2016.

**Focus Topics: Child Nutrition**

- **School Nutrition Requirement Flexibilities:** FNS updated the nutrition requirements for school meals and established requirements for all foods sold in schools (“Smart Snacks”) to align them with the latest *Dietary Guidelines for Americans*, as required by amendments made by the Healthy, Hunger-Free Kids Act of 2010 P.L. 111-296, 124 STAT 3183. The new requirements increased the availability of fruits, vegetables, whole grains, and fat-free and low-fat fluid milk in school meals, and placed limits for sodium and fats. Recent Congressional appropriation and reauthorization bills included
provisions to delay or alter these requirements, particularly regarding sodium, whole grains, and Smart Snack exemptions.

- **Improper Payments in Child Nutrition (CN) Programs:** Improper payments in the school meal programs are a concern to some in Congress. The most recent report by FNS in FY 2015, estimated an overall improper payment rate of 17.4 percent in National School Lunch Program (NSLP) for school year 2012-2013, down from the 18 percent rate measured in school year 2005-2006.

- **Child Nutrition Reauthorization (CNR):** The Healthy, Hunger-Free Kids Act of 2010 (HHFKA) expired on September 30, 2015, and is currently operating under a continuing resolution. Though reauthorization is not required for much of the programs to continue, both the House Education and the Workforce Committee and the Senate Agriculture Committee have passed versions of CNR in Committee. While the Senate version largely protects the nutrition standards passed in HHFKA, the House version, which has been met with bipartisan opposition, would dilute the nutrition standards, makes cuts to the Community Eligibility Provision which would reduce the availability of free meals for students in high-poverty schools, and block grants the child nutrition programs through capped funding in three states. Neither the House nor Senate versions have seen floor action.

**Committees of Jurisdiction and Interest in FNS Programs:**

- **House Agriculture Committee:** The Committee is responsible for reauthorizing SNAP and Food Distribution programs The Emergency Food Assistance Program (TEFAP), Commodity Supplemental Food Program (CSFP), Food Distribution Program on Indian Reservations (FDPIR) and the Senior Farmer’s Market Nutrition Program (SFMNP)) via the 2014 Farm Bill (e.g. the Agriculture Act of 2014).

  The Committee is a participant in Speaker Ryan’s Poverty Task Force. Current Chairman K. Michael Conaway (R-TX) is expected to step down in 2019 after being term limited. He is very active on FNS issues and is expected to be a strong proponent of passing a Farm Bill while he is Chairman. Current Ranking Member Collin Peterson (D-MN) is a former Chairman and has been a long time member of the Committee. FNS has a very good relationship with both the majority and minority committee staff who have been in place for many years and are knowledgeable on FNS programs under their jurisdiction.

- **House Education and Workforce Committee:** The Committee is responsible for reauthorizing child nutrition programs (National School Lunch Program (NSLP), School Breakfast Program (SBP), Child and Adult Care Food Program (CACFP), Summer Food Service Program (SFSP), Special Milk Program (SMP), and the Fresh Fruit and Vegetable Program (FFVP)), as well as the Special Supplemental Nutrition Program for Women Infants and Children (WIC). The authorizations for SFSP and WIC technically expired in FY 2015.
The Committee has a child nutrition reauthorization bill (H.R. 5003, the Improving Child Nutrition and Education Act of 2016) which was reported out of Committee on May 18, 2016, but has yet to have any House floor action.

Current Chairman John Kline (R-MN) is retiring at the end of the 114th Congress. Current Ranking Member Robert C. “Bobby” Scott (D-VA) who took over after the long-term Ranking Member George Miller (D-CA) retired at the end of the 113th Congress. Committee staff members on the Majority side have been with the Committee for a long time, but the Minority is fairly new. FNS has good working relationships with both sides.

- **House Oversight and Government Reform:** The Committee recently held a hearing in June 2016 on SNAP fraud waste and abuse. Both the Subcommittees on Government Operations and the Interior held the hearing jointly. The hearing looked at issues of SNAP fraud and the role of states related to retailer oversight, which is the responsibility of FNS.

- **House Appropriations:** The Subcommittee on Agriculture Chairman Robert Aderholt (R-AL) and Ranking Member Sam Farr (D-CA), who will be retiring after the 114th Congress both are very active on FNS issues. The Committee has been active on FNS issues by utilizing policy riders on issues of concern that are unable to be resolved by the regular authorization process. Specifically, on child nutrition issues, they limited sodium and whole grain changes to the NSLP and proposed language in the FY 2017 mark-up limiting FNS’ ability to implement the SNAP Retailer Enhancement Proposed rule mandated by the 2014 Farm Bill. The Committee always asks FNS to testify on the President’s budget request for FNS and Committee staff consistently request updates on FNS activities.

- **Senate Agriculture:** Chairman Pat Roberts (R-KS) and Ranking Member Debbie Stabenow (D-MI) are both very active on FNS issues. The Committee is responsible for reauthorizing SNAP and Food Distribution programs (The Emergency Food Assistance Program (TEFAP), Commodity Supplemental Food Program (CSFP), Food Distribution Program on Indian Reservations (FDPIR) and the Senior Farmer’s Market Nutrition Program (SFMNP)) via the Farm Bill. Unlike the House Agriculture Committee, this Committee is also responsible for reauthorizing child nutrition programs (National School Lunch Program (NSLP), School Breakfast Program (SBP), Summer Food Service Program (SFSP), Child and Adult Care Food Program (CACFP), Special Milk Program (SMP), and the Fresh Fruit and Vegetable Program (FFVP)), as well as WIC. The authorization for the child nutrition programs expired in 2015.

The Committee has a child nutrition reauthorization bill (S. 3136, Improving Child Nutrition Integrity and Access Act of 2016) which was reported out of Committee on
July 6, 2016, but has yet to have any Senate floor action.

- **Senate Appropriations:** Subcommittee on Agriculture Chairman Jerry Moran (R-KS) and Ranking Member Jeff Merkley (D-OR) are fairly active on FNS programs. Ranking Member Merkley’s staff is very interested in child nutrition reauthorization, specifically Summer EBT and verification.

The Committee has supported the policy riders that have been added by the House Appropriators. The Committee does not routinely hold hearings on the President’s budget request for FNS; and FNS does not directly receive many requests for information from the Committee staff, although the Office of Congressional Affairs at USDA has received a few.

IV. **Internal and External Stakeholders**

**Important relationships with other Federal Departments or organizations**

Food and Nutrition Service (FNS) regularly partners with Federal departments in order to educate their stakeholders about FNS nutrition programs. SNAP also meets with some of these Federal agencies to align its Employment and Training (E&T) Program with programs offered by their partners. The following is a list of the most mission critical Federal partners:

- **U.S. Department of Agriculture Rural Development (RD), Community Economic Development Division** - to coordinate work with community-based organizations, agricultural cooperatives and producers, and other partner agencies to ensure well-coordinated delivery of aid to persistent poverty regions that face challenges in accessing affordable and healthy food. FNS also partnered with RD in the planning of the 2014 Farm Bill requirements on Healthy Food Financing Initiative. Furthermore, FNS and RD continue to work closely in delivering assistance to place-based priority areas. For instance, Southeastern Kentucky is a StrikeForce area as well as a Rural Promise Zone. In summer 2016, FNS in partnership with CED and other agencies within USDA, worked with local and state officials to create the first-ever “Summer Feeding Site” for children in this region – many of whom experience hunger over the summer because they do not have access to school meals.

- **U.S. Department of Agriculture Agricultural Marketing Service** - in support of USDA Foods, including the Pilot Project for the Procurement of Unprocessed Fruits and Vegetables and other initiatives related to local and regional foods.

- **U.S. Department of Agriculture Know Your Farmer, Know Your Food Taskforce** - in support of Office of Community Food Systems farm to school and other local and regional food related topics such as SNAP at farmers markets.

- **U.S. Department of Agriculture Office of Tribal Relations** - in support of all programs that serve Native Americans
• U.S. Department of Defense - in support of School Meals and Summer Meals
• U.S. Department of Education - in support of School Meals, Summer Meals, and SNAP E&T
• U.S. Department of Health and Human Services/Administration for Children and Families – in support of all school and Summer Meals as well as the Nutrition Services Incentive Program (NSIP)
• U.S. Department of Health and Human Services/Centers for Disease Control and Prevention - in support of SNAP-Ed, a program that provides information on healthy food choices to SNAP participants
• U.S. Department of Housing and Urban Development - in support of Summer Meals
• U.S. Department of Labor/Employment and Training Administration - in support of Summer Meals and SNAP E&T
• U.S. Department of Transportation/Federal Transit Administration - in support of Summer Meals
• Corporation for National and Community Services - FNS has two Interagency Agreements; one for Summer Meals Summer Associates and one for SNAP E&T VISTAs
• White House Office of Science and Technology Policy - in support of Summer Meals
• White House Rural Council - in support of all programs
• Office of Management and Budget - in support of all programs

FNS also partners with the following USDA entities for certain human resource services:

• U.S. Department of Agriculture Food Safety and Inspection Service – in support of human resources services for staff acquisition, position classification, personnel action processing and reporting; and
• U.S. Department of Agriculture National Finance Center – in support of human resources services for employee benefits, retirements, workers’ compensation, personnel security and pay and leave.

The American Federation of Government Employees (AFGE) and the National Treasury Employees Union (NTEU) are the recognized Union representation for all FNS bargaining unit employees. AFGE is the largest federal employee union representing 670,000 federal and D.C. government workers nationwide and overseas. NTEU is the nation’s largest independent union of federal employees, representing 150,000 workers in 31 departments and agencies.

Stakeholder group overview and recent engagements with stakeholder groups

FNS partners with hundreds of organizations, although many of those are engaged only to solve specific issues or to promote our programs. Organizations that play a more active or prominent role generally include:
• **Alliance to End Hunger:** a coalition of organizations, including corporations, non-profits, faith-based organizations, universities and others, all committed to build public and political will to end hunger at home and abroad. Supporters of Federal nutrition assistance, and collaborators to promote Summer Meals.

• **American Commodity Distribution Association (ACDA):** ACDA is a national organization committed to improving the USDA Distribution Food Program on behalf of all stakeholders. Special Nutrition and Safety (SNAS) partners with them to promote USDA Foods and Food Safety Programs in child nutrition settings. FNS recently met with ACDA to plan its participation in their annual conference.

• **American Public Human Services Association (APHSA):** This is a group that represents states. SNAP meets regularly with APHSA on issues that impact state administration of SNAP. For E&T, SNAP works with APHSA to align workforce development initiatives across state workforce and human services agencies. SNAP speaks at their annual conferences and participates in bi-monthly calls with subgroups of APHSA. Most recently, SNAP and APHSA have worked together on an APHSA survey of states regarding the integration of their SNAP and Medicaid eligibility systems. Additionally, SNAP is working with APHSA on changes to the Quality Control (QC) 310 handbook, which provides procedures for conducting QC reviews of SNAP cases.

• **Association of SNAP Nutrition Education Administrators (ASNNA):** ASNNA is a national group of nutrition education administrators. SNAP participates in monthly calls and the ASNNA annual conference. Most recently, they worked together on the SNAP-Ed intervention toolkit, SNAP-Ed Framework, and a joint conference presentation.

• **Catholic Charities:** A network of member agencies that work through a variety of channels to reduce and alleviate poverty, including nutrition assistance. Members are direct service providers, but the organization also does advocacy work. Strong supporters of Federal nutrition assistance, and collaborators to promote Summer Meals.

• **Center on Budget and Policy Priorities (CBPP):** CBPP is a think tank with a long history of interest in FNS programs. SNAP meets with CBPP to discuss SNAP E&T and ABAWDs policy, in particular the perspective of state and local client-facing organizations on those policy areas. Child Nutrition meets monthly with CBPP on Community Eligibility Provision (CEP); most recently to provide technical assistance on CEP take up and implementation.

• **Center of Excellence at Kansas State (COE):** COE provides science-based solutions to problems impacting food safety in Child Nutrition Programs across the United States. SNAS partners with them to promote USDA Foods and Food Safety Programs in child nutrition settings. SNAS and COE meet regularly.

• **Center on Law and Social Policy (CLASP):** CLASP is a think tank that has subject matter experts in SNAP, TANF, and workforce development. SNAP works with CLASP to identify best practices and provide technical assistance to states on the opportunity to align best practices in workforce development and education with SNAP E&T. SNAP and CLASP meet several times a year.

• **Feeding America:** Feeding America is a nationwide network of food banks and is one of the nation’s leading domestic hunger relief organizations. Feeding America and
FNS partner to promote The Emergency Food Assistance Program (TEFAP) and Feeding America promotes Summer Meals. FNS talks to Feeding America at least quarterly.

- **Food Distribution Program on Indian Reservations (FDPIR) Tribal Leaders Workgroup:** This group exists to look at the role of FDPIR in tribal communities. They meet regularly with SNAS to promote collaboration for the betterment of the USDA Foods Program on Indian Reservations.

- **Food Research Action Center (FRAC):** FRAC is a non-profit anti-hunger advocate for FNS programs. SNAP and Child Nutrition participate in their annual Anti-Hunger Policy Conference, hosted by both FRAC and Feeding America.

- **Hunger-Free America:** Hunger Free America is a national nonprofit group building a nonpartisan, grassroots membership movement to enact the policies and programs needed to end domestic hunger and ensure that all Americans have sufficient access to nutritious food. FNS has a contract with Hunger-Free America to run its National Clearinghouse. FNS engages with Hunger-Free America monthly.

- **Institute for Child Nutrition (ICN):** ICN is a national center dedicated to applied research, education and training, and technical assistance for child nutrition programs. They are funded through grants from USDA. Child Nutrition meets with them regularly; most recently they discussed the status of various cooperative agreements including Team Up for Success, Child and Adult Care Food Program (CACFP) meal pattern training, and a USDA/state agency meeting. SNAS also partners with ICN to promote USDA Foods and Food Safety Programs in child nutrition settings.

- **National Association of Farmer’s Market Nutrition Programs:** This is a non-profit agriculture group. SNAP recently engaged them on Electronic Benefits Transfer (EBT) equipment at Farmers Markets. Special Nutrition and Safety (SNAS) also works with this group to promote WIC Farmers Markets. FNS meets with them monthly and assists with the planning of their annual conference.

- **National Commodity Supplemental Food Program Association:** This association provides leadership in program advocacy, accountability, delivery of healthy foods and nutrition education. SNAS meets with them regularly in order to promote the Commodity Supplemental Food Program (CSFP) program and to participate in their annual conference.

- **National Council on Aging:** An organization with a network of partners that provide services and advocate for policy change to improve the health and economic security of older adults. Supporters of Federal nutrition assistance, and collaborators to promote Summer Meals.

- **National Farm to School Network (NFSN):** An information, advocacy and networking hub for communities working to bring local food sourcing and food and agriculture education into school systems and early care and education settings. Child Nutrition and NFSN meet regularly to share information and participate in NFSN national conferences.

- **National Skills Coalition (NSC):** NSC focuses on workforce development and SNAP E&T. SNAP recently worked with NSC to promote job-driven SNAP E&T programs. NSC is hosting a meeting of state advocates to discuss SNAP E&T for SNAP.
• **National WIC Association (NWA):** This national organization is a non-profit education arm and advocacy group focusing on the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) program. They meet regularly with SNAS to promote the program. WIC is participating in their upcoming annual conference.

• **Seattle Jobs Initiative:** SNAP has a contract with this organization to provide technical assistance in the SNAP to Skills project. The project is designed to assist states expand and strengthen their SNAP E&T programs, especially through the use of third-party 50-50 providers. They meet with SNAP each month until the project ends in September 2017.

• **School Nutrition Association (SNA):** SNA is a national organization of school nutrition professionals committed to advancing the quality of school meal programs through education and advocacy. Child Nutrition and SNAS partner with SNA on USDA Foods and Food Safety Programs in child nutrition settings. They meet regularly and participate in SNA’s annual national and legislative conferences.

• **Share Our Strength:** This is a non-profit anti-hunger advocacy organization. Child Nutrition meets with Share Our Strength regularly to discuss ways FNS can increase breakfast participation, promote Child Nutrition programs in Indian country, and improve data collection. FNS also collaborates with Share our Strength to promote Summer Meals.

• **Workforce Data Quality Campaign (WDQC):** WDQC is a group of subject matter experts who provide technical assistance to states to help implement SNAP E&T reporting measures. WDQC participated on a FNS hosted webinar on data issues related to SNAP E&T reporting measures. SNAP and WDQC meet regularly.

V. **Top Issues**

**Hot Topics**

**Agency-Wide**

• Regulatory - remaining rules implementing amendments made by the Healthy, Hunger Free Kids Act of 2010, and 2008 and 2014 Farm Bills

**Supplemental Nutrition Assistance Program (SNAP)**

• Implementation of SNAP Retailer Eligibility Standards Rule
• Implementation of Participant Photos on SNAP Electronic Benefit Transfer (EBT) Cards (“Photo EBT”)
• SNAP Quality Control
• Online SNAP Purchasing Pilots

2016 Presidential Transition
Food and Nutrition Service (FNS)

Child Nutrition (CN) Programs

- Child Nutrition Program Integrity Proposed Rule
- Summer Meals for Children
- Sodium Targets, National School Lunch And School Breakfast Programs

Key Regulatory Priorities: Child Nutrition Reauthorization, 2008 and 2014 Farm Bills

Background

- All FNS programs are reauthorized either through the Farm Bill process, which covers SNAP and the food distribution programs, or the Child Nutrition reauthorization process, which covers school meals, other meals programs, and WIC.
  - The Healthy, Hunger-Free Kids Act of 2010 (HHFKA) reauthorized CN programs through FY 2015. Though this reauthorization has now lapsed, the programs continue to operate under their permanent authorities and with the appropriation of funding.

- Many program changes enacted through these reauthorization cycles are implemented based on the requirements of the amending legislation through policy memoranda and other communications in advance of regulatory implementation. Others require extensive research as well as stakeholder input in advance of the issuance of a proposed rule. In both of these circumstances, other FNS and USDA regulatory priorities are at times advanced ahead of these changes. As a result, a number of regulatory actions from prior reauthorizations are still awaiting completion. These include:

From William F. Goodling Child Nutrition Reauthorization Act of 1998:

Final Rule – National School Lunch Program (NSLP), State Administrative Expense (SAE) Funds, Determining Eligibility for Free and Reduced Price Meals and Free Milk in Schools: Reimbursement for Snacks in Afterschool Care Programs

From Child Nutrition and WIC Reauthorization Act of 2004:

1. Final Rule – Direct Certification of Children in SNAP Households and Certification of Homeless, Migrant, and Runaway Children for Free Meals in the NSLP, School Breakfast Program (SBP), and Special Milk Program (SMP)

From Food, Conservation, and Energy Act of 2008:

2. Final Rule – Fresh Fruit and Vegetable Program
3. Final Rule – SNAP: Major System Failures
4. Interim Rule – Suspension of SNAP Benefit Payments to Retailers

From Healthy, Hunger-Free Kids Act of 2010 (HHFKA):

1. Interim or Final Rule – Child Nutrition Program Integrity
2. Final Rule – National School Lunch (NSLP) and School Breakfast Programs (SBP): School Food Service Account Revenue Amendments Related to the HHFKA
3. Final Rule – Child and Adult Care Food Program: Amendments Related to the HHFKA
4. Final Rule – NSLP & SBP: Nutrition Standards for All Foods Sold in School, as Required by HHFKA

From Agricultural Act of 2014:

1. Proposed Rule – Modernizing SNAP Benefit Redemption Systems
5. Final Rule – SNAP: Employment and Training Program Monitoring, Oversight and Reporting Measures
8. Interim Rule – Supplemental Nutrition Assistance Program Promotion
9. Proposed Rule – SNAP: Restaurant Meal Program State Agency Annual Plan and Reporting Requirements, the Use of Benefits for Purchase of Community Supported Agriculture Shares, and the Public Disclosure of Retailer Redemption Data
SNAP Retailer Eligibility Standards Rule

Background

- The Agricultural Act of 2014 included statutory changes that require eligible stores to maintain at least seven different varieties of foods in each staple category with perishable products to be included in at least three of the four staple food categories.
- In February 2016, FNS published a proposed rule that codified the statutorily-required provisions, and made a number of other changes to reflect the intent of Congress that staple foods are those foods used primarily for home preparation and consumption that provide the main sources of nutrition intake for households. The rule also reflected feedback that had been received from a request for information published in August 2013.
- A number of members of Congress and several food industry and food retailer groups raised concerns about potential negative impacts of the proposal on food access for SNAP clients. To ensure a robust set of comments from all affected stakeholders, FNS extended the comment period an additional 30 days.
- The final rule is scheduled to be published by the end of calendar year 2016 with an effective date of one year following publication. The Agency is carefully considering all of the comments that it has received, and will seek to minimize any potential negative impacts consistent with the intent of the law. In addition, a substantial education and technical assistance program for SNAP retailers will be conducted to ensure that authorized retailers are able to comply with the new standards by the effective date.
- Despite any adjustments made in finalizing the rule, stakeholders may continue to raise concerns about the potential negative impacts of the new standards, and see the change in Administration as an opportunity to revisit the policy decisions made in the final rule. These issues could also emerge in discussions about the next Farm Bill.

Action/Decision: Continue implementation of retailer standards rule; communicate with stakeholders and Congressional staff about plans to support implementation and resolve concerns.

Action Date: Immediate for new Administration.
PARTICIPANT PHOTOS ON SNAP ELECTRONIC BENEFIT TRANSFER (EBT) CARDS

(“PHOTO EBT”)

Background

- Federal law allows states the option to require EBT cards to include a photo of one or more household members, but according to statute the state must ensure that all members of the household and their authorized representatives are able to use the card, regardless of whose picture is on the card. The unique Personal Identification Number (PIN) associated with each card establishes authorization for use to purchase food.
- Photo EBT involves complex legal, operational, and civil rights issues. If not well-planned and well-executed, it can adversely affect the ability of eligible applicants and participants to participate in the program.
- It is unclear whether photo EBT cards will reduce SNAP fraud and abuse. The vast majority of households who receive SNAP meet all program requirements and the vast majority of retailers that accept SNAP ensure that benefits are used lawfully to purchase food. USDA has worked and continues to work diligently with states to reduce fraud in SNAP.
- FNS issued guidance on December 29, 2014, to provide clear parameters for states, including establishing procedures that safeguard access for all those authorized to use the card.
- FNS issued a proposed rule on January 6, 2016, to ensure implementation is consistent with all Federal requirements and to ensure a state’s implementation does not inhibit access to SNAP benefits.
- The final rule will be published by the end of calendar year 2016.
- USDA continues to work with states (Maine and Massachusetts implemented; Kansas in pre-planning phase) that have implemented or are considering implementing photo EBT cards to help ensure that any state choosing to implement photo EBT cards adheres to their responsibilities under Federal statute and regulations, and does not adversely impact benefit access for program participants.

Action/Decision: Continue implementation of photo EBT to support the effective date which will likely be in early February; communicate with stakeholders and Congressional staff about plans to support implementation and resolve concerns.

Action Date: Immediate for new Administration.

SNAP QUALITY CONTROL

Background

- The SNAP Quality Control (QC) system measures the accuracy of state eligibility and benefit determinations. Data collected by quality control are also used for program improvement and analysis.
In 2015, USDA began a thorough integrity review of QC in all 53 State Agencies, and is working to improve administration of SNAP using the results of these reviews, as well as guidance from the USDA’s Office of the Inspector General report issued in September 2015. All 53 reviews are complete and reports have been transmitted to the states as of September 30, 2016.

The reviews looked at both intentional and unintentional non-compliance in the QC process, such as states misinterpreting FNS requirements or providing inadequate oversight of their QC review process, reducing or mitigating errors reported, and a lack of cooperation with FNS QC monitoring efforts. If issues were documented during the reviews, states must commit to corrective action plans and implement fully compliant procedures during the FY 2017 review period.

USDA is working internally and with states to ensure that all state QC review processes are fully up to date and consistent with Federal guidelines. In September 2016, FNS issued a revised SNAP quality control handbook and, in October 2016, conducted training for all FNS QC reviewers. State training occurred or will occur in October and November 2016 and will continue through webinars and Q&A documents.

By December 31, 2016, USDA will announce decisions related to the quality control error rate for FY 2015. This announcement was postponed from June 2016 so that these reviews could be completed.

To establish a national QC error rate for FY 2016, FNS staff will work with states to pull a new sample of FY 2016 cases and complete case reviews. State agencies must grant Federal reviewers access to the documentation and state systems necessary to complete these case reviews. States must continue to report FY 2016 case results to FNS as an opportunity to review internal procedures to ensure that all state QC reviewers are operating in accordance with program rules and the QC system for FY 2017 is sound. This review will begin in early 2017. USDA will not issue bonuses or establish state liabilities for FY 2016.

Error rates are not fraud rates. Error rates measure the amount of improper payments occurring in the SNAP eligibility determination process. Most errors stem from unintentional mistakes on the part of the state agency or the household, not intentional actions to violate program rules.

The Department of Justice is currently investigating states for possible False Claims Act violations in connection with payments by FNS and state error rate reporting.

**Action/Decision:** Continue to implement review process for FY 2016 error rates.

**Action Date:** Immediate for new Administration.

**ONLINE SNAP PURCHASING PILOTS**

**Background**

The 2014 Farm Bill mandated a pilot be conducted to test the feasibility and implications of allowing retail food stores to accept SNAP benefits through online transactions. For households to make online purchases, the online purchasing pilot
is required to be secure, private, and easy to use, and to provide similar support to that found for SNAP transactions in a retail store. Benefits cannot be used to pay for fees of any type, such as delivery, service, or convenience fees.

- There is currently one company, Acculynk, which meets the technical requirements for secure online shopping. There has been additional interest from other companies that are exploring secure Personal Identification Number (PIN) technology alternatives, and these others may enter the market with a solution at any time.
- On September 15, 2016, USDA released a Request for Volunteers to seek retailers to participate in this effort. This will be a small pilot, initially involving up to 5 online retailers in three states. The goal is to ensure that the foundational infrastructure necessary for running SNAP transactions online operates in a safe and secure manner. Retailers will be selected by the end of calendar year 2016.
- Selected retailers will also need to complete website and system development work on their sites to account for SNAP requirements. For example, SNAP does not allow sales tax to be charged on eligible food items purchased with SNAP benefits. Managing sales tax, handling manufacturer’s coupons, ensuring delivery fees can be paid for with a form of tender other than SNAP, and managing refunds are some of the items selected retailers will need to consider.

**Action/Decision:** Continue roll out of the online purchasing pilot; respond as needed to firms and other stakeholders with interest in online SNAP purchases.

**Action Date:** Immediate for new Administration. The pilot is expected to begin in late summer 2017. The evaluation report is expected to be delivered to the Secretary by July 2018. By the fall of 2018, it is expected that a decision will be made regarding expansion of online shopping.

---

**Child Nutrition Program Integrity Proposed Rule**

**Background**

- The Healthy, Hunger-Free Kids Act of 2010 includes statutory changes to further enhance the integrity of the Child Nutrition (CN) Programs.
- In March 2016, FNS published a proposed rule to codify these changes as well as several recommendations from recently conducted management evaluations and USDA Office of Inspector General (OIG) audits of state agencies operating CN Programs.
- The rule would:
  
  o Establish consistent procedures to permanently remove program operators who intentionally or consistently mismanage CN Programs;
  o Authorize USDA and state agencies to establish assessments in situations where willful, repeated and egregious mismanagement of a program has been committed;
o Improve the financial management of the Child and Adult Care Food Program (CACFP) by increasing state resources, strengthening review timeframes, and other requirements designed to improve oversight of CACFP operators; and

o Strengthen state and school nutrition program requirements and training related to effective award and management of food service management contracts.

• A total of 5,659 comments were received on the proposed rule. An FNS team, in conjunction with a contractor, reviewed and analyzed all comments and is in the process of drafting the final rule. Comments indicated that among the more controversial provisions are proposed assessments for violating program requirements, reciprocal disqualification in all Child Nutrition Programs, and Summer Food Service Program disqualifications.

**Action/Decision:** The final rule is scheduled to be published June 2017. Policy decisions will be needed on key issues in February 2017 in order to finalize drafting and clearance of the rule by this date.

**Action Date:** February 2017

**Summer Meals for Children**

**Background**

• The USDA summer meal programs were designed to reach low-income children who have limited access to meals during the summer. Although 22 million children receive free and reduced-price meals during the 2014-15 school year through the National School Lunch and School Breakfast Programs, only a small fraction of those children participated in summer meals.

• FNS has a long history of working towards increasing the number of children served by the Summer Food Service Program (SFSP). Over the past six years in particular, FNS has made extensive efforts to provide summer meals for the children who most need them. FNS implemented a summer meals expansion effort that included the formation of State Technical Assistance Teams (STAT). These teams have worked in partnership with state and community agencies to increase participation of eligible children in summer meals.

• Through the combined efforts of the STAT approach, summer meals have increased from 164 million meals in 2009 to 191 million in 2015, a 16.5 percent increase. In addition, strategies have been institutionalized to ensure sustainability of the summer meal programs.

• Although progress has been significant, the SFSP statutory limitations make summer site operations difficult in some areas and situations. In an effort to address these limitations, FNS has explored alternative methods of providing food benefits
United States Department of Agriculture
2016 Presidential Transition
Food and Nutrition Service (FNS)

during the summer, most notably through the Summer Electronic Benefit Transfer (EBT) for Children demonstrations.

- Since summer 2011, USDA has supported the Summer EBT demonstration projects to test the impact of providing low-income households with children additional funding through EBT cards to buy food during the summer. Rigorous evaluations of these pilots found that providing additional food benefits in this manner significantly reduced very-low food insecurity by one-third and improved nutrition. Summer EBT is able to reach low income families in areas where there are limited numbers of sites eligible to serve meals through SFSP.

- FNS expects that appropriators will provide over $20 million to continue Summer EBT demonstrations in FY 2017. Decisions will need to be made early in 2017 regarding the states and tribal organizations receiving grants to operate summer EBT projects in summer 2017.

**Action/Decision:** Continue efforts in SFSP and a Summer EBT legislative strategy. Select and inform Summer EBT 2017 grant awardees.

**Decision Date:** Dependent on final appropriations action, but likely before mid-February to ensure effective strategy.

**Timeline**

**Key Upcoming Actions, Events and Decisions**

**January 2017:**

- **Summer EBT Project Awards:** Since summer 2011, USDA has supported the Summer Electronic Benefit Transfer for Children (SEBTC) projects, which can to reach low income families in areas where there are limited numbers of sites eligible to serve summer meals. FNS expects that appropriators will provide over $20 million to continue Summer EBT demonstrations in FY 2017. Decisions will need to be made before mid-February 2017 regarding the states and tribal organizations receiving grants to operate summer EBT projects in summer 2017.

- **National Academy of Medicine (NAM) WIC Food Package Report:** The Healthy, Hunger Free Kids Act of 2010 requires a comprehensive review of the WIC food package at least every ten years to ensure that it conforms to current nutrition science, public health concerns, and cultural eating patterns. In late 2014, FNS contracted with the NAM to convene an expert panel and conduct the next review. The panel’s report could be released as early as January, though it could take several months longer. The report will be highly scrutinized by Congress and other program stakeholders, who will likely be interested to know FNS’ plans to consider regulatory changes in WIC based on the report soon after its release.
- **SNAP Retailer Eligibility Standards Rule**: The final rule which provides for changes to the standards for participating SNAP retailers is scheduled to be published by the end of calendar year 2016 with an effective date of one year following publication. A substantial education and technical assistance program for SNAP retailers will be conducted to ensure that authorized retailers are able to comply with the new standards by the effective date. Plans for this effort will need to begin shortly after the publication of the final rule, potentially as early as January 2017. Some stakeholders may raise concerns about the new standards; the change in Administration may be seen as an opportunity to revisit policy decisions.

- **SNAP Quality Control, Establishment of a National Quality Control (QC) error rate for FY 2016**: FNS will begin working with states to pull a new sample of FY 2016 cases and complete case reviews in order to establish a national QC error rate for FY 2016. This change in approach (from a two tier to a one tier review) is being instituted for FY 2016 based on changes that needed to be incorporated into the QC system to assure a sound QC system; there will be no State error rates for FY 2016, only the national error rate. These reviews will require significant state cooperation, Federal access to case documentation and state systems. The 2016 national error rate will be announced in June, 2017.

**February 2017:**

- **CN Program Integrity Final Rule**: The Healthy, Hunger-Free Kids Act of 2010 included statutory changes to further enhance the integrity of the Child Nutrition (CN) Programs. In March 2016, FNS published a proposed rule to codify these changes as well as several recommendations from recently conducted management evaluations and USDA Office of Inspector General (OIG) audits of state agencies operating CN Programs. Policy decisions will be needed on key issues in February 2017 in order to finalize drafting and clearance of the rule by June 2017.

**March 2017: None**

**April 2017:**

- **FNCS Park Office Center Lease Re-Competition**: The lease for Park Office Center, the location of FNCS’ National Office, in Alexandria, VA expires in May 2017. A General Services Administration (GSA)-led competition to replace that lease is currently underway. Results of that competition are expected to be known in the second quarter of FY 2017. Costs associated with execution of a new lease are estimated to be approximately $17 million. While funding to support those costs is essentially dependent on full year FY 2017 appropriations action, some potential alternative funding options have been identified. No later than April 2017, FNCS will need to assess its financial situation and finalize its funding strategy.
May 2017: Announcement of Farm to School Grant Awards: Each year, USDA awards up to $5 million in competitive grants to assist eligible entities (school districts, state and local agencies, Tribal nations, agricultural producers, and non-profit organizations) in implementing farm to school programs that improve access to local foods in eligible schools. They can support training, operations, planning, purchasing equipment, developing school gardens, developing partnerships, and implementing farm to school programs. Applications for the FY 2017 grants are due in December 2016; announcement of awards is scheduled for May 2017.

June 2017: None

**Appendix A: Acronyms**
WHO WE ARE: OUR MISSION AREA

The mission of the Marketing and Regulatory Programs (MRP) is to facilitate and expand the domestic and international marketing of U.S. agricultural products, to help protect the agricultural sector from plant and animal health threats, and to ensure humane care and treatment of regulated animals. MRP agencies are active participants in setting national and international standards. MRP is composed of the Agricultural Marketing Service, the Animal and Plant Health Inspection Service, and the Grain Inspection, Packers, and Stockyards Administration.

WHO WE ARE: OUR WORKFORCE

- AMS – 2,074 permanent employees
- APHIS – 5,771 permanent employees, and 2,838 temporary employees
- GIPSA – 643 permanent employees

WHO WE SERVE: OUR CONSTITUENTS

MRP programs provide the basic infrastructure to improve agricultural market competitiveness for the overall benefit of consumers and producers of American agriculture. MRP efforts also ensure agricultural exports remains high – fiscal year 2015 was the third-highest year on record with $139.7 billion in farm exports.

KEY UPCOMING DECISIONS

- Establishment of a mandatory national bioengineered food disclosure standard; a study on consumer access to electronic disclosures must also be completed within one year.
- Whether APHIS should finalize new regulations under the Horse Protection Act to provide additional protections against soring?
- Whether APHIS should approve imports of Argentine lemons and EU apples/pears?
- Whether to proceed and how with a comprehensive revision of APHIS’ biotechnology regulations in light of scientific advances since they were established in 1987? How do we address diverse stakeholder interests in regulation of biotechnology?

BUDGET HIGHLIGHTS FY 2016

- AMS – total budget authority of $2.75 billion of which $723.7 million is non-federal marketing order assessments.
- APHIS – total budget authority of $1.36 billion. 15 percent is generated through Agricultural Quarantine Inspection User Fees.
- GIPSA – total budget authority of $98.0 million. 56 percent is generated through Inspection & Weighing Mandatory User Fees.
I. Organizational Overview

Organizational Chart

United States Department of Agriculture
2016 Presidential Transition
Marketing and Regulatory Programs (MRP)

In addition, the Office of the Under Secretary includes one political position serving as Confidential Assistant to the Under Secretary. The office also includes two administrative support positions which are Program Analyst and Staff Assistant.

The MRP Mission Area, at full staff, composed of at minimum 7 full-time employees, with office space to support an additional 2 employees as needed (ie, as detailees to assist in special projects). Political appointments include: Under Secretary; Two Deputy Under Secretaries; Chief of Staff; and Confidential Assistant.

In addition to political appointees, there are two front-office career staff, with the titles of Program Analyst and Staff Assistant. In addition, MRP may bring in detailees from the agencies to assist in special priority projects.
Biographies for career staff in key leadership positions

Kevin Shea  
APHIS Administrator  
202-799-7000, Kevin.A.Shea@aphis.usda.gov

Kevin Shea was appointed Administrator of the U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS) on June 18, 2013, after serving as Acting Administrator since June 2012. As Administrator, Mr. Shea carries out the agency's broad mission of protecting and promoting American agriculture, regulating genetically engineered organisms, administering the Animal Welfare Act and carrying out wildlife damage management activities. In addition to his regular duties, Mr. Shea serves on the Secretary's Executive Resources Board and the Secretary's Management Council.

Before becoming Administrator, Mr. Shea served as Associate Administrator since September 2004, ensuring the smooth functioning of the Agency and championing APHIS' unprecedented business process improvement efforts. Starting in 2000, Mr. Shea served as Deputy Administrator for Policy and Program Development, providing leadership for the overall planning and direction of policies, programs and activities at APHIS, as well as being responsible for the Agency's budget, regulation development and environmental compliance programs. From 1992 to 2000 he served as APHIS' Director of Budget and Accounting. Earlier in his career he worked as a budget analyst, Chief of the Program Analysis Branch, and Chief of the Policy Analysis and Development Staff. He also spent one year practicing law in the litigation department of Frank, Bernstein, Conaway and Goldman in Baltimore, MD. Mr. Shea graduated from DeMatha Catholic High School in Hyattsville, MD and the University of Maryland in College Park. He earned a law degree, summa cum laude, from the University of Baltimore School of Law.

A native Washingtonian, Mr. Shea now resides in Crofton, MD.

Biographies for political staff in key leadership positions

Elvis Cordova  
Acting Under Secretary for Marketing and Regulatory Programs  
202-720-0395, Elvis.Cordova@osec.usda.gov

Mr. Cordova is the Deputy Under Secretary for the Marketing and Regulatory Programs Mission Area at the U.S. Department of Agriculture where he helps to oversee the Agricultural Marketing Service, the Animal and Plant Health Inspection Service, and the Grain Inspection, Packers and Stockyards Administration. He previously served as the Chief of Staff for the Research, Education & Economics Mission Area at USDA where he helped to oversee the Agricultural Research Service, the Economic Research Service, the National Agricultural Statistical Service, and the National Institute of Food and Agriculture.
Before joining USDA, he served as a Presidential Management Fellow at the Farm Credit Administration and the U.S. Department of Energy where he worked on issues encompassing alternative energy, economic development, financial services, and international & public affairs. Mr. Cordova has also held the position of Vice President of Public Relations at Tzolkin Media Inc., a D.C. based start-up company that developed online entertainment content for the Latino youth market. Prior to joining Tzolkin Media, he was the Director for Latin American programs at the Self Reliance Foundation where he managed the organization's civil society building projects, which focused on teaching social media technology to journalists and radio producers throughout Latin America. Before relocating to Washington D.C., he lived in Argentina and Brazil where he conducted research on economic and trade development. During his time in New York City, he worked at the United Nations as a consultant where he researched state capacity building strategies aimed at enhancing trade development in emerging markets. He also worked as a management planning analyst for the New York City Department of Parks and Recreation.

Mr. Cordova began his career as a financial analyst at the Harvard Management Company in Boston, Massachusetts.

Mr. Cordova, a recipient of the Woodrow Wilson Graduate Fellowship, holds a Master’s Degree in Public Administration from the Wagner Graduate School of Public Service at New York University and a Bachelor’s Degree in Criminal Justice from Northeastern University. He also holds various professional and academic certificates from Georgetown University, Harvard University, University of California at Berkeley, Universidad de Sevilla in Spain, Universidad de Buenos Aires in Argentina, Ecole Nationale des Travaux Publics de l’Etat in France, and Pontificia Universidade Catolica in Brazil. His languages include Spanish, Portuguese, and French. Mr. Cordova recently served as a member of the Executive Board of the Washington D.C. Chapter of the National Society of Hispanic MBAs.

Ben Thomas
Deputy Under Secretary for Marketing and Regulatory Programs
202-260-8322, Ben.Thomas@osec.usda.gov

Ben Thomas is the Deputy Under Secretary for the Marketing and Regulatory Programs Mission Area at the U.S. Department of Agriculture where he helps oversee the Agricultural Marketing Service, the Animal and Plant Health Inspection Service, and the Grain Inspection, Packers and Stockyards Administration. Most recently, he served as the Chief of Staff for the Farm and Foreign Agricultural Services Mission Area, which encompasses the Farm Service Agency, Foreign Agricultural Service, and Risk Management Agency. In that role, he oversaw the department’s international activities and worked to implement provisions of the 2014 Farm Bill.

Prior to joining USDA, Ben served as Legislative Assistant and Counsel to two Members of the Senate Agriculture Committee, helping write the 2014 Farm Bill. He also provided counsel on trade, telecommunications, nutrition, the environment, rural development, and more. Prior to his Senate experience, Ben served in various policy positions at the Farm Service Agency and Risk Management Agency, and as a Law Clerk to the Chairman of the Federal Trade Commission.

Ben graduated from Austin College in Sherman, Texas with a Bachelor of Arts degree. He
received his Juris Doctor from Washington University in St. Louis, Missouri, and his LL.M in Agricultural and Food Law from the University of Arkansas in Fayetteville.

Ben was raised on a cotton and peanut farm near Morton, Texas, where his family still farms.

David Howard  
Chief of Staff and Acting Deputy Under Secretary for Marketing and Regulatory Programs  
202-720-5759, David.howard@osec.usda.gov

David Howard is the Chief of Staff and is also serving as Acting Deputy Under Secretary for the Marketing and Regulatory Programs Mission Area (MRP) at the U.S. Department of Agriculture, where he helps oversee the Agricultural Marketing Service, the Animal and Plant Health Inspection Service, and the Grain Inspection, Packers and Stockyards Administration. David also serves as the main conduit between the MRP mission area and the Office of the Secretary, including the Office of Congressional Relations and the Office of Communications. Before joining MRP, David covered the Rural Development and Natural Resources and Environment portfolios in the Department’s Office of Congressional Relations.

Prior to joining USDA, David worked for Senator Tom Harkin from 2007 – 2013 in various roles. David received a B.A. in political science from the University of Northern Iowa in 2007. He hails from the small town of Marble Rock, Iowa.

Elanor Starmer, AMS Administrator  
202-720-5115, elanor.starmer@ams.usda.gov

Ms. Elanor Starmer is USDA’s AMS Administrator. Ms. Starmer joined USDA in 2011, first to support the Deputy Secretary and then as a Senior Advisor to Secretary Tom Vilsack. She also served as the National Coordinator and Advisor for Local and Regional Food Systems at USDA. In this role, she guided Department-wide efforts to strengthen local and regional food systems.
and lead the Know Your Farmer, Know Your Food initiative. She acted as liaison to U.S. Food and Drug Administration on the Food Safety Modernization Act (FSMA) and developed Department-wide strategy to support industry on FSMA implementation.

Prior to joining USDA in 2011, Elanor worked on agriculture, food and development policy issues for over a decade with nonprofits in Washington, DC, Minnesota, and California. She also consulted with the Organization of American States' agriculture policy arm in El Salvador. Originally from a small farming community in New Hampshire, Ms. Starmer has an MS in Agriculture Science and Policy from Tufts University's Friedman School; an MA in Development Economics from the Fletcher School of Law and Diplomacy; and a BA from Brown University. [b][6]

Larry Mitchell
GIPSA Administrator
202-720-0219, Larry.Mitchell@usda.gov

Larry Mitchell was appointed Administrator of the United States Department of Agriculture (USDA), Grain Inspection, Packers and Stockyards Administration (GIPSA) on June 3, 2012. He is responsible for a variety of programs that facilitate the marketing of livestock, poultry, meat, cereals, oilseeds, and related agricultural products, and to promote fair and competitive trading practices for the overall benefit of consumers and American agriculture. GIPSA's programs directly and significantly impact two key sectors of American agriculture - the livestock and grain markets. The markets serviced by GIPSA represent a total economic value of approximately $170 billion annually with exports contributing over $28.7 billion to the U.S. economy.

Before joining GIPSA, Mr. Mitchell served as the Associate Director of the Office of Advocacy and Outreach at USDA and previously served as Deputy Administrator for Farm Programs of the Farm Service Agency (FSA) of USDA and Deputy Vice President at Commodity Credit Corporation in the 1990s.

In the interim, Mr. Mitchell served in the private and nonprofit sectors as President of K Street Research, Inc. and as Chief Executive Officer of the American Corn Growers Association. Prior to serving at USDA in the 1990s, Mitchell held the position of Vice President of Government Relations for the National Farmers Union in Washington, D.C., Director of Federal and State Relation for the American Agriculture Movement, Editor of the AAM Reporter and as an independent consultant and writer on American farm issues. Before coming to Washington in 1989, Mr. Mitchell was a grain and cotton farmer in Texas. Mr. Mitchell earned a Bachelor’s degree from Tarleton State University in Plant and Soil Science.

Overview of Agency Programs and Operations

The economic vitality and quality of life in rural America and the U.S. economy at large depends on a competitive, efficient, and productive agricultural system. U.S. agricultural producers are not simply farmers and ranchers; they are often small business owners trying to survive and support their families and rural communities in a challenging global, technologically advanced,
and competitive business environment. In an era of market consolidation and intense competition, these producers rely on fair and open access to markets and control over their decisions to thrive. Agricultural producers also need to safeguard animal and plant resources against the introduction of foreign agricultural pests and diseases.

The mission of the Marketing and Regulatory Programs (MRP) is to facilitate and expand the domestic and international marketing of U.S. agricultural products, to help protect the agricultural sector from plant and animal health threats, and to ensure humane care and treatment of regulated animals. Because these programs provide the basic infrastructure to improve agricultural market competitiveness for the overall benefit of consumers and producers of American agriculture, this mission area contributes to all of USDA’s Strategic Goals. As a result of many efforts within MRP and other mission areas, the U.S. achieved $139.7 billion in farm exports in fiscal year 2015, the third-best year on record. Notably, the Animal and Plant Health Inspection Service (APHIS) continued efforts to eliminate trade barriers and ensure that trade decisions are based on science. The grain inspection and weighing work of the Grain Inspection, Packers and Stockyards Administration (GIPSA) and the work of the Agricultural Marketing Service (AMS) also contributed to the high level of exports seen in fiscal year 2015. As a direct result of the work of the MRP agencies and their sister agencies, USDA resolved more than 150 trade-related issues involving U.S. agricultural exports valued at $2.4 billion.

Through GIPSA, MRP also conducts oversight activities to protect livestock, meat, and poultry producers from unfair competition and unfair business practices, and partners with the Department of Justice to help prevent anti-competitive behaviors for regulated entities in the livestock, meat, and poultry industries. In addition, MRP assists producers in management and domestic marketing by providing market trend analysis and business and marketing tools through the work of the AMS. MRP also helps increase the competitiveness of the agricultural sector by working to protect the Nation’s agriculture from pests and diseases, thereby increasing the efficiency of production.

MRP’s efforts over the years have made a lasting impact on markets important to small and mid-sized producers. Through the National Organic Program, AMS has provided critical support needed to help fuel double-digit growth in the organic consumer market. In 2015, the retail market for organic products was valued at $43.3 billion by the Organic Trade Association and continues to grow. AMS has worked to expand market access for organic farms and businesses. Today, the industry encompasses a record 22,818 certified organic businesses.

**Agriculture Marketing Service (AMS)**

**Quality Grading and Inspections.**

USDA quality grade marks are usually seen on beef, lamb, chicken, turkey, butter, and eggs. For many other products, such as fresh and processed fruits and vegetables, the grade mark isn't always visible on the retail product. In these commodities, the grading service is used by wholesalers, and the final retail packaging may not include the grade mark. However, quality grades are widely used—even if they are not prominently displayed—as a "language" among
traders. They make business transactions easier whether they are local or made over long distances.

Consumers, as well as those involved in the marketing of agricultural products, benefit from the greater efficiency permitted by the availability and application of grade standards. AMS currently grades cotton, fresh fruits and vegetables, processed fruits and vegetables, poultry, eggs, livestock and meat, dairy products, and tobacco.

**Auditing and Accreditation**

AMS provides audit and accreditation programs based on International Organization for Standardization (ISO) Standards and/or Hazard Analysis and Critical Control Point (HACCP) Principles and Guidelines. These programs provide producers and suppliers of agricultural products the opportunity to assure customers of their ability to provide consistent quality products or services. AMS verifies their documented programs through independent, third-party audits. AMS audit and accreditation programs are voluntary and paid through hourly user-fees.

AMS is recognized nationally and internationally as a competent and reliable provider of audit and accreditation services. AMS utilizes the International Organization for Standardization (ISO) 19011:2011 guidelines for quality and/or environmental management systems auditing as the format to evaluate program documentation, to ensure consistent auditing practices, and to promote international recognition of audit results.

**Organic Certification and Accreditation**

- **Organic Certification** allows a farm or processing facility to sell, label, and represent their products as organic. Any organic operation in violation of the USDA organic regulations is subject to enforcement actions, which can include financial penalties or suspension/revocation of their organic certificate.
- **Organic Accreditation** authorizes private, foreign, or State entities to certify farms or processing facilities. Certifying agents are accredited by the USDA and are located throughout the United States and around the world. Certifying agents are responsible for ensuring that the USDA organic products meet or exceed all organic standards.

**Local Food Research & Development**

- **Farmers Markets and Direct-to-Consumer Marketing**: conducts regular data collection and analysis of farmers market operations and other direct-to-consumer marketing outlets (Community Supported Agriculture, food hubs, on-farm markets) to help market managers, planners, and researchers better understand the impact of these outlets on food access and local economic development, and help the public easily find sources of fresh, local food.
- **Food Value Chains and Food Hubs**: studies “food value chains”, an innovative business model in which agricultural producers, processors, buyers, and other supply chain members form collaborative, transparent partnerships that intentionally attempt to combine financial success with social benefit. “Food hubs”, a subset of these innovative enterprises, work to
ramp up the availability of local food in wholesale marketing channels by offering affordable aggregation, distribution and marketing services to small and mid-sized producers

- **Wholesale Markets and Facility Design:** provides targeted site assessment and design services for food market planners, managers and community stakeholders to improve the efficiency of permanent food market facilities.

- **USDA Farmers Market:** The Department’s own “living laboratory” for farmers market operations, the farmers market at USDA headquarters has been running strong for 17 years and counting on a seasonal basis, and currently operates throughout the year in both outdoor and indoor locations. Posted here are schedules of upcoming market days and special programs/events for USDA headquarters along with materials that provide transferable lessons about market management, layout and organizational self-assessment for use by farmers market stakeholders across the country.

- **AMS Grant Programs:** AMS administers four grant programs to help farmers and ranchers market the food they produce, including programs that further farmers markets, specialty crops such as fruit and vegetables, local food marketing, and cost-share programs to help farmers become organic.

**Know Your Farmer, Know Your Food Initiative**

The Know Your Farmer, Know Your Food (KYF2) initiative is a USDA-wide initiative (not an appropriated program) to strengthen local and regional food systems and strengthen the critical connection between farmers and consumers. The initiative facilitates cross-cutting efforts at USDA that seek to use existing USDA programs to break down structural barriers that have inhibited local food systems from thriving.

**Import/Export Certificates**

**Imports**

- Specialty Crops: The AMS Specialty Crops Program administers Marketing Orders and Section 8e Import regulations that apply quality standards to certain perishable fruits and vegetables entering the United States. These standards ensure that consumers have access to high-quality products and ensure that the American produce industry and imports are competing on a level playing field.

- Shell Eggs: Additionally, AMS routinely inspects egg imports for compliance with U.S. quality standards, including storage and transportation temperature requirements.

**Exports**

AMS certification and verification programs support American exporters by ensuring that products meet specific export requirements for countries around the world, including in the European Union, Asia, and South America.
To further facilitate domestic and international movement of U.S. agricultural products, AMS works to develop centralized electronic trade document solutions, including the Electronic Document Exchange (eTDE) System and the International Trade Data System (ITDS). These electronic systems give authorized product owners, buyers, carriers, brokers, and government port agents access to critical information around the clock and around the world--making the certification and verification process even faster and easier.

**Lab Testing & Approval**

AMS provides lab testing and approval services to facilitate domestic and international marketing of food and agricultural commodities.

- **Lab Testing:** AMS’ National Science Laboratories (NSL) is a fee-for-service lab network utilized by both industry and government. Through laboratories located in Gastonia, NC; Blakely and Dawson, GA; and Winter Haven, FL, NSL provides chemical, microbiological, and bio-molecular analyses on food and agricultural commodities. NSL provides testing service for AMS commodity programs, other USDA agencies, Federal and State agencies, US Military, research institutions, and private sector food and agricultural industries.

- **Lab Approval:** AMS approves, or accredits, labs to perform testing services in support of domestic and international trade. At the request of industry, other Federal agencies, or foreign governments, AMS develops and administers laboratory approval programs to verify that the analysis of food and agricultural products meet country or customer-specified requirements.

**Market Research & Analysis**

AMS has a long history of providing tools and services that help create opportunities for American farmers and businesses. One of the tools we provide—free of charge—is in-depth market information and analysis.

Price, volume, values, weather impacts, supply, and demand—the market and all of the economic factors surrounding it can be complex to track and understand. From the smallest farmer to the largest grocery store chain, all of American agriculture is impacted by the trends and prices within the marketplace. Having the right information at the right time is key to achieving success.

**Grants & Opportunities**

The U.S. Department of Agriculture’s (USDA) Agricultural Marketing Service (AMS) works to improve domestic and international opportunities for U.S. growers and producers. AMS works with State and local agricultural departments to provide support to rural America and the Nation’s agricultural sector.
AMS funding supports a variety of programs, including organic certification cost-share programs and efforts to expand farmers markets and other local food sources. This funding is one of the ways that USDA invests in the future of rural America and the nation’s agricultural sector.

- **The Farmers Market and Local Food Promotion Program**

  Farmers Market and Local Food Promotion Program grants are available annually to support local and regional food systems through two competitive programs: the Farmers Market Promotion Program (FMPP) and the Local Food Promotion Program (LFPP). FMPP grants fund farmer-to-consumer direct marketing projects such as farmers markets, community-supported agriculture programs, roadside stands, and agritourism.

  LFPP grants fund local and regional food business enterprises that serve as intermediaries to process, distribute, aggregate, and store locally or regionally produced food products. Projects also provide technical assistance and outreach, including planning grants for local food businesses.

- **Federal State Marketing Improvement Program**

  FSMIP provides matching grant funds to conduct applied research projects that explore new market opportunities for U.S. food and agricultural products and improve the efficiency and performance of the U.S. agricultural marketing system.

  These grants are awarded on a competitive basis to State departments of agriculture, forestry, natural resources, or energy, as well as other State agencies such as experiment stations, universities, and colleges.

- **Sheep Production and Marketing Grant Program**

  The Sheep Production and Marketing Grant Program is designed to strengthen and enhance the production and marketing of sheep and sheep products in the United States. The program will create new opportunities by improving infrastructure, developing business and resources, and supporting innovative approaches to address long-term needs. Projects will be funded through the National Sheep Industry Improvement Center.

- **Specialty Crop Block Grant Program**

  The SCBGP focuses on projects that enhance the competitiveness of specialty crops, including fruits, vegetables, tree nuts, cut flowers, and other horticulture products. Projects cover issues from food safety to business planning. The block grants are designed to increase the long-term success of producers and broaden the market for specialty crops.

  Many of the projects help market locally grown foods and help increase opportunities for specialty crop farmers. SCBGP also offers funds to States to support research and marketing projects that help increase crop yields and to conduct research to mitigate the crop damage.
Transportation Research & Analysis

Our Transportation Services Division (TSD) serves as the definitive source for economic analysis of agricultural transportation from farm to market. TSD experts support domestic and international agribusinesses by providing market reports, economic analysis, transportation disruption reports, technical assistance, and outreach to various industry stakeholders.

Tracking developments in truck, rail, barge, and ocean transportation, TSD provides information and analysis on the four major modes of moving food from farm to table, port to market.

Plant Variety Protection

The Plant Variety Protection Office (PVPO) provides intellectual property protection to breeders of new varieties of seeds and tubers. Implementing the Plant Variety Protection Act (PVPA), we examine new applications and grant certificates that protect varieties for 20 years (25 years for vines and trees). Our certificates are recognized worldwide and allow faster filing of foreign PVP applications. Certificate owners have exclusive rights to market and sell their varieties, manage the use of their varieties by other breeders, and enjoy legal protection of their work.

Research & Promotion

Research & Promotion (R&P) programs, authorized by Congress, are requested, funded, and driven by industry. The programs establish a framework to pool resources to develop new markets, strengthen existing markets, and conduct important research and promotion activities. AMS provides oversight, ensuring fiscal responsibility, program efficiency, and fair treatment of participating stakeholders. AMS oversees more than 20 research and promotion boards that empower farmers, ranchers, and agricultural businesses.

Pesticide Data Program

The Pesticide Data Program (PDP) is a national pesticide residue monitoring program and produces the most comprehensive pesticide residue database in the U.S. PDP administers the sampling, testing, and reporting of pesticide residues on agricultural commodities in the U.S. food supply, with an emphasis on those commodities highly consumed by infants and children. The program is implemented through cooperation with State agriculture departments and other Federal agencies.

Cooperation with Cuba

USDA entered into a Memorandum of Understanding with the Republic of Cuba, in which the Ministry of Agriculture calls for cooperation on mutually determined activities in the fields of agriculture. AMS’ role with respect to the MOU is to conduct technical exchanges with subject matter experts regarding production, post-harvest handling, and certification processes.
USDA announced that it will allow the 22 industry-funded research and promotion programs and 18 specialty crop marketing organizations with research authorities to conduct authorized research and information exchange activities with Cuba. Authorized activities are limited to information exchanges with Cuban government and industry officials and to health, science, nutrition, and limited consumer-oriented research. Promotional and advertising campaigns or materials are prohibited. USDA’s oversight role includes review of all activities and travel related to Cuba to ensure consistency with USDA policy and all other federal statutes and regulations. All requests are vetted through AMS’s Office of General Counsel and the USDA Deputy Counsel, before being referred to the FAS, as necessary.

Beginning Farmers

AMS also participates in the cross Department Agency Priority Goal for New and Beginning Farmers. Through outreach, education, and added data collection, AMS aims to support 10 percent of the projects funded by the Farmers Market Promotion Program (FMPP) and Local Food Promotion Program (LFPP) to benefit beginning farmers and ranchers. Both of these programs have a statutory priority to support projects that benefit communities that (1) are located in areas of concentrated poverty with limited access to fresh locally or regionally grown foods; and (2) have not received benefits from the Program in the recent past. Taking these priorities into consideration, AMS also promotes outreach and education for projects that benefit beginning farmers and ranchers as a part of their overall mission. Data on beginning farmers and ranchers in such projects has not been gathered in previous years, but beginning with FY 15 grant awards, AMS will receive voluntary information from its awardees regarding project beneficiaries. In FY 2014 FMPP awarded 183 projects for $14 million; and LFPP awarded 191 projects for $12 million. Using the number of projects awarded in FY 14 and amount of funds available for FY 15 ($13 million), AMS estimates the following for projects that benefit beginning farmers and ranchers:

<table>

Animal and Plant Health Inspection Service (APHIS)

The Animal and Plant Health Inspection Service (APHIS) was reestablished by the Secretary of Agriculture on March 14, 1977, pursuant to authority contained in 5 U.S.C. 301 and Reorganization Plan No. 2 of 1953 (5 U.S.C. app.). APHIS was established to conduct regulatory and control programs to protect and improve animal and plant health for the benefit of
agriculture and the environment. In cooperation with State governments, industry stakeholders, and other Federal agencies, APHIS works to prevent the entry and establishment of foreign animal and plant pests. APHIS also regulates certain genetically engineered organisms and works to support healthy international agricultural trade and exports of U.S. agricultural products. In addition, the agency enforces regulations to ensure the humane treatment of certain animals and carries out research and operational activities to reduce crop and livestock depredation caused by birds, rodents, and predators.

**Biotechnology Regulatory Services**

Biotechnology regulatory officials are responsible for regulating the importation, movement, and field release of genetically engineered plants and certain other genetically engineered organisms that may post a risk to plant health.

Biotechnology regulations are designed to ensure that genetically engineered organisms, such as herbicide-tolerant or drought-resistant crops, are as safe for agriculture and the environment as traditionally bred crop varieties. In regulating biotechnology, APHIS works in concert with the Environmental Protection Agency and the Food and Drug Administration, agencies that also play important roles in protecting agriculture, a safe food supply, and the environment. APHIS’ involvement begins when a person or organization wishes to import, move across a State line, or field-test a genetically engineered plant. These activities are subject to the Agency’s permitting and notification system.

**Plant Protection and Quarantine**

Plant protection officials are responsible for programs to control or eradicate damaging foreign plant pests and diseases. These programs are carried out in cooperation with the States involved, other Federal agencies, farmers, and private organizations. Pest control programs use a single tool or a combination of pest control techniques, both chemical and nonchemical, which are both effective and safe. Plant protection officials develop Federal regulations and policies that prohibit or restrict the entry into the United States of foreign pests and plants, plant products, and other materials that may harbor pests, diseases, or noxious weeds. They also manage programs for overseas preclearance—agricultural inspection—of commodities, passengers, and U.S. military activities. These efforts help protect the health and value of U.S. agricultural production and natural resources.

**Veterinary Services**

Animal health officials are responsible for programs to protect and improve the health, quality, and marketability of U.S. animals and animal products. The programs are carried out through cooperative links with States, foreign governments, livestock producers, and other Federal agencies.

APHIS officials conduct exclusion and quarantine activities for animal pests and diseases, carry out eradication and control programs for certain diseases, provide laboratory diagnostic services, and conduct animal health monitoring and surveillance. They also certify as to the health status of animals and animal products being exported to other countries and respond to animal disease incursions or epidemics that threaten the health status of U.S. livestock and poultry. Because
human health is closely linked to veterinary health, APHIS animal health officials cooperate with other agencies and organizations to effectively manage the intersection between wildlife, veterinary, and human health issues. APHIS also administers a Federal law intended to ensure that all veterinary biological products used in the diagnosis, prevention, and treatment of animal disease are safe, pure, potent, and effective.

**Animal Care**

APHIS administers the Animal Welfare Act, which establishes standards for the humane care and handling of certain warm-blooded animals bought, sold, and transported in commerce and used or intended for use as pets at the wholesale level or used or intended for use in exhibitions or for research purposes. The agency also enforces the Horse Protection Act of 1970, which prohibits the soring of horses at shows and sales.

**International Services**

APHIS activities in the international arena include conducting cooperative plant and animal pest and disease control, eradication, and surveillance programs in foreign countries. These programs provide a first line of defense for the United States against threats such as screwworm Mediterranean fruit fly, and other exotic pests and diseases. APHIS also provides international representation concerning sanitary and phytosanitary technical trade issues and conducts capacity building activities to help develop the animal and plant health competencies and infrastructure of international counterparts.

**Wildlife Services**

Wildlife services officials provide assistance, upon request, to States, counties, local communities, and agricultural producer groups to reduce crop and livestock depredations caused by birds, rodents, and predators. Using methods and techniques that are biologically sound, environmentally acceptable, and economically feasible, they educate and advise farmers and ranchers on proper uses of control methods and techniques; suppress serious nuisances and threats to public health and safety caused by birds, rodents, and other wildlife in urban and rural communities; and work with airport managers to reduce risks of bird strikes. Wildlife services officials also assist in the recovery of endangered and threatened species and monitor wildlife across the country for diseases to help protect animal and human health. In addition, they conduct research into predator-prey relationships, new control methods such as wildlife contraception, and more efficient and safe uses of existing methods such as toxicants, repellants and attractants, biological controls, scare devices, and habitat alteration.

**Grain Inspection, Packers and Stockyards Administration (GIPSA)**

**Federal Grain Inspection Service**

Across America, U.S. grain, rice, and other commodities flow from farm to elevator to destinations around the world. GIPSA’s Federal Grain Inspection Service (FGIS) helps move our Nation’s harvest into the marketplace by providing farmers, handlers, processors, exporters, and international buyers with sampling, inspection, process verification, weighing and stowage
examination services that accurately and consistently describe the quality and quantity of the commodities being bought and sold.

**Packers and Stockyards Program**
The Agency's Packers and Stockyards Program (P&SP) promotes fair business practices and competitive environments to market livestock, meat, and poultry. Through its oversight activities under the Packers and Stockyards (P&S) Act, including monitoring programs, reviews, and investigations, P&SP fosters fair competition, and provides payment protection. It also guards against deceptive and fraudulent trade practices that affect the movement and price of meat animals and their products. P&SP’s work protects consumers and members of the livestock, meat, and poultry industries. P&SP’s major enforcement areas are payment protection, unfair, deceptive, and fraudulent practices, and competition.

APHIS Discretionary Funding

The FY 2011 Full-Year Continuing Resolution removed $27 million from APHIS’ appropriation related to approximately 45 Congressionally directed projects. Without funding, APHIS permanently discontinued many of the specific projects.

Congress provided $20 million in 2-year funding through a general provision in the FY 2014 appropriation for the Multi-Agency Coordination (MAC) Group for Huanglongbing (HLB), or citrus greening. HLB is a devastating disease that threatens U.S. citrus production, valued at $3.1 billion in 2013. Congress provided an additional $5.5 million in the FY 2016 appropriation for the HLB MAC that is available until the end of FY 2017.

The Plant Protection Act and the Animal Health Protection Act grant the Secretary of Agriculture authority to transfer funds to APHIS for use in controlling outbreaks of insects, plant diseases, and animal and poultry diseases. Although the Secretary is authorized to transfer funds from any USDA agency or corporation, the funds are typically transferred from the Commodity Credit Corporation (CCC). Each year, APHIS’ appropriation also emphasizes this authority. In FY 2015, APHIS received approximately $1 billion in emergency funds transferred from the CCC to address the largest animal outbreak in history – that of notifiable avian influenza.

Also, in FY 2015 the Department decentralized its General Services Administration (GSA) rent account. The appropriated budget included a new line item totaling $42.5 million to cover APHIS’ portion of this account.

APHIS’ Mandatory Funding

Congress originally created a program in the 2008 Farm Bill to prevent the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. There was a significant funding increase for this purpose between FY 2009 and FY 2010. The House and Senate Agriculture Committees renewed their support for the program in the 2014 Farm Bill, making the program permanent and expanding funding.

APHIS’ Supplemental Funding

APHIS received a transfer from the Department of Health and Human Services’ Centers for Disease Control and Prevention to extend surveillance and diagnostic capabilities associated with influenza viruses in domestic swine in response to the Novel H1N1 2009 Virus outbreak. APHIS’ efforts assisted in determining whether the novel H1N1 virus influenza or other strains of interest are present in the U.S. swine population.

**Regulatory Actions**

A regulation is a legally binding rule developed by an agency. For that reason, rulemaking is a thorough, time consuming, and often complicated process that provides opportunity for the public to provide input on regulations before they are finalized. The process is governed by the Administrative Procedures Act and several Executive Orders. Rulemaking can take from several months to several years. Factors affecting the timeline include the complexity of the issues involved; the availability of data needed for economic, risk, or environmental analyses; the extent of public participation in the rulemaking, and the number and nature of comments received; the priority of the rulemaking relative to other Agency rulemakings under development at the same time; and whether the rule requires review by the Office of Management and Budget. Some also require consultations with State and local government, and Indian Tribes.

From January through June 2017, APHIS will continue the rulemaking process for the proposed regulatory actions listed below whose comment periods closed and for which we published no final regulatory decision prior to the end of fiscal year (FY) 2016. APHIS will update its rulemaking priorities following any published update to the Current Unified Agenda of Regulatory and Deregulatory Actions, including:

- the proposed rule for amending the horse protection regulations (published 7/26/16; comments due 10/26/16);
- the proposed rule for the importation of live sheep, goats, and certain other non-bovine ruminants, and products derived from sheep and goats, with regard to transmissible spongiform encephalopathies such as bovine spongiform encephalopathy (BSE) and scrapie (published 7/8/16; comments due 9/16/16);
the proposed rule to update our National Environmental Policy Act regulations (published 7/20/16; comments due 10/19/16);
the proposed rule for establishing de minimis exemptions from the Animal Welfare Act (published 8/4/16; comments due 11/2/16);
the proposed rule for the importation of lemons from Argentina (published 5/10/16; comments due 8/10/16);
the proposed rule for marine mammals (published 2/3/16; comments due 5/4/16)
the proposed rule for the select agents program (published 1/19/16; comments due 3/21/16);
the proposed rule for brucellosis and tuberculosis (TB) (published 12/16/15; comments due 5/16/16);
the proposed rule to establish performance standards for importation and interstate movement of fruits and vegetables (Q56 expansion) (published 9/9/14; comments due 11/10/14; comment period reopened 12/04/14; comments due 1/09/15; comment period reopened 2/06/15; comments due 3/10/15);
the proposed rule for scrapie (published 9/10/15; comments due 11/9/15; comment period reopened 11/16/15; comments due 12/09/2015);
the proposed rule for the forfeiture regulations (published 5/21/2013; comments due 7/22/13); and,
the interim rule to specify conditions for payment of indemnity claims for highly pathogenic avian influenza (HPAI) (published and effective 2/9/16; comments due 4/11/16).

(See Important Policies and Regulations for additional information about many of these proposed rules.)

APHIS will also continue to address petitions to deregulate genetically engineered plants, including:

- a petition from Scotts and Monsanto to deregulate creeping bentgrass genetically engineered for resistance to the herbicide glyphosate (notice published 1/08/2016; comments due 3/8/16; notice of environmental impact statement published 9/30/2016; comments due 11/14/16).
- a petition from ArborGen Inc. to deregulate freeze tolerant eucalyptus lines designated 427 and 435, which have been genetically engineered to be more tolerant of cold conditions (notice published 2/27/2013; comments due 4/29/2013; draft environmental impact statement and Endangered Species Act findings submitted to the Department of the Interior, Fish and Wildlife Service 4/2015).

January 2017

Pet Bird Home Quarantine Business Process Improvement (BPI)
In January 2017, APHIS expects to move into phase 2 of its Pet Bird Home Quarantine BPI, which will focus on increasing the effectiveness of the process for bringing certain pet birds into
the United States and permitting them to be quarantined at home rather than a Federal quarantine facility. This change will allow APHIS to improve communication with importers before and after the birds arrive in the United States and improve the Agency’s oversight of the birds from pre-export through import, quarantine, and release. In FY 2017, APHIS plans to share data regarding the improvements with stakeholders.

**New APHIS Inspection Facility in Eagle Pass, TX**
APHIS inspects cattle entering the United States from Mexico at several locations along the United States-Mexico border to ensure they are free of specific diseases and pests that could harm domestic livestock and impact trade. The current APHIS livestock inspection facility in Eagle Pass, TX, is not suitable for long-term use for several reasons, including concern for employee safety due to violence in the region. APHIS is working to lease/build new space in Eagle Pass while maintaining operations in the current space. The lease is anticipated to be in place by the end of 2016 with construction beginning in early 2017 and a goal for occupancy by the end of FY 2017. Industry is very interested in, and has been asking questions about, the new facility. APHIS anticipates moving facilities will have only minimal operational impact to stakeholders.

**Expansion of the Systems Approach Program for the Export of Hass Avocado from Mexico into the United States**
APHIS, in collaboration with its Mexican counterpart, SENASICA, and avocado industry representatives, will sign an operational work plan that includes measures for the inclusion of avocado-producing areas in Mexico into the avocado import program. This program facilitates the safe importation of this commodity into the United States.

**Announce Projects Approved for Funding Through Farm Bill Section 10007**
APHIS plans to announce the projects that will receive $62.5 million in overall funding in 2017 through the Farm Bill’s Section 10007. Section 10007 funding is split between two programs: the Plant Pest and Disease Management and Disaster Prevention Program, and the National Clean Plant Network (NCPN). Of the overall funding distributed, at least $5 million will go to NCPN. APHIS – with input from stakeholders – chooses projects that are best aligned with the Agency’s specific goals for preventing the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. A variety of entities, including State departments of agriculture, academic partners, non-profit organizations, and other Federal agencies carry out these 10007 projects.

**Broad Offsetting Collection Activities (Audit # 100332)**
The U.S. Government Accountability Office (GAO) is reviewing the different types of collection authorities that regulatory agencies use and how those agencies balance autonomy and Congressional oversight. The tentative due date for the report is January 31, 2017.

**Safety of Imported Beef from Countries with Foot-and-Mouth Disease (Audit #100294)**
GAO is reviewing USDA’s processes to ensure that beef from foreign sources is disease-free and safe for import into the United States. This includes a review of how USDA determines the potential risk to U.S. agriculture from beef imported from countries with a recent history of foot-and-mouth disease, the methods USDA uses to verify animal health data received from foreign
agricultural authorities seeking approval to export beef to the United States, and how USDA decides what specific conditions foreign entities should meet before their beef products may be imported. The tentative due date for the report is January 31, 2017.

February 2017

Certification of a Second Irradiation Facility in Vietnam for the Treatment of Commodities Intended for Export to the United States
APHIS, in partnership with the Vietnam National Plant Protection Organization, will finalize the certification process to approve a second irradiation facility in Hanoi, Vietnam. Under the purview of a preclearance program, local producers will be able to treat their fruit closer to growing areas and expedite the export inspection and certification process of commodities to be shipped to the United States.

March 2017

Completion of Recommendations from Reviews of Fast-Track Action Committee on Select Agent Regulations (FTAC-SAR) and Federal Experts Security Advisory Panel (FESAP)
APHIS and the Centers for Disease Control and Prevention (CDC) manage the Federal Select Agent Program (FSAP). The program oversees the possession, use and transfer of biological select agents and toxins that have the potential to pose a severe threat to public, animal or plant health or to animal or plant products. FSAP is leading implementation for 19 recommendations stemming from White House-driven reviews of the FTAC-SAR and FESAP. APHIS expects to complete any remaining recommendations by early 2017.

Implementation of an Offshore Certification Program for the Importation of Ornamental Cuttings into the United States
APHIS has partnered with the U.S. greenhouse industry to develop a voluntary certification program for overseas (i.e., offshore) facilities that produce ornamental cuttings to be exported to the United States. This means that APHIS will audit and certify the offshore facilities to produce the cuttings. This will standardize facility operating procedures, streamline inspections, and provide APHIS with additional safeguards against the entry of plant pests and pathogens on ornamental cuttings. APHIS and industry will pilot this program in fiscal year 2017, beginning as early as March if agreeable to industry, using the plant inspection stations in Atlanta, Georgia and Miami, Florida.

Highly Pathogenic Avian Influenza (Audit # 100668)
USDA’s Office of the Inspector General is reviewing any threats the highly pathogenic avian influenza virus may pose to public health, agriculture, or the economy in the United States; steps the Federal Government is taking to address these threats; and what gaps remain for addressing any future threats. The tentative due date for the report is March 31, 2017.
April 2017

Implementation of Suspension and Debarment Tools in the U.S. Department of Agriculture
USDA’s Office of the Inspector General is reviewing USDA’s controls to ensure agencies initiate and refer USDA program violators for Suspension and Debarment actions. The tentative due date for the report is April 30, 2017.

May 2017

N/A

June 2017

Publication: Results of Infectious Salmon Anemia Virus (ISAV) Surveillance
The APHIS aquaculture program supports producers, promotes good farming practices, and monitors for disease in aquaculture. In 2012, in response to unofficial ISAV findings in British Columbia, APHIS, multiple State and Federal agencies, and Tribal entities launched a surveillance program to detect if ISAV is present in wild and farm-raised salmon in the Pacific Northwest. Infectious salmon anemia is a serious viral disease that affects farmed Atlantic salmon in several areas of the world, and its presence in British Columbia would have raised concerns about the potential impact to wild fish populations and commercial aquaculture in Alaska and Washington. The surveillance effort concluded in FY 2016 with 4,000 animals sampled and tested and no evidence of the virus found. APHIS and its collaborative partners plan to publish the surveillance findings by June 2017.

Wild Bird Surveillance for Highly Pathogenic Avian Influenza (HPAI)
APHIS coordinates the U.S. interagency surveillance efforts for HPAI in wild birds. The goals of this effort are to maximize our ability to detect avian influenza viruses in wild waterfowl in the United States, detect virus spread to new areas, provide a flexible surveillance framework to monitor wild dabbling duck populations for influenza reassortants and introductions of new viruses, and estimate the prevalence of new influenzas once detected. Between July 2016 and June 2017, APHIS and its State and Federal partners will collect about 30,000 samples from migratory waterfowl in 47 States and test them for HPAI. Progress on this sampling effort will be posted weekly on the APHIS avian influenza web page.

GIPSA

Packers and Stockyards Program
Assuming that the Farmer Fair Practices Rules are published in the Federal Register in November or December 2016, with a 60-day comment period, the new administration will have to first determine whether to extend the comment period. That is anticipated before mid-February, 2017. Once the comment period closes, the program will have to review comments and decide how to proceed on the proposed rules.
The President recently signed P.L. 114-237, which amended the Packers and Stockyards Act to define market agency to include livestock sales conducted online through video or other electronic methods and to allow packers, market agencies, and dealers to pay for livestock by wire, electronic fund transfer, or any other method determined appropriate. The new administration will need to review existing regulations and decide how to proceed with rules to implement the amendments to the Packers and Stockyards Act.

**Federal Grain Inspection Service**
No key decisions or program actions are anticipated in the first six months of the new administration, through June 30, 2017.

**Mission Area Issues**

**AMS**

**Labeling of Bioengineered Food**
On July 29, 2016, President Obama signed into a law a mandatory national bioengineered food disclosure standard (Public Law 114-216). AMS is the USDA Agency responsible for implementing the labeling requirements. AMS has published the new law on its website and provided an opportunity for the public to provide comments and ask questions on the new law via phone and email. The new law requires AMS to conduct a study identifying technical challenges for consumers to access an electronic or digital disclosure. On September 1, AMS published a Request for Information seeking input from vendors and general stakeholders on the study design, which closed on September 15. On September 14, AMS Administrator Starmer delivered to all AMS Deputy Administrators a policy memorandum affirming the new law’s consistency with the National Organic Program (NOP) and ensuring that rulemaking on the new law will not impact the NOP.

**Next Steps:** AMS is using the comments received on the RFI to develop the solicitation for vendor proposals for the study on the electronic or digital disclosure. However, posting of the solicitation is contingent on funding. AMS is continuing to analyze the requirements of the law, establish funding for staffing and study requirements, determine potential interactions with existing AMS programs, and work within the regulatory process to publish an advanced notice of public rulemaking in the Federal Register.

**U.S. District Court Decision on Resolute Forest Products, Inc.**
On April 15, 2015, Resolute Forest Products filed a motion for summary judgment claiming that the Softwood Lumber Research and Promotion Order is unconstitutional. USDA has been involved in ongoing deliberation since the initial filing. On May 17, 2016, the U.S. District Court found that USDA’s Softwood Lumber Order was unlawful as promulgated. At a June 1, 2016, hearing held to discuss remedies, the court ordered: (1) USDA and the Softwood Lumber Board are prohibited from collecting further assessments from Resolute under the current Order; (2) USDA and the Board must maintain a balance of funds of not less than $1.1 million under the
current Order; and, (3) USDA and Department of Justice (DOJ) shall file a brief supporting USDA’s position that the $1.1 million is assessments paid by Resolute should not be refunded in its entirety. A brief developed by AMS and DOJ for the court was filed on June 30, 2016. Resolute filed its response on July 20, 2016; USDA/DOJ’s reply was filed by the extended due date of August 24, 2016. Subsequent to the briefs being filed, the judge ordered the parties to submit briefs on issues regarding sovereign immunity and the authority of USDA to require the Board to refund assessments to Resolute. The deadlines for USDA and Resolute to submit their briefs are October 18, 2016 and November 1, 2016, respectively. On June 30, 2016, AMS posted external Q&As about the case per the industry’s request.

AMS published a notice on July 20, 2016, notifying industry that a continuance referendum originally scheduled for August 20 will not be held. On July 13, 2016, AMS met with the Office of the Chief Economist (OCE) to discuss analyses necessary for upcoming rulemaking on the de minimis provisions of the order. On August 30, 2016, an interim rule was published in the Federal Register revising the time frame for the continuance referenda under the Softwood Lumber Order. The rule revises the time frame from 5 years (2016) to no later than 7 years (2018). Comments are due by October 31, 2016. On September 1, 2016, Resolute filed a notice of supplemental authority to emphasize its previous arguments about the order in the context of USDA’s August 2016 interim rule. On September 14, 2016, AMS and DOJ decided to file a response to Resolute’s notice of supplemental authority. Our response will clarify the status of the rulemaking and any subsequent referenda on the order.

**R-CALF USA v. USDA/Vilsack**

On May 2, 2016, R-CALF USA filed suit in Federal District Court in Montana against Secretary Vilsack arguing that the Beef Checkoff Program should be promoting only U.S. beef. The complaint argues that the Checkoff Program denies R-CALF USA members in Montana their First Amendment rights since they are required to pay into the Montana chapter of the Checkoff program without a say in the marketing strategy. AMS will soon issue a rule regarding the redirection of beef Checkoff funds so producers have the option of directing their full assessment under the Beef Checkoff go entirely to the National Board. According to R-CALF’s legal challenge, the activities of the National Board are considered constitutionally sound by the Supreme Court, while the activities of the State Beef Councils are not. Thus, by giving producers the option to direct their monies to the National Board, R-CALF’s purported violations of First Amendment rights should be addressed.

On June 7, AMS asked if the Montana Beef Council would comply if a producer requested that they redirect assessments to the Cattlemen’s Beef Board. The Montana Beef Council responded that any redirection request, accompanied by appropriate and timely documentation, would be considered independently and that all state and Federal laws would be considered when making board decisions. The redirection rule was published on July 15, 2016, with a 60-day comment period that closed on September 13, 2016. USDA filed a motion to dismiss the case on August 4, 2016. On August 24, 2016, R-CALF responded to the motion to dismiss. On September 12, 2016, R-CALF also filed a motion for a temporary restraining order (TRO) to prevent USDA from allowing the Montana Beef Council from retaining half of the assessments. On 9/28/16, USDA filed opposition to the TRO and reply in support of its summary judgment motion. On
September 20, 2016, the Court issued an Order for a hearing to take place on October 25, 2016, at 2 p.m. regarding USDA’s Motion to Dismiss and Plaintiffs Motions to Summary Judgement and their Motion for a Temporary Restraining Order.

**American Egg Board**
The Chief Executive Officer of Hampton Creek, Inc., San Francisco, CA (Hampton Creek) complained that the American Egg Board (AEB) exceeded its mandate by funding a campaign to halt the growth of Hampton Creek. An internal AMS review of the allegations has been completed and was released publicly on October 7, 2016.

**The USDA Farmers Market**
Located on the corner of 12th and Independence Avenue, SW, the USDA Farmers Market is the Department’s own “living laboratory” for farmers’ market operations across the country. The market supports the local economy, increases marketing opportunities for farmers and small businesses, provides access to an assortment of local and regionally sourced products, and increases access to healthy, affordable food in the District of Columbia’s Ward 2. In its 21st year of operation, the USDA Farmers Market has experienced tremendous growth and has become a “go to” destination for federal employees and Washington, DC, visitors on Fridays during the spring and summer.

The daytime market hosts approximately 30 produce, prepared food, and cut flower vendors, and the nighttime market hosts approximately 24 vendors. The farmers market upholds the principles of “sourcing locally.” For prepared food vendors to participate in the market, they must demonstrate that the foods they are preparing are using ingredients sourced from local producers. It also conducts a weekly fruit and vegetable education program where shoppers can attend short 10-minute classes and get a "VegUcation" - learning how to pick, prepare and store a particular fruit or vegetable that is in season in the United States.

**Additional Pending Issues**

**Peoples Republic of China Government Officials to Visit U.S. Beef Production**
China Ministry of Agriculture officials conducted an assessment of the U.S. beef industry from September 11-19, 2016, to determine whether boxed beef products can be traceable to the ranch of origin. FAS, AMS, FSIS, and APHIS accompanied the delegation during the assessment. The opening meeting in Denver, CO, included the USDA agencies and various members of industry. The group continued to Nebraska to review two cow/calf ranch operations, one feedlot, and two slaughter facilities. Industry demonstrated its ability to trace the boxed beef to cattle arriving from slaughter, and the cattle to ranch of origin, through AMS’ program for source and age verification, which would eventually be a part of an Export Verification, developed for China. The delegation then traveled to the State of Washington, where APHIS briefed the delegation on how the single incidence of BSE in December 2003 was handled to ensure that BSE is still a negligible risk in the United States according to OIE standards.
On September 22, 2016, China officially lifted its 13-year ban on U.S. beef.

**Notice Seeking Comments on U.S. Standards for Grades of Catfish and Catfish Products**

On July 14, 2016, AMS published a Notice in the Federal Register seeking comments, data, research, and other information to help the Agency carry out the 2014 Farm Bill mandate to establish a voluntary fee-based grading program for catfish and catfish products. AMS is coordinating with the Department of Commerce’s National Marine Fisheries Service (NMFS), which has a program for quality evaluation of product, grading, and certification of fish (including catfish), shellfish, and fish products. We received four comments during the comment period, which ended on September 12, 2016 AMS will conduct two workshops to share information with stakeholders and gain more input to assist in developing grade standards and establishing a USDA grading program for catfish.

**Petition to Revise U.S. Beef Standards to Allow Alternate Means of Age Determination in Carcass Beef**

On April 13, 2016, AMS received a petition from several industry stakeholders asking the Agency to make changes to allow for dentition as a means of age determination and eligibility for carcass grading. AMS published a Notice in the Federal Register on August 24, 2016, seeking public comments on the changes proposed in the petition. Comments were due by October 24, 2016. Based on an analysis of the comments received, AMS will decide whether to proceed with specific changes to the standards.

**Japan to Audit U.S. Beef Production**

Japan government officials have set a tentative date of November 7-18, 2016, to visit the United States to audit U.S. beef producers exporting to Japan. Japan is awaiting additional questionnaires from beef producers, and evaluating responses from AMS on the JBS Souderton issue before audit sites are selected and the trip is finalized.

- **JBS Souderton Suspended from Export Verification Programs** - In April 2016, AMS suspended and delisted JBS Souderton from the Export Verification (EV) program because of issues related to the shipment of non-conforming beef products to Korea through Chicago Meat Authority. AMS completed “for cause” audits at all JBS facilities in late May, and subsequent corrective actions and required training in July. AMS provided a summary of the audit findings to Japan in late July and continues to address Japan’s questions about the findings and corrective actions. On August 22, AMS provided info to Japan regarding mislabeled packages from JBS Souderton, which shipped to Japan but did not enter commerce. Japan notified importing companies that it suspended imports of product from JBS Souderton. FAS will keep AMS apprised of any developments.

**Development of Industry Standard Definition for “Cage-Free” Eggs**

On September 21, 2016, Secretary Vilsack hosted a meeting with key representatives of the grocery and food retail sectors and the U.S. shell egg industry to discuss strategies for meeting the 2026 deadline established by volume food buyers for transitioning to cage-free supplies. All
parties agreed that the starting point was for industry to develop a standard definition of the term “cage-free.” The United Egg Producers (UEP) is leading the effort; AMS offered to play a support role and facilitate discussions.

A meeting is tentatively planned for October 27, 2016, in Washington, DC, at which interested egg producers and members of the food retailing sectors will begin developing an agreed-upon definition. Once that definition is developed, UEP and the group will then engage consumer and animal rights organizations.

**Cornucopia Institute v. USDA/Secretary Vilsack**
On April 19, the Cornucopia Institute filed a complaint with the U.S. District Court for the Western District of Wisconsin on behalf of two organic producers. The complaint charges that USDA violated the Organic Foods Production Act (OFPA) in appointing members to the NOSB who did not meet OFPA qualifications. AMS continues to provide OGC and DOJ with information to support the case as requested.

**National Organic Program Freedom of Information Act (FOIA) Lawsuits**
The Cornucopia Institute filed eight lawsuits over AMS handling of FOIA requests related to National Organic Program records. AMS continues to coordinate with General Law on case-specific actions, and NOP has awarded a contract to support expanding FOIA needs.

**Process Verified Program (PVP)**
LPS provided independent verification and transparency to issues of increasing importance to consumers by partnering with industry to develop several groundbreaking consumer marketing programs. These include a non-GE/GMO USDA Process Verified Program (PVP) for consumer-facing products and the McDonald’s Responsible Antibiotic Use PVP for chicken, which launched publicly during the Summer Olympics, 5 months earlier than originally planned; the School Food Focus (SFF) Certified Responsible Antibiotic Use PVP for chicken; and a non-GE/GMO USDA Process Verified Program (PVP) for grain. In total, PVPs verify antibiotic-related claims for nearly 15 percent of the U.S. broiler industry, with an additional 12 percent committed by the end of the calendar year. LPS relaunched the PVP after completing all action items related to the OIG audit of the PVP, developing consistent procedures to maintain public and customer confidence in AMS third-party verification services. LPS and AMS Public Affairs developed a comprehensive communications plan to inform customers of the program changes through publishing three PVP blogs and an infographic, updating PVP Web site information, reformatting the PVP listing to highlight process points, partnering with external stakeholders to highlight the PVP in practice, and rolling out PVP updates on the GovDelivery platform.

**Transition of Layer Industry to “Cage-Free” Eggs**
On September 21, 2016, the Secretary of Agriculture and AMS hosted a meeting with leaders in the retail, manufacturing, and foodservice sectors and U.S. egg producers to discuss the challenges in transitioning egg production from conventional caged systems to “cage-free.” The meeting provided USDA an opportunity to show support for the industry and commit its assistance in addressing several of the major hurdles ahead.
A major outcome of the meeting was that all the participants agreed that a clear and commonly accepted definition for “cage-free” was necessary for all parties to have confidence in moving forward. Participants agreed that efforts to develop a common definition should be led by industry, with support from AMS. The participants also agreed that animal rights and consumer groups should be involved in future discussions, with as much direct communication between these organizations and the industry and food sector as possible. The next meeting has been scheduled for November 30, 2016, and will be convened by the United Egg Producers.

Center for Food Safety, et al. v. Vilsack, et al/Green Waste: A second complaint, filed on April 14, 2015, relates to Guidance Document – NOP 5016 (Allowance of Green Waste in Organic Production Systems). On June 20, 2016, the U.S. District Court Judge for the Northern District of California ruled that NOP 5016 must be vacated by August 22, 2016. AMS did so, withdrawing NOP 5016 on August 22 as directed. A Notice to Trade was sent on August 18 to update the organic community. AMS is currently drafting a proposed rule to replace the guidance with a regulatory rule change, with the opportunity for public comment. The work plan was designated as significant by OMB on August 31.

On September 19, 2016, USDA and the plaintiffs executed a settlement agreement for legal fees authorized under the Equal Access to Justice Act.

Livestock Mandatory Reporting (LMR) Study
The Agriculture Reauthorizations Act of 2015 specified that USDA complete, by March 1, 2018, a study through AMS and the Office of the Chief Economist, and in consultation with the livestock and meat industry, to analyze current livestock marketing practices; identify future legislative or regulatory recommendations; analyze price and supply information reporting services of USDA related to cattle, swine, and lamb; and, address any other issues that the Secretary considers appropriate. AMS commissioned a baseline “as is” study of the livestock and meat industry and LMR, which was completed August 2016, to help inform this comprehensive review. To gather feedback from industry stakeholders, AMS will bring members of the industry together in a series of structured stakeholder meetings to openly discuss the marketing methods and current challenges with reporting livestock and meat markets to reach consensus on what each commodity area would like changed in the next reauthorization of LMR. All meetings will be facilitated by the Federal Mediation and Conciliation Service (FMCS). The goal of these meetings is to reach consensus on what each commodity area would like changed in the next reauthorization of LMR. This industry consensus report will provide information for Congress to consider to facilitate an orderly reauthorization of LMR in 2020. The first stakeholder meeting will be held on November 15-16, 2016, in Washington, DC.

Humane Society of the United States vs. Vilsack
In September 2012, the Humane Society of the United States (HSUS) filed suit in the Federal District Court of the District of Columbia against the Secretary of Agriculture under the Administrative Procedure Act (APA) challenging the approval of the National Pork Board’s (Board) purchase of four trademarks including the “Pork, The Other White Meat” (PTOWM) slogan from the National Pork Producers Council (NPPC). On August 14, 2015, HSUS won its appeal for standing. The case is still pending with each party submitting records to the Court. The decision will be based upon the administrative records filed on June 29, 2016. On August
24, 2016, USDA filed additional materials to supplement USDA’s administrative record that was originally filed with the court on June 29, 2016.

**USDA Certified Transitional Program**
AMS is reviewing the Organic Trade Association’s Transitional Certification standard, which was submitted on May 20. The standard would allow AMS to approve Accredited Certifying Agents to verify processes and practices used by producers during the 3-year transition period required by the National Organic Program regulations when moving from conventional to organic production. On September 27, AMS met with OTA to outline the issues, primarily with the label. AMS continues to work with OGC.

**Global Food Safety Initiative**
In recent years, international entities, such as the Global Food Safety Initiative (GFSI), have worked to build equivalence and convergence among the various effective food safety management systems in an effort to eliminate redundancy in the audit process for buyers and producers, and to improve the operational efficiency of the food safety certification sector. Major U.S. corporations, namely Walmart, McDonalds, Cargill, Kroger and Wegmans, sit on the GFSI Board of Directors.

AMS is working closely with GFSI to obtain equivalency under the new GFSI Standard Equivalency Process for Government Entities. This accreditation will allow AMS’ audit program to serve as a single, accredited certification body that can meet buyers’ multiple requirements for audits.

**Pesticide Data Program—Glyphosate**
Glyphosate is an herbicide used to control weeds used in soybeans, corn, cotton, wheat, pasture/hay, orchards/grapes, and fruit and vegetables. In the past, the Pesticide Data Program (PDP), a national pesticide residue monitoring program that produces the most comprehensive pesticide residue database in the U.S., did not routinely test glyphosate because it was not widely used on many of the fruit and vegetables and other products tested and requires a specialized method of analysis. PDP is implemented through cooperation with State agriculture departments and other Federal agencies and selections for testing are made based on EPA’s data needs.

Glyphosate has been a popular topic in agricultural/consumer news. Currently, FDA is testing corn and soybean grains for glyphosate residues. The FDA glyphosate residues testing will provide results to help determine if EPA needs additional data. When FDA results become available, USDA will consult with EPA to ensure we continue to provide quality data to meet EPA’s data needs.
Overarching Issues

1. Increasing Exports

Issue: The years 2011-2015 were the best for agricultural exports in U.S. history. However, many countries maintain barriers to U.S. agricultural exports related to animal and plant health concerns (sanitary and phytosanitary, or SPS, issues). Many of these barriers are not justified by science and impede U.S. agricultural export growth.

Public Policy Reason for APHIS Involvement: APHIS experts work with foreign counterparts to negotiate science-based import and export requirements, eliminate unjustified SPS barriers to trade, and advocate on behalf of U.S. agriculture in international forums such as the World Trade Organization, the World Organisation for Animal Health, and the International Plant Protection Convention. APHIS also helps exporters whose products have been detained in foreign ports. In addition, APHIS supports the free flow of exports by certifying that U.S. agricultural products meet importing countries' entry requirements.

APHIS’ Statutory/Regulatory Scope: In accordance with the Animal Health Protection Act, the Plant Protection Act, and related regulations, APHIS regulates the export of live animals and facilitates the export of animal products, plants, and plant products. APHIS supports these exports through its Veterinary Services (VS), Plant Protection and Quarantine (PPQ), International Services (IS), and Biotechnology Regulatory Services programs. Serving as the United States’ veterinary medical and plant protection authorities, respectively, VS and PPQ negotiate conditions for U.S. exports (with support from IS) and develop risk mitigations necessary to prevent the spread of pests and diseases.

Items in Controversy: [b](5) Deliberative Process Privilege

Industry, Consumer, and Congressional Interest: In addition to relying on APHIS to resolve immediate trade issues involving exports, a wide range of exporters—including poultry, beef, and specialty crop producers—have asked APHIS to help expand their access to markets abroad. Congress requested reports on the status of foreign market access requests submitted by U.S. producers, companies, and others in the fiscal year (FY) 2016 Appropriations Act and FY 2017 House Appropriations Bill. As of October, the report in response to the FY 2016 Appropriations Act is in USDA clearance.
Executive Branch Position to Date: APHIS was a party to negotiations with 11 other Pacific Rim nations for the Trans-Pacific Partnership, concluded earlier this year. It is currently involved in negotiations for the Trans-Atlantic Trade and Investment Partnership with the EU. APHIS also holds annual meetings with representatives of major export sectors to determine issues of concern and how APHIS can assist. In FY 2015, APHIS resolved 171 trade-related issues valued at $2.5 billion; it also successfully obtained the release of 293 individual shipments valued at more than $25 million.

APHIS received increased funding in the last two appropriations acts ($2 million in FY 2015 and $1 million in FY 2016) to support resolution of issues affecting U.S. exports. The Agency is using this funding to support exports by, among other things, training and assigning more personnel to key positions domestically or in emerging markets, which have the largest potential growth for U.S. exporters but also present difficulties caused by technical and regulatory issues. APHIS is also using this funding to provide greater oversight of how growers and packers are implementing the export requirements of foreign countries, to ensure export products may enter foreign markets safely and efficiently.

APHIS has long worked to streamline the export process through continual advancements in its Web-based Phytosanitary Certificate Issuance and Tracking system, which handles all phases of the phytosanitary certificate application and issuance process. In response to an Executive Order to streamline the import and export process for America’s businesses, APHIS is also coordinating with other Federal agencies to implement the International Trade Data System. This system will allow businesses to electronically submit data required by U.S. Customs and Border Protection and partner government agencies to import or export cargo through a single “window.”

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

2. Border Security

Issue: Beginning in 2010, violence in Mexico at or near the U.S. border—mostly due to drug trafficking organizations—reached levels that required APHIS to periodically modify or suspend operations in some areas to ensure employee safety. APHIS takes these actions in concert with the U.S. Department of State (DOS), which has authority to determine whether U.S. Government (USG) personnel can operate in Mexico.

The violence tends to be transitory and operational actions APHIS takes are usually short-term, though there are exceptions. One involves APHIS’ movement of cattle inspection facilities from Mexico to four locations on the U.S. side of the border in Texas (Pharr, Del Rio, Eagle Pass, and Laredo). Border issues have also affected APHIS’ long-term pest and disease reduction-efforts with Mexico on bovine tuberculosis (TB), fruit fly, and cotton pest suppression programs, among
others. With respect to TB, security concerns have reduced APHIS’ ability to evaluate the TB program status of cattle coming from certain areas of Mexico. As a result, APHIS is unable to consider changing U.S. entry requirements for those cattle if the disease prevalence has changed—e.g., strengthening or reducing import restrictions as appropriate.

APHIS has nearly 600 employees along the U.S. border with Mexico working in a variety of programs to safeguard U.S. agriculture and to facilitate trade. Nearly half are Foreign Service national employees of APHIS who live and work in Mexico; the rest are U.S. residents whose work frequently requires them to cross into Mexico. DOS has prohibited USG personnel from working in areas of Mexico due to gun battles, executions, kidnappings, and carjackings. At times, APHIS employees have witnessed these activities, been directly threatened, and, on one occasion, robbed and carjacked.

**Public Policy Reason for APHIS Involvement:** APHIS’ work in Mexico helps facilitate trade and ensures that products exported from Mexico to the United States do not pose a disease or pest risk to U.S. agriculture.

**APHIS’ Statutory/Regulatory Scope:** APHIS’ programmatic activities in Mexico are carried out under the authority of the Animal Health Protection Act and the Plant Protection Act. However, DOS has ultimate authority over USG personnel in Mexico. APHIS security staff work with DOS’ Regional Security Officers and—as appropriate—the Department of Homeland Security (DHS) to assess security situations prior to a DOS determination.

**Items in Controversy:**

**Industry, Consumer, and Congressional Interest:** APHIS’ work in Mexico benefits agricultural importers and exporters in the United States who do business with counterparts in Mexico. Programmatic work in Mexico also helps safeguard U.S. citrus production in southern Texas, and much of Mexican fruit fly eradication efforts are undertaken in coordination with Mexico’s Secretary of Agriculture, Livestock Rural Development, Fisheries, and Food. Trapping for Mexican fruit flies along the northern Tamaulipas border is severely limited due to security issues. The citrus industry is concerned that if violence were to disrupt APHIS’ use of aerial release and sterile insect technique efforts to suppress fruit flies in Northern Mexico on a long-term basis, citrus production in south Texas could be impacted. In another case, the United States temporarily halted the import of Mexican avocados, when security concerns prevented APHIS from conducting inspections and certifying facilities to ensure the avocados met U.S. import requirements.

Several Congressional representatives have inquired about APHIS modifications or suspensions of activities along the border when they have impacted members of their districts, particularly in Texas. House Committee staff have informally inquired about border security issues in recent
years and their impact on some APHIS programs, especially the cotton pests programs. The House included language in the fiscal year 2016 appropriation directing APHIS to work with the U.S. cotton industry to develop a plan of action to protect the United States from boll weevil re-infestation. While APHIS is working with Mexican counterparts on the final stage of eradicating the cotton pest, security issues have affected this work because APHIS counterparts in Mexico cannot perform program activities such as conducting trapping and cotton treatment.

Executive Branch Position to Date: Employee safety and security is paramount and APHIS’ top priority. APHIS has developed strategies for ensuring a secure working environment for its employees, while protecting plant and animal health and allowing for safe trade. APHIS will continue to pursue such strategies as needed and will continue to work with DOS and DHS on evaluating potentially unsafe situations.

Potential Alternative Approaches: [b][s]Deliberative Process Privilege[/b][s]

Animal Care

1. Horse Protection Act (HPA)

Issue: The HPA, passed by Congress in 1970 and enforced by APHIS, prohibits the showing, sale, auction, exhibition, or transport of sored horses. The HPA has dual purposes: eliminating the inhumane practice of soring and restoring fair competition within the walking horse industry. Soring is a cruel and inhumane practice that aims to accentuate a horse’s gait through the application of chemicals, mechanical agents, or training methods. Soring is primarily used in the training of Tennessee Walking Horses, racking horses and related breeds to gain an advantage for persons showing sored horses.

Currently, the horse industry trains and oversees horse show inspectors. A 2010 report from the Office of the Inspector General (OIG) found that this industry-led inspection process creates a conflict of interest that allows the inhumane practice of soring to continue. APHIS veterinary medical officers conduct unannounced inspections at roughly 18 percent of horse shows annually to evaluate industry-hired inspectors and to visually and physically inspect horses to determine compliance with the HPA. OIG found that, for the shows they reviewed, industry-hired inspectors issued 49 percent of their total violations at the six percent of shows APHIS officials also attended, indicating inconsistent application of the HPA. In July 2016, APHIS published a proposed rule (Docket No. APHIS-2011-0009) that would bring responsibility for training and licensing horse show inspectors directly under the control of APHIS, and implement prohibitions on equipment correlated to the presence of soring.

Public Policy Reason for APHIS Involvement: Eliminating the practice of soring is one of the original missions of the Agency and remains a top priority.
APHIS’ Statutory/Regulatory Scope: 1976 amendments to the HPA authorized the appointment of “qualified persons” to detect soreness in horses and led to the establishment of the Designated Qualified Person (DQP) program. The DQP program allows horse show management to obtain services from a DQP—who is licensed by a Horse Industry Organization—to detect horses that are sored. The HPA also authorizes APHIS to issue rules and regulations it deems necessary to carry out the provisions of the Act.

Items in Controversy: APHIS has faced legal challenges and Congressional questions about the consistency of APHIS inspections at HPA-covered events to detect soreness in horses, and the process for disqualifying horses from competition based on inspection findings. This issue has proven contentious enough to, in some cases, result in personal threats to Agency officials by horse show participants.

Industry, Consumer, and Congressional Interest: Several Representatives and Senators, along with members of the performance horse segment of the industry that continue to use pads and action devices during horse shows, exhibitions, sales, and auctions, oppose the proposed rule. Several other Representatives and Senators, together with the American Veterinary Medical Association, the American Association of Equine Practitioners, and the animal protection community, support the proposed changes.

Executive Branch Position to Date: The Administration published the proposed rule to bring responsibility for training and licensing horse show inspectors directly under the control of APHIS, and eliminate the use of stacked pads and chains and other “action devices,” as well as foreign substances. The proposed rule aligns with OIG’s recommendations that APHIS play a larger role in training and overseeing horse protection inspectors. APHIS extended the comment period on the proposed rule 30 days to October 26, 2016.

Potential Alternative Approaches: (b)(5) Deliberative Process Privilege

2. Inspection of Agricultural Research Service’s Research Facilities

Issue: In January 2015, the New York Times published a lengthy investigative piece alleging significant animal welfare violations at the U.S. Meat Animal Research Center (MARC), a U.S. Department of Agriculture (USDA) Agricultural Research Service (ARS) facility in Nebraska that works to improve livestock health and production.

In response to the article’s allegations, the Secretary directed ARS and APHIS to implement a plan to ensure that APHIS inspects ARS facilities that use animals for agriculture or production research. Additionally, the U.S. House of Representatives placed a directive in the fiscal year (FY) 2016 omnibus appropriation, instructing ARS to enter into an agreement with APHIS. Under the terms of the agreement, APHIS would conduct animal welfare inspections—as it does
for non-governmental entities regulated under the Animal Welfare Act (AWA)—at ARS facilities that use animals in agriculture or production research to ensure compliance with the AWA.

The AWA sets standards for the humane care and treatment of most warm-blooded animals exhibited to the public, bred for commercial sale, used in medical research, or transported commercially. Regulated facilities must provide their animals with, among other things, adequate housing, sanitation, nutrition, water, and veterinary care. Because the AWA generally exempts agriculture research from regulatory oversight, when evaluating ARS’ compliance with the AWA, APHIS will rely on both the AWA regulations and standards as well as the standards of care for farm animals used in research, as set forth in the Federation of Animal Science Societies’ Guide for the Care and Use of Agricultural Animals in Agricultural Research and Teaching (commonly referred to as the Ag Guide).

The House directive further stipulated that more than $57 million of ARS’ appropriation would not be obligated until the Secretary certified to Congress that ARS had updated its animal care policies and all ARS animal research facilities had established fully functioning Institutional Animal Care and Use Committees (IACUC). In compliance with the directive, APHIS and ARS signed a memorandum of understanding under which APHIS would conduct animal welfare inspections at ARS facilities and make the results of those inspections publically available on its website.

In August 2015, APHIS inspectors initiated pre-compliance site visits at ARS facilities to evaluate the welfare of animals at each facility and work with ARS officials on building an effective inspection program that will ensure the facilities are in full compliance with the AWA. The pre-compliance visits were completed in early October 2016. Based on ARS’ progress in meeting AWA requirements at its research facilities, the House appropriations committee released ARS’ remaining appropriation in the summer of 2016. Starting in November 2016, APHIS officials will begin conducting unannounced animal welfare inspections at 37 ARS locations engaged in agricultural research activities.

**Public Policy Reason for APHIS Involvement:** As the agency charged with enforcement of the AWA, APHIS was asked to fulfill Congress’s directive to oversee certain aspects of animal welfare at ARS research facilities.

**APHIS’ Statutory/Regulatory Scope:** APHIS is authorized under the AWA to conduct unannounced inspections of research facilities that use certain animal species. However, facilities that use only livestock or poultry for research to improve livestock health and production are exempt from AWA regulation. Prior to the House’s directive, all Federal Government research facilities were also exempt from registering with APHIS, as each agency has the responsibility to ensure that any of its facilities that conduct research on AWA-protected animals remain in compliance with the AWA. Federal animal research facilities have long been required to have animal oversight committees similar in composition and function to the IACUCs required at other research facilities.
Items in Controversy: The New York Times article alleged that a significant number of serious animal abuses were occurring at the MARC. Prior to the House directive, no Federal animal research facility was ever required to register with APHIS, although APHIS offers courtesy registration and inspections to Federal facilities upon request.

Industry, Consumer, and Congressional Interest: The New York Times article spurred other media to pick up the story, triggering concern about the alleged animal abuses at the MARC facility. The House Appropriations Committee, especially its Democratic staff, has expressed strong interest in the issue. At a February 2015 House Agriculture Committee hearing, Representative Brad Ashford (D-NE) asked the Secretary for an update on actions taken. In addition to requiring ARS to work with APHIS on the inspection process, the 2016 omnibus appropriations bill included language requiring ARS to share inspection reports with the Committee. Senator Corey Booker (D-NJ) and Representative Earl Blumenauer (D-OR) introduced companion bills in February 2015 that would amend the AWA to require inspections at Federal research facilities that conduct livestock research. However, the legislation did not advance.

Executive Branch Position to Date: APHIS and ARS have complied with the House of Representatives’ directives. During its inspections of ARS facilities, APHIS evaluates compliance based on AWA and Ag Guide standards.

The IACUC at each ARS facility has the responsibility to closely monitor the care and treatment of animals and ensure that research protocols are properly carried out and documented. If, during an inspection, APHIS identifies a direct noncompliance (one currently having a serious or severe adverse effect on the health and well-being of the animal) with the AWA or Ag Guide, the facility’s IACUC will suspend the research activity until corrective action has been taken, and then report that action to APHIS.

3. Animal Welfare Act

Issue: APHIS administers the Animal Welfare Act (AWA) and its associated regulations, which set standards for the humane care and treatment of most warm-blooded animals exhibited to the public, bred for commercial sale, used in medical research, or transported commercially. Facilities using regulated animals for these purposes must provide their animals with, among other things, adequate housing, sanitation, nutrition, water, and veterinary care. The AWA also prohibits most animal fighting ventures. Every year, APHIS conducts roughly 10,000 unannounced inspections of facilities licensed or registered under the AWA, ensuring the health and welfare of more than 2 million animals. Sanctions for alleged violations of the AWA and its implementing regulations include license suspensions and revocations, civil penalties, cease and desist orders, and misdemeanor criminal penalties (for alleged violations of statutory provisions). APHIS operates a Center for Animal Welfare that provides training to employees and stakeholders and serves as the USDA national science and technology resource in support of the AWA. APHIS received $28 million from Congress in fiscal year (FY) 2015 and $28.4 million in FY 2016 for AWA-related activities.
Public Policy Reason for APHIS Involvement: Congress directed the Secretary of Agriculture to enforce the provisions of the Animal Welfare Act. APHIS’ extensive animal health capabilities and regulatory experience position it particularly well to oversee certain aspects of animal welfare.

APHIS’ Statutory/Regulatory Scope: The AWA does not cover all animals used in all activities. Farm animals used for food or fiber (fur, hide, etc.), coldblooded species (amphibians and reptiles), horses not used for research, fish, invertebrates (crustaceans, insects, etc.), or rats of the genus Rattus and mice of the genus Mus bred for use in research are not covered. Birds are covered under the AWA but we have not yet established specific regulatory standards for them.

Items in Controversy: APHIS has faced intense scrutiny and legal challenges from AWA licensees, animal protection groups, and concerned citizens, as well as Congressional inquiries, about its inspection activities at regulated facilities and sanctions levied for AWA violations. Certain issues—such as the welfare of elephants and big cats in circuses and zoos, dogs sold by breeders and dealers, orcas in exhibition, and primates used in laboratory research—are focal points for public attention and attract local and national press coverage.

Industry, Consumer, and Congressional Interest: APHIS receives a large volume of inquiries expressing concerns about the welfare of regulated animals. Although most industry partners work closely with APHIS to ensure they meet AWA standards, certain breeders and exhibitors consistently remain out of compliance with AWA standards; we have sanctioned them. Spurred by constituent and interest-group activism, Congressional offices regularly contact APHIS about its AWA-related activities. Some believe that APHIS is too intrusive or unfair in enforcement matters while others argue that APHIS does too little.

Executive Branch Position to Date: APHIS has undertaken significant actions in the past several years in response to Office of the Inspector General audits, congressional interest, and concerns from the general public, as well as internally generated initiatives. In 2013, APHIS finalized a rule amending the AWA to require dealers selling animals sight unseen over the Internet to be licensed. As with many animal welfare issues, this action generated intense congressional and public interest both for and against the rule. The following year, the Agency finalized a rule required by the 2008 Farm Bill to prohibit imports of most dogs into the United States for resale, research, or veterinary treatment unless the dogs are vaccinated, healthy, and at least 6 months old. In response to provisions in the FY 2016 Consolidated Appropriations Act, APHIS also stopped issuing or renewing AWA licenses for Class B “random” dealers selling animals from various sources, some believed to be illegitimate. In early 2016, the Agency published for public comment a proposed rule amending the AWA to further support the humane handling, care and treatment of marine mammals such as orcas in captivity; the comments are under review. APHIS also issued a policy promoting humane handling of newborn and infant exotic cats, such as tigers and lions, which risked illness and even death as a result of direct contact with the public, and held three public listening sessions on broader issues involving the handling of dangerous animals. In addition, APHIS has published a proposed “de minimis” rule authorized by the 2014 Farm Bill exempting certain businesses that are small or infrequently
exhibit certain animals—as well as owners of household pets that are exhibited occasionally and meet other criteria—from AWA license/oversight requirements. Public comments are due in early November 2016. Beginning that month, APHIS will perform regular inspections of animals at 37 USDA Agricultural Research Service research facilities to ensure AWA compliance.

To ensure fair and effective AWA enforcement, APHIS regularly reviews its internal processes, including its civil penalty guidelines, and reaches out to licensees and registrants to enhance their understanding of their obligations under the AWA. Further, although the AWA does not apply to privately owned pets, APHIS supports pets during emergencies. After Hurricane Katrina (2005), APHIS created an Emergency Programs division to work with the Federal Emergency Management Agency, States, and others to safeguard public safety and animal welfare by supporting collaborative capacity building in animal emergency management. Examples demonstrating the effectiveness of this effort include the Colorado airlift of over 800 animals accompanying owners evacuated from flood zones (2013) and recent Louisiana flooding (2016) where pets/animals were evacuated with their owners from flooded areas and sheltered.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

4. Public Contact with Dangerous Animals

Issue: APHIS is considering revising the Animal Welfare Act (AWA) regulations governing handling and public contact of dangerous animals. APHIS’ main focus is ensuring the welfare of animals while striving to develop and enact the most appropriate measures to protect animals from any potential harm that can result from being handled by humans. Some members of the public, animal interest groups and the regulated community have strong and divergent views on the subject.

Public Policy Reason for APHIS Involvement: Congress directed the Secretary of Agriculture to enforce the provisions of the Animal Welfare Act. APHIS’ extensive animal health capabilities and regulatory experience position it particularly well to oversee certain aspects of animal welfare.

APHIS’ Statutory/Regulatory Scope: The Animal Welfare Act and its associated regulations require the enforcement by USDA (APHIS) of federally established standards of care and treatment for certain warm-blooded animals bred for commercial sale, used in research, transported commercially or exhibited to the public. This docket applies to the latter category.
Items in Controversy: APHIS receives many public complaints related to the handling of animals, including handling resulting in injuries to animals and the public. During follow-up inspections, APHIS often documents evidence of noncompliance with AWA handling regulations.

Industry, Consumer, and Congressional Interest: More than 70 AWA-licensed exhibitors allow public contact with dangerous animals. APHIS has issued internal and external guidance interpreting the handling regulations, particularly as they relate to the handling of large felids (big cats). On average, APHIS initiates 45 investigations each year related to the handling of animals, including cases that resulted in significant injuries to, and the deaths of, animals and members of the public. Within the past decade, approximately 74 percent of those cases involved exhibitors of animals.

Executive Branch Position to Date: When APHIS promulgated current handling regulations, APHIS stated “exhibitors do not have the right to allow contact between public and dangerous animals,” but the regulatory text itself is less clear on this point. In 2000, APHIS published a handling policy in the Federal Register for public comment, and, in 2004, withdrew this policy from consideration noting “any clarification of the regulations should take place through rulemaking.” Thereafter, in 2007, a licensed exhibitor sued APHIS in Federal District Court alleging APHIS’ interpretation of the handling regulations to restrict contact between juvenile and adult large felids (big cats) and the public was arbitrary and capricious. Although the District Court found APHIS’ interpretation of the regulations was not unreasonable (and the Fourth Circuit Court of Appeals affirmed this decision), APHIS is repeatedly challenged during both inspections and administrative enforcement proceedings regarding this interpretation, and exhibitors often seek to circumvent the handling regulations.

On August 5, 2013, APHIS published in the Federal Register for comment a petition filed by the Humane Society of the United States on behalf of a broader coalition of stakeholders to prohibit public contact with big cats, bears, and nonhuman primates. The published petition (Docket No. APHIS-2012-0107) received more than 15,000 public comments. Officials reviewed all comments and found overall support for the basis of the petition. As a result, APHIS published a notice on June 24, 2016, reopening the comment period for the petition to explore the possibility of revising the Animal Welfare Act (AWA) regulations governing handling of and public contact with dangerous animals. APHIS also hosted a series of listening sessions that allowed participants to provide oral comments and hear responses on handling regulations. Archived audio recordings and written transcripts of these sessions can be found at: https://www.aphis.usda.gov/aphis/ourfocus/animalwelfare/handling-dangerous-animals-feedback-page. APHIS officials are carefully reviewing the more than 6,000 comments they received on or prior to the August 31, 2016, closing of the reopened comment period, and they will evaluate and address all feedback before proceeding with any decisionmaking on this matter.

Additionally, on April 4, 2016, APHIS notified all affected USDA license holders of their regulatory responsibilities under the AWA to ensure that newborn and infant nondomestic cats 28 days of age or younger are provided preventive and responsive veterinary care and adequate housing and nutrition, and to ensure that these animals are handled safely and protected from
harm. Licensees must handle these animals in a manner that does not expose them to any form of public contact, including public feeding and handling. The guidance document is located at https://www.aphis.usda.gov/publications/animal_welfare/2016/tech-neonatal-nondomestic-cats.pdf.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

Biotechnology Regulatory Services

1. Proposed 340 Regulations

Issue: USDA uses science-based regulatory systems to allow for the safe development, use, and trade of products derived from new agricultural technologies. USDA continues to regulate the importation, interstate movement, and field-testing of newly developed genetically engineered (GE) organisms that qualify as "regulated articles" to ensure they do not pose a threat to plant health before they can be commercialized. These science-based evaluations facilitate the safe introduction of new agricultural production options and enhance public and international confidence in these products. As a part of this effort, the Animal and Plant Health Inspection Service (APHIS) will publish a proposed rule to revise its regulations regarding the regulation of GE organisms.

Public Policy Reason for APHIS Involvement: APHIS’ mission is to protect plants from plant pests and noxious weeds, and is conducted under the authority of the PPA. There’s a critical need to make the current regulations more relevant in light of significant scientific advances and the risk assessment experience gained over the years. APHIS plans to better align its regulations with its statutory authority, align its regulatory oversight with risks to plant health, and ensure its regulatory program is more consistent with the current status of the science of genetic engineering.

APHIS’ Statutory/Regulatory Scope: When current biotechnology regulations were codified in 1987, the PPA had not yet been passed and the existing regulations were written pursuant to the Federal Plant Pest Act of 1957. The Plant Protection Act of 2000 gives APHIS authority to regulate organisms that are plant pests, noxious weeds, or both, and pose a risk to plant health. Amongst other changes, the proposed revisions will more closely align our regulations with the PPA to allow APHIS to regulate GE organisms that may pose a plant pest or noxious weed risk.

Items in Controversy: In March 2015, USDA withdrew a 2008 proposed rule to change the regulations. The 2008 proposed revisions were extensive and included significant changes to the scope of the regulations and the mechanics of APHIS’ regulatory oversight. APHIS received more than 88,300 comments on the 2008 proposed rule, indicating the proposed scope and many of the provisions of the rule were unclear, needed additional rigor, were far-reaching and overly restrictive. APHIS received concerns regarding what future criteria might be used to determine what organisms would fall under APHIS regulatory jurisdiction. Concerns regarding oversight
of crops that produce pharmaceutical and industrial compounds and increased regulatory burden are just a few examples of the complex issues raised by commenters. Therefore, APHIS withdrew the 2008 proposed rule and sought additional input from stakeholders.

In 2015, following the withdrawal of the 2008 proposed rule, APHIS reached out to the public for input with a series of webinars and through a public comment period to start a fresh dialogue with stakeholders on future proposed rulemaking. We received more than 220,000 comments. After considering those comments, on February 5, 2015, APHIS published a Notice of Intent (NOI) to prepare a programmatic environmental impact statement (EIS), as required for any significant rule change. The Agency is thoroughly considering all public input submitted during the 75-day public comment period on the NOI as we develop the draft programmatic EIS and the new proposed rule.

The goal of the proposed regulation is to consider a broader range of potential harms, prevent potential gaps in oversight, improve clarity and transparency of risk assessments, and regulate by specifically identifying and including all GE organisms that may pose plant pest or noxious weed risks. Although APHIS will be conducting initial reviews of certain types of GE organisms that are not now subject to review, overall the proposed rule will lead to substantial regulatory relief that fosters innovation through a more efficient, risk-based system. APHIS will stay within the statutory authority of the PPA, and the public will have ample opportunity to comment on the proposed rule and the draft programmatic EIS. Based on the comments already received on the NOI, APHIS has modified the alternatives considered in its draft programmatic EIS.

Revising the current regulations will help ensure the appropriate oversight by the regulatory system and increase transparency, while continuing to provide a framework that fosters innovation to address some of society’s most pressing challenges.

**Industry, Consumer, and Congressional Interest:** Biotechnology itself is a controversial subject, with strong convictions both from those who oppose it and those who support it. Industry organizations currently regulated by APHIS are generally supportive of the concept of revising the regulations to reflect scientific advances and to better align regulation with risk. Some special interest groups/NGOs oppose genetic engineering in general and tend to resist any change they perceive as resulting in less regulation. Congressman Aderholt (R-AL) of the House Agriculture Appropriations Subcommittee has historically been interested in APHIS’ biotechnology and regulatory efforts.

**Executive Branch Position to Date:** APHIS has been communicating about a new rule throughout the Executive Branch for nearly two years, and has strong support from the Executive Office of the President, as well as our Coordinated Framework partners in Health and Human Services’ Food and Drug Administration and the Environmental Protection Agency, and from other USDA agencies. In September 2016, APHIS sent the proposed rule to the Office of Management and Budget for its review as part of the formal rulemaking process. When that review process is complete, APHIS intends to publish the proposed rule for public comment.
Potential Alternative Approaches: [b](5) Deliberative Process Privilege

2. **Coordinated Framework**

**Issue:** The White House Office of Science and Technology Policy (OSTP) is leading a process to modernize the Federal regulatory system for products of biotechnology. This is to ensure that Federal regulatory agencies with jurisdiction over biotechnology products keep pace with rapidly changing science, without creating barriers to future innovation and competitiveness. The Executive Office of the President released two documents on September 16, 2016 as part of that effort.

**Public Policy Reason for APHIS Involvement:** The Coordinated Framework for the Regulation of Biotechnology (CF) describes the comprehensive Federal regulatory policy for ensuring the safety of biotechnology products and is comprised of the regulatory authorities and review efforts of the Food and Drug Administration (FDA), the Environmental Protection Agency (EPA), and the USDA. Advances in science and technology have dramatically altered the biotechnology landscape, enabling the development of products not envisioned when the CF was published. In addition, the complexity of the array of regulations and guidance documents developed by the three primary Federal agencies can make it difficult for the public to understand how the safety of biotechnology products is evaluated. Navigating the regulatory process for these products can be challenging, especially for small companies.

**APHIS’ Statutory/Regulatory Scope:** USDA’s authority to regulate genetically engineered (GE) plants falls under the Plant Protection Act (PPA). Under the PPA, APHIS regulates certain GE organisms that may be plant pests and pose a risk to plant health. The update of the CF is especially timely for USDA as it considers options for revising its regulations for the field-testing and development of new GE organisms. APHIS plans to better align its regulations with its statutory authority, better align its regulatory oversight with risks to plant health, and ensure its regulatory program is more consistent with the evolving science of genetic engineering. These activities support the goals of the OSTP in its effort to modernize the Federal regulatory system for products of biotechnologies.

**Items in Controversy:** The current regulatory system for the products of biotechnology effectively protects health and the environment. However, in some cases, unnecessary costs and burdens associated with regulatory uncertainty about agency jurisdiction, and lack of predictability of timeframes for review, for example, have grown. Updating the CF and laying the foundation for future updates is intended to help ensure the appropriate oversight by the regulatory system and increase transparency, while continuing to provide a framework for advancing innovation to address some of society’s most pressing challenges.

**Industry, Consumer, and Congressional Interest:** Biotechnology itself is a controversial subject, with strong convictions both from those who oppose it, and those who support it.
Chairman Aderholt (R-AL) of the House Agriculture Appropriations Subcommittee has historically been interested in APHIS’ biotechnology and regulatory efforts.

**Executive Branch Position to Date:** APHIS, FDA, and EPA have been working closely with the Executive Office of the President (EOP) to modernize the CF.

On July 2, 2015, the EOP directed FDA, EPA, and USDA to update the CF by clarifying current roles and responsibilities, to develop a long-term strategy to ensure that the Federal biotechnology regulatory system is prepared for the future products of biotechnology, and to commission an expert analysis of the future landscape of biotechnology products to support these efforts. For the last 14 months, these agencies have analyzed Federal regulation of biotechnology products, reviewed more than 900 comments submitted in response to a Request for Information, and conducted three public meetings in different regions of the country, with presentations, case studies, and break-out “listening sessions.”

EOP released two products of this effort: the *Update to the Coordinated Framework for the Regulation of Biotechnology*, and the *National Strategy for Modernizing the Regulatory System for Biotechnology Products*.

The *Update to the Coordinated Framework for the Regulation of Biotechnology* offers the public a complete picture of the regulatory structure that provides oversight for the products of modern biotechnology, and present clarifying information about agency roles, responsibilities, and coordination. On September 22, 2016, the OSTP published a notice in the Federal Register asking for public comments on the proposed update to the CF. Comments will be accepted through November 1.

The *National Strategy for Modernizing the Regulatory System for Biotechnology Products* sets forth a 5-year vision for ensuring that the Federal regulatory system is equipped to assess efficiently the risks, if any, associated with future products of biotechnology while supporting innovation, protecting health and the environment, maintaining public confidence in the regulatory process, increasing transparency and predictability, and reducing unnecessary costs and burdens.

FDA, EPA, and USDA have also commissioned a report by the National Academies of Sciences, Engineering, and Medicine, titled “*Future Biotechnology Products and Opportunities to Enhance Capabilities of the Biotechnology Regulatory System.*” The report is expected to be released at the end of 2016 and will be used by the agencies to: 1) gain a better understanding of future products and how they fit within the U.S. regulatory system; 2) consider any necessary updates to scientific assessments; 3) consider any necessary updates to regulatory processes or procedures; and 4) enhance communication with stakeholders.

3. **Significant Biotechnology Issues**

**Issue:** The Federal government has been regulating genetically engineered (GE) organisms since 1987. As part of the regulatory process, APHIS ensures that developers, growers, and
others take important steps to prevent unauthorized releases of GE organisms. However, there remain several significant issues, including the coexistence of GE crops with non-GE and organic crops, herbicide resistant weeds, the labeling of GE products and new and emerging technologies used to modify plant genes that require further consideration by both APHIS and other Federal agencies.

**Public Policy Reason for APHIS Involvement:** The biotechnology industry—valued worldwide at $280 billion—creates products that can improve medical care and increase agricultural production. While American farmers and consumers can benefit from the products, it is important to ensure that they do not pose a risk to America’s agricultural and natural resources. APHIS works to ensure new GE crops will not pose plant health risks when released into the environment.

**APHIS’ Statutory/Regulatory Scope:** The Plant Protection Act gives APHIS authority to regulate certain GE organisms that might pose a risk to plant health. APHIS regulates the introduction—meaning the importation, interstate movement, and field-testing—of certain organisms derived through biotechnology that may pose a plant pest risk.

**Items in Controversy:**

- **Coexistence:** USDA’s policy has been to support all forms of agriculture, including GE, non-GE and organic, and to strengthen coexistence among these agricultural production systems. In order to maintain the integrity of differentiated markets, farmers employ a variety of practices to prevent the accidental comingling of GE crops with other crops. When comingling does happen, some stakeholders have the strong opinion that the companies who patent, promote, and profit from GE products should be responsible for covering the losses associated with the impacted crops and for taking measures to prevent this from occurring in the future. Currently, there is no compensation mechanism for farmers impacted by unintended presence of GE in non-GE production. USDA is working with an Advisory Council (AC21) to identify measures that can promote and strengthen coexistence. These include:
  - Engaging stakeholders and seeking public input on how to foster communication and collaboration to strengthen coexistence.
  - Funding or conducting research relevant to crop stewardship and gene flow risk mitigation under USDA’s Biotechnology Risk Assessment Grants program.
  - Development of an approach for examining seed purity of holdings in the USDA/Agriculture Research Service National Plant Germplasm System.

- **Herbicide Resistant Weeds:** The Environmental Protection Agency (EPA) is currently the only Federal agency with authority to implement weed resistance management through the Federal Insecticide, Fungicide, and Rodenticide Act. APHIS’ role in this effort is to promote the use of best management practices during GE field trials, especially for field trials of herbicide resistant crops. APHIS is collaborating USDA’s Natural Resources Conservation Service, the Office of Pest
Management Policy, the EPA, and the Weed Science Society of America to better understand impediments to the adoption of weed management strategies and to identify ways to encourage producers to adopt diverse tactics for weed management, including herbicide control.

- **Labeling:** APHIS has no direct role in the labeling of GE products. The Food and Drug Administration has issued labeling guidance for companies who wish to voluntarily label their products, and several food companies are doing so. Additionally, States have considered laws to mandate labeling for food products. In July 2016, Congress passed a disclosure law that requires most food packages to carry a text label, symbol or electronic code to indicate whether the food contains biotech material. The President signed the bill on August 1, 2016; this law preempts any state laws. The authority provided by the July 2016 law was delegated to the Agricultural Marketing Service.

- **Gene Editing Technology:** Several methods of gene editing (Zinc Fingers, TALENs and CRISPRs) are now being used to modify crops. For example, in 2015, APHIS responded to two inquiries regarding the need for regulation for products developed with CRISPRs. For both products, a white button mushroom developed by Penn State, and waxy corn developed by DuPont Pioneer, the only change to the plant genome was a deletion. APHIS determined that neither product falls under APHIS regulations because no genetic material from plant pests was inserted into the final genomes. APHIS also concluded that neither plant presents a risk to plant health as weeds. However, APHIS regulates GE plants produced using genome editing techniques if plant pest DNA is inserted in the final product or otherwise poses a risk to plant health.

**Industry, Consumer, and Congressional Interest:** There are a wide variety of viewpoints on these issues - some stakeholders believe that GE products are too dangerous and need more regulation (or should be banned), while others believe that APHIS should expedite the deregulation of products. Consumers are very supportive of product labeling. In 2015, Congressman Bishop (D-GA) asked about coexistence, and Congresswoman Pingree (D-ME) asked about “superweeds” as part of the House Agriculture Appropriations hearing. Congresswoman Pingree also states that consumers want to know what is in their food (labeling) and growers do not want their crops contaminated.

**Executive Branch Position to Date:** APHIS supports all forms of agriculture. We hear the concerns of all types of farmers and where able, are providing dedicated resources to address public concerns.
International Services

1. **Engagement with Cuba**

**Issue:** The decision to extend diplomatic relations to Cuba has already led to greater movement of people; ultimately, it may also entail increased U.S. agricultural exports and the lifting of the current U.S. embargo on Cuban imports. Given decades of limited contact, however, relatively little is known about the current state of Cuban agriculture, including its plant and animal pests and diseases. On the first official USDA visit to Cuba since 1961, focused on strengthening bilateral agricultural engagement, Secretary Vilsack recommended that Cuba complete detailed pest risk analyses to start the decisionmaking process for exports when the embargo is lifted. If trade restrictions are lifted and the United States allows imports from Cuba, domestic producers may be concerned about the introduction of potentially harmful plant and animal pests and diseases under APHIS’ purview, including screwworm and classical swine fever—both eradicated in the United States—and possibly fruit flies and other threats.

**Public Policy Reason for APHIS Involvement:** APHIS safeguards U.S. agricultural and natural resources against the entry, establishment, and spread of significant pests and diseases, while facilitating the safe and fair trade of agricultural products.

**APHIS’ Statutory/Regulatory Scope:** In accordance with the Plant Protection Act and the Animal Health Protection Act, APHIS safeguards U.S. agriculture from potentially harmful plant and animal pests and diseases that may be present in Cuba.

**Items in Controversy:** APHIS’ Cuban counterparts wish to begin exporting agricultural products to the United States. Similarly, many U.S. agricultural industries and States are interested in opening or expanding markets for U.S. products—particularly rice, wheat, soybeans, pork, poultry, and corn—to Cuba.

**Industry, Consumer, and Congressional Interest:** In 2015, the United States exported $148 million worth of agricultural products to Cuba. U.S. poultry and soybean producers account for a large share of these exports and have a vested interest in expanded trade relations. Other industry groups, including the American Farm Bureau Federation, the American Feed Industry Association, the International Dairy Foods Association, the National Farmers Union, and the U.S. Grains Council have also expressed significant interest in a more open Cuban market. During the November 2015 USDA visit to Havana, Secretary Vilsack was accompanied by APHIS Administrator Kevin Shea, U.S. Senator Jeff Merkley (D-Oregon), and U.S. Representatives Terri Sewell (D-Alabama), Suzan DelBene (D-Washington), and Kurt Schrader (D-Oregon).

**Executive Branch Position to Date:** For many years, APHIS has sought to stay current on potential Cuban agricultural risks through its offices in Puerto Rico, the Dominican Republic, Haiti, and Trinidad and Tobago. APHIS has also participated in regional initiatives such as CaribVET and the Caribbean Plant Health Directors Forum, which facilitates information exchange between APHIS and Cuban regulatory counterparts. APHIS has supported U.S.
exporters through such successful actions as working with Cuban counterparts to lift bans on U.S. poultry imports related to highly pathogenic avian influenza and ensuring Cuban recognition of the United States as a country at negligible risk for bovine spongiform encephalopathy.

Along with the signing of a Memorandum of Understanding establishing bilateral cooperation in the U.S. and Cuban agricultural and forestry sectors,APHIS has been involved in workplan negotiations to develop relationships with Cuban animal and plant health counterparts and address risks from established pests and diseases in Cuba.

APHIS recently sent an employee on detail to Cuba to facilitate information exchanges between APHIS plant and animal health experts and their Cuban counterparts.

Potential Alternative Approaches:

**Plant Protection and Quarantine**

1. **Argentine Lemon Imports**

**Issue:** Argentina has requested that APHIS amend its regulations to allow the importation of lemons from the northwest region of that country into the United States. APHIS approved market access for Argentine lemons in 2000, but in October 2001 the U.S. citrus industry filed a lawsuit opposing this decision and APHIS stopped importations.

In 2013, Argentina requested consultations with the United States through the World Trade Organization (WTO) regarding market access for Argentine lemons. In response, in April 2014 APHIS completed a pest risk analysis, and in June 2015 conducted a site visit. In May 2016 APHIS used this information to publish a proposed rule (Docket No. APHIS-2014-0092-0001) that would allow the importation of lemons from Northwest Argentina under a systems approach. The systems approach would require a series of safeguards to effectively mitigate pest risk.

In September 2016, after an extended comment period that ended on August 10, 2016, APHIS conducted another site visit during peak growing season to verify that Argentina had implemented the proposed mitigation measures. The Agency then shared its findings with industry and other stakeholders that its site visit confirmed that Argentina has a system of safeguards in place to mitigate any pest risk. If the Office of Management and Budget (OMB) designates the rule not significant, APHIS intends to publish a final rule by December 2016. If it is deemed significant, publication would likely be 3 to 4 months later.
United States Department of Agriculture
2016 Presidential Transition
Marketing and Regulatory Programs (MRP)

Public Policy Reason for APHIS Involvement: APHIS safeguards U.S. agriculture and natural resources against the entry, establishment, and spread of significant pests, while facilitating the safe and fair trade of agricultural products.

APHIS’ Statutory/Regulatory Scope: APHIS regulates the importation of fruits and under the Plant Protection Act and our regulations in “Subpart—Fruits and Vegetables” (7 CFR 319.56-1 through 319.56-74).

Items in Controversy: Argentina began consultations through the WTO and, if the rule is not finalized, would likely proceed with the dispute. If this rule is finalized, the U.S. citrus industry may again attempt to block imports through legal action, as it did 2001.

Industry, Consumer, and Congressional Interest: There is both support for and opposition to the rule. There is congressional support from representatives of States with large ports who believe there would be an economic benefit to granting market access. Industry and legislators from citrus-growing States strongly oppose the rule. Congresswoman Rosa DeLaura (D-CT) also expressed concerns that the United States would make regulatory concessions due to WTO involvement.

Executive Branch Position to Date: APHIS has determined the systems approach will mitigate pest risk; the current administration believes the rule is necessary to strengthen the trade relationship with Argentina and avoid issues with the WTO.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

2. European Union (EU) Apple and Pear Imports

Issue: The EU requested that APHIS amend its regulations to replace the current preclearance program with a systems approach for the importation of apples and pears from certain member countries: Belgium, Germany, France, Italy, Poland, Portugal, Spain, and the Netherlands. Under the current preclearance program, we require producers in the exporting countries to contribute to a trust fund to cover the cost of APHIS inspection in the exporting country, as well as any risk mitigation measures. The systems approach, which combines a series of risk mitigation measures, would eliminate this preclearance inspection protocol and rely on individual countries’ National Plant Protection Organization to ensure that producers carry out required risk mitigation activities in fields and packing houses. APHIS plans to conduct an annual audit of the systems approach and works with the Department of Homeland Security’s Customs and Border Protection to carry out inspections of arriving apple shipments to ensure compliance with the U.S. import requirements.

In 2015, APHIS published a risk management document that outlined risk mitigation measures necessary to address previously identified pest risks. These measures are essentially the same as
those used in the current preclearance program. APHIS published a proposed rule (Docket No. APHIS-2015-0073-0001) in January, 2016 reflecting the change to a systems approach.

**Public Policy Reason for APHIS Involvement:** APHIS safeguards U.S. agriculture and natural resources against the entry, establishment, and spread of significant pests, while facilitating the safe and fair trade of agricultural products.

**APHIS’ Statutory/Regulatory Scope:** APHIS regulates the importation of fruits and under the Plant Protection Act and our regulations in “Subpart—Fruits and Vegetables” (7 CFR 319.56-1 through 319.56-74).

**Items in Controversy:** Poland was a late addition to the list of countries seeking market access. However, unlike the other countries on the list, APHIS has not completed a separate pest risk assessment for Poland because that country’s pests were previously identified and analyzed in published materials.

**Industry, Consumer, and Congressional Interest:** Industry and some legislators have expressed concern about pest risk generally and specifically with regard to Poland. In March 2012, the EU banned the import of U.S. apples based on their reduced tolerance level for a chemical used by U.S. producers to mitigate disease risk. U.S. stakeholders are concerned about the resulting trade imbalance.

**Executive Branch Position to Date:** APHIS determined the systems approach will mitigate the risk of pest introductions and that imports would not pose a threat of pest introduction. APHIS is proceeding with decision making at this time.

**Potential Alternative Approaches:** [b](5) Deliberative Process Privilege

### 3. Potatoes to Mexico

**Issue:** The U.S. potato industry has long wanted market access for U.S. fresh, table-stock potatoes to all of Mexico, but efforts toward this goal have met a series of ongoing roadblocks. In 2003, APHIS and Mexico’s Ministry of Agriculture, Livestock, Rural Development, Fish, and Food (SAGARPA) signed an operational work plan that allowed immediate access for U.S. fresh, table-stock potatoes to Mexican markets within a 26-kilometer border zone. Provisions in the work plan also anticipated that expansion of market access for U.S. table-stock potatoes to all of Mexico would be phased in over time. Exports of U.S. seed potatoes for planting were excluded from this agreement.

In the spring of 2014, APHIS published a new regulation to authorize Mexico to export fresh table-stock potatoes to the United States, and SAGARPA issued new regulations allowing the long-awaited access for U.S. table-stock potatoes to all States in Mexico. APHIS and
SAGARPA then signed new work plans to harmonize the two countries’ mutual trade in potatoes. Beginning on May 19, 2014, U.S. exporters shipped about 15.5 million pounds of product into Mexico’s expanded markets. However, after just a few weeks of expanded access, a Mexican court issued an injunction suspending SAGARPA’s new potato regulations in response to a series of lawsuits filed by the National Confederation of Potato Producers. Under the injunction, U.S. potato exporters were allowed continued access to the original 26-kilometer border area. Mexican exporters to date have not shipped any fresh potatoes to the United States.

On May 26, 2016, SAGARPA officially cancelled its 2014 regulation, and on June 6, 2016 provided APHIS with a new work plan for comment, which both APHIS and U.S. industry considered to be too restrictive. APHIS provided its comments to SAGARPA on June 10, 2016. On July 15, 2016, Mexican President Peña Nieto issued a presidential order authorizing the market expansion for U.S. fresh table-stock potatoes to all Mexico as a temporary measure until SAGARPA could publish new regulations for the import of U.S. table-stock potatoes. However, on July 20, a Mexican court issued yet another injunction that suspended President Nieto’s executive order.

U.S. industry representatives have estimated that U.S. table-stock potato exports could increase from the approximately $40 million worth of fresh potatoes currently exported to the 26-kilometer border zone to $150 million or more if U.S. exporters had market access to all of Mexico for table-stock potatoes.

**Public Policy Reason for APHIS Involvement:** APHIS safeguards U.S. agriculture and natural resources against the entry, establishment, and spread of significant pests, while facilitating the safe and fair trade of agricultural products.

**APHIS’ Statutory/Regulatory Scope:** Under the Plant Protection Act, APHIS has authority to establish import regulations to safeguard U.S. agriculture. As the recognized National Plant Protection Organization for the United States, APHIS is authorized to represent overall U.S. agricultural interests in bilateral trade negotiations concerning the import and export of agricultural commodities. As a signatory of the International Plant Protection Convention (IPPC), APHIS plays a key leadership role in protecting the world’s plant resources from pests and diseases. APHIS’ membership in the IPPC fosters international relationships on behalf of our stakeholders to support new market access, market expansion, and market retention for U.S. exports.

**Items in Controversy:** The plaintiffs representing Mexico’s potato producers claim that imported U.S. table-stock potatoes, although labeled for consumption only, would put Mexico’s agriculture at risk from as many as 60 quarantine pests and diseases because the potatoes could be diverted for agricultural production in Mexico. One of the bilaterally agreed-upon phytosanitary mitigations in the 2014 work plan required U.S. potato shipments to be pretreated with an anti-sprouting solution that would minimize any risk of the potatoes being diverted for agricultural purposes. Under the IPPC to which both the United States and Mexico are signatories, the intended use of a commodity must be taken into account when establishing any phytosanitary restrictions on a commodity.
Industry, Consumer, and Congressional Interest: The U.S. potato industry supports the Federal Government’s efforts to press at all levels for a resolution that would allow full access to Mexico’s fresh potato market. APHIS has not received any Congressional inquiries on this issue since 2011.

Executive Branch Position to Date: Although the Office of the U.S. Trade Representative has closely monitored this situation, the resolution of this matter remains within Mexico’s court system.

Potential Alternative Approaches: [b][5] Deliberative Process Privilege

4. Fruit Flies/Sterile Fruit Fly Facilities

Issue: U.S. agriculture is at risk from exotic fruit flies that could enter the United States across our southern border as well as through infested host plants, fruits, and vegetables that unintentionally or illegally enter the country. Southern Texas faces a continuous threat from introductions of Mexican fruit fly (Mexfly), and Florida and California experience frequent introductions of Mediterranean fruit fly (Medfly) and Oriental fruit fly (OFF). Medfly, OFF, Malaysian fruit fly, and melon fly are established in Hawaii and continually threaten the mainland. Because the larvae of these exotic species can feed on more than 400 host plants and render fruit inedible, they are among the most destructive pests of fruits and vegetables around the world. The establishment of any of these species within the continental United States would cause significant economic losses from the damage to host commodities, the costs associated with implementing control measures, and the loss of export markets.

To prevent the introduction and establishment of exotic fruit flies, APHIS employs a proven strategy involving surveillance trapping, quarantine restrictions, port of entry inspections, and mating disruption using sterile insect technique. Use of the sterile insect technique (SIT) has remained a key component of its cooperative exotic fruit fly control programs for over 30 years. SIT involves the mass-rearing of sterilized exotic fruit flies. When released, sterile male fruit flies mate with wild females, which disrupts natural breeding and the production of progeny because the female’s eggs remain unfertilized. Through continuous releases, this form of mating disruption significantly reduces wild fly populations and aids eradication.

USDA maintains cooperative programs with the governments of Mexico, Guatemala, and Belize, which employ SIT and other mitigation strategies to diminish the populations of exotic fruit flies in those countries. These cooperative efforts reduce destruction of fruit, improve local food production, and decrease the pest risk to the United States.
APHIS also operates domestic SIT facilities in California, Florida, and Texas. The California and Florida facilities currently receive sterile Medfly pupae from the facility in Guatemala, and the Texas facility receives some supplemental Mexfly pupae from Guatemala. The domestic facilities rear and release hundreds of millions of sterile Mexflies and sterile male Medflies each week for ongoing preventive release efforts and domestic outbreak eradication campaigns against these two pests. However, APHIS and State cooperative fruit-fly program managers have completed comprehensive evaluations of all of the domestic SIT facilities and determined that these facilities were all beyond their useful lifespan, have inefficiencies that lead to production losses, and—in some cases—pose health and safety concerns for workers. New domestic facilities would also allow for a significant increase in the quantities of sterile Medflies and Mexflies produced, which could enable the United States to become self-sustaining in sterile fruit-fly production and provide a reserve capacity for mitigating any future outbreaks required to protect U.S. agricultural resources. Because the landowners of the Florida facility have opted not to renew the lease that will expire in 2017, work to replace that facility has already begun.

Public Policy Reason for APHIS Involvement: APHIS’ efforts, in cooperation with State officials and industry stakeholders, to prevent exotic fruit flies from becoming established in the United States directly protects approximately $5 billion in citrus and tree fruit production.

Although one of the long-term goals of APHIS’ Fruit Fly Exclusion and Detection Program is to eradicate Medfly throughout Guatemala, the more realistic aim—given current resources and available technology—is to prevent Medfly’s northward movement into Mexico and the United States.

APHIS’ Statutory/Regulatory Scope: The Plant Protection Act authorizes APHIS to take action against plant pests that cause damage to agricultural assets, to prevent such pests from entering and establishing in the United States, and to cooperate with other countries in taking such actions.

Items in Controversy: Due to violence and security issues in areas surrounding the northern border of Mexico, Mexfly surveillance and SIT preventive-release activities in these regions have significantly decreased and in some cases stopped. This has significantly increased the Mexfly threat to Texas. Because all of the domestic SIT facilities in Florida, Texas, and California are in a serious state of physical decline and need to be replaced, APHIS will need additional funding to replace all of those facilities and ensure production of sufficient quantities of sterile fruit flies to protect vulnerable agricultural areas of the United States.

Industry, Consumer, and Congressional Interest: Susceptible producers in the South and Southwest, and in the citrus industry in particular, strongly support APHIS’ safeguarding efforts and fruit fly eradication campaigns. Industry, most notably Texas Citrus, has asked Congressman Vela (D-TX) and others to seek Congressional funding for upgrades to SIT facilities that produce and release sterile fruit flies in Florida, California, and Texas. Congressman Rooney (R-FL) has questioned APHIS’ capacity to produce sufficient quantities of sterile Mexfly.
Executive Branch Position to Date: APHIS’ total appropriation for its domestic and international exotic fruit fly eradication and control efforts totaled $59.6 million in fiscal year 2016. Through this funding, APHIS maintains a cooperative, nationwide trapping and surveillance program, which serves as an early warning system for pest introductions. In addition, USDA continues to prioritize cooperative programs with foreign governments. APHIS’ efforts also include mounting domestic quarantine eradication campaigns in response to exotic fruit fly introductions. During the past two years, unprecedented numbers of exotic fruit fly introductions have occurred in Florida, Texas, and California. All Medfly and OFF infestations in the mainland United States have now been eradicated, but five of the eight Mexfly quarantines established in southern Texas during the year remain in place.

The House Appropriations Committee included $30 million for APHIS in the FY 2017 Agriculture Appropriations.

Potential Alternative Approaches: [b][5] Deliberative Process Privilege

5. Citrus Health Programs

Issue: The presence in the United States of exotic citrus diseases, especially citrus canker and Huanglongbing (HLB, aka citrus greening)—which is spread by the Asian citrus psyllid (ACP)—hampers the ability of commercial citrus industries to produce, harvest, process, domestically move, and internationally export healthy fruit and clean plant stock. APHIS supports citrus health-related activities through its Citrus Health Response Program (CHRP) and its leadership in USDA’s HLB-Multiagency Coordination (MAC) Group.

APHIS has established Federal quarantines for citrus canker, HLB, and ACP in parallel with quarantines already imposed at the State level.

- The entire State of Florida, as well as portions of Louisiana and Texas, are quarantined for citrus canker.
- The entire States of Florida and Georgia, as well as portions of Louisiana, Texas, and California, are quarantined for HLB. All of Guam, Puerto Rico, the U.S. Virgin Islands, and the Northern Mariana Islands are also quarantined for HLB. The biology of HLB does not lend itself to early detection or eradication.
- The entire States of Florida, Georgia, Alabama, Mississippi, Louisiana, Arizona, and Texas, as well as portions of South Carolina, Nevada, and California, are quarantined for ACP. All of Guam, the Northern Mariana Islands, and American Samoa are also quarantined for ACP.
United States Department of Agriculture
2016 Presidential Transition
Marketing and Regulatory Programs (MRP)

Public Policy Reason for APHIS Involvement: The United States ranks third overall in citrus production globally, and the packinghouse-door value of U.S. citrus production in 2015 was more than $3 billion. In addition, approximately 100,000 U.S. jobs are generated from the harvesting, packing, processing, transportation, and retail sale of fresh and processed citrus fruit and citrus nursery stock production.

APHIS’ Statutory/Regulatory Scope: Section 412(a) of the Plant Protection Act of June 20, 2000, as amended, 7 U.S.C. 7701, provides APHIS with broad authority to prohibit or restrict the movement in interstate commerce of any plant, plant part, article, or means of conveyance if necessary to prevent the introduction or dissemination of a plant pest, including citrus pests/diseases.

Items in Controversy: Although tree removal is the best way to stop the spread of HLB and citrus canker, there has been some resistance to removing trees, especially from residential citrus owners. Additionally, trees infected by HLB can take years to develop symptoms, further fostering opposition to tree removal. Industry is pushing for early detection technologies, but regulatory applicability of these technologies has not been established. There has also been some resistance to spray programs to control ACP populations. Each citrus-producing State—in particular Florida and California—has different priorities, diverse approaches to disease management, and wants a larger share of CHRP funding.

Industry, Consumer, and Congressional Interest: The citrus industry is a strong supporter of CHRP. Congressman Rooney (R-FL) represents a citrus-growing district and submitted questions for the record about the proposed decrease in Federal cost-share for CHRP during budget hearings. In July 2016, Congressman Denham (R-CA) inquired about funding sources to help California combat HLB. Congress provided $20 million in 2-year funding for FY 2014/15 to help establish the HLB MAC Group, and provided an additional $5.5 million in two-year funding for its continuation in FY 2016/17.

Executive Branch Position to Date: Secretary Vilsack established the HLB-MAC in December 2013 as a means to coordinate the response of Federal, State, and industry in order to reduce the impact of HLB on the U.S. citrus industry. The HLB-MAC’s mission is to provide producers with the practical tools and solutions they need in the near-term to allow them to remain economically viable until longer-term solutions are developed. The HLB-MAC’s priority projects include field-testing antimicrobials and mitigations such as thermotherapy, establishing model groves, and enhancing biological controls for ACP.

CHRP’s mission is to compile best practices to sustain the U.S. citrus industry, maintain grower's continued access to export markets, and safeguard citrus-growing States against a variety of citrus diseases and pests. CHRP provides guidelines for nursery stock product compliance and fruit inspection, treatment, and certification, and funds operational activities, such as surveillance and monitoring, packing house inspections, and release of biocontrol agents to suppress ACP.
6. **Agricultural Quarantine Inspection (AQI) User Fees**

**Issue:** In October 2015, APHIS published a final rule in the *Federal Register* to update the AQI user fee rates. The Agency had two goals: 1) ensuring that collections for each fee type covers the costs associated with that fee and did not over-charge or under-charge by fee type and 2) increasing overall revenue to cover program costs adequately and maintain a reasonable reserve. APHIS lowered two of the existing fees (international airline passengers and commercial rail cars) and raised four fees (commercial aircraft, commercial vessels, and trucks—for both individual crossings and decals). Additionally, APHIS added new fees for international cruise ship passengers and for monitoring treatments of imported commodities such as fruits and vegetables. [See table below for a comparison of old and new fees.]

**Public Policy Reason for APHIS Involvement:** Through the AQI program, APHIS and the Department of Homeland Security’s Customs and Border Protection (CBP) safeguard U.S. agricultural and natural resources from the introduction of invasive pests and diseases associated with the movement of people and goods around the world. APHIS collects user fees for AQI services conducted at ports of entry in connection with the arrival of imports, means of conveyance, and passenger baggage. These services are designed to prevent the entry of foreign pests and diseases that could harm U.S. agricultural or natural resources. APHIS had last updated AQI user fees in December 2004. Since then, there has been an 82 percent increase in the value of imported goods, a 42 percent increase in international passengers, and CBP has added hundreds of inspectors and invested in X-ray machines and other technology, as well as canine teams. Prior to the 2015 revisions, AQI user fee collections had not kept pace with the costs of the program. CBP’s personnel costs in particular had increased significantly since the last time the fees were updated due to grade increases in journey-man level inspector positions and increases in the number of inspection personnel.

**APHIS’ Statutory/Regulatory Scope:** The Food, Agriculture, Conservation, and Trade (FACT) Act of 1990 authorized USDA to implement user fees to cover AQI costs associated with international arrivals. APHIS continues to receive appropriated funds for AQI inspections of passenger baggage and cargo traveling from Hawaii and Puerto Rico to the mainland United States to prevent pest and disease introductions from these locations. Following the establishment of DHS in 2003 (based on the Homeland Security Act of 2002), the inspection function at ports of entry (with the exception of inspections of imported plants) transferred to CBP. DHS also has appropriated funds to cover inspections of pedestrians and bus passengers entering the United States, among other things. APHIS continues to collect AQI user fees and transfers a portion of the AQI collections to CBP to cover that Agency’s costs. APHIS continues to assess risks associated with imports, set import regulations and inspection policies, inspect imported plant shipments, train CBP agricultural specialists and detector dog teams, monitor fumigations and other treatments of imported commodities, and provide the scientific support...
necessary for the program, among other things. This account is subject to the sequestration of mandatory funds each year.

**Items in Controversy:** The industries affected by the increased fees as well as those affected by the newly implemented fees have objected to the new rates. The Air Transit Association filed a lawsuit on May 13, 2016, objecting to the new rate for commercial aircraft, which increased from $70.75 to $225.00. The complaint alleges that APHIS’ final rule updating the AQI fees does not comply with several provisions of the FACT Act, which requires that the fees associated with each fee type cover the costs of services for that fee type and not cross-subsidize inspection activities for other classes of fee payers. It states that APHIS did not provide adequate information demonstrating the $225 fee was necessary to cover costs of inspecting aircraft and states that the commercial aircraft fee itself is not authorized by the FACT Act, among other items. With assistance from APHIS, the U.S. Department of Justice filed an answer to the complaint and filed the administrative record. Plaintiffs’ motion for summary judgment is due in March, 2017.

The bulk of the collections under the new rates began mid-year in FY 2016, and APHIS is still evaluating collection levels under the new fees. We anticipate FY 2016 collections will total approximately $675 million. While this reflects a substantial increase from the previous year, the initial projection was approximately $727 million. APHIS will continue to evaluate AQI collections and determine whether they are adequate to maintain the program. [See table below showing AQI collections and spending.]

**Industry, Consumer, and Congressional Interest:** While agricultural stakeholder groups support the AQI program, AQI fee payers—particularly the airline and commercial trucking industries—objected to the new rates. When APHIS published the proposed rule, members of Congress requested and APHIS agreed that the public comment period be extended by 60 days.

**Executive Branch Position to Date:** When developing the new rates, APHIS contracted with an independent firm to review the AQI user fee schedule to determine what adjustments were needed to ensure fees are commensurate with the cost of the AQI program. The company conducted an extensive analysis, and—based on its recommendation—APHIS implemented activity based costing models to help track costs related to the various fee types. APHIS conducted significant outreach to affected industries, including holding six stakeholder engagements throughout the process of developing a proposed rule. APHIS carefully considered the public comments on the proposed rule and the feedback received through the various stakeholder meetings, calls, and webinars, and made several adjustments in the final rule in response to information provided by stakeholders. One of the changes involves phasing in a new fee—treatment monitoring services—over 5 years and lowering the full fee from the proposed $375 rate (which included costs built in for overtime pay for employees) to $237 (however, reimbursable overtime would be charged for services provided outside of normal business hours).
7. **Farm Bill Section 10007**

**Issue:** APHIS is charged with implementing Section 10007 of the 2014 Farm Bill (Agricultural Act of 2014) to prevent the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. Section 10007 contains the Plant Pest and Disease Management and Disaster Prevention program with projects organized around six goal areas: enhancing plant pest/disease analysis and survey; targeting domestic inspection activities at vulnerable points in the safeguarding continuum; increasing identification capacity and enhancing and strengthening pest detection technology; safeguarding nursery production; conducting outreach and education; and enhancing mitigation and rapid response capabilities. It also contains the National Clean Plant Network (NCPN) with a focus on supporting clean plant center networking, diagnostics, therapeutics, and foundation plantings. Through these programs, APHIS provides funding to a variety of entities, including State departments of agriculture, academic partners, non-profit organizations, and other Federal agencies. APHIS accepted suggestions for FY 2017 projects for the Plant Pest and Disease Management and Disaster Prevention Program from July 11, 2016, through August 19, 2016. A panel of USDA, State, and
industry representatives are evaluating these projects on specific goal areas that represent critical needs and opportunities to strengthen, prevent, detect, and mitigate invasive pests and diseases. APHIS is accepting suggestions for the National Clean Plant Network from August 17, 2016, through October 26, 2016.

**Public Policy Reason for APHIS Involvement:** APHIS safeguards U.S. plant health against introductions of foreign pests and diseases through a variety of exclusion, early detection, and mitigation programs. The Farm Bill program enhances APHIS’ efforts to detect new plant pests and diseases and provides a source of funds for rapid response to small-scale outbreaks of plant pests and diseases. Through the NCPN, the program also provides sources of disease-free, high-value nursery stock to growers, enabling them to import desirable varieties of items such as grapevines, stone fruit trees, and berries (among others) from other countries without posing disease risks to existing agricultural production. The program also produces clean materials from domestic stock. APHIS continually evaluates pest and disease threats to U.S. agriculture and engages in regular communication with stakeholders and government partners, providing the Agency with knowledge of the most pressing plant health issues.

**APHIS’ Statutory/Regulatory Scope:** Section 10007 of the 2014 Farm Bill combined two programs previously authorized in the 2008 Farm Bill – formerly Sections 10201 for the Plant Pest and Disease Management and Disaster Prevention Program and Section 10202 for the NCPN. The 2014 Farm Bill provided permanent authorization for the annual transfer of funds from USDA’s Commodity Credit Corporation at the rate of $62.5 million in FY 2014 through FY 2017, and $75 million in FY 2018 and beyond. At least $5 million must go towards NCPN. This account is subject to the sequestration of mandatory funds each year. In FY 2017, $58.187 million will be available after sequestration is applied.

**Items in Controversy:** As required by the Farm Bill, APHIS seeks input from the National Plant Board, State departments of agriculture, and land grant universities to develop overall goals for the program and review project suggestions. APHIS has also consulted the Specialty Crop Farm Bill Alliance, industry organizations, other Federal Agencies, and non-governmental stakeholders to develop goals and review annual spending plans. Each year, APHIS receives more project suggestions than it can fund, and cooperators sometimes raise concerns when a specific project does not receive funding.

**Industry, Consumer, and Congressional Interest:** The program has broad support from APHIS stakeholders and Congress, including the Agriculture Committees and the Appropriations Committees.

**Executive Branch Position to Date:** Since 2009, APHIS has funded more than 2,200 projects in 50 States and 2 U.S. territories, supporting a variety of stakeholders, including Federal, State, academic, Tribal, and private entities. In FY 2016, APHIS provided Plant Pest and Disease Management and Disaster Prevention funding to 50 States plus Guam and Puerto Rico to implement 412 projects suggested by universities, States, Federal agencies, nongovernmental organizations, non-profits and Tribal organizations. For NCPN, APHIS supported 22 suggestions in 17 States that focus on providing high-quality propagative plant material for fruit
trees, grapes, hops, berries, citrus, roses and sweet potatoes that is free of targeted plant pathogens and pests.

Major projects funded by the 2014 Farm Bill include eradication of exotic fruit fly outbreaks, nationwide surveys of honey bee pests and diseases, support of canine detector teams in California and Florida, and response to the giant African snail in Florida, among many others.

APHIS has also used portions of PPDM funding to initiate emergency programs for emerging and high-priority pests impacting agricultural resources, such as the giant African snail in Florida, the European grapevine moth in California, and the coconut rhinoceros beetle in Hawaii.

Potential Alternative Approaches: (b)(5) Deliberative Process Privilege

Veterinary Services

1. **Highly Pathogenic Avian Influenza (HPAI)**

**Issue:** The 2014-2015 outbreak of highly pathogenic avian influenza (HPAI) was the worst animal disease outbreak in U.S. history, affecting commercial premises, backyard flocks, captive birds, and wild birds in 21 States and costing USDA more than $1 billion. Nearly 50 million commercial birds (7.5 million turkeys and 42.1 million egg-layer and pullet chickens) were depopulated or died from the disease. The outbreak involved several H5 Eurasian-origin strains of the virus that caused substantial mortality. While these strains were not transmitted to people, there is always a chance that HPAI can mutate and become infectious to humans. The longer the virus circulates, the greater the chance this can happen.

APHIS coordinated the Federal and State response to the outbreak—which included cleaning and disinfection, environmental sampling, and restocking of affected facilities—in addition to enhancing wild bird surveillance efforts. Although APHIS’ response was swift and comprehensive, one of the biggest lessons learned was that the Agency’s capacity to effectively address large animal health events has eroded over the years. Current funding for animal health activities is below levels that were available to APHIS 10 years ago. For fiscal year 2017, APHIS requested an additional $30 million to improve its readiness for responding to animal health emergencies. APHIS would use that funding to rebuild its workforce and optimize its emergency readiness and response capabilities.

**Public Policy Reason for APHIS Involvement:** The American public and industry expect the Federal Government to lead efforts to protect U.S. agriculture and natural resources from threats posed by exotic animal and plant pests and diseases. APHIS partners with States and industry to preview costly animal diseases outbreaks and protect U.S. poultry and livestock.
Further HPAI-related losses to the U.S. poultry industry could be catastrophic and cause billions of dollars in damage to allied industries as well as to the local and national economy. Poultry and poultry product shortages and price increases could result for consumers.

**APHIS’ Statutory/Regulatory Scope:** The Animal Health Protection Act, 7 United States Code 8301 et seq., authorizes the Secretary of Agriculture to, among other things, detect, control, or eradicate any disease or pest of livestock. This authority has been delegated to APHIS.

**Items in Controversy:** During the 2014-2015 HPAI outbreak, APHIS used indemnity calculators (i.e., formulas) to determine the fair market value of birds that were destroyed as part of the disease response. Egg layer and turkey producers raised concerns about these formulas. While APHIS is working to finalize proposed changes in response to some of these concerns, the changes likely will not fully satisfy those producer organizations that have proposed alternative formulas, including formulas that compensate owners for downtime. APHIS’ position has been that paying for downtime losses essentially provides a safety net to producers that insurance, not indemnity payments, should provide.

**Industry, Consumer, and Congressional Interest:** As a result of the outbreak, the poultry and turkey industries incurred roughly $1 billion and $530 million dollars respectively in direct losses. Egg layer and turkey producers did not believe APHIS’ indemnity payments adequately covered the losses their industries incurred and as a result, asked for changes to APHIS’ indemnity calculators. Local economies and allied industries in some particularly hard-hit areas such as Minnesota and Iowa also suffered substantial losses, and the overall economy-wide losses were estimated at $3.3 billion (including losses due to international trade impacts). Additionally, egg supplies decreased and costs rose for consumers. Public health agencies and animal advocacy organizations also have a considerable stake in this issue, given the possible human health implications of HPAI and animal welfare concerns involved.

The U.S. Senate Agriculture, Nutrition, and Forestry Committee held a hearing on the impact of the HPAI outbreak on the poultry sector in July 2015. Congressional representatives, particularly those representing affected districts, have contacted USDA about logistical aspects of the response, producer indemnification and APHIS’ calculators, and vaccine development and use.

**Executive Branch Position to Date:** The Administration made over $1 billion available to address the 2015-2016 HPAI outbreak, and the FY 2017 President’s budget request included an increase of $30.338 million to improve APHIS’ readiness for responding to animal health emergencies, in part based on lessons learned during the HPAI outbreak. APHIS has taken steps to prepare for future cases, including improving wild bird surveillance to enable early detection; improving capabilities to rapidly detect HPAI in domestic poultry and depopulate affected flocks within 24 hours; and, streamlining the indemnification process so that producers can be compensated fairly and return to production quickly. APHIS also has conducted planning meetings with industry to promote improved biosecurity practices and design a biosecurity auditing system to ensure that these practices are followed.
In February 2016, APHIS published an interim rule that, among other things, provided a formula to allow indemnity payments to be split between poultry and egg owners and their contracted growers. Such a system was already in place for low pathogenicity AI. The interim rule also required owners and contract growers to provide a statement certifying that a biosecurity plan was in place at the time HPAI was detected in order to receive indemnity. Although APHIS’ epidemiological investigations concluded there was not enough evidence to pinpoint a specific pathway or pathways for the spread of the virus, comprehensive and stringent biosecurity practices are crucial to reducing the risk of HPAI infection from wild birds, equipment, and clothing.

APHIS also implemented a new indemnity calculator for egg layers following robust internal discussions about what factors should inform appropriate indemnity amounts for these birds. The new calculator took effect on October 1, 2016, and will be used for any future indemnity payments. It was not applied retroactively.

One of the challenges in determining fair market value for laying hens is the lack of an active market price. Generally, these birds are owned by one company throughout their lifecycle, and few bird prices are publicly available because laying hens are rarely sold at auction. The previous layer calculator estimated the value of the birds at the time of depopulation. When proposing a new calculator, APHIS added to that estimate a percentage of farm earnings that would have resulted from the lost egg production. APHIS also proposed putting a “floor” in place to ensure producers would never lose money on the production cost of their birds, even when economic circumstances would have created a loss.

USDA’s Office of the Chief Economist then recommended—and APHIS implemented—changes that made the calculator more reflective of a fair-market transaction. For example, the new calculator no longer has a “floor” in place, which means it is possible under some circumstances that indemnity payments may not fully cover a producer’s production costs. The new calculator also determines fair market value based on net farm income ratio (the amount of net income generated per dollar of production cost). While the new calculator addresses concerns raised by producers and is not expected to change indemnity payments dramatically, future indemnity rates could be higher or lower than the rates under the previous calculator.

Currently, USDA has not approved using vaccine as part of an HPAI response because that would likely lead many export markets to ban all U.S. poultry. But APHIS is obtaining a reliable supply of vaccine should outbreaks occur that cannot be controlled through the typical depopulation approach, a decision that would be made only in conjunction with industry and State partners. APHIS has issued requests for proposals for vaccine manufacturers to supply a variety of Eurasian-origin, H5 vaccines.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege
2. **Brucellosis and Bovine Tuberculosis (TB) Program**

**Issue:** On December 16, 2015, APHIS published a proposed rule in the Federal Register to update its brucellosis and bovine TB program regulations. Under the proposed rule, APHIS would, among other things, move from categorizing the disease statuses of entire States—or large regions within States—to establishing standards that States and Tribal Nations would meet for disease surveillance, epidemiological investigations, and affected herd management. By using program compliance rather than disease prevalence—which is already extremely low—to determine statuses, States and Tribes will no longer run the risk of status downgrades and statewide restrictions and testing requirements if sporadic cases appear. Rather, they can focus their disease control efforts on specifically designated herds or areas. APHIS officials are carefully reviewing all issues raised in the comments received and considering the need for changes to the proposed provisions.

**Funding Requests To Depopulate TB-Affected Herds in Texas and Michigan:** To address TB-affected herds, APHIS routinely uses one of two strategies: depopulating an entire herd and paying indemnity, or a test-and-remove approach, where regular testing with removal of reactor animals continues while the herd is under quarantine until it is determined with a high degree of confidence that the herd is TB-free. When determining a strategy, APHIS considers a scientific model to determine the probability of removing infection, as well as the size of the herds, potential indemnity costs compared to funds available, and State and owner preferences.

In fiscal year (FY) 2015, the Secretary transferred $17.89 million in emergency funding from the Commodity Credit Corporation for TB eradication efforts in Texas and Michigan. In FY 2016, the Secretary approved an additional transfer of $23.90 million to depopulate an additional dairy herd in Texas and address additional TB findings throughout the United States. The Office of Management and Budget (OMB)
Public Policy Reason for APHIS Involvement: APHIS partners with States and industry to prevent and manage costly animal diseases outbreaks and protect U.S. poultry and livestock.

APHIS’ Statutory/Regulatory Scope: Under the Animal Health Protection Act, APHIS works to protect U.S. agriculture from livestock pests and diseases.

Items in Controversy: Although APHIS developed the regulations collaboratively with States, Tribes, and industry, stakeholders raised concerns during the comment period about the perceived burden on the States to define their plans to prevent and mitigate disease occurrences. Also, the Senate Appropriations Committee included a directive for APHIS to report to Congress on the amount of State and Federal funding needed to implement the rule prior to finalizing it.

Industry, Consumer, and Congressional Interest: Several legislators expressed concerns that testing requirements outlined in the proposed rule would harm deer and elk farmers. The National Assembly of State Animal Health Officials (NASAHO) would like to consult with APHIS before we publish the final rule to discuss how the Agency intends to address the comments received. Some State officials who provided separate feedback from the NASAHO comments stated opposition or requested consultation with APHIS.

Executive Branch Position to Date: APHIS believes that the proposed regulatory changes will allow the brucellosis and bovine TB programs to be most effective at protecting animal health. Regarding its emergency funding request, APHIS believes that depopulating the TB-affected herd in Texas will enable the Agency to eradicate the current outbreaks and to prevent disease spread. APHIS will conduct stakeholder outreach and discussion regarding potential future cost sharing for indemnity regulations.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

3. Foot-and-Mouth Disease (FMD) Vaccine

Issue: There has not been an outbreak of FMD, a devastating, highly contagious viral livestock disease, in the United States since 1929. Although APHIS has comprehensive, overlapping safeguards in place to protect against FMD and is prepared to swiftly respond should an outbreak occur, vaccine would be critical to effective control or eradication should the outbreak be widespread. Current inventory in the North American FMD vaccine bank is 2.5 million doses per strain of the 10 FMD strains of greatest risk to North America. This amount is insufficient to address a medium or large-scale outbreak. APHIS estimates that we would need a minimum of
United States Department of Agriculture  
2016 Presidential Transition  
Marketing and Regulatory Programs (MRP)  

approximately 25 million vaccine doses for each of the 10 FMD strains of greatest concern to provide the optimum level of protection. This would cost approximately $130 million. APHIS’ current appropriations for FMD preparedness total $1.4 million.

The U.S. stockpile of FMD vaccine is currently housed at the Plum Island Animal Disease Center (PIADC) in New York and is managed cooperatively with Canada and Mexico. Currently, all FMD vaccine is acquired from foreign manufacturers because the live FMD virus cannot be maintained on the U.S. mainland by law. However, USDA’s Agricultural Research Service (ARS)—working at PIADC—has developed novel vaccine platforms that do not require traditional live FMD virus production techniques. These novel vaccine techniques are not yet commercially available, and it likely will be years before they can be used.

FMD is endemic in much of the world and remains a major threat to U.S. agriculture. While not a public health or food safety issue, FMD is highly infectious in all cloven-hoofed animals—including cattle, sheep, goats, and swine—and can spread rapidly and widely. Its presence in the United States, if unchecked, could cause billions of dollars in damage to animal agriculture industries, producers, and local economies through lost export markets; cause product shortages and price increases for consumers; and threaten the security of the U.S. food supply.

Public Policy Reason for APHIS Involvement: Only a Federal agency would have the interstate authorities and access to resources necessary to respond to a significant FMD outbreak. APHIS partners with States and industry to preview costly animal diseases outbreaks and protect U.S. poultry and livestock.

APHIS’ Statutory/Regulatory Scope: The Animal Health Protection Act authorizes the Secretary of Agriculture to, among other things, detect, control, or eradicate any disease or pest of livestock. This authority has been delegated to APHIS.

Items in Controversy: Federal-industry cost sharing is one possible solution APHIS has discussed with industry to help fill the vaccine gap. However, the cattle and swine industries, citing Homeland Security Presidential Security Directive Number 9, “Defense of United States Agriculture and Food”, believe that filling the gap is a matter of food security and is solely a Federal responsibility. Although sufficient quantities of vaccine would be valuable, APHIS’ import requirements reduce the threat of FMD dramatically, and surveillance systems would expedite detection of the disease.

Industry, Consumer, and Congressional Interest: The U.S. livestock sector has expressed concern that an FMD outbreak in the United States could cause severe economic ramifications for local economies and communities, as well as associated businesses (e.g., trucking and livestock markets). Some industry representatives believe vaccine use could minimize disruptions by reducing animal movement restrictions and the number of animals that would need to be depopulated as part of an emergency response effort. The House Agriculture Livestock Subcommittee held an FMD vaccine hearing in February 2016.

Executive Branch Position to Date: APHIS is committed to safeguarding U.S. agriculture...
against an FMD incursion and is prepared to respond swiftly in the event of an outbreak, using vaccine as resources permit. APHIS has joined Australia, Canada, Mexico, and New Zealand in signing an arrangement to share their limited amounts of FMD vaccines in the event of an outbreak. APHIS will continue working with industry to identify ways to close the vaccine gap.

Potential Alternative Approaches:

**Issue:** Since 2004, the U.S. Department of Homeland Security (DHS) and USDA have worked closely to fulfill the Homeland Security Presidential Directive 9 mandate for the agencies to plan to establish safe, secure, state-of-the-art agriculture biocontainment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic diseases (those that can pass between animals and humans). The NBAF—a $1.25 billion next-generation biocontainment facility under construction in Manhattan, Kansas—is the result of DHS’ and USDA’s planning efforts. The NBAF will replace existing, aging biocontainment laboratories located at the Plum Island Animal Disease Center (PIADC) in Orient Point, New York. DHS plans for the NBAF to be fully operational in 2023 with registration of select agents (i.e., bio-agents that have the potential to pose a severe threat to public, animal, or plant health, or to animal or plant products) by December 2022.

**Public Policy Reason for APHIS Involvement:** APHIS is charged with safeguarding the health of U.S. livestock by rapidly detecting and responding to any accidental or intentional introduction of a foreign animal disease. Foreign animal diseases, such as highly infectious foot-and-mouth disease (FMD), have the potential to inflict billions of dollars in livestock and trade losses and threaten the U.S. food supply. The NBAF will provide USDA scientists with larger and more technologically sophisticated laboratory facilities, including biosafety level (BSL)-4 biocontainment capacity, which will exceed PIADC’s BSL-3 laboratory capacity. With BSL-4 capacity, USDA scientists will be able to conduct diagnostics, and research and develop countermeasures for high-consequence zoonotic diseases of livestock such as those caused by Ebola virus, Hendra virus, and Nipah virus, which are potentially lethal to both humans and animals.

**APHIS’ Statutory/Regulatory Scope:** USDA was in charge of all operations at the Plum Island facility from 1954 until June 2003, when operational responsibility transferred from USDA to DHS, in accordance with the Homeland Security Act of 2002. APHIS’ Foreign Animal Disease Diagnostic Laboratory, located at Plum Island, continues to provide the capabilities, including training, for early detection and diagnosis of an accidental or intentional introduction of a foreign animal disease. APHIS’ laboratory personnel also work closely with
USDA’s Agricultural Research Service (ARS) to develop diagnostic methods and test vaccines to protect U.S. agriculture from foreign animal disease. The APHIS laboratory is the custodian of the North American FMD Vaccine Bank.

Under the Public Health, Security, and Bioterrorism Preparedness and Response Act of 2002, USDA has the authority to regulate the use, possession, and transfer of certain biological agents and toxins, including the FMD virus. The Food, Conservation, and Energy Act of 2008 directs the Secretary of Agriculture to issue a permit to the Secretary of Homeland Security to transfer live FMD virus to a single research facility that is a successor to the Plum Island facility, provided that the facility meets all of USDA’s regulatory requirements under the Federal Select Agent Program. NBAF is the successor facility.

**Items of Controversy:** Although there is a broad consensus among industry and policymakers that the NBAF is necessary to protect U.S. livestock from high-consequence foreign pathogens, there has been some concern about the Kansas location due to its proximity to a large cattle population and the potential for tornados.

**Industry, Consumer, and Congressional Interest:** The Senate Appropriations Committee report on the FY 2017 Agriculture Appropriations Bill encourages DHS and USDA to work together on a plan for the future operation of NBAF, including consideration of the appropriate agency to manage the facility. DHS Senate Appropriations includes the same language. The Senate has included $4 million for USDA ($3 million for APHIS and $1 million for ARS) for workforce development for NBAF. The House passed H.R. 1887, which would delay the required sale of PIADC while the Government Accountability Office studies possible uses for the island. The bill has been sent to the Senate for consideration. DHS released its 180-page report to Congress on the sale of Plum Island in July 2016. USDA has no concerns with the bill as long as there is no lapse between departure from PIADC and full operation of NBAF. USDA and DHS continue to plan for the transition from PIADC to NBAF. Kansas State University holds an industry meeting on an annual basis to share ideas, recommendations, needs, and collaboration possibilities to help develop the framework necessary for NBAF to protect the Nation’s animal health and food supply. Kansas committed a total of $307 million toward the construction of NBAF.

**Executive Branch Position to Date:** USDA officials have signed a memorandum of understanding with DHS and Kansas that affirms the mutual desire to broaden cooperative bio/agro defense activities, interactions, and collaborations. USDA is preparing budgets for the development of the USDA workforce at NBAF and for transition activities. USDA continues to participate in DHS-organized working groups to coordinate transition planning.

**Potential Alternative Approaches:** [b]([5] Deliberative Process Privilege)
5. **Antimicrobial Resistance (AMR)**

**Issue:** AMR is a global issue affecting public and animal health. There is growing concern that bacteria that cause disease in people and animals are developing more resistance to the antibiotics used for treatment. The issue has become more urgent with the occurrence of bacterial isolates resistant to existing antimicrobial drugs, the decreasing availability of effective antimicrobial drugs and absence of new ones in the pharmaceutical pipeline, and the lack of incentives and funding for research into alternatives. In fiscal year 2014, APHIS worked with agencies across the Federal Government to develop a National Strategy for Combating Antibiotic-Resistant Bacteria. This document covers a broad array of potential government efforts to address AMR in human and animal health and was the forerunner to the National Action Plan for AMR released in 2015. In December 2014, USDA released its own AMR Action Plan. Under the plan, APHIS and other USDA agencies are using an integrated, One Health approach for surveillance and monitoring, research and development, and education and outreach.

For its part, APHIS is determining patterns, purposes, and impacts of antibiotic use in food animals and monitoring antibiotic drug susceptibilities of bacterial organisms in food-producing animals and associated products and production environments. APHIS is also identifying management practices, antibiotic alternatives, and other mitigations that may help to reduce AMR in bacteria in food-producing animals and their production environments, and to improve stewardship and judicious use of existing antimicrobials.

**Public Policy Reason for APHIS Involvement:** APHIS and other USDA agencies are uniquely positioned to contribute to the body of scientific knowledge about AMR, specifically about the role of antimicrobial use in livestock, given their in-depth knowledge of the management practices and technologies associated with animal health, welfare, productivity, and food safety.

The Food and Drug Administration (FDA) is the primary regulatory agency for antibiotic use in animals. However, USDA and FDA work together closely to identify and mitigate emerging threats to America’s food supply. APHIS is charged with safeguarding U.S. animal health. As part of its mission, the Agency operates the National Animal Health Monitoring System (NAHMS), which collects data on farm management and animal health practices, as well as on the prevalence and economic importance of livestock diseases and associated risk factors. FDA relies on the science-based information that APHIS and other USDA agencies generate about antibiotic drug use, AMR patterns, and livestock and poultry management practices to inform its policy and regulatory decisions. FDA also taps into USDA’s extensive network of collaborative relationships with producers and industry organizations as part of its outreach.

**APHIS’ Statutory/Regulatory Scope:** Under the Animal Health Protection Act, APHIS works to detect, control, or eradicate any disease or pest of livestock.

**Items in Controversy:** Some believe that the use of antimicrobial drugs in agriculture is one of the primary drivers for the emergence and spread of AMR in bacteria. Current understanding of
the factors that contribute to levels of AMR in various settings and the specific role of antimicrobial use in agriculture in the selection for AMR in bacteria is incomplete.

**Industry, Consumer, and Congressional Interest:** Several legislators, the American Veterinary Medical Association, industry groups, and public health interest organizations have expressed concerns about the emergence and spread of antibiotic-resistant bacteria and inquired about Federal agencies’ plans to address antibiotic use in animal agriculture.

**Executive Branch Position to Date:** The President’s FY 2017 budget request included an increase of $10 million to provide on-farm surveillance, measure antimicrobial drug use by livestock and poultry producers, and develop education and outreach materials to promote the judicious use of antimicrobials.

**Potential Alternative Approaches:** [b](5) Deliberative Process Privilege

**Wildlife Services**

1. **Predator Damage Management**

**Issue:** APHIS (through its Wildlife Services program) resolves human/wildlife conflicts and protects agriculture, human health and safety, personal property, and natural resources from wildlife damage and wildlife-borne diseases in the United States. As part of this effort, APHIS protects livestock from predators, including wolves, grizzly bears and black vultures.

**Public Policy Reason for APHIS Involvement:** The North American Model for Wildlife Conservation has stated that wildlife should be managed in trust for the people by government agencies based on science. APHIS is charged with protecting agriculture, human health and safety, property, and natural resources from disease and damage caused by wildlife. Livestock losses attributed to predators cost producers more than $137 million annually, according to the most recent surveys by National Agriculture Statistics Service. In FY 2015, APHIS provided assistance in dealing with damage caused by predators to producers in the western United States with livestock valued at more than $2.5 billion.

**APHIS’ Statutory/Regulatory Scope:** The Animal Damage Control Act of 1931, as amended, gives APHIS broad authority to conduct activities “in the control of nuisance mammals and birds
and those mammal and bird species that are reservoirs of zoonotic diseases.” The statute allows APHIS to conduct cooperative programs with funding from State, local, or private entities.

**Items in Controversy:** Animal advocacy groups oppose the Agency’s use of lethal control in managing wildlife conflicts. A recently published research paper out of the University of Wisconsin is questioning the long-term efficacy of lethal predator control and receiving interest; other researchers disagree with these findings. Wolf populations and movements are closely monitored by animal advocacy organizations.

**Industry, Consumer, and Congressional Interest:** Livestock industries strongly support APHIS’ predatory control work, and livestock producers share in the costs of the activities they request. Congress is generally supportive of APHIS’ wildlife management efforts; the House included report language in the appropriation directing APHIS to prioritize and document the process that allows USDA to help States and local livestock producers manage wolves. Representatives from Minnesota have encouraged funding for APHIS’ wolf work. However, many animal advocacy groups decry any lethal control activities APHIS conducts.

**Executive Branch Position to Date:** APHIS prevents and reduces livestock predation through education, technical assistance to producers, and management programs. APHIS plays a major role in the management of wolves and grizzly bears in the United States. APHIS personnel work with State wildlife agencies, the U.S. Fish and Wildlife Service (FWS) and Tribal Nations to conduct wolf damage management programs, and provided additional services to capture and mark wolves and grizzly bears for research and population monitoring. In cooperation with State and Federal wildlife agencies, APHIS removes depredating wolves to resolve conflicts. Most of this work is cooperatively funded with appropriated money as well as funding from State or local sources.

To avoid or reduce predation, APHIS provides technical advice (education and educational materials) to producers on preventative measures, which are then implemented by producers themselves. In FY 2016, APHIS conducted 29 Predator Management Workshops to educate more than 1,000 producers on these methods, such as the use of guard dogs.

In FY 2015, APHIS responded to more than 1,000 incidents of reported wolf depredations on livestock or other resources, and removed 385 wolves (one of which was unintentionally removed). Approximately 44 percent of the requests for assistance were from the Great Lakes Region where wolves remain listed as endangered in Michigan and Wisconsin and threatened in Minnesota. Depending on the legal status of the wolf (delisted, threatened, endangered), the primary management authority (FWS or State Department of Wildlife) varies from State to State. Except where wolves are listed as endangered, the appropriate management authority provides APHIS with authorization to control wolves that prey on domestic animals or pose a risk to human safety. Where endangered, wolves can only be controlled when there is a direct risk to human safety.

APHIS also conducts research on alternative approaches. For example, the reintroduction of the gray wolf to the Northern Rockies marks a tremendous success for conservationists, but also
resulted in increased conflicts with livestock producers. Many western ranchers use livestock protection dogs to deter predation by coyotes, but some commonly used species of dogs are not effective against wolves and grizzly bears, which sometimes kill these traditional breeds. APHIS scientists initiated a series of studies to evaluate three larger breeds of dogs that Europeans have successfully used to deter livestock predation by wolves.

In the last 30 years, populations of black vultures have increased in both abundance and range, due to the highly adaptive nature of the bird. Black vultures, which prey on livestock, are protected by the Migratory Bird Treaty; removing birds, nests or eggs, requires a permit from FWS. In FY 2015, APHIS conducted direct control work in 18 States, removing 4,239 black vultures and dispersing an additional 49,755. APHIS’ direct control work for black vultures is 100 percent funded by cooperators.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

2. Feral Swine

Issue: Feral swine have quickly established themselves throughout the nation, increasing from 1 million animals in 17 States to about 5 million animals in 38 States in the last 20 years, making them one of the fastest growing invasive species in the United States. In FY 2014, APHIS implemented a national, cooperative cost-share program to slow – and eventually stop – the leading edges of population spread; eliminate swine populations where possible; and control swine numbers to achieve acceptable levels in other States.

Public Policy Reason for APHIS Involvement: The total cost of feral swine damage in the United States is $1.5 billion annually; recently collected data currently under review may estimate the total at $2 to $2.5 billion. Invasive swine damage crops, residential property, and sensitive ecosystems. They potentially can spread livestock and zoonotic diseases (classical swine fever, swine brucellosis, pseudorabies, swine influenza and porcine reproductive and respiratory syndrome, among others). APHIS is charged with protecting agriculture, human health and safety, property, and natural resources from disease and damage caused by wildlife.

APHIS’ Statutory/Regulatory Scope: Executive Order 13112, signed in 1999, directs Federal agencies to “detect and respond rapidly to and control populations of (invasive) species…, and monitor invasive species populations...” The Animal Damage Control Act of 1931, as amended, gives APHIS broad authority to conduct activities “in the control of nuisance mammals and birds and those mammal and bird species that are reservoirs of zoonotic diseases.” The statute allows APHIS to conduct cooperative programs with funding from State, local, or private entities.
**Items in Controversy:** Some private entities consider the removal of feral swine to compete with local businesses and recreational hunting. Some animal interest groups are opposed to any lethal control measures.

**Industry, Consumer, and Congressional Interest:** The pork industry strongly supports efforts to minimize the contact of feral swine with domestic livestock populations. In 2015, Chairman Aderholt (R - AL), of the House Agriculture Appropriations Subcommittee inquired about the success of the program to date. Additionally in 2015, Rep. Mike Conaway (R-TX), Chairman of the House Agriculture Committee visited a feral swine field operation in Texas to see the tools and techniques APHIS and its partners use.

**Executive Branch Position to Date:** Congress authorized a new program in 2014, and has since appropriated $20 million annually for this nationwide program. In FY 2015, APHIS had operational programs in 41 States and two territories in cooperation with State agencies, and had received permission from landowners to conduct feral swine activities on 127 million acres. In FY 2016, access to conduct activities on property increased to 152 million acres.

In FY 2015, APHIS and partners successfully eliminated feral swine from four States - Washington, Idaho, New York, and Maryland. In FY 2016, APHIS and partners successfully eliminated feral swine from an additional two States - New Jersey and Wisconsin. These States will continue to be monitored for two additional years to ensure successful elimination. Feral swine populations are still low enough that elimination is considered possible in 19 States. In the other 16 States, efforts have been focused on suppressing feral swine populations and minimizing damage to resources.

APHIS’ National Wildlife Research Center evaluated a toxicant and delivery system and is pursuing the registration of this toxicant with the Environmental Protection Agency. APHIS also researched a feral swine DNA detection process that would enable the agency to detect the presence of feral swine in an area and quickly remove them.

Every State has different laws and a different natural environment; the APHIS strategy is to provide funding and other resources to State programs and support them at a National level while allowing flexibility to manage operational activities at a local level. Task forces developed State-level management control plans that outline management goals and objectives, ranging from elimination of feral swine populations to management of individual populations.

APHIS has also initiated collaborative efforts with Mexico and Canada to monitor feral swine along the borders.

**Potential Alternative Approaches:** [b](5) Deliberative Process Privilege
3. **Aquaculture Predation**

**Issue:** APHIS resolves human/wildlife conflicts and protects agriculture, human health and safety, personal property, and natural resources from wildlife damage and wildlife-borne diseases in the United States.

**Public Policy Reason for APHIS Involvement:** Aquaculture is an important industry in the United States; however, wildlife depredation, especially by fish-eating birds, is significantly impacting production. Annual fish production in the United States is valued at $1.4 billion. The aquaculture industry incurs approximately $25 million in costs associated with bird damage and damage prevention. Nearly 70 percent of catfish producers reported some losses to wildlife.

**APHIS’ Statutory/Regulatory Scope:** The Animal Damage Control Act of 1931, as amended, gives APHIS broad authority to conduct activities “in the control of nuisance mammals and birds and those mammal and bird species that are reservoirs of zoonotic diseases.” The statute allows APHIS to conduct cooperative programs with funding from State, local, or private entities. APHIS also partners with the U.S. Fish and Wildlife Service (FWS) to address conflicts arising from birds covered under the Migratory Bird Treaty Act. Upon request, APHIS works with aquaculture producers to obtain a depredation permit from the FWS to remove birds such as cormorants from production areas.

**Items in Controversy:** Some States have raised concern regarding the loss of Congressional directive funding for aquaculture depredation. Animal advocacy groups have filed lawsuits challenging FWS’s National Environmental Policy Act processes that authorize the Agency’s use of lethal methods to address cormorants. The group claimed that FWS did not provide transparency in their actions, and did not adequately address cumulative effects on cormorant populations. In May, 2016, a judge vacated two major depredation orders, one related to aquaculture protection. FWS declined to appeal the judge’s decision, and is re-evaluating a path forward.

**Industry, Consumer, and Congressional Interest:** The aquaculture industry is strongly supportive of our bird damage prevention efforts. In 2015, in response to the Secretary’s Appropriations Hearing, APHIS was asked to respond regarding the future of funding to address cormorant control activities to protect natural resources in the Lake Champlain region. Since the removal of the Congressionally directed funding (approximately $94,000 annually) in 2012, the State of Vermont has expressed the difficulty in finding funding to address cormorant control.

**Executive Branch Position to Date:** In FY 2015, APHIS provided assistance to baitfish and crawfish producers, catfish farmers, fish hatcheries, sport fish producers for pond stocking, and tropical fish producers in 13 States under a special depredation order for aquaculture. APHIS also conducted double-crested cormorant damage management in 36 States in FY 2015. And on a year-round basis, APHIS provides operational and technical assistance to aquaculture producers, specifically on roost management of double-crested cormorant, harassment of fish-eating birds on catfish facilities, and helping farmers with the FWS depredation permit process.
Upon the May 2016 court decision ordering FWS to vacate its aquaculture depredation orders, APHIS suspended all lethal cormorant removal work. APHIS is consulting with FWS to determine next steps. In the meantime, APHIS will continue to conduct night roost harassment techniques to disperse birds from roosting near aquaculture ponds. APHIS will continue to provide technical assistance (education on the use of non-lethal management techniques) to impacted cooperators.

APHIS’ National Wildlife Research Center’s field station in Starkville, Mississippi, is developing methods to reduce the impacts of fish-eating birds on aquaculture stocks. Current research is gathering information about the abundance, distribution, and foraging behavior of fish-eating birds, the economic impacts associated with their foraging activities, and the diseases they transmit at aquaculture facilities. This information will help develop new techniques for reducing damage.

Funding for aquaculture damage management has been FY 2015: $388,000; FY 2016: $759,000; FY 2017: $759,000 (estimate).

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

GIPSA

Farmer Fair Practices Rules
Since passage of the Consolidated and Further Continuing Appropriations Act, 2012, USDA had been precluded from working on certain proposed regulatory provisions related to the Packers and Stockyards Act (Act). These proposed regulations included provisions to clarify that it is not necessary to find harm to competition in order to find that a packer, swine contractor, or live poultry dealer has engaged in an unfair, unjustly discriminatory, or deceptive practice or device or has given an undue or unreasonable preference or advantage.

The Consolidated Appropriations Act, 2016 does not include the prohibition. USDA intends to issue an interim final rule to clarify that it is not necessary to establish harm to competition in order to prove that a packer, swine contractor, or live poultry dealer has engaged in an unfair or unjustly discriminatory practice. USDA intends to propose regulations to establish the kinds of conduct or action that would be considered unfair under the Act without a showing of harm to competition. USDA also intends to propose a regulation to establish criteria for live poultry dealers who use a poultry grower ranking system to determine the amount of compensation poultry growers receive.
Other Packers and Stockyards Program Regulations
Congress recently passed legislation to clarify that online or video livestock auctions that handle the proceeds of the sale are subject to the Packers and Stockyards Act and to authorize electronic payments by packers, livestock market agencies, and livestock dealers. GIPSA will review current regulations to determine what changes are necessary to make the regulations consistent with the amendments to the Packers and Stockyards Act.

GIPSA has also identified regulations that are out of date and should either be updated or eliminated. These regulatory changes are less critical than the Farmer Fair Practices rules and the regulatory changes that are necessary to address the statutory changes.

Revaluating the Budget Obligation Limitation on Inspection and Weighing Fees Collected Under the United States Grain Standards Act
Currently, the annual appropriations act includes a budget obligation limitation on fees collected from inspection and weighing services which allows the Grain Inspection, Packers and Stockyards Administration (GIPSA) to operate its Federal Grain Inspection Service’s official inspection and weighing program. This program provides both mandatory and voluntary services, including a variety of inspection, weighing, and related services on grains, pulses, oilseeds, and processed and graded commodities. These services extend to both domestic and international markets, with services being mandatory for exports. These mandatory services include official weighing of the majority of grain exported from the United States and of intercompany barge grain received at export port locations; official inspection of the majority of grain exported from the United States; and testing of all corn exported from the United States for aflatoxin prior to shipment, unless the contract stipulates testing is not required.

In FY 2014, GIPSA experienced a dramatic increased demand for export inspection services in direct response to an increase of more than 35 percent in grain exports. In FY 2015 grain exports were higher than the record in FY 2014 and are anticipated to continue to increase through FY 2017. Demand for inspection services will increase with a continued increase in export volumes because of the statutory requirement to inspect and weigh export grain. To meet the increased demand for services, grain exporters and handlers are opening new export facilities that require around the clock service by GIPSA, thus increasing GIPSA’s costs. Additionally, GIPSA’s cost for installing inspection laboratories at these new facilities is approximately $200,000 each. In order to support mandatory official inspection and official weighing services along with the voluntary domestic services, and continue to meet the demand of the domestic and foreign grain and related commodity markets, the limitation on official inspection and official weighing services expenses that is currently in place needs to be eliminated.

GIPSA has executed various cost containment initiatives to limit obligations while meeting increased demand for services. GIPSA has limited supply and equipment purchases and changed hiring practices to optimize cost-efficient use of intermittent, part-time, and full-time employees to minimize overtime. Beginning in calendar year 2017, GIPSA will annually adjust its export inspection fees based on a rolling 5-year average of the volume of grain exports so that it
United States Department of Agriculture
2016 Presidential Transition
Marketing and Regulatory Programs (MRP)

maintains an operating reserve of between three to six months, ensuring a direct link between the user fees and the volume of grain exports.

Agricultural Marketing Service (AMS) Fact Sheet

WHAT WE DO: OUR MISSION

AMS facilitates the strategic marketing of agricultural products in domestic and international markets, while ensuring fair trading practices and promoting a competitive and efficient marketplace to the benefit of producers, traders, and consumers of U.S. food and fiber products. Some examples of our programs are Market News (appropriated), the National Organic Program (appropriated), Commodity Procurement (Section 32), Commodity standardization, auditing, grading and inspection (user fee).

WHO WE ARE: OUR WORKFORCE

AMS has a total of 3,531 employees of which 2,074 are permanent full-time employees. Approximately 1,582 are field-based, with major offices in Des Moines, IA; Fredericksburg, VA; Fresno, CA; Gastonia, NC; Glen Allen, IL; Little Rock, AR; and Winter Haven, FL.

WHO WE SERVE: OUR CONSTITUENTS

Most are “quality verification” customers, who buy our services in grading, inspection, and certification, or who request assistance in industry self-help programs like research and promotion, and marketing orders. Millions receive daily market reports, Farm Bill grants and food from Federal feeding programs among other services.

KEY UPCOMING DECISIONS

The new GMO Law requires that within two years of enactment, AMS establish a mandatory national bioengineered food disclosure standard and the procedures to implement the national standard. A study on consumer access to electronic disclosures must also be completed within one year of enactment of the law.

AMS will conduct rulemaking on Guidance on the Allowance of Green Waste in Organic Production Systems after a U.S. District Court prospectively vacated a previous guidance.

The 2014 Farm Bill provided opportunity for California dairy farmers to request a Federal milk marketing order to assure a minimum price while ensuring an adequate supply. USDA will be issuing a recommendation after considering hearing and rulemaking materials obtained during the last few months.

BUDGET HIGHLIGHTS FY 2016

Discretionary

- Marketing Services - $81.2 million
- Payments to States - $1.2 million

Mandatory

- Section 32 - $1.01 billion
- Farm Bill/Grants - $109.3 million

User Fees

PACA/Grading - $226.6 million
United States Department of Agriculture  
2016 Presidential Transition  
Agricultural Marketing Service (AMS)

I. Organizational Overview

Agency’s Mission/Strategic Plan

Mission:
The mission of the Agricultural Marketing Service (AMS) is to facilitate the strategic marketing of agricultural products in domestic and international markets, while ensuring fair trading practices and promoting a competitive and efficient marketplace to the benefit of producers, traders, and consumers of U.S. food and fiber products.

AMS carries out a wide range of programs under the authorization of the Agricultural Marketing Act of 1946 as well as over 50 other statutes. More than half of the funds needed to finance AMS activities (excluding commodity purchase program funds) are derived from voluntary user fees. AMS also provides services for private industry and State/Federal agencies on a reimbursable basis. In addition, AMS conducts several appropriated program activities through cooperative arrangements with State Departments of Agriculture and other agencies.

Goals and Objectives:
GOAL 1: Enhance Communication between Stakeholders and AMS Programs (COMMUNICATION)
Objective 1.1: Strengthen Stakeholder Relationships and Understanding of the Agency’s Role in Facilitating Marketing
Objective 1.2: Increase Outreach Efforts by Building and Maintaining Effective Partnerships
Objective 1.3: Encourage Board and Committee Teamwork and Diversity

GOAL 2: Provide Market Information and Intelligence and Support the Development of New Markets (MARKET INFORMATION and MARKETING INNOVATION)
Objective 2.1: Increase Market Opportunities for American Agriculture through Analysis of Domestic and International Market Information and Data
Objective 2.2: Improve Access to Healthy, Locally Produced Foods while Developing Market Opportunities
Objective 2.3: Develop International and Domestic Commodity Standards to Facilitate Global Trade and Economic Growth

GOAL 3: Provide Quality Claims and Analyses to Facilitate Agricultural Marketing (GRADING, AUDIT VERIFICATION, TESTING, and EXAMINING)
Objective 3.1: Improve Voluntary User-Fee Services
Objective 3.2: Facilitate Exports of American Agricultural Products
Objective 3.3: Expand Plant Variety Protection Services
United States Department of Agriculture
2016 Presidential Transition
Agricultural Marketing Service (AMS)

GOAL 4: Provide Effective Oversight of Markets and Entities (REGULATORY OVERSIGHT)
Objective 4.1: Ensure Research and Promotion Programs Operate in Compliance with Acts, Orders, and Guidelines
Objective 4.2: Safeguard the Quality and Wholesomeness of Agricultural Products
Objective 4.3: Stabilize and Protect Markets
Objective 4.4: Create Jobs and Expand Opportunities for Farms and Businesses by Supporting Organic Agriculture
Objective 4.5: Augment Perishable Commodity Services

GOAL 5: Provide Premier Procurement and Technical Solutions to Identify and Fulfill the Needs for Agricultural, Food Assistance, and Other Programs (COMMODITY PROCUREMENT)
Objective 5.1: Enhance the Procurement Business Model
Objective 5.2: Provide Greater Value and Additional Opportunities for Nutrition Assistance Program Recipients
Objective 5.3: Ensure and Expand Optimal Web-Based Supply Chain Management (WBSCM) Service Delivery

GOAL 6: Sustain and Enrich a Diverse, Progressive, and Dynamic Organizational Environment (ORGANIZATION)
Objective 6.1: Implement a Human Capital Approach that Invests in the Diversification, Recruitment, Training, and Development of Leaders and Employees
Objective 6.2: Augment the Deployment and Alignment of Information Technology Assets in Support of Mission-Critical Programs and Activities
Objective 6.3: Continue to Strive for New Efficiencies, Improvements, and Cost-Savings in Key Functions and Processes
Objective 6.4: Encourage and Support Diversity
Objective 6.5: Effectively Address Opportunities Identified in Federal Employee Viewpoint Survey (FEVS) Results

Organizational Chart

The mission of the Agricultural Marketing Service is to facilitate the competitive and efficient marketing of agricultural products.
Biographies of career staff in key leadership positions

Bruce Summers  
Associate Administrator, Office of the Administrator  
(202) 720-5116, bruce.summers@ams.usda.gov

Mr. Bruce Summers currently serves as the Associate Administrator for the USDA’s Agricultural Marketing Service. In this position Mr. Summers works on policy issues and oversight of a variety of programs including grading and inspection of commodities such as meat, produce, dairy and cotton, the USDA Market News Service, Research and Promotion Programs and the National Organic Program. Mr. Summers is a long time employee of AMS with more than 20 years of experience. Prior to being named to the Associate Administrator he served as Deputy Associate Administrator and in various capacities in the Specialty Crops Program Area of AMS. Mr. Summers has a degree in Agricultural Economics from the University of Maryland.

Erin Morris  
Associate Administrator/Chief Operating Officer  
(202) 720-690-4024, erin.morris@ams.usda.gov  

Ms. Erin Morris is the Associate Administrator/Chief Operating Officer of USDA’s AMS. In this capacity, Ms. Morris is responsible for the formulation of operational policies and programs to carry out the broad agricultural regulatory, marketing, and inspection programs conducted by AMS.

Before being selected for this position, Erin served in a variety of other positions within AMS including serving in Commodity Procurement, Market News, Research and Promotion, and Country of Origin Labeling programs. Prior to joining the Federal government approximately 16 years ago, Ms. Morris worked in the foodservice distribution industry. Ms. Morris is a Cum Laude graduate of the College of Agriculture at Texas A&M University. She resides in Fairfax Station, VA, with her husband and two children.
Dana H. Coale  
Deputy Administrator, Dairy Programs  
(202) 720-5116, dana.coale@ams.usda.gov

Ms. Dana H. Coale served as AMS Acting Associate Administrator from February through October 2016. Ms. Coale was selected as Deputy Administrator of the AMS Dairy Program in September 2004. She oversees a wide array of programs and services that establish and maintain orderly dairy marketing conditions and ensure that consumers have adequate supplies of pure and wholesome milk at all times. She manages an organization of more than 470 employees who implement these programs across the Nation.

Ms. Coale began her career with AMS in 1989 serving in several positions. Ms. Coale received a Bachelor of Science degree in Public Service and Administration in Agriculture and International Agriculture from Iowa State University. She grew up on a grain and livestock farm in Central Iowa, and she continues to maintain ownership in the operation. Ms. Coale and her husband have two children and reside in Gainesville, Virginia.

William ‘Bill’ D. Allen  
Director, Legislative and Regulatory Review Staff  
202-720-3785, william.allen@ams.usda.gov

Mr. William ‘Bill’ Allen was hired as a Legislative Analyst with AMS in May 2004. He now serves as the Director of the Legislative and Regulatory Review Staff which coordinates and monitors all Congressional activities, reviews all agency rulemakings, and ensures that AMS meets its responsibilities under the Freedom of Information Act, the Paperwork Reduction Act, and the Small Business Regulatory Enforcement Fairness Act. Mr. Allen received a Bachelor’s Degree in History from Emory & Henry College and a Master’s Degree in Political Management from George Washington University. Mr. Allen was born and raised in Richmond, Virginia, and now resides in [b](6).

David Tuckwiller  
Director, Commodity Procurement Program  
202-720-2784, david.tuckwiller@ams.usda.gov

Mr. David Tuckwiller is the Director of the AMS Commodity Procurement. He is responsible for managing purchases of meat, poultry, fruit and vegetable commodities for the National School Lunch and other nutrition programs. These purchases support American agriculture by providing an outlet for surplus products and encouraging consumption of domestically-produced foods. The wholesome, high-quality products purchased by USDA—collectively called USDA Foods—are delivered to schools, food banks and households in communities across the country, and are a vital component of our nation’s food safety net. Additionally, Mr. Tuckwiller is the Program Manager for the overall implementation of the Web-Based Supply Chain Management System (WBSCM).
Prior to this position in AMS, Mr. Tuckwiller worked for twelve years in the Food and Nutrition Service’s Food Distribution Division, where he managed these same programs and managed the development and implementation of the Electronic Commodity Ordering System. Combined, he has nearly 22 years of experience with USDA’s commodity purchase program.

Shayla M. Bailey
Acting Director, Public Affairs Staff
(202) 690-3816, shayla.bailey@ams.usda.gov

Shayla Mae Bailey is the Acting Director of AMS Public Affairs. Prior to acting as director, Ms. Bailey served as the Digital Communications Manager & Deputy Director of Public Affairs. She has spent her career developing communication strategies for academic institutions and government agencies, including the University of Connecticut, St. Mary’s College of Maryland, and the Department of Defense.

An expert in branding, reputation management, digital communications, and strategic planning, Ms. Bailey leverages technology, design, and marketing principles to improve public awareness and promote government services. Her previous work includes developing consumer label infographics and agroforestry campaigns for USDA, raising vaccine awareness during the H1N1 flu outbreak, and building interactive course modules to teach future generations of doctors how to understand MRI and CAT scan images. She was also design consultant on the Check Your Steps food safety campaign. Shayla studied journalism at the University of Kansas and lives in...

Clifton J. Gilchrist
Director, Civil Rights Programs
202-720-0583, clifton.gilchrist@ams.usda.gov

Mr. Clifton Gilchrist has served as the AMS Director of Civil Rights Programs since March 15, 2009. Mr. Gilchrist has served over 30 years with the Federal Government including Departments of Defense and Treasury and has a broad understanding and experience in the different areas of Civil Rights/EEO.

Mr. Gilchrist has a bachelor’s degree in Business Administration with emphasis in Personnel Management from Norfolk State University, in Norfolk, Virginia. He also possesses a master’s degree in counseling psychology from Bowie State University in Bowie, Maryland. Mr. Gilchrist is a native of Virginia Beach, Virginia. He currently resides with his wife, daughter and son in Clinton, Maryland.

Darryl W. Earnest
Deputy Administrator, Cotton & Tobacco Programs
901-384-3060, darryl.earnest@ams.usda.gov

Mr. Darryl W. Earnest is the Deputy Administrator of the AMS Cotton and Tobacco Program. Mr. Earnest is responsible for all operations including grading, standardization,
United States Department of Agriculture  
2016 Presidential Transition  
Agricultural Marketing Service (AMS)

market news, information technology, research and promotion, quality assurance, international initiatives, legislative policy and administration.

Mr. Earnest has spent his entire career with the AMS Cotton Program. After graduating from the University of Alabama with a Bachelor of Science degree in Industrial Engineering in 1990, he went to work with the Cotton Program in its Greenwood, Mississippi Classing Office. He moved to Memphis, Tennessee and performed duties in several other capacities. In May 2005, he was named Deputy Administrator. Mr. Earnest has two children – daughter Riley and son Connor.

Charles ‘Chuck’ W. Parrott  
Deputy Administrator, Specialty Crops Program  
202-720-4722, charles.parrot@ams.usda.gov

Mr. Charles W. Parrott was named the Deputy Administrator of USDA’s Specialty Crops Program in October 2012. He began his career with USDA in 1983 holding various positions in the Perishable Agricultural Commodities Act (PACA) Program and in the Deputy Administrators office. Mr. Parrott leads the Agency's regulatory programs related to the specialty crops industries. The programs include quality grading, testing, auditing and accreditation services; voluntary market news reporting; PACA; Marketing Orders; Research and Promotion; and economic and statistical analysis.

Mr. Parrott holds a Bachelor of Science degree in Horticulture and a minor in agricultural economics from Virginia Tech, and is a Senior Executive Fellow from Harvard University’s Kennedy School of Government.

Miles McEvoy  
Deputy Administrator, National Organic Program  
202-720-3252, miles.mcevoy@ams.usda.gov

Mr. Miles McEvoy has served as Deputy Administrator of the AMS National Organic Program (NOP) since the program’s inception in October 2009. The NOP is responsible for the full range of activities associated with establishing, overseeing, and enforcing the USDA organic regulations and standards.

During his tenure, Mr. McEvoy has increased oversight and consistency in the organic certification process, utilized civil penalties to enforce organic standards, implemented unannounced inspection and residue testing requirements, while bringing together diverse community stakeholders. In addition he has implemented ‘Sound and Sensible’ principles to ensure organic integrity and support organic farmers and handlers. Prior to joining the USDA, Mr. McEvoy led the Washington State Department of Agriculture's (WSDA) Organic Food Program.
Ms. Judith J. Dudley has served as the Acting Chief Information Officer (CIO) for AMS since June 2016. Before that she served as Deputy Chief Information Officer (DCIO) for AMS from November 2009 to June 2016. She is responsible for managing the Agency’s Information Technology Program. The Program provides support and guidance to all Agency business units in information technology issues such as: the development and support of web-based information systems, cyber-security, work flow automation, voice and data telecommunications, technology equipment and services acquisition, electronic records management, and server and personal computer technical support.

Ms. Dudley has 31 years of Federal Service, all with USDA. Ms. Dudley received her M.S. in Computer Science from Northern Illinois University, an M.S. in Library and Information Science from the University of Illinois, and a B.S. in Mathematics from Western Illinois University.

Mr. Arthur L. Neal, Jr. is the Deputy Administrator of the Transportation and Marketing (T&M) Program in AMS. He provides leadership in market research and technical assistance for local food systems development, conducting economic analysis regarding the transportation of agriculture products from farm to market, and directing the funding of approximately $100 million dollars in grants for local food marketing and the competitive marketing of specialty crops. Arthur also oversees the USDA Farmer’s Market at headquarters and the People’s Garden Initiative.

Prior to joining T&M, Mr. Neal served as the Associate Deputy Administrator for the National Organic Program and played a significant role in the development of the national organic regulations. He has served as the U.S. delegate regarding organic issues for the United Nation’s Food and Agriculture/World Health Organization Codex Alimentarius Commission’s Committee on Food Labeling. Mr. Neal also worked for the Office of the Assistant Secretary for Civil Rights as the National Program Manager for the USDA/1890 Land Grant Partnership. He has served at USDA for 19 years. Mr. Neal is a native of Newellton, Louisiana. He graduated summa cum laude with a Bachelor of Science degree in Agriculture Economics from Southern University and A&M College in Baton Rouge, Louisiana, and earned a master’s degree from the Dale Bumpers College of Agriculture, Food and Life Sciences at University of Arkansas-Fayetteville and the Scottish Agricultural College in Aberdeen, Scotland (UK). [b] (6)
Sonia N. Jimenez  
Deputy Administrator, Compliance and Analysis Program  
202-720-6766, sonia.jimenez@ams.usda.gov

As the Deputy Administrator of AMS’ Compliance and Analysis Program, Ms. Sonia Jimenez is responsible for a broad range of administrative management, budget, homeland security and defense, and compliance and investigation services for the Agency’s programs, personnel and activities.

Ms. Jimenez began her career in USDA over 25 years ago, working in various positions in AMS and the Foreign Agricultural Service. She has worked closely with industry counterparts to facilitate the marketing of fruits, vegetables and specialty crops as well as the acquisition, compilation, processing, analysis and reporting of economic, statistical and commodity information and assessment of commodity supplies. During 2013, she served as the Agency’s acting Deputy Associate Administrator and is currently serving as the Deputy Administrator for C&A. Ms. Jimenez was born in Puerto Rico where she spent her childhood and early adulthood. She received her bachelor’s degree in Business Administration from the University of Puerto Rico and her Masters of Business Administration from the Inter-American University of Puerto Rico.

Craig A. Morris, Ph.D.  
Deputy Administrator, Livestock, Poultry and Seed Program  
202-720-5705, craig.morris@ams.usda.gov

Dr. Craig A. Morris serves as the Deputy Administrator of the AMS Livestock, Poultry and Seed (LPS) Program. In this role, Dr. Morris leads the Agency's regulatory programs related to the livestock, meat, poultry, egg, fish, grain and seed industries. The programs include retail country of origin labeling, quality grading, testing, auditing and accreditation services, mandatory and voluntary market news reporting, and economic and statistical analysis among others.

Dr. Morris has spent his entire professional career as part of the meat and poultry industry. Apart from government service, Dr. Morris served as the Assistant Vice President of Food Safety for Future Beef Operations, LLC, in Arkansas City, Kansas, and as the Manager of Scientific and Technical Affairs for the American Meat Institute in Washington, D.C. Dr. Morris was born in St. Louis County, Missouri and received his Bachelor of Science degree with Distinction in Animal Science from Iowa State University and served as a Regent’s Graduate Fellow while earning his Doctorate in Animal Science from Texas A&M University. Dr. Morris and his wife have two sons and reside in Fairfax Station, Virginia.
Ruihong Guo, Ph.D.
Deputy Administrator, Science and Technology Programs
202-720-8556, ruihong.guo@ams.usda.gov

Dr. Ruihong Guo is the deputy administrator of the AMS Science & Technology Program, and oversees scientific and analytical support services to the agricultural community, including the Plant Variety Protection Office, the Laboratory Approval & Testing Division, and the Pesticide Data Program.

Previously, Dr. Guo served as the AMS Associate Administrator and various positions within the National Organic Program (NOP). Before joining the NOP, she served as Director of Civil Rights Program for the Agricultural Marketing Service, and Director of Program Complaint in the Office of the USDA Assistant Secretary for Civil Rights. Ruihong came to the United States from China as a student and received her Ph.D. degree in speech communication from Southern Illinois University at Carbondale.

Biographies of political staff in key leadership positions

Elanor Starmer
Administrator
202-720-5115, elanor.starmer@ams.usda.gov

Ms. Elanor Starmer is USDA's AMS Administrator. Ms. Starmer joined USDA in 2011, first to support the Deputy Secretary and then as a Senior Advisor to Secretary Tom Vilsack. She also served as the National Coordinator and Advisor for Local and Regional Food Systems at USDA. In this role, she guided Department-wide efforts to strengthen local and regional food systems and lead the Know Your Farmer, Know Your Food initiative. She acted as liaison to U.S. Food and Drug Administration on the Food Safety Modernization Act (FSMA) and developed Department-wide strategy to support industry on FSMA implementation.

Prior to joining USDA in 2011, Elanor worked on agriculture, food and development policy issues for over a decade with nonprofits in Washington, DC, Minnesota, and California. She also consulted with the Organization of American States' agriculture policy arm in El Salvador. Originally from a small farming community in New Hampshire, Ms. Starmer has an MS in Agriculture Science and Policy from Tufts University’s Friedman School; an MA in Development Economics from the Fletcher School of Law and Diplomacy; and a BA from Brown University. Enterprise Workforce Data

AMS Permanent Workforce FY 2009-FY 2016

*HQ equals Washington, DC

Total AMS Workforce
FYs 2009-2016

- Seasonal & Other
- Permanent Only
AMS employs a workforce of 3,531 employees of which the following are full-time and part-time. These numbers were pulled from the NFC Onboarding Report for the Agency. There is a difference on 1 between this number and the SF-113A due to the timing of when the report was run.

- Full-time: 2,184 employees
- Part-time: 112 employees
- Other employment (term, temporary): 1,235 employees

There are 2,722 employees in mission critical occupations (MCO). This represents 77% of AMS’ total workforce. For permanent staff, this number is 1,567 and 76%. In summary, whether looking at AMS’ total workforce or permanent workforce, MCO’s represent ¾ of the workforce.

- AMS employs an additional 1,400 seasonal employees during our peak months to grade and inspect seasonal crops.

For both AMS’ total and permanent workforce, 27% are eligible to retire within the next year.

- Our headquarters is located within Washington, D.C., which houses 15% of our total workforce

AMS has three conventional laboratories. They include:

- Gastonia, NC – 27 employees
- Blakely, GA – 7 employees (note that AMS has a satellite location affiliated with the Blakely Lab in Dawson, GA. These seven employees work between these two locations.)
- Winter Haven, FL – 5 employees

(AMS conducts other laboratory activities through third party laboratories and other AMS field office locations. This work is conducted by both AMS staff and contractors.)

II. Policies and Regulations

Statutory Authorities – None has expired or will expire in the next year.

This Bill was a $288 billion, five-year agricultural policy bill that was passed into law on June 18, 2008. AMS impacts include:

- Established new guidance on the funds to be made available for Section 32 activities; required increased Specialty Crop Purchases, and other provisions.
- Expanded and funded the Farmers Market Promotion (grant) Program from CCC.
- Expanded and funded the Specialty Crop Block Grant (SCBG) program from CCC.
- Extended the National Organic Cost Share Program and funded from CCC.
- Increased funding for AMA Organic Cost Share Program (for a specified period).
- Provided one-time funding from CCC to expand organic market data.
- Amended Country of Origin Labeling to include additional commodities.
- Authorized (unfunded) specific amounts for the National Organic Program.
- Provided guidance on Milk Marketing Orders.
- Provided guidance on mandatory market reporting.

Agricultural Act of 2014 (H.R. 2642; Pub.L. 113–79, also known as the 2014 U.S. Farm Bill)

This Bill, formerly the "Federal Agriculture Reform and Risk Management Act of 2013", authorizes nutrition and agriculture programs in the United States for the years of 2014-2018. It authorizes $956 billion in spending over the next ten years. AMS impacts include:

- Extended and expanded the Farmers Market Promotion Program to add the Local Food Promotion (grant) Program and funded from CCC.
- Extended the SCBG program and increased funding from CCC including funding for Multi-State projects.
- Extended the National Organic Cost Share Program and increased CCC funding.
- Provided additional one-time funding from CCC for organic market data expansion.
- Provided one-time funding for a technical modernization upgrade to the National Organic Program.
- Provided one-time funding for a sheep marketing grant from CCC.
- Changed the source of funding for Wool Trust from Customs receipts to CCC.
- Provided (unfunded) appropriations authority for specialty crop reporting.
- Provided (unfunded) appropriations authority at specified amounts for the National Organic Program.
Agricultural Marketing Act of 1946 (7 U.S.C. 1621-1627)

This Act provides for:

- continuous research to improve the marketing, handling, storage, processing, transportation, and distribution of agricultural products;
- cooperation among Federal and State agencies (including the Virgin Islands and Guam), producers, industry organizations, and others in the development and effectuation of research and marketing programs to improve the distribution processes;
- an integrated administration of all laws to aid the distribution of agricultural products research, market aids and services, and regulatory activities, to the end that marketing methods and facilities may be improved, that distribution costs may be reduced, and the price spread between the producer and consumer may be narrowed; and
- matching funds with cooperating State agricultural experiment stations, State extension services, and State departments of agriculture.

The Act also: (1) authorizes grading, inspection, and certification of all agricultural products; (2) makes certifications prima facie evidence; (3) prohibits misrepresentation with respect to such services.

- Cooperation with States and Specialty Crop Grants (7 U.S.C. 1621)
- Market News, Standards, and Grading (including collection and retention of fees) (7 U.S.C. 1622)
- Livestock Mandatory Reporting (7 U.S.C. 1635-1636i) and Dairy Product Mandatory Reporting (7 U.S.C. 1637-1637b)
- Country of Origin Labeling (7 U.S.C. 1638d)
- National Bioengineered Food Disclosure Standard (7 U.S.C. 1639)

Livestock Mandatory Reporting Act of 1999 (Title IX of the FY2000 USDA appropriations act (P.L. 106-78)

Requires the Secretary of Agriculture to establish mandatory price reporting programs for live cattle and swine that: (1) provide timely and accurate market information; (2) facilitate informed marketing decisions; and (3) promote competition in the slaughtering industry. Sets forth reporting provisions for the Secretary and packers. This Act was reauthorized in 2005, 2010 and 2015.

Dairy Market Enhancement Act of 2000 (Public Law 106 – 532)

Directs the Secretary of Agriculture to establish a program of mandatory dairy product information reporting. Authorizes appropriations.
Mandatory Price Reporting Act of 2010

Directs the Secretary to (1) extend reporting requirements for livestock daily markets through September 30, 2015; (2) establish mandatory reporting for wholesale pork cuts; and (3) direct the Secretary of Agriculture (USDA) to establish, and implement within one year, an electronic price reporting system for dairy products.

The Agricultural Reauthorizations Act of 2015

Reauthorized and amended laws that address livestock mandatory price reporting requirements.

Agricultural and Food Act of 1981

An Act to provide price and income protection for farmers, assure consumers an abundance of food and fiber at reasonable prices, continue food assistance to low-income households.

Food Security Act of 1985

An Act to extend and revise agricultural price support and related programs, to provide for agricultural export, resource conservation, farm credit, and agricultural research and related programs, to continue food assistance to low-income persons, to ensure consumers an abundance of food and fiber at reasonable prices.

The Farm Security and Rural Investment Act of 2002, also known as the 2002 Farm Bill, includes ten titles, addressing a great variety of issues related to agriculture, ecology, energy, trade, and nutrition. The act directs approximately 16.5 billion dollars of funding toward agricultural subsidies each year through 2007. These subsidies have a dramatic effect on the production of grains, oilseeds, and upland cotton.

President Bush signed the Specialty Crop Competitiveness Act of 2004 (Act) on December 21, 2004. The Act seeks to promote increased consumption of specialty crops and increase the competitiveness of specialty crop producers. Specialty crops are defined as fruits and vegetables, tree nuts, dried fruits, and nursery crops (including floriculture). The Act authorizes $54 million annually for the next 5 fiscal years to help meet these goals. The Act authorizes: (1) specialty crop block grants to States through 2009; (2) technical assistance for specialty crops through 2009; (3) efforts to reduce the backlog of agricultural export petitions; (4) publication of a report on sanitary and phytosanitary export issues; (5) research on methyl bromide alternatives; (6) a national specialty crop research program; (7) a specialty crop committee; (8) a pest and disease response fund; (9) a peer review of import and export regulations; and (10) maintenance of a USDA training facility for USDA fresh fruit and vegetable inspectors.
Peanut Statistics (7 U.S.C. 951-957)

The Act of June 24, 1936, as amended, authorized the collection and publication of statistics of raw peanuts and peanut oil.

Provides for mandatory continuous inspection of egg products processing plants and regulates the distribution of certain qualities of shell eggs in interstate, foreign, and intrastate commerce. Inspection of egg products processing plants is performed within FSIS. This act also provides for the use of nationwide standards, grades, and weight classes for eggs in interstate or foreign commerce and prohibits origin labeling of shell eggs except for noncontiguous areas of the United States. AMS conducts Shell Egg Surveillance through periodic inspection of shell egg facilities.

Pesticide Data Program (21 U.S.C. 346a note)

Requires the Secretary to ensure that the residue data collection activities conducted by USDA in cooperation with the Environmental Protection Agency and the Department of Health and Human Services, provide for the improved data collection of pesticide residues, including guidelines for the use of comparable analytical and standardized reporting methods, and the increased sampling of foods most likely consumed by infants and children.

DATA COLLECTION ACTIVITIES TO ASSURE HEALTH OF INFANTS AND CHILDREN

1996 Food Quality Protection Act
Pub. L. 104–170, title III, §301, Aug. 3, 1996, 110 Stat. 1511, provided that:
"(a) In General.-The Secretary of Agriculture, in consultation with the Administrator of the Environmental Protection Agency and the Secretary of Health and Human Services, shall coordinate the development and implementation of survey procedures to ensure that adequate data on food consumption patterns of infants and children are collected.
"(b) Procedures.-To the extent practicable, the procedures referred to in subsection (a) shall include the collection of data on food consumption patterns of a statistically valid sample of infants and children.
"(c) Residue Data Collection.-The Secretary of Agriculture shall ensure that the residue data collection activities conducted by the Department of Agriculture in cooperation with the Environmental Protection Agency and the Department of Health and Human Services, provide for the improved data collection of pesticide residues, including guidelines for the use of comparable analytical and standardized reporting methods, and the increased sampling of foods most likely consumed by infants and children."
United States Department of Agriculture
2016 Presidential Transition
Agricultural Marketing Service (AMS)

Federal Seed Act (7 U.S.C. 1551-1611)

- Prohibits transportation or delivery for transportation in interstate commerce of agricultural or vegetable seeds unless each container bears a label giving information prescribed by regulations.
- Establishes that only those seeds properly certified by the seed-certifying agency (as defined in the Act) shall bear label or advertising to that effect.
- Prohibits transportation of certain described seeds and prescribes procedures relating to importations.
- Authorizes promulgation of rules and regulations by the Secretary and by the Secretary of the Treasury jointly or separately after notice and public hearing.
- Prohibits alteration, defacement, or destruction of labels.
- Makes unlawful in the U.S. or in interstate or foreign commerce the sale of uncertified seed of a protected variety under the Plant Variety Protection Act.
- Sec. 415 (a) and (b) authorizes the appropriation for this activity from the U.S. Treasury to the Secretary of Agriculture.

- Defines “direct marketing from farmers to consumers” to mean the marketing of agricultural commodities at any marketplace established for the purpose of enabling farmers to sell their agricultural commodities directly to individual consumers in a manner calculated to lower the cost and increase the quality while providing increased financial returns for farmers.
- Requires the Secretary to carry out a program to facilitate the direct marketing of food commodities from farmers to consumers, for their mutual benefit, under which there would be (1) a nationwide survey of existing direct marketing operations; (2) an allocation of funds to the State departments of agriculture and/or the State cooperative extension services to provide assistance for direct marketing within the respective States; and (3) an annual report by the Secretary on activities carried out under the act to further direct marketing.

Makes it unlawful for handlers to knowingly: coerce a producer in the exercise of the producer's right to join and belong to a cooperative; refuse to deal with a producer because of his/her membership in a cooperative; discriminate against a producer because of a membership in a cooperative; induce a producer to refuse or cease to belong to a cooperative; make false reports about cooperatives; conspire to do any of the foregoing.

Capper-Volstead Act (7 U.S.C. 291, 292)

Authorizes persons engaged in the production of agricultural products to act together as associations in collectively processing, preparing for market and marketing, and make the necessary contracts and agreements to affect such purposes. Prohibits monopolies and restraints of trade and provides an administrative procedure to establish the facts and an order directing the association to cease and desist.
International Carriage of Perishable Foodstuffs Act (7 U.S.C. 4401-4406)

Authorizes the Secretary to implement the Agreement on the International Carriage of Perishable Foodstuffs and on the Special Equipment to be Used for such Carriage. The objective of the Agreement is to establish uniform inspection requirements for transportation equipment, which moves perishable foodstuffs across national borders. 

Sec 6 of this Act authorizes organizations (a) designated by the Secretary to test or inspect equipment to charge fees for such services and authorizes the Secretary (b) to collect fees to cover USDA costs in issuing certificates of compliance.

Transportation Provisions of Agricultural Adjustment Act of 1938 (7 U.S.C. 1291)

Authorizes complaints and prosecution of complaints before the Interstate Commerce Commission with respect to rates, charges, tariffs, and practices relating to the transportation of farm products.

Rural Development Act of 1972 (7 U.S.C. 2204(b)(c))

Requires the Secretary to prepare a comprehensive rural development strategy, which takes into account the need to improve the transportation network in rural areas. This Act also provides authority to serve as the focal point for all Department transportation issues and to recommend revisions of current procedures. Note: Somewhat broader authority in connection with transportation is found in the Agricultural Marketing Act of 1946 (see Subpart A of this Part).

RESEARCH & PROMOTION

Authorizes the Secretary to establish a generic commodity promotion, research, and information program for those interested industries that wish to petition the Department of Agriculture for the establishment of a national commodity generic promotion program. Provides a menu of options for industry groups seeking authority to engage in a program of generic research and promotion.

Sec. 515, (e)(2) requires full reimbursement to the Secretary for the implementation, administration, and supervision of the program, including all referenda costs incurred in connection with the order.

Research and Promotion Programs - Miscellaneous Provisions
• Producer Research and Promotion Board Accountability (104 Stat. 3927)
• Consistency with International Obligations of the United States (7 U.S.C. 2278)
Commodity Promotion and Evaluation (7 U.S.C. 7401)

- Requires an independent evaluation of the effectiveness of each industry-funded generic commodity research and promotion program not less than every 5 years.
- Requires an annual report on administrative expenses to the House and Senate Agriculture Committees of commodity boards that conduct generic promotion programs.

Dairy Production Stabilization Act of 1983

- Dairy Promotion Program (Subtitle B) (7 U.S.C. 4501-4513)
  - Authorizes a national dairy products promotion, research, and nutrition education program.
  - Establishes a National Dairy Promotion and Research Board to administer the program and oversee the expenditure of funds to promote the use of milk and dairy products, for research, and for nutrition education.
  - Requires the Secretary to conduct a referendum after September 30, 1985, among dairy producers to determine the continuation of the dairy promotion program.
- Dairy Research Program (Subtitle C) (7 U.S.C. 4531-4538)
  - Authorizes the Secretary to establish within USDA a National Dairy Research Endowment Institute to aid the dairy industry in implementing a dairy products research order.

Cotton Research and Promotion Act (7 U.S.C. 2101-2118)

Enables cotton growers to improve the competitive position and expand markets for cotton through a program of self-assessments. Requires action by the Secretary of Agriculture to hold public hearings, a referendum of cotton producers, and to establish a Cotton Board to administer a program of research and promotion, which would be funded by assessments on producers and importers, when imports are subject to an order.

Fluid Milk Promotion Act of 1990 (7 U.S.C. 6401-6417)

Authorizes fluid milk processors to develop, finance, and carry out a nationally coordinated program of advertising designed to strengthen the position of the dairy industry and to maintain and expand markets and uses for fluid milk products produced in the United States. The program is to be financed by an assessment rate not to exceed 20 cents per hundredweight of fluid milk products marketed. Provides that a processor funded milk promotion order will be issued by the Secretary if fluid milk processors who market 30 percent or more of all fluid milk products propose such an order.

Egg Research and Consumer Information Act (7 U.S.C. 2701-2718)

Provides for the Secretary to issue an order providing for the establishment of an Egg Board of not more than 20 members composed of egg producers or representatives of egg producers appointed by the Secretary, with such representation reflecting the proportion of eggs produced in each geographic area of the United States. The Board is responsible for developing and submitting for the Secretary's approval a program to enable egg producers to establish, finance,
and carry out a coordinated program of research, producer and consumer education, and promotion to improve, maintain, and develop markets for eggs, egg products, spent fowl, and products of spent fowl.

Authorizes promotion, research, industry information, and consumer information, including marketing and market research activities designed to: (1) strengthen the position of the Hass avocado industry in the domestic marketplace; and (2) maintain, develop, and expand markets and uses for Hass avocados in the domestic marketplace.

**Honey Research, Promotion, and Consumer Information Act (7 U.S.C. 4601-4612)**

Authorizes producers and handlers of honey and honey products to finance a nationally coordinated research, promotion, and consumer information program designed to expand the markets for honey and honey products.

**Mushroom Promotion, Research, and Consumer Information Act of 1990 (7 U.S.C. 6101-6112)**

Enables domestic producers and importers of fresh mushrooms to develop, finance, and carry out a nationally coordinated program for mushroom promotion, research, and consumer information.

**Popcorn Promotion, Research, and Consumer Information Act (7 U.S.C. 7481-7491)**

Authorizes domestic processors of popcorn to develop, finance, and carry out a nationally coordinated program for popcorn promotion, research, consumer information, and industry information.

**Potato Research and Promotion Act (7 U.S.C. 2611-2627)**

Provides authority to establish a “Plan” to collect assessments on potatoes produced in the United States and on imported table-stock, frozen, processed, or seed potatoes. Funds would be used to administer the Plan and to finance a program of research development, advertising, and promotion of potatoes and potato products.

**Watermelon Research and Promotion Act (7 U.S.C. 4901-4916)**

Authorizes the establishment of the National Watermelon Promotion Board for the purpose of carrying out a coordinated program of research, development, advertising, and promotion designed to strengthen the competitive position of the watermelon industry in both domestic and foreign markets.
Beef Research and Information Act (7 U.S.C. 2901-2911)

This Act enables cattle producers to establish, finance, and carry out a coordinated program of research, producer and consumer information, and promotion to improve, maintain, and develop markets for cattle, beef, and beef products. It also provides for the establishment of the Cattlemen's Beef Promotion and Research Board.

An Act to extend and revise agricultural price support and related programs, to provide for agricultural export, resource conservation, farm credit, and agricultural research and related programs, to continue food assistance to low-income persons, to ensure consumers an abundance of food and fiber at reasonable prices.

Peanut Promotion, Research and Information Order (CFR 7, Part 1216)

The Order became effective on July 29, 1999, after a national referendum among all peanut producers. Under the Order, peanut producers are assessed 1 percent of the total value of all farmers’ stock peanuts, which currently generates about $6 million in annual revenues. The program is administered by the Board under USDA supervision. The Board is composed of 10 members and 10 alternates, nominated by producers and appointed by the Secretary of Agriculture. There is one member and alternate for each of the nine primary peanut-producing states and one at-large member and alternate representing all other peanut-producing states. Currently, the nine major peanut-producing states are (in descending order) Georgia, Texas, Alabama, North Carolina, Florida, Virginia, Oklahoma, New Mexico, and South Carolina. The minor peanut-producing states are Arizona, Arkansas, California, Kansas, Louisiana, Mississippi, Missouri, and Tennessee.

There is an assessment rate of one percent of the price paid for all farmers stock peanuts sold. Peanut producers may sell their peanuts commercially or put them in the market assistance loan program. For peanuts sold commercially, the first handler will remit the assessment to the Board.

Pork Promotion, Research, and Consumer Information Act of 1985 (7 U.S.C. 4801-4819)

Authorizes a program of promotion, research, and consumer information designed to strengthen the position of the pork industry in the marketplace and to maintain, develop and expand markets for pork and pork products.

Soybean Promotion, Research and Consumer Information Act (7 U.S.C. 6301-6311)

Authorizes the soybean industry to initiate a soybean promotion, research and consumer information program.
MISCELLANEOUS INSPECTION AND CERTIFICATION

Dairy Inspection for Export (21 U.S.C. 693)

The Act of June 30, 1901, provides on a permissive basis, for the inspection and certification as to purity and quality of dairy products intended for export and the marking, stamping, and labeling of such products as to secure their identity.

Wool Standards Act (7 U.S.C. 415b-415d)

Authorizes the use of certain funds for wool standardization and grading work.

Export Apple Act (7 U.S.C. 581-590) as amended

Prohibits shipment or transportation of apples to any foreign destination in packages, which are not accompanied by a certificate issued under authority of the Secretary.

Export Grape and Plum Act (7 U.S.C. 591-599)

Prohibits shipment or transportation of specified fruits to any foreign destination in packages, which are not accompanied by a certificate issued under authority of the Secretary.

National Laboratory Accreditation Program (7 U.S.C. 138-138i)

Requires the Secretary to establish a program to certify private laboratories that conduct residue testing of agricultural products, or that make claims to the public or buyers of agricultural products concerning residue levels. Requires that such laboratories meet certain minimum quality standards. Requires the Secretary to consult with the Environmental Protection Agency and the Food and Drug Administration in establishing the standards.

PLANT VARIETY PROTECTION

Provides for the issuance of “certificates of plant variety protection” assuring the developers of novel varieties of sexually reproduced plants exclusive rights to sell, reproduce, import or export such varieties, or use them in the production of hybrids or different varieties, for a period of 20 years, and 25 years for a tree or vine.

Authorizes the establishment of a Plant Variety Protection Office in the Department of Agriculture to administer the Act. Chapter 3 of this Act authorizes the Secretary to prescribe, charge, and collects reasonable fees for service and to retain and invest such fees collected under the Act.
COTTON AND TOBACCO GRADING AND VERIFICATION

United States Cotton Standards Act (7 U.S.C. 51-65)

- Provides for establishment, preparation, distribution, and use of official cotton standards.
- Authorizes contracts with cooperatives for classing cotton and payment for services.
- Provides for a cotton classing service by the Department of Agriculture for the public on a fee basis.
- Provides for the licensing of cotton classers.
- Provides for agreements between the Secretary of Agriculture and cotton organizations in foreign countries for adoption, use, and observance of universal standards of cotton classification; the arbitration and settlement of disputes with respect thereto; and the preparation, distribution inspection, and protection of practical forms (boxes) of such universal standards.

Provides for (1) a report on estimates of the grades and staple lengths in the carryover of cotton stocks as of August 1 each year, and (2) periodic reports each year on estimates of the grades and staple lengths of the cotton crop.
- Smith-Doxey Amendment (7 U.S.C. 473a-c)
  
  *The 2008 Farm Bill (Food, Conservation and Energy Act of 2008), Sec. 14201, amended Sec. 3a of the Act to extend cotton classing authority without fiscal year restriction, authorizes the Secretary to enter into long-term lease agreements exceeding 5 years or take title of property for cotton classing, provides greater discretion to the Secretary in establishing fees but requires consultation with the cotton industry, and requires the announcement of classification fees not later than June 1 of the year in which the fee applies.*

- Cotton Service Testing Amendment (7 U.S.C. 473d)

U.S. Cotton Futures Act (7 U.S.C. 15b)

- Provides for a cotton classing service by the Department of Agriculture for tenderers and receivers of cotton on futures.
- Provides for establishment, preparation, and distribution of official cotton standards.
- Provides for designation of bona fide spot cotton markets by the Secretary of Agriculture and the use of cotton quotations in certain of these markets in settlement of future contracts.
- Provides for proceeds from cotton samples be credited to the account that incurs the cost.
Tobacco Inspection Act of 1935 (7 U.S.C. 511-511q)

- Authorizes (i) the promulgation and establishment of Official U.S. Standard Grades, (ii) the designation of auction markets for mandatory inspection after approval by growers in a referendum, (iii) permissive inspection upon request of owners or other financially interested persons, and (iv) employing and licensing of persons as samplers to take official samples of tobacco or as weighers to weigh and certify the weight of tobacco or as inspectors to inspect tobacco.
  - Sec. 2 of this Act addresses the need for uniform standards for tobacco as referenced in 7 U.S.C. 511a.
  - Sec. 5 addresses the establishment of fees to cover the cost of the program (as nearly as practicable), and will be credited to the current year appropriation account and will be available without fiscal year limitation. It also allows for the investment of the funds collected in insured or fully collateralized, interest-bearing account.
- Directs warehousemen to provide space on tickets, tags, or labels to show certified grades.
- Prohibits many practices designed to result in improper certification of tobacco.

Tobacco Adjustment Act of 1983 (7 U.S.C. 511r)

Requires all tobacco, except cigar tobacco and oriental tobacco that is imported into the United States to be inspected, insofar as practicable, for grade and quality. If the tobacco to be imported is not accompanied by appropriate certification, it will be inspected by the Secretary at the point of entry to determine whether it meets the pesticide residue requirements. This Act also requires importers of flue-cured and burley tobacco to identify any and all end users of imported tobacco.

Sec. 213 (d) requires importers to pay a fee for inspection services comparable to fees charged for domestic tobacco services. As with domestic tobacco collections, these funds will be credited to the current year appropriation account and will be available without fiscal year limitation. It also allows for the investment of the funds collected in insured or fully collateralized, interest-bearing account.

Tobacco Statistics Act (7 U.S.C. 501-508)

The Act of January 14, 1929, provides for the collection of statistics on stocks of leaf tobacco held by dealers and manufacturers and the publication of these and other statistics for tobacco.

Naval Stores Act (7 U.S.C. 91-99)

Provides for defining and establishing standards, establishing methods for analysis, inspection, sampling, and grading of naval stores products; fixing and collecting fees for such services; and regulating the labeling, advertising, and packing of such products for sale in commerce.

Turpentine and Rosin Statistics (7 U.S.C. 2248)

The Act of August 15, 1935, provides for compilation and publication of statistics and essential information relating to spirits of turpentine and rosin.
PERISHABLE AGRICULTURAL COMMODITIES ACT PROGRAM

Perishable Agricultural Commodities Act, 1930 (7 U.S.C. 499a-499s)

- Prohibits unfair conduct by commission merchants, dealers, and brokers.
- Requires that persons engaged in these businesses have a valid and effective license issued by the Secretary of Agriculture.
- Creates additional liability in damages to persons injured by the unfair conduct of a commission merchant, dealer, or broker.
- Provides for administrative action to establish the injury and its extent as well as a sanction in the form of suspension of license for failure to obey Secretary's order for the payment of money.
- Provides for criminal, civil, and monetary penalties for certain violations of the Act.
- Sec. 3, (2) allows for a fee increase if the Secretary determines that the reserve balance at the end of the fiscal year will be less than 25 percent of the projected budget.

Produce Agency Act (7 U.S.C. 491, 493-497)

Prohibits destruction or dumping by commission merchants.

MARKETING AGREEMENTS & ORDERS
(Fruits, Vegetables, & Specialty Crops; Dairy)

NOTE: This legislation enacted June 3, 1937, in the form of an amendment of the Agricultural Adjustment Act of 1933, as amended, reenacted certain provisions of the old legislation without change and amended and reenacted others as amended.

- Provides for forfeiture equal to three times the current market value of the excess when any person willfully exceeds any quota or allotment fixed under this legislation.
- Authorizes (i) marketing agreements with processors, producers, associations of producers and others engaged in the handling of a designated agricultural commodity, (ii) orders regulating handling of designated agricultural commodities or products in interstate commerce and (iii) fixing minimum prices to be paid to producers or associations of producers for milk or its products.
- Prohibits importation of certain enumerated commodities when they are covered by a marketing order regulating grade, size, quality or maturity unless they comply with these provisions of the order.
Consolidation and Reform of Federal Milk Marketing Orders (7 U.S.C. 7253)

- Requires the Secretary to consolidate the number of Federal milk marketing orders issued pursuant to section 8c of the Agricultural Marketing Agreement Act to not less than 10 and not more than 14 orders.
- Stipulated the Secretary has the authority and discretion to consider multiple basing points and utilization rates in pricing fluid milk, and to use uniform multiple component pricing when developing a new basic formula price(s) for manufacturing milk.
- Prohibits the Secretary from considering, or basing any decision on, the Class I differentials mandated by the 1985 Farm Bill Requires the Secretary to propose consolidation and pricing reform of milk marketing orders within 2 years and to implement consolidation and pricing reform within 3 years of enactment.
- Provides that if the process is not complete by the end of 3 years, the USDA will lose the authority to assess producers and handlers for market order services and administration. Makes provisions for an extension of the three year limit should the Department be subject to an injunction regarding the consolidation.
- Authorizes the Secretary to use informal rulemaking to address order consolidation and pricing reform, and any issues peripheral to the consolidation process.
- Designate the State of California as a separate Federal milk order, upon petition and approval of California dairy producers. The California order shall have the right to reblend and distribute order receipts to recognize quota value.

Northeast Interstate Dairy Compact (7 U.S.C. 7256)
Allows the Secretary of Agriculture, upon the finding of a compelling public interest in the area, to grant the New England region-- Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont--the authority to enter into a Dairy Compact. Delaware, New Jersey, New York, Pennsylvania, Maryland, and Virginia may join the Compact, individually or otherwise. The Compact would terminate with the completion of price and order reform authorized in the agreement. The Compact precludes the use of compensatory payments as a barrier to the entry of milk into the Compact region or for any other purpose. It also precludes the regulation of Class II, Class III, or Class III-A milk used for manufacturing purposes, or any other milk, other than Class I (fluid) milk. Before the end of each fiscal year, the Compact Commission must reimburse the Commodity Credit Corporation (CCC) for any purchases CCC must make due to the projected rate of increase in milk production within the Compact region in excess of the projected national average rate of increase in milk production as determined by the Secretary.
COMMODITY PURCHASES AND DONATIONS - SECTION 32 AND RELATED STATUTES

Section 32 of the Act of August 24, 1935 (7 U.S.C. 612c)

Appropriates funds each fiscal year in an amount equal to 30 percent of the gross receipts from duties collected under the customs laws during the preceding calendar year. These funds may be used for the following purposes:

- To encourage the exportation of agricultural commodities and products by payment of benefits or indemnities in connection with exportation, or by payments to producers in connection with that part of the production required for domestic consumption;
- To encourage domestic consumption of agricultural commodities and products by payment of benefits or indemnities for diversion from the normal channels of trade or increasing utilization among persons in low-income groups;
- To reestablish farmers' purchasing power by payments in connection with the normal production for domestic consumption.

Commodity Distribution Reform Act - Section 3(c) (7 U.S.C. 612c note)

- Prohibits USDA from refusing an offer from a contractor for the purchase of entitlement commodities (provided in standard order sizes) solely on the basis that such offer is less than requested. Standard order sizes are construed to mean not less than truckload quantities.
- Requires USDA to take into account, prior to entering into a contract for the purchase of entitlement commodities, the previous history and current patterns of the bidding party with respect to compliance with other appropriate standards relating to the wholesomeness of food for human consumption.

Seafood Safety Act (110 Stat. 1321-312)

- Provides that any fish or fish product produced in compliance with food safety standards or procedures accepted by the Food and Drug Administration are considered having met any inspection requirements of the Department of Agriculture or other Federal agency for any Federal commodity purchase program, including Section 32 purchases.
- Authorizes lot inspections to assure that the product meets Federal specifications.

Act of August 11, 1939 (Salstonstall-Kennedy Act) (Fishery Products) (15 U.S.C. 713c-2, 713c-3)

Authorizes use of section 32 funds for the following purposes:

- Transfer to the Secretary of the Commerce for use by the Secretary to (i) conduct a fishery educational service and fishery technological, biological, and related research programs and (ii) acquire, operate, and maintain facilities for research directed to promotion of the free flow of domestically produced products in commerce;
• Retransfer to the Secretary of Agriculture by the Secretary of the Commerce of funds not in excess of $1,500,000 to be used for the purchase and distribution through Federal, State, and private relief channels of fishery products produced in the United States.

**Agricultural Act of 1949 - Section 404 (7 U.S.C. 1424)**

Authorizes the Secretary to utilize the services and facilities of the Commodity Credit Corporation in carrying out section 32 programs and programs under section 6 of the National School Lunch Act.

**Agricultural Act of 1956 - Section 205 (7 U.S.C. 1855)**

Authorizes the yearly appropriation of $500,000,000 to enable the Secretary to further carry out the provisions of section 32 subject to a limitation that not more than 50 percent of that amount may be used for any one agricultural commodity or the products thereof.

The Agricultural Trade Development and Assistance Act of 1954 is a United States federal law that established Food for Peace, the primary U.S. overseas food assistance program. The Act was signed into law on July 10, 1954 by President Dwight D. Eisenhower. According to Eisenhower, the purpose of the legislation was to "lay the basis for a permanent expansion of our exports of agricultural products with lasting benefits to ourselves and peoples and peoples of other lands."

**Administrative Expenses (7 U.S.C. 1392b)**

Limits the sums to be paid for Federal and State administrative expenses (excluding county and local committees) under the Agricultural Adjustment Act of 1938 and the Soil Conservation and Domestic Allotment Act to 3 percent of the total sum appropriated, and to 4 percent of the total sum appropriated under section 32 and the Agricultural Marketing Agreement Act of 1937, as amended; and requires that the salaries paid to local and county committees be publicly displayed.

**Appropriation and Apportionment of Funds (31 U.S.C. 1341(a), 1343, 1351, 1511-1519)**

Prohibits the expenditures of funds or creation of obligations in excess of appropriations or apportionments, unless authorized by law, required by emergencies, or necessary for welfare of individuals, and exempting price support, surplus removal, and section 32 funds from the requirements of apportionment.

*Note: the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) (P.L. 110-246) placed limitations on funding and expenditures for Section 32 activities as follows:*

---

3 This is essential to Section 32 funding and restriction.
• Sec. 14222 Establishes a maximum amount available for fiscal year 2009 and beyond to carry out Section 32 activities, and requires that amounts in excess to be transferred to the Food and Nutrition Service for the National School Lunch program. This section also provides for the transfer from Section 32 funds for the Fresh Fruit and Vegetable Program (section 19 of the National School Lunch Act).

• Sec. 4404 raises the minimum purchase level for fruits, vegetables, and nuts above the minimum established by the 2002 Farm Bill (Farm Security and Rural Investment Act of 2002), 7 U.S.C. 612c-4.

**Donations Under the Commodity Purchase Program**

**Agricultural Act of 1949 - Section 202** (7 U.S.C. 1446a)

Provides for the transfer of dairy products acquired by the Commodity Credit Corporation under price-support programs to the military and veterans hospitals without charge.

**Agricultural Act of 1949 - Section 416** (7 U.S.C. 1431)

Authorizes use of food commodities, in private stocks or acquired through price support operations of the Commodity Credit Corporation and which might otherwise be wasted, for donation to State, Federal, or private agencies for use in school lunch and charitable outlets.

**Agricultural Act of 1954 - Section 204(c)** (7 U.S.C. 1446c)

Directs the Secretary of Agriculture to undertake domestic disposal programs as authorized by law to prevent accumulation of excessive inventories of dairy products.

**Foods and Agriculture Act of 1965 - Section 709** (7 U.S.C. 1446a-1)

Authorizes the Secretary of Agriculture to use Commodity Credit Corporation funds to purchase dairy products to meet the requirements of any food donation, community action or other program when CCC’s stocks of dairy products are insufficient for these purposes.

**Agriculture and Consumer Protection Act of 1973 - Section 4** (7 U.S.C. 612c note)

Authorizes the Secretary of Agriculture to use appropriated funds for purchase and distribution of agricultural commodities for food assistance programs.

**Act of September 13, 1960, as amended** (7 U.S.C. 1431 note)

Authorizes the use by schools of donated foods in home economics courses.

**Act of August 19, 1958, as amended** (7 U.S.C. 1431 note)

Authorizes the Commodity Credit Corporation whenever it has grain available for donation pursuant to certain statutes to purchase processed food products and to donate such products and sell the grain.
United States Department of Agriculture
2016 Presidential Transition
Agricultural Marketing Service (AMS)

**Agricultural Act of 1956 - Section 210** (7 U.S.C. 1859)

Authorizes the Commodity Credit Corporation to donate food commodities acquired through price support operations to penal and correctional institutions.

**Agricultural Act of 1958 - Section 505** (7 U.S.C. 1431a)

Authorizes the Commodity Credit Corporation to donate cotton acquired through its price support operations to educational institutions.

**Act of September 21, 1959 - Section 201** (7 U.S.C. 1431c)

Provides that cornmeal, grits, rice, and white flour made available for distribution under section 416 of the Agricultural Act of 1949 or for distribution to schools under any act shall be enriched so as to meet the standards promulgated under the Federal Food, Drug, and Cosmetic Act, and shall be packaged in sanitary containers.

**Act of September 6, 1958 - Section 9** (7 U.S.C. 1431b)

Authorizes distribution of surplus commodities available under section 32 or section 416 of the Agricultural Act of 1949 to areas under the jurisdiction of the United States on the same basis as domestic distribution.

**USDA ORGANIC ACTS**

**The Organic Act of the Department of Agriculture** (7 U.S.C. 2201)

Established the Department of Agriculture to acquire and diffuse useful information on subjects connected with agriculture.

**Department of Agriculture Organic Act of 1944** (7 U.S.C. 396, 415e, 2259, 2256)

- Authorizes the inspection and examination of livestock, hides, skins, meat, or other products at places other than the headquarters of inspector upon request of the owner and charges for the expenses of travel and subsistence.
- Authorizes sale of samples, illustrations, practical forms or sets of grades under rules and regulations to be prescribed.
- Directs that authorized market inspection certificates be received in U.S. courts as prima facie evidence of statements therein contained.
- Authorizes other agencies of the Government requiring inspections, analyses, and tests to be made for them to transfer funds to this Department for direct expenditure.
Department of Agriculture Organic Act of 1956 - Section 12 (7 U.S.C. 2229)

Authorizes use of funds for payment of transportation expenses and per diem of persons appointed for temporary or seasonal services in inspection, etc., of agricultural commodities.

- Authorizes a national organic production program within AMS, establishing national standards for the production and certification of organically produced foods.
- The Secretary is required to establish national minimum organic standards for producers and handlers of agricultural products. The Act also authorizes the Secretary to develop organic standards for meat, poultry, and non-plant products through public hearings and notice and comment procedures.
- Each State, with the approval of the Secretary, could establish an organic certification program using the Federal standards as a basis. Each State, however, could enact different, more restrictive standards, provided there is no discrimination toward agricultural products from another State, which are certified as meeting the national minimum standard.
- The Secretary will be responsible for ensuring that imported organic food meets at least equivalent requirements.
- Requires the Secretary to establish a National Organic Standards Board to provide recommendations on implementation of the Act as well as to develop a national list of allowable and prohibited substances. The Secretary cannot include any exemptions for the use of synthetic substances unless proposed by the Board. The Board is to convene technical advisory panels to provide scientific evaluation and may seek input from the Environmental Protection Agency and other appropriate sources.

MISCELLANEOUS

Cooperation (7 U.S.C. 450, 450b, 2220, 2249)

- Provides for the Secretary of Agriculture to cooperate with State agencies in the administration and enforcement of Federal laws and regulations relating to the marketing of agricultural products and to the control or eradication of plant and animal diseases and pests. This statute is commonly referred to as the “Talmadge-Aiken” authority (7 U.S.C. 450).
- Requires that moneys contributed from outside sources involved in cooperative activities, except in the case of the Forest Service, shall be paid only through the Secretary or through State, county, or municipal agencies, or local farm bureaus or like organizations, cooperating for the purpose with the Secretary (7 U.S.C. 450b).
- Exempts officials and employees of the Department engaged in cooperative activities from criminal provisions prohibiting payment or receipt of salaries of Government employees from any source other than the Government (18 U.S.C. 1914) under certain circumstances (7 U.S.C. 2220).
- Authorizes the Secretary to prescribe the measure and character of cooperation on the part of the Government unless otherwise provided by law (7 U.S.C. 2249).

Authorizes heads of agencies of Government to prescribe fees, charges or prices for work, service, publication, etc., rendered to or for any person or other legal entity.

User Fees for Reports, Publications, and Software (7 U.S.C. 2242a)

- Authorizes the Secretary, on requests, to furnish copies of software programs, pamphlets, reports, or other publications, regardless of their form, including electronic publications, prepared by the Department.
- Authorizes fees to be collected for such materials and publications as the Secretary determines to be reasonable. All moneys received may be credited to appropriations or funds that incur such costs. They may be used until expended to pay directly the costs of such work.
- Authorizes investment of fees collected.

Department of Agriculture Advisory Committees (7 U.S.C. 2281-2286)

- Prohibits any person who is not a USDA employee from simultaneously serving on more than one advisory committee. Prohibits more than one person from the same organization from serving on the same advisory committee. Limits the term of any member to six consecutive years.
- Prohibits advisory committees from expending funds in excess of 10 percent of its estimated annual operating costs, or $500, whichever is greater, until the committee explains the need for the additional expenditures to the Secretary.
- Provides for termination of advisory committees that (1) expend funds in excess of their estimated annual operating costs by more than 10 percent, or $500, whichever is greater, without prior approval of the Secretary; (2) fail to file all required reports; (3) fail to meet two consecutive years; (4) responsible for functions that would or should be performed by Federal employees; and (5) do not serve or have ceased to serve an essential function.

Federal Advisory Committee Act (5 U.S.C. App.)

- Provides guidelines for the creation of advisory committees and provides for the Administrator of General Services to oversee the operations of these committees, which are created to advise officers and agencies of the Federal Government. Advisory committees include such committees, boards, commissions, councils, conferences, panels, task forces, or other similar groups.
- Requires each agency head, which has an advisory committee to designate an Advisory Committee Management Officer who shall (1) exercise control and supervision over the establishment, procedures, and accomplishments of advisory committees established and (2) assemble and maintain the reports, records and other papers of any such committee during its existence.

The American Taxpayer Relief Act of 2012 was passed by the United States Congress on January 1, 2013. The Act centers on a partial resolution to the United States fiscal cliff by addressing the expiration of certain provisions of the Economic Growth and Tax Relief Reconciliation Act of 2001 and the Jobs and Growth Tax Relief Reconciliation Act of 2003 (known together as the "Bush tax cuts"), which had been temporarily extended by the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010. The Act also addressed the activation of the budget sequestration provisions of the Budget Control Act of 2011.

Important Policies and Regulations

In 2014, AMS published 138 regulations, in 2015 a total of 117 regulations were published with one OMB-designated significant publication (Origin of Livestock) during April 2015. As of August 31, 2016, 116 regulations have been published.

Overview of the policy/regulation review process

The Agricultural Marketing Service publishes between 100 and 200 Federal Register documents, including regulations, notices and announcements, each year in order to facilitate its mission to facilitate the efficient, fair marketing of U.S. agricultural products.

AMS rulemaking actions are generally initiated as the result of one of the following:

(1) **Congress**: Laws passed by Congress usually direct the Agency to implement regulations to carry out the law. For example, this is what prompted AMS to develop regulations related to Country of Origin Labeling and Livestock Mandatory Reporting. In these cases AMS utilizes the statutes passed by Congress to develop regulations or guidance for the newly approved programs.

(2) **Industry**: Initial development or revision of a U.S. grade standard usually comes at the request of an interested party, such as a commission or association representing a specific commodity. These requests are generally due to a commodity becoming commercially successful and requiring a trading language, or due to a commodity’s changing cultural or marketing practices. In these cases, AMS utilizes existing laws to further explain, clarify or institute a change that is requested by industry and conforms to and is in accordance with existing law.

(3) **Committee or Board Meetings**: Based on recommendations received from boards or advisory committees (marketing orders, checkoffs, National Organic Standards Board), AMS may initiate regulatory actions. For example, a board may recommend a change in the geographic distribution
of its membership or a change in assessment rates. AMS may initiate regulations to meet the needs of these industries as long as they are in conformance to existing law.

OMB may review any action that AMS undertake.

III. **Congressional Relations and Issues**

**Overview**

On March 3, 2016, the House Appropriations Agriculture Subcommittee held a hearing on the 2017 MRP budget. Former Under Secretary Avalos and the three agency administrators testified. On March 18, 2016, the House Agriculture Committee held a hearing to examine USDA organization and program administration for the Marketing and Regulatory Programs mission area. Former Under Secretary Avalos and the three agency administrators testified.

Over the past few months, The House and Senate Agriculture Committees and Appropriations Agriculture Subcommittees have inquired about a variety of issues. The most frequent and high-profile issues on which Congressional offices have made inquiries include:

- Implementation of the National Bioengineered Food Disclosure Standard (GMO labeling) - Senators Roberts, Stabenow, Leahy, and Merkely
- Establishment of a California Federal Milk Marketing Order - Rep. Valadao; Senators Boxer, and Feinstein
- Establishment of an organic research and promotion program - Rep. Pingree, Farr; and Senator Feinstein
- Oversight of research and promotion programs - Rep. Larsen, Rouzer; Senators Lee, and Booker
- Support for the domestic dairy industry - Rep. Maloney (NY); Senators Leahy, Baldwin, Shaheen, Feinstein, Boxer, Heinrich, and Gillibrand
- Sec. 32 bonus purchases - the 4 committees listed above

**GMO Labeling Law**

Public Law 114-216 created a nationwide mandatory labeling requirement for food containing Genetically Modified Organisms (GMOs). The legislation amends the Agricultural Marketing Act of 1946, and requires that within two years of the Law’s enactment USDA’s Agricultural Marketing Service (AMS) establish a mandatory national bioengineered food disclosure standard and the procedures necessary to implement the national standard. This would provide increased transparency for American consumers and enable them to make informed choices about the foods they purchase.

The law:

- Covers certain processed food products that contain meat, poultry, or eggs.
- Provides protections for the organic label.
- Protects critical consumer rights under both state and federal law.
- Limits food companies to three, clearly regulated options for GMO disclosure: on-package words, on-package symbol, or on-package electronic label.
  - If a company chooses electronic labels, they must comply with additional requirements.
United States Department of Agriculture
2016 Presidential Transition
Agricultural Marketing Service (AMS)

- Requires USDA to provide additional and comparable means to access GMO information if USDA determines that there will be consumer accessibility issues related to electronic labels.
- Prevents a multi-state patchwork of GMO labeling laws which would create confusion for consumers and uncertainty for food companies and farmers.
- Calls for a study (within 1 year of enactment) to be conducted to assess any technological challenges that may impact whether consumers would have access to electronic disclosures.

USDA has established a GMO Disclosure working group comprised of representatives from all of the USDA Agencies that will be required to implement this law. The lead person is Melinda Cep (OSEC). AMS intends to complete the study investigating the technological challenges that may limit consumers accessing electronic disclosures of GMO information about their food and do several public meetings across the country. However, the Agency did not receive funding in the CR for this effort. The House and Senate Agriculture Committees and Appropriations Agriculture Subcommittees have asked about this issue. Senators Roberts, Stabenow, Leahy, and Merkely have inquired about this issue specifically.

Organic Compost
On April 14, 2015, the Center for Environmental Health (CEH), the Center for Food Safety (CFS), and Beyond Pesticides (Plaintiff) filed a “Complaint for Declaratory and Injunctive Relief” against USDA alleging that USDA violated the Administrative Procedure Act (APA) by not requesting undertaking notice-and-comment rulemaking when AMS published the Guidance on the Allowance of Green Waste in Organic Production Systems (NOP 5016) during April 2010.

On June 20, 2016, a judicial decision from the United States District Court for the Northern District of California ruled that the NOP 5016 was a legislative rule subject to notice-and-comment rulemaking under APA. The court prospectively vacated NOP 5016, effective on August 22, 2016, and grandfathered in compost purchased or used between 2010 and that date. On August 18, 2016, AMS issued a Notice to Trade stating that in response to the court’s decision, the agency plans to conduct a notice-and-comment rulemaking. A proposed rule is under development with publication planned for April, 2017. In the interim, accredited certifying agents must continue to review and approve all materials used by organic producers, including compost, as part of an operation’s organic system plan. Certifying agents are responsible for ensuring that all materials used by organic producers comply with the USDA organic regulations. The proposed rule is likely to raise interest from the California delegation.

Organic Livestock & Poultry Practices

On April 13, 2016, AMS issued a proposed rule to amend the organic livestock and poultry production requirement in order to ensure consistent application of the USDA organic regulations for organic livestock and poultry operations and maintain confidence in organically labeled products.
The proposed rule grows out of a series of recommendations from the National Organic Standards Board (NOSB) and public comments to the NOSB indicating a need for more specific standards in order to support the continued growth in the organic sector and ensure consumer confidence in the organic market, which in 2015 was worth over $43.3 billion in the U.S. alone. This proposal aims to ensure that all organic livestock live in pasture based systems, with clear standards for living conditions that support the health and natural behavior of the animals. Over 6,000 comments were received.

In addition to the multiple recommendations of the NOSB, a 2010 OIG report recommended that AMS issue guidance regarding outdoor access for poultry in order to end the inconsistent interpretation of current rules. APHIS reviewed the proposed rule and determined that it would not have any negative impact on APHIS biosecurity efforts surrounding HPAI or other poultry diseases of concern.

AMS expects to publish a final rule by the end of calendar year 2016. The House and Senate Agriculture Committees and Appropriations Agriculture Subcommittees have asked about this issue. Rep. Farr, Pingree; Senators Leahy, Feinstein, and Merkley have inquired specifically.

**Potential California Federal Milk Marketing Order**
California is ranked first in milk production in the U.S. and currently operates a state milk marketing order administered by the California Department of Food and Agriculture. The 2014 Farm Bill contained a provision to allow California producers to request a Federal milk marketing order (FMMO) recognizing the California quota program.

FMMO’s are voluntary marketing tools that assure dairy farmers a minimum price for their milk throughout the year, while also assuring consumers of an adequate supply of milk to meet their needs. There are currently 10 FMMO’s that regulate about 60 percent of the milk produced in the U.S.

AMS conducted extensive outreach and education with California dairy industry stakeholders. AMS held over 25 outreach meetings, ensuring that over 95 percent of the California dairy industry was informed about the Federal order program and the rulemaking process. AMS received a formal proposal from California Dairies Inc., Land O’Lakes and Dairy Farmers of America and three additional proposals on behalf of the Dairy Institute of California, the California Producer Handlers Association, and Ponderosa Dairy.

AMS held three public outreach meetings to review the proposals received and a hearing to consider the establishment of a CA FMMO. USDA estimates the total number of transcript pages at around 8,000, not including exhibits. The complete transcript and hearing exhibits are available on the AMS website https://www.ams.usda.gov/rules-regulations/moa/dairy/ca. A Recommended Decision is being developed based on the evidence presented during the rulemaking and is expected to be published by the end of calendar year 2016. USDA will request public comment on the Recommended Decision and will issue a Final Decision. If USDA recommends a FMMO, dairy farmers potentially covered by the Order will vote on whether to adopt it. The process from the end of the hearing until final implementation is expected to take around eighteen months.
The House and Senate Agriculture Committees and Appropriations Agriculture Subcommittees have asked about this issue. Rep. Valadao; Senators Boxer, and Feinstein have inquired specifically.

**Organic Working Group**

The Organic Working Group is a USDA-wide coordinating body led by AMS. The OWG brings together staff from across the USDA to share information and coordinate policies, programs, and services for the sector. The Organic Policy Advisor, a career AMS employee, leads the OWG, serving as both a coordinator between agencies and an advisor within the Marketing and Regulatory Programs mission area. The AMS Administrator serves as the executive lead on organic across the department, collaboratively setting goals and work agendas with other agency leads to meet the growing needs of the organic sector. The OWG has met since the 1990s, conducting public listening sessions and creating inventories of USDA work through an Organic Task Force report (2010), an Organic Resource Guide (2012, updated 2015), and an organic training program, which reached over 30,000 USDA employees.

Since 2013, the OWG has created a team structure to focus on specific topics outlined in Secretary Vilsack’s guidance on organic agriculture: data, research, conservation, compliance, training and outreach, and internal capacity building. The group has active participation of about 30 members, and reaches networks of several hundred employees through email lists and intranet sites. The group maintains [www.usda.gov/organic](http://www.usda.gov/organic), a portal which connects visitors to organic resources and landing pages across the USDA. Strong supporters of cross USDA organic activities include Senator Leahy and others in the Organic Caucus.

**Know Your Farmer, Know Your Food Initiative**

The Know Your Farmer, Know Your Food (KYF2) initiative is a USDA-wide initiative (not an appropriated program) to strengthen local and regional food systems and strengthen the critical connection between farmers and consumers. The initiative facilitates cross-cutting efforts at USDA that seek to use existing USDA programs to break down structural barriers that have inhibited local food systems from thriving. Industry estimates show U.S. local food sales totaled at least $12 billion in 2014, up from $5 billion in 2008, and experts anticipate that value to hit $20 billion by 2019.

The initiative has a successful KYF2 website ([http://www.usda.gov/knowyourfarmer](http://www.usda.gov/knowyourfarmer)) that is a one-stop shop for resources and information about USDA programs and a place where interested producers could find support for local and regional food systems such as information on grants, loans, research, and the KYF2 Compass, which maps over 4,200 federal investments in local and regional food made by USDA and other Federal Agencies since 2009. The Compass allows users to search for federally-supported local food projects in their community and learn what others are doing across the country through keyword or geographic searches.

Through the efforts of KYF2 and between 2009 and 2015, USDA has invested over $1 billion in more than 40,000 local and regional food businesses and infrastructure projects, from the smallest on-farm projects like high tunnels, to large-scale investments like food hubs. Today,
United States Department of Agriculture  
2016 Presidential Transition  
Agricultural Marketing Service (AMS)

more than 160,000 farmers and ranchers nationwide are selling into local markets, from farmers markets and CSAs to local restaurants, grocery stores and institutions, generating huge returns for local communities. KYF2 is coordinated by the Local and Regional Food Systems Policy Advisor, an AMS employee, and Department assets such as the website and Compass are in the process of being transitioned to AMS hosting services. The AMS Administrator often acts as an “ambassador” to other agencies on issues important to local food stakeholders due to the Agency’s significant role in this work (see below). Rep. Pingree; Sen. Stabenow have shown interest in this issue.

Local Food Research and Development/Local Regional Markets  

Rural and urban food distribution markets and facilities play an important role in getting food to consumers. Poor markets and facilities can destroy product quality, cause spoilage losses, and add unnecessary handling costs to food, resulting in higher consumer prices or reduced income to farmers. AMS provides technical assistance and develops educational materials to help small and medium-sized producers, processors and wholesalers of farm products access new marketing channels, expand current markets, and improve the efficiency and quality of food distribution practices.

Each year, AMS helps hundreds of agricultural food businesses – including farmers’ markets, food hubs, wholesale markets, retailers, state agencies, community planning organizations, and other agri-food focused groups – enhance their local food marketing efforts to support prosperous, self-sustaining, and economically thriving communities. AMS works in cooperation with other USDA agencies to assess innovative and cost-efficient options that help producers, distributors, and planners by identifying and developing alternative market outlets that help meet growing consumer demand for local and regional foods.

Local and regional food system marketing outlets, including farmers markets, food hubs, and other local/regional, source-identified marketing models are important vehicles for enabling small and medium-sized farmers to reach household consumers and retain a greater share of the consumer food market. Today, more than 160,000 farmers and ranchers nationwide are selling into local markets with estimates sales total of at least $12 billion in 2014, up from $5 billion in 2008, and experts anticipate that value to hit $20 billion by 2019.

AMS facilitates the enhancement of producer income and improvements in marketing efficiency by: Developing and evaluating agricultural marketing solutions, including strategies for improving local and regional food systems; Providing design, construction, and renovation recommendations for local and regional food market facilities; Identifying emerging local and regional food system marketing opportunities for farm commodities, and conducting applied research to help producers, processors and distributors of farm commodities take advantage of these opportunities; Investigating and encouraging adoption of improved postharvest technologies and practices; Presenting marketing information and education through outreach activities, training workshops and an Internet-based information clearinghouses; Forming partnerships with federal and state agencies, universities, local governments, and non-profit
organizations to leverage resources and provide local food marketing technical assistance to rural and urban communities.

AMS conducts regular data collection and analysis on farmers’ markets and direct-to-consumer marketing to help stakeholders understand evolving influences on market performance and profitability. The National Farmers Market Directory connects consumers to producers at over 8,000 farmers’ markets by providing location and operation information. Food hubs and other aggregation models inform retail, commercial, and institutional customers who are seeking local and regional food products. Wholesale markets and facility design provide targeted site assessment and design services for food market planners, managers, and community stakeholders to improve the efficiency of permanent food market facilities.

AMS’ increased emphasis on regional food systems supports economic growth for tribal, state, county, community, non-profit, and private sector partners as well as small farmers. These new market opportunities develop and revitalize the infrastructure necessary for vibrant regional food systems and support innovation and proven business approaches such as cooperatives.

AMS is working with USDA’s National Institute for Food and Agriculture, Land-Grant Universities, and a national data center to develop a local and regional mapping project that should lead to strategic local and regional linkages that enhance the marketing of local foods. The data is being collected to identify and map states’ local food infrastructure and resources in the food supply chain, including production capacity, existing local and regional markets, distribution networks used by local buyers and sellers, processors, market size and demographics, and other food system traits. Rep. Pingree has shown interest in this issue.

Grants

AMS grant programs play an important role in facilitating marketing. The Federal-State Marketing Improvement Program (FSMIP) provides matching funds to States to assist in exploring new market opportunities for U.S. food and agricultural products, both locally and internationally. In FY 2016, AMS awarded nearly $1 million in grants for 12 projects. Recent FSMIP projects have supported efforts to bolster local and regional food systems through farmers markets and community supported agriculture operations, while other projects have focused on building international markets for pine lumber, pork, and more.

With the Specialty Crop Block Grant Program, AMS helps states strengthen markets for their specialty crops, such as fruits, vegetables, tree nuts, horticulture and nursery crops. In FY 2016, AMS awarded approximately $63 million for 693 projects.

These grants address issues ranging from food safety to research needs to increased access to fruits and vegetables, all benefiting specialty crop producers and consumers across the country. With additional funding from the 2014 Farm Bill, we are able to do even more to help specialty crop growers increase profitability and sustainability.
Farmers Market and Local Food Promotion Program - The purpose of the Program is “...to increase domestic consumption of and access to locally and regionally produced agricultural products, and to develop new market opportunities for farm and ranch operations serving local markets...” Entities eligible to apply for grants include agricultural cooperatives, producer networks, producer associations, local governments, nonprofit corporations, public benefit corporations, economic development corporations, regional farmers’ market authorities, Tribal governments, and local and regional food business enterprises. Grants are available annually to support local and regional food systems through two competitive programs: the Farmers Market Promotion Program (FMPP) and the Local Food Promotion Program (LFPP). FMPP grants fund farmer-to-consumer direct marketing projects such as farmers markets, community-supported agriculture programs, roadside stands, and agritourism. LFPP grants fund local and regional food business enterprises that serve as intermediaries to process, distribute, aggregate, and store locally or regionally produced food products. Projects also provide technical assistance and outreach, including planning grants for local food businesses.

In Fiscal Year 2016, AMS awarded approximately $26 million in competitive grants to expand marketing through these two programs. FMPP awarded $13.4 million to 50 project recipients and LFPP awarded $13.4 million to 52 project recipients. A similar amount will be available in Fiscal Year 2017.

Rep. Barr, Adams, Etsy, Brownley; Sen. Whitehouse, Tester are all interested in grants programs from AMS.

Organic Certification Cost-Share Program

AMS administered the Agricultural Management Assistance (AMA) Organic Certification Cost-Share Program through the end of FY 2016. In late FY 2016, AMS and FSA provided congressional notification that the program will be administered by FSA in FY 2017. The program provides reimbursements to eligible organic crop and livestock producers in 16 States for a portion of the costs of organic certification (up to 75 percent of their organic certification costs, not to exceed $750 per year).

By offering reimbursement for certification-related expenses, the USDA recognizes the cost of regulation and makes certification more affordable. State agencies (typically Departments of Agriculture) work with the USDA to administer the program. After entering into a cooperative agreement, the state agencies process applications for cost share funds, and the USDA reimburses them. Participating States are: Connecticut, Delaware, Hawaii, Maine, Maryland, Massachusetts, Nevada, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Utah, Vermont, West Virginia, and Wyoming.

Crop and livestock producers in eligible States who have received organic certification or a renewal of certification from an accredited certifying agent are eligible to participate. Transitioning farms that are not yet certified are not eligible. The program is not competitive – it is administered on a first-come, first-served basis until funds are exhausted. In 2014, USDA issued nearly 10,000 reimbursements totaling close to $6 million, providing critical support to
the organic community. Each participating State receives an annual budget based on the number of certified operations and past fund usage.

In FY 2017, the program will transfer from AMS to FSA. Only approximately half of the nation’s organic producers and handlers take advantage of this cost share program to help them with certification, and for those that do, the experience differs widely throughout the nearly 50 states that oversee the process. Now, organic producers will be able to visit any one of FSA’s 2,124 offices located in almost every rural county in the United States. Organic producers and handlers will experience uniformity in the program throughout the country, and they will be able to learn more about USDA FSA programs (disaster assistance, farm/facility/marketing loans) when they apply for cost share. Past Congressional representatives interested in this issue are in the States listed above and States where cost share is widely used such as Pennsylvania, New York, California, the Upper Midwest and Upper Northwest. These states would be particularly interested in a smooth transition to FSA.

**Organic - Hydroponic Crop Production**

Organic hydroponics is a method of growing plants using nutrient solutions in water, without soil. Terrestrial plants may be grown with their roots in the nutrient solution or in an inert medium, such as perlite, gravel, biochar, or coconut husk.

Some organic farms are utilizing hydroponic growing methods to produce organic crops under the USDA organic regulations. These producers use the same fertilizers and pest control practices as other organic farmers – primarily natural fertilizers and pest control methods. Organic hydroponic production is allowed as long as the producer can demonstrate compliance with the USDA organic regulations.

On September 2, 2015, the National Organic Program appointed 16 members to a task force to explore hydroponic and aquaponic production practices and their alignment with USDA organic regulations. The task force prepared a report for the NOSB about the current state of technologies and practices for hydroponics and aquaponics, as well as how those practices do or do not align with the USDA organic regulations. The NOSB will utilize the report to determine the best path forward regarding recommendations on hydroponics and aquaponics production systems. On July 21, 2016, AMS transmitted a report from the Hydroponic and Aquaponic Task Force to the NOSB. Stakeholders can view the Hydroponic and Aquaponic Task Force Report (pdf) on the AMS website. The public may provide comments to the NOSB through the public comment period for the November 2016 NOSB meeting. Congressional representatives in the North East particularly Senators Leahy and Sanders have expressed strong opposition to the use of Hydroponics in organic operations.

**Organic - Aquaculture**

AMS is in the process of developing a proposed rule for organic aquaculture standards. Final policy questions received from other Federal agencies are currently being addressed; the current schedule is for a proposed rule to be published in the Federal Register in November or December 2016. Once published, there will be an opportunity for interested parties to comment on the development of these standards.
This action proposes to establish standards for organic production and certification of farmed aquatic animals and their products in the USDA organic regulations. This action would also add aquatic animals as a scope of certification and accreditation under the National Organic Program. This action is necessary to establish standards for organic farmed aquatic animals and their products, which would allow U.S. producers to compete in the organic seafood market. Senator Farr has been the champion for this initiative.

**Organic - Trade and Research**
USDA signed five major trade agreements on organic products, first with Canada and then with the European Union, Japan, Korea, and Switzerland. The trade agreements are a significant indicator of the strength of the National Organic Program and the value of the USDA organic label.

AMS also helped lead the effort to establish international trade codes for tracking organic imports and exports. Organic trade codes were initially established in 2011 with 32 export codes and 20 import codes. Since 2009, USDA has supported researchers with nearly $220 million in funding for research focused on improving the productivity and success of organic agriculture. Additionally, USDA has undertaken new initiatives in conservation funding assistance, crop insurance for organic producers, data collection and price reporting. While Congress has not directly expressed either support or opposition to specific trade initiatives, there may be future interest in the negotiations currently taking place with Mexico, as the two countries negotiate an equivalency agreement.

**Organic - Sound and Sensible**
Making organic certification accessible, attainable, and affordable involves collaboration with many partners. To advance this work, USDA supports a diverse community of organic stakeholders. Nonprofits, businesses, universities, state governments and other organizations lead a range of technical assistance, training, outreach and certification programs for organic farms and businesses. To support their work, on September 5, 2014, USDA awarded project contracts to 14 organizations that will advance the NOP’s Sound and Sensible initiative.

These groups worked with hundreds of farmers and livestock handlers to help them simplify and streamline organic certification and compliance. USDA shared the results of these projects, including an array of valuable tools and resources – templates, decision-making tools, trainings, guides, tip sheets, and videos – with the entire organic community, from certifying agents to certified organic operations, to producers who are considering organic certification for the first time.

All of the projects share a common goal – making organic certification more accessible, attainable, and affordable while maintaining high standards, ensuring compliance, and protecting organic integrity. These projects educate producers and provide them with tools and information resources needed to streamline certification, inspections, recordkeeping, and compliance.

Sound and Sensible projects have been completed across the United States, and while Congress has not expressed direct support, these projects have led to increased counts of certified organic operations year-to-year.
**Organic INTEGRITY Database**

http://apps.ams.usda.gov/integrity/

AMS launched the Organic Integrity Database (INTEGRITY), a modernized system for tracking certified organic operations. In the past, AMS published the number of certified organic operations once a year, using data submitted annually by accredited organic certifying agencies. With the new database – funded by the 2014 Farm Bill – organic certifiers can add new operations and report changes to existing operations at any time, allowing us to report updated counts of certified organic operations throughout the year.

INTEGRITY makes it easy for anyone to search for organic farms and businesses by name, certification status, state, country, products, and other factors. By providing updated and accurate information about all certified operations, INTEGRITY will deter fraud, provide data for market research, enable stakeholders to identify market opportunities and make supply chain connections, support the data needs of international trading partners, and establish technology connections with certifiers to share more accurate and timely data.

Due to the success of the INTEGRITY program, industry representatives are likely to approach Congress with specific requests for further technology investments for the National Organic Program; these requests are likely to focus on import certificates and data availability, as well as further investment in INTEGRITY modules to support supply chain research and development.

**Organic - Domestic Certification of Hemp**

On August 12, 2016, USDA published a Statement of Principles on Industrial Hemp to inform the public on how Federal law applies to hemp grown according to the Agricultural Act of 2014 (Farm Bill). On August 23, 2016, AMS posted a revised Instruction to certifiers regarding the organic certification of industrial hemp, highlighting the Statement of Principles.

Previously, NOP published an instruction halting certification of industrial hemp until the publication of federal guidance. The 2014 Farm Bill allows for the domestic production of industrial hemp under certain specific criteria, including that the hemp must contain 0.3 percent or less THC content. Organic hemp that is imported legally into the United States and is certified according to the USDA organic regulations has not been affected by the Farm Bill or AMS instruction and has always been allowed to be used as an ingredient in food products, textiles or other agricultural products. Colorado has expressed continuous interest in the USDA position on organic hemp production.

**Organic - Nanotechnology**

In March 2015, AMS issued a memorandum in response to stakeholder requests for clarification on the status of nanotechnology in organic production and handling. The policy memo clarifies that engineered nanomaterials are prohibited in organic production and handling as recommended by the National Organic Standards Board.

The policy memo clarified that the statutory framework for the review of substances intended for use in organic production and handling would also apply to engineered nanomaterials. They would be reviewed just like any other petitioned substance. Before they could be considered, the
NOSB must evaluate the substance and review its effects on human health and the environment. While little interest has been expressed recently in nanotechnology, this subject could reemerge as an issue if the Board is called upon to review any nanomaterials as part of their advisory responsibilities.

**Food Safety Modernization Act**

The FDA Food Safety Modernization Act (FSMA) was signed into law on January 4, 2011. It aims to ensure the U.S. food supply is safe by shifting the focus from responding to contamination to preventing it. In November 2015, FDA released the FSMA Produce Safety final rule which establishes, for the first time, science-based minimum standards for the safe growing, harvesting, packing, and holding of fruits and vegetables grown for human consumption.

AMS participates with the FDA in the jointly-funded Produce Safety Alliance, a collaborative effort managed by Cornell University. PSA provides the produce industry with training/educational opportunities related to best practices and regulatory requirements (i.e., FDA’s Produce Safety regulation). Grower Training courses and Train-the-Trainer courses have been scheduled throughout the fall and winter with an up-to-date listing on the PSA website and more courses being added frequently. In response to input from stakeholders representing small farms, FDA issued two cooperative agreements in late FY 2016 to support the development of alternate curricula, one targeting the small farm/local food community and one targeting tribal growers.

AMS is beginning the last phase of a joint project with FDA to review our Good Agricultural Practices (GAP) Program to ensure that it aligns with the FDA produce safety regulation. The project is projected to wrap-up this fall/winter (2016/2017) after our FDA colleagues join AMS on some on-farm audits to observe actual GAPs and audit protocols on farms. The purpose of the on-farm component is to also align any observations noted with respect to identification and severity. The revised aligned GAP program will be available well in advance of the FDA compliance dates (earliest date is January 2018). Rep. Aderholt, DeLauro, Brownley; and Sen. Stabenow are all interested in this area.

**GroupGAP**

USDA Good Agricultural Practices (GAP) audits are voluntary audits that verify that fruits and vegetables are produced, packed, handled, and stored as safely as possible to minimize risks of microbial food safety hazards based on industry best practices and Federal guidelines. AMS received feedback that GAP audits were cost-prohibitive for some smaller growers and launched a successful 3-year pilot run in conjunction with the Wallace Center at Winrock International to develop a program that would allow a group of growers to share the cost of certification while providing buyers with the assurance that GAP standards were being followed. AMS began offering a new USDA GroupGAP program on April 3, 2016.

Unlike the traditional one-farm-one-audit GAP Program model, GroupGAP allows groups of growers, including food hubs, cooperatives, and grower associations, to collaboratively achieve GAPs certification as a group, allowing more accessibility to growers of all sizes, including...
small and mid-sized producers. By verifying growers’ compliance with buyers’ food safety requirements, GroupGAP has the ability to build local food marketing opportunities and markets for growers and retailers alike. Rep. Pingree, Senators Stabenow and Gillibrand have shown interest in this area.

**Research and Promotion Programs**

Research and Promotion programs, authorized by Congress, are requested, funded, and driven by industry. The programs establish a framework to pool resources to develop new markets, strengthen existing markets, and conduct important research and promotion activities. AMS provides oversight, helping to ensure fiscal responsibility, program efficiency, and fair treatment of participating stakeholders. AMS oversees more than 20 research and promotion boards that empower farmers, ranchers, and agricultural businesses. The House and Senate Agriculture Committees and Appropriations Agriculture Subcommittees have asked about research and promotion programs issues. Rep. Larsen, Rouzer, Pelosi; Senators Lee, and Booke’s offices have inquired specifically.

- **GAO Engagements:** On September 12, 2016, AMS received notification from OIG that GAO will be conducting two engagements with AMS to (1) Determine the status of USDA’s processing of checkoff FOIA requests since fiscal year 2005, and to determine (2) To what extent do USDA’s oversight activities ensure program funds are used in a manner consistent with authorizing legislation?, and (3) To what extent does USDA have performance measures that enable the agency to assess the effectiveness of the checkoff programs? An entrance interview with OIG and GAO took place Monday, September 19, 2016. AMS is sending responsive documents to GAO. Representative Pelosi requested the review.

- **American Egg Board:** The Chief Executive Officer of Hampton Creek, Inc., San Francisco, CA (Hampton Creek) complained that the American Egg Board (AEB) exceeded its mandate by funding a campaign to halt the growth of Hampton Creek. An AMS review of the allegations has been completed and was released publicly on October 7, 2016.

- **Organic Check-Off Program:** The 2014 Farm Bill authorized USDA – under the Commodity Promotion, Research, and Information Act of 1996 (1996 Act) – to accept an application for a research and promotion (R&P) program for organic products. On May 15, 2015, the Organic Trade Association (OTA) submitted a formal proposal, accompanied by a $250,000 bond, to the Agricultural Marketing Service (AMS) to cover expenses.

AMS invited the public to submit alternative proposals or partial proposals. AMS received eight partial proposals. On May 3, 2016, OTA submitted a letter to AMS to formally amend its proposal to include some stakeholder feedback, language from the partial proposals, and technical edits based on discussions with AMS.

Over the past year, AMS has worked with the Office of the General Counsel (OGC) to evaluate the legal implications of the order language. AMS continues to hear from stakeholder groups opposed to the proposal and to an organic R&P program in general. AMS is working to move forward expeditiously on drafting a proposed rule for the program, while also working to publish a proposal that is legally sound and can be successfully administered.
through its oversight. The goal is to have the proposed rule published by the end the 2016 calendar year.

The House and Senate Agriculture Committees and Appropriations Agriculture Subcommittees have asked about this issue. Rep. Pingree, Farr; and Senator Feinstein’s office have inquired about this issue.

- **R-CALF v. USDA:** On May 2, 2016, R-CALF USA filed suit in Federal District Court in Montana against Secretary Vilsack arguing that the Beef Checkoff Program should be promoting only U.S. beef. The complaint argues that the Checkoff Program compels R-CALF USA members to subsidize private speech because it allows the Montana Beef Council, to retain a portion of their assessments to fund their activities that does not qualify as government speech in violation of the First Amendment. The Montana Beef Council is a non-government organization that is a Qualified State Beef Council (QSBC) authorized to collect Beef Checkoff assessments.

 AMS issued a proposed rule on July 15, 2016, with a 60-day comment period, regarding the redirection of Beef Checkoff funds so producers in certain states including Montana have the option of directing their full assessment under the Beef Checkoff entirely to the National Board. Thus, under this proposal, producers would not be compelled to fund the activities of QSBCs that do not receive mandatory state assessments under state law. In the meantime, the Montana Beef Council’s Board of Directors indicated to AMS that it would comply with a producer’s written request, accompanied by appropriate and timely documentation, to have the entire $1-per-head assessment forwarded to the Cattlemen’s Beef Promotion and Research Board. A hearing was held on October 25, 2016, in District Court in Great Falls, MT, where both sides argued their motions.

- **National Pork Board:** In September 2012, HSUS filed suit in the Federal District Court of the District of Columbia against the Secretary under the Administrative Procedure Act challenging the approval of the National Pork Board’s purchase of Pork trademarks that include the “Pork, The Other White Meat” slogan from the National Pork Producers Council (NPPC). On August 14, 2015, the Court of Appeals for the District of Columbia ruled that plaintiff in this suit had standing to challenge USDA’s decision to approved the purchase of the trademarks. On remand, the Court stayed the case to allow USDA to review the continued payments under the purchase contract. USDA completed its review and determined that it was acceptable for the Board to continue with the payments. The litigation is ongoing and the decision will be based upon the administrative record filed on June 29, 2016 and August 24, 2016.

- **Softwood Lumber:**
  On December 12, 2014, Resolute Forest Products filed a complaint in U.S. District Court claiming that the Softwood Lumber Research and Promotion Order (Order) is unconstitutional and that USDA violated the Administrative Procedure Act (APA) when the program was promulgated. On September 9, 2015, the Court ruled in favor of USDA on five out of six APA challenges, and requested additional information on one APA issue concerning the rationale for the Order’s 15 million board foot exemption threshold. On May
17, 2016, the Court found that, on the basis of estimates and information reviewed, the selection of 15 million board foot exemption threshold was arbitrary and capricious and that the Softwood Lumber Order was unlawful as promulgated.

A hearing was held on June 1, 2016, to discuss remedies. The court ordered that: (1) USDA and the Softwood Lumber Board (Board) are prohibited from collecting further assessments from Resolute under the current Order; (2) USDA and the Board must maintain a balance of funds of not less than $1.1 million under the current Order; and (3) USDA and Department of Justice (DOJ) shall file a brief by June 29, 2016, supporting USDA’s position that the $1.1 million is assessments paid by Resolute should not be refunded. Subsequent to the briefs being filed, the judge ordered the parties to submit briefs on issues regarding sovereign immunity and the authority of USDA to require the Board to refund assessments to Resolute. The deadlines for USDA and Resolute to submit their briefs are October 18, 2016 and November 1, 2016, respectively. In addition, the continuance referendum that was scheduled to be conducted in August 2016, was postponed.

**Study of Rural Transportation Issues**

USDA’s Agricultural Marketing Service (AMS) and the U.S. Department of Transportation (DOT) are updating *Study of Rural Transportation Issues*, as required by the 2014 Farm Bill. The updated study is expected to be provided to Congress by December 2016. The comprehensive update includes 13 substantive chapters and will be approximately 500 pages in length, updating the previous study similar to how a textbook is revised. The update will include content on: (1) how freight transportation supports agriculture and rural America, (2) transportation of coal and biofuels, (3) modal and issue information on transportation of agricultural products via rail, barge, truck and ocean, (4) infrastructure planning, and (5) resiliency of the transportation system and implications for agriculture. The Farm Bill also requested the Study address “the sufficiency of infrastructure along waterways in the United States and the impact of the infrastructure on the movement of agricultural goods in terms of safety, efficiency and speed, as well as the benefits derived through upgrades and repairs to locks and dams.”

**House Report Request for A Long-Term Infrastructure Plan**

The FY16 House Ag Subcommittee report (HR 114-205) requires that USDA develop an infrastructure plan. Specifically, conference report language states: “Infrastructure Plan—The United States has experienced record levels of agricultural exports for the past few years, and there is support for expanding trade opportunities. However, increasing trade without consideration for the domestic infrastructure to adequately support it is short-sighted. The Midwest rail situation and disruptions at the West Coast ports are prime examples of the fact that USDA is reacting to the domestic and international commerce circumstances instead of having a proactive plan in place. Having the commodities available but not being able to deliver them will jeopardize the U.S.’s ability to remain a reliable trading partner. The Committee directs the Secretary to submit a long-term infrastructure plan that benefits American producers and provides examples of how USDA is working with other Federal agencies to prevent future transportation mishaps.”
The report was provided to Congress in March 2016. The report highlights USDA’s authority related to agriculture transportation issues, USDA’s role regarding recent agriculture transportation disruptions, and the roles of the Department of Transportation (DOT) and the Surface Transportation Board (STB). Under the Agricultural Adjustment Act of 1938 and the Agricultural Marketing Act of 1946, the Secretary of Agriculture is charged with representing the interests of agricultural producers and shippers in improving transportation services and facilities by, among other things, initiating and participating in U.S. Surface Transportation Board (STB) proceedings involving rates, charges, tariffs, practices, and services.

USDA does not have regulatory authority over transportation issues and cannot prevent or intervene during transportation disruptions or labor management disputes. USDA does not possess the resources and expertise to develop a long-term transportation infrastructure plan. In an effort to engage stakeholders on this issue, AMS and a representative from DOT participated in a stakeholders’ listening session facilitated by Representative David Young (R-Iowa) on February 22, 2016, in West Des Moines, IA.

**Market News**

AMS Market News (MN) provides current, unbiased information on supply, demand, prices, volume, movement, location, quality, condition, and other market data. Hundreds of market reports are issued daily, free of charge, on approximately 700 products and commodities. Annually, AMS provides 250,000 reports garnering 53 million views. In response to stakeholder interest, AMS continues to increase the number of market reports on local/regional products including reports on farmers markets, auctions and direct to consumers. In addition, AMS provides approximately 250 reports on organic commodities. AMS is utilizing an allocation of $3.5 million made in the 2014 Farm Bill to improve Market News reports for the organic sector.

MN produces information that impacts billions of dollars in agricultural trading each year. During the 2013 government shutdown, the absence of market intelligence made it difficult for farmers to determine a fair price for their produce and resulted in a significant decrease in commodity futures on the Chicago Mercantile Exchange. AMS has heard from many industries and the Fruit and Vegetable Advisory Committee about the importance of MN for their industries’ success. Market News data is critical for the Risk Management Agency, the International Trade Commission, the DOD Fresh Program, the Farm Service Agency, and the Grain Inspection Packers and Stockyards Administration. Rep. Peterson, Senators Grassley, Ernst, and Stabenow have shown interest in this area.

**Country of Origin Labeling**
[https://www.ams.usda.gov/sites/default/files/media/COOL%20Brochure%20CONSUMER%20Final.pdf](https://www.ams.usda.gov/sites/default/files/media/COOL%20Brochure%20CONSUMER%20Final.pdf)

Country of Origin Labeling (COOL) is a labeling law that requires retailers notify their customers with information regarding the source of certain foods. The covered commodities contained in the law include muscle cut and ground meats: beef, veal, pork, lamb, goat, and
chicken; wild and farm-raised fish and shellfish; fresh and frozen fruits and vegetables; peanuts, pecans, and macadamia nuts; and ginseng. The final rule for all covered commodities went into effect on March 16, 2009.

In response to Mexico’s and Canada’s allegations that U.S. COOL requirements for beef and pork products are inconsistent with World Trade Organization (WTO) obligations, the WTO found that, while the United States has the right to adopt mandatory COOL requirements, certain aspects of the existing requirements are inconsistent with U.S. obligations. In particular, the WTO found that the measure accords less favorable treatment to imported Canadian hogs and Canadian and Mexican cattle than to like U.S. hogs and cattle. On May 23, 2013, AMS issued a final rule that modified the labeling provisions to require the origin designations to include information about where each of the production steps (i.e., born, raised, and slaughtered) occurred and removed the allowance for commingling. As directed by Congress, on March 2, 2016, AMS published a final rule repealing COOL for beef and pork products. Removal of mandatory COOL requirements for beef and pork averts more than $1 billion in potential retaliation by Canada and Mexico, two of our biggest customers for beef and pork. Sen. Hoeven, and Grassley have shown interest in this area.

Livestock Mandatory Reporting
On April 2, 2001, AMS implemented the LMR program as required by the Livestock Mandatory Reporting Act of 1999 (1999 Act). The purpose of the 1999 Act was to establish a program of information regarding the marketing of cattle, swine, lambs, and the products of such livestock that provides information that can be readily understood by producers; improves the price and supply reporting services of the Department; and encourages competition in the marketplace for livestock and livestock products. The program facilitates open, transparent price discovery and provides all market participants, both large and small, with comparable levels of market information for cattle, swine, sheep, beef, pork, and lamb meat.

In September 2015, the program was reauthorized through September 2020. The timely reauthorization of the statute avoided a lapse in authority, which could have created uncertainty in the markets. On February 29, 2016, AMS published the final rule to amend lamb reporting requirements and published a proposed rule for the other changes provided for in the reauthorization. In February 2016, AMS held a stakeholder meeting for key industry personnel to review LMR regulation changes specific to each industry. Rep. Peterson, Senators Grassley, Ernst, and Stabenow have shown interest in this area.

Stakeholder group overview

GENERAL FARM ORGANIZATIONS

American Farm Bureau Federation
Farm Bureau is an independent, non-governmental, voluntary organization governed by and representing farm and ranch families united for the purpose of analyzing their problems and formulating action to achieve educational improvement, economic opportunity and social advancement. Farm Bureau is local, county, state, national and international in its scope. Farm Bureau is the voice of agricultural producers at all levels.

National Farmers Organization
National Farmers Organization provides commodity marketing and agricultural risk management programs and services. Through National Farmers Maximum Marketing, producers market their commodities in pooled groups, and their bank accounts benefit. Their negotiators assure transactions with major buyers include terms favorable to farmers and ranchers. Today's National Farmers members represent a cross-section of both conventional and organic production—grain growers, cattle and hog producers, and dairymen and women.

National Farmers Union
The National Farmers Union (NFU) represents family farmers, fishers and ranchers across the country, with formally recognized divisions in 33 states. The key to the success and credibility of the organization has been Farmers Union's grassroots structure in which policy positions are initiated locally. The policy process includes the presentation of resolutions by individuals,
followed by possible adoption of the resolutions at the local, state and national levels. Members and staff of the Farmers Union advocate these policy positions nationwide.

**National Sustainable Agriculture Coalition**
The National Sustainable Agriculture Coalition (NSAC) is the Washington, DC voice for more than 100 local and state-level organizations representing farmers and ranchers. NSAC works to support small and mid-size family farms, natural resource stewardship, healthy rural communities, and access to healthy, nutritious foods. NSAC is particularly active on local foods, organic agriculture and FSMA-related issues.

**National Association of State Departments of Agriculture**
The National Association of State Departments of Agriculture (NASDA) was founded in 1916. It grows and enhances agriculture by forging partnerships and creating consensus to achieve sound policy outcomes between state departments of agriculture, the federal government and stakeholders.

NASDA is governed by a 10 member Board of Directors consisting of a five member Executive Committee; one At-Large member; and the presidents of the four NASDA regions. Executive Committee members are the officers of the association and serve a five-year term. (Each region has at least one member serving on the Executive Committee.) The regional presidents serve a one year term. The At-Large member is selected by the Executive Committee.

**North American Agricultural Marketing Officials**
The North American Agricultural Marketing Officials (NAAMO) is an international organization of the State and Provincial government agricultural marketing officials who provide both domestic and international marketing services to the agricultural and food industries in their states and provinces.

Its’ purpose is to provide members with a forum to network, collaborate and share insights to enhance the development, marketing and promotion of North American food and agricultural products. NAAMO is a subsidiary of the National Association of State Department of Agriculture, which represents the leadership of the individual state departments of agriculture.

**ADVISORY COMMITTEES**

**National Organic Standards Board**
The National Organic Standards Board (NOSB) is a Federal Advisory Board made up of 15 dedicated public volunteers from across the organic community. Established by the Organic Foods Production Act (OFPA) and governed by the Federal Advisory Committee Act (FACA), the NOSB considers and makes recommendations on a wide range of issues involving the production, handling, and processing of organic products.

The NOSB generally meets twice per year at a public meeting to discuss the items on its work agenda, vote on proposals, and make recommendations to the Secretary. AMS and the NOSB value transparency and invite public input via advance written and in-person oral comments.
**Fruit and Vegetable Advisory Committee**
Since 2001, the Fruit and Vegetable Advisory Committee (FVAC) has met up to two times per year to develop recommendations for submission to the Secretary of Agriculture on issues affecting the U.S. produce industry. AMS officials ensure this Advisory Committee is administered according to the Federal Advisory Committee Act, and plan Advisory Committee meetings.

**UNIONS**

**National Meat Graders Council, American Federation of Government Employees, AFL-CIO**
The union represents all of the approximately 150 Agricultural Commodity Meat Graders. A new 4-year collective bargaining agreement (CBA) was signed on June 20, 2016, and approved by the Department on July 12, 2016. The CBA covers union representation, hours of work, working conditions, duties and performance, grievances, personnel actions (disciplinary, adverse, performance-based), reassignments, reduction in force, and unfair labor practices. Even though all meat graders are represented by the union, less than 25% join the union and pay dues. The management/union relationship is good.

**TRADE ASSOCIATIONS**

**American Mushroom Institute**
The American Mushroom Institute (AMI) is a national voluntary trade association representing the growers, processors and marketers of cultivated mushrooms in the U.S. and industry suppliers worldwide. Membership is available to any person interested in the mushroom industry. Categories of membership are grower, associate, professional and retiree.

AMI’s purposes are to anticipate and respond to issues affecting mushroom production, processing, and marketing; to monitor and influence legislative and regulatory issues; support, analyze, and disseminate relevant information such as research, statistics and innovations in technology; to develop best practices and training in food safety, integrated pest management and worker safety; and to provide a communications network for all industry partners.

**American National Cattle Women, Inc.**
Based in Denver, CO, American National Cattle Women, Inc. (ANCW), is an association with a history and record of positively promoting beef and the beef industry. In 1952, cattlewomen had the foresight to organize so that their individual messages would have a strong national voice. This national voice has had impact on consumers, politicians and other cattle producers all over the U.S. ANCW continues to impact beef promotion, legislation and youth development with the assistance of 27 states. ANCW offers an opportunity for women who share the passion for the beef industry and their way of life to network with one another.

**American Seed Trade Association**
Founded in 1883, the American Seed Trade Association (ASTA) is one of the oldest trade organizations in the United States. Its membership consists of over 700 companies involved in seed production and distribution, plant breeding, and related industries in North America. As an
authority on plant germplasm, ASTA advocates science and policy issues of industry-wide importance. ASTA, directed by its members, is involved in nearly all issues relating to plant germplasm, focusing on three areas of industry importance—regulatory and legislative matters at international, national, and state levels; new technologies impacting all crop species; and communication and education of members and appropriate public audiences regarding science and policy issues affecting the seed industry.

**American Sheep Industry Association**
The American Sheep Industry Association (ASI) began in 1865. The heart and soul of ASI are the thousands of farm and ranch families across America who raise sheep, as are the hundreds of individuals who volunteer a portion of their time, energy and financial support to work on behalf of the industry.

ASI provides the opportunity for producers to work with others in molding the policies and programs that improve the markets for sheep producers through enhanced marketing opportunities and reduced production costs. It is also the best option for those producers wanting to provide input on issues affecting his or her individual sheep operation but in need of a national, cooperative effort to find resolution.

**American Soybean Association**
Founded in 1920 and organized in 1925, the American Soybean Association (ASA) represents all U.S. soybean farmers on domestic and international issues of importance to the soybean industry. ASA’s advocacy efforts are made possible through voluntary farmer membership by farmers in 30 states where soybeans are grown. ASA is a grassroots organization led by soybean farmers from across America.

**Association of Official Seed Certifying Agencies**
The Association of Official Seed Certifying Agencies (AOSCA) is dedicated to assisting clients in the production, identification, distribution and promotion of certified classes of seed and other crop propagation materials. Established in 1919 as the International Crop Improvement Association, AOSCA’s membership includes Seed Certifying Agencies across the U.S., and global membership including Canada, Argentina, Brazil, Chile, Australia, New Zealand, and South Africa.

**California Citrus Quality Council**
The California Citrus Quality Council’s (CCQC) mission is to represent the California citrus industry in response to problems and issues which arise in state, national or international arenas and which affect the industry generally in areas of quarantine matters, technical assistance, international compliance or other related issues. Use of the word “related” is key to CCQC’s mission because it explains CCQC’s interest in preventing pest introductions, which would increase pesticide use and disrupt successful integrated pest management (IPM) activities. It also explains CCQC’s preemptive interest in international phytosanitary issues which could later restrict export opportunities. CCQC is pro-active and always maintains a science-based approach to the issues relating to the state’s citrus industry.
California Fresh Fruit Association
The California Fresh Fruit Association (formerly the California Grape & Tree Fruit League) is a voluntary, nonprofit agricultural trade association that represents California’s fresh fruit industry. The California Fresh Fruit Association (CFFA) is the key public policy organization that represents the needs and interests of its members by advocating on behalf of its members on legislative and regulatory issues, at state, Federal, and international levels. Through the daily presence of the CFFA’s representatives in Sacramento and Washington, D.C., the organization actively monitors legislative and regulatory activity on such issues as farm labor, crop protection materials, marketing requirements, environmental resources, trade, packaging, transportation and other issues of importance.

CME Group
The CME Group is a risk management organization comprised of four exchanges—CME, CBOT, NYMEX and COMEX—they offer the widest range of global benchmark products across all major asset classes, helping businesses everywhere mitigate the myriad of risks they face in today's uncertain global economy.

Corn Refiners Association
Through a series of operating committees of executives from corn refining firms, the Corn Refiners Association conducts programs of technical service, public relations and government relations for the association membership. The association is a primary source of educational material on corn and products from corn for schools, government, journalists, agriculture and agribusiness.

Florida Fruit and Vegetable Association
The Florida Fruit & Vegetable Association (FFVA) is the state's leading full-service specialty crop organization, serving Florida's grower-shipper community since 1943. FFVA represents a broad range of crops, including vegetables, citrus, tropical fruit, berries, sod, sugar cane, tree crops and more. Their mission is to enhance the business and competitive environment for producing and marketing fruits, vegetables, and other crops. The association offers membership in two categories: Producer Members and Trade Associate Members.

Food Marketing Institute
The Food Marketing Institute (FMI) is the trade association that serves as the voice of food retail. We assist food retailers in their noble role of feeding families and enriching lives. FMI promotes policies, programs and forums supporting its members, their customers and supplier partners, and other industry stakeholders in the areas of government relations, food and product safety, and defense, education, industry collaboration and networking, research, health and wellness, social, environmental and sustainability programs, and communications.

International Bottled Water Association
Founded in 1958, The International Bottled Water Association’s (IBWA) member companies include U.S. and international bottlers, distributors, and suppliers. IBWA unifies the bottled water industry and represents uncompromising commitment to the safety and availability of
bottled water worldwide. While IBWA represents companies of all sizes, the vast majority of the 640 members are small, locally owned companies.

**Inter-American Commission for Organic Agriculture**

In 2008, the Inter-American Commission for Organic Agriculture (ICOA) was founded to support organic agriculture in the Americas and facilitate the trade of organic products.

ICOA consists of agriculture officials from 18 member countries in Latin America and aims to harmonize organic standards, strengthen control systems and support market development in Latin America. The United States sources many organic products from Latin America including bananas, apples, pears, wine, strawberries, raspberries, blueberries, coffee, mangoes, papayas, winter vegetables and more.

USDA supports greater harmonization of organic regulatory systems to support market development on a global level. ICOA is a catalyst that promotes the necessary dialogue between the United States and the Western Hemisphere on this growing global market.

**International Fresh-cut Produce Association**

The International Fresh-cut Produce Association (IFPA) is a leading global advocate and business resource for the makers of pre-cut, pre-washed, packaged fruits and vegetables and their allied suppliers. As the only organization representing the $12 billion fresh-cut produce industry, IFPA’s members include fresh-cut produce processors, as well as packaging and machinery equipment manufacturers, packaging/materials suppliers and technology solution providers.

Founded in 1987, IFPA has a robust membership of over 500 fresh-cut processors, distributors and retail/foodservice produce buyers, as well as companies that supply equipment, goods and services to the fresh-cut industry. Their uniquely interdependent membership fosters the collective power of the fresh-cut sector.

**Meat Import Council of America**

The Meat Import Council of America’s primary goal is to foster the trade, commerce and interests of importers and exporters of fresh and/or frozen and/or cured and/or cooked and/or canned meats; to seek and obtain relief from unlawful or burdensome exactions, statutes and regulations; to work with importers’ and exporters’ associations, domestic or foreign governmental bodies, and others toward solutions to industry problems; to procure uniformity and certainty in customs and usages of the meat trade; to distribute accurate information to its
members and to the public; and to settle differences and promote free intercourse between its members and those with whom they deal.

**National Bison Association**
In 1995, the American Bison Association (formed in 1975) and the National Buffalo Association (chartered in 1966) merged to become the National Bison Association (NBA). NBA has over 1,100 members in all 50 states and 10 foreign countries. NBA is a non-profit association of producers, processors, marketers, and bison enthusiasts. The mission of NBA is to bring together stakeholders to celebrate the heritage of American bison/buffalo, to educate, and to create a sustainable future for the bison industry.

**National Chicken Council**
The National Chicken Council was first established in 1954 in Richmond, VA, as the National Broiler Council. NCC headquarters moved to the nation’s capital in 1965 and the new name, National Chicken Council, was adopted in 1998, to better describe the industry and its products.

The National Chicken Council (NCC), based in Washington, D.C., is a national, non-profit trade association representing the U.S. chicken industry. NCC is a full-service trade association that promotes and protects the interests of the chicken industry and is the industry’s voice before Congress and Federal agencies. NCC member companies include chicken producer/processors, poultry distributors and allied industry firms. The producer/processors account for approximately 95 percent of the chickens produced in the United States.

**National Cattlemen’s Beef Association**
In January 1996, the National Cattlemen’s Beef Association (NCBA) was formed from the merger of the Beef Industry Council of the Livestock and Meat Board and the National Cattlemen's Association, creating one unified organization representing all segments of the beef industry. NCBA has offices in Centennial, CO, and Washington, D.C.

NCBA is composed of two divisions—the Policy Division and the Federation of State Beef Councils (Federation). The Federation is an integral part of the Beef Checkoff Program and as such is not permitted to engage in any policy activities. The Federation works closely with Cattlemen’s Beef Board as it elects 10 of the 20 members to the Beef Promotion Operating Committee; the remaining 10 members come from CBB membership. The Policy Division works with issues that are of concern to its stakeholders and works closely with its membership so that concerns of the producers may be voiced through the NCBA.

**National Cotton Council of America**
The National Cotton Council of America’s mission is to ensure the ability of all U.S. cotton industry segments to compete effectively and profitably in the raw cotton, oilseed, and U.S.-manufactured product markets at home and abroad. The Council serves as the central forum for consensus-building among producers, ginner, warehousers, merchants, cottonseed processors/dealers, cooperatives and textile manufacturers. The organization is the unifying force in working with the government to ensure that cotton's interests are considered.
National Grain and Feed Association
The National Grain and Feed Association (NGFA), founded in 1896, is a broad-based, non-profit trade association that represents and provides services for grain, feed and related commercial businesses. Its activities focus on enhancing the growth and economic performance of U.S. agriculture. NGFA handles more than 70 percent of all U.S. grains and oilseeds utilized in domestic and export markets. The Association represents a balance of small and large companies, including both privately owned and cooperative firms.

National Grocers Association
The National Grocers Association (NGA) is the national trade association representing the retail and wholesale grocers that comprise the independent sector of the food distribution industry. Also represented are affiliated associations, manufacturers, and service suppliers, as well as other entrepreneurial companies that support NGA’s mission and philosophy, which is to ensure independent, community-focused retailers and wholesalers the opportunity to succeed and better serve the consumer through its policies, advocacy, programs and services.

National Livestock Producers Association
Following passage of the Packer and Stockyards Act of 1921, the National Livestock Producers Association (NLPA) was founded in direct response to diminishing markets and excessive supplies of livestock. The realization that producers needed to work together to battle marketing problems led to the development of livestock cooperatives nationwide.

When the Federal Farm Board was established in the early 1930s the NLPA took on a new role as a capitalization vehicle for several livestock credit corporations across the country. The credit corporations were formed to make needed credit available to the producers through organizations that would specialize in working with livestock lending.

National Milk Producers Association
The National Milk Producers Federation (NMPF), established in 1916 and based in Arlington, VA, develops and carries out policies that advance the well-being of dairy producers and the cooperatives they own. The members of NMPF’s cooperatives produce the majority of the U.S. milk supply, making NMPF the voice of dairy producers on Capitol Hill and with government agencies.

NMPF provides a forum through which dairy farmers and their cooperatives formulate policy on national issues that affect milk production and marketing. NMPF’s contribution to this policy is aimed at improving the economic interests of dairy farmers, thus assuring the nation's consumers an adequate supply of pure, wholesome, and nutritious milk and dairy products.

National Pecan Shellers Association
The National Pecan Shellers Association (NPSA), a non-profit trade association, is committed to educating culinary and health professionals, food technologist and the general public about the nutritional benefits, variety of uses and great taste of pecans. NPSA’s purpose is to serve the best interests of industry members, its customers, and consumers of its products through a governing body of an 11-member Board of Directors and several committees with general membership meetings being held twice a year.
United States Department of Agriculture
2016 Presidential Transition
Agricultural Marketing Service (AMS)

**National Organic Coalition**
The National Organic Coalition (NOC) is a coalition of nonprofit farmer, consumer and environmental organizations that advocate on behalf of organic producers and consumers. The NOC seeks to advance organic food and agriculture and ensure a united voice for organic integrity, which means strong, enforceable, and continuously improved standards. The coalition works to assure that policies are fair, equitable, and encourage diversity of participation and access.

**National Pork Producers Council**
The National Pork Producers Council (NPPC), representing 43 affiliated state associations, works to ensure that the U.S. pork industry remains a consistent and responsible supplier of high-quality pork to domestic and international markets. Through public-policy outreach, NPPC fights for reasonable legislation and regulations, develops revenue and market opportunities, and protects the livelihood of America’s 68,000 pork producers. NPPC has its own political action committee, PorkPAC, dedicated to educating and supporting federal lawmakers and candidates who support pork producers.

NPPC also uses ad hoc task forces to study various industry issues and maintains strong relationships with other channel partners through the Packer Processor Industry Council and the Pork Alliance Committee. In addition, NPPC works closely with the National Pork Board.

**National Potato Council**
The National Potato Council (NPC) was formed in 1948 for the 45,000 U.S. potato growers. Currently located in Washington, D.C., NPC was organized to promote the greater consumption of Irish potatoes and to nationally represent potato farmers on legislative and regulatory matters.

To this day, NPC remains committed to providing a unified voice for the U.S. potato industry on national legislative, regulatory, environmental and trade issues to promote the increased profitability for growers and greater consumption of potatoes. NPC has been highly successful in representing the diverse interests of U.S. potato producers and plays a significant role influencing policy that directly affects the U.S. grower's ability to compete both domestically and globally.

**National Restaurant Association**
The National Restaurant Association (NRA) supports over 500,000 restaurant businesses. In partnership with state restaurant associations, NRA works every day to empower all restaurant owners and operators to achieve more than they thought possible. NRA represents and advocates for foodservice industry interests—taking on financial and regulatory obstacles before they hit members’ bottom line. They also provide tools and systems that help members of all sizes get better operating results.

**National Sorghum Producers Association**
The National Sorghum Producers (NSP) Association serves as the voice of the sorghum industry from coast to coast through legislative and regulatory representation and education. NSP is
leading legislative and regulatory change through effective policy and relationships for a more profitable, diverse and competitive sorghum industry.

**National Sheep Industry Improvement Center**
The Mission of the National Sheep Industry Improvement Center (NSIIC) is to improve the infrastructure of the U.S. sheep industry by strengthening and enhancing the production and marketing of sheep and sheep products.

**National Turkey Federation**
The National Turkey Federation (NTF) serves as the national advocate for the turkey farmer and processors—representing their point of view to Congress and Federal agencies. NTF also tracks trends and identifies challenges unfolding in the public, legislative, regulatory, and news media that could potentially impact the entire industry. NTF’s professional staff helps members successfully bridge an understanding between the public and the producer.

**North American Meat Institute**
The North American Meat Institute (NAMI) is a national trade association that represents companies that process 95 percent of red meat and 70 percent of turkey products in the U.S. and their suppliers throughout America. Headquartered in metropolitan Washington, DC, NAMI keeps its fingers on the pulse of legislation, regulation, and media activity that impacts the meat and poultry industries. NAMI conducts scientific research through its foundation designed to help meat and poultry companies improve their plants and their products. NAMI is governed by elected leaders and staffed by 32 professionals.

**Northwest Horticultural Council**
The Northwest Horticultural Council (NHC) was incorporated in 1947 with the broad purpose of coordinating the activities of its members and to assist in handling problems common to the Northwest tree fruit industry. Its current work focuses on national and international policy issues affecting growers and shippers in Idaho, Oregon and Washington.

**Organic Trade Association**
The Organic Trade Association (OTA) is the membership-based business association for organic agriculture and products in North America. OTA represents over 8,500 organic businesses across 50 states. Its members include growers, shippers, processors, certifiers, farmers' associations, distributors, importers, exporters, consultants, retailers and others. Organic products represented include organic foods, ingredients and beverages, as well as organic fibers, personal care products, pet foods, nutritional supplements, household cleaners and flowers. OTA’s organic business members work together through networking, advocacy and other initiatives to encourage and protect organic farming practices, and to share messages about the positive environmental and nutritional attributes of organic products with consumers, media and policymakers. OTA has an annual conference each year in May.

**R-CALF USA**
R-CALF USA, the Ranchers-Cattlemen Action Legal Fund, United Stockgrowers of America, represents thousands of U.S. cattle and sheep producers on domestic and international trade and marketing issues. R-CALF USA, a national, non-profit organization, is dedicated to ensuring the continued profitability and viability of the U.S. cattle and U.S. sheep industries. R-CALF USA’s
membership consists primarily of cow-calf operators, cattle backgrounders and feedlot owners. Its members are located in 47 states, and the organization has many local and state association affiliates, from both cattle and farm organizations.

Texas Produce Association
The Texas International Produce Association (TIPA) was created in 1942 by a group of industry leaders who shared a vision to expand the Texas produce industry. These industry pioneers understood that by working together they would be able to reap greater benefits, thus TIPA was formed to represent the business, economic and political interests of Texas-grown fruits and vegetables. In 2012, in response to the rapidly evolving needs of its members, TIPA’s mission was further expanded to address the issues and opportunities surrounding the importation and marketing of foreign grown produce that was being shipped through Texas ports.

United Egg Association
The United Egg Association (UEA) is part of the United Egg Producers. UEA itself has three divisions:

1. The UEA Further Processors group was established in 1983 to represent those companies engaged in breaking and further egg processing into egg products. The organization has approximately 20 members who in turn break and further process about 80% of all U.S. eggs broken. Customers include bakeries, food service establishments, and food manufacturers.

2. The UEA Allied group was organized in January 1995 as a trade association representing companies or individuals that are engaged in providing products, services, consulting, and/or information services to the egg industry but do not produce eggs or engage in the processing of eggs into egg products. UEA Allied members, who in many cases have office or manufacturing in urban areas, help egg farmers expand the communication with state and federal legislation.

3. The UEA Producers-Packers group was organized in September 1995 as a trade association to represent companies or individuals that pack (and/or produce) eggs but do not qualify for membership in a Capper-Volstead Cooperative.

United Egg Producers
United Egg Producers (UEP) is a Capper-Volstead cooperative of egg farmers from all across the United States and representing the ownership of approximately 95 percent of all the nation's egg-laying hens. UEP and their farm members believe in consumer choice and therefore produce eggs in modern cage, cage-free and organic production systems as well as producing other specialty shell egg products. Their members also provide liquid, dried and other forms of further processed egg products to the retail, food service and food manufacturing sectors.

United Fresh Produce [Fruit & Vegetable] Association
Founded in 1904, the United Fresh Produce Association brings together companies across every segment of the fresh produce supply chain, including growers, shippers, fresh-cut processors, wholesalers, distributors, retailers, foodservice operators, industry suppliers, and allied associations. They empower industry leaders to shape sound government policy. They deliver the resources and expertise companies need to succeed in managing complex business and technical issues and provide the training and development individuals need to advance their
careers in produce. Through these endeavors, they unite the industry with a common purpose—to build long-term value for members and grow produce consumption.

**United Salmon Association**  
The United Salmon Association is a fishermen's marketing association dedicated to the promotion of Wild Alaska Salmon.

**United States Tuna Foundation**  
The U.S. Tuna Foundation (USTF) was established in 1976 to serve as an umbrella organization representing the various interests of the U.S. canned tuna industry. USTF represents the international and domestic interests of the industry on numerous issues including fishing access arrangements, federal and state regulations, national legislation and domestic marketing.

**U.S. Apple Association**  
The U.S. Apple Association represents the nation’s 7,500 apple growers, close to 40 state and regional apple associations, and hundreds of apple-related companies. By unifying a diverse industry, we serve three primary goals:

1. Represent the U.S. apple industry on national issues.
2. Increase demand for U.S. apples and apple products.
3. Provide accurate, helpful information on matters pertaining to U.S. apples, apple products and the apple industry.

**U.S. Cattlemen’s Association**  
The purpose of the United States Cattlemen’s Association (USCA) is to present an effective voice for the United States cattle industry. USCA is dedicated to, and focused on, efforts in Washington, D.C. to further the interests of cattle producers on mandatory country of origin labeling, international trade, market competition, reform of the mandatory beef checkoff, animal health, welfare and identification, private property rights and other issues that affect the United States cattle industry.

**U.S. Meat Export Federation**  
The U.S. Meat Export Federation (USMEF) is a non-profit trade association working to create new opportunities and develop existing international markets for U.S. beef, pork, lamb and veal. Headquartered in Denver, CO, USMEF has offices in Seoul, Tokyo, Beijing, Hong Kong, Shanghai, Singapore, Taipei, Moscow, St. Petersburg, Mexico City, Monterrey, and Brussels. USMEF also has special market representatives covering China, the Middle East, the Caribbean, as well as Central and South America.

USMEF is the trade association responsible for developing international markets for the U.S. red meat industry. It is funded by USDA; the beef, pork, lamb, corn and soybean checkoff programs; and its members.

**U.S. Poultry & Egg Association**  
The U.S. Poultry & Egg Association is the world's largest and most active poultry organization. They represent the entire industry as an "All Feather” association. Membership includes
producers and processors of broilers, turkeys, ducks, eggs and breeding stock, as well as allied companies. Formed in 1947, the association has affiliations in 27 states and member companies worldwide. The U.S. Poultry & Egg Association strives to serve its poultry and egg members through research, education, communications and technical services.

**USA Poultry & Egg Export Council**
The USA Poultry & Egg Export Council’s (USAPEEC's) reach is far ranging. Through its network of international offices and consultants in key markets around the globe, USAPEEC keeps current on issues that have a direct impact on U.S. poultry and egg exports.

Although USAPEEC's mission is to promote exports of U.S. poultry and eggs around the world, the Council has evolved into an association that is an advocate for the industry on trade policy issues. Because of its status as a not-for-profit entity, USAPEEC does not lobby, but the organization can and does act as intermediary with USDA, both in Washington and at embassies and Agricultural Trade Offices around the world.

**Western Growers Association**
Since 1926, Western Growers has represented local and regional family farmers growing fresh produce in Arizona and California and now Colorado, too. Its members provide half the nation’s fresh fruits, vegetables and tree nuts, including a third of America’s fresh organic produce. Some members also farm throughout the U.S. and in other countries so people have year-round access to nutritious food. For generations, members have provided both variety and healthy choices as the first line of defense against obesity and disease.

**COMMODITY RESEARCH AND PROMOTION AND MARKETING ORDER PROGRAMS**

**Almond Board of California**
A Federal Marketing Order for almonds was established in 1950. At that time, it dealt primarily with compliance issues, and accordingly, was called the Almond Control Board. In the 1970’s, recognizing a need to address market development, the name was changed to the Almond Board of California. While compliance is still a crucial part of its activities, the Board now engages in production, nutrition and market research, advertising and promotion in domestic and international markets, quality control, and statistical analysis and dissemination.

**American Egg Board**
The American Egg Board (AEB) connects America’s egg farmers with consumers, communicates the value of “The incredible edible egg™” and receives funding from a national legislative checkoff on all egg production from companies with more than 75,000 hens in the continental United States.

AEB's mission is to increase demand for eggs and egg products through research, education and promotion. The Board consists of 18 members and 18 alternates from all regions of the country who are appointed by the Secretary of Agriculture. AEB staff carries out the programs under the Board’s direction.
American Lamb Board
In 2002, AMS issued the Lamb Promotion, Research, and Information Order, which created the program under the authority of the Commodity Promotion, Research, and Information Act of 1996. The Lamb R&P program operates as the American Lamb Board. The program's goal is to develop and expand the markets for sheep and sheep products. Under the program, producers, seedstock producers and feeders pay an assessment of $0.007 per pound, and first handlers pay $0.42 per pound. Importers are not assessed. These assessments fund the American Lamb Board, which runs the industry’s research and promotion activities under AMS oversight.

USDA-certified organizations nominate, and the Secretary of Agriculture approves, the 13 Board members that represent one-of-two geographic regions: the area east of the Mississippi River and the area west of the Mississippi River.

California Raisin Marketing Board
The California Raisin Marketing Board was created by a State Marketing Order in 1998 and it is 100 percent grower funded. The mission of the California Raisin Marketing Board is to conduct market development activities to improve the demand for all categories of raisin usage, including ingredient usage, and for retail package, both branded and private label. Also, the Board sponsors crop production, nutrition and market research. Lastly, the mission is to create a positive marketing environment within which the industry can collectively expand the worldwide demand for California Raisins.

California Table Grape Commission
The California Table Grape Commission was established by an act of the state’s legislature in 1967. Approved by a grower referendum in 1968, the commission has been affirmed through grower referenda every five years since its inception. The commission’s importance to the state and its mandate—to maintain and expand markets for fresh California grapes and to create new and larger intrastate, interstate and foreign markets—was reaffirmed and its authorities broadened by the legislature in 1995, 1997 and again in 2001.

Cattlemen’s Beef Promotion and Research Board
The Cattlemen's Beef Promotion And Research Board, usually referred to as the Cattlemen's Beef Board (CBB), consists of 100 members, including domestic beef, dairy and veal producers, as well as importers of beef and beef products.

The Beef Board oversees collection of $1-per-head on all cattle sold in the U.S. and $1-per-head equivalent on imported cattle, beef and beef products.

Cotton Board
Based in Memphis, TN, the Cotton Board is the oversight and administrative arm of the Cotton Research & Promotion Program, representing U.S. Upland cotton.

To fund the Program, the Cotton Board collects a $1 per bale, plus up to 1 % of bale value, of all Upland cotton harvested and ginned in the U.S., as well as an importer assessment for all Upland
cotton products imported into the U.S. The Cotton Board contracts with Cotton Incorporated to carry out the actual research and promotion activities for U.S. producers and importers of cotton.

**Florida Tomato Committee**  
The Florida Tomato Committee is a Federal Marketing Order that was established pursuant to Federal Marketing Agreement and Order No. 966 as amended regulating the handling of tomatoes and has authority over the tomatoes grown in Florida’s production area comprising the counties of Pinellas, Hillsborough, Polk, Osceola, Brevard and all counties situated south. It affects tomatoes that are shipped outside the regulated area, which includes that portion of the state of Florida situated east of the Suwanee River and south of the Georgia border.

The Committee funds research and development projects and marketing promotions that focus on maximizing Florida tomato movement, including consumer and marketing research, and customized marketing programs.

**National Honey Board**  
The National Honey Board (NHB) is an industry-funded agriculture promotion group that works to educate consumers about the benefits and uses for honey and honey products through research, marketing and promotional programs. The Board’s work, funded by a $0.01 per pound to a maximum of $0.02 per pound assessment on domestic and imported honey, is designed to increase the awareness and usage of honey by consumers, the foodservice industry and food manufacturers. The ten-member Board, appointed by the U.S. Secretary of Agriculture, represents producers (beekeepers), packers, importers and a marketing cooperative.

**Mohair Council of America**  
The Mohair Council of America is an organization that helps the producers of angora goats promote American mohair. Their mission is to protect and preserve the integrity of the ranchers/producers of Angora goats.

**Mushroom Council**  
In 1990, the Mushroom Promotion, Research and Consumer Information Act was passed by Congress to strengthen the mushroom industry’s position in the marketplace, maintain and expand existing markets and uses for mushrooms, and develop new markets and uses for mushrooms. In 1993, the Mushroom Council was established to carry out the direction of this act. Today, the Mushroom Council plays a very important role in the national promotion of fresh mushrooms through consumer public relations, foodservice communications and retail. Thanks to the Mushroom Council, mushrooms have their own month to be honored and eaten. September is National Mushroom Month.

**National Dairy Promotion & Research Board**  
The Dairy Research and Promotion Program, also known as the Dairy Checkoff Program, is a national producer and importer program for dairy product promotion, research and nutrition education. To fund the program, U.S. dairy farmers pay a 15-cents per hundred-weight assessment on their milk and importers pay 7.5-cents per hundred-weight on dairy products.
imported into the U.S. The program was created and is administered under the Dairy Production Stabilization Act of 1983 and the Dairy Promotion and Research Order.

**National Fluid Milk Processors Promotion Board**
The Fluid Milk Processor Promotion Program, or Fluid Milk Checkoff Program develops and finances a generic advertising program designed to maintain and expand markets and uses for fluid milk products produced in the U.S. Processors marketing more than 3 million pounds of fluid milk per month pay a 20-cent per hundred-weight assessment on fluid milk processed and marketed in consumer type packages in the U.S. The program was created and is administered under the Fluid Milk Promotion Act of 1990 and the Fluid Milk Promotion and Research Order.

**National Pork Board**
The National Pork Board oversees the Pork Checkoff program, which is overseen by the USDA. Today’s pork checkoff is at work for pork producers. U.S. pork producers and importers pay 0.40 of 1 % of market value when pigs are sold and when pigs or pork products are brought into the United States.

**National Potato Promotion Board**
The United States Potato Board (USPB) is the nation’s potato marketing and research organization. Based in Denver, CO, USPB represents more than 2,500 potato growers and handlers across the country. USPB was established in 1971 by a group of potato growers to promote the benefits of eating potatoes. Today, as the largest vegetable commodity board, the USPB is proud to be recognized as an innovator in the produce industry.

Anchored by a strong foundation of market and consumer research and analysis, USPB’s domestic and international potato marketing programs include: advertising, nutrition science, public relations, retail and foodservice marketing, and issues management. Whether the potato is grown for fresh, frozen, chip, dehydrated or seed use, the USPB is dedicated to positioning potatoes as a nutrition powerhouse.

**National Watermelon Promotion Board**
The National Watermelon Promotion Board (NWPB) operates with a single objective: to increase consumer demand for watermelon through promotion, research and educational programs. The Orlando-based non-profit organization was formed in 1989 by watermelon growers and shippers. Since then, NWPB has developed marketing programs to boost watermelon sales in supermarkets throughout the U.S. and Canada. NWPB is also working to develop sales opportunities for watermelon in Japan and the U.K.

**National Peanut Board**
The National Peanut Board strives to help America’s 7,000 peanut-farming families improve their production practices and continue to put the world’s highest-quality peanut product in the hands of people around the globe.

**U.S. Highbush Blueberry Council**
The U.S. Highbush Blueberry Council (USHBC) is an agriculture promotion group made up of blueberry farmers, processors and importers in North and South America, who work together to
research, innovate and promote the fruits of their labors as well as the growth and well-being of the entire blueberry industry. The blueberry industry is committed to providing blueberries that are grown, harvested, packed and shipped in clean, safe environments.

The Council was founded and funded by its members, with independent oversight from the USDA. In 2000, members of the North American Blueberry Council, a voluntary organization that has supported the highbush blueberry industry for more than 50 years, submitted a proposal to the USDA for the Blueberry Promotion, Research and Information Order and creation of the USHBC. Growers and importers approved the program in a referendum.

**United Sorghum Checkoff Board**
The United Sorghum Checkoff Program has been working with checkoff dollars to help improve profitability for sorghum producers nationwide. Since 2008, the Sorghum Checkoff has enhanced its efforts in the areas of research, promotion and information to help sorghum producers yield greater financial return. Today, the economic picture for sorghum is bright, with greater acreage being devoted to sorghum and increased demand coming from foreign markets and here in the U.S.

**United Soybean Board**
The soybean checkoff is supported entirely by soybean farmers with individual contributions of 0.5 percent of the market price per bushel sold each season. The efforts of the checkoff are directed by the United Soybean Board, composed of volunteer farmer-leaders often nominated by their state-level checkoff organizations, called Qualified State Soybean Boards (QSSBs). The nominees are appointed to the board by the U.S. Secretary of Agriculture.

**Washington Apple Commission**
The primary purpose of the Washington Apple Commission is advertising, promotion, education and market development for the Washington fresh apple crop. Currently, no promotions are being implemented in the United States, but promotions are in place in more than 30 countries where Washington apples are sold. Initially established in 1937 by the Washington State Legislature as The Washington State Apple Advertising Commission—at the request of the apple industry—is one of the oldest commodity commissions in the United States.

**PROCESSOR GROUPS**

**Alaska Fisheries Development Foundation, Inc.**
Founded in 1978, Alaska Fisheries Development Foundation (AFDF) is a collaboration of harvesters, processors and support sector businesses dedicated to making opportunities out of challenges. AFDF identifies problems common to the Alaska seafood industry and collaborates with coastal communities, research institutes and government agencies to develop effective solutions with shared benefits.

The Magnuson-Stevens Fisheries Conservation and Management Act, passed in 1976, contained language which allowed for the formation of regional fishery development corporations for the purpose of building infrastructure for the newly claimed American fishery resources. Shortly
thereafter, six regional fisheries development foundations were created. AFDF is one of only two that remain.

**Alaskan Seafood Marketing Institute**
Alaskan Seafood Marketing Institute (ASMI) is a public-private partnership between the State of Alaska and the Alaska seafood industry established to foster economic development of a renewable natural resource. ASMI is playing a key role in the repositioning of Alaska’s seafood industry as a competitive market-driven food production industry. Its work to boost the value of Alaska’s seafood product portfolio is accomplished through partnerships with retail grocers, foodservice distributors, restaurant chains, foodservice operators, universities, culinary schools, and the media. It conducts consumer campaigns, public relations and advertising activities, and aligns with industry efforts for maximum effectiveness. ASMI also functions as a brand manager of the Alaska Seafood family of brands.

**American Association of Meat Processors**
The American Association of Meat Processors (AAMP) is North America's largest meat trade organization. Founded in 1939, it is the mission of AAMP to provide quality service, knowledge through education, regulatory representation, and networking opportunities for members.

**American Cotton Shippers Association**
The American Cotton Shippers Association (ACSA) was organized on July 8, 1924, to provide a united voice for the cotton merchandising trade of the United States. ACSA is comprised of Merchants, Primary Buyers, and Mill Service Agents. ACSA’s member firms handle over 80 percent of the U.S. cotton sold in domestic and foreign markets. The market involvement of ACSA members requires that the Association take an active part in promoting the increased use of cotton in the U.S. and throughout the world; establishing with other cotton trade organizations national and international standards for trade; collaborating with producer organizations throughout the cotton belt in formulating farm programs; and cooperating with government agencies in the administration of such programs.

**American Dairy Products Institute**
The American Dairy Products Institute (ADPI) seeks to be the most effective and relevant association representing the dairy ingredient industry today. ADPI’s goal is to increase the world-wide use of dairy ingredients by marshaling the technical, manufacturing and marketing resources of its members and others. Through the ADPI Committee and Task Force structure, members work collaboratively to remove the barriers to increasing dairy ingredient sales.

**American Frozen Foods Institute**
The American Frozen Food Institute (AFFI) is the national trade association that promotes the interests of all segments of the frozen food and beverage industry. AFFI’s work to promote and advance the frozen food industry’s public policy agenda includes managing numerous affiliated organizations focused on specific frozen food products and issues. Each AFFI affiliated organization is headed by its own leadership and offers a diverse range of services, programs and initiatives designed to meet their unique public policy needs and engage the public.
Florida Citrus Processors Association
Florida Citrus Processors Association is a trade association whose members market and process citrus fruit juices. The association was established in 1938 and its headquarters are located in Lakeland, FL. It is our mission to represent, communicate, protect and enhance the interests of our members, and to promote the growth and welfare of the citrus industry.

International Dairy Foods Association
As the premier organization for dairy foods processors, manufacturers and marketers, International Dairy Foods Association (IDFA) offers strategic leadership, expertise and advocacy to promote the success of its members. IDFA influences Federal, state, and international government policies with legislative, executive and regulatory advocacy focused on dairy policy and other key industry issues. IDFA serves as a source of information on dairy-related issues for members and the media, and collaborates with dairy industry partners to protect and enhance the image of dairy. IDFA also provides training, education programs and materials, and is a forum for dairy industry stakeholders to meet and exchange views on the key issues facing the dairy industry.

National Fisheries Institute
The National Fisheries Institute is a non-profit organization dedicated to education about seafood safety, sustainability and nutrition. From vessels at sea to your favorite seafood restaurant, its diverse member companies bring delicious fish and shellfish to American families.

National Food Processors Association
The National Food Processors Association (NFPA) is the voice of the food processing industry on scientific and public policy issues involving food safety, nutrition, technical and regulatory matters, and consumer affairs. NFPA’s members process and package fruits, vegetables, meat, fish, specialty food and beverage products using a variety of technologies including canning, freezing, refrigeration, dehydration and aseptic manufacturing. The benefits of membership include scientific and technical assistance, crisis management, claims handling, product liability insurance and representation before Congress and the regulatory agencies.

Research and Development Associates for Military Food & Packaging Systems
The mission of the Research and Development Associates (R&DA) for Military Food and Packaging is to provide the safest and highest quality food and food service to the U.S. Armed Forces. R&DA serves as a focal point to foster communications and cooperation relating to research and development, supply and procurement of food, packaging, foodservice equipment, and food service/feeding systems between private industry, government, academic institutions, consultants and technical/trade/professional associations.

Southwest Meat Association
The Southwest Meat Association (SMA) was founded in 1957 by a group of Texas meat packers who came together to form an organization that would unite packers/processors with the goal of promoting goodwill, friendship, education, legislation and better labor relations within the meat industry.
industry. SMA provides information and assistance to packer and processor members across the country.

SUPPLIER & SERVICE GROUPS

**Agriculture Ocean Transportation Coalition**
The Agriculture Transportation Coalition (AgTC) was founded in 1987 with the objective of assuring transportation service which allows U.S. agricultural exporters to be competitive in the international market. AgTC monitors government and commercial activity on ocean, truck, rail, port shipping and other transportation developments, hosts workshops around the country, lobbies Congress when necessary, and assists members on an individual basis with transportation-related problems.

**Agricultural Commodity Distribution Association**
The Agricultural Commodity Distribution Association (ACDA) is committed to improve the USDA Food Distribution Program on behalf of all stakeholders. ACDA is the communication link between agriculture, industry, government and the customer (recipient agencies), and the collective voice for policy decisions impacting food distribution programs. ACDA is committed to improving the USDA Distribution Food Program on behalf of all stakeholders.

**Association of American Seed Control Officials**
The Association of American Seed Control Officials is an organization of seed regulatory officials from the United States and Canada. The Association was organized in 1949 from an outgrowth of regional meetings held in various parts of the United States. The members meet annually to discuss mutual concerns of seed law enforcement, to be updated on new developments in the seed industry, and to update the Recommended Uniform State Seed Law which the organization developed and maintains as a "model" law for states and Federal programs.

**Association of Official Seed Analysts**
The Association of Official Seed Analysts (AOSA) is an organization of member laboratories. Members include official state, Federal and university seed laboratories across the United States and Canada. To assure a high standard of quality, many individuals within AOSA member laboratories have acquired AOSA Certified Seed Analyst status through extensive training followed by a mandatory certification testing process.

AOSA’s primary functions include:
- establishing the AOSA Rules for Testing Seeds which are generally adopted by most states as the rules for testing seeds in their respective states,
- contributing to the refinement and modification of the rules and procedures for seed testing,
- ensuring that testing procedures are standardized between analysts and between laboratories, and
- influencing and assisting in enforcement of appropriate seed legislation at state and federal levels.
CropLife America
CropLife America (CLA), or CropLife USA, advocates for and promotes the responsible use of innovative, safe and environmentally sound crop protection products (including herbicides, fungicides, and insecticides) that are essential in the production of food, fiber, and renewable or alternative fuels. Their vision is to increase awareness and advance policy that highlights the vital and necessary role of pesticides in protecting public health, enhancing our environment and biodiversity, and meeting the food and nutritional needs of billions of individuals.

Association for Laboratory Accreditation
The American Association for Laboratory Accreditation (A2LA) is a non-profit, non-governmental, public service, membership society. A2LA offers a full range of comprehensive laboratory and laboratory-related accreditation services and training. Services are available to any type of organization, be it private or government. All of A2LA’s accreditation programs are based on internationally-accepted criteria for competence. In addition to the accreditation of laboratories, A2LA offers programs for the accreditation of inspection bodies, proficiency testing providers, reference material producers and product certification bodies.

National Food Consortium
The Agricultural & Food Law Consortium is a national, multi-institutional collaboration designed to enhance and expand the development and delivery of authoritative, timely, and objective agricultural and food law research and information. This information is available to the nation’s vast agricultural community of producers, attorneys, state and Federal policymakers, Cooperative Extension Service professionals, and others at the local, state, regional and national levels. Agricultural law and food law includes law related to land-based food, fiber and energy production systems, as well as seafood and marine-based aquaculture.

School Nutrition Association
The School Nutrition Association (SNA) is a national, nonprofit professional organization representing more than 56,000 members who provide high-quality, low-cost meals to students across the country. Recognized as the authority on school nutrition, SNA has been advancing the availability, quality and acceptance of school nutrition programs as an integral part of education since 1946.

Society of Commercial Seed Technologists
The Society of Commercial Seed Technologists (SCST) is an organization composed of commercial, independent, and government seed technologists. Formed in 1922, SCST functioned as a liaison between the Association of Official Seed Analysts and the American Seed Trade Association. SCST has developed over the years into a progressive organization that trains and provides accreditation of technologists, researches and develops rule changes, publishes training and education materials, and serves as an important resource to the seed industry.
OTHER GROUPS

**USDA, Rural Development Community Economic Development Division (CED)**
Support to agricultural marketing and consumer healthy eating is inconceivable without growth in rural economies, particularly in regions that are geographically isolated or persistently poor. Therefore, AMS partners with CED to coordinate services by linking producers and buyers in a regional geography. The Food Leveraging Investment for Network Coordination (Food LINC) is a 3-year partnership between RD-CED, AMS, and its philanthropic and cooperative partners to enhance local and regional food systems by creating value chain coordinators across the country. The role of these coordinators is to link rural-based producers to urban markets where there is demand for local food. Food LINC has leveraged close to $2.4 million in funding from philanthropy partners. It is expected to yield a 5 to 1 return on investment based on increased revenue to local producers, as well as discernible job creation along the food value chain and increases in access to healthy food for underserved communities.

**Animal Welfare Institute**
Since its founding in 1951, The Animal Welfare Institute (AWI) has sought to alleviate the suffering inflicted on animals by people. In the organization's early years, the emphasis was on the desperate needs of animals used for experimentation. In the decades that followed, AWI expanded the scope of their work to address many other areas of animal suffering. AWI works to minimize the impacts of all human actions detrimental to endangered species, including the destruction of natural forests containing ancient trees, and pollution of the oceans destroying every kind of marine life.

**Consumer Federation**
The Consumer Federation of America (CFA) is an association of non-profit consumer organizations that was established in 1968 to advance consumer interest through research, advocacy and education. As a research organization, CFA investigates consumer issues, behavior, and attitudes through surveys, focus groups, investigative reports, economic analysis and policy analysis. As an advocacy organization, CFA works to advance pro-consumer policies on a variety of issues before Congress, the White House, Federal and state regulatory agencies, state legislatures and the courts. As an education organization, CFA disseminates information on consumer issues to the public and news media, as well as to policymakers and other public interest advocates.

**Consumers Union**
Consumers Union is the policy and action division of Consumer Reports. They work with over a million activists to pass consumer protection laws in states and in Congress. They identify corporations that do wrong by their customers, and encourage companies that are heading in the right direction.

**Environmental Working Group**
For more than 20 years, the Environmental Working Group (EWG) has been changing the game in environmental policy. They have experienced phenomenal growth and greatly expanded their reach over the last several years, and will continue to evolve. EWG’s work continues to focus on six major program areas, including toxics, food, agriculture, children’s health, energy and water.
**Food and Drug Law Institute**
The Food and Drug Law Institute (FDLI), founded in 1949, is a non-profit organization that provides a marketplace for discussing food and drug law issues through conferences, publications and member interaction. The scope of FDLI includes food, drugs, animal drugs, biologics, cosmetics, diagnostics, dietary supplements, medical devices and tobacco. FDLI is a not-for-profit 501(c)(3) organization. FDLI does not engage in advocacy activities.

FDLI’s Mission is to provide education, training and publications on topical food and drug law; act as a liaison to promote networking as a means to develop professional relationships and idea generation; and ensure an open, balanced marketplace of ideas to inform innovative public policy, law and regulation.

**Humane Society of the United States**
The Humane Society of the United States (HSUS) is the nation’s largest animal protection organization. HSUS is the leading animal advocacy organization, seeking a humane world for people and animals alike. They are driving change in the U.S. and around the world by opposing puppy mills, animal fighting, factory farming, seal slaughter, horse cruelty, captive hunts and the wildlife trade.

**PEW Charitable Trusts**
Pew Charitable Trusts is driven by the power of knowledge to solve today’s most challenging problems. They are an independent non-profit organization—the sole beneficiary of seven individual trusts established between 1948 and 1979 by two sons and two daughters of Sun Oil Company founder Joseph N. Pew and his wife, Mary Anderson Pew.

From its first day in 1948, Pew’s founders steeped the new institution with the entrepreneurial and optimistic spirit that characterized their lives. As the country and the world have evolved, they have remained dedicated to their founders’ emphasis on innovation. Today, Pew is a global research and public policy organization, still operated as a non-partisan, non-governmental organization dedicated to serving the public.
Recent engagements with stakeholder group

Note: Recent engagements include those since May 2016 to present. AMS has not met with all stakeholders groups identified above during this period. However, those groups are of great importance to AMS and as such are listed above.

May 2016 – September 2016

V. Top Issues

Hot Topics

Labeling of Bioengineered Food
On July 29, 2016, President Obama signed into a law a mandatory national bioengineered food disclosure standard (Public Law 114-216). AMS is the USDA Agency responsible for implementing the labeling requirements. AMS has published the new law on its website and provided an opportunity for the public to provide comments and ask questions on the new law via phone and email. The new law requires AMS to conduct a study identifying technical challenges for consumers to access an electronic or digital disclosure. On September 1, AMS published a Request for Information seeking input from vendors and general stakeholders on the study design, which closed on September 15. On September 14, AMS Administrator Starmer delivered to all AMS Deputy Administrators a policy memorandum affirming the new law’s consistency with the National Organic Program (NOP) and ensuring that rulemaking on the new law will not impact the NOP.

Next Steps: AMS is using the comments received on the RFI to develop the solicitation for vendor proposals for the study on the electronic or digital disclosure. However, posting of the solicitation is contingent on funding. AMS is continuing to analyze the requirements of the law, establish funding for staffing and study requirements, determine potential interactions with existing AMS programs, and work within the regulatory process to publish an advanced notice of public rulemaking in the Federal Register.

Georgia Department of Agriculture Poultry Market News Report (Georgia Dock)
On July 20, 2016, AMS discovered that a price report issued by the Georgia Department of Agriculture (GDA) for processed poultry prices (Georgia Dock) was not being properly verified. The price information in the report has been included in an AMS issued market news report since 1993. AMS has been working with GDA officials to seek options to change the methodology of the report so it reflects verifiable market prices, but GDA plans to continue publishing the Georgia Dock report without change until an alternative methodology can be developed. In the meantime, AMS discontinued publishing the AMS Market News report based upon the Georgia Dock report on August 5, 2016. On September 1, AMS met with GDA in Atlanta to discuss the new Federal report and GDA’s current work with the Georgia poultry industry related to a replacement for its GDA Georgia Dock report.

Next Steps: AMS will continue working with GDA and offering technical assistance to develop new report procedures consistent with AMS Market News reporting methodologies and confidentiality guidelines. In addition, AMS is developing a new spot market poultry report in an effort to meet industry needs. The new addition to the report was launched in October 2016.

U.S. District Court Decision on Resolute Forest Products, Inc.
On April 15, 2015, Resolute Forest Products filed a motion for summary judgment claiming that the Softwood Lumber Research and Promotion Order is unconstitutional. USDA has been involved in ongoing deliberation since the initial filing. On May 17, 2016, the U.S. District Court found that USDA’s Softwood Lumber Order was unlawful as promulgated. At a June 1,
2016, hearing held to discuss remedies, the court ordered: (1) USDA and the Softwood Lumber Board are prohibited from collecting further assessments from Resolute under the current Order; (2) USDA and the Board must maintain a balance of funds of not less than $1.1 million under the current Order; and, (3) USDA and Department of Justice (DOJ) shall file a brief supporting USDA’s position that the $1.1 million is assessments paid by Resolute should not be refunded in its entirety. A brief developed by AMS and DOJ for the court was filed on June 30, 2016. Resolute filed its response on July 20, 2016; USDA/DOJ’s reply was filed by the extended due date of August 24, 2016. Subsequent to the briefs being filed, the judge ordered the parties to submit briefs on issues regarding sovereign immunity and the authority of USDA to require the Board to refund assessments to Resolute. The deadlines for USDA and Resolute to submit their briefs are October 18, 2016 and November 1, 2016, respectively. On June 30, 2016, AMS posted external Q&As about the case per the industry’s request.

AMS published a notice on July 20, 2016, notifying industry that a continuance referendum originally scheduled for August 20 will not be held. On July 13, 2016, AMS met with the Office of the Chief Economist (OCE) to discuss analyses necessary for upcoming rulemaking on the de minimis provisions of the order. On August 30, 2016, an interim rule was published in the Federal Register revising the time frame for the continuance referenda under the Softwood Lumber Order. The rule revises the time frame from 5 years (2016) to no later than 7 years (2018). Comments are due by October 31, 2016. On September 1, 2016, Resolute filed a notice of supplemental authority to emphasize its previous arguments about the order in the context of USDA’s August 2016 interim rule. On September 14, 2016, AMS and DOJ decided to file a response to Resolute’s notice of supplemental authority. Our response will clarify the status of the rulemaking and any subsequent referenda on the order.

**R-CALF USA v. USDA/Vilsack**

On May 2, 2016, R-CALF USA filed suit in Federal District Court in Montana against Secretary Vilsack arguing that the Beef Checkoff Program should be promoting only U.S. beef. The complaint argues that the Checkoff Program denies R-CALF USA members in Montana their First Amendment rights since they are required to pay into the Montana chapter of the Checkoff program without a say in the marketing strategy. AMS will soon issue a rule regarding the redirection of beef Checkoff funds so producers have the option of directing their full assessment under the Beef Checkoff go entirely to the National Board. According to R-CALF’s legal challenge, the activities of the National Board are considered constitutionally sound by the Supreme Court, while the activities of the State Beef Councils are not. Thus, by giving producers the option to direct their monies to the National Board, R-CALF’s purported violations of First Amendment rights should be addressed.

On June 7, AMS asked if the Montana Beef Council would comply if a producer requested that they redirect assessments to the Cattlemen’s Beef Board. The Montana Beef Council responded that any redirection request, accompanied by appropriate and timely documentation, would be considered independently and that all state and Federal laws would be considered when making board decisions. The redirection rule was published on July 15, 2016, with a 60-day comment period that closed on September 13, 2016. USDA filed a motion to dismiss the case on August 4, 2016. On August 24, 2016, R-CALF responded to the motion to dismiss. On September 12, 2016, R-CALF also filed a motion for a temporary restraining order (TRO) to prevent USDA from allowing the
Montana Beef Council from retaining half of the assessments. On 9/28/16, USDA filed opposition to the TRO and reply in support of its summary judgment motion. On September 20, 2016, the Court issued an Order for a hearing to take place on October 25, 2016, at 2 p.m. regarding USDA’s Motion to Dismiss and Plaintiffs Motions to Summary Judgement and their Motion for a Temporary Restraining Order.

**Marvin Horne Compliance Actions**

On June 22, 2015, the U.S. Supreme Court ruled in favor of Horne, et al., in *Horne v. USDA* determining the reserve component of the raisin marketing order was unconstitutional as it was considered a taking that would require just compensation. Lower courts ruled in USDA’s favor and held that Mr. Horne met the definition of a handler under the marketing order. Because Mr. Horne never subsequently challenged the ruling by the U.S. Court of Appeals for the Ninth Circuit that he met the definition of a handler, the ruling stands. AMS has eight additional administrative cases against Mr. Horne that were stayed pending the outcome of the Supreme Court’s decision. The administrative cases filed against Mr. Horne for violations in subsequent crop years total approximately $400,000 in assessments owed to the Raisin Administrative Committee, plus civil penalties that may be issued. The administrative cases remain stayed pending the resolution of the cases in the Court if Federal Claims brought by raisin growers seeking compensation for a Fifth Amendment taking under the legal theory decided in *Horne v. USDA*.

In July, AMS authorized an investigation of Marvin Horne’s business transactions as he continues to operate outside the requirements under the Federal marketing order for raisins grown in California. On September 2, 2016, AMS issued administrative subpoenas to obtain records from the Dried Fruit Association and the Pacific/Atlantic Crop Exchange, Inc. (PACE). On September 8, 2016, AMS received a letter from PACE’s counsel requesting additional time to comply with the subpoena. AMS is reviewing a letter drafted in response to PACE’s request for additional time to comply with subpoena. On September 13, 2016, the DFA submitted only a response to the AMS-issued subpoena. Since 2012, DFA inspectors started leaving inspection records with Horne/Lassen Vineyards so that DFA no longer maintains a copy of its records.

**American Egg Board**

The Chief Executive Officer of Hampton Creek, Inc., San Francisco, CA (Hampton Creek) complained that the American Egg Board (AEB) exceeded its mandate by funding a campaign to halt the growth of Hampton Creek. An internal AMS review of the allegations has been completed and was released publicly on October 7, 2016.

**Government Accountability Office (GAO) Initiates Two Audits of AMS**

On September 9, 2016, the GAO announced they were initiating the two subject audits on a Congressional request: “USDA Oversight of National Research & Promotion Programs” and “FOIA Requests Related to R&P Programs.” The objectives of the (first) audit are to determine: 1) the extent to which USDA’s oversight activities ensure program funds are used in a manner consistent with authorizing legislation, and 2) the extent to which USDA has performance measures that enable the agency to assess the effectiveness of the checkoff programs. The objective of the second audit pertains to how FOIAs related to R&P programs are received, processed, and how any exceptions are handled. An entrance conference was held
September 19 with AMS, FAS, and GAO officials. AMS is collecting documents to provide to GAO for their review.

**The USDA Farmers Market**
Located on the corner of 12th and Independence Avenue, SW, the USDA Farmers Market is the Department's own "living laboratory" for farmers’ market operations across the country. The market supports the local economy, increases marketing opportunities for farmers and small businesses, provides access to an assortment of local and regionally sourced products, and increases access to healthy, affordable food in the District of Columbia's Ward 2. In its 21st year of operation, the USDA Farmers Market has experienced tremendous growth and has become a “go to” destination for federal employees and Washington, DC, visitors on Fridays during the spring and summer.

The daytime market hosts approximately 30 produce, prepared food, and cut flower vendors, and the nighttime market hosts approximately 24 vendors. The farmers market upholds the principles of “sourcing locally.” For prepared food vendors to participate in the market, they must demonstrate that the foods they are preparing are using ingredients sourced from local producers. It also conducts a weekly fruit and vegetable education program where shoppers can attend short 10-minute classes and get a "VegUcation" - learning how to pick, prepare and store a particular fruit or vegetable that is in season in the United States.

**Supporting the Next Generation of Agriculture**
AMS is a key leader in the USDA cross-Departmental collaboration to support new and beginning farmers and ranchers and a healthy next generation of agriculture. This effort brings together staff from across the USDA to share information and coordinate policies, programs, and services for the next generation of agriculture, including those new and beginning producers who are looking to access new and emerging market opportunities.

AMS’ leadership is critical in this space, because while new markets often create excitement among new and beginning producers, offering new possibilities for them to know their consumers and capture added value, producers in these market spaces can often find themselves outside the traditional agricultural support system. AMS’ support of local and regional marketing, infrastructure for enhanced market opportunities, and organic production is a key opportunity point for this growing customer segment – and often serves as the bridge for these customers to access the breadth of USDA’s portfolio of customer service.

**Transition of Layer Industry to “Cage-Free” Eggs**
On September 21, 2016, the Secretary of Agriculture and AMS hosted a meeting with leaders in the retail, manufacturing, and foodservice sectors and U.S. egg producers to discuss the challenges in transitioning egg production from conventional caged systems to “cage-free.” The meeting provided USDA an opportunity to show support for the industry and commit its assistance in addressing several of the major hurdles ahead.

A major outcome of the meeting was that all the participants agreed that a clear and commonly accepted definition for “cage-free” was necessary for all parties to have confidence in moving
forward. Participants agreed that efforts to develop a common definition should be led by industry, with support from AMS. The participants also agreed that animal rights and consumer groups should be involved in future discussions, with as much direct communication between these organizations and the industry and food sector as possible. The next meeting has been scheduled for November 30, 2016, and will be convened by the United Egg Producers.

Additional Pending Issues

Peoples Republic of China Government Officials to Visit U.S. Beef Production
China Ministry of Agriculture officials conducted an assessment of the U.S. beef industry from September 11-19, 2016, to determine whether boxed beef products can be traceable to the ranch of origin. FAS, AMS, FSIS, and APHIS accompanied the delegation during the assessment. The opening meeting in Denver, CO, included the USDA agencies and various members of industry. The group continued to Nebraska to review two cow/calf ranch operations, one feedlot, and two slaughter facilities. Industry demonstrated its ability to trace the boxed beef to cattle arriving from slaughter, and the cattle to ranch of origin, through AMS’ program for source and age verification, which would eventually be a part of an Export Verification, developed for China. The delegation then traveled to the State of Washington, where APHIS briefed the delegation on how the single incidence of BSE in December 2003 was handled to ensure that BSE is still a negligible risk in the United States according to OIE standards.

On September 22, 2016, China officially lifted its 13-year ban on U.S. beef. The next step is to negotiate specific export requirements with the Chinese government. This will commence once the Chinese delegation issues its trip report.

Notice Seeking Comments on U.S. Standards for Grades of Catfish and Catfish Products
On July 14, 2016, AMS published a Notice in the Federal Register seeking comments, data, research, and other information to help the Agency carry out the 2014 Farm Bill mandate to establish a voluntary fee-based grading program for catfish and catfish products. AMS is coordinating with the Department of Commerce’s National Marine Fisheries Service (NMFS), which has a program for quality evaluation of product, grading, and certification of fish (including catfish), shellfish, and fish products. We received four comments during the comment period, which ended on September 12, 2016 AMS will conduct two workshops to share information with stakeholders and gain more input to assist in developing grade standards and establishing a USDA grading program for catfish.

Petition to Revise U.S. Beef Standards to Allow Alternate Means of Age Determination in Carcass Beef
On April 13, 2016, AMS received a petition from several industry stakeholders asking the Agency to make changes to allow for dentition as a means of age determination and eligibility for carcass grading. AMS published a Notice in the Federal Register on August 24, 2016, seeking public comments on the changes proposed in the petition. Comments were due by October 24, 2016. Based on an analysis of the comments received, AMS will decide whether to proceed with specific changes to the standards.
Japan to Audit U.S. Beef Production
Japan government officials have set a tentative date of November 7-18, 2016, to visit the United States to audit U.S. beef producers exporting to Japan. Japan is awaiting additional questionnaires from beef producers, and evaluating responses from AMS on the JBS Souderton issue before audit sites are selected and the trip is finalized.

- **JBS Souderton Suspended from Export Verification Programs** - In April 2016, AMS suspended and delisted JBS Souderton from the Export Verification (EV) program because of issues related to the shipment of non-conforming beef products to Korea through Chicago Meat Authority. AMS completed “for cause” audits at all JBS facilities in late May, and subsequent corrective actions and required training in July. AMS provided a summary of the audit findings to Japan in late July and continues to address Japan’s questions about the findings and corrective actions. On August 22, AMS provided info to Japan regarding mislabeled packages from JBS Souderton, which shipped to Japan but did not enter commerce. Japan notified importing companies that it suspended imports of product from JBS Souderton. FAS will keep AMS apprised of any developments.

Development of Industry Standard Definition for “Cage-Free” Eggs
On September 21, 2016, Secretary Vilsack hosted a meeting with key representatives of the grocery and food retail sectors and the U.S. shell egg industry to discuss strategies for meeting the 2026 deadline established by volume food buyers for transitioning to cage-free supplies. All parties agreed that the starting point was for industry to develop a standard definition of the term “cage-free.” The United Egg Producers (UEP) is leading the effort; AMS offered to play a support role and facilitate discussions.

A meeting is tentatively planned for October 27, 2016, in Washington, DC, at which interested egg producers and members of the food retailing sectors will begin developing an agreed-upon definition. Once that definition is developed, UEP and the group will then engage consumer and animal rights organizations.

Cornucopia Institute v. USDA/Secretary Vilsack
On April 19, the Cornucopia Institute filed a complaint with the U.S. District Court for the Western District of Wisconsin on behalf of two organic producers. The complaint charges that USDA violated the Organic Foods Production Act (OFPA) in appointing members to the NOSB who did not meet OFPA qualifications. AMS continues to provide OGC and DOJ with information to support the case as requested.

National Organic Program Freedom of Information Act (FOIA) Lawsuits
The Cornucopia Institute filed eight lawsuits over AMS handling of FOIA requests related to National Organic Program records. AMS continues to coordinate with General Law on case-specific actions, and NOP has awarded a contract to support expanding FOIA needs.

OIG Audit: “National Organic Program – International Trade Arrangements and Agreements”
On March 17, AMS and OIG conducted a meeting to initiate OIG’s audit of NOP’s processes for international agreements supporting organic trade. OIG is near completion of the compliance
portion of the audit and is on schedule to finish fieldwork in September 2016. OIG will schedule a meeting with AMS to discuss audit findings and possible recommendations in the fall.

**Sun-Maid Growers of California Filing Suit Against USDA**

On April 6, 2015, Sun-Maid Growers of California filed a lawsuit in Federal District Court of Washington, DC, seeking to overturn the Secretary’s denial of the company’s November 17, 2014, petition for proposed amendments and hearings on terminating volume control authority from the raisin marketing order.

On August 28, 2015, USDA filed a Motion to Dismiss Sun-Maid’s suit against USDA. The April 23, 2016, hearing on the motion to dismiss was cancelled because of the May 3-4 rulemaking hearing on removing raisin reserve authority from the Federal marketing order for raisins. AMS will draft a Recommended Decision once the hearing record is certified and interested parties are provided the opportunity to file briefs.

**Raisin Compensation Lawsuits**

USDA received three claims for compensation from Lion Farms, LLC, Bruce Ciapessoni et al., and Boyajian et al. in the U.S. Court of Federal Claims. In early December 2015, USDA’s motions to consolidate the Lion Farms and Ciapessoni cases were denied but the cases were all reassigned to one judge. USDA filed motions to dismiss the three cases, concluding with a February 26, 2016 motion to dismiss the Boyajian et al case. Plaintiffs submitted their briefs on May 6, 2016. USDA filed its reply briefs on August 5, 2016.

On August 12, 2016, the Court indicated that oral arguments will be scheduled on USDA’s motions to dismiss and the opponent’s opposition responses. On October 6, 2016, Plaintiff Boyajian filed a motion to substitute Mr. Ray Hickman for Mr. Earl Boyajian as the named plaintiff and class representative.

**Center for Food Safety, et al. v. Vilsack, et al/Sunset.**

After the court dismissed the case because the plaintiffs did not have standing to challenge USDA’s procedures to sunset review of materials on the organic National List, the Center for Food Safety filed an Amended Complaint related to the Sunset Notice litigation on October 30, 2015. On December 10, 2015, USDA filed a Motion to Dismiss the amended complaint. On September 8, 2016, the Court denied USDA’s Motion to Dismiss, finding that the Plaintiffs had alleged sufficient facts to support its standing. On October 11, 2016, the parties filed a status report with the court informing it that the parties were unable to settle the litigation at that time. The parties will file stipulations and a proposed scheduling order by October 17, 2016.

**Center for Food Safety, et al. v. Vilsack, et al/Green Waste:** A second complaint, filed on April 14, 2015, relates to Guidance Document – NOP 5016 (Allowance of Green Waste in Organic Production Systems). On June 20, 2016, the U.S. District Court Judge for the Northern District of California ruled that NOP 5016 must be vacated by August 22, 2016. AMS did so, withdrawing NOP 5016 on August 22 as directed. A Notice to Trade was sent on August 18 to update the organic community. AMS is currently drafting a proposed rule to replace the
guidance with a regulatory rule change, with the opportunity for public comment. The work plan was designated as significant by OMB on August 31. On September 19, 2016, USDA and the plaintiffs executed a settlement agreement for legal fees authorized under the Equal Access to Justice Act.

ISO Technical Specification on Animal Welfare for Food Animals
AMS chairs U.S. representation to the International Organization for Standardization’s (ISO) Technical Committee 34 (TC34)/Working Group 16 (WG), a group of experts in the field of animal welfare assembled to develop industry consensus on technical specification (TS) for food producing animals. On February 8, 2016, the TS was sent for a vote through a three month ballot process. The results of the vote were positive, and AMS notified the U.S. Technical Advisory Group to discuss the next steps in the process. AMS will attend the ISO TC34 plenary meeting in Paris, France, on July 7-8. AMS, as part of the smaller drafting group, is reviewing the comments provided during the vote. The WG is meeting in Paris on September 15-16 to finalize the TS, incorporating edits based on the comments. Once finalized, the intent is to have the TS published by December 1, in time for it to be announced at the next OIE Global Conference on Animal Welfare in December 2016.

Burnette Foods Inc. v. USDA Case Related to the Federal Marketing Order for Tart Cherries
On August 3, 2011, the Plaintiff filed a petition with USDA to be exempt from the Tart Cherry Marketing Order (Order) and to modify certain provisions of the Order under section 15(A) of the Agricultural Marketing Agreement Act of 1937 (AAMA). On December 21, 2015, Judicial Officer (JO) William Jenson confirmed his ruling in USDA’s favor on all of the issues raised in Burnette Foods, Inc.’s petition challenging the tart cherry marketing order, denying Burnette’s administrative 15(A) filing. On January 11, 2016, Burnette appealed the 15(A) decision by filing suit in Federal District Court. In his complaint, Burnette seeks a declaratory judgment to overturn the JO’s order recognizing that tart cherry canners are separately situated from other segments of the tart cherry industry as being arbitrary and capricious. Mr. Burnette contends the Board is improperly structured and that the tart cherry marketing order is unconstitutional because it ignores imported cherries, does not apply to all states, and places a season-to-season reserve requirement on products with short shelf life. On September 9, 2016, the District Court Judge, ruling on USDA’s motion to dismiss the 15(A) case, dismissed 4 of 5 claims fully, and one claim partially. The Judge partially dismissed Burnette’s complaint that the Cherry Industry Administrative Board was improperly structured and stated that he required the entire administrative record to analyze the claim. On September 23, 2016, USDA filed its answer to the remaining count of the complaint.

OGC issued a litigation hold on all Burnette related tart cherry documents and e-mails.

Livestock Mandatory Reporting (LMR) Study
The Agriculture Reauthorizations Act of 2015 specified that USDA complete, by March 1, 2018, a study through AMS and the Office of the Chief Economist, and in consultation with the livestock and meat industry, to analyze current livestock marketing practices; identify future legislative or regulatory recommendations; analyze price and supply information reporting services of USDA related to cattle, swine, and lamb; and, address any other issues that the
Secretary considers appropriate. AMS commissioned a baseline “as is” study of the livestock and meat industry and LMR, which was completed August 2016, to help inform this comprehensive review. To gather feedback from industry stakeholders, AMS will bring members of the industry together in a series of structured stakeholder meetings to openly discuss the marketing methods and current challenges with reporting livestock and meat markets to reach consensus on what each commodity area would like changed in the next reauthorization of LMR. All meetings will be facilitated by the Federal Mediation and Conciliation Service (FMCS). The goal of these meetings is to reach consensus on what each commodity area would like changed in the next reauthorization of LMR. This industry consensus report will provide information for Congress to consider to facilitate an orderly reauthorization of LMR in 2020. The first stakeholder meeting will be held on November 15-16, 2016, in Washington, DC.

**PCRM Litigation - FOIA Request for Beef and Dairy Checkoff Documents**
AMS is working with OGC and DOJ to respond to the allegations of improper processing of FOIA requests and appeals. The FOIA suit was filed against USDA by the Physician’s Committee for Responsible Medicine on April 12, 2013.

PCRM Litigation – PCRM v USDA and HHS On January 6, 2016, PCRM filed a lawsuit in Federal Court in the Northern District of California, against USDA and the Department of Health and Human Services alleging that the government had allowed the food industry and financial inducements to dictate the Dietary Guidelines Advisory Committee’s (DGAC) new recommendations on cholesterol. PCRM is requesting injunctive relief in the suit preventing Defendants from relying on DGAC recommendations. On August 25, 2016, the Court requested additional briefings on the matter. AMS will continue to help OGC and DOJ as requested.

**Humane Society of the United States vs. Vilsack**
In September 2012, the Humane Society of the United States (HSUS) filed suit in the Federal District Court of the District of Columbia against the Secretary of Agriculture under the Administrative Procedure Act (APA) challenging the approval of the National Pork Board’s (Board) purchase of four trademarks including the “Pork, The Other White Meat” (PTOWM) slogan from the National Pork Producers Council (NPPC). On August 14, 2015, HSUS won its appeal for standing. The case is still pending with each party submitting records to the Court. The decision will be based upon the administrative records filed on June 29, 2016. On August 24, 2016, USDA filed additional materials to supplement USDA’s administrative record that was originally filed with the court on June 29, 2016.

**USDA Certified Transitional Program**
AMS is reviewing the Organic Trade Association’s Transitional Certification standard, which was submitted on May 20. The standard would allow AMS to approve Accredited Certifying Agents to verify processes and practices used by producers during the 3-year transition period required by the National Organic Program regulations when moving from conventional to organic production. On September 27, AMS met with OTA to outline the issues, primarily with the label. AMS continues to work with OGC.
The Good Food Institute
On August 8, 2016, the Good Food Institute (GFI) filed a lawsuit against USDA for allegedly refusing to release American Egg Board (AEB) documents under Freedom of Information Act (FOIA) requests. In a complaint filed in the U.S. District Court for the District of Columbia, GFI, a food advocacy group, says USDA did not fulfill three FOIA requests in late 2015 and early 2016 regarding AEB and Hampton Creek's egg-free mayonnaise line. The group is asking that the court force the USDA to release the records and pay legal and search fees.

The USDA Foods Business Management Improvement (BMI)
This project is co-sponsored by the Food and Nutrition Service (FNS), the Agricultural Marketing Service (AMS), the Farm Service Agency (FSA), the Foreign Agricultural Service (FAS), and the United States Agency on International Development (USAID). This project began in September 2015 to redesign business operations and management processes which support ordering, procurement, and distribution of domestic agricultural products in FNS nutrition assistance and International food aid programs.

While each of the five Federal Agencies have unique mission requirements, all utilize the Web-based Supply Chain Management (WBSCM) system’s capabilities and features, including interaction with industry, program recipients, and other governmental agencies. WBSCM is built on SAP commercial software, and was fully implemented in April 2011. Since all Agencies utilize WBSCM, processes and procedures for the applicable Federal Agencies developed through the BMI project need to be integrated into a common business solution and method of operation.

For the domestic nutrition programs, this project was initiated because changes to commercial practices, meal patterns, etc. made it essential that FNS and AMS examine practices and make changes to be more efficient and effective. Concurrently, GAO produced GAO -14-22, INTERNATIONAL FOOD AID Better Agency Collaboration Needed to Assess and Improve Emergency Food Aid Procurement System, and part of their recommendation was for FSA, USAID and FAS to work together and review their business practices.

The project includes stakeholders from Federal and State Agencies, Indian Tribal Organizations, school districts, agricultural product suppliers, freight companies, distributors, and other organizations. These various stakeholders participated in numerous sessions and meetings to document as-is business processes, and participated in sessions to determine potential changes to those business processes to achieve efficiencies and improve the operational management of the nutrition and food aid programs. Next steps include the development of a business case and implementation plan in preparation to operationalize the changes to business processes.

Global Food Safety Initiative
In recent years, international entities, such as the Global Food Safety Initiative (GFSI), have worked to build equivalence and convergence among the various effective food safety management systems in an effort to eliminate redundancy in the audit process for buyers and producers, and to improve the operational efficiency of the food safety certification sector. Major
U.S. corporations, namely Walmart, McDonalds, Cargill, Kroger and Wegmans, sit on the GFSI Board of Directors.

AMS is working closely with GFSI to obtain equivalency under the new GFSI Standard Equivalency Process for Government Entities. This accreditation will allow AMS’ audit program to serve as a single, accredited certification body that can meet buyers’ multiple requirements for audits.

**Pesticide Data Program--Glyphosate**

Glyphosate is an herbicide used to control weeds used in soybeans, corn, cotton, wheat, pasture/hay, orchards/grapes, and fruit and vegetables. In the past, the Pesticide Data Program (PDP), a national pesticide residue monitoring program that produces the most comprehensive pesticide residue database in the U.S., did not routinely test glyphosate because it was not widely used on many of the fruit and vegetables and other products tested and requires a specialized method of analysis. PDP is implemented through cooperation with State agriculture departments and other Federal agencies and selections for testing are made based on EPA’s data needs.

Glyphosate has been a popular topic in agricultural/consumer news. Currently, FDA is testing corn and soybean grains for glyphosate residues. The FDA glyphosate residues testing will provide results to help determine if EPA needs additional data. When FDA results become available, USDA will consult with EPA to ensure we continue to provide quality data to meet EPA’s data needs.

**Process Verified Program (PVP)**

LPS provided independent verification and transparency to issues of increasing importance to consumers by partnering with industry to develop several groundbreaking consumer marketing programs. These include a non-GE/GMO USDA Process Verified Program (PVP) for consumer-facing products and the McDonald’s Responsible Antibiotic Use PVP for chicken, which launched publicly during the Summer Olympics, 5 months earlier than originally planned; the School Food Focus (SFF) Certified Responsible Antibiotic Use PVP for chicken; and a non-GE/GMO USDA Process Verified Program (PVP) for grain. In total, PVPs verify antibiotic-related claims for nearly 15 percent of the U.S. broiler industry, with an additional 12 percent committed by the end of the calendar year. LPS relaunched the PVP after completing all action items related to the OIG audit of the PVP, developing consistent procedures to maintain public and customer confidence in AMS third-party verification services. LPS and AMS Public Affairs developed a comprehensive communications plan to inform customers of the program changes through publishing three PVP blogs and an infographic, updating PVP Web site information, reformatting the PVP listing to highlight process points, partnering with external stakeholders to highlight the PVP in practice, and rolling out PVP updates on the GovDelivery platform.

**PVP Program for Non-GE/GMO Marketing Claim on Yogurt**

Chobani, LLC first submitted an application for an approved Process Verified Program (PVP) for a non-genetically engineered/genetically modified (non-GE/GMO) marketing claim in December 2015. In March, an AMS desk audit of their Quality Manual determined that their program met the requirements for a PVP; however, further evaluation of the company’s
application was suspended due to the increasing likelihood that a Federal law would pass that would address the labeling of GE/GMO foods.

With the signing of the National Bioengineered Food Disclosure Law on July 29, Chobani contacted AMS and renewed their request for PVP approval. AMS is currently evaluating how to proceed with their proposed PVP, in light of the requirements of the new law.

**Timeline**

Note: Not all topics have a timeline – many topics relate to lawsuits and other issue for which a timeline is not available.

WHAT WE DO: OUR MISSION

APHIS protects the health and value of American agriculture and natural resources. We facilitate the movement of healthy animal and plant resources in the global marketplace, while standing guard against the introduction of pests and diseases that could limit agricultural production and damage export markets. We monitor and respond to invasive species, diseases of wildlife and livestock, and conflicts between humans and wildlife, while also managing and resolving sanitary (animal) and phytosanitary (plant) trade barriers and ensuring the humane treatment of animals. Finally, APHIS ensures that biotechnology-derived agricultural products are safe for release into the environment.

WHO WE ARE: OUR WORKFORCE

APHIS employs 8609 employees (5771 full time/1313 temporary); 29.8% of permanent employees are eligible to retire by 2017; 25% are unionized and 75% are not; D.C/Riverdale, MD, houses 18% of our workforce, with 82% located throughout the U.S. and internationally; 155 employees are located in 18 non-U.S. locations.

WHO WE SERVE: OUR CONSTITUENTS

From overseeing pest/disease eradication, testing livestock/poultry for diseases, and quarantining certain plants' movement, to keeping air travel safe from wildlife-related accidents, ensuring animal welfare, and protecting tree-lined streets, APHIS employees serve all Americans.

KEY UPCOMING DECISIONS

- How should APHIS proceed with implementing new Horse Protection Act regulations that increase protections against soring and defend against likely legal challenges by some groups?
- Should APHIS approve imports of Argentine lemons and EU apples/pears? These actions were proposed based on scientific risk analysis and are consistent with international trade obligations, but U.S. industries are opposed.
- Should we proceed—and if so, how—with a comprehensive revision of APHIS' biotechnology regulations in light of scientific advances since they were established in 1987? How do we address diverse stakeholder interests in regulation of biotechnology?

BUDGET HIGHLIGHTS FY 2016

Of the estimated $1.364 billion in FY 2016:

- 60% is for safeguarding animal and plant health and resolving conflicts with wildlife using appropriated and Farm Bill authorized funds;
- 3% aids in facilitating safe agricultural trade using appropriated funds;
- 15% is fees collected for Agricultural Quarantine Inspection services; and,
- 22% comprises reimbursements from Agency partners for certain services and revenue from various animal and plant health user fees. It also includes appropriated funds to ensure the humane care and treatment of certain animals, to conduct investigative and regulatory enforcement activities, and to support Agency-wide IT and facilities infrastructure needs.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

I. Organizational Overview

Agency’s Mission/Strategic Plan

Mission:
APHIS’ mission is to protect the health and value of American agriculture and natural resources.

Together with its stakeholders, APHIS promotes the health of animal and plant resources to facilitate their movement in the global marketplace and to ensure abundant agricultural products and services for U.S. customers. APHIS strives to assure its stakeholders that it is on guard against the introduction or re-emergence of animal and plant pests and diseases that could limit agricultural production and damage export markets. At the same time, APHIS also monitors and responds to potential acts of agricultural bio-terror, invasive species, diseases of wildlife and livestock, and conflicts between humans and wildlife. The Agency also manages and resolves sanitary (animal) and phytosanitary (plant) trade barriers and addresses certain issues relating to the humane treatment of animals. Finally, APHIS ensures that biotechnology-derived agricultural products are safe for release in the environment.

The APHIS Strategic Plan outlines the goals, objectives, and performance measures that set the direction of APHIS' work.

Goals and Objectives:
GOAL 1: Prevent the entry and spread of agricultural pests and diseases.
Objective 1.1: Work with foreign governments and partners to keep damaging pests and diseases from entering the United States.
Objective 1.2: Work with foreign governments and partners to prevent the spread of damaging pests and diseases.

GOAL 2: Ensure the humane care and treatment of vulnerable covered animals.
Objective 2.1: Improve the welfare of animals covered under the AWA.
Objective 2.2: Eliminate soring in the Tennessee walking horse industry.
Objective 2.3: Ensure the safe and humane commercial transport of equines for slaughter.

GOAL 3: Protect forests, urban landscapes, rangelands and other natural resources, as well as private working lands from harmful pests and diseases.
Objective 3.1: Reduce damage caused by plant pests and diseases to natural and agricultural resources.
Objective 3.2: Reduce damage caused by wildlife to natural, agricultural, and other resources.
GOAL 4: Ensure the safety, purity, and effectiveness of veterinary biologics and protect plant health by optimizing our oversight of genetically engineered (GE) organisms.
Objective 4.1: Ensure that regulated GE organisms will not pose plant pest risks when released into the environment.
Objective 4.2: Ensure pure, safe, potent, and effective veterinary biologics are available for diagnosis, prevention, and treatment of animals.

GOAL 5: Ensure the safe trade of agricultural products, creating export opportunities for U.S. producers.
Objective 5.1: Ensure the resolution of sanitary and phytosanitary (SPS) issues and trade barriers.
Objective 5.2: Eliminate all remaining bovine spongiform encephalopathy (BSE) barriers to export markets.
Objective 5.3: Improve the export customer experience.

GOAL 6: Protect the health of U.S. agricultural resources, including addressing zoonotic disease issues and incidences, by implementing surveillance, preparedness and response, and control programs.
Objective 6.1: Monitor the health, including incidences and issues related to zoonotic diseases, of U.S. agricultural resources.
Objective 6.2: Ensure effective preparedness and response systems.
Objective 6.3: Ensure effective control, eradication, management, and enforcement programs.
Objective 6.4: Manage conflicts caused by wildlife, detect and control wildlife diseases, and protect threatened and endangered species.
Objective 6.5: Provide and coordinate timely diagnostic laboratory support and services.

GOAL 7: Create an APHIS for the 21st Century that is high-performing, efficient, adaptable, and embraces civil rights.
Objective 7.1: Build and maintain a public-service oriented, inclusive, high-performing workforce by investing in and engaging employees.
Objective 7.2: Build a safe, secure, and efficient workplace by leveraging technology and shared solutions across organizational boundaries.
Objective 7.3: Value the differences offered by a diverse workforce, and leverage those differences to better serve the Agency’s customers.
Objective 7.4: Maximize the return on taxpayer investment in APHIS through stewardship of resources and focused program evaluations.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

Key mission delivery performance measures

APHIS has six strategic goals and sixteen strategic objectives that contribute towards the Secretary’s priority goals.

**USDA Strategic Goals:** Assist Rural Communities to Create Prosperity So They Are Self-Sustaining, Repopulating, and Economically Thriving. Ensure That All of America’s Children Have Access to Safe, Nutritious, and Balanced Meals.

**USDA Strategic Objectives:** 1.1: Enhance rural prosperity, including leveraging capital markets to increase government’s investment in rural America. 4.4: Protect agricultural health by minimizing major diseases and pets to ensure access to safe, plentiful, and nutritious food.

<td>Reduce or mitigate the impact of agricultural pests and diseases by preventing the entry or spread of agricultural pests and diseases.</td>
</tr>
</tbody>
</table>

**Key Performance Measures and Targets:**

APHIS protects U.S. livestock, poultry, specialty crops, corn, cotton, and wheat industries worth more than $195 billion. U.S. agriculture as a whole supports 1 in 12 jobs and provides U.S. consumers with 83 percent of the food we consume. APHIS’ pest and disease prevention efforts help ensure that U.S. farms and ranches remain healthy and productive by keeping devastating pests and diseases from entering the country. APHIS works with many partners, including the U.S. Department of Homeland Security’s Customs and Border Protection (CBP), foreign governments, State departments of agriculture, and a variety of other U.S. government agencies on these prevention programs that help ensure U.S. and international consumers have access to safe, nutritious food. For example, APHIS works jointly with CBP to provide for inspections of imported animal, plant, and other agricultural goods, products, and other articles at U.S. ports of entry to prevent the introduction of harmful agricultural pests and diseases. APHIS also conducts inspections of passenger baggage and cargo leaving Hawaii and Puerto Rico for the continental United States. Demand for inspection services from Hawaii and Puerto Rico has increased in recent years as the number of passenger flights from these islands increased by 8.4 percent between FY 2011 and FY 2015.
APHIS cooperates with foreign governments to prevent the northward spread of two extremely destructive pests into the United States—screwworm from South America and the Mediterranean fruit fly (Medfly) from Central America. In 1976, a screwworm outbreak in Texas resulted in an estimated $113 to $150 million in losses. Nearly four decades later, screwworm damage has been contained because of the APHIS preventative program. This program continues to keep this serious pest away from U.S. livestock by maintaining a barrier against it in Panama through the use of sterile insect technology. Medfly has one of the widest host ranges of any fruit fly pest and is considered one of the most serious agricultural pests in the world. The pest especially threatens high-value specialty crops such as citrus and tree fruit. Maintaining barriers to prevent this pest from entering the United States is imperative, especially considering increasing U.S. consumer demand for imported fruits and vegetables in recent years.

APHIS also cooperates with the Mexican government to eradicate two devastating cotton diseases (the boll weevil and pink bollworm) and prevent them spreading into areas in the United States adjacent to the border. Other activities include maintaining a quarantine buffer in Texas against the spread of cattle fever ticks and diseases such as bovine babesiosis and working with Mexico to control Mexican fruit fly outbreaks along the border that threaten Texas citrus production. In FY 2014, APHIS and its partners in Texas detected cattle fever ticks outside the quarantine zone and since then have been working to control the outbreak. The intensive response effort involves inspecting and treating all premises and livestock within the 222,000 acre temporarily quarantined area as well as measures to address wildlife such as deer that can also carry the ticks.

| Goal 2. Ensure the humane care and treatment of vulnerable animals. | Objective 2.1: Improve the welfare of animals covered under the Animal Welfare Act.  
Objective 2.2: Reduce the detection of horse soring in the Tennessee walking horse industry. | Provide modern and collaborative tools and services to protect the welfare of animals. |

**Key Performance Measures and Targets:**

The welfare of animals nationwide continues to attract significant media attention and passionate public engagement. APHIS has been front and center in the dialogue, playing the unique Federal role of ensuring the humane care and treatment of millions of animals covered by the Animal Welfare Act (AWA) and the Horse Protection Act. Twenty-seven States, the District of Columbia, and a number of municipalities have enacted laws establishing some form of humane welfare standards for animals. However, none of these laws address all categories of welfare required under the AWA, including veterinary care, food and water, proper sanitation, and housing. Consequently, Federal oversight is necessary to ensure that AWA regulations are consistently applied in all States.

APHIS oversees more than 7,300 licensees and registrants associated with more than 10,000 facilities regulated under the AWA. APHIS inspects facilities (with a focus on re-inspecting noncompliant facilities), educates regulated entities, provides detailed training for inspectors, investigates complaints, and pursues civil penalties and other enforcement measures when necessary. Together, these efforts yielded impressive results: regulated entities maintained an average 95 percent compliance rate with the AWA in the past 5 years. New AWA licensees and registrants present a unique opportunity for APHIS to have a lasting impact on the way they care for their animals and improve program efficiency. APHIS has increased the rigor of its pre-licensing program for dog dealers to ensure that prospective licensees fully understand the AWA’s requirements before obtaining a license, which reduces overall noncompliance over time. The program is tailored to the individual licensee based on an initial discussion, the condition of the facility during the first visit, and developing individualized materials and presentations that focus on specific aspects or issues at each facility.

</tr>
</thead>
<tbody>
<tr>
<td>Goal 3. Protect forests, urban landscapes, rangelands and other natural resources, as well as private working lands from harmful pests and diseases.</td>
<td>Objective 3.1: Reduce damage to valuable natural and agricultural resources caused by plant pests and diseases. Objective 3.2: Reduce damage to valuable natural and agricultural resources caused by wildlife.</td>
<td>Provide tools and services to protect forests, urban landscapes, rangelands and other natural resources, as well as private working lands from harmful pests and diseases.</td>
</tr>
</tbody>
</table>

**Key Performance Measures and Targets:**

America’s forests, rangelands, and other working lands are valuable resources that provide jobs, support ranches, provide habitat for wildlife, and create recreation opportunities. U.S. forests alone provide economic opportunities and ecosystem services worth an estimated $1.2 trillion. APHIS coordinates national programs that target damage caused by the Asian longhorned beetle (ALB), emerald ash borer, gypsy moth, grasshopper and Mormon cricket outbreaks, thousand cankers disease, depredation from migratory birds, and damage from other wildlife such as beavers and deer.

Together, APHIS and key partners focus on preventing the spread of pests and diseases and mitigating damage they cause. Specific activities include: conducting pest surveys
and inspections to more accurately delimit the infestation of specific pests and diseases and wildlife; developing and implementing control strategies; conducting eradication efforts where appropriate, such as removing or treating host trees or problem wildlife; conducting public outreach and education to enlist the public’s support for these efforts; developing predictive analytical tools and risk-based models to inform trapping and survey work; and establishing new regulatory frameworks to minimize negative impacts on regulated business in quarantine areas, while still protecting American forests and rangelands from the spread of these harmful events. The following are highlights of these cooperative efforts.

Trees provide environmental value as forest and natural canopy and economic value when used in production of wood products. Trees are also an integral part of urban and suburban neighborhoods. ALB threatens forest resources nationwide, as 30 percent of U.S. trees are potential ALB hosts. APHIS is working to eliminate ALB from the United States as a whole; longstanding strategies and collaborations have proven successful as APHIS and other Federal and State partners have eradicated ALB outbreaks from Chicago, Illinois; Islip, Staten Island and Manhattan in New York; and Jersey City and Union and Middlesex Counties, New Jersey. In FY 2014, APHIS completed eradication of the ALB infestation in and around Boston, Massachusetts. These successes prevented multi-billion dollar losses to urban and suburban communities and the maple syrup, timber, tree nursery, trade and tourism industries. APHIS is continuing to address outbreaks in other areas of Massachusetts, Ohio, and New York, including the most recently detected outbreak on Long Island. Although the program has been successful, APHIS and its cooperators continue to improve program delivery and to create more efficient projects. For example, APHIS and cooperators modified both ALB survey and control protocols, resulting in more efficient use of resources required to eradicate the pest. The program continues to study how beetle biology and the time elapsed between surveys impact survey effectiveness, and evaluate an extended timeframe for the application of preventive treatments (potentially saving funds by treating less frequently to achieve the same results).

It is also critical to protect U.S. agricultural crops and rangelands against pest and disease damage. The value of rangeland forage across western States is estimated to average $13 per acre; the comprehensive value of rangeland for use as wildlife habitat, to stabilize soils and filtering water, and for recreation and other uses is two to three times greater than that. Although grasshoppers and Mormon crickets are natural components of rangeland ecosystems, their populations can reach outbreak levels and cause serious damage, especially when accompanied by drought conditions. APHIS’ grasshopper and Mormon cricket program monitors and protects 661 million acres of rangeland worth a total of nearly $8.78 billion. Uncontrolled infestations could cause significant economic losses for U.S. livestock producers by reducing animal food supply in rangeland, therefore forcing producers to buy supplemental feed or sell their livestock at reduced prices. APHIS conducts surveys in western States that provide information to help landowners and managers manage outbreaks. To reduce damage caused by grasshoppers, APHIS applies predictive models that allow early-season treatments using lower levels of insecticides to reduce immature pest populations as an alternative to using more...
expensive and stronger pesticides required to address mature pests. In FY 2015, APHIS applied treatments to 207,401 acres of rangeland, which protected rangeland forage and wildlife habitat on approximately 384,000 acres.

**USDA Strategic Goal:** Help America Promote Agricultural Production and Biotechnology Exports as America Works to Increase Food Security.

**USDA Strategic Objective:** 3.2: Enhance America's ability to develop and trade agricultural products derived from new and emerging technologies.

<table>
<thead>
<tr>
<th>Agency Strategic Goal</th>
<th>Agency Objectives</th>
<th>Key Outcome</th>
</tr>
</thead>
<tbody>
<tr>
<td>Goal 4. Ensure the safety of genetically engineered organisms and veterinary biologics.</td>
<td>Objective 4.1: Ensure that certain genetically engineered crops that are “regulated articles” as defined in our regulations will not pose plant pest risks when released into the environment. Objective 4.2: Ensure pure, safe, potent and effective veterinary biologics are available for diagnosis, prevention, and treatment of animals.</td>
<td>APHIS will scientifically demonstrate the safety of biotechnology and veterinary biologic products and facilitate their development to benefit producers and consumers.</td>
</tr>
</tbody>
</table>
The biotechnology industry—valued worldwide at $280 billion—is constantly developing innovative products of modern biotechnology (including genetically engineered [GE] organisms) that can greatly benefit the public. On the plant health side, GE crops can increase yields or decrease crop losses due to pests and diseases. On the animal health side, veterinary biologics derived from modern technologies help to prevent, diagnose, and treat serious animal diseases. However, before any of these products can be brought to market, it is essential to demonstrate—through rigorous, scientific review—that they do not pose a risk to America’s agricultural and natural resources.

APHIS provides the regulatory controls that ensure new GE crops will not pose plant health risks when released into the environment and that veterinary biologics are safe, pure, potent, and effective. In addition to protecting America’s agriculture, these controls instill confidence in the public and in our trading partners that GE products produced in America are of the highest quality.

APHIS regulates the importation, interstate movement, and field release—or “introduction”—of GE organisms that may pose a risk to plant health. As part of its science-based framework, APHIS requires developers to apply for a permit or notification before introducing these organisms into the environment and conducts thorough scientific analyses to evaluate potential plant risks and environmental impacts before authorizing such introductions. Once a developer can demonstrate that a GE crop does not pose a risk to plant health, the developer can petition APHIS to seek deregulation of the crop. As of the end of FY 2015, APHIS has made a total of 117 determinations of regulated status, increasing the number of products that developers can bring to the marketplace.

APHIS ensures regulatory compliance on the part of the biotechnology community through inspections, educational and outreach efforts, and investigations and audits. In FY 2015, APHIS authorized 1,500 new permits and notifications throughout the United States. The program conducted 688 site inspections (with 96 percent of those inspected found to be in compliance with APHIS’ regulations). In FY 2017, APHIS will inspect more higher-risk sites with a goal that 90 percent of those inspected will be in compliance.

Through its efforts to ensure the safety and effectiveness of U.S. veterinary biological products, valued at $1.35 billion, APHIS safeguards the health of millions of livestock and pet animals and protects domestic and worldwide markets for U.S. animals and animal products, worth $182 billion. APHIS protects animals and animal owners from contaminated, worthless, or dangerous products. The Agency also facilitates the entry of new, innovative products to the market, expanding options for animal owners to protect the health of their animals.
APHIS continuously evaluates its activities and makes adjustments to improve efficiency and effectiveness. APHIS has conducted business process improvement reviews of both its biotechnology regulatory determination reviews and its veterinary biologics licensing reviews with the goal of streamlining the processes and reducing the time required to allow companies to bring new products to market sooner. In FYs 2011–2013, APHIS conducted a series of review of its veterinary biologics licensing process to find time savings. The reviews focused on a range of objectives including the electronic workflow of documents and streamlining of submission processing and testing. As a result, APHIS reduced licensing times by more than 20 percent on average for all biologics. APHIS also initiated a business process improvement effort for its biotechnology reviews in 2012 and has worked since to implement changes to its petition review process, with a goal to reduce the time required for review from an average of 3 years to about 13 to 16 months. The changes included establishing specific timelines for each step, using new management and tracking tools, and getting the public involved earlier to identify risks and controversial issues. By taking these steps, APHIS delivers a more predictable petition process without compromising the quality of the analysis to support our decision making. In FY 2015, using the improved petition process, APHIS reduced the time it takes to evaluate petitions and make a regulatory determination from 3 to 5 years to 1.8 years (on average). APHIS completed eight petitions in total in FY 2015, exceeding its target and bringing the cumulative total of deregulations to 117.

**USDA Strategic Goal:** Help America Promote Agricultural Production and Biotechnology Exports as America Works to Increase Food Security.

**USDA Strategic Objective:** 3.2: Enhance America's ability to develop and trade agricultural products derived from new and emerging technologies.
### United States Department of Agriculture
#### 2016 Presidential Transition
##### Animal and Plant Health Inspection Service (APHIS)

#### Agency Strategic Goal

- **Goal 5.** Ensure the safe trade of agricultural products, creating export opportunities for U.S. producers.

#### Agency Objectives

- **Objective 5.1:** Ensure the resolution of sanitary and phytosanitary issues and trade barriers.
- **Objective 5.2:** Eliminate all remaining bovine spongiform encephalopathy (BSE) barriers to export markets through a deliberate process of engagement with trading partners with BSE restrictions.
- **Objective 5.3:** Improve the export customer experience.

#### Key Outcome

- Resolve sanitary and phytosanitary (SPS) trade barriers, improve international animal and plant health standards, and collaborate with U.S. and foreign partners to build capacity and prevent agricultural pest and disease threats from reaching the United States.

---

**Key Outcome:** Resolve sanitary and phytosanitary (SPS) trade barriers, improve international animal and plant health standards, and collaborate with U.S. and foreign partners to build capacity and prevent agricultural pest and disease threats from reaching the United States.

APHIS uses its technical expertise in animal and plant health to resolve sanitary (animal) and phytosanitary (plant) issues that affect export opportunities for U.S. producers, allowing U.S. companies to be competitive in trade. In FY 2015, APHIS retained, expanded, or opened markets worth $2.5 billion for U.S. agricultural exports. The Agency also plays a central role in resolving technical trade issues to ensure the fast and safe movement of agricultural imports and exports. In FY 2014, our overseas employees secured the release of 293 detained shipments of U.S. agricultural products worth more than $25 million. To support these export opportunities, the Agency negotiates animal and plant health certification requirements; assists U.S. exporters in meeting foreign regulatory requirements, ensuring requirements are proportional to risk without being excessively restrictive; and provides technical information to support the safety of U.S. agricultural products destined for foreign markets. APHIS’ employees—including headquarters personnel, field staff, and personnel stationed in 30 countries—play a critical role in the success of these efforts.

One of APHIS’ specific objectives to support U.S. exports is to eliminate all remaining trade barriers related to avian influenza (AI). Several countries restrict U.S. exports of poultry, or poultry products, as a result of non-tariff barriers. This includes sanitary and phytosanitary issues that APHIS addresses, as well as food safety issues that the Food Safety and Inspection Service addresses. In FY 2015, the outbreak of highly pathogenic avian influenza (HPAI) significantly impacted U.S. exports of poultry and poultry products. Over the course of the outbreak, 18 countries imposed restrictions on poultry and poultry products from the entire United States, 38 countries recognized the control measures taken during the outbreak and limited their restrictions to affected zones or
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

States, and 100 other countries had no known restrictions established. By the end of FY 2015, APHIS was able to remove poultry bans from Vietnam, and for certain States shipping poultry and poultry products to Guatemala and Colombia. APHIS coordinates with United States Trade Representative, USDA’s Foreign Agricultural Service, and USDA’s Food Safety and Inspection Service in these animal health discussions.

<td>Reduce or mitigate the impact of agricultural pests and diseases as well as wildlife damage by providing tools and services—including diagnostic, detection, control, management, and enforcement methods and programs—to protect and enhance animal and plant health.</td>
</tr>
</tbody>
</table>
**Key Outcome:** Reduce or mitigate the impact of agricultural pests and diseases as well as wildlife damage by providing tools and services—including diagnostic, detection, control, management, and enforcement methods and programs—to protect and enhance animal and plant health.

APHIS’ surveillance, preparedness and response, and control activities are designed to quickly detect and address destructive animal and plant pests and diseases and reduce and prevent billions of dollars in damage to agricultural resources each year. They not only ensure children and other consumers in the United States and across the world have access to safe and nutritious food, they also directly support farmers’ efforts to export their products. Healthy farms and ranches and the robust agricultural exports help create a sustainable agricultural system and keep rural America thriving. Along with the programs discussed in the Agency’s Goal 1, these efforts protect U.S. livestock, poultry, specialty crop, corn, cotton, and wheat industries worth more than $193 billion.

The first component of APHIS’ efforts, early detection, is critical to averting economic and environmental damage. Once a pest or disease becomes established or spreads, mitigation costs can reach millions of dollars and result in substantial costs to producers and consumers, as well as irreversible damage to ecosystems. An article published in the *Journal of Veterinary Diagnostics and Investigations* estimated that a detection of FMD identified on day 7 would have an impact of $2.3 billion on the economy; if not identified until day 22, it could have an impact of $69 billion. In monitoring for potentially serious animal diseases, APHIS conducts more than 500,000 diagnostic tests per year on approximately 250,000 animal samples collected. To bolster surveillance efforts, APHIS continues to implement the animal disease traceability program that would allow affected animals to be found quickly in the event of an outbreak. APHIS conducts early detection plant pest and disease surveys—targeting various fruit, vegetable, and honey bee pests—in cooperation with all 50 States, 2 U.S. territories, Tribal and local governments, industry partners, and other stakeholders. In FY 2015, the Agency targeted 118 high-risk pests of national concern for survey in corn, oak, pine, small grains, soybean, and nursery crop commodities, as well as exotic wood boring bark beetles and cyst nematodes.

APHIS also works closely with its State counterparts to address ongoing pest and disease issues and has longstanding partnerships with industry groups. In FY 2014, APHIS and other USDA agencies strengthened their partnerships with the citrus industry and citrus-producing States through the establishment of the Huanglongbing (HLB) Multi-Agency Coordination (MAC) Group. HLB, or citrus greening, is a devastating disease that threatens continued citrus production in the United States unless new tools are found to combat it. In addition to APHIS, the MAC is made up of USDA’s Agricultural Research Service, National Institute of Food and Agriculture, and Risk Management Agency; the Environmental Protection Agency; State departments of agriculture in Florida, Arizona, California, and Texas; and citrus industry organizations in Florida, California, and Texas. The MAC Group is coordinating efforts to identify and support promising tools and solutions that citrus growers can use against HLB, or citrus greening, in the short term, while research continues into long-term solutions.

Organization’s History

The Secretary of Agriculture established the Animal and Plant Health Inspection Service (APHIS) on April 2, 1972, under the authority of Reorganization Plan No. 2 of 1953 and other authorities. However, much of the work that falls under its mission today has been the responsibility of the U.S. Department of Agriculture (USDA) for more than 100 years. In 1883, USDA established the Veterinary Division, the Department’s first regulatory program, forming the foundation of what would become APHIS. One year later, the Veterinary Division became the Bureau of Animal Industry (BAI). Congress created the BAI to promote livestock disease research, enforce animal import regulations, and regulate the interstate movement of animals. Regulatory activities to protect U.S. crops began with the 1912 Plant Quarantine Act and the establishment of the Federal Horticultural Board to enforce the act. In 1928, Federal Horticultural Board was separated into various plant health bureaus. In 1953 the functions of the BAI and the various plant health bureaus became part of USDA’s Agricultural Research Service (ARS).

In 1966, Congress passed the Laboratory Animal Welfare Act, which later became the Animal Welfare Act (AWA). This provided for the regulation of warm blooded animals used in research, bred for commercial sale, exhibited to the public, or commercially transported. The law requires basic standards of animal care to be established and enforced. APHIS’ Animal Care program enforces the provisions of the AWA and also the Horse Protection Act, passed by Congress in 1970. In 1971, the animal and plant regulatory functions were separated from ARS to become an entity known as the Animal and Plant Health Services (APHS) and in 1972 the meat and poultry inspection divisions of the Consumer and Marketing Service (later known as the Agricultural Marketing Service) were added to APHS (putting the “I” into APHIS). (In 1977, however, the Food Safety and Quality Service—now the Food Safety and Inspection Service—was established and took responsibility for meat and poultry inspections.) In 1985, the Secretary of Agriculture designated APHIS as the agency responsible for regulating biotechnology-derived products that affect animal and plant health. In 1985 Congress also transferred the Animal Damage Control (ADC) program from the U.S. Department of the Interior’s U.S. Fish and Wildlife Service to APHIS, where it was later renamed Wildlife Services. In 1987 APHIS’ international programs staff was given Foreign Service status, the agency’s influence in the international arena.

APHIS’ ability to protect animal and plant health was further strengthened by the passage of the 2000 Plant Protection Act and the 2002 Animal Health Protection Act. Both laws consolidated and modernized previous animal and plant health statutes, giving APHIS more tools for safeguarding agriculture and responding to pest and disease threats.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

Organizational Chart
Biographies of career staff in key leadership positions

Kevin Shea  
Administrator  
202-799-7000, Kevin.A.Shea@aphis.usda.gov

Kevin Shea was appointed Administrator of the U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS) on June 18, 2013, after serving as Acting Administrator since June 2012. As Administrator, Mr. Shea carries out the agency's broad mission of protecting and promoting American agriculture, regulating genetically engineered organisms, administering the Animal Welfare Act and carrying out wildlife damage management activities. In addition to his regular duties, Mr. Shea serves on the Secretary's Executive Resources Board and the Secretary's Management Council.

Before becoming Administrator, Mr. Shea served as Associate Administrator since September 2004, ensuring the smooth functioning of the Agency and championing APHIS' unprecedented business process improvement efforts. Starting in 2000, Mr. Shea served as Deputy Administrator for Policy and Program Development, providing leadership for the overall planning and direction of policies, programs and activities at APHIS, as well as being responsible for the Agency's budget, regulation development and environmental compliance programs. From 1992 to 2000 he served as APHIS' Director of Budget and Accounting. Earlier in his career he worked as a budget analyst, Chief of the Program Analysis Branch, and Chief of the Policy Analysis and Development Staff. He also spent one year practicing law in the litigation department of Frank, Bernstein, Conaway and Goldman in Baltimore, MD. Mr. Shea graduated from DeMatha Catholic High School in Hyattsville, MD and the University of Maryland in College Park. He earned a law degree, summa cum laude, from the University of Baltimore School of Law.

A native Washingtonian, Mr. Shea now resides in Crofton, MD.

Michael C. Gregoire  
Associate Administrator  
202-799-7023, Michael.C.Gregoire@aphis.usda.gov

Michael C. Gregoire was appointed Associate Administrator in January 2014. In this position, he works closely with Administrator Kevin Shea, ensuring the smooth day-to-day functioning of APHIS. Mr. Gregoire leads the Agency’s efforts to identify more alternatives to rulemaking to find solutions for the many critical animal and plant health and animal welfare issues facing U.S. agriculture. He also focuses on APHIS policy, budget and administrative issues and the Biotechnology Regulatory Services (BRS) and Plant Protection and Quarantine (PPQ) program areas.

Previously, Mr. Gregoire was Deputy Administrator of the BRS program for six years. In this position, he provided leadership and direction to ensure the safe development and introduction
(importation, interstate movement, and field testing) of genetically engineered organisms. Earlier, Mr. Gregoire served as Deputy Administrator for Policy and Program Development. In this role, he provided leadership and guidance in the overall planning and formulation of USDA policies, programs, and activities. Mr. Gregoire was also responsible for the Agency’s budget, regulation development, and environmental compliance programs.

After receiving his undergraduate degree, Mr. Gregoire worked for 2 years as a Social Welfare Examiner with the Erie County Department of Social Services in Buffalo, New York. He began his Federal career as a Budget Analyst with APHIS in 1978 and served in progressively responsible roles as an analyst and manager. From 1978 until 1992, Mr. Gregoire worked in the APHIS Budget and Accounting Division and served as the Agency’s Budget Officer for several years. From 1992 until 1995, Mr. Gregoire was the Chief of Staff to the APHIS Administrator. In 1995, he assumed a leadership position in the Agency’s information technology organization and was named APHIS Chief Information Officer in 1996.

Mr. Gregoire received his Bachelor of Arts degree in political science from Niagara University in 1976 and a Master’s Degree in public administration from George Washington University in 1983. Mr. Gregoire is a native of Buffalo, New York. He is married and has three children.

---

**Dr. Jere L. Dick**
**Associate Administrator**
202-799-7160, Jere.L.Dick@aphis.usda.gov

Dr. Jere L. Dick was appointed Associate Administrator in October 2013. In this position, he works closely with Administrator Kevin Shea, ensuring the smooth day-to-day functioning of APHIS. Dr. Dick leads APHIS’ Business Process Improvement efforts, supports APHIS’ emergency response community, and focuses on the work of Veterinary Services (VS), Wildlife Services (WS), and International Services (IS).

Before becoming Associate Administrator, Dr. Dick was the Associate Deputy Administrator and Chief of U.S. Field Operations for VS for four years. In this critical position, Dr. Dick led Agency efforts to protect, sustain, and improve the productivity, marketability, and health of the nation’s animals, animal products, and biologics. He also played an integral role in protecting the nation from the introduction of dangerous and costly pests and diseases. Dr. Dick cooperated closely with States, foreign governments, industry, and other organizations to ensure that APHIS fulfilled its vital mission of safeguarding American agriculture.

Dr. Dick began his VS career as a field Veterinary Medical Officer in Helena, Montana, in 1988, after owning and operating two private veterinary practices in the State of Washington for nearly 10 years. He went on to hold a variety of critical positions in VS, including Associate Deputy Administrator for Veterinary National Animal Health Programs and Policy Staff, Eastern Regional Director, Area Veterinarian in Charge, Area Epidemiologist, field veterinary medical officer, as well as Incident Commander and Regional Incident Commander on two different disease eradication campaigns.
Dr. Dick received his Doctorate of Veterinary Medicine from Washington State University and his Bachelor of Science degree from Northwest Nazarene University. A native of Denair, California, Dr. Dick currently resides in Laurel, Maryland, with his wife Myrna.

William H. (Bill) Clay  
Deputy Administrator, Wildlife Services (WS)  
202-799-7095, Bill.Clay@aphis.usda.gov

Mr. Clay is responsible for overall planning, coordinating, and direction of the national WS operational and research programs. Before assuming the role of Deputy Administrator in August, 2000, Mr. Clay was the WS Associate Deputy Administrator for a period of 3 years, and was the WS director of the operational support staff for a period of 7 years. Prior to that, he served as the State Director for the WS program in North Dakota, and Assistant to the State Director for the Texas WS program.

Mr. Clay is a native of San Antonio, Texas. He obtained his B.S. degree in Wildlife Management from Texas Tech University, Lubbock, Texas, in December 1974 and is a certified wildlife biologist.

Dr. Jack Shere  
Deputy Administrator, Veterinary Services (VS)/Chief Veterinary Officer  
202-799-7147, Jack.A.Shere@aphis.usda.gov

Dr. Shere joined VS in 1990 as a field veterinary medical officer in Nebraska and Wisconsin and has held many leadership positions since then, including Associate Western Regional Director from 2002 to 2005 and Eastern Regional Director from 2005 to 2013. More recently, Dr. Shere served as VS’ Associate Deputy Administrator since 2013.

Dr. Shere has extensive experience with animal disease outbreaks, including salmonella enteritidis, foot-and-mouth disease in England, low pathogenic avian influenza, Exotic Newcastle Disease (END), and highly pathogenic avian influenza. During the extensive 2002-2003 END outbreak in California, Texas, New Mexico, and Utah, Dr. Shere served as the Joint Area Commander and Incident Commander, leading a massive federal and state eradication effort for nine months until the disease was eradicated from the United States.

Dr. Shere received a Bachelor of Science in Biology and Chemistry in 1981, a Doctor of Veterinary Medicine in 1987, and a Master of Science in Education with a minor in Counseling
in 1988 – all from Iowa State University. He received PhD’s in Poultry Science and Microbiology in 2001 from the University of Wisconsin. He also practiced veterinary clinical medicine for 3 years in Georgia.

Bernadette Juarez
Deputy Administrator, Animal Care (AC)
301-851-2735, Bernadette.R.Juarez@aphis.usda.gov

Ms. Juarez leads the program’s many employees in protecting and ensuring the welfare of millions of animals nationwide that are covered under the Animal Welfare Act (AWA) and the Horse Protection Act (HPA). She also oversees the collaborative work done at AC’s Center for Animal Welfare, building critical partnerships domestically and internationally, while seeking to improve regulatory practices and develop training and educational resources.

Prior to being named Deputy Administrator in February 2016, Ms. Juarez served with APHIS’ Investigative and Enforcement Services (IES), first as Deputy Director for nearly 5 years and then as Director beginning in 2013. As Director, Ms. Juarez was responsible for leading investigations of alleged AWA and HPA violations, as well as all other APHIS-administered statutes and regulations, and pursuing enforcement actions where warranted. She also transformed the unit’s ability to complete investigation and enforcement actions nearly 50% faster by streamlining its business processes and focusing on the highest priority investigations.

Ms. Juarez’s experience enforcing the AWA and HPA began prior to her joining APHIS as a trial attorney in USDA’s Office of the General Counsel from 2002 to 2009. In over 6 years, she represented APHIS in numerous AWA and HPA administrative enforcement proceedings. In 1999, Ms. Juarez completed her Bachelor in Business Administration from the University of New Mexico. She went on to earn her Juris Doctor from American University, Washington College of Law, in 2002.

Although originally from New Mexico, Ms. Juarez currently resides in Silver Spring, Maryland, with her husband Brian and two children, Concetta and Miles.

Osama El-Lissy
Deputy Administrator, Plant Protection and Quarantine (PPQ)
202-799-7163, Osama.A.El-Lissy@aphis.usda.gov

Mr. El-Lissy leads and directs a nationally dispersed staff that safeguards U.S. animal and plant resources from destructive pests and diseases.

For nearly two years before becoming PPQ’s Deputy Administrator, Mr. El-Lissy was the Associate Deputy Administrator responsible for policy and financial management within PPQ. Before that, he directed PPQ’s emergency management, providing national coordination in the preparedness, response, and recovery from plant health emergencies in the United States. This
included working with federal and state governments, industry stakeholders, and subject matter experts to develop and implement comprehensive plans designed to safeguard American agriculture against invasive pest outbreaks such as the recent citrus black spot in Florida, European grapevine moth in California, and potato cyst nematode in Idaho.

From 2000 to 2005, Mr. El-Lissy served as the APHIS National Coordinator for cotton pest programs. In that role, he provided the coordination for national cotton pest programs in the United States and Mexico, including the boll weevil and pink bollworm eradication programs. Mr. El-Lissy’s previous experience includes more than twelve years in the private sector managing large scale pest control and eradication programs. As the director of the Texas boll weevil eradication program from 1994 through 2000, he led one of the largest pest eradication programs in the world, affecting approximately four million acres of cotton and providing services to several thousand cotton producers and landowners.

Mr. El-Lissy earned a Master’s Degree in International Business Administration from Georgetown University, a Master’s Degree in Public Administration from American University, and a Bachelor of Science in Agriculture Production and Entomology from Cairo University.

Bethany Jones, Deputy Administrator, Legislative and Public Affairs (LPA)
202-799-7037, Bethany.X.Jones@aphis.usda.gov

Ms. Jones provides leadership and guidance to effectively communicate APHIS policy developments and program accomplishments. Ms. Jones is responsible for the overall planning and direction of LPA activities, which include media and industry outreach, legislative analysis, Freedom of Information and Privacy Act requests, production of informational materials, and response to media, congressional, intergovernmental, and citizen inquiries about APHIS programs.

Ms. Jones began her career with APHIS in 1990, after graduating from Randolph Macon Woman’s College with a Bachelor of Arts degree in English. She accepted a position as a writer/editor with LPA’s Executive Communications program and has been with LPA ever since. Ms. Jones spent 11 years in LPA’s Public Affairs office where she served in various positions including editor of the Agency’s newsletter, outreach campaign coordinator, international trade public affairs specialist, and Deputy Director of Public Affairs. In 2000, she was named Director of Public Affairs with responsibility for managing the Agency’s media, outreach, publications, web, and audio visual functions. In 2003, Ms. Jones was selected as Associate Deputy Administrator for LPA and then in 2007 as Deputy Administrator.

Beverly Simmons
Deputy Administrator, International Services (IS)
301-851-3775, Beverly.Simmons@aphis.usda.gov

In leading a 300-person staff domestically and overseas, Ms. Simmons directs cooperative efforts with foreign governments to prevent the introduction of high-risk pests and diseases into the
United States. She is also responsible for protecting and expanding overseas markets for U.S. agricultural goods, supporting rural incomes and jobs. Simmons broadens APHIS’ safeguarding system by leading work in developing regions to improve their capacity to detect—and respond—to emerging pests and disease threats.

Previously in APHIS, Simmons served as the Associate Deputy Administrator for Emerging and International Programs of Biotechnology Regulatory Services. In that role, she was responsible for developing new programs and initiatives to meet the evolving nature of APHIS’ biotechnology regulatory framework, and for advancing its international objectives.

Before joining APHIS, she was the Assistant Deputy Administrator of the Office of Scientific and Technical Affairs of USDA’s Foreign Agricultural Service. In that role, Simmons led the Agency’s efforts to develop strategic and tactical approaches to address technical, sanitary and phytosanitary barriers to agricultural trade. As director of the biotechnology group, she coordinated program and policy development for agricultural biotechnology trade-related issues. Other positions within FAS include Assistant Deputy Administrator for International Trade Policy and Assistant to the Deputy Administrator for Commodity and Marketing Programs. Simmons has also served as Agricultural Attaché at the U.S. Embassy in London. Simmons earned her undergraduate and graduate degrees in business/marketing and agricultural and resource economics from the University of Maryland at College Park.

Christine Zakarka
Deputy Administrator, Policy and Program Development (PPD)
301-851-3112, Christine.A.Zakarka@aphis.usda.gov

Ms. Zakarka provides leadership for the overall planning and directions of policies, programs and activities at APHIS. She is also responsible for the Agency’s budget, regulation development, and environmental compliance programs.

Prior to her recent appointment, Ms. Zakarka served since 2001 as Chief of PPD’s Planning, Evaluation, and Monitoring staff. In that role, she was responsible for developing the Agency’s strategic and operational plans, evaluating the effectiveness and efficiency of APHIS programs, and analyzing and improving business processes. Ms. Zakarka has also held numerous other positions in APHIS, including as a Manager of Information Technology Planning and as an Employee Development Specialist. She has served on several temporary managerial details, including Acting Director for the Agency’s Conflict Prevention and Management Program, Acting Director of the National Veterinary Services Laboratories in Ames, Iowa, and most recently, Acting Assistant Human Resources Director.

Ms. Zakarka obtained her Bachelor’s degree in Urban Planning from Fordham University and her Masters degree from University of Maryland University College.
Marilyn L. Holland
Deputy Administrator, Marketing and Regulatory Programs Business
202-799-7065, Marilyn.L.Holland@aphis.usda.gov

Ms. Holland is responsible for providing human resource management, financial management, and administrative services to support the objectives of the Animal and Plant Health Inspection Service (APHIS), the Agricultural Marketing Service and the Grain Inspection, Packers and Stockyards Administration. Ms. Holland also provides a variety of support services to APHIS, including information technology management, emergency management, and investigative services.

Ms. Holland led APHIS’ Modernization Project Management Office from 2011-2012. Prior to that assignment, she was APHIS’ Chief Information Officer from 2008 through 2011. Ms. Holland came to APHIS in 2006 as the Deputy Chief Information Officer. She has also worked in the area of IT Management at USDA’s Office of the Chief Information Officer and Agricultural Stabilization and Conservation Service (now Farm Service Agency). She began her career at USDA as a financial analyst in the Farmers Home Administration (now Rural Development).

Ms. Holland holds a Bachelor of Arts in History and a Master’s in Business Administration from Georgetown University.

Kenneth E. Johnson (Ken)
Director, Office of Civil Rights, Diversity and Inclusion (OCRDI)
202-799-7012, Ken.E.Johnson@aphis.usda.gov

Mr. Johnson is responsible for providing leadership, direction, coordination, evaluation and support to the APHIS Formal and Informal Complaint Programs; Cultural Transformation and Diversity and Inclusion Programs; Tribal Consultation and Outreach Programs; Civil Rights Compliance Program; and Minority Outreach and Special Emphasis Programs.

During his 37-year Federal Career, Mr. Johnson spent 10 years with the Agricultural Marketing Service, 2 years with the Office of the Assistant Secretary for Civil Rights, and 25 years with the Animal and Plant Health Inspection Service. He has held positions such as Special Programs Consultant to the Administrator; Acting Director, USDA Center for Minority Farmers; Director, Emergency Planning and Response Division; Director of the Riverdale/Washington Business Site; Director, Resource Management, Wildlife Services; Branch Chief, Procurement Policy and Safety Management; Budget Analyst; Administrative Officer; and Agricultural Marketing Specialist.

In addition to his Federal service, Ken served 9 years as an elected member of the Prince George's County Maryland Board of Education. During his tenure on the Board, his colleagues elected him Chairman of the Board three times.
Michael J. Firko, Ph.D.,
Deputy Administrator, Biotechnology Regulatory Services (BRS)
301-851-3941, Michael.J.Firko@aphis.usda.gov

Dr. Firko provides leadership and direction to ensure the safe development and introduction (importation, interstate movement, and field testing) of genetically engineered organisms. Dr. Firko’s USDA career spans more than 26 years, most of which he spent at APHIS, along with several years at the Agricultural Research Service. In fact, Dr. Firko first joined APHIS to work for Biotechnology, Biologics and Environmental Protection—the predecessor to BRS. The majority of Dr. Firko’s APHIS career, however, has been with the Plant Protection and Quarantine (PPQ) program, where he served in a number of leadership positions.

As APHIS’ Executive Sponsor for ePermits, Dr. Firko led the Agency’s transition to an on-line, electronic permitting system. He also led the creation of PPQ’s Remote Pest ID system, which uses digital images to help identify intercepted pests and expedite cargo clearance. In addition, Mike led PPQ’s Plant Pest Molecular Diagnostics Laboratory, the National Plant Pest Identification Services, and the Plant Germplasm Quarantine program. Following the terrorists attacks on Sept. 11, 2001, Dr. Firko helped create and subsequently led the Federal Select Agent Program until his move to BRS in 2011.

Dr. Firko joined BRS as the Acting Associate Deputy Administrator in July 2011, and was officially named to that position in March 2012. A little more than a year later, in May 2013, he was asked to serve as BRS’ Acting Deputy Administrator. In addition to his BRS responsibilities, Dr. Firko currently serves on USDA’s Science Council as the Marketing and Regulatory Program’s mission area representative. In that role he facilitates and supports cross-Department coordination and collaboration of science-related activities.

Dr. Firko received his Doctorate degree in Biology from the University of Pennsylvania in 1986. Dr. Firko was born in New Jersey, and has lived and worked in Colorado, Alabama, Pennsylvania, North Carolina, Massachusetts, Mississippi, Texas, and Maryland.

Congress provided $469,000 in FY 2009 and $2.6 million in FY 2010 through general provisions in the appropriation for the planning and design of an agricultural pest facility in Hawaii.

Congress provided $20 million in 2-year funding through a general provision in the FY 2014 appropriation, and an additional $5.5 million in 2-year funding through a general provision in the FY 2016 appropriation for the Multi-Agency Contingency Fund.

The Animal and Plant Health Protection Act adopted by Congress will provide the Secretary of Agriculture with the authority to transfer funds to APHIS for use in controlling outbreaks of insects, plant diseases, and animal and poultry diseases. However, Congress provided $469,000 in FY 2009 and $2.6 million in FY 2010 through general provisions in the appropriation for the planning and design of an agricultural pest facility in Hawaii.

The Animal and Plant Health Protection Act grant the Secretary of Agriculture authority to transfer funds to APHIS for use in controlling outbreaks of insects, plant diseases, and animal and poultry diseases. Although Congress provided $20 million in 2-year funding through a general provision in the FY 2014 appropriation, and an additional $5.5 million in 2-year funding through a general provision in the FY 2016 appropriation for the Multi-Agency Contingency Fund.
Congressional Actions

Congress provided $469,000 in FY 2009 and $2.6 million in FY 2010 through general provisions in the appropriation for the planning and design of an agricultural pest facility in Hawaii. This funding was related to a FY 2007 Senate requirement for APHIS to conduct a feasibility study on the construction of a multi-species fruit fly facility in Hawaii. APHIS had an existing, but defunct, fruit fly facility in Waimanalo, Hawaii. APHIS closed down the Waimanalo facility in 2002 due to a variety of structural and technical problems. APHIS used the funds provided to conduct the feasibility study as directed. The study’s findings included that the existing building needed to be demolished and that the cost of a new multi-species facility was an estimated $35 million in 2011 dollars. Congress did not provide funding to construct the new facility. APHIS used the remaining general provision funding to demolish the old building. APHIS continues to have an irradiator in Waimanalo where Mediterranean fruit flies produced by the California Department of Food and Agriculture are sterilized for use in preventive release programs in California.

The FY 2011 Full-Year Continuing Resolution removed $27 million from APHIS’ appropriation related to approximately 45 Congressionally directed projects. This funding covered a variety of activities, ranging from specific wildlife damage mitigation projects to pre-departure inspections of passenger baggage from Hawaii to the continental United States to projects related to specific animal and plant disease mitigation programs. Without funding, APHIS permanently discontinued many of the specific projects.

Congress provided $20 million in 2-year funding through a general provision in the FY 2014 appropriation for the Multi-Agency Coordination (MAC) Group for Huanglongbing (HLB), or citrus greening. HLB is a devastating disease that threatens U.S. citrus production, valued at $3.1 billion in 2013. APHIS established the HLB MAC framework to identify and support promising tools and solutions that growers can use to fight HLB in their groves. Congress provided an additional $5.5 million in the FY 2016 appropriation for the HLB MAC that is available until the end of FY 2017. Since FY 2014, APHIS has funded more than 30 projects carried out by State cooperators, universities, private companies, and Federal agencies. The projects focus on control methods targeting the insect vector that spreads HLB, therapies for HLB-infected trees, early detection methods for finding newly infected trees, and ways to sustain new citrus plantings. Some promising tools developed include thermotherapy (heat treatment) to keep HLB-infected trees productive, biological control of the insect vector, and new grove management strategies—such as lowering the pH of soil and water to allow better uptake of nutrients—that keep trees productive.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

Agency Actions and Authorities

In FY 2012, APHIS restructured its budget with Congressional approval through the appropriations process. APHIS shifted from pest and disease-specific line items toward a commodity-based approach. For example, the previous budget structure had separate line items for bovine tuberculosis and brucellosis as well as another focused on animal disease surveillance. APHIS combined portions of each of these line items into the Cattle Health line item. On the plant side, APHIS combined line items for addressing exotic fruit flies, plum pox virus, golden nematode, and others into the Specialty Crop Pests line item. The APHIS budget went from approximately 45 line items to 30. APHIS pursued this change to provide flexibility to address the most pressing pest and disease issues facing a particular industry or commodity.

When pest or disease outbreaks that pose a serious economic threat to American agriculture require funding beyond that available, emergency funds may be needed. The Plant Protection Act and the Animal Health Protection Act grant the Secretary of Agriculture authority to transfer funds to APHIS for use in controlling outbreaks of insects, plant diseases, and animal and poultry diseases. Although the Secretary is authorized to transfer funds from any USDA agency or corporation, the funds are typically transferred from the Commodity Credit Corporation (CCC). Each year, APHIS’ appropriation also emphasizes this authority. In FY 2015, APHIS received approximately $1 billion in emergency funds transferred from the CCC to address the largest animal outbreak in history – that of notifiable avian influenza. In past years, APHIS has received transfers of emergency funds to address plant pests such as Asian longhorned beetle and European grapevine moth and animal pest or disease outbreaks such as bovine tuberculosis and cattle fever ticks.

Also, in FY 2015 the Department decentralized its General Services Administration (GSA) rent account. The appropriated budget included a new line item totaling $42.5 million to cover APHIS’ portion of this account.

In FY 2016, APHIS implemented new rates for the Agricultural Quarantine Inspection user fees. The new rates were designed to increase overall revenue as well as ensure that the fees for each conveyance covered the costs associated with that conveyance. The Agency expects to see the impact of the new user fee rates in FY 2017.

USDA’s Animal and Plant Health Inspection Service (APHIS) employs a workforce of 8609 employees of whom 5771 are permanent. Of these permanent employees, the following are full-time and part-time:
- Full-time: 5669 employees
- Part-time: 85 employees
- APHIS employs an additional 5 full-time seasonal employees and 12 intermittent employees to provide support during busier months.
- In addition to its permanent workforce, APHIS employs 1313 temporary employees and 1525 term employees.

Of the total permanent staff, 25% are unionized and 75% are not unionized.

Of the total permanent staff, 60% are in the following mission-critical positions:
- General Biological Science
- Veterinary Medical Officer
- Wildlife Biologist
- Animal Health Technician
- Information Technology
- Plant Protection and Quarantine Technician
- Biological Technician
- Human Resources Specialist
- Microbiologist

Of our total permanent workforce, 29.8% are eligible to retire within the next year; if term and temporary employees are included, 21.6% are eligible to retire as of November 1, 2016.

Our headquarters is located in Washington, D.C. and nearby Riverdale Maryland, which together house 18% of our workforce, a total of 1056 employees.

82% of the APHIS workforce are located in the field throughout the United States and internationally.

- Of these employees, 21.8% are located in 4 regional offices:
  - Fort Collins, CO, site of the National Wildlife Research Center, the Western Regional Animal Care office and the Centers for Epidemiology and Animal Health;
  - Raleigh, NC, location for the Center for Plant Health Science and Technology and Eastern Regional Animal Care office;
  - Ames, IA, site of the National Veterinary Services Laboratories and Center for Veterinary Biologics; and
- 59.9% are elsewhere, with a large number of these employees teleworking from their homes.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

- 155 employees are located in 18 non-U.S. locations. These employees develop international strategies and partnerships, help protect and expand U.S. agricultural exports abroad, and assist foreign partners in building their animal and plant health infrastructures, helping to reduce the likelihood of undetected agricultural threat pathways into the United States.

II. Policies and Regulations

Statutory Authorities

The Secretary of Agriculture established the Animal and Plant Health Inspection Service (APHIS) on April 2, 1972, under the authority of Reorganization Plan No. 2 of 1953 and other authorities. The mission of the Agency is to protect the health and value of American agriculture and natural resources.

APHIS operates under the following general authorities:

- 7 U.S.C. 450 Talmadge-Aiken Act (cooperation with States)
- 7 U.S.C. 7759 Miscellaneous Receipts
- 31 U.S.C. 9701 Miscellaneous Receipts
- 7 U.S.C. 3291a(3) Authority to provide technical assistance and training
- 7 U.S.C. 5680 Farm Security and Rural Investment Act of 2002—reporting on SPS issues and trade barriers
- 7 U.S.C. 5925 Food, Agriculture, Conservation, and Trade Act of 1990—authorizes funding for national honeybee pest survey
- 7 U.S.C. 2279g Marketing Services; cooperative agreements

Animal and Plant Safeguarding and Emergency Preparedness/Response

APHIS monitors plant and animal health domestically and throughout the world and uses the information to control pests and diseases and set effective agricultural import policies to prevent the introduction of foreign plant and animal pests and diseases. Sanitary (animal) and phytosanitary (plant) (SPS) regulations can have a significant impact on market access for the United States as an exporter of agricultural products. APHIS plays a central role in resolving technical trade issues to ensure the smooth and safe movement of agricultural commodities into and out of the United States.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

Authorities:

Animal Health:

7 U.S.C. 8301-8317  The Animal Health Protection Act
49 U.S.C. 80502  28-Hour Law (feed, water, and rest for animals)
19 U.S.C. 1202, Part I, Item 100.01  Purebred animal duty-free entry
7 U.S.C. 1622  Section 203 of the Agricultural Marketing Act of 1946
7 U.S.C. 1624  Section 205 of the Agricultural Marketing Act of 1946
7 U.S.C. 430  Section 101(d) of the Organic Act of 1944
7 U.S.C. 3801-3813  Swine Health Protection Act
7 U.S.C. 851-855  Anti-hog cholera serum and hog cholera virus
7 U.S.C. 2274  Firearms (tick inspectors)
7 U.S.C. 1901 note  Transportation of Equines to Slaughter
21 U.S.C. 151-159  Virus-Serum-Toxin Act
21 U.S.C. 113a  Authority to establish research facilities for FMD and other diseases
21 U.S.C. 618  Section 18 of the Federal Meat Inspection Act, as amended, as it pertains to the issuance of certificates of condition of live animals for export
7 U.S.C. 8401  Title II, Subtitles B and C of the Agricultural Bioterrorism Act of 2002
7 U.S.C. 8318  Section 10504 of the Farm Security and Rural Investment Act of 2002 (training of accredited veterinarians)

Plant Health:

7 U.S.C. 7701-7772; 7781-7786  Plant Protection Act
7 U.S.C. 1581-1611  Title III, Federal Seed Act
7 U.S.C. 2801 note; 2814  Federal Noxious Weed Act
7 U.S.C. 281-286  Honeybee Act
7 U.S.C. 2279e and 2279f  Title V of the Agricultural Risk Protection Act of 2000 (penalties for interfering with inspection animals)
16 U.S.C. 1531-1544  Endangered Species Act (plants)
16 U.S.C. 3371-3378  Lacey Act (importation or shipment of injurious mammals, birds, fish)
7 U.S.C. 8401 and 8411  Title II, Subtitle B, of the Agricultural Bioterrorism Protection Act of 2002
Wildlife

Through its Wildlife Services program, APHIS protects agriculture from detrimental animal predators through identification, demonstration, and application of the most appropriate methods of control. APHIS also develops methods to control animals and pests that are detrimental to agriculture, wildlife, and public safety.

Authority:

7 U.S.C. 426-426d  
Control of predatory and other wild animals

Animal Welfare

The Agency conducts regulatory activities to ensure the humane care and treatment of certain animals and horses as required by the Animal Welfare Act of 1966 as amended (7 U.S.C. 2131-2159), and the Horse Protection Act of 1970 as amended (15 U.S.C. 1821-1831). These activities include inspection of certain establishments that handle animals intended for research, exhibition, and sale as pets, and monitoring of certain horse shows.

Authorities:

7 U.S.C. 2131-2159  
Animal Welfare Act
15 U.S.C. 1821-1831  
Horse Protection Act

Important Policies and Regulations

APHIS publishes an average of 120 to 150 documents in the Federal Register each year, ranging from notices regarding the Paperwork Reduction Act, notices of availability for environmental assessments or for risk assessments used to make market access decisions, to interim rules establishing or expanding domestic quarantined areas for plant pests or to adjust the status of States with regard to animal health programs, to proposed and final rules that make substantive changes or updates to our animal welfare and plant and animal health regulations. Fiscal year 2015 was a typical year in terms of the number and types of documents published: 96 notices, 18 final rules (2 of which were economically significant, the remainder not significant), 14 proposed rules (2 of which were significant, the remainder not significant), and 4 interim rules. Of the current regulatory and non-regulatory actions being tracked, roughly 15 percent are significant/economically significant, 20 percent are not significant, and the remainder are waived or not subject to OMB review.

Regulatory Actions Published in the Last Year:

The proposed rule for amending the horse protection regulations would, among other things, amend the regulations to provide that APHIS (rather than industry) will train and license inspectors inspecting horses for compliance with the Horse Protection Act. (The Horse Protection Act prohibits soring, a cruel and inhuman practice where certain gaited breeds of horses are subjected to irritants to enhance their gait and provide a competitive advantage in shows,
exhibitions, sales and auctions.) We are also proposing several changes to the list of devices, equipment, substances, and practices that can cause soring or are otherwise prohibited under the HPA and regulations. (Published: 7/26/16; Comments due: 10/26/16)

The **proposed rule for the importation of live sheep, goats, and certain other non-bovine ruminants, and products derived from sheep and goats, with regard to transmissible spongiform encephalopathies such as bovine spongiform encephalopathy (BSE) and scrapie** would remove BSE-related import restrictions on sheep and goats and most of their products, and add import restrictions related to transmissible spongiform encephalopathies for certain wild, zoological, or other non-bovine ruminant species. The conditions for the importation of specified commodities would be based on internationally accepted scientific literature and would more closely align our regulations with guidelines set out in the World Organization for Animal Health’s Terrestrial Animal Health Code. (Published: 7/18/16; Comments due: 9/16/16)

The **proposed rule to update our National Environmental Policy Act regulations** would clarify and amend the categories of action for which we would normally complete an environmental impact statement or an environmental assessment for an action, expand the list of actions subject to categorical exclusion from further environmental documentation, and set out an environmental documentation process that could be used in emergencies. (Published: 7/20/16; Comments due: 9/19/16)

The **proposed rule for establishing de minimis exemptions from the Animal Welfare Act** would amend the AWA regulations in response to a 2014 Farm Bill amendment to the Act that provides the Secretary of Agriculture with the authority to determine that animal dealers and exhibitors are not required to obtain a license under the Act and regulations if the size of the business conducting AWA-related activities is determined by the Secretary to be de minimis. The proposal would establish de minimis thresholds for businesses breeding, selling, or exhibiting regulated animals and include the thresholds in the regulations. Dealers and exhibitors operating at or below the thresholds determined for their AWA-related business activity would be exempted from Federal licensing requirements established under the Act and regulations. (Published: 8/4/16; Comments due: 11/2/16)

The **proposed rule for the importation of lemons from Argentina** would allow for the importation of lemons from Argentina under certain conditions. (Published: 5/10/16; Comments due: 8/10/16).

The **final rule for user fees for agricultural quarantine and inspection services** amended the user fee regulations by adding new fee categories and adjusting current fees charged for certain agricultural quarantine and inspection services that are provided in connection with certain commercial vessels, commercial trucks, commercial railroad cars, commercial aircraft, and international passengers arriving at ports in the customs territory of the United States. We also adjusted and removed the fee caps associated with commercial trucks, commercial vessels, and commercial railcars. This rule allows us to recover the costs of the current level of activity, to account for actual and projected increases in the cost of doing business, and to more accurately
align fees with the costs associated with each fee service. (Published: 10/29/15; Effective 12/28/15)

The **interim rule for highly pathogenic avian influenza** (HPAI) in response to the outbreaks that occurred 2014 to 2015 addressed indemnity claims paid to owners and contractors to ensure that contractors are compensated appropriately. Specifically, we provided a formula that allows us to split indemnity payments between poultry and egg owners and parties with which the owners enter into contracts to raise or care for the eggs or poultry based on the proportion of the production cycle completed. This requirement is intended to prevent the introduction of HPAI into commercial facilities due to substandard biosecurity practices. (Published and effective: 2/9/16)

The **proposed rule for marine mammals** would ensure that the minimum standards for the humane handling, care, treatment, and transportation of marine mammals in captivity are based on current industry and scientific knowledge and experience. (Published: 2/3/16; Comments due: 5/4/16).

The **proposed rule for the select agents program** is part of the biennial review to amend and republish the list of select agents and toxins that have the potential to pose a severe threat to animal or plant health, or to animal or plant products, as required by the Agricultural Bioterrorism Protection Act of 2002. (Published: 1/19/16; Comments due: 3/21/16).

The **proposed rule for brucellosis and tuberculosis** (TB) would shift the focus of the domestic regulations from disease prevalence to disease management, better reflecting today’s low prevalence rates for these diseases. In addition, it revises the TB- and brucellosis-related import requirements to make these requirements clearer and assure that they more effectively mitigate the risk of introduction of these diseases into the United States. (Published: 12/16/15; Comments due: 5/16/16).

**Upcoming Regulatory Actions:**

The **proposed rule for part 340** would amend the regulations regarding the importation, interstate movement, and environmental release of certain genetically engineered organisms to bring the regulations into alignment with provisions of the Plant Protection Act. The revisions would also update the regulations in response to advances in genetic science and technology and the agency’s accumulated experience in implementing the current regulations, as well as reduce the burden on regulated entities. This is the first comprehensive review and revision of the regulations since they were established in 1987.

The **final rule to establish performance standards for importation and interstate movement of fruits and vegetables (Q56 expansion)** would expand the current notice-based process for the importation of fruits and vegetables subject to certain mitigations to include all imported fruits and vegetables, regardless of the mitigations identified in the pest risk analysis for the commodity. This will eliminate the need for those rulemakings and free up regulatory
development resources to work on other pending regulatory changes that impact APHIS program delivery. APHIS will maintain a list of all approved fruits and vegetables and their corresponding import requirements on its Web site.

The **final rule for scrapie**, among other things, would amend the regulations by changing the risk groups and categories established for individual animals and for flocks, increasing the use of genetic testing as a means of assigning risk levels to animals, reducing movement restrictions for animals found to be genetically less susceptible or resistant to scrapie, and simplifying, reducing, or removing certain recordkeeping requirements.

The **final rule for select agents** biennial review to amend and republish the list of select agents and toxins that have the potential to pose a severe threat to animal or plant health, or to animal or plant products, as required by the Agricultural Bioterrorism Protection Act of 2002.

The **proposed rule for plant pest regulations (part 330)** would revise our regulations regarding the movement of plant pests, propose criteria regarding the movement of soil, the movement and environmental release of biological control organisms, and propose to establish regulations to allow the importation and movement in interstate commerce of certain types of plant pests without restriction by granting exceptions from permitting requirements for those pests.

The **proposed rule for domestic quarantines (part 301)** would, instead of pest-specific regulations, establish a consolidated regulatory framework that would pertain to all plant pests for which the Administrator has established a domestic quarantine program. The proposed framework would establish a process to add or remove domestic quarantine programs without requiring rulemaking.

This **final rule for the forfeiture regulations** would bring our forfeiture regulations into compliance with the Civil Asset Forfeiture Reform Act of 2000. It also amends the requirements for determining the value of seized property, increases the monetary threshold of those cases proceeding through judicial forfeiture, provides for the assessment of storage costs of seized property, and makes the regulations easier to understand.

This **final rule for wood packaging material** from Canada would amend the regulations for the importation of unmanufactured wood articles to remove the exemption that allows wood packaging material from Canada to enter the United States without first meeting the treatment and marking requirements of the regulations that apply to wood packaging material from all other countries.

**Overview of the policy/regulation review process**

Pursuant to its authority under the Animal Health Protection Act, Plant Protection Act, Animal Welfare Act, and other statutes, APHIS promulgates rules as necessary to support the efforts of its regulatory programs (Animal Care, Biotechnology Regulatory Services, Plant Protection and Quarantine, and Veterinary Services). Regulatory priorities are established in a variety of ways.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

In rare cases, APHIS has statutory deadlines that come out of the Farm Bill or other laws, such as the Agricultural Bioterrorism Protection Act of 2002. Market access (trade) requests are prioritized according to a master list developed in cooperation with the Foreign Agriculture Service. Other regulations are marked as priorities based on Administration policy goals, the need to address an urgent situation, or as deliverables to leverage U.S. market access requests. The prioritization process is fluid, changing regularly depending on Secretarial/Administration priorities.

APHIS has developed procedures to streamline internal regulatory clearance processes as much as possible. The Agency routinely provides the Office of the General Counsel (OGC) a prioritized list of pending rules, to help that office prioritize its review of pending regulations and to anticipate upcoming demands, and conducts briefings for USDA, OMB, and other agencies to facilitate clearance of high priority rules. In implementing the regulations, the Agency relies on a variety of manuals and guides, all of which are made available to the public on the Agency website.

Both the Animal Health and Plant Protection Acts give APHIS broad authority to address emergency situations through the issuance of Emergency Action Notifications and Federal Orders. These are both emergency regulatory mechanisms. A Federal Order is issued by the agency to generally regulate an area or put in place a general control. Federal Orders are effective immediately and contain specific regulatory requirements; they may prohibit or restrict entry of a regulated article, or they may prohibit or restrict interstate movement. For example, APHIS may quarantine a county with several growers in it using a Federal Order. An Emergency Action Notification (EAN) provides notice that a specific action must take place to mitigate a specific threat. For example, APHIS may issue an EAN to a grower requiring that they perform a quarantine treatment, or to a shipper requiring the treatment, re-export, or destruction of a shipment presented for entry into the United States.

A Federal Order remains in effect until it is revised by another Federal Order, rescinded, or until an interim rule on the subject is published. If APHIS determines the situation addressed by a Federal Order is going to be long term, the Agency will either establish regulations or implement a non-regulatory solution, at which point the Federal Order is no longer necessary.

An emergency action may be triggered by a finding of a quarantine pest or confirmed case of a recognized foreign animal disease; an occurrence of a new or emerging pest or disease that poses a significant threat to plant health, animal health, public health, the food supply, or the economy; or an outbreak that is unusually widespread and thus strains Federal, State, and producer resources. In any animal or plant health emergency, APHIS works closely with State, local, Tribal, and other appropriate Federal officials, as well as industry, to determine the scope and approach of the regulatory response. Guidelines are outlined in documents such as APHIS’ Foreign Animal Disease Preparedness and Response Plan. The Plant Protection Act and the Animal Health Protection Act grant the Secretary of Agriculture authority to transfer funds to APHIS for use in controlling outbreaks of insects, plant diseases, and animal and poultry diseases. Although the Secretary is authorized to transfer funds from any USDA agency or corporation, the funds are typically transferred from the Commodity Credit Corporation.
With regard to regulation of biotechnology, APHIS has processes in place to ensure the safe importation, interstate movement, and field testing of certain genetically engineered (GE) organisms (plants, insects, or microbes). All regulated introductions of GE organisms must be authorized by APHIS’ Biotechnology Regulatory Services (BRS) under either its permitting or notification procedures. BRS issues permits for introductions of GE organisms that pose a plant pest risk; applicants must provide scientific information for BRS to review before the program issues the permit. BRS’ notification procedure is an administratively-streamlined alternative to a permit. The GE organism must meet specified eligibility criteria, and the introduction must meet certain pre-defined performance standards.

When a developer has collected enough evidence that a GE organism poses no more of a plant pest risk than an equivalent non-GE organism, the developer may petition BRS to determine non-regulated status for the GE organism. If BRS approves the petition, the GE organism may then be introduced into the United States without any further regulatory oversight by APHIS.

In recent years, BRS has undertaken a number of business process improvement projects that have enabled APHIS to meet its goal of safely moving important new technology to market faster, according to timeframes established in the new process. BRS also developed and implemented a related project aimed at increasing use of the extension process described in its biotechnology regulations, optimizing it to achieve faster de-regulations while maintaining a high standard of protection of plant health. This process applies in cases where an applicant is seeking de-regulation of a new genetically engineered plant that is very similar to one or more already de-regulated.

APHIS’ Center for Veterinary Biologics (CVB) regulates veterinary biologics (vaccines, bacterins, antisera, diagnostic kits, and other products of biological origin) to ensure that products available for the diagnosis, prevention, and treatment of animal diseases are pure, safe, potent, and effective. CVB reviews license applications for veterinary biologics production facilities, as well as for the products themselves; reviews applications for permits to import these products; establishes licensing, testing, and permit requirements and procedures; and reviews production methods, labels, and supporting data involved in the licensing and permit process. CVB’s prelicense testing involves evaluating parent materials (master seeds and cells) and final products to, among other things, ensure purity, safety, and potency and that the manufacturer is able to reproduce quality product.

CVB also conducts postlicense quality control monitoring. Manufacturers submit samples of each serial of all licensed veterinary biologics to CVB, which are stored for the shelf life of the product. All serials are required to be tested by the manufacturer prior to sale. CVB monitors the reliability of manufacturers’ quality control programs by conducting confirmatory testing of randomly selected serials; the unit also tests products as part of investigations resulting from consumer or manufacturer concerns.

CVB has undertaken several business process improvement projects over the past several years, which have resulted in in the unit streamlining its processes for license submissions, reviews, and issuances. This, in turn, has enabled the veterinary biologics industry to safely move important
new technologies to market faster. CVB has also taken steps to create simpler label claim requirements to make it easier for veterinarians and animal owners to understand what products do and don’t do.

III. Congressional Relations and Issues

Overview

Key issues are listed in alphabetical order below.

1. Agricultural Security

Issue Summary:

In 2003, the Federal Government designated the Food and Agriculture Sector as a critical infrastructure sector, recognizing its significant contribution to national security and the economy. Protecting the Nation’s food and agricultural critical infrastructure is an important responsibility shared by Federal, State, local, Tribal, and territorial governments and private sector partners. Since 2003, the sector has successfully built public-private partnerships that improved information sharing, created forums to share best practices, and developed tools and exercises to improve incident response and recovery.

Interruption of operations within the sector could have a potentially devastating impact on the Nation’s public health and economy. For example, the highly pathogenic avian influenza outbreak of 2015 cost the Federal government nearly $1 billion just in response, clean up, and indemnity costs. That didn’t include lost export markets, temporary shortages, or price increases for certain poultry and their products, lost jobs, and people who saw their livelihoods put in grave danger. The Animal and Plant Health Inspection Service (APHIS) works every day to protect the Food and Agriculture Sector by preventing the entry and spread of agricultural pests and diseases, ensuring the safe trade of agricultural products, and protecting the health of U.S. agricultural resources, including addressing zoonotic disease issues and incidences.

Current Status/Executive Branch Position:

The U.S. Department of Agriculture, Food and Drug Administration, and Department of Homeland Security released an updated Food and Agriculture Sector-Specific Plan in 2015. The plan outlines key accomplishments to reduce sector risk, improve coordination, and strengthen security and resilience capabilities. It also identifies Sector partners, risks, goals, and priorities.

Member/Committee Interest and APHIS Response:

There has been increasing interest in the 114th Congress in agricultural security. APHIS expects continued interest in the 115th Congress.
House Agriculture Committee:
In March 2016, the Committee held a hearing, “Defending American Agriculture Against Foreign Pests and Diseases”, at which APHIS and U.S. Customs and Border Protection testified about their efforts to protect U.S. agriculture against both intentional and unintentional threats. This followed a November 2015 hearing, “American Agriculture and Our National Security,” during which a former U.S. ambassador and an academic discussed the relationship between U.S. national security and agriculture.

Senate Agriculture Committee:
Chairman Pat Roberts (R-KS) has long had a focus on agricultural security, having previously served as Chair of the Senate Select Committee on Intelligence. He also indicated interest in having the Department of Homeland Security’s National Bio- and Agro-Defense Facility (NBAF, see related Hot Topic) constructed on the campus of Kansas State University. NBAF will be a state-of-the-art, biocontainment laboratory for the study of diseases that threaten both America’s animal agricultural industry and public health.

In June 2016, APHIS, the Central Intelligence Agency, and the National Counterterrorism Center provided a classified briefing to Roberts—at his request—on intentional and unintentional threats to agriculture. His staff has indicated he may consider an additional briefing or hearing on the issue.

2. **Antimicrobial Resistance (AMR)**

Issue Summary:

In recent years, there has been growing consensus in the public and the scientific community that bacteria that cause disease in people and animals are developing more resistance to the antibiotics, including those used in animal agriculture.

The Food and Drug Administration (FDA) is the primary regulatory agency for antibiotic use in animals. However, USDA and FDA work together closely to identify and mitigate emerging threats to America’s food supply. Under the Animal Health Protection Act, APHIS works to detect, control, or eradicate any disease or pest of livestock. APHIS operates the National Animal Health Monitoring System (NAHMS), which collects data on farm management and animal health practices, as well as on the prevalence and economic importance of livestock diseases and associated risk factors. FDA relies on the science-based information that APHIS and other USDA agencies generate about antibiotic drug use, AMR patterns, and livestock and poultry management practices to inform its policy and regulatory decisions. FDA also taps into USDA’s extensive network of collaborative relationships with producers and industry organizations as part of its outreach.

In 2014, USDA and its other Federal partners developed a National Strategy for Combatting Antibiotic-Resistant Bacteria, which outlined an array of possible initiatives to address the issue. In December 2014, USDA released its own AMR Action Plan. Under the plan, APHIS and other USDA agencies are using an integrated, One Health approach for surveillance and monitoring,
United States Department of Agriculture  
2016 Presidential Transition  
Animal and Plant Health Inspection Service (APHIS)

research and development, and education and outreach. For its part, APHIS is determining patterns, purposes, and impacts of antibiotic use in food animals and monitoring antibiotic drug susceptibilities of bacterial organisms in food-producing animals and associated products and production environments.

For more background, see the Hot Topics paper on AMR.

Member/Committee Interest and APHIS Response:

Sen. Dianne Feinstein (D-CA) and Rep. Louise Slaughter (D-NY):
Feinstein and Slaughter introduced companion bills in their respective chambers that would prevent the introduction of new medically important antibiotics for use in animal agriculture unless FDA demonstrated that the antibiotics would not contribute to increased AMR. They have introduced similar legislation in a previous Congress, although the committees have taken no action on the bill. Both offices have actively engaged APHIS and USDA on the issues. They have written several letters and have asked for occasional briefings and updates on USDA and APHIS initiatives on the issue. Senators Kirsten Gillibrand (D-NY), Elizabeth Warren (D-MA) have also been actively engaged on the issue.

3. Apples and Pears from the European Union

Issue Summary:

In January 2016, at the request of the European Union (EU) and after an analysis of risk, the Animal and Plant Health Inspection Service (APHIS) published a proposed rule that would grant market access to the United States for fresh apples and pears from eight EU countries. This is a routine market-access request, which is in line with international trading obligations to which the EU and the United States hold other countries.

Currently, several EU countries can import fresh apples and pears into the United States under a preclearance process that eliminates potential plant pests and diseases. The proposed rule would allow importation of apples and pears using a systems approach, which would allow these countries to meet their phytosanitary (plant health) obligations in fields and packing houses, which combines a series of risk mitigation measures, instead of the preclearance program.

As APHIS was developing the rule, Poland asked to be included in the market-access request. Because that country’s pests were previously identified and analyzed in published materials and did not require additional mitigation strategies, APHIS determined that it did not need to perform a separate pest risk analysis.

The apple industry has expressed concerns that Polish apples could increase risk to the U.S. apple industry. The industry is also concerned with the economic impact of EU apples, as the EU may be able to ship apples to eastern U.S. markets for less than U.S.-origin apples from the west coast.
Current Status/Executive Branch Position:

APHIS is finalizing the final rule, which would open the U.S. market to apples from certain EU countries, including Poland, treated under a systems approach. APHIS plans to conduct an annual audit of the systems approach and works with the Department of Homeland Security’s Customs and Border Protection to carry out inspections of arriving apple shipments to ensure compliance with the U.S. import requirements.

Member/Committee Interest and APHIS Response:

The House and Senate Agriculture Committees:
The Committees have questioned APHIS’ actions on the proposed rule, and the apple industry has asked Committee staff to express industry’s reservations about the market access request. In September 2016, APHIS briefed the Committees and legislative assistants on its regulatory process and its international trading obligations. APHIS informed the Committee that the system of overlapping safeguards that would be in place under the rule would ensure the health and safety of U.S. apples from foreign pests and disease.

Members from Apple-Producing States:
Numerous members from apple-producing states (including Washington, New York, Michigan, and Idaho) wrote letters objecting to the rule, specifically urging more consultation with stakeholders and questioning the decision to not conduct a full pest risk analysis for Poland. Many of these members sent staff to briefings with the Agriculture Committees in September 2016. Notable Senators interested include: Patty Murray (D-WA); Maria Cantwell (D-WA); Debbie Stabenow (D-MI); Kirsten Gillibrand (D-NY); Charles Schumer (R-NY); and Sen. Mike Crapo (R-ID). Notable Representatives interested include: Fred Upton (R-MI); Mike Simpson (R-ID); Bob Goodlatte (R-VA); Suzan DelBene (D-WA); Rick Larsen (D-WA); Dan Newhouse (D-WA); and Cathy McMorris Rodgers (D-WA).

4. Argentine Lemon Imports

Issue Summary:

In 2013, Argentina requested consultations with the United States through the World Trade Organization (WTO) regarding market access for Argentine lemons. In response, in April 2014 APHIS completed a pest risk analysis, and in June 2015 conducted a site visit, both to assess the potential risk any plant pests in Argentina would pose to the United States. In May 2016, APHIS used this information to publish a proposed rule that would allow the importation of lemons from Northwest Argentina under a systems approach. The systems approach would require safeguards to effectively mitigate pest risk. In September 2016, after an extended comment period that ended on August 10, 2016, APHIS conducted another site visit during peak growing season to verify that Argentina had implemented the proposed mitigation measures. APHIS has since shared with industry and other stakeholders that its site visit confirmed that Argentina has a system of safeguards in place to mitigate any pest risk.
See related Hot Topics paper for additional background.

**Current Status/Executive Branch Position:**

APHIS has determined Argentina’s implementation of the systems approach will mitigate pest risk on imported lemons. The current Administration believes the rule is necessary to strengthen the trade relationship with Argentina and avoid issues with the WTO. If the Office of Management and Budget (OMB) designates the rule not significant, APHIS intends to publish a final rule by December 2016. If the rule is designated significant, publication would likely be 3 to 4 months later. APHIS will notify interested congressional offices of the final rule, and expects some discontent, but likely no significant congressional action. Industry may file suit.

**Member/Committee Interest and APHIS Response:**

Representatives of lemon-producing states (CA and AZ) have opposed the rule, while several representatives of states with large ports who believe there would be an economic benefit to granting market access support it.

**Senate Appropriations Committee:**

Senate Appropriators included language in the FY 2017 agriculture appropriations bill requiring APHIS to conduct a site visit in Fall 2016 and allow industry to review the results of the visit, and that APHIS conduct a full economic analysis if the economic impact of the rule is determined to exceed $100 million annually.

**House Appropriations Committee:**

House Appropriators included a provision prohibiting work on a final rule until USDA certifies it has completed site visits and a pest risk assessment, and until OMB certifies that the economic analysis required for economically significant rules has been completed. APHIS briefed Agriculture Subcommittee majority staff in September 2016, and they indicated that the Agency’s scientific justification was stronger than industry opposition claims.

**Rep. Julia Brownley (D-CA):**

In the House, Brownley has led congressional efforts to prevent or delay implementation of a final rule. Her district produces the most lemons in the country. APHIS met with the Congresswoman and explained the science behind the proposed rule as well as our economic analysis. She has repeatedly requested that APHIS conduct an additional site visit to Argentina and provide industry a visit report and an opportunity to weigh in.

**Sen. Dianne Feinstein (D-CA):**

In the Senate, Feinstein has led the coordinated effort to oppose the proposal, sending letters to USDA and the President, drafting an appropriations directive, and requesting information on the rule.
Sen. John McCain (R-AZ):
Representing the second largest lemon-producing state in the United States, McCain has written USDA several times in opposition to the rule, and has twice requested that the comment period be extended for a total of 60 days. USDA extended the comment period by 30 days.

DE and PA Delegation:
Members of the DE and PA delegations, including Rep. Robert Brady (D-PA) and Sens. Pat Toomey (R-PA), Chris Coons (D-DE), Bob Casey (D-PA), and Thomas Carper (D-DE) support the rule, as they believe it will bring economic benefits to their local ports.

5. Biotechnology and Part 340 Regulation Revisions

Issue Summary:
APHIS protects plant health from genetically engineered (GE) crops that pose a plant pest risk—such as causing disease or damage to other crops or plant products in the United States. If a GE product requires APHIS oversight, developers must apply for an APHIS permit or notification and adhere to APHIS’ regulations to maintain adequate confinement of a regulated organism while being moved or during field trials. After developers have the scientific information that they believe is sufficient for us to conclude that a GE organism is unlikely to pose a plant pest risk, they can petition APHIS for nonregulated status. If APHIS grants nonregulated status, the GE organism may be freely moved or planted without APHIS authorization or other APHIS regulatory oversight.

APHIS has developed a proposed rule to update its biotechnology regulations, all within the Agency’s current statutory authority under the Plant Protection Act (PPA) and our regulations at 7 CFR part 340. USDA uses science-based regulatory systems to allow for the safe development, use, and trade of products derived from new agricultural technologies. USDA continues to regulate the importation, interstate movement, and field-testing of newly developed genetically engineered (GE) organisms that qualify as “regulated articles” to ensure they do not pose a threat to plant health before they can be commercialized. These science-based evaluations facilitate the safe introduction of new agricultural production options and enhance public and international confidence in these products. As a part of this effort, the Animal and Plant Health Inspection Service (APHIS) will publish a proposed rule to revise its regulations regarding the regulation of GE organisms.

Recent media reports have focused on APHIS’ regulation of GE organisms and products created with newer gene editing technologies such as CRISPR, which can modify the genetics of organisms without introducing new material. In April 2016, APHIS determined that a mushroom developed by Penn State and waxy corn developed by DuPont Pioneer using CRISPR technology did not fall under APHIS’ biotechnology regulation because no genetic material from plant pests was inserted into the final genomes.

For more background, see related Hot Topics papers.
Current Status/Executive Branch Position:

In September 2016, USDA sent the proposed rule to the Office of Management and Budget (OMB) for its review as part of the formal rulemaking process. When that review process is complete, USDA intends to publish the proposed rule for public comment.

Member/Committee Interest and APHIS Response:

House and Senate Agriculture Committees:
Both Republican and Democratic Committee leadership have been generally supportive of biotechnology, indicating that the Federal government should not overregulate the technology but should conduct an appropriate review when there may be a risk to agriculture. Both Committees have been actively engaged on the issue, and APHIS regularly updates them on the progress of its regulatory revisions and other significant biotechnology issues. The Senate Agriculture Committee held a hearing on agriculture biotechnology in October 2015 at which APHIS, the Environmental Protection Agency, and the Food and Drug Administration testified. Both majority and minority Senators asked witnesses several times to affirm that they had identified no safety concerns with the GE products that had been approved or deregulated.

A February 2016 briefing with staff of both Committees on the scope of the regulatory revisions was generally received well. The Committees have not taken an active position on efforts to update the regulations. In 2016, much of their focus was on GE labeling legislation, and the Committees expressed concern about how introducing a new dynamic with the proposed rule would impact their ability to reach compromise legislation. As APHIS moves forward with the proposed rule, we can expect the questions we receive on the issue to mirror any concerns industry raises. The Committees have also been interested in general in how APHIS regulates new technologies such as CRISPR and gene editing.

House Appropriations Committees:
The FY 2017 House Agriculture Appropriations report notes that there have been no proven instances of harm to agriculture or the environment from GE plants on the market or under current APHIS regulations. It encourages APHIS as it updates the biotechnology regulatory system to maintain the benefits of the current system while finding greater efficiencies and “include advances in biotechnology methodology”.
6. **Black Vulture Predation**

**Issue Summary:**

Increased populations of black vultures in the southeastern United States are causing costly damage to personal property, as well as natural and agricultural resources. For example, the birds have been observed killing newborn calves and other livestock and some consider their roosting to be a nuisance.

Vultures are protected under the Migratory Bird Treaty Act, which is enforced by the U.S. Fish and Wildlife Service (FWS). Accordingly, the public cannot kill or destroy the birds, their nests, or their eggs without a permit from FWS. Those affected by the birds have complained about the FWS permitting process, including the length of time it takes to get a permit and the costs associated with it.

APHIS’ Wildlife Services program is charged with reducing conflicts between humans and animals to protect human and animal health as well as agricultural and natural resources. In support of that, APHIS provides technical assistance to the public on short- and long-term measures they can carry out to provide relief from or eliminate problematic wildlife. APHIS also helps producers with direct management on a reimbursable basis; those actions include non-lethal hazing or, when properly permitted by FWS and appropriate, lethal methods.

**Current Status/Executive Branch Position:**

No legislation is pending. However, APHIS continues to offer its technical assistance and direct operational assistance to those who request it.

**Member/Committee Interest and APHIS Response:**

**Rep. Scott DesJarlais (R-TN):**

DesJarlais has raised his constituents’ concerns to the Secretary and other USDA officials at several House Agriculture Committee hearings. Livestock producers in his district are upset with the losses of young cattle and how the FWS permitting process prevents them from being more proactive to stop losses. He also joined with Rep. Bob Goodlatte (R-VA) in 2014 to write to USDA with concerns about impacts on producers.

**Rep. Brad Wenstrup (R-OH):**

Wenstrup’s office has reached out to APHIS directly with questions about the permitting process, and the types and kinds of assistance APHIS can offer. His office has indicated their dissatisfaction with the permitting process and, in cooperation with the Ohio Farm Bureau, he has considered asking for a formal review or report by APHIS on the number of vultures in his area and the damage they cause. His intent is to use the data to make the case that FWS should make it easier for producers to get predation permits for vultures.
7. Brucellosis and Bovine Tuberculosis Program

Issue Summary:

Brucellosis and bovine tuberculosis (TB) are contagious diseases that negatively impact animal health and animal production, and can negatively affect international trade. On December 16, 2015, APHIS published a proposed rule to update its brucellosis and bovine TB program regulations. Under the proposed rule, APHIS would, among other things, move from categorizing the disease statuses of entire States—or large regions within States—to establishing standards that States and Tribal Nations would meet for disease surveillance, epidemiological investigations, and affected herd management. By using program compliance rather than disease prevalence—which is already extremely low—to determine statuses, States and Tribes will no longer run the risk of status downgrades and statewide restrictions and testing requirements if sporadic cases of the diseases appear. Rather, they can focus their disease control efforts on specifically designated herds or areas.

Current Status/Executive Branch Position:

APHIS officials are carefully reviewing all issues raised in the comments received and considering the need for changes to the proposed provisions.

Member/Committee Interest and APHIS Response:

Although APHIS developed the regulations collaboratively with States, Tribes, and industry, stakeholders have now raised concerns about the perceived burden on States and industry, raising congressional interest.

Senate Appropriations Committee:
The Committee included a directive in its FY 2017 Agriculture Appropriations report for APHIS to report to Congress on the amount of State and Federal funding needed to implement the rule prior to finalizing it. Initially, Sen. Jerry Moran (R-KS) had proposed language requiring withdrawal of the rule and the formation of a stakeholder group to address concerns.

House Agriculture Committee:
Committee staff requested a briefing in May 2016 based on concerns raised by Member offices, but postponed the briefing indefinitely. Ranking Member Collin Peterson (D-MN), along with Rep. Pete Sessions (R-TX), wrote USDA with concerns about the economic impact of testing required under the rule on the captive deer and elk industries. Committee Member Dan Benishek (R-MI) also asked about the rule and the impact on his state’s affected cattle herds during a March 2016 hearing.
8. **Cattle Fever Tick**

**Issue Summary:**

Cattle fever (bovine babesiosis) is a severe and often fatal disease of cattle transmitted by cattle fever ticks (CFT) and southern cattle ticks. APHIS’ Cattle Fever Tick Eradication Program (CFTEP) aims to eliminate the disease from the U.S. cattle population and works cooperatively with the Texas Animal Health Commission (TAHC). In 1943, APHIS and TAHC eradicated cattle fever and the ticks from the continental United States, with the exception of a permanent quarantine “buffer” zone between Texas and Mexico—a country where these ticks remain well established. Today, this permanent buffer zone extends more than 500 miles from Del Rio, TX, to the Gulf of Mexico. APHIS has requirements to ensure that cattle in this zone or imported from Mexico do not spread the ticks into free areas. Given the role of wildlife in spreading CFT, APHIS and TAHC have been working with the U.S. Fish and Wildlife Service (FWS) to develop a strategy for eradicating these ticks in wildlife, particularly deer and non-native nilgai antelope, on FWS properties in Cameron County, TX.

See related Hot Topics paper for additional background.

**Current Status/Executive Branch Position:**

APHIS committed $2.4 million from its contingency fund in FY 2015 to expand CFT eradication efforts in Cameron and Willacy Counties in Texas. In FY 2016, APHIS committed an additional $1.7 million in contingency funds to continue those efforts, as well as to address quarantined trace pastures in Kleberg and Starr Counties, Texas. All of these counties are represented by Congressman Filemon Vela (D-TX), except Starr, which is represented by Henry Cuellar (D-TX).

APHIS has made progress on several fronts. The Agency has developed herd plans with all of the private land owners in the area and with FWS and State officials for the wildlife refuge. The Food and Drug Administration recently signed a Memorandum of Understanding with APHIS to allow cattle feeders with ivermectin-treated corn to be placed around the quarantine area to help reduce the spread. Additionally, APHIS will begin using a CFT vaccine in the quarantined area this year. Even with this progress, APHIS expects this to be a multi-year effort, as the results of implementing these actions will be realized over time.

**Member/Committee Interest and APHIS Response:**

**Rep. Filemon Vela (D-TX):**
In July 2016, Vela held a forum on CFT, with Subcommittee on Livestock and Foreign Agriculture Chairman David Rouzer (R-NC) and Ranking Member Jim Costa (D-CA) participating. Vela wanted to raise awareness of the threat of CFT if allowed to spread, and to raise concerns about FWS’ role and restrictions on and around Federal refuge land in TX. Please see the relevant discussion under Hot Topics for more discussion of the FWS’ role and
restrictions. Congressman Vela held other meetings with APHIS and USFWS and inquired about the issue at congressional hearings.

Sen. John Cornyn (R-TX):
Cornyn’s staff have had several briefings with APHIS to better understand APHIS’ role in the CFT effort as well as to inquire about how USFWS is working with APHIS, TAHC, and producers to address CFT. He and Vela also sent a letter to USFWS raising concerns about their cooperation.

Rep. Henry Cuellar (D-TX):
In recent years, Cuellar has inquired on occasion about assistance to impacted ranchers.

9. Citrus Health

Issue Summary:

The presence in the United States of exotic citrus diseases, especially citrus canker, sweet orange scab, and Huanglongbing (HLB, aka citrus greening), hampers the success of commercial citrus industries to produce, harvest, process, domestically move, and internationally export healthy fruit and clean plant stock. APHIS supports citrus health-related activities through its Citrus Health Response Program (CHRP) and its leadership in USDA’s HLB-Multiagency Coordination (MAC) Group. CHRP’s mission is to compile best practices to sustain the U.S. citrus industry, maintain grower's continued access to export markets, and safeguard citrus-growing States against a variety of citrus diseases and pests. The HLB-MAC coordinates the Federal, State, and industry response and supports research to provide producers with the practical tools and solutions they need in the near-term to allow them to remain economically viable until longer-term solutions are developed.

CHRP funding (within the Specialty Crop Pest line item) was $48.8 million in FYs 2015 and 2016, with $41.891 million requested in FY 2017. APHIS received $20 million to use in FYs 2014 and 2015 for the HLB-MAC program, and an additional $5.5 million in FY 2016.

See related Hot Topics paper for additional background.

Current Status/Executive Branch Position:

Secretary Vilsack created the HLB MAC Group in December 2013 to foster greater coordination among Federal and State agencies in responding to citrus greening. The FY 2017 President’s budget did include a decrease of $7.223 million for the Citrus Health Response Program (CHRP) to reduce the Federal cost-share.

Member/Committee Interest and APHIS Response:

Representatives of citrus-producing States, particularly Florida and California, have been strong supporters of APHIS efforts to protect U.S. industry from citrus pests and diseases.
Rep. Tom Rooney (R-FL):
Rooney, through his position on the House Agriculture Appropriations Subcommittee, has been a prominent supporter of APHIS’ citrus health efforts. He regularly seeks increased funding for the program and worked closely with the Appropriations Committee for the past several years to secure funding for the HLB-MAC program. Rooney has hosted APHIS at several events in DC and FL to discuss citrus health efforts with the industry, and his staff participated in a 2016 tour of HLB-MAC projects in FL. Rooney co-chairs the Congressional Citrus Caucus, which hosted a forum in 2016, coordinated by APHIS, to hear from HLB-MAC and Agricultural Research Service (ARS)-funded researchers about their progress.

Rep. David Valadao (R-CA):
Valadao has also been supportive of APHIS’ citrus health efforts through his role on the Agriculture Appropriations Subcommittee. In 2014, he held a meeting in CA with the citrus industry in support of the HLB-MAC. He co-chairs the Congressional Citrus Caucus.

Rep. Filemon Vela (R-TX):
Vela is the most prominent voice in the TX delegation on citrus issues. He co-chairs the Congressional Citrus Caucus and participated in the 2016 forum on USDA-funded citrus research. He also hosted the former Under Secretary for Marketing and Regulatory Programs for a stakeholder meeting on citrus issues in TX in 2014.

Other Member Interest:
Reps. Bill Posey (R-FL), Dennis Ross (R-FL), Ruben Hinojosa (D-TX), Henry Cuellar (D-TX), and Sens. Feinstein (D-CA), Bill Nelson (D-FL), and John Cornyn (R-TX) occasionally request information on citrus issues.

10. Farm Bill Section 10007

Issue Summary:
APHIS, through its Plant Protection and Quarantine (PPQ) program, is charged with implementing Section 10007 of the 2014 Farm Bill to prevent the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. Under the Farm Bill, APHIS provides funding to strengthen the nation’s infrastructure for pest detection and surveillance, identification, and threat mitigation, while working to safeguard the nursery production system.

Section 10007 funding is split between two programs: the Plant Pest and Disease Management and Disaster Prevention Program (PPDM) and the National Clean Plant Network (NCPN). The first program solicits project suggestions from cooperators, principally State and local governments and universities. A panel of USDA, State, and industry representatives evaluates these projects on specific goal areas that represent critical needs and opportunities to strengthen, prevent, detect, and mitigate invasive pests and diseases. The NCPN supports established university and government clean plant centers to develop, maintain, and provide foundation
stock of select specialty crops. Industry and others use the stock material to start or regrow clean plant orchards, vineyards, groves, and other commercial plantings should plant pests or disease strike.

The Farm Bill provides $62.5 million in Commodity Credit Corporation funding each year from FY 2014-FY 2017 and $75 million per year in FY 2018 and beyond. At least $5 million must go to NCPN each year.

See the related Section 10007 Hot Topics paper for more information.

**Current Status/Executive Branch Position:**

For the PPDM program, APHIS solicits project suggestions from cooperators on an annual basis and accepted proposals for six weeks through August 2016. The joint USDA-State-Industry panel is evaluating those suggestions and developing a spending plan, which it plans to release by January 2017. Once released, APHIS will enter into cooperative agreements with the entities that proposed the projects, and the Agency will oversee their progress.

APHIS has also used portions of PPDM funding to initiate emergency programs for emerging and high-priority pests impacting agricultural resources, such as the giant African snail in Florida, the European grapevine moth in California, and the coconut rhinoceros beetle in Hawaii.

For NCPN, APHIS solicited grant projects from August 17 through October 26, 2016. Grants support established university and government clean plant centers to develop, maintain, and provide foundation stock of select specialty crops. In 2016, APHIS and cooperators supported 22 clean plant centers and associated programs in 17 States representing specialty crops including fruit trees, grapes, citrus, berries, sweet potatoes, roses and hops.

**Member/Committee Interest and APHIS Response:**

There has been broad support for the program and recognition that the funding allows APHIS to expand its mission and leverage partnerships to better protect American agriculture. The cooperative review panel has generated considerable support for the annual allocation decisions.

**The House and Senate Agriculture Committees:**

Congress originally created this program in the 2008 Farm Bill. The House and Senate Agriculture Committees renewed their support for the program in the 2014 Farm Bill, making the program permanent, expanding funding, and consolidating the NCPN (which had been a separate program) with PPDM under one section.

Per the Farm Bill language, APHIS submits an annual report to the Chairman and Ranking Members of the House and Senate Agriculture Committee on the PPDM program action plans to mitigate the threats posed by high consequence plant pests and diseases.
11. **Farm Bill Pest and Disease Program for Livestock**

**Issue Summary:**

Section 10007 of the 2014 Farm Bill provides funding, administered through APHIS, to prevent the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. APHIS provides funding for pest detection and surveillance, identification, and threat mitigation, as well as to safeguard the nursery production system. The program, which was first authorized in the 2008 Farm Bill, provides $62.5 million in Commodity Credit Corporation funding each year from FY 2014-FY2017 and $75 million per year in FY 2018 and beyond. See the related Section 10007 papers for more information.

The Animal Agriculture Coalition (AAC) developed a concept paper proposing that Congress create a similar program to support livestock pest and disease efforts. AAC is comprised of most major animal and animal-related commodity organizations as well as related organizations representing veterinary medicine, animal science and various livestock sectors or animal agriculture interests in the United States. The proposal would build on the 2014 Farm Bill’s authorization of the National Animal Health Laboratory Network. Like its plant analog under Section 10007, APHIS would receive mandatory funding to support efforts by states, industry, universities, and other interested groups to reduce the impact of high-consequence animal diseases, provide rapid detection and response capabilities to respond to animal diseases, develop disease prevention and mitigation technologies including vaccines, prevent the entrance and spread of foreign animal diseases into the United States, and identify and support critical research needs. Particular interest has been raised about using a portion of the funding for foot and mouth vaccine, though the National Pork Producers Council has objected, preferring that funding instead go to fully fund vaccines.

**Current Status/Executive Branch Position:**

Since 2008, APHIS has successfully implemented the Farm Bill program for plant pests and diseases, with much support from stakeholders and Congress. APHIS met with AAC in spring 2016 and provided feedback on their proposal and will continue to work with those interested in the program, including stakeholders and Congress.

**Member/Committee Interest and APHIS Response:**

Some on the House Agriculture Committee have shown interest in the AAC proposal. During a March 2016 hearing, “Defending American Agriculture Against Foreign Pests and Diseases”, Livestock and Foreign Agriculture Subcommittee Chairman David Rouzer (R-NC) asked APHIS Administrator Shea if such a program would be beneficial. Shea indicated that he saw benefit in such a program, referencing several plant health successes under the Section 10007 program and noting that APHIS has had a reduction in its animal health staffing levels in recent years due to budget cuts.
12. Feral Swine

Issue Summary:

APHIS’ Wildlife Services program is charged with reducing conflicts between humans and animals to protect human and animal health as well as agricultural and natural resources. In support of that mission, in FY 2014, APHIS asked for and received $20 million in funding to create a new nation-wide program to reduce the impact of feral swine. APHIS estimates that feral swine cause at least $2 billion in damage to natural resources, agriculture, and personal property each year. Additionally, they carry potentially damaging diseases, including classical swine fever, swine influenza and pseudorabies.

APHIS’ feral swine program provides a national framework that works closely with State partners to tailor a program that meets the needs of the State. In some places, that means elimination of an entire population of feral swine in a State. In other areas, such as in Texas, the program focuses on reducing their numbers and minimizing the damage they cause. Beyond direct control of populations, APHIS also conducts disease testing and research into new methods and techniques to help reduce their populations.

See the related Hot Topics paper on Feral Swine for more information.

Current Status/Executive Branch Position:

Despite a tough appropriations environment, Congress authorized a new program in 2014, and has appropriated $20 million annually for this nationwide program.

Member/Committee Interest and APHIS Response:

The program has broad support throughout Congress, as the significant damage caused by widespread feral swine populations has raised awareness of the issue.

Rep. Mike Conaway (R-TX), Chairman of the House Agriculture Committee:
In 2015, Conaway visited a feral swine field operation in Texas to see the tools and techniques APHIS and its partners use. He expressed his appreciation of the tour and indicated support for the program.

Senators Martin Heinrich (D-NM) and Tom Udall (D-NM):
Prior to the unveiling of the national program, APHIS conducted a pilot program in New Mexico to demonstrate the effectiveness of APHIS’ proposed approach. Both Senators wrote letters of support for that program.

The House and Senate Agriculture Committees:
In the 2014 Farm Bill, the Committees included a “Sense of Congress” provision that feral swine is a threat to domestic swine and the agriculture industry, and that the Secretary should prioritize a program of eradication under the Animal Health Protection Act.
13. **Foot-and-Mouth Disease (FMD) Vaccine**

**Issue Summary:**

FMD has the potential to be the most economically significant foreign animal disease that could strike the United States. Thanks to the strong control measures APHIS has in place through its authority under the Animal Health Protection Act, there has not been an outbreak of FMD in the United States since 1929.

Should the disease be detected, APHIS will consider the use of vaccines as one of its control and eradication tools. APHIS can rapidly obtain vaccines through the North American Vaccine Bank, which is currently housed at the Plum Island Animal Disease Center in New York, but current availability (around 2.5 million doses) would only be enough to address a small outbreak. APHIS estimates that it would need a minimum of 25 million doses for each of the 10 FMD strains of greatest risk to North America, which would cost approximately $130 million to purchase and store. APHIS’ current appropriation for FMD preparedness is $1.4 million.

See the Hot Topics paper on FMD Vaccine for more information.

**Current Status/Executive Branch Position:**

APHIS has had discussions with industry on how to address the gaps in vaccine coverage. Those discussions included Federal-industry cost sharing, which has been opposed by the cattle and swine industries. Other options include a potential Farm Bill program on livestock readiness. (See the related Congressional Issues paper on that for more background.)

**Member/Committee Interest and APHIS Response:**

The House Agriculture Committee:
The Committee has generally been interested in FMD preparedness. They held a hearing in February 2016 on FMD, at which the National Pork Producers Council (NPPC) raised concerns about APHIS’ preparedness for an outbreak, namely due to limited vaccine supplies. Following a July 2015 hearing on avian influenza, Rep. David Rouzer (R-NC) asked follow-up questions for the record about APHIS’ vaccine strategy for FMD.

APHIS occasionally receives inquiries from individual Member offices about the Agency’s preparedness for an FMD outbreak.

14. **Fruit Fly Sterile Release Facilities**

**Issue Summary:**

U.S. agriculture is at risk from exotic fruit flies that could enter the United States across our southern border as well as through infested host plants, fruits, and vegetables that unintentionally or illegally enter the country. Because the larvae of these exotic species can feed on more than
400 host plants and render fruit inedible, they are among the most destructive pests of fruits and vegetables around the world.

APHIS’ use of the Sterile Insect Technique (SIT) has remained a key component of its cooperative exotic fruit fly control programs for over 30 years. SIT involves the mass-rearing of sterilized exotic fruit flies. When released, sterile male fruit flies mate with wild females, which disrupts natural breeding and the production of progeny because the female’s eggs remain unfertilized. Through continuous releases, this form of mating disruption significantly reduces wild fly populations and aids eradication. APHIS operates domestic SIT facilities that receive, rear, and release hundreds of millions of sterile Mexflies and sterile male Medflies each week for ongoing preventive release efforts and domestic outbreak eradication campaigns against these two pests. The Texas SIT facility is located at Moore Air Base in Rep. Ruben Hinojosa’s (D-TX) district. In Florida, the Sarasota facility is in Rep. Vern Buchanan’s (R-FL) district. The Los Alamitos, CA facility is in Rep. Alan Lowenthal’s (D-CA) district.

See related Hot Topics paper for additional background.

Current Status/Executive Branch Position:

The facilities used to produce sterile insects in Texas, California, and Florida have inefficiencies that lead to production losses, and, in some cases, pose health and safety concerns for workers. APHIS estimates it will need approximately $112 million over the next few years to replace the current facilities. This would enable APHIS to produce sterile Mexflies and Medflies at full capacity and provide contingencies for potential outbreaks, as well as reduce the costs for quarantine campaigns. During summer 2016, APHIS completed a report outlining projected construction and funding needs to replace these facilities. Several congressional offices have requested this report since 2015, and APHIS plans to informally share it with them once it completes USDA review. APHIS expects continued questions about funding needs and whether USDA will formally request funding.

Member/Committee Interest and APHIS Response:

Rep. Filemon Vela (D-TX):
The citrus industry has worked closely with Vela to urge support to replace the Moore Air Base Mexican Fruit fly rearing and release facility. Vela occasionally requests updates on the facilities report that APHIS was developing through his staff or the House Agriculture Committee. He and/or his staff have visited the facility three times in the past 2 years.

House Agriculture Committee Chairman Mike Conaway (R-TX):
Following a February 2015 House Agriculture Committee hearing, Conaway submitted questions for the record to the Secretary about fruit fly facility needs and plans for construction. In 2016, Conaway again submitted a question for the record following a hearing with the Secretary, asking how much USDA had requested in the FY 2017 budget to renovate or replace the TX facility. USDA has not requested funding.
Rep. Tom Rooney (R-FL):
During hearings for the FY 2016 budget, Rooney (R-FL) questioned APHIS’ capacity to produce sufficient quantities of sterile Mexfly.

House Agriculture Appropriations Subcommittee:
APHIS briefed Republican Committee staff on the facilities in spring 2016. They were interested in the current state of the facilities, capacity, and plans to address facility needs.

15. Highly Pathogenic Avian Influenza

Issue Summary:
In December 2014, APHIS identified highly pathogenic avian influenza (HPAI) in wild birds, kicking off the largest animal disease outbreak in U.S. history. Since that time, 21 states detected cases of HPAI. Fifteen states found cases in poultry, which impacted 233 premises (212 commercial, 21 backyard) and over 50 million birds. The majority of commercial cases were in Minnesota (109) and Iowa (71). In 2016, APHIS responded to an additional case of HPAI in Indiana. USDA sought and received Commodity Credit Corporation (CCC) funding for HPAI response operations. At this point in time, APHIS has obligated expenditures from that $1 billion of over $645 million for response operations (e.g. cleaning, disinfection, euthanasia, and disposal) related to the 2014/2015 and 2016 cases and paid over $206 million in indemnity to producers for the cost of the birds from both outbreaks. In addition, APHIS has spent over $60 million on activities which APHIS outlined in the Fall Plan it released in summer 2015 to improve our readiness for a future outbreaks. The remainder has been on hold for potential outbreaks.

See related Hot Topics papers for additional background.

Current Status/Executive Branch Position:
The Administration made over $1 billion available to address the 2015-2016 outbreak and has sought to enhance APHIS’ capability to respond. The FY 2017 President’s budget request included an increase of $30.338 million to improve APHIS’ readiness for responding to animal health emergencies, in part based on lessons learned during the HPAI outbreak. The request includes funds to hire and train veterinarians, animal health technicians, and others to enable us to reduce start-up times during emergencies, ensure a coordinated response, and quickly carry out investigations and response operations to minimize the potential for continued spread of animal pathogens, among other things. The House Appropriations Committee provided $24.268 million, and the Senate Appropriations Committee provided $28.821 million.

Member/Committee Interest and APHIS Response:
There was broad congressional interest in the HPAI outbreak, particularly after the number of impacted producers rapidly climbed several months into the outbreak. The House and Senate Agriculture Committees as well as the Senate Homeland Security Committee held hearings while
the Agriculture Appropriations Committees requested regular updates, particularly regarding APHIS’ requests to transfer funding from the Commodity Credit Corporation to use in the response. More localized interest came from state delegations impacted by the disease. If another significant outbreak were too occur, APHIS would expect a similar level of interest, particularly if trade is impacted.

Iowa Congressional Delegation:
Rep. Steve King (R-IA) was one of the most heavily involved Members on this issue, holding several meetings and calls with APHIS leadership. Initially, he wanted APHIS to work with companies he recommended to help incinerate and dispose of birds, and made recommendations on how required equipment could be configured to handle the large numbers of birds. As the outbreak wound down, a number of King’s producers complained that a contractor hired to help with the outbreak, Clean Harbors, damaged their properties or owed them money for various reasons. King eventually decided to take the issues up with the company, as APHIS suggested.

Sen. Joni Ernst (R-IA) also regularly followed this issue and requested updates. Iowa turkey and egg producers have been advocating for APHIS to change its indemnity calculator to increase payments they would receive for birds taken during an HPAI outbreak, and Ernst has supported their efforts through inquiries to APHIS and at congressional hearings. She also held a producer roundtable during the outbreak.

Congressman David Young (R-IA) inquired several times about the issue through the House Appropriations Committee and was briefed by APHIS in response to producer concerns.

Minnesota Congressional Delegation:
Rep. Collin Peterson (D-MN) and Sens. Amy Klobuchar (D-MN) and Al Franken (D-MN) engaged regularly on the issue, requesting routine updates on the outbreak and answers to producer questions. APHIS leadership had multiple meetings and calls with Peterson, who supported APHIS’ overall response efforts and the Agency’s decision not to compensate producers for downtime losses that they were requesting. Peterson has also advocated on behalf of turkey and egg industry requests that APHIS make adjustments to how it calculates indemnity payments. (APHIS implemented an updated egg layer calculator on Oct. 1, 2016.) Klobuchar and Franken raised concerns over delays in depopulation and disposal of poultry in infected facilities, timing for producers to restock their facilities with birds, and funding for impacted producers.

Other Members of Note:
House Agriculture Committee Chairman Mike Conaway (R-TX), along with Rep. Peterson, met with APHIS officials in September 2015 to understand issues around the indemnity calculator and producer concerns.
16. **Horse Protection Act**

**Issue Summary:**

APHIS administers the Horse Protection Act (HPA) and is charged with ending the abusive practice of horse soring and restoring fair competition within the walking horse industry. Horses have typically been sored through the application of caustic chemicals or foreign substances, often in concert with mechanical equipment known as action devices (“chains” and performance package “pads”) to intensify pain and cause a higher gait. While many observers believe that soring remains a major and pervasive problem, the industry and its supporters believe that the practice has been substantially curtailed. In July 2016, APHIS published a proposed rule that would bring responsibility for training and licensing horse show inspectors directly under the control of APHIS, which would end the current system whereby the industry trains and oversees inspectors; and it would eliminate the use of stacked pads and chains and other “action devices,” as well as foreign substances, which many people contend contribute to the soring of horses. These changes are consistent with Office of the Inspector General (OIG) and The American Veterinary Medical Association recommendations.

There are competing bills in the 114th Congress to address the HPA. H.R. 3268, the Prevent All Soring Tactics (PAST) Act, introduced by the House’s two veterinarians, Reps. Ted Yoho (R-FL) and Kurt Schrader (D-OR), has over 260 cosponsors. Companion legislation (S. 1121) introduced by Senators Kelly Ayotte (R-NH) and Mark Warner (D-VA), has 49 cosponsors. Both bills were also introduced in the 113th Congress with similar levels of support. The PAST Act aims to achieve the same goals as APHIS’ proposed rule, with the exception that it increases penalties for violations of the HPA.

A faction in Congress that opposes the PAST Act and APHIS’ proposed rule has introduced competing legislation. The Horse Protection Amendments Act of 2015 (H.R. 4105/S. 1161), introduced by Rep. Scott Desjarlais (R-TN) and Sen. Lamar Alexander (R-TN), have 8 and 4 cosponsors, respectively. They would amend the HPA to create a single, national Horse Industry Organization whose membership would be appointed by the Agriculture Commissioners of Tennessee and Kentucky and industry. Related bills in the 113th Congress had similar levels of support. It appears both the PAST Act and Horse Protection Amendments Act of 2015 will die in the 114th Congress. However, their sponsors have introduced similar bills over several Congresses, and it is expected they will again be introduced in the 115th Congress.

See related Hot Topics paper for additional background.

**Current Status/Executive Branch Position:**

The Administration published the proposed rule to bring responsibility for training and licensing horse show inspectors directly under the control of APHIS, and eliminate the use of stacked pads and chains and other “action devices,” as well as foreign substances. The proposed rule closely tracks with recommendations made by the Office of the Inspector General in a program audit. The comment period on the proposed rule ended in late October.
Member/Committee Interest and APHIS Response:

House Appropriations Committee Chairman Hal Rogers (R-KY):
Chairman Rogers has questioned APHIS’ conclusions about the extent of soring and urged greater collaboration with industry rather than new regulations, and has inserted language in appropriations reports to that effect. In June 2016, he sent an oversight letter requesting detailed data on APHIS’ HPA security costs, a list of security incidents against APHIS inspectors, numbers of employees present at HPA-regulated events, and requested certification that no individuals in APHIS have consulted or engaged with any non-governmental entity as the Agency developed its proposed rule.

House Agriculture Committee Majority:
Committee staff have regularly engaged APHIS on the HPA on behalf of Member Scott Desjarlais (R-TN). The majority has generally not taken a side on the issue and instead tried to ensure that the Agency is providing requested information to the Congressman’s office. With recent staff changes, it is unclear if and how the Committee will engage on this issue in the future.

Rep. Bob Goodlatte (R-VA):
In the past year, former House Agriculture Committee Chairman Goodlatte has taken an active role in opposing APHIS’ enforcement activities around the HPA. In addition to advocating on behalf of several constituents who claim they were incorrectly found noncompliant with the HPA, Goodlatte has proposed in correspondence and a meeting with APHIS that third-party veterinarians serve as arbiters when an APHIS and industry inspector disagree as to whether a horse is sore. APHIS has indicated that USDA is not authorized to delegate its decision-making authority to private veterinarians, and it would not be appropriate or in the best interests of enforcing the law.

Other Interest:
Although the PAST Act has received broad, bipartisan support in the House and Senate during the last two Congresses, it has never been brought up for a vote, except in 2014 when the Committee on Commerce, Science and Trade approved it. Senate Majority Leader Mitch McConnell is a cosponsor of the Horse Protection Amendments Acts of 2015 and 2014 and generally opposes any stricter HPA regulation.

PAST Act sponsors Rep. Yoho and Sens. Ayotte and Warner, along with cosponsor Sen. Dianne Feinstein (D-CA) have regularly engaged on the issue in recent years, reaching out to USDA to support rulemaking efforts and putting out supportive press releases. The big push to gain broad congressional support for the PAST Act, however, came from Rep. Ed Whitfield (R-KY), who introduced the original PAST Act in the 112th Congress. However, he was the target of an Ethics Committee investigation following allegations to Ethics Committee Members by the Performance Show Horse Association regarding his relationship to the Humane Society. Mr. Whitfield ultimately stepped back from his role as lead PAST Act advocate before retiring from Congress.
17. **Inspection of Agricultural Research Service (ARS) Facilities**

**Issue Summary:**

In January 2015, the *New York Times* published a lengthy investigative piece alleging animal welfare violations at the U.S. Meat Animal Research Center (MARC), an ARS facility in Nebraska that works to improve livestock health and production.

In response, the Secretary directed ARS and the APHIS to implement a plan to ensure that APHIS inspects ARS facilities that use animals for agriculture or production research. Additionally, the U.S. House of Representatives placed a directive in the fiscal year (FY) 2016 omnibus appropriation, instructing ARS to enter into an agreement with APHIS under which APHIS would conduct animal welfare inspections—as it does for non-governmental entities regulated under the Animal Welfare Act (AWA)—at ARS facilities.

APHIS enforces the Animal Welfare Act (AWA) and conducts inspections of regulated entities to ensure they are providing animals with appropriate care under the AWA. APHIS conducts pre-license inspections to verify that facilities are meeting all pertinent AWA requirements. Once a facility passes that inspection, our inspectors will conduct regular and routine unannounced inspections to verify compliance with AWA regulations.

APHIS and ARS agreed to a Memorandum of Understanding, which outlines the process through which APHIS will ensure ARS facilities are complying with AWA regulations. When evaluating ARS’ compliance with the AWA, APHIS will rely on both the AWA regulations and standards as well as the standards of care for farm animals used in research, as set forth in the Federation of Animal Science Societies’ Guide for the Care and Use of Agricultural Animals in Agricultural Research and Teaching (commonly referred to as the Ag Guide).

For more background, see the Hot Topics paper on the Inspection of ARS Facilities.

**Current Status/Executive Branch Position:**

APHIS began conducting precompliance visits in August 2015 at ARS facilities to ensure that each facility understands its obligations under the AWA. These precompliance inspections will be complete in early October 2016. In November 2016, APHIS’ Animal Care program will conduct unannounced inspections at the 37 ARS facilities registered with APHIS. Inspection reports will be available for public review on the APHIS website.

**Member/Committee Interest and APHIS Response:**

*House Appropriations Committee:*

The Committee (particularly the Democratic staff) has had strong interest in the issue, and has had regular meetings with ARS and APHIS about the issue and asked for regular updates and documentation of the progress toward implementing the inspection process.
The 2016 omnibus appropriations bill included strong language requiring ARS to work with APHIS on the inspection process, and to regularly share inspection reports with the Committee. It also held back over $57 million of the ARS appropriation until the Secretary certified that ARS had updated its animal welfare policies and that each facility had a fully functioning Institutional Animal Care and Use Committees (IACUC) to oversee research at those facilities. The Secretary provided that attestation in July 2016.

Sen. Corey Booker (D-NJ) and Rep. Earl Blumenauer (D-OR):
Booker and Blumenauer introduced companion bills in February 2015 that would amend the AWA to require inspections at Federal research facilities that conduct livestock research. The legislation did not advance, and APHIS’ and ARS’ actions have largely eliminated the need for legislation.

Rep. Brad Ashford (D-NE):
Ashford asked the Secretary for an update on actions taken at a February 2015 House Agriculture Committee hearing.

18. Marine Mammal Rule

Issue Summary:

In February 2016, APHIS published a proposed rule that would update the Agency’s standards for the humane care of marine mammals, as part of its responsibilities under the Animal Welfare Act. APHIS is reviewing the comments it received and intends to finalize the rule as soon as it can.

APHIS previously updated these regulations in 2001 as part of a negotiated rulemaking process that included direct input from a variety of stakeholders. Soon after, APHIS began developing a proposed rule to address areas where the negotiated rulemaking process could not identify consensus between welfare groups and industry. In August 2015, APHIS announced a withdrawal and re-submission of the proposed rule to OMB to ensure that the basic standards for marine mammals were based upon the most recent and accurate scientific knowledge and industry experience.

The current proposed rule uses that recent scientific data to amend the standards for water quality, indoor and outdoor facilities, variances, and interactive activities. The proposed changes are intended to better ensure the humane handling and treatment of marine mammals in a way that is practical and enforceable. The difficulty in developing a rule has been resolving conflicting views about the necessity for prescriptive rules on things like tank sizes (which ultimately were not adjusted in the proposed rule) and the presumed increased costs imposed on the regulated entities.
Current Status/Executive Branch Position:

APHIS is working to respond to comments to the proposed rule and hopes to publish a final rule by the end of the calendar year.

Member/Committee Interest and APHIS Response:

Reps. Adam Schiff (D-CA) and Jared Huffman (D-CA); Sens. Dianne Feinstein (D-CA) and Barbara Boxer (D-CA):
Schiff, Huffman, Feinstein and Boxer have written several letters urging swift action by USDA and OMB on the proposed rule. They have also expressed concern that the proposed rule did not increase the tank size requirements for marine mammals. During rule development, staff requested several briefings to learn more about APHIS’ plans for the proposed rule, and to urge prompt development of the rule.

Senate Appropriations Committee:
In FY 2016, the Committee included a provision in its agriculture appropriations bill that would require APHIS to issue the proposed rule within six months of the bill’s passage. The House version did not include a similar provision.

Issue Summary:

The principal facilities that study and diagnose foreign animal diseases of livestock in the United States are currently located at the Plum Island Animal Disease Center (PIADC) in New York. The facility houses APHIS and Agricultural Research Service and the Department of Homeland Security’s (DHS) foreign animal disease research, diagnostics and training. PIADC lacks the infrastructure to work with BSL-4 zoonotic agents and has inadequate space, which results in a backlog of experiments, and faces increased demand for high-bio-containment laboratory space.

To replace the PIADC, DHS was appropriated $234 million in FY 2006-FY 2013, $404 million in FY 2014 and $300 million in FY 2015 to complete the funding needed for full construction of the NBAF in Manhattan, Kansas. Kansas committed a total of $307 million toward the construction of NBAF. The total cost of the project from design through final construction is $1.25 billion. In May 2015, construction of the NBAF main laboratory began.

Current Status/Executive Branch Position:

DHS, USDA, and Kansas State University have made substantial progress in development and construction of the new facility. NBAF is scheduled to become fully operational in 2023. USDA and DHS are working together to identify the necessary budgetary requirements to ensure a timely stand-up of the laboratory.
Member/Committee Interest and APHIS Response:

Kansas Congressional Delegation:
Given the location of NBAF, the Kansas congressional delegation has followed its development closely and supported funding for its construction.

In June, APHIS, the Central Intelligence Agency, and the National Counterterrorism Center briefed Senate Agriculture Committee Chairman Pat Roberts (R-KS) on threats to agriculture, and much of the Senator’s conversation centered on the need for NBAF. His staff has indicated he may consider an additional briefing or hearing on agriculture security.

The Senate Appropriations Committee’s (chaired by Sen. Jerry Moran, R-KS, in the 114th Congress) FY 2017 Agriculture Appropriations bill encourages DHS and USDA to work together on a plan for the future operation of NBAF, including consideration of the appropriate agency to manage the facility.

20. **Protecting Aquaculture**

Issue Summary:
APHIS, acting through its Wildlife Services program, is charged with managing damage caused by wildlife and thereby protecting agriculture, natural resources, property, and human health and safety. In FY 2015, APHIS through management efforts helped aquaculture facilities in 13 states. Annual fish production in the United States is valued at $1.4 billion, while the aquaculture industry incurs approximately $25 million in costs associated with damage and damage prevention due to Federally protected species of birds.

In recent years, aquaculture producers, particularly those in southern states, have asked for increased support to protect their fish from fish-eating birds such as cormorants. Prior to 2011, much of this damage management had been funded by now-canceled Congressional earmarks.

APHIS provides direct operational assistance to haze and disperse problematic birds to alleviate the damage they cause. Additionally, APHIS operates a wildlife research field station in Mississippi that develops new and innovative methods to deter damage from birds.

For more background, see the Hot Topics paper on Predator Damage Management.

Current Status/Executive Branch Position:

In 2016, the Appropriations Committees approved an additional $600,000, for a total of $988,000, in funding for APHIS’ aquaculture program operations and research. APHIS used $400,000 to provide direct assistance to producers in Mississippi. Additional funding will go toward service in other areas of the Mississippi Delta and for research.
Member/Committee Interest and APHIS Response:

The Appropriations Committees:
The Committee has included appropriations language in support of APHIS’ aquaculture program, and approved the $600,000 increase in the Agency’s budget.

Rep. Terry Sewell (D-AL):
Sewell spoke with Secretary Vilsack when he was in her district about support for catfish farmers who were suffering losses from cormorants and from a specific parasite spread by pelicans. APHIS added an additional wildlife specialist in Alabama to provide direct operational assistance to 85 state producers so they can conduct their own damage management. APHIS is conducting research on methods to reduce transmission of the parasite.

21. Regulation of Select Agents

Issue Summary:

USDA and the Department of Health and Human Services (HHS) share joint responsibility for the oversight of select agents and toxins. Within those two departments, APHIS and the Centers for Disease Control and Prevention (CDC) manage the Federal Select Agent Program (FSAP), which oversees the possession, use and transfer of biological select agents and toxins, which have the potential to pose a severe threat to public, animal or plant health or to animal or plant products.

Entities such as private, State, and Federal research laboratories; universities; and vaccine companies that possess use or transfer select agents must be registered with FSAP. If the select agent they work with affects animal and plant health, they must register with APHIS. If it affects human health, they must register with CDC. For those select agents that fall under both jurisdictions, entities can choose who their lead agency will be.

Facilities must meet safety requirements, including biosecurity and physical security measures that ensure the safety and security of the agents and toxins and to prevent their release. APHIS and CDC regularly inspect facilities that use or transfer these agents to ensure compliance. They also inspect each other’s facilities to eliminate any potential conflicts.

See related Hot Topic paper on Readiness and Select Agents for more information.

Current Status/Executive Branch Position:

In 2014, there were several high profile incidents where CDC and the Department of the Army inadvertently released or transferred select agents without proper security or following safety protocols. As a response, the Federal government stood up several review panels to make recommendations to improve FSAP. APHIS and its partners are implementing those recommendations.
Member/Committee Interest and APHIS Response:

The House Energy and Commerce Committee:

The Committee has held two hearings on select agents at which APHIS has testified in recent years. A July 2014 hearing focused on the incidents at CDC and Federal oversight of the program. The Committee primarily focused on CDC and that Agency’s lapses, pointing out that APHIS and the Government Accountability Office (GAO) had observed numerous problems during audits. APHIS explained its oversight role to the committee.

On September 23, 2016, APHIS testified before the same committee to respond to a GAO audit that primarily focused on inactivation of select agents. APHIS testified about a proposed rule it is finalizing to strengthen the select agent program and which will incorporate more controls and clear guidance on how to evaluate the inactivation of select agents. Proposed changes would also enforce guidance and policies on improper activation by those the agency regulates.

Sen. Jon Tester (D-MT) and Steve Daines (R-MT):

The Senators have requested that APHIS remove Brucella abortus from the select agents list, which they hope would spur additional research into brucellosis. APHIS and CDC jointly review the select agent lists every two years, and intend to issue a final rule in fall 2016 to remove B. abortus from the list. However, some Department of Homeland Security officials have opposed this action and it remains to be seen what position the Administration will take.

Congressional Reports:
Per Public Law 107-188, APHIS and CDC jointly prepare a report on the number and nature of thefts and losses of select agents to Congress. The report goes to the leadership in the House and Senate.

22. Wolf Predation and Control

Issue Summary:

APHIS, acting through its Wildlife Services (WS) program, is charged with managing damage caused by wildlife and thereby protecting agriculture, natural resources, property, and human health and safety. In FY 2015, APHIS, through its wildlife management efforts, protected more than 6.5 million head of cattle, sheep, and goats, valued at more than $2.5 billion.

APHIS plays a major role in managing damage caused by wolves in the United States. APHIS personnel work with State wildlife agencies, the U.S. Fish and Wildlife Service (FWS), and Tribal Nations to conduct wolf damage management programs and to provide additional services to capture and mark wolves for research and population monitoring purposes. To avoid or reduce predation, APHIS provides technical assistance (advice, education, and educational materials) to producers on preventative, nonlethal measures, which are then implemented by producers themselves. However, if those techniques do not work, APHIS can provide direct operational assistance to lethally remove wolves under permits from the Federal or state
management agency. Most of this work is cooperatively funded with appropriated money and funding from State or local sources. In FY 2015, APHIS responded to more than 1,000 incidents of reported wolf depredations on livestock or other resources, and removed 385 wolves (one unintentionally).

Please see Hot Topics paper on Predator Damage Management for more background.

Current Status/Executive Branch Position:

APHIS, through its statutory authority under the Animal Damage Control Act, continues to provide technical assistance and advice to producers on how to handle damage due to wolves and other livestock predators. Where appropriate, APHIS conducts direct operational activities to remove problematic predators.

Member/Committee Interest and APHIS Response:

Senator Amy Klobuchar (D-MN) and Rep. Collin Peterson (D-MN): Klobuchar and Peterson wrote to the Secretary to ask that USDA fully fund wolf control activities in Minnesota. Primary regulatory control for wolves in the state is managed by FWS. In recent years, APHIS and the State have each provided $110,000 to protect private property and agricultural resources. APHIS intends to continue that agreement into the future, contingent upon funding.

Senators Al Franken (D-MN), Debbie Stabenow (D-MI) and Tammy Baldwin (D-WI) wrote similar letters in support of APHIS continuing wolf-damage management in their respective states. APHIS responded that it could fund the agreement with the State of Minnesota where wolves are categorized as threatened. However, wolves in Wisconsin and Michigan have a different status under the Endangered Species Act and cannot be removed for livestock predation reasons. Accordingly, APHIS can only remove wolves when human health or safety is directly impacted and permitted by wolf management agencies.

Rep. Peter DeFazio (D-OR): DeFazio is APHIS’ wildlife program’s most vocal critic in Congress, and he has objected to the program’s use of lethal methods for wolf control and other activities.

Relevant Committees

House Committee on Agriculture
- Subcommittee on Biotechnology, Horticulture and Research oversees Biotechnology Regulatory Services and Plant Protection and Quarantine
- Subcommittee on Livestock and Foreign Agriculture oversees Veterinary Services, Animal Care, and Wildlife Services, International Services

House Committee on Appropriations, Subcommittee on Agriculture, Rural Development, Food and Drug Administration and Related Agencies oversees appropriations for the APHIS
IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

Animal and Plant Health Inspection Service’s (APHIS) Relationships with Other USDA Agencies

Agricultural Marketing Service (AMS) and Grain Inspection, Packers and Stockyards Administration (GIPSA)
APHIS, AMS, and GIPSA make up USDA’s Marketing and Regulatory Programs mission area, which facilitates domestic and international marketing of U.S. agricultural products and ensures the health and care of animals and plants. APHIS provides a number of support services to AMS and GIPSA (see Shared Service Provider to Other Agencies, below).

Agricultural Research Service (ARS)
Together, APHIS and ARS operate the National Centers for Animal Health (NCAH) in Ames, Iowa, which meets national needs for animal health research, diagnosis, and product evaluation to improve the Nation’s competitiveness in domestic and world markets and protect against emerging diseases. NCAH provides greater efficiencies in operations between the two agencies and fosters a collaborative research and service culture. At NCAH, APHIS is responsible for animal health diagnostics, regulatory activities, and emergency response through its National Veterinary Services Laboratories (NVSL) and Center for Veterinary Biologics (CVB). ARS—through its National Animal Disease Center (NADC)—is responsible for conducting basic and applied research on livestock and poultry diseases that are of major economic importance to U.S. agriculture and applies the results to animal disease prevention and control programs. Through NVSL, APHIS provides diagnostic services, reagents, and training; supports responses to animal health emergencies; and manages the National Animal Health Laboratory Network (NAHLN). At CVB, APHIS ensures that veterinary biologics (vaccines, bacterins, antisera, diagnostic kits, and other products of biological origin) available for the diagnosis, prevention, and treatment of animal diseases are pure, safe, potent, and effective.

APHIS and ARS also conduct research at the Department of Homeland Security (DHS)-owned Plum Island Animal Disease Center (PIADC) in Orient Point, New York. At PIADC, APHIS operates the Foreign Animal Disease Diagnostic Laboratory, the only laboratory in the Nation...
United States Department of Agriculture  
2016 Presidential Transition  
Animal and Plant Health Inspection Service (APHIS)

that can conduct initial diagnostic testing for foot-and-mouth disease, one of the most significant livestock diseases. At this facility, APHIS also develops novel diagnostic tools and provides diagnostic testing for foreign animal diseases (FADs), and conducts training for Federal and State veterinarians who serve as first responders during FAD outbreaks. ARS’ Foreign Animal Disease Research Unit at PIADC conducts research on high-consequence FADs to increase understanding and develop useful interventions—including vaccines—and diagnostic tools.

APHIS and ARS also meet national needs for plant health research in areas such as plant pest and disease identification, detection, commodity treatment, and management. ARS scientists work extensively with APHIS to conduct basic and applied research on introduced plant pests that are of major economic importance to U.S. agriculture, and APHIS applies the results to plant health exclusion and management programs. Both APHIS and ARS collaborate closely on the development and transfer of scientific and diagnostic technologies to stakeholders in the private sector. In addition, APHIS and ARS have an agreement that allows APHIS to conduct animal welfare inspections of ARS facilities that perform animal research designed to improve livestock health and production.

National Institute for Food and Agriculture (NIFA)
APHIS, ARS, and NIFA work on research, quarantine, and outreach activities associated with the National Clean Plant Network (NCPN), which was created to protect U.S. specialty crops such as grapes, nuts, fruit trees, citrus, berries, hops, sweet potato, and roses from the spread of economically harmful plant pests and diseases. The NCPN produces and distributes plant material free of targeted plant pathogens and pests to specialty crop producers to ensure global competitiveness and protect the environment. NIFA and APHIS also support the National Plant Diagnostic Network, a consortium of plant diagnostic laboratories at land grant universities, other Federal agencies, State departments of agriculture, and other entities throughout the country that quickly detect and identify pests and pathogens of agricultural concern. On the animal health side, APHIS and NIFA work cooperatively with the American Association of Veterinary Laboratory Diagnosticians on the NAHLN, a network of laboratories that use common testing methods and data standards to process diagnostic requests and share information regarding certain animal diseases.

Food Safety and Inspection Service (FSIS)
APHIS and FSIS each have a role in USDA’s efforts to promote a safe, secure, healthy food supply. APHIS works to ensure healthy livestock and poultry, and FSIS works to ensure that the meat, poultry, and eggs derived from these animals is safe, wholesome, and correctly labeled and packaged. APHIS and FSIS have complementary responsibilities relative to animal health surveillance, diagnostic testing, investigations, tracebacks, and response to evidence of disease. APHIS collects samples for surveillance purposes; conducts tests at its laboratories; performs epidemiological traces of animals and animal products; and works to mitigate disease outbreaks in food-producing animals. FSIS performs food safety inspection activities at slaughter establishments nationwide.

APHIS and FSIS have a memorandum of understanding outlining collaborative efforts relative to the inspection, collection, and examination of imported cooked meats for under processing;
animal health slaughter surveillance activities; and information sharing. The agencies have an additional memorandum of understanding to assess the root cause in outbreaks of foodborne illness in humans.

APHIS and FSIS each have animal welfare authorities. FSIS administers the Humane Methods of Slaughter Act, which requires that livestock at Federally inspected establishments be handled and slaughtered in a humane way. APHIS administers the Animal Welfare Act (AWA), which protects certain animals bred for commercial sale, used in research, exhibited to the public, or transported commercially; however, the AWA does not extend to animals used for food, fiber, or other agricultural purposes.

**Foreign Agricultural Service (FAS)**

FAS is responsible for promoting U.S. agriculture overseas and providing food assistance and other international capacity building. APHIS works closely with FAS and the U.S. Trade Representative (USTR) to maintain a coordinated, strategic approach to resolving animal and plant health (sanitary and phytosanitary) issues that can become barriers to agricultural trade. APHIS’ technical experts build relationships with their agricultural health and regulatory counterparts in other countries and use scientific principles to make the case for American agricultural exports, explaining to foreign officials why U.S. commodities are safe to import. APHIS headquarters and overseas staff, many collocated with FAS, maintain contact with FAS colleagues to resolve regulatory issues that may arise with U.S. exports and address animal and plant health issues that are preventing full market access for U.S. products. APHIS also provides FAS information to maintain awareness of new or emerging pests and diseases in those countries that may impact U.S. policy for importing agricultural products.

**Forest Service (FS)**

APHIS, FS, and States cooperate under the Animal Damage Control Act of 1931, as amended, to manage animal damage on National Forest System lands. These activities include wildlife damage management through direct control, as well as technical assistance to achieve desired management objectives. APHIS carries out animal damage management activities on National Forest System lands mostly to minimize livestock losses from predation by coyotes, black bears, and other predators. On request and under agreements, APHIS also conducts activities to control animal damage caused by small mammals and other animals to National Forest System resources, such as timber stands and roads. APHIS and FS also work cooperatively to safeguard U.S. forestland from potentially devastating pests and diseases.

**APHIS’ Relationships with Other Federal Agencies**

**U.S. Department of Health and Human Services, Centers for Disease Control and Prevention (CDC)**

APHIS works with CDC to address complex issues that have the potential to impact animal and human health. ‘One Health’ approaches to these issues have become more important as interactions among people, animals, and the environment increase and evolve. About 75 percent of recently emerging infectious diseases affecting humans are of animal origin, and nearly 60 percent of all human pathogens are zoonotic, meaning they can move between people and
animals. Through its One Health Coordination Office and the placement of a liaison at CDC, APHIS applies its animal health expertise as part of a multidisciplinary approach to these issues.

APHIS and CDC also jointly operate the Federal Select Agent Program. Through this program, APHIS and CDC oversee the possession, use, and transfer of biological select agents and toxins, which could pose a severe threat to public, animal, or plant health.

In addition, APHIS collaborates extensively with CDC on rabies management in wildlife to protect human and animal health and to reduce the significant economic and social costs of this disease. APHIS and CDC work closely on enhanced rabies surveillance, oral rabies vaccination programs in 16 States, and rabies-related research projects focused on prevention and control strategies.

U.S. Department of Health and Human Services, Food and Drug Administration (FDA) and U.S. Environmental Protection Agency (EPA)
APHIS, FDA, and EPA work together to ensure that products of biotechnology and those derived from them are safe for farmers to use, safe for animals and humans to consume, and safe for the environment. Under the Coordinated Framework for the Regulation of Biotechnology (which is currently being modernized to help ensure appropriate oversight and transparency into the future), the three agencies regulate these products based on their characteristics and intended uses, ensuring the safety of organisms used in agriculture and industry, pesticides, foods, and animal feeds.

APHIS and FDA also work together closely to identify and mitigate emerging threats to America’s food supply, such antimicrobial resistance in human and animal health. In addition, APHIS works with EPA to identify quarantine treatments for certain agricultural pests. For example, EPA has registered and authorized methyl bromide—the use of which is restricted and reduced each year because it depletes the ozone layer—to control agricultural pests that affect crops like strawberries, for which no technically and economically feasible alternatives or substitutes are available.

U.S. Department of Homeland Security, Customs and Border Protection (CBP)
APHIS and CBP work collaboratively at the Nation’s borders and ports of entry to safeguard American agriculture and natural resources and to carry out agricultural quarantine inspection (AQI) activities to intercept and keep out any foreign agricultural pests that could affect U.S. agriculture, trade, and commerce. Following the establishment of DHS in 2003, the AQI function at ports of entry (with the exception of inspections of imported plants) transferred from APHIS to CBP. APHIS continues to assess risks associated with imports, set import regulations and inspection policies, inspect imported plant shipments, train CBP agricultural specialists and detector dog teams, monitor fumigations and other treatments of imported commodities, and provide the scientific support necessary for the program, among other things.

CBP enforces APHIS regulations at ports of entry. CBP’s primary focus is on inspection of conveyances, cargo, and passenger baggage at ports of entry; data collection; documenting violations; and targeting based on analysis. APHIS works with CBP to determine where
collective efforts should be focused so resources are efficiently utilized to mitigate damage to agriculture and natural resources. APHIS continues to collect AQI user fees and transfers a portion of the AQI collections to CBP to cover that agency’s costs.

Under the Department of Homeland Security’s *National Response Framework*, USDA has the primary role for coordinating Emergency Support Function (ESF) #11 – Agriculture and Natural Resources assistance during Presidentially declared disasters. Since receiving delegated authority in March 2006, APHIS has fulfilled this primary role for USDA, working with its ESF #11 partner agencies—USDA’s Food Safety and Inspection Service and Food and Nutrition Service, and the Department of the Interior—to assist when the President issues a disaster declaration for a State and FEMA requests ESF #11 assistance. APHIS has an ESF #11 coordinator in each of FEMA’s 10 regions and a national coordinator in the Washington, D.C., area who communicate regularly with FEMA, participate in interagency meetings and planning activities, and coordinate ESF #11 assistance during disasters as part of the Federal response team. The coordinators in the FEMA regions also reach out to other USDA agencies to address inquiries from FEMA. Since 2006, FEMA has activated ESF #11 to respond to more than 100 disasters, including the Deepwater Horizon oil spill in the Gulf of Mexico and Superstorm Sandy, which caused an estimated $65 billion in total damage along the East Coast, from Maine to North Carolina.

**U.S. Department of the Interior (DOI), Fish and Wildlife Service (FWS)**

APHIS works with the FWS to further the purposes of the migratory bird conventions, the Migratory Bird Treaty Act, the Bald and Golden Eagle Protection Act, the Fish and Wildlife Coordination Act, the Endangered Species Act (ESA), the National Environmental Policy Act (NEPA), and other pertinent statutes. APHIS coordinates with FWS to address human-wildlife conflicts arising from migratory birds and obtains migratory bird depredation permits from FWS when necessary to resolve wildlife damage. As required by Executive Order 13186, APHIS and FWS have a memorandum of understanding focusing on avoiding or minimizing adverse impacts on migratory birds and strengthening migratory bird conservation through enhanced collaboration.

APHIS also consults with FWS on some biological assessments conducted under NEPA in response to petitions to deregulate certain genetically engineered (GE) crops. The ESA requires such consultations in cases where the Agency determines that a GE crop “may affect, but is not likely to adversely affect” some endangered species.

**U.S. Department of Justice (DOJ)**

APHIS may refer serious violations of APHIS-administered laws to the DOJ through USDA’s Office of the Inspector General and/or Office of the General Counsel. DOJ may pursue civil or criminal action, as appropriate.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

U.S. Department of Transportation, Federal Aviation Administration (FAA); U.S. Department of Defense (DOD); EPA; DOI, FWS; and National Transportation Safety Board (NTSB)
APHIS has a memorandum of understanding with FAA to strengthen airport safety by addressing wildlife conflict issues, conducting hazard mitigation operations, maintaining and interpreting the FAAs wildlife strike database, educating the airport community on wildlife strike risks and hazards management, and conducting research. The Agency has an additional agreement with FAA and the National Association of State Aviation Officials to increase hazard awareness and information sharing in every State to improve airport safety.

APHIS has a memorandum of understanding with the DOD to address wildlife conflicts associated with military bases and aircraft to protect military personnel and property. DOD provides funding for APHIS to provide direct assistance for, and research into, wildlife hazards at 106 domestic military airbases and 3 overseas airfields. APHIS provides additional assistance at joint-use civil/military airfields. APHIS also assists DOD, on request, in complying with the Sikes Act to achieve natural resources management goals. APHIS has a memorandum of agreement with DOD, EPA, FAA, and FWS outlining mission areas and facilitating coordinated aviation protection responsibilities and activities.

When requested by NTSB, APHIS responds to aircraft incidents to assist with investigations. It can determine whether wildlife caused the incident and the species involved.

Shared Service Provider to Other Agencies
APHIS works closely with MRP agency leaders and managers to provide human resources services to the MRP mission area’s 14,000 employees. APHIS also provides human resources operational support to USDA’s FAS and Natural Resources Conservation Service (headquarters-based employees) as well as the Merit Systems Protection Board. These services include:

- Recruiting and hiring high-caliber personnel;
- Providing insurance and retirements benefits information;
- Administering processes for salaries, promotions, recognitions, and benefits in a timely manner;
- Providing policy guidance on performance and labor management;
- Providing supervisors with training and tools to support and counsel their employees;
- Creating a supportive and diverse workplace culture to attract and retain talent;
- Promoting the health, safety, and security of employees;
- Planning for workforce and succession needs;
- Offering seminars on employee leadership development;
- Providing coaching, mentoring, and leadership transition services to managers; and,
- Supporting employee development through AgLearn courses available online.

APHIS provides financial management services to AMS, FAS, FSIS, and GIPSA. A cadre of APHIS analysts, accountants, and managers direct and carry out program business activities related to receiving, reviewing, and preparing accounting information for input into USDA’s financial management system; preparing, analyzing, and disseminating financial reports,
including quarterly financial statements; and conducting a sound financial management program for these agencies.

APHIS also provides AMS and GIPSA with accounting, financial operations, travel management, and auditing services, including:

- Program and policy formulation, account classification, billing and collections, examination and certification, accounting and control, adjustments, financial reports, systems and procedures, and liaison activities;
- Accounts receivable services, including examination and certification, purchase card program management, foreign allowance, billing and collections, debt management, and tort claims;
- Travel policy and issuance interpretation, centrally billed account coordination, and individually billed account management; and,
- Internal control policy formulation and liaison activities.

APHIS provides realty services to USDA’s National Appeals Division and a variety of acquisitions and asset management services to AMS and GIPSA, including:

- Acquisitions assistance;
- Printing, distribution, mail, and copier solutions;
- Guidance regarding contracting, the Purchase Card Program, the Contracting Officer Warrant System, and services/requirements of USDA’s Office of Small and Disadvantaged Business Utilization;
- Fleet management coordination and guidance on fleet/gas card requirements;
- Realty, real, and personal property management and guidance;
- Facility and conference center management;
- Information technology awards procurement (GIPSA); and,
- Management of architectural and engineering services procurement for planning, design, construction, utilities, alterations, repairs, and installation of fixed equipment in GIPSA-owned and –leased facilities.

APHIS also provides a number of security, safety, and emergency management services to other agencies, including:

- Physical security support (AMS and GIPSA);
- Operating three shared Homeland Security Presidential Directive-12 compliant Personal Identity Verification card enrollment and activation stations that are part of the General Services Administration’s USAccess Program and serving as the USAccess Program role administrator for AMS and GIPSA by managing the agencies’ sponsor, adjudicator, registrar, security officer, and activator roles;
- Support for AMS’ random drug testing program;
- Pre-employment, random, reasonable suspicion, and post-accident drug testing support to FAS;
- Workers’ compensation support to AMS and FAS;
- Relocation facilities within the National Capital Region to support GIPSA continuity of operations;
• Webinar-based ergonomics training for employees of all Federal Departments and Agencies; classroom-based training for ARS (Ames, Iowa), FAS, and the United States Secret Service; ergonomics evaluations for FAS and some ARS employees; and access for all Federal employees to APHIS’ ergonomics lab in Riverdale, MD;
• Classified National Security Information support to AMS and ARS;
• Workplace violence prevention training, and assessment and investigation support to FAS; and,
• Representing USDA as the coordinating agency for Emergency Support Function #11 of the National Response Framework.

APHIS provides information technology and related support to MRP agencies, including:
• Video teleconferencing communications support to AMS;
• Full telecommunications mission area control officer services to GIPSA;
• Support for physical security access systems at seven GIPSA locations;
• Support to AMS and GIPSA for publishing agency notices, directives, and other formal documents;
• Support to GIPSA for designing and ordering agency forms; reviewing rules and regulations to ensure that information collection requirements are met; records management; and,
• Support to AMS for issuances, including support for agency notices, directives, and other formal documents.

Stakeholder group overview

The following is a list of State, industry, and nongovernmental organizations that have an interest in APHIS policies and activities. Given the breadth and depth of APHIS’ mission, the Agency has an extensive list of stakeholders that it communicates with regularly on multiple issues. This list is not all inclusive, but does highlight some of the Agency’s more active or vocal stakeholders. The briefs include background about the organizations’ missions, identify key leadership positions, and provide information about important APHIS issues. The stakeholders are broken into seven categories: union organizations; general agriculture organizations, consumer advocacy organizations, international regulatory organizations, state-level organizations, animal organizations, and plant organizations.

Union Organizations:

American Federation of Government Employees (AFGE)
https://www.afge.org/

AFGE is the largest Federal employee union, representing 670,000 Federal and D.C. Government workers nationwide and overseas. AFGE has been nationally affiliated with the AFL-CIO since its founding in 1932. AFGE’s national office is located in Washington, D.C.; J. David Cox is the national president.
Employees associated with various APHIS, Agricultural Research Service (ARS), and Agricultural Marketing Service (AMS) programs are AFGE members. These include non-supervisory animal health technicians and clerical employees with APHIS-Veterinary Services’ (VS) Cattle Fever Tick Eradication Program (AFGE Local 3106: Doug Anderson, president); non-professional VS employees in Puerto Rico and the Virgin Islands (AFGE Local 2614: Awilda Morales, president); and all non-professional employees with ARS’ National Animal Disease Laboratory and APHIS’ Science, Technology, and Analysis Services and Program Support Services (Division of Information Technology) in Ames, Iowa (AFGE Local 2315: Sheree Wolf, president). The National Meat Graders Council, AFGE Local 2223 (Heather Tenhoff, president), represents all permanent, full-time meat commodity graders within AMS’ Livestock, Poultry, and Seed Program.

Issues of concern to AFGE local affiliates revolved around selections for supervisory positions; alleged unfair labor practice related to investigative interviews; random vehicle/employee inspections; and tour-of-duty changes and changes in duty stations for certain employees.

American Federation of State, County and Municipal Employees (AFSCME)
http://www.afscme.org/

According to the organization’s Web site, AFSCME is the Nation’s largest and fastest growing public services employees union, with more than 1.6 million working and retired members. AFSCME represents all professional and non-professional employees employed by the Foreign Agricultural Service (FAS) in the Washington, D.C., metropolitan area, including professional and nonprofessional schedule B employees with re-employment rights and Schedule B employees without re-employment rights. An important issue to AFSCME is renegotiating telework provisions of the collective bargaining agreement to conform with Office of Personnel Management guidance.

Lee Saunders is the national AFSCME president.

National Association of Agriculture Employees (NAAE)
http://www.aginspectors.org/

NAAE represents all nonprofessional (non-clerical and non-managerial) employees in APHIS’ Plant Protection and Quarantine (PPQ) program, as well as professionals in the GS-401 series (PPQ officers, Smuggling Interdiction and Trade Compliance officers, etc.). APHIS is involved in ongoing negotiations with NAAE regarding changes made to the methyl bromide use label and grievances and a request regarding educational requirements for the 401 series. NAAE working groups are also looking at reviewing GS-11 positions in the 401 series and possibilities for increasing the number of GS-12 positions.

The NAAE has no central office; Mike Randall is the current national president.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

National Association of Plant Protection and Quarantine Office Support Employees (NAPPQOSE)
https://sites.google.com/site/nappqose/home

NAPPQOSE represents most of the administrative/office support employees within APHIS-PPQ. The organization is primarily concerned about the number of employees attending training related to government-owned vehicles. Cynthia C. Ross is NAPPQOSE’s president.

American Foreign Service Association (AFSA)
http://www.afsa.org/

AFSA, which has represented the foreign affairs community since 1924, represents all foreign service officers within APHIS’ International Services program and FAS. APHIS is involved in ongoing negotiations with AFSA regarding specific employees in a collective bargaining agreement. AFSA’s offices are located in Washington, D.C.; Barbara Stephenson is AFSA’s president.

General Agriculture Organizations:

American Farm Bureau Federation (AFBF)
www.fb.org

AFBF is a nongovernmental, voluntary organization that provides a national-level voice for farm and ranch families. The AFBF mission is to enhance and strengthen the lives of rural Americans and to build strong, prosperous agricultural communities. AFBF has an affiliate bureau in all 50 states.

Priority APHIS issues for AFBF include passage of the Trans-Pacific Partnership agreement to expand export markets and farmer access to biotechnology. The AFBF has worked cooperatively with APHIS on outreach and training activities related to biotechnology regulation and has provided comments on APHIS’ revised regulations for genetically engineered (GE) organisms. The AFBF is also preparing to advocate for more funding in the 2018 Farm Bill.

The AFBF is located in Washington, D.C. and Zippy Duvall is AFBF’s President. Mace Thornton is the Executive Director, Communications.
Consumer Advocacy Organizations:

Center for Food Safety (CFS)
http://www.centerforfoodsafety.org

CFS is a national non-profit public interest and environmental advocacy organization that works “to protect human health and the environment by curbing the use of harmful food production technologies and by promoting organic and other forms of sustainable agriculture.” CFS also promotes educational materials for consumers about organic foods and products. CFS uses legal actions, scientific and policy reports, books, campaigns and other materials to advocate for market changes through their “True Food Network.” CFS also pursues legal cases and has sued APHIS on numerous issues, including some of our GE deregulations and most recently over APHIS responses to CFS requests under the Freedom of Information Act (FOIA). Almost half of FOIA requests received in APHIS’s Biotechnology Regulatory Services program are from CFS.

In general, CFS opposes genetic engineering, with specific interests in changes to biotechnology regulations, the development of “superweeds,” and economic losses to organic and identity-preserved crop farmers by the unintended presence of GE material.

CFS national headquarters are in Washington, D.C., and Andrew Kimbrell is the Executive Director.

Center for Science in the Public Interest (CSPI)
http://www.cspinet.org/

Founded in 1971, CSPI’s mission is to educate the public, advocate government policies that are consistent with scientific evidence on health and environmental issues, and “counter industry’s powerful influence on public opinion and public policies.” CSPI covers both animal and plant health issues.

APHIS issues of interest to CSPI include all aspects of the Agency’s biotechnology program. CSPI’s goal is to “provide responsible information about the benefits and risks of agricultural biotechnology.” The CSPI Biotechnology Project addresses scientific concerns, government policies, and corporate practices concerning GE plants and animals, that are released into the environment or that end up in food.

CSPI’s headquarters are in Washington, D.C. and Michael Jacobson is the President. Gregory Jaffe is the Director of the Biotechnology Project.
In 2005, members of the Energy and Environment Program at the advocacy organization Public Citizen created FWW. FWW advocates for safe food and clean water using grassroots organizing, education campaigns, and media outreach. Overlap with APHIS issues includes FWW’s efforts to make country-of-origin labeling on meat and produce mandatory and make food irradiation labeling mandatory. FWW also supports labeling all genetically engineered foods. Outside of the United States, FWW is also known as Food & Water Europe.

FWW headquarters are in Washington, D.C., and the Executive Director is Wenonah Hauter.

Founded in 1969, UCS is a nonprofit organization working for “a healthy planet and safer world.” UCS uses independent scientific research and citizen action to advocate for changes in government policy, corporate practices, and consumer choices. UCS is concerned with strengthening government oversight of GE crops and advocates against the production of pharmaceutical products in food crops. APHIS issues of interest to UCS include biotechnology regulations and regulation of pharmaceutical and industrial crops.

UCS headquarters are in Cambridge, Massachusetts and Kenneth Kimmell is the President. Peter Frumhoff is the Director of Science & Policy.

The Food and Agriculture Organization of the United Nations’ primary mission is achieving food security for all people so they have regular access to enough high-quality food to lead active, healthy lives.

The FAO’s three main goals are the eradication of hunger, food insecurity, and malnutrition; the elimination of poverty and the driving forward of economic and social progress for all; and the sustainable management and utilization of natural resources, including land, water, air, climate, and genetic resources for the benefit of present and future generations. APHIS is an FAO Reference Center for foot and mouth disease (FMD) and other vesicular diseases of the Americas and the Caribbean, animal influenza, and Newcastle disease. FAO Reference Centers are institutions designated by the Director-General to provide independent technical and scientific advice on issues related to the FAO’s mandate. These Reference Centers, such as the APHIS National Veterinary Services Laboratories (NVSL), have expertise in areas including veterinary diagnostics, vaccines, research, biocontainment, and epidemiology. The References Centers are
internationally regarded as centers of excellence in providing scientific and technical expertise, diagnostic services, laboratory and field training, and coordinating research. NVSL in particular is recognized as a confirmatory testing laboratory for suspected FMD and other vesicular disease samples from all of the Americas.

FAO is located in Rome; the Director-General is José Graziano da Silva.

*International Plant Protection Convention (IPPC)*
https://www.ippc.int/en/

The International Plant Protection Convention (IPPC) is a 1951 multilateral treaty placed with the United Nations’ Food and Agriculture Organization (FAO) that coordinates effective action to prevent and to control the introduction and spread of pests of plants and plant products. The Convention extends beyond the protection of cultivated plants to the protection of natural flora and plant products, considering both direct and indirect damage by pests, including weeds.

The governing body is known as the Commission on Phytosanitary Measures (CPM), which oversees the implementation of the IPPC. As of September 2015, the Convention has 182 parties, including 179 member states, and the European Union. The IPPC is recognized by the World Trade Organization’s (WTO) Agreement on the Application of Sanitary and Phytosanitary Measures (the SPS Agreement) as the international standard setting body for plant health. While the IPPC’s primary focus is on plants and plant products in international trade, the IPPC also covers research materials, biological control organisms, germplasm banks, containment facilities, food aid, emergency aid and anything else that can act as a vector for the spread of plant pests – containers, packaging materials, soil, vehicles, vessels and machinery. APHIS issues relevant to the IPPC include pest control programs and the promotion of harmonized, science-based, SPS trade regulations.

The IPPC is based in Rome, at the FAO headquarters, and has staff around the world. Jingyuan Xia is the IPPC Secretary. Marina Zlotina is PPQ’s IPPC Technical Director.

*North American Plant Protection Organization (NAPPO)*
www.nappo.org

NAPPO is a Regional Plant Protection Organization of the International Plant Protection Convention (IPPC). NAPPO coordinates efforts among Canada, the United States, and Mexico to protect plant resources from the entry, establishment, and spread of regulated plant pests, while facilitating North American trade. The organization develops phytosanitary (relating to the health of plants) standards to protect the North American region, provides a forum for technical assistance for relevant phytosanitary issues, facilitates agricultural trade, and provides a mechanism for disputes in regional trade.
APHIS has various staff on NAPPO executive and technical panels. APHIS issues of interest to NAPPO include international standards for solid wood packing material and compliance with those standards, biological control, and invasive species.

Patricia Abad is PPQ’s NAPPO Technical Director. Stephanie Bloem, a former APHIS employee, is NAPPO’s Executive Director. NAPPO headquarters are located in Raleigh, North Carolina.

World Organisation for Animal Health (OIE)
http://www.oie.int/

Commonly referred to as “the OIE”, because of its original name in French (Office de Epizooties), the OIE is recognized as the global reference organization (international standard setting body) for animal health by the World Trade Organization and has a total of 180 member countries. The OIE maintains permanent relations with 71 international and regional organizations and has offices worldwide.

OIE issues relevant to APHIS include animal disease control programs, especially animal disease epidemiology and surveillance, and promotion of transparent, science-based, animal health trade regulations around the world. APHIS is responsible for reporting U.S. animal disease occurrences to the OIE, including immediate notifications of some diseases and annual and semiannual reports. The OIE also operates the World Animal Health Information Database, which captures data on notifiable animal disease events around the world and is an important resource for trade issues.

Daily operations are managed at OIE headquarters in Paris, under the responsibility of Director General Dr. Monique Eloit. Delegates from member countries elect Commissions to develop resolutions, which are considered at the OIE annual meeting, usually in May. The OIE’s financial resources are derived from annual member country contributions. The United States is a major financial contributor. The APHIS-VS Chief Trade Advisor, Dr. John Clifford, is the U.S. Delegate to the OIE.

State-Level Organizations:

National Assembly of State Animal Health Officials (NASAHO)

The National Assembly operates as a non-profit organization representing State veterinary officials in the United States. It is a communications network and lobbying group that offers education resources, publications, and research. The National Assembly conducts conferences and seminars, including the annual U.S. Animal Health Association (USAHA) conference, in conjunction with the American Association of Veterinary Laboratory Diagnosticians (AAVLD).

The National Assembly is a close partner of APHIS. Therefore, APHIS Veterinary Services (VS) holds regular monthly conference calls to inform the members of the National Assembly on
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

current issues and to gain feedback from the group. VS also works closely with the National Assembly on all animal health emergencies and guidance on animal health program initiatives.

Dr. Susan Keller is the National Assembly President and also the current North Dakota State Veterinarian.

National Association of State Departments of Agriculture (NASDA)

www.nasda.org

NASDA represents State Departments of Agriculture in the development, implementation, and communication of public policy and programs that support and promote the American agricultural industry, while protecting consumers and the environment. NASDA is a key partner in almost all of APHIS’ programs, and the group, collectively or individually by Commissioner, frequently bring State issues to APHIS’ attention for discussion and resolution. APHIS holds a regular conference call with NASDA the first Monday of every month to provide updates to Commissioners on key program activities.

Since fiscal year 2004, APHIS has provided cooperative agreement funding to NASDA. APHIS structures the terms of that agreement to focus support around several key NASDA activities. Each year, APHIS’ Leadership attends NASDA’s midyear and annual meetings and provides program updates at their Animal and Plant Industries Committee meetings.

Dr. Barbara Glenn is NASDA’s Chief Executive Officer and Greg Ibach, Nebraska Department of Agriculture, is the current NASDA President.

National Plant Board (NPB)
http://www.nationalplantboard.org/

NPB is a nonprofit organization that represents plant pest regulatory agencies in all 50 States, the Commonwealth of Puerto Rico and Guam. The organization provides national leadership to foster the effective management of plant health programs and address plant pest regulatory issues that affect States. NPB frequently brings plant health and biotechnology issues to APHIS’ attention for discussion and resolution. Officials with APHIS’ Plant Protection and Quarantine hold regular conference calls with the NPB Executive Team, APHIS’ Biotechnology Regulatory Services participates on the calls when there are biotechnology issues to discuss. NPB also holds a national annual meeting each August where participants discuss plant health policy and current issues. NPB also has relationships with the NASDA, the U.S. Forest Service, and the USDA/Agricultural Research Service (ARS).

APHIS issues of primary interest to NPB include Farm Bill funding for pests and diseases, as well as emerald ash borer, potato cyst nematode, citrus greening, invasive species, biotechnology, and coordination of agricultural inspection activities with the U.S. Department of Homeland Security’s Customs and Border Protection. APHIS currently has one cooperative agreement with NPB to develop a program for States to conduct biotechnology field test inspections on behalf of APHIS.
The NPB is located in Sacramento, California and Joe Collins (KY) is the current NPB President. The NPB President serves a one-year term in office.

Animal Organizations:

American Association of Equine Practitioners (AAEP)
www.aaep.org/

The AAEP is the world’s largest professional organization dedicated to equine veterinary medicine and is a leading medical authority on the health and welfare of horses. Nearly 9,300 veterinarians and veterinary students in 61 countries are AAEP members. Their mission is to improve the health and welfare of horses, provide education and professional development, establish ethical standards, as well as become a respected source of information for influencing public policy.

The AAEP helped launch and manages the Equine Disease Communication Center (EDCC), a USDA-supported component of the National Equine Health Plan that collects and report real-time information about disease outbreaks, as well as provides information needed to respond to and manage those outbreaks. The EDCC helps protect the horse industry from the threat of infectious disease outbreaks and keep horse moving domestically and internationally.

The AAEP is located in Lexington, Kentucky. Dr. Reynolds Cowles will begin his term as President in December 2016.

American Association of Small Ruminant Practitioners (AASRP)
www.aasrp.org

AASRP has over 1,000 members in the United States and Canada, with additional members in over 20 countries. The AASRP was founded in 1968 to further the programs and studies of those working with small ruminants (sheep, goats, camelids, elk, deer, and other related species). The organization is a clearinghouse for education, research, and training to promote good health and productivity in the small ruminant sector.

AASRP’s primary goals are to work cooperatively with regulatory agencies, to further the professional development of members, and to provide resources to elevate the standards of small ruminant medicine. APHIS issues of importance to the AASRP include the eradication of classical scrapie from the United States, chronic wasting disease (CWD) State herd certification programs, and zoonotic diseases affecting small ruminants, including brucellosis, coxiellosis (Q fever), and tuberculosis (TB).

AASRP is located in the Montgomery, Alabama suburbs. Dr. Patty Scharko is AASRP’s current president, Dr. Dale Duerr is the President-Elect, and Dr. Bradley Fields is the Executive Director.
American Association of State Public Health Veterinarian (AASPHV)
http://aaphv.org/

The AASPHV promotes the science, art, and practice of public health, epidemiology, and preventive medicine. Its membership includes those in private practice or employed by a governmental or non-governmental agency or academia (students and faculty), at the local, State, national, or international level. The Association carries out its mission by providing an expert forum to discuss public health issues of importance to the veterinary profession and developing professional recommendations and public health resolutions. The Association consistently supports programs to promote and improve the professional education, communication, and collaboration of public health veterinarians to reduce human and animal disease and disability, to improve human and animal population well-being, and to integrate the contributions of veterinary medicine to the successful practice of public health throughout the United States.

AASPHV’s programs overlap with those of USDA at the human-animal environmental interface, such as food safety, infectious diseases, antimicrobial resistance, Global Health, and pandemic influenza.

AASPHV is located in Albuquerque, New Mexico and Jeff Baravik is the current AASPHV President.

American Association of Swine Veterinarians (AASV)
www.aasv.org

AASV has approximately 1,300 members involved in practice, industry, and academia in more than 40 countries. One of AASV’s primary goals is to support science-based approaches to veterinary, industry, and public health issues. AASV has worked with APHIS to provide input and recommendations on the management of swine health issues, such as porcine enteric corona virus in 2014, and senecavirus A in the U.S. swine population.

AASV has also developed position statements on issues relevant to the swine industry, including judicious use of antibiotics, porcine epidemic diarrhea virus, premises registration, swine welfare, and porcine reproductive and respiratory syndrome. AASV has also engaged APHIS on issues related to identification of emerging diseases, and validation of newly developed diagnostic tests for foreign animal diseases.

The AASV is located in Perry, Iowa. Tom Burkgren is AASV’s Executive Director, and George Charbonneau is the President.
American Association of Veterinary Laboratory Diagnosticians (AAVLD)
www.aavld.org

AAVLD is a not-for-profit professional organization that seeks to improve all aspects of animal disease diagnostic programs. Specific organizational goals include the dissemination of information related to the diagnosis of animal diseases; coordination of diagnostic activities of regulatory, research, and service laboratories; the establishment of uniform diagnostic techniques; and the development of new diagnostic techniques.

Since 2002, APHIS—in conjunction with USDA’s National Institute of Food and Agriculture — has worked closely with AAVLD to establish the National Animal Health Laboratory Network (NAHLN). NAHLN is a network of Federal, State, and university veterinary laboratories designed to provide a rapid and effective response to animal health emergencies. AAVLD strongly supports the network concept, which builds on a memorandum of understanding (MOU) signed by APHIS and AAVLD to cooperatively improve veterinary diagnostic services in the United States.

Additionally, APHIS, AAVLD, and the U.S. Animal Health Association (USAHA) are partners in the National Animal Health Reporting System (NAHRS). NAHRS is designed to provide data from State animal health officials on the presence of reportable diseases in commercial livestock, poultry, and aquaculture species. NAHRS is intended to be part of a comprehensive and integrated animal health system.

The AAVLD is located in Visalia, California, and Dr. Tom Baldwin is AAVLD’s President.

American Cervid Alliance (ACA)
www.americancervidalliance.com

The ACA is a leadership council comprised of representatives from 40 separate elk, deer, and exotic associations. The leaders of these associations meet regularly to assess the latest concerns from the cervid industry regarding over-regulation and harmful legislation. The ACA essentially functions as the United Nations of the cervid industry.

The ACA Leadership Council reviews the latest news and challenges facing the cervid industry. A major topic is the revision of APHIS’ Chronic Wasting Disease (CWD) Program Standards document and advocating to make the standards more favorable to industry. The council also spends time advocating against proposed moratoriums, closed borders proposals, and new farm requirements at the state level. APHIS issues of interest to the American Cervid Alliance include CWD, bovine TB, and brucellosis.

The ACA is located in Charles City, Iowa, and there is no formal President. Travis Randal Lowe is the ACA Moderator and is responsible for organizing conference calls and ACA business.
American Dairy Goat Association (ADGA)
www.adga.org

The ADGA was organized in 1904 to collect, record, and preserve the pedigrees of dairy goats and to provide genetic, management, and related services to dairy goat breeders. With over two million goats registered, ADGA is the largest and fastest growing dairy goat organization in the United States.

APHIS issues of interest to the ADGA include the eradication of classical scrapie from the United States, goat traceability (with a special emphasis on the use of registry tattoos for registered goats), brucellosis and TB surveillance and policy in relation to the testing requirements in the Pasteurized Milk Ordinance, and surveillance of and response to coxiellosis (Q fever).

The ADGA is located in Spindale, North Carolina and Robin Saum is the President. Phil Cassette and Linda Campbell are Vice-Presidents, and the Association Manager is Shirley McKenzie.

American Goat Federation (AGF)
https://www.americangoatfederation.org

Founded in 2010, AGF represents the interests of more than 150 organizations and thousands of producers engaged in the sustainable production and marketing of goat milk, meat, fiber, breeding stock and grazing services across the United States. The ADGA, American Boer Goat Association, and the Texas Sheep and Goat Raisers are all members of AGF. AGF promotes the development of all segments of the goat industry, including dairy, meat, and fiber, by encouraging sound public policy, enhancing production and marketing of goat products, and promoting research beneficial to its member organizations and all producers.

APHIS issues of interest to AGF include the eradication of classical scrapie from the United States, animal traceability, zoonotic disease surveillance and response, and foreign animal and emerging diseases preparedness and response. APHIS and AGF have a cooperative agreement to increase awareness of scrapie and the National Scrapie Eradication Program and proposed updates to animal traceability requirements for goats.

The AGF is located near Indianapolis, Indiana. Dr. Ken Andries is the AGF President, Lary Duncan is the Vice-President, and Anita Teel Dahnke is the Executive Director.

American Horse Council (AHC)
www.horsecouncil.org

The AHC was organized to represent the horse industry in Washington before Congress and Federal regulatory agencies. It is a non-profit corporation that represents all segments of the equine industry. AHC helped launch and supports the Equine Disease Communication Center (EDCC), a USDA-supported component of the National Equine Health Plan that will collect and report real time information about disease outbreaks, as well as provide the information needed
to respond to and manage those outbreaks. The EDCC will help protect the horse industry from the threat of infectious disease outbreaks and keep horses moving domestically and internationally.

The AHC is located in Washington, D.C. and Julie Broadway is the current AHC President.

American Sheep Industry Association (ASI)
www.sheepusa.org/

ASI represents the interests of more than 88,000 sheep producers located throughout the United States. ASI is a federation of 45 State sheep associations, as well as individual members dedicated to the common goal of promoting the profitability and well-being of the U.S. sheep industry. The American Wool Council and the American Lamb Council are divisions of ASI. APHIS issues of importance to ASI include National Scrapie Eradication Program (NSEP), sheep traceability, foreign animal and emerging diseases preparedness and response, sheep and sheep products import and export, and predator management. APHIS and ASI have a cooperative agreement to promote compliance with the identification, record keeping, and movement requirements of the NSEP, identifying and reporting scrapie-affected animals, and submitting animals for scrapie surveillance. ASI has also been engaged on issues surrounding foot-and-mouth disease (FMD) with respect to livestock imports from Argentina and public land use issues resulting from concerns over domestic-Bighorn sheep interactions and the potential for disease transmission.

In addition, ASI supports much of the predator management work carried out by APHIS’ Wildlife Services program. It pulls together some 200 agencies and associations to provide an annual letter of support for the program to Senate and House committees.

Burton Pfliger is President of ASI, and Peter Orwick is the Executive Director of the association headquartered in Englewood, CO.

American Veterinary Medical Association (AVMA)
https://www.avma.org/Pages/home.aspx

The AVMA, established in 1863, is a not-for-profit association representing more than 88,000 veterinarians working in private and corporate practice, government, industry, academia, and uniformed services. Structured to work for its members, the AVMA acts as a collective voice for its membership and for the profession to advance the science and practice of veterinary medicine to improve animal and human health.

Within the AVMA, APHIS is involved with the Council on Biologic and Therapeutic Agents. This Council serves as an informational and advisory resource to government agencies (including APHIS’ Center for Veterinary Biologics) and to other AVMA groups on issues pertaining to veterinary biologics, drugs, and other therapeutic agents. The Council also fosters the proper use of biologic and therapeutic agents in the practice of veterinary medicine. Examples of Council activity include improving animal vaccine label content to provide
additional meaningful information to veterinarians to assist them in customizing vaccine recommendations for their patients; furnishing comprehensive veterinary education on animal product issues; advocating for animals and veterinarians regarding the proper use of compounded drugs; addressing Internet issues affecting veterinary practice with regulatory officials, including pharmacy and diagnostic testing; and reviewing and enhancing the adverse event reporting systems for animal health products.

Dr. Thomas Meyer, a co-owner of a mixed-animal practice, is the current AVMA President.

Animal Agriculture Alliance (AAA)
www.animalagalliance.org

AAA is a coalition of livestock, poultry, and aquaculture trade associations and veterinary and scientific communities that monitors and influences issues dealing with animal health, the environment, food safety, and research and education. The organization advocates for Federal funding and legislation to support its platform. AAA membership includes more than 30 national animal agriculture producers and allied animal agriculture industry organizations. Established in 2001, the AAA is interested in helping consumers better understand the role animal agriculture plays in providing a safe, abundant food supply. APHIS and AAA—along with USAHA and the AVMA—meet regularly as part of the National Animal Health Emergency Management Steering Committee. APHIS issues of interest to the AAA include foot-and-mouth disease, promoting science-based and species-specific animal welfare principles, responsible use of antibiotics and antibiotic resistance, and monitoring legislation concerning animal agriculture at the state and federal levels. The AAA also maintains detailed outreach and educational information on its website regarding animal agriculture issues.

The AAA is based in Arlington, Virginia, and Kay Johnson Smith is the President and CEO.

Animal Health Institute (AHI) and Association of Veterinary Biologics Companies (AVBC)
http://ahi.org
http://avbc.net

The AHI and the AVBC are the two main trade associations that represent the majority of U.S. veterinary biologics manufacturers. APHIS meets with AHI three times a year, and AVBC twice each year to discuss issues relevant to them. Three APHIS issues that AHI and AVBC support, include the simplification and standardization of veterinary biologics labeling requirements, electronic communications between stakeholders and the APHIS National Centers for Animal Health, and the APHIS specifications policy for the efficacy and potency of veterinary biologics. The AHI and AVBC support science-based approaches to regulatory policy and specifically support adequate resources for APHIS programs to assure the quality of veterinary biologics and to minimize the impact of animal diseases.

The AHI is located in Washington, D.C. and Alexander Mathews is the President and CEO. The AVBC is located in McLean, Virginia, and John Thomas is the Executive Director.
Animal Welfare Institute (AWI)
www.awionline.org

AWI is a nongovernmental organization whose mission is “to alleviate the suffering inflicted on animals by people.” APHIS issues of interest to AWI include the humane treatment of livestock, poultry, and other animals; bison management in the Greater Yellowstone Area; and, the welfare of Asian elephants in U.S. zoos. AWI is also a plaintiff in multi-party lawsuits opposing APHIS’ lethal control of predators. AWI advocates to protect animals in laboratories including promotion of non-animal testing methods and prevention of experiments on animals by high school students. AWI also has representation on the Secretary’s National Wildlife Services Advisory Committee, which provides recommendations to USDA about Wildlife Services’ activities and policies.

The organization has headquarters in Washington, D.C. and Cathy Liss is AWI’s President.

Association of Fish and Wildlife Agencies (AFWA)
www.fishwildlife.org

AFWA represents North America’s fish and wildlife agencies at all levels of government. The Association provides its member agencies with coordination services that range from migratory birds, fish habitat, and invasive species, to conservation education, leadership development, and international relations.

AFWA works closely with APHIS on a wide range of wildlife issues including development of Best Management Practices for regulated trapping, a conservation project to guide humane trapping. APHIS worked closely with AFWA to develop reproductive control methods to manage overabundant wildlife populations, as well as protocols for their use. APHIS assists many AFWA members in wildlife damage management projects. In addition, AFWA is interested in APHIS’ regulation of chronic wasting disease, viral hemorrhagic septicemia, bovine tuberculosis, and brucellosis.

AFWA is located in Washington, D.C. and Ron Regan is the Executive Director. Jennifer Mock Schaeffer is AFWA’s Government Affairs Director and Gary Taylor is AFWA’s Legislative Director Emeritus. AFWA is represented on the Secretary’s National Wildlife Services Advisory Committee and on the APHIS Wildlife Services steering committee on feral swine damage management.
Association of Zoos and Aquariums (AZA)
https://www.aza.org/

AZA is a non-profit organization dedicated to the advancement of accredited zoos and aquariums in the areas of animal care, wildlife conservation, education, and science. It is the leading independent U.S. accrediting organization for zoos and aquariums. Among its standing committees are: animal health, animal welfare, and wildlife conservation and management. While APHIS’ Animal Care program enforces Federal standards of care for zoos and aquariums, the AZA accreditation program is voluntary. Zoos and aquariums that are accredited by AZA generally must meet higher standards than those required by APHIS. There are more than 230 AZA-accredited zoos and aquariums in the United States and overseas. AZA member institutions also support multiple wildlife conservation projects around the world. APHIS and the AZA meet regularly at conferences and symposia. The AZA participates in APHIS working groups and conferences on a regular basis, including receiving funds through cooperative agreements with APHIS to take part in events and a specific agreement on zoo preparedness. The AZA supports increasing standards for zoos and aquariums regulated by APHIS, and recognizes the role, responsibilities, and regulatory process that APHIS follows under relevant policies such as the Animal Welfare Act.

AZA is headquartered in Silver Spring, Maryland. Kris Vehrs is the Interim President and CEO.

Center for Biological Diversity
www.biologicaldiversity.org

The Center for Biological Diversity, a nonprofit with a staff of 20 lawyers in more than a dozen offices, is devoted to protecting biodiversity through science, legal action, policy advocacy, negotiation with government and industry, and strategic media and outreach. The Center has filed numerous suits or issued notices of intent to sue APHIS and its Wildlife Services program, alleging a variety of noncompliances with the Endangered Species Act, National Environment Policy Act (NEPA), and other policies and procedures. With like-minded organizations, it has sued counties in California arguing that APHIS’ NEPA compliance is insufficient and the counties need to conduct similar processes under the California Environmental Quality Act requirements.

Kierán Suckling is Executive Director and a founder of the Tucson-based group. Michael Robinson, its Conservation Advocate, focuses on the protection and recovery of top predators.
Defenders of Wildlife
www.defenders.org

Defenders of Wildlife is a national, nonprofit membership organization dedicated to the protection of native animals and plants in their natural communities. Defenders works to protect and restore America’s native wildlife, safeguard habitat, resolve conflicts, and educate and mobilize the public. Defenders’ initial mission was to protect coyotes and other furbearers from steel-jawed leg-hold traps and poisons; its current main focus is restoring wolves to former habitats in the lower 48 States and preventing the elimination of wolves in areas where they still exist. The organization has grown to more than 500,000 members; Defenders of Wildlife equips some producers with nonlethal methods to prevent wolf predation of livestock in the Western United States. It will cost-share with producers for nonlethal methods to prevent predation by grizzly bear. Defenders opposes some APHIS predator control work. The organization has concerns over APHIS’ partnership with State wildlife agencies and the issue of controlling wolves to enhance wild ungulate (hooved animals) populations for people to hunt.

Defenders of Wildlife is headquartered in Washington, D.C. Jamie Rappaport Clark is President and CEO. Robert Dewey is Vice President for Government Relations.

Friends of Sound Horses (FOSH)
http://www.fosh.info/

FOSH is a nonprofit organization whose mission is to provide information on the humane care, treatment, and training of gaited horses, with a specific emphasis on the Tennessee Walking Horse. FOSH promotes the exhibition of flat shod and barefoot Walking Horses at competitions designed to showcase the natural gaited pleasure walking horse. FOSH, like APHIS, strives to eliminate all horse soring, or pain inflicted to a horse’s limbs to accentuate its gait. FOSH is extremely interested in APHIS’ enforcement of the Horse Protection Act and maintains a public database of soring violators.

All FOSH-related work is performed by volunteers. FOSH is headquartered in St. Louis, Missouri. Teresa Bipped is the FOSH President and Keith Dane is the USDA/Government Action point of contact.

Humane Society of the United States (HSUS)
http://www.hsus.org/

The HSUS’ mission is “Celebrating Animals, Confronting Cruelty.” HSUS advocates on behalf of pets, wildlife and habitat, farm animals, animals in research, and horses. APHIS issues of interest to HSUS include animal cruelty and fighting regulations, wildlife management methods, oversight of commercial animal breeders and primate research, and the transportation of horses to slaughter. HSUS advocacy takes the form of proposed State and Federal legislation, ballot initiatives, write-in campaigns, and lawsuits. In particular, HSUS opposes dog breeders (puppy mills), animal fighting, horse cruelty, and wildlife trade.
HSUS is headquartered in Washington, D.C. Wayne Pacelle is President and CEO. HSUS also has representation on the Secretary’s National Wildlife Services Advisory Committee.

National Aquaculture Association (NAA)
http://thenaa.net/

The NAA was founded in 1991 to provide a representative voice at the national and State levels for its members. Members culture a diversity of fish, shellfish, aquatic plants, crustaceans, reptiles, corals, and other invertebrates for seafood, aquarium, water garden, bait, and recreational stocking markets. The NAA is a U.S. producer-driven, nonprofit trade association that supports the establishment of governmental programs that further the common interest of the NAA membership, both as individual producers and as members of the aquaculture industry. The NAA is committed to the continued growth of its industry, to working with State and Federal governments, including APHIS, to create a business climate conducive to success and to fostering cost-effective environmental stewardship and sustainability. The NAA is concerned with label requirements for seafood products, in particular, country of origin and method of production, wild-caught or farm-raised. The NAA notes that these USDA regulations apply to seafood, but not to small fish markets, butcher shops, or restaurants.

The NAA headquarters are in Tallahassee, Florida, and Jim Parson is the NAA’s current President.

National Association for Biomedical Research (NABR)
http://www.nabr.org/

On behalf of the biomedical research community, NABR advocates for public policy in support of ethical and essential laboratory animal research. Since its inception, NABR has represented the scientific community to policymakers. With an increase in animal activist campaigns against researchers, NABR informs legislators and educates them on the impacts proposed changes would have on medical progress. NABR works to assure that new Federal laws and regulations meet animal welfare and biomedical research needs. Research facilities are members of the NABR and the NABR has invited Animal Care subject matter experts to participate in webinar events so member facilities can communicate directly with APHIS staff about animal welfare issues and compliance. Animal Care staff regularly attend research and industry events to present information and engage in direct interaction with NABR stakeholders. NABR’s issue of concern with APHIS is federal oversight of research facilities, specifically in regards to animal welfare.

Frankie Trull is the president. NABR is headquartered in Washington, D.C.
National Association of Federal Veterinarians (NAFV)
http://www.nafv.org/

NAFV is a constituent body of the AVMA, made up of 1,000 members and formed during the AVMA annual meeting in 1918 by a small group of Bureau of Animal Industry (a precursor to APHIS) veterinarians. It is recognized by the USDA as the representative organization for federally employed veterinarians and as an association of managers and supervisors. NAFV serves veterinarians and the agencies they work for by facilitating communication, making suggestions for improvements, and collaborating to address issues of concern. As an advocate for veterinarians in Federal service, NAFV emphasizes professionalism and expertise in Federal service, while promoting continuing education, teamwork, and a standard of excellence.

NAFV is located in Washington, D.C. and Dr. Ken Angel is the current President.

National Cattlemen’s Beef Association (NCBA)
www.beefusa.org

The NCBA has existed under various names since the late 19th century, but took its current name in 1996 with the merger of the Beef Industry Council of the Meat Board and the National Cattlemen’s Association. The NCBA represents U.S. cattle producers, with more than 28,000 individual members and several industry organization members. NCBA represents more than 175,000 cattle producers and feeders. NCBA works to advance the economic, political and social interests of the U.S. cattle business and advocate for the cattle industry's policy positions and economic interests.

APHIS works closely with NCBA to address animal disease traceability (ADT) issues and promote consistent enforcement between States and cattle sectors. NCBA will be an integral industry partner in the discussion regarding inclusion of feeder cattle less than 18 months of age into ADT regulations. Other APHIS issues relevant to NCBA include emergency preparedness, bovine spongiform encephalopathy, brucellosis, bovine tuberculosis, cattle fever tick, and foot-and-mouth disease preparedness, including Secure Beef Supply and Secure Milk Supply planning. The NCBA is also interested in new disease surveillance approaches, indemnity funding, collaborating on wildlife surveillance, the bison industry, antimicrobial resistance, and animal welfare issues. It supports APHIS’ program for managing damage due to wildlife. NCBA has engaged APHIS on issues related to 2015 final rules to allow the importation of boneless beef, with certain mitigations, from Argentina and Brazil. NCBA has also been very supportive of the work conducted under the National Animal Health Monitoring System to characterize health and management of cattle populations throughout the United States.

The NCBA has offices in Washington, D.C., and Denver, CO. Tracy Brunner is the NCBA President and APHIS also works closely with Dr. Kathy Simmons, the NCBA Chief Veterinarian.
National Chicken Council (NCC)  
http://www.eatchicken.com

Established in 1954, the NCC is a national, nonprofit trade association representing the U.S. chicken industry. It promotes and protects the interests of the chicken industry and is its voice before Congress and Federal agencies. In addition, the council conducts programs to address food safety and worker safety and health. NCC members include chicken producer/processors, poultry distributors, and allied industry firms.

APHIS issues of interest to NCC include comprehensive integrated disease surveillance; foreign and emerging animal disease awareness, preparedness, and response; chicken health; and animal welfare.

The NCC is located in Washington, D.C. and Michael Brown is the President.

National Milk Producers Federation  
www.nmpf.org

NMPF is a farm commodity organization representing dairy marketing cooperatives that produce the majority of the U.S. milk supply. NMPF represents dairy cooperatives and their dairy farmer members such as milk production and marketing. NMPF aims to improve the economic well-being of dairy farmers, thus assuring the Nation's consumers an adequate supply of pure, wholesome milk and dairy products.

NMPF is interested in several APHIS issues, including the potential for regulating genetically engineered animals, antimicrobial resistance, FMD vaccine bank, secure milk supply, animal disease traceability, bluetongue virus, and emerging and individual disease programs like bovine TB and brucellosis. It supports the APHIS' program for managing damage due to wildlife.

NMPF is headquartered in Arlington, Virginia. Randy Mooney is the NMPF Chairman. APHIS also works closely with Dr. Jamie Jonker, Vice President, Sustainability & Scientific Affairs.

National Institute for Animal Agriculture (NIAA)  
www.animalagriculture.org

NIAA works to build consensus and advance proactive solutions for animal agriculture. They provide continuing education and communication linkages to animal agriculture professionals and serve as a networking platform across animal agriculture. NIAA routinely shares information relevant to APHIS positions with its members. The NIAA mission is to provide a forum for representatives from animal agriculture, the veterinary procession, governmental agencies and academia to address animal health emergency management issues that may adversely affect animal agriculture or public health. NIAA’s Animal Health Emergency Management Council sends resolutions on preparedness to APHIS for consideration and further
action. Resolution topics include Foot-and-Mouth Disease control, foreign animal disease control, and business continuity strategic planning.

NIAA has a number of cooperative agreements with APHIS to provide stakeholder outreach and education. It developed and maintains the “Eradicate Scrapie” website for sheep and goat producers. NIAA hosted the 2016 Equine Disease Forum, a USDA-supported meeting, and will do the same for the 2017 Equine Identification Forum. NIAA has also hosted meetings on antimicrobial resistance and animal disease traceability. Other NIAA committees represent a range of agricultural species, as well as Emerging Diseases, Antibiotics and Global Animal Health & Food Security Councils.

NIAA is located in Colorado Spring, Colorado and R. Scott Stuart is the Director.

*National Pork Board (NPB)*

[www.pork.org](http://www.pork.org)

NPB is based in Des Moines, Iowa, and is funded by the Pork Checkoff Program. Under this Agricultural Marketing Service-led program, U.S. pork producers and importers pay $0.40 per $100 of value when pigs are sold and when pigs or pork products are brought into the United States. The National Pork Board then uses these resources to benefit producers through pork promotion, research and education. APHIS issues of interest to NPB include animal disease traceability, foreign animal disease awareness and preparedness, swine health, and animal welfare.

APHIS programs and policy of interest to NPB include comprehensive integrated disease surveillance; foreign and emerging animal disease awareness, preparedness, and response; swine health; and public health issues involving swine, such as trichiniae or antibiotics, animal welfare, and trade. NPB members have strong interests related to the APHIS’ feral swine damage management and NPB has engaged APHIS on issues related to swine health.

The NPB is located in Des Moines, Iowa, and Dr. Dave Pyburn is Senior Vice President for Science and Technology, overseeing the swine health program. Bill Even is CEO of NPB.

*National Pork Producers Council (NPPC)*

[www.nppc.org](http://www.nppc.org)

NPPC conducts public-policy outreach on behalf of the U.S. pork industry, including legislation, reviewing regulations, and trade initiatives to enhance opportunities for U.S. pork producers and other industry stakeholders. NPPC works to ensure the U.S. pork industry remains a consistent and responsible supplier of high-quality pork to the domestic and world markets. The NPPC represents 43 affiliated State associations and advocates for legislation and regulations that develop revenue and market opportunities to protect the livelihoods of America’s 68,000 pork producers.
APHIS programs and policy of interest to NPPC include increasing international market access for swine and pork products, trichinella, antimicrobial use, animal welfare, foreign animal disease preparedness, and response and prevention efforts, including foot-and-mouth vaccines and strengthening disease surveillance. NPPC supports APHIS’ program for managing damage due to wildlife and its members have strong interests related to the APHIS’ feral swine damage management.

NPPC is headquartered in Des Moines, Iowa, and has a public policy office in Washington, D.C. The current NPPC president is John Weber. Neil Dierks is the NPPC CEO. Bobby Acord, former APHIS Administrator, serves as a consultant to NPPC.

National Renderers Association
http://www.nationalrenderers.org/

Since 1933, the National Renderers Association has helped the rendering industry grow, advance, and become leaders in recycling and sustainability. The rendering industry consists of more than 36 firms operating more than 200 plants across the United States and Canada. The U.S. livestock sector slaughters more than 150 million head of cattle, calves, hogs, and sheep and more than 55 billion pounds of poultry annually. In addition to protein for human consumption, the meat production system produces an enormous amount of byproducts that are in turn transformed into nearly 20 billion pounds of highly valuable feed and industrial products such as various types of fats and proteins.

APHIS collaborates with the National Renderers Association to explore ways APHIS can use rendering to potentially process infected animal materials in the event of an animal disease outbreak.

The National Renderers Association is located in Alexandria, Virginia, and Nancy Foster is the President.

National Turkey Federation (NTF)
http://www.eatturkey.com

The NTF is a national organization that represents all segments of the turkey industry. It represents members’ interests in legislative and regulatory affairs. Today, the turkey industry contributes $26 billion to the U.S. economy annually, and employs between 20,000 and 25,000 people, with tens of thousands more working in related industries such as contract growing, product distribution, equipment manufacturing and a wide variety of other affiliated services. NTF members who comprise the turkey industry include growers, processors, hatchers, breeders, distributors, allied services and state associations.

APHIS issues of interest to NTF include comprehensive integrated disease surveillance; foreign and emerging animal disease awareness, preparedness, and response; turkey health; animal welfare and pending changes to the APHIS turkey indemnity calculators.
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

The NTF is located in Washington, D.C. and Joel Brandenberger is the President.

**North American Meat Institute (NAMI)**
https://www.meatinstitute.org/

NAMI was established in 2015 by the merger of the American Meat Institute and the North American Meat Association. NAMI provides member services in legislative, regulatory, scientific, international, and public affairs advocacy. The Institute represents beef, pork, lamb, and poultry producers, as well as equipment and other industry suppliers. NAMI provides rapid updates and analyses to its members on legislative, regulatory, and media activity and funds research through its foundation to improve meat and poultry plants and products. The Institute operates policy and advisory committees for its member companies to recommend new policies in their areas of interest. APHIS issues of interest to NAMI include animal welfare, avian influenza, bovine spongiform encephalopathy (BSE), foot-and-mouth disease, and trade issues.

NAMI is located in Washington, D.C. and Barry Carpenter is the President and CEO.

**People for the Ethical Treatment of Animals (PETA)**
http://www.peta.org

PETA is the largest animal rights organization in the world, with more than five million members and supporters. PETA focuses its attention on four areas of animal concern: food industry, clothing trade, laboratories, and the entertainment industry. PETA also advocates against cruelty to pets. PETA works through public education, cruelty investigations, research, animal rescue, legislation, celebrity involvement, and protest campaigns.

APHIS issues of concern for PETA include the Animal Welfare Act, in particular farm animal welfare and Animal Care programs in general. PETA also closely follows APHIS Veterinary Services programs on de-population of poultry in relation to poultry disease events. PETA is the most frequent submitter of FOIA requests to APHIS. APHIS Animal Care holds an annual stakeholder meeting with animal welfare organizations and PETA is a regular participant at this meeting. PETA communicates frequently with APHIS in the form of petitions and recommendations for regulatory changes.

Ingrid Newkirk is the PETA president and cofounder. PETA is headquartered in Norfolk, Virginia.

**Pet Food Institute (PFI)**
http://www.petfoodinstitute.org/

PFI is an industry association that has represented pet food manufacturers for almost 60 years, and whose members make 98 percent of all U.S. pet food products. PFI’s primary role is to advocate for legislation, regulations, and technologies that support the domestic manufacture and global distribution of safe, quality pet foods that provide for consumer choice. Additionally, PFI promotes pet safety through supporting innovation in manufacturing and handling practices, provides information on pet food-related issues to members and stakeholders, and communicates
the benefits of pet ownership to the public. PFI provides comments on pending legislation, in particular, on topics such as food labeling and food safety, hazard analysis, and verification of foreign suppliers of U.S. bound pet food products. PFI supports science and risk-based approaches to identify and address potential food safety issues.

PFI is based in Washington, D.C., and Cathleen Enright is the PFI President and CEO.

**Ranchers-Cattlemen Action Legal Fund, United Stockgrowers of America (R-CALF USA)**

www.r-calfusa.com

Founded in 1998, R-CALF USA’s stated mission is to represent the U.S. cattle and sheep industries in national and international trade and marketing issues to ensure the continued profitability and viability of U.S. livestock producers.

R-CALF has opposed animal disease traceability and APHIS trade policies related to bovine spongiform encephalopathy (BSE). The group has filed multiple lawsuits in an effort to block regulations restoring Canadian cattle imports to the United States following the detection of BSE there in 2003. In addition, R-CALF has challenged producer requirements for animal identification. R-CALF has also been active in the Interagency Bison Management Plan for the Greater Yellowstone Area and has proposed that APHIS redirect animal identification funds to brucellosis surveillance and vaccination programs.

The organization has members in 47 States, and the current president is Bryan Hanson.

**Secretary’s Advisory Committee on Animal Health (SACAH)**

https://www.aphis.usda.gov/aphis/ourfocus/animalhealth/sacah

The Secretary’s Advisory Committee on Animal Health (SACAH) advises the Secretary of Agriculture on matters of animal health and broader issues of public concern. SACAH membership represents the greater agricultural community and includes animal welfare advocates; local and commercial livestock producers; small and minority farmers; and State and Tribal animal health officials. SACAH considers and makes recommendations on collateral issues involving public health, conservation of natural resources, and the stability of livestock economies. The Committee advises the Secretary on strategies, policies, and programs to prevent, control, or eradicate animal diseases. The Committee considers agricultural initiatives of national scope and significance and advises on matters of public health, conservation of national resources, stability of livestock economies, livestock disease management and traceability strategies, prioritizing animal health imperatives, and other related aspects of agriculture. Committee meetings are held in person and/or via teleconference. Interested parties are encouraged to attend or participate in public meetings or teleconferences by emailing the SACAH management.

Diane Sutton with APHIS Veterinary Services is the Designated Federal Officer for the SACAH.
The National Wildlife Services Advisory Committee (NWSAC) provides guidance from diverse stakeholders interested in APHIS’ Wildlife Services (WS) program, including agriculture, wildlife management, animal welfare, and public health and safety interests. Annual meetings of the NWSAC allow the public an opportunity to participate and provide input to the Secretary of Agriculture on overall policy and guidance for the operation of the WS program, resources to accomplish the WS mission, impacts of depredating wildlife, public health and safety problems created by birds and other wildlife, and research activities and priorities to address wildlife damage management needs. The Committee also serves as a public forum enabling those affected by the WS program to have a voice in the program's policies. The Secretary of Agriculture created the Committee under the Federal Advisory Committee Act; members are appointed for a 2-year term. Committee members are chosen to represent the diverse interests in the WS program and the multitude of industries to whom we provide services. Meeting minutes and other relevant documents are posted to the website once finalized and approved by the Committee chair.

United Egg Producers (UEP)
http://unitedegg.org

UEP is a cooperative of egg farmers from across the United States that represents the ownership of approximately 95 percent of the Nation's egg-laying hens. UEP and their farm members believe in consumer choice and produce eggs in modern cage, cage-free, and organic production systems, as well as producing other specialty shell egg products. Their members also provide liquid, dried, and other forms of further processed egg products to the retail, food service, and food manufacturing sectors. UEP pride themselves on working with government agencies such as APHIS, the Agricultural Marketing Service, Food and Drug Administration, Environmental Protection Agency, and others to solve problems and create programs that will move their industry forward on topics like reducing foreign barriers to U.S. egg exports.

APHIS issues of concern to UEP include animal welfare. Specifically, UEP-developed welfare guidelines for cage production of eggs and promotes the voluntary adherence to these guidelines rather than government mandates or legislation. Similarly, UEP supports voluntary egg quality assurance programs to reduce disease prevalence based on Hazard Analysis Critical Control Point (HACCP) system principles. APHIS supports the HACCP concept and implements trainings on this topic. APHIS and the UEP also came to agreement on new terms for the APHIS egg layer indemnity calculator in September 2016.

UEP is based near Atlanta, Georgia, and Chad Gregory is the President and CEO.
USA Poultry and Egg Export Council (USAPEEC)
http://www.usapeec.org/

USAPEEC is a not-for-profit entity with a mission to promote exports of U.S. poultry and eggs around the world. From offices in Washington, D.C. and around the world, it advocates on behalf of the U.S. poultry and egg industry with regards to trade policy issues.

The Council has also evolved into an association that is an advocate for the industry on trade policy issues. Because of its status as a not-for-profit entity, USAPEEC does not lobby, but the organization can and does act as intermediary with USDA, both in Washington and at embassies and international offices.

USAPEEC’s global headquarters are located in Stone Mountain, Georgia, a suburb of Atlanta, and James Sumner is the President.

U.S. Animal Health Association (USAHA)
http://www.usaha.org/

USAHA’s primary objective is to prevent, control, and eliminate livestock diseases. The organization’s 1,400 members are State and Federal animal health officials, national allied organizations, regional representatives, and individual members. USAHA provides a national forum to communicate about animal health issues, serves as a clearinghouse for new information and methods for policy and program development, and develops solutions for animal health issues. Priority USAHA issue areas include disease control, animal health, emergency preparedness, emergency response and recovery, emerging diseases, food safety, public health, animal welfare, feral swine damage management, and international trade.

USAHA has 29 science-based committees and holds a national annual meeting every October where animal health policy and practices are discussed. This meeting is Veterinary Services (VS)’ primary stakeholder engagement meeting of the year. USAHA committees pass resolutions each year for response by VS and other APHIS units. APHIS is a major participant at the annual USAHA meeting, routinely sending over 100 staff to participate in committee sessions and make presentations on important animal health and regulatory topics. APHIS staff present on upcoming initiatives and engage with USAHA counterparts to exchange ideas and develop feedback for incorporation to proposed activities. The APHIS Administrator attends, presents, and also holds a series of one-on-one meetings with State Veterinarians to discuss current issues and engage with stakeholders.

Dr. David Schmitt, the Iowa State Veterinarian with the Iowa Department of Agriculture, is the current USAHA President. APHIS’ VS program is a standing USAHA member and will participate heavily at the 2016 USAHA conference in Greensboro, North Carolina, October 13 – 19.
United States Department of Agriculture  
2016 Presidential Transition  
Animal and Plant Health Inspection Service (APHIS)

U.S. Meat Export Federation (USMEF)  
https://www.usmef.org/

USMEF is a trade association that represents beef/veal, pork, and lamb producers and feeders; packers and processors; purveyors and traders; oilseed producers; feed grains producers; farm organizations; and supply and service organizations. USMEF’s mission is “to increase the value and profitability of the U.S. beef, pork, and lamb industries by enhancing demand for their products in export markets through a dynamic partnership of all stakeholders.” Priorities for this group include building export demands for value added products that are underused in the U.S. market to move toward total carcass utilization, increase buyer education and loyalty through positive product image, and increase the presence of U.S. meat and meat products in export markets by supporting trade contacts to secure meaningful and sustained international market access. Though USMEF accepts private contributions, the majority of their funding (96 percent) comes from a checkoff program for beef, pork, soybeans, and corn, and the USDA, via cooperation in the Market Access, Emerging Market, and Foreign Market Development programs.

APHIS issues of interest to USMEF include animal health trade issues, such as traceability, bovine spongiform encephalopathy (BSE), and trichinae.

USMEF is headquartered in Denver, Colorado, and Philip Seng is the President and CEO.

U.S. Poultry and Egg Association (USPOULTRY)  
http://www.uspoultry.org

USPOULTRY is the world’s largest and most active poultry organization. Its members include producers and processors of broilers, turkeys, ducks, eggs, and breeding stock and allied companies. Formed in 1947, the association has affiliations in 27 States and member companies worldwide. In fiscal year 2015, USPOULTRY channeled more than $2.8 million dollars into industry programs that focus on industry promotion, education, communication, and research. APHIS issues of interest to USPOULTRY include comprehensive integrated disease surveillance; foreign and emerging animal disease awareness, preparedness, and response; poultry health; animal welfare; and food safety.

USPOULTRY is located in Tucker, Georgia, and John Starkey is the President.

WildEarth Guardians  
www.wildearthguardians.org

In 2008, Sinapu and Forest Guardians merged to become WildEarth Guardians, creating a single organization whose mission is to “protect and restore the wildlife, wild places, wild rivers, and health of the American West.” WildEarth Guardians’ priorities relevant to APHIS are: abolishing APHIS’ Wildlife Services program and protecting reintroduced wolf populations and expanding their range, protecting carnivores and especially border-cat habitat, and protecting all species of prairie dogs.
WildEarth Guardians submitted a petition to the U.S. Environmental Protection Agency to ban APHIS’ use of compound 1080 and sodium cyanide for predator management. The petition was denied in January 2009. In March 2009 it issued a 100-page document to the new Administration and Congress, calling on Congress to abolish Wildlife Services. In November 2009, it petitioned the Administration to ban aerial gunning and the use of those same restricted pesticides on Federal lands.

WildEarth Guardians, brought a suit in 2011 that argued the APHIS Wildlife Services program relied on outdated information for its National Environmental Policy Act process and should have prepared a Nevada-specific environmental impact statement before continuing the program.

Robin Smith is WildEarth Guardians’ President with its main office in New Mexico.

Plant Organizations:

Advisory Committee on Biotechnology & 21st Century Agriculture (AC21)

The Secretary of Agriculture established the AC21 in 2003 to provide information and advice on the broad array of issues related to the expanding dimensions and importance of agricultural biotechnology. The committee is charged with examining the long-term impacts of biotechnology on the U.S. food and agriculture system and USDA, and providing guidance to USDA on pressing individual issues, identified by the Office of the Secretary, related to the application of biotechnology in agriculture. Recently, the work of the AC21 has centered on the issue of coexistence among different types of agricultural production systems. The AC21 consists of members representing the biotechnology industry, the organic food industry, farming communities, the seed industry, food manufacturers, state government, consumer and community development groups, as well as academic researchers and a medical doctor. In addition, representatives from the Department of Commerce, the Department of Health and Human Services, the Environmental Protection Agency, the Council on Environmental Quality, and the Office of the United States Trade Representative serve as “ex officio” members. The Committee meets in public session to discuss relevant topics. The most recent meeting was held in September 2016 in Washington, D.C. The meeting focused on the topic of coexistence, specifically defined as “the concurrent cultivation of conventional, organic, identity preserved (IP), and genetically engineered (GE) crops consistent with underlying consumer preferences and farmer choices.” All materials for committee meetings, meeting summaries and transcripts, as well as committee reports and recommendations are posted at the website cited above.

Michael Schechtman with the Office of the Deputy Secretary is the Designated Federal Official for the AC21.
AmericanHort
http://americanhort.org/

AmericanHort was established in 2014 by the consolidation of the American Nursery & Landscape Association and the Association of Horticultural Professionals. AmericanHort’s objective is to unify industry and support growth opportunities for breeders, greenhouse and nursery growers, retailers, distributors, landscapers, florists, researchers, and manufacturers. It is the leading national industry association and the largest association for garden retailers. AmericanHort focuses on advocacy, market development and leveraging industry experience to impact legislative and regulatory decisions.

APHIS issues relevant to AmericanHort include pest disease management and control, international and domestic plant quarantines and trade issues, and crop research.

Ken Fisher is the AmericanHort President and CEO. The organization is based in Washington, D.C.

American Seed Trade Association (ASTA)
http://www.betterseed.org/

Founded in 1883, ASTA is one of the oldest trade organizations in the United States. Its membership consists of over 700 companies involved in seed production and distribution, plant breeding, and related industries in North America. As an authority on plant germplasm, ASTA advocates science and policy issues of industry-wide importance. ASTA's mission is to be an effective voice of action in all matters concerning the development, marketing, and free movement of seed, associated products, and services throughout the world. APHIS issues of interest to ASTA include the regulation, development, and use of GE plants and seeds.

Andrew LaVigne is President and CEO, and Jane DeMarchi is Vice President, Government and Regulatory Affairs. ASTA is headquartered in Alexandria, Virginia.

Biotechnology Innovation Organization (BIO)
http://www.bio.org/

BIO is the world's largest biotechnology trade association, representing industry, academia, and related organizations in the United States and 30 other countries. Corporate members range from entrepreneurial companies developing a first product to Fortune 100 multinationals. BIO also represents State and regional biotech associations, service providers to the industry, and academic centers. BIO members are involved in healthcare, agriculture, industrial and environmental products. BIO advocates for member concerns and produces media content and international conventions. For the agriculture sector, BIO focuses on issues related to international affairs, regulations, and public relations. BIO meets regularly with APHIS leadership, APHIS Biotechnology and Regulatory Services leaders, Departmental leadership and comments regularly on changes to existing GE regulations. BIO also attends APHIS stakeholder meetings and is supportive of APHIS efforts to improve the biotech regulatory process,
specifically time-limitations on regulatory process stages, but is less supportive of changes to existing regulations. APHIS issues of interest are regulation of GE products and any revisions to existing GE regulations.

BIO is located in Washington, D.C, and James Greenwood is the President and CEO. Brian Baenig is Executive Vice President of the Food and Agriculture Section.

California/Florida/Texas Citrus Mutual
https://www.cacitrusmutual.com/
http://www.flcitrusmutual.com/about/fcmoverview.aspx
http://www.valleyag.org/

The three major citrus producing States—California, Florida, and Texas—each have their own organizations dedicated to helping citrus growers in their States produce and market their crops. APHIS issues of interest to California/Florida/Texas Citrus Mutual include fruit fly control and eradication, citrus greening, Asian citrus psyllid, and citrus canker. While all three nonprofit trade organizations represent citrus growers, they don’t always share the same views about APHIS policies and regulations.

Joel Nelsen is the President of California Citrus Mutual, located in Exeter, California; John Barben and Robert Barben are the 2016 Presidents of Florida Citrus Mutual, located in Lakeland, Florida; and Dale Murden is the President of Texas Citrus Mutual, based in Mission, Texas.

The Environmental Investigation Agency (EIA)
https://eia-international.org/

The EIA is an independent campaigning and investigation organization “committed to bringing about change that protects the natural world from environmental crime and abuse.” EIA has been one of the key non-governmental advocates for the Lacey Act amendments of 2008, and has testified in Lacey Act congressional hearings. EIA has partnered with the World Resources Institute, a non-governmental organization launched in 1982 as a center for policy research and analysis addressed to global resource and environmental issues, to form the Forest Legality Alliance (FLA). Work of the FLA is supported by U.S. Agency for International Development and companies in the forest sector, and focuses on reducing illegal logging through supporting the supply of legal forest products.

Under the Lacey Act, as amended in 2008, APHIS oversees implementation of the import declaration requirement as part of a global effort to combat illegal timber imports and protect natural resources.

The EIA has offices in Washington, D.C. and London, England. Allan Thornton is the President.
Florida Fruit and Vegetable Association (FFVA)  
http://www.ffva.com/

FFVA is a nonprofit agricultural trade organization whose mission is to enhance the business and competitive environment for producing and marketing citrus fruits, vegetables and other crops such as berries, sod, and sugar cane. FFVA focuses on crop protection, labor issues, water management, government relations, marketing, and communications. APHIS issues of interest to FFVA include pest management and the regulation of citrus greening, Asian citrus psyllid, citrus canker, redbay ambrosia beetle, and laurel wilt disease.

FFVA is headquartered in Maitland, Florida. Mike Stuart is FFVA’s President.

The Hardwood Federation (HF)  
http://hardwoodfederation.wildapricot.org/

HF is an umbrella trade association representing thousands of hardwood businesses engaged in manufacturing, wholesaling, or distribution of North American lumber, veneer, plywood, flooring and related products. HF acts as the industry’s advocacy voice on Capitol Hill. One of its members, the Hardwood Plywood & Veneer Association (HPVA), has met with APHIS leadership. HPVA supports the legal and sustainable trade in wood and wood products. Under the Lacey Act, as amended in 2008, APHIS oversees implementation of the Lacey Act import declaration requirement as part of a global effort to combat illegal timber imports and protect natural resources.

The Hardwood Federation is based in Washington, D.C. and Dana Lee Cole is the Executive Director. Cary Moon is the Hardwood Federation Policy Manager.

National Cotton Council of America (NCC)  
www.cotton.org

NCC’s mission is to ensure the ability of all U.S. cotton industry segments to compete effectively and profitably in the raw cotton, oilseed, and U.S.-manufactured product markets at home and abroad. The Council represents producers, ginners, warehousears, merchants, cottonseed processors/dealers, cooperatives, and textile manufacturers on national issues. The NCC has six program committees that generate policy recommendations that are considered by the Council’s 35-member board of directors. NCC is interested in APHIS cotton pest programs, including boll weevil and pink bollworm.

The NCC is located in Memphis, Tennessee, and Dr. Gary Adams is the President and CEO. Reece Langley is the Vice President of Washington Operations.
National Grain and Feed Association (NGFA)
https://www.ngfa.org/

The NGFA was founded in 1896 and is a non-profit trade association that represents and provides services for grain, feed and related commercial businesses. Its activities focus on enhancing the growth and economic performance of U.S. agriculture. The NGFA represents more than 1,000 companies with approximately 6,000 facilities that handle over 70 percent of all U.S. grains and oilseeds used in domestic and export markets. The NGFA is also affiliated with approximately 30 state and regional associations with more than 10,000 grain and feed companies nationwide. Allied industries include biotechnology providers, banks, railroads, barges, grain exchanges, insurance companies and other that service the industry. The NGFA actively promotes free trade and supports its members via advocacy, training, education and outreach.

Biotechnology is a key APHIS issue of concern for the NGFA. It supports biotechnology in principle, but advocates for commercialization only after authorization from U.S. export markets is achieved in order to maintain access. The NGFA also supports policies to guard against the presence of unauthorized or restricted-use biotech traits in the general commodity stream and tolerance for low-level presence in commodity shipments of biotech traits that have been approved.

The NGFA is based in Washington, D.C., and Randy Gordon is the President. Jess McCluer is the Vice President for Regulatory Affairs and Jared Hill is the Director of Legislative Affairs.

National Potato Council
www.nationalpotatocouncil.org

The NPC was formed in 1948 to represent U.S. potato growers on legislative, regulatory, environmental, and trade issues. APHIS issues of interest to NPC include potato cyst nematode and potato virus Y (particularly from Alberta, Canada), preservation of export markets, and trade issues with Mexico. The NPC also promotes science-based regulatory legislation and supports approval of the Trans-Pacific Partnership (TPP).

Jim Tiede is the NPC President. The NPC headquarters are in Washington, D.C.

North American Export Grain Association (NAEGA)
http://naega.org/

NAEGA is a not for profit trade association, established in 1912, consisting of private and publicly owned companies and farmer-owned cooperatives involved in, and providing services to, the bulk grain and oilseed exporting industry. NAEGA’s mission is to promote and sustain the development of commercial export of grain and oilseed and their primary products. NAEGA serves as a conduit for trade inquiries; interacts with foreign buyers; educates foreign buyers on U.S. grain purchase specifications; provides for, through the industry standard contracts, uniform commercial practices and dispute resolution; advises governments on agricultural and trade
United States Department of Agriculture
2016 Presidential Transition
Animal and Plant Health Inspection Service (APHIS)

Policy; distributes information; works to prevent and resolve trade disrupting actions of
governments; and provides a forum for communication on matters of concern to the U.S. export
industry.

APHIS issues of concern for NAEGA include biotechnology. In particular, NAEGA and the
National Grain and Feed Association (NGFA) submitted joint statements to APHIS advocating
for substantial increases in monitoring, oversight and notification of biotechnology field trials.
NAEGA and NGFA are concerned about potential trade disruptions due to the presence of
biotech traits in the general commodity stream. NAEGA and NGFA closely monitor APHIS’
efforts on biotechnology regulations.

NAEGA is located in Arlington, Virginia, and Gary Martin is the President and CEO. Martin
was Deputy Administrator of Commodity Operations at USDA during the George H.W. Bush
Administration.

Organic Seed Alliance (OSA)
http://seedalliance.org/

OSA is a non-profit organization created in 2003 as an offshoot of the Abundant Life Seed
Foundation. The new organization was created after a fire destroyed the seed collection of the
foundation. OSA’s objective is “the ethical development and stewardship of seed.” They
advocate for their objective through research, education campaigns, and advocacy. OSA
opposes seed patents and consolidation in the seed industry, and promotes the availability,
quality, and integrity of organic seeds. APHIS issues relevant to OSA include changes to
biotechnology regulations and most recently the discovery of regulated GE wheat volunteers
growing in Oregon, Montana, and Washington. In general, OSA opposes genetic engineering,
and is concerned with economic losses to organic and identity-preserved crop farmers by the
unintended presence of GE material. The OSA shares issue specific information with its
members and encourages them to take action during public comment periods of relevant APHIS
policies. The OSA also maintains an online catalog of their policy positions and comments on
USDA proposals, particularly on biotechnology issues.

OSA is based in Washington State, and Cara Loriz is the Executive Director.

Organic Trade Association (OTA)
https://www.ota.com/

OTA is a membership-based business association for organic agriculture and products in North
America. OTA represents over 8,500 organic businesses across all 50 states. Its members
include growers, shippers, processors, certifiers, farmers’ associations, distributors, importers,
exporters, consultants, and retailers. Organic products represented by OTA include organic
foods, ingredients and beverages, as well as organic fibers, personal care products, pet foods,
nutritional supplements, household cleaners and flowers. OTA’s members work together
through networking, advocacy, and other initiatives “to encourage and protect organic farming
practices, and to share messages about the positive environmental and nutritional attributes of organic products with consumers, the media, and policymakers.”

APHIS issues relevant to OTA include animal welfare standards and labeling of products containing GE organisms. OTA also submitted comments to APHIS in February 2016 regarding an Environmental Impact Statement on the introduction of biotechnology products and changes to biotechnology regulations. In general, OTA opposes genetic engineering, and is concerned with economic losses to organic and identity-preserved crop farmers by the unintended presence of GE material.

OTA is headquartered in Washington, D.C., and also has offices in Vermont and Ottawa, Canada. Laura Batcha is the CEO and Executive Director.

*United Fresh Produce Association*

[www.unitedfresh.org](http://www.unitedfresh.org)

The association was founded in 1904 to represent the produce industry, and took the name United Fresh as a result of a 2006 merger between the United Fresh Fruit & Vegetable Association and the International Fresh-Cut Produce Association. United Fresh represents the interests of member companies throughout the global, fresh produce supply chain—these interests include family-owned, private and publicly traded businesses as well as regional, national, and international companies in every segment of the industry—growers, shippers, processors, wholesalers, distributors, and retailers. United Fresh also joined forces with the Specialty Crop Farm Bill Alliance to work with policymakers to ensure that implementation of the 2014 Farm Bill provision meet the interests of producers. The Specialty Crop Farm Bill Alliance no longer has a stand-alone presence.

APHIS issues relevant to United Fresh include implementation of the 2014 Farm Bill, international trade promotion, and the development of new markets for U.S. produce. Food safety is also a critical area of interest for United Fresh.

Tom Stenzel is the current United Fresh President and CEO. The Association is based in Washington D.C.

*U.S. Apple Association (USApple)*

[http://usapple.org/](http://usapple.org/)

USApple is a non-profit, member-based association comprised of individuals, companies, and state and regional associations within the apple industry. It is the national representative and resource center for U.S. apple growers, packers, shippers, processors, marketers, and others within the industry. USApple represents the 7,500 apple growers and approximately 40 state and regional apple associations, in addition to hundreds of apple-related companies. The three main goals of the organization are to represent the U.S. apple industry on national issues, increase demand for U.S. apples and apple products, and provide accurate information on issues concerning the apple industry. Issues of concern include food safety, regulatory changes, and
trade, in particular the proposed APHIS rule to allow apple and pear imports from the European Union to the United States. In addition to working with USDA, USApple also conducts advocacy work with the U.S. Trade Representative, EPA, and FDA.

USApple is based in Vienna, Virginia and Jim Bair is the President and CEO. Diane Kurrle is the Senior Vice President who oversees work with Congress and regulatory counterparts and worked on food safety issues at the USDA during the Clinton Administration.

**U.S. Grains Council (USGC)**  
http://www.grains.org/

The USGC develops export markets for U.S. barley, corn, grain sorghum, and related products. The Council is a private, non-profit corporation with ten international offices and programs in more than 50 countries. Members include producer organizations and agribusinesses with a common interest in developing export markets. Membership funds trigger matching market development funds from the U.S. government and support from cooperating groups in foreign countries, which results in a development program valued at approximately $28 million per year. The Council tailors its programs to meet individual countries’ needs. Its technical programs teach livestock and poultry producers how to use feed grains effectively and manage their operations efficiently. Its trade service efforts educate potential and current customers about the U.S. marketing system, including financing, government programs, U.S. feed grain quality and prices, and its trade policy initiatives identify foreign barriers to U.S. feed grain exports.

APHIS issues of concern for the USGC include trade policy and biotechnology. Worldwide biotechnology acceptance is a USGC priority. The USGC encourages policymakers to develop biotechnology policies that are science-based, risk-appropriate and consistent. These policy guidelines make it easier to originate grain from more sources, which ensures a reliable supply at lower cost. The Council support clear, consistent approaches to export policy that responds to changing international markets. In particular, the Council supports the Transatlantic Trade and Investment Partnership (T-TIP) Agreement.

The USGC international headquarters are located in Washington, D.C. Thomas Sleight is the President and CEO.

**U.S. Wheat Associates (USW)**  
http://www.uswheat.org/

U.S. Wheat Associates (USW) is the export market development organization for the U.S. wheat industry. USW promotes the reliability, quality and value of all six U.S. wheat classes to wheat buyers, millers, bakers, food processors and government officials in more than 100 countries around the world. USW’s mission is to “Develop, maintain, and expand international markets to enhance the profitability of U.S. wheat producers and their customers.” Funding is provided via check-off dollars, goods and services from 19 state wheat commissions and cost-share grants from the USDA’s Foreign Agricultural Service. USW supports free and fair trade practices around the world and uses information from the USDA Foreign Agricultural Service and the
Office of the U.S. Trade Representative to advocate for fair and competitive market access. Trade policy issues of concern to USW are: trade negotiations to improve market access; monitoring and enforcement of past trade agreements to ensure U.S. producers compete on an agreed playing field for market access and domestic support; and observe and raise awareness on phytosanitary (plant health) measures that are not scientifically sound or that are managed in a way that distorts trade or impedes market access. USW is also concerned with genetically engineered wheat crops and potential for cross-contamination with non-genetically engineered crops.

USW is based in Arlington, Virginia, and has additional offices around the world. Alan Tracy is the President and Dalton Henry is the Vice President of Policy.

Recent engagements with stakeholder group

Given the diverse scope of APHIS’ mission, the Agency has developed continuous and ongoing engagement strategies with stakeholders that result in regular communication and feedback.

Annual Sector Meetings

In 2012, APHIS formalized its commitment to stakeholder engagement and instituted yearly meetings with 19 key animal and plant commodity sectors. Agency program leaders invite high-level industry representatives to meet and discuss issues of concern, as well as priorities for the coming year. The meetings are also an opportunity to hear directly from industry about their challenges and how APHIS can help industry protect and promote U.S. agriculture. The meetings are typically scheduled from October through May. Last year, APHIS held 19 sector sessions with the groups listed below and is currently scheduling sessions for fiscal year 2017.

**Apples** – March 2, 2016 – Attendees included: U.S. Apple Association, U.S. Apple Export Council, Northwest Fruit Exporters, California Apple Commission, Washington Apple Commission, Michigan Apple Committee, Northwest Horticultural Council, and the Pennsylvania Apple Marketing Board. Among other things, APHIS committed to: continue work on retaining and expanding access to export markets; continue work with universities and companies to make sure they understand the biotechnology regulations and guidance through the Compliance Assistance Program; and schedule a bilateral meeting with Israel to discuss apple exports.

**Berries** – January 27, 2016 – Attendees included: North American Blueberry Council, California Strawberry Commission, Cranberry Marketing Committee, Washington Red Raspberry Commission, North American Raspberry and Blackberry Association, Florida Strawberry Growers Association, North American Blueberry Council, Oregon Raspberry and Blackberry Commission, and the U.S. Highbush Blueberry Council. Among other things, APHIS committed to: continue facilitating market access for berries to Australia, China, South Korea, New Zealand, Philippines, and Vietnam; continue to work with industry to address Clean Stock concerns with the European Union; and ensure that appropriate resources are available at ports in the Northwestern United States to provide timely inspections of berry imports and exports.
Citrus – January 6, 2016 – Attendees included: Citrus Research and Development Foundation, Citrus Research Board, California Citrus Quality Council, California Citrus Nursery Society, California Citrus Pest and Disease Management Program, Southern Gardens, Texas Citrus Pest and Disease Management Corporation, California Citrus Mutual, Florida Citrus Packers, and the Sunkist Corporation. Among other things, APHIS committed to: continue the conversation on early detection tools and their use for regulatory and management purposes; move forward with the revision of the citrus nursery protocol; facilitate Florida citrus exports to the European Union and ensure that interstate movement of nursery stock from Florida can continue; continue work with Australia, South Africa, and Japan to expand their current market access; and work with Argentina, Brazil, Chile, China, Korea, Mexico, and Swaziland on new market access requests.

Cotton – January 14, 2016 – Attendees included: National Plant Board and National Cotton Council. Among other things, APHIS committed to: develop a transition strategy for boll weevil to ensure the cotton industry is protected post eradication; maintain the cotton pests budget line item; develop a plan to address Old World Bollworm; and discuss industry’s concerns about pollinator health policies and potential impact on cotton pest programs with the Environmental Protection Agency (EPA).

Forest Products – February 24, 2016 – Attendees included: American Lumber Standards Committee, National Wooden Pallet and Container Association, American Firewood and Distributors Association, National Firewood Association, National Association of State Foresters, Society of American Foresters, Tree Care Industry Association, and the Hardwood Federation. Among other things, APHIS committed to: develop our ability to respond to plant disease emergencies using Farm Bill infrastructure; explore options for U.S. exporters and their agreement to a systems approach for new projects with Canada; research the impact of International Standard for Phytosanitary Measure 15 (ISPM 15/treatment requirements for wood packing material) on wood pallets to Brazil; and refine exemptions currently in place regarding ISPM 15 and Canada.

Grapes – December 15, 2016 – Attendees included: New York Wine and Grape Foundation, the Wine Institute, California Association of Wine Grape Growers, Consolidated Central Valley Table Grape Pest & Disease Control District, National Grape Cooperative Association, California Fresh Fruit Association, California Table Grape Commission, Texas Wine and Grape Growers Association, Washington Association of Wine Grape Growers, Oregon Winegrowers Association, Argyle Winery, and New York State Department of Agriculture and Markets. Among other things, APHIS committed to: continue support for specialty crop pest and disease
research, surveillance, and management through the Farm Bill Section 10007 suggestion process; continue to monitor the developing glassy-winged sharpshooter/Pierce’s Disease situation and provide consistent funding; continue to dedicate resources to facilitate grape exports, open new markets, and maintain existing markets; and continue to engage EPA regarding the critical need for agricultural pesticides, especially the organophosphates currently undergoing registration review.

Nursery – November 19, 2015 – Attendees included: AmericanHort, Society of American Florists, Cornerstone Government Affairs, Plant Source International and Malmborg’s Inc., Florida Nursery Growers and Landscaper Association, Northwest Nursery Institute, New Jersey Nursery & Landscape Association, and the National Plant Board. Among other things, APHIS committed to: continue to involve industry in the Section 10007 Farm Bill spending plan development process; continue to provide technical expertise, training, and guidance as the States and industry implement a systems approach to nursery certification; share industry concerns about wood packaging reciprocal exemption with Canada; conduct stakeholder outreach and training seminars to help ensure a smooth transition before we publish the final Q37 rule (importation of plants for planting) and make reference materials publicly accessible; and share industry concerns about Plum pox with Canada and continue to engage with Canada on this issue.

Potatoes – December 17, 2015 – Attendees included: National Potato Council, Washington State Potato Commission, Idaho Potato Commission, Maine Potato Board, Michigan Potato Industry Commission, Oregon Potato Commission, U.S. Potato Board, Bryant Christie Trade Consultant, and the National Plant Board. Among other things, APHIS committed to: continue to share results on Dickeya dianthicola (blackleg) diagnostic testing and continue to engage industry on non-regulatory best management practices; work with States to determine if fees for phytosanitary certifications are appropriate; continue efforts to maintain current potato markets and continue to work with Mexico to regain market expansion of U.S. fresh table stock potatoes; negotiate market access with China, Japan, Egypt, Korea, and Costa Rica; and continue work with Idaho to encourage reduced restrictions on the planting of litchi tomato and allow treated litchi seed to be grown in Idaho under permitted conditions.

Seeds – March 15, 2016 – Attendees included: American Seed Trade Association, Monsanto, Eurofins STA Labs, RiceTec, Sakata Seeds, Syngenta Seeds, Harris Moran Seed Company, and the National Plant Board. Among other things, APHIS committed to: continue to investigate the feasibility of imposing a surcharge on phytosanitary certificates issued for seed to bolster the funding base of the National Seed Health System; continue to work with EPA and the Food and Drug Administration (FDA) to support the White House Office of Science and Technology Policy effort to modernize the Coordinated Framework for regulation of biotechnology; and continue to work with the seed industry to identify and resolve trade issues in high priority markets including Chile, Argentina, Brazil, and Mexico by engaging in technical discussion, correspondence, and bilateral meetings.

Troutlodge, Inc., University of Florida Tropical Aquaculture Laboratory, National Aquaculture Association, WM James & Assoc. LLC, Mount Parnell Fisheries, Inc., and the Catfish Farmers of America. Among other things, APHIS committed to: consult with USDA’s Food Safety and Inspection Service (FSIS) on catfish inspection to advise FSIS on animal health issues; continue to expand the use of electronic certification; and continue to develop interagency relationships with FWS.

**Cattle** – May 3, 2016 – Attendees included: National Cattlemen’s Beef Association, Livestock Marketing Association, National Milk Producers Federation, United States Cattlemen’s Association, Texas Cattle Feeders, and representatives from the Missouri and Texas State Departments of Agriculture. Among other things, APHIS committed to: partnership, cooperation, and communication in our relationship with Cattle Sector counterparts; preparedness regarding foot-and-mouth disease; increasing awareness about the importance of biosecurity and decreasing animal movements; and continuing to work on emerging diseases, such as bluetongue.

**Cervid** – February 22, 2016 – Attendees included: North American Deer Farmer’s Association, Whitetails of Wisconsin, North American Elk Breeders Association, Raindeer Owners and Breeders Association, Exotic Wildlife Foundation, and Powder Ridge Whitetails. Among other things, APHIS committed to: complete an evaluation of the Cervid Health Program and convene a working group to reassess our Chronic Wasting Disease (CWD) program standards; improve consistency of implementation of the Herd Certification Program across States; and continue to support research activities that support CWD, tuberculosis, and brucellosis programs.

**Equine** – April 7, 2016 – Attendees included: American Horse Council, American Association of Equine Practitioners, Fairfield Equine Center, Equine Disease Communications Center (EDCC), Marion du Pont Scott Equine Medical Center, Animal Health Diagnostic Center at Cornell University, and Mersan International LTD. Among other things, APHIS committed to: continue to conduct testing, as appropriate where dual infections of Equine Piroplasmosis and Equine Infectious Anemia (EIA) are suspected; provide $75,000 in cooperative agreement funding in fiscal year 2016 for the EDCC; develop regulatory and non-regulatory options to address EIA control based on feedback from the 2015 EIA Discussion Group; provide the American Association of Equine Practitioner’s Equine Welfare Committee with an overview of APHIS enforcement of the Commercial Transportation of Equines to Slaughter Act; and continue to collaborate with other USDA agencies on equine-related activities.

**Poultry** – March 4, 2016 – Attendees included: Cobb-Vantress Inc., Aviagen North America, Mountaire Farms Inc., United Egg Producers, USPOULTRY, National Chicken Council, USA Poultry and Egg Export Council, Indiana State Poultry Association, Hy-Line International, Butterball LLC, North American Game Bird Association, and the Georgia Poultry Federation. Among other things, APHIS committed to: work on removing trade restrictions due to highly pathogenic avian influenza; increase the movement of poultry and poultry products; and review all comments to the interim biosecurity rule, including any from the General Conference Committee of the National Poultry Improvement Plan.
Sheep and Goat – March 29, 2016 – Attendees included: the American Goat Federation, American Sheep Industry, Sheep Improvement Company, Boyer Land & Livestock, UC Davis School of Veterinary Medicine, Florida A&M University. Among other things, APHIS committed to: request an additional $3 million in funding in fiscal year 2018 for sheep and goat scrapie surveillance within the Equine, Cervid, and Small Ruminant budget line and increase goat identification and education outreach around scrapie and sheep and goat health.

Swine – April 1, 2016 – Attendees included: National Pork Board, National Pork Producers Council, American Association of Swine Practitioners, and the Swine Health Information Center. Among other things, APHIS committed to: provide a comprehensive report on feral swine disease monitoring; continue to work with industry on Swine Enteric Corona Disease program needs; and share the Seneca Virus A guidance document with industry.

Trade – May 5, 2016 – Attendees included: National Pork Producers Council, National Turkey Federation, International Serum Industry Association, the Pet Food Institute, American Feed Industry Association, National Customs Broker and Forwarders Association of America, U.S. Hide, Skin and Leather Association, North American Meat Institute, and the National Renderers Association. Among other things, APHIS committed to: the importance of China as a current and potential market; work with industry on research and enforcement issues; and engage with stakeholders on new regulations and policies.

Annual Meetings & Calls

APHIS leaders and staff also regularly attend many State and industry organization annual and regional meetings. Those key meetings include, among others, the National Association of State Departments of Agriculture (NASDA), the National Plant Board (NPB), and the U.S. Animal Health Association (USAHA).

NASDA is a key partner in almost all of APHIS’ programs, and the group, collectively or individually by Commissioner, frequently brings State issues to APHIS’ attention for discussion and resolution. APHIS holds a regular conference call with NASDA the first Monday of every month to provide updates to Commissioners on key program activities. Additionally, each year, APHIS leadership attends NASDA’s midyear and annual meetings and provides program updates at their Animal and Plant Industries Committee meetings. NASDA’s 2016 Annual Meeting was September 20-24, in Lincoln, Nebraska. Action items slated for the Annual Meeting that concern APHIS included a statement to continue to work with Federal and State agency partners to ensure adequate monitoring of wild bird surveillance for highly pathogenic and low pathogenic avian influenza, as well as increased spot checks of waterfowl at live bird markets.

NPB is a nonprofit organization that represents plant pest regulatory agencies in all 50 States and the Commonwealth of Puerto Rico and Guam. NPB frequently brings plant health and biotechnology issues to APHIS’ attention for discussion and resolution. Officials with APHIS’ Plant Protection and Quarantine program hold regular conference calls with the NPB Executive Team. NPB also holds a national annual meeting each August where plant health policy and
current issues are discussed. APHIS' Administrator and other Agency leaders routinely spend several days at the NPB meeting each year. NPB’s 2016 Annual Meeting was July 31 to August 4, in Wilmington, Delaware. APHIS issues of primary interest to NPB include Farm Bill funding for pests and diseases, as well as emerald ash borer, potato cyst nematode, citrus greening, invasive species, biotechnology, and coordination of agricultural inspection activities with the U.S. Department of Homeland Security’s Customs and Border Protection.

USAHA’s primary objective is to prevent, control, and eliminate livestock diseases. The organization’s 1,400 members are State and Federal animal health officials, national allied organizations, regional representatives, and individual members. USAHA holds a national annual meeting where animal health policy and practices are discussed. This year’s meeting is October 13-19, 2016, in Greensboro, North Carolina. APHIS is a major participant at the annual USAHA meeting, routinely sending over 100 staff to participate in committee sessions and to make presentations on important animal health and regulatory topics. APHIS’ Administrator and other Agency leaders routinely spend several days at the USAHA meeting each year, holding a series of one-on-one meetings with State veterinarians to discuss current issues and engage with stakeholders at sessions held during the event.

**Stakeholder Engagement for Rulemaking**

For high-visibility rulemaking, APHIS conducts up-front outreach efforts beyond basic Federal requirements for docket announcements. These outreach efforts include advance engagement with stakeholders and webinars, public meetings, and listening campaigns prior to formation of new policies and regulations. Some specific examples include:

- APHIS’ efforts to begin fresh stakeholder engagement to explore alternative policy approaches after withdrawing its 2008 proposed rule to amend the regulations for certain genetically engineered (GE) organisms. APHIS started this stakeholder dialog by creating opportunities to provide oral and written comments on biotechnology questions, holding a series of webinars in May 2015, discussing a possible new proposed rule at an annual stakeholder meeting, and publishing a February 5, 2016, Federal Register notice announcing the development of a draft programmatic environmental impact statement to evaluate a range of alternatives that the Agency can take as it works to update its biotech regulations. As of September 2016, the proposed rule and several associated analyses are with the Office of Management and Budget for review.

- APHIS’ efforts to strengthen enforcement of the Horse Protection Act (HPA) and to end inhumane practices known as soring, which cause horses to suffer physical pain, distress, inflammation, or lameness while walking and moving. APHIS published the proposed rule on July 25, 2016, and—recognizing extreme industry and advocacy group interest—held five public meetings, including a virtual one, across the country to seek additional comments and feedback for consideration. APHIS extended the comment period 30 days to October 26, 2016.
V. Top Issues

Hot Topics

Hot topics are listed in priority order under each Animal and Plant Health Inspection Service program area below.

Overarching Issues

1. Increasing Exports

Issue: The years 2011-2015 were the best for agricultural exports in U.S. history. However, many countries maintain barriers to U.S. agricultural exports related to animal and plant health concerns (sanitary and phytosanitary, or SPS, issues). Many of these barriers are not justified by science and impede U.S. agricultural export growth.

Public Policy Reason for APHIS Involvement: APHIS experts work with foreign counterparts to negotiate science-based import and export requirements, eliminate unjustified SPS barriers to trade, and advocate on behalf of U.S. agriculture in international forums such as the World Trade Organization, the World Organisation for Animal Health, and the International Plant Protection Convention. APHIS also helps exporters whose products have been detained in foreign ports. In addition, APHIS supports the free flow of exports by certifying that U.S. agricultural products meet importing countries' entry requirements.

APHIS’ Statutory/Regulatory Scope: In accordance with the Animal Health Protection Act, the Plant Protection Act, and related regulations, APHIS regulates the export of live animals and facilitates the export of animal products, plants, and plant products. APHIS supports these exports through its Veterinary Services (VS), Plant Protection and Quarantine (PPQ), International Services (IS), and Biotechnology Regulatory Services programs. Serving as the United States’ veterinary medical and plant protection authorities, respectively, VS and PPQ negotiate conditions for U.S. exports (with support from IS) and develop risk mitigations necessary to prevent the spread of pests and diseases.
Industry, Consumer, and Congressional Interest: In addition to relying on APHIS to resolve immediate trade issues involving exports, a wide range of exporters—including poultry, beef, and specialty crop producers—have asked APHIS to help expand their access to markets abroad. Congress requested reports on the status of foreign market access requests submitted by U.S. producers, companies, and others in the fiscal year (FY) 2016 Appropriations Act and FY 2017 House Appropriations Bill. As of October, the report in response to the FY 2016 Appropriations Act is in USDA clearance.

Executive Branch Position to Date: APHIS was a party to negotiations with 11 other Pacific Rim nations for the Trans-Pacific Partnership, concluded earlier this year. It is currently involved in negotiations for the Trans-Atlantic Trade and Investment Partnership with the EU. APHIS also holds annual meetings with representatives of major export sectors to determine issues of concern and how APHIS can assist. In FY 2015, APHIS resolved 171 trade-related issues valued at $2.5 billion; it also successfully obtained the release of 293 individual shipments valued at more than $25 million.

APHIS received increased funding in the last two appropriations acts ($2 million in FY 2015 and $1 million in FY 2016) to support resolution of issues affecting U.S. exports. The Agency is using this funding to support exports by, among other things, training and assigning more personnel to key positions domestically or in emerging markets, which have the largest potential growth for U.S. exporters but also present difficulties caused by technical and regulatory issues. APHIS is also using this funding to provide greater oversight of how growers and packers are implementing the export requirements of foreign countries, to ensure export products may enter foreign markets safely and efficiently.

APHIS has long worked to streamline the export process through continual advancements in its Web-based Phytosanitary Certificate Issuance and Tracking system, which handles all phases of the phytosanitary certificate application and issuance process. In response to an Executive Order to streamline the import and export process for America's businesses, APHIS is also coordinating with other Federal agencies to implement the International Trade Data System. This system will allow businesses to electronically submit data required by U.S. Customs and Border Protection and partner government agencies to import or export cargo through a single “window.”

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

2. Border Security

Issue: Beginning in 2010, violence in Mexico at or near the U.S. border—mostly due to drug trafficking organizations—reached levels that required APHIS to periodically modify or suspend operations in some areas to ensure employee safety. APHIS takes these actions in concert with the U.S. Department of State (DOS), which has authority to determine whether U.S. Government (USG) personnel can operate in Mexico.
The violence tends to be transitory and operational actions APHIS takes are usually short-term, though there are exceptions. One involves APHIS’ movement of cattle inspection facilities from Mexico to four locations on the U.S. side of the border in Texas (Pharr, Del Rio, Eagle Pass, and Laredo). Border issues have also affected APHIS’ long-term pest and disease reduction-efforts with Mexico on bovine tuberculosis (TB), fruit fly, and cotton pest suppression programs, among others. With respect to TB, security concerns have reduced APHIS’ ability to evaluate the TB program status of cattle coming from certain areas of Mexico. As a result, APHIS is unable to consider changing U.S. entry requirements for those cattle if the disease prevalence has changed—e.g., strengthening or reducing import restrictions as appropriate.

APHIS has nearly 600 employees along the U.S. border with Mexico working in a variety of programs to safeguard U.S. agriculture and to facilitate trade. Nearly half are Foreign Service national employees of APHIS who live and work in Mexico; the rest are U.S. residents whose work frequently requires them to cross into Mexico. DOS has prohibited USG personnel from working in areas of Mexico due to gun battles, executions, kidnappings, and carjackings. At times, APHIS employees have witnessed these activities, been directly threatened, and, on one occasion, robbed and carjacked.

**Public Policy Reason for APHIS Involvement:** APHIS’ work in Mexico helps facilitate trade and ensures that products exported from Mexico to the United States do not pose a disease or pest risk to U.S. agriculture.

**APHIS’ Statutory/Regulatory Scope:** APHIS’ programmatic activities in Mexico are carried out under the authority of the Animal Health Protection Act and the Plant Protection Act. However, DOS has ultimate authority over USG personnel in Mexico. APHIS security staff work with DOS’ Regional Security Officers and—as appropriate—the Department of Homeland Security (DHS) to assess security situations prior to a DOS determination.

**Items in Controversy:**

* [b](5) Deliberative Process Privilege

**Industry, Consumer, and Congressional Interest:** APHIS’ work in Mexico benefits agricultural importers and exporters in the United States who do business with counterparts in Mexico. Programmatic work in Mexico also helps safeguard U.S. citrus production in southern Texas, and much of Mexican fruit fly eradication efforts are undertaken in coordination with Mexico’s Secretary of Agriculture, Livestock Rural Development, Fisheries, and Food. Trapping for Mexican fruit flies along the northern Tamaulipas border is severely limited due to security issues. The citrus industry is concerned that if violence were to disrupt APHIS’ use of aerial release and sterile insect technique efforts to suppress fruit flies in Northern Mexico on a long-term basis, citrus production in south Texas could be impacted. In another case, the United States temporarily halted the import of Mexican avocados, when security concerns prevented
APHIS from conducting inspections and certifying facilities to ensure the avocados met U.S. import requirements.

Several Congressional representatives have inquired about APHIS modifications or suspensions of activities along the border when they have impacted members of their districts, particularly in Texas. House Committee staff have informally inquired about border security issues in recent years and their impact on some APHIS programs, especially the cotton pests programs. The House included language in the fiscal year 2016 appropriation directing APHIS to work with the U.S. cotton industry to develop a plan of action to protect the United States from boll weevil re-infestation. While APHIS is working with Mexican counterparts on the final stage of eradicating the cotton pest, security issues have affected this work because APHIS counterparts in Mexico cannot perform program activities such as conducting trapping and cotton treatment.

**Executive Branch Position to Date:** Employee safety and security is paramount and APHIS’ top priority. APHIS has developed strategies for ensuring a secure working environment for its employees, while protecting plant and animal health and allowing for safe trade. APHIS will continue to pursue such strategies as needed and will continue to work with DOS and DHS on evaluating potentially unsafe situations.

**Potential Alternative Approaches:**

**Animal Care**

1. **Horse Protection Act (HPA)**

**Issue:** The HPA, passed by Congress in 1970 and enforced by APHIS, prohibits the showing, sale, auction, exhibition, or transport of sored horses. The HPA has dual purposes: eliminating the inhumane practice of soring and restoring fair competition within the walking horse industry. Soring is a cruel and inhumane practice that aims to accentuate a horse’s gait through the application of chemicals, mechanical agents, or training methods. Soring is primarily used in the training of Tennessee Walking Horses, racking horses and related breeds to gain an advantage for persons showing sored horses.

Currently, the horse industry trains and oversees horse show inspectors. A 2010 report from the Office of the Inspector General (OIG) found that this industry-led inspection process creates a conflict of interest that allows the inhumane practice of soring to continue. APHIS veterinary medical officers conduct unannounced inspections at roughly 18 percent of horse shows annually to evaluate industry-hired inspectors and to visually and physically inspect horses to determine compliance with the HPA. OIG found that, for the shows they reviewed, industry-hired inspectors issued 49 percent of their total violations at the six percent of shows APHIS officials also attended, indicating inconsistent application of the HPA. In July 2016, APHIS published a
proposed rule (Docket No. APHIS-2011-0009) that that would bring responsibility for training and licensing horse show inspectors directly under the control of APHIS, and implement prohibitions on equipment correlated to the presence of soring.

**Public Policy Reason for APHIS Involvement:** Eliminating the practice of soring is one of the original missions of the Agency and remains a top priority.

**APHIS’ Statutory/Regulatory Scope:** 1976 amendments to the HPA authorized the appointment of “qualified persons” to detect soreness in horses and led to the establishment of the Designated Qualified Person (DQP) program. The DQP program allows horse show management to obtain services from a DQP—who is licensed by a Horse Industry Organization—to detect horses that are sored. The HPA also authorizes APHIS to issue rules and regulations it deems necessary to carry out the provisions of the Act.

**Items in Controversy:** APHIS has faced legal challenges and Congressional questions about the consistency of APHIS inspections at HPA-covered events to detect soreness in horses, and the process for disqualifying horses from competition based on inspection findings. This issue has proven contentious enough to, in some cases, result in personal threats to Agency officials by horse show participants.

**Industry, Consumer, and Congressional Interest:** Several Representatives and Senators, along with members of the performance horse segment of the industry that continue to use pads and action devices during horse shows, exhibitions, sales, and auctions, oppose the proposed rule. Several other Representatives and Senators, together with the American Veterinary Medical Association, the American Association of Equine Practitioners, and the animal protection community, support the proposed changes.

**Executive Branch Position to Date:** The Administration published the proposed rule to bring responsibility for training and licensing horse show inspectors directly under the control of APHIS, and eliminate the use of stacked pads and chains and other “action devices,” as well as foreign substances. The proposed rule aligns with OIG’s recommendations that APHIS play a larger role in training and overseeing horse protection inspectors. APHIS extended the comment period on the proposed rule 30 days to October 26, 2016.

**Potential Alternative Approaches:** (b)(5) Deliberative Process Privilege
2. Inspection of Agricultural Research Service’s Research Facilities

**Issue:** In January 2015, the *New York Times* published a lengthy investigative piece alleging significant animal welfare violations at the U.S. Meat Animal Research Center (MARC), a U.S. Department of Agriculture (USDA) Agricultural Research Service (ARS) facility in Nebraska that works to improve livestock health and production.

In response to the article’s allegations, the Secretary directed ARS and APHIS to implement a plan to ensure that APHIS inspects ARS facilities that use animals for agriculture or production research. Additionally, the U.S. House of Representatives placed a directive in the fiscal year (FY) 2016 omnibus appropriation, instructing ARS to enter into an agreement with APHIS. Under the terms of the agreement, APHIS would conduct animal welfare inspections—as it does for non-governmental entities regulated under the Animal Welfare Act (AWA)—at ARS facilities that use animals in agriculture or production research to ensure compliance with the AWA.

The AWA sets standards for the humane care and treatment of most warm-blooded animals exhibited to the public, bred for commercial sale, used in medical research, or transported commercially. Regulated facilities must provide their animals with, among other things, adequate housing, sanitation, nutrition, water, and veterinary care. Because the AWA generally exempts agriculture research from regulatory oversight, when evaluating ARS’ compliance with the AWA, APHIS will rely on both the AWA regulations and standards as well as the standards of care for farm animals used in research, as set forth in the Federation of Animal Science Societies’ Guide for the Care and Use of Agricultural Animals in Agricultural Research and Teaching (commonly referred to as the Ag Guide).

The House directive further stipulated that more than $57 million of ARS’ appropriation would not be obligated until the Secretary certified to Congress that ARS had updated its animal care policies and all ARS animal research facilities had established fully functioning Institutional Animal Care and Use Committees (IACUC). In compliance with the directive, APHIS and ARS signed a memorandum of understanding under which APHIS would conduct animal welfare inspections at ARS facilities and make the results of those inspections publically available on its website.

In August 2015, APHIS inspectors initiated pre-compliance site visits at ARS facilities to evaluate the welfare of animals at each facility and work with ARS officials on building an effective inspection program that will ensure the facilities are in full compliance with the AWA. The pre-compliance visits were completed in early October 2016. Based on ARS’ progress in meeting AWA requirements at its research facilities, the House appropriations committee released ARS’ remaining appropriation in the summer of 2016. Starting in November 2016, APHIS officials will begin conducting unannounced animal welfare inspections at 37 ARS locations engaged in agricultural research activities.
Public Policy Reason for APHIS Involvement: As the agency charged with enforcement of the AWA, APHIS was asked to fulfill Congress’s directive to oversee certain aspects of animal welfare at ARS research facilities.

APHIS’ Statutory/Regulatory Scope: APHIS is authorized under the AWA to conduct unannounced inspections of research facilities that use certain animal species. However, facilities that use only livestock or poultry for research to improve livestock health and production are exempt from AWA regulation. Prior to the House’s directive, all Federal Government research facilities were also exempt from registering with APHIS, as each agency has the responsibility to ensure that any of its facilities that conduct research on AWA-protected animals remain in compliance with the AWA. Federal animal research facilities have long been required to have animal oversight committees similar in composition and function to the IACUCs required at other research facilities.

Items in Controversy: The New York Times article alleged that a significant number of serious animal abuses were occurring at the MARC. Prior to the House directive, no Federal animal research facility was ever required to register with APHIS, although APHIS offers courtesy registration and inspections to Federal facilities upon request.

Industry, Consumer, and Congressional Interest: The New York Times article spurred other media to pick up the story, triggering concern about the alleged animal abuses at the MARC facility. The House Appropriations Committee, especially its Democratic staff, has expressed strong interest in the issue. At a February 2015 House Agriculture Committee hearing, Representative Brad Ashford (D-NE) asked the Secretary for an update on actions taken. In addition to requiring ARS to work with APHIS on the inspection process, the 2016 omnibus appropriations bill included language requiring ARS to share inspection reports with the Committee. Senator Corey Booker (D-NJ) and Representative Earl Blumenauer (D-OR) introduced companion bills in February 2015 that would amend the AWA to require inspections at Federal research facilities that conduct livestock research. However, the legislation did not advance.

Executive Branch Position to Date: APHIS and ARS have complied with the House of Representatives’ directives. During its inspections of ARS facilities, APHIS evaluates compliance based on AWA and Ag Guide standards.

The IACUC at each ARS facility has the responsibility to closely monitor the care and treatment of animals and ensure that research protocols are properly carried out and documented. If, during an inspection, APHIS identifies a direct noncompliance (one currently having a serious or severe adverse effect on the health and well-being of the animal) with the AWA or Ag Guide, the facility’s IACUC will suspend the research activity until corrective action has been taken, and then report that action to APHIS.
3. **Animal Welfare Act**

**Issue:** APHIS administers the Animal Welfare Act (AWA) and its associated regulations, which set standards for the humane care and treatment of most warm-blooded animals exhibited to the public, bred for commercial sale, used in medical research, or transported commercially. Facilities using regulated animals for these purposes must provide their animals with, among other things, adequate housing, sanitation, nutrition, water, and veterinary care. The AWA also prohibits most animal fighting ventures. Every year, APHIS conducts roughly 10,000 unannounced inspections of facilities licensed or registered under the AWA, ensuring the health and welfare of more than 2 million animals. Sanctions for alleged violations of the AWA and its implementing regulations include license suspensions and revocations, civil penalties, cease and desist orders, and misdemeanor criminal penalties (for alleged violations of statutory provisions). APHIS operates a Center for Animal Welfare that provides training to employees and stakeholders and serves as the USDA national science and technology resource in support of the AWA. APHIS received $28 million from Congress in fiscal year (FY) 2015 and $28.4 million in FY 2016 for AWA-related activities.

**Public Policy Reason for APHIS Involvement:** Congress directed the Secretary of Agriculture to enforce the provisions of the Animal Welfare Act. APHIS’ extensive animal health capabilities and regulatory experience position it particularly well to oversee certain aspects of animal welfare.

**APHIS’ Statutory/Regulatory Scope:** The AWA does not cover all animals used in all activities. Farm animals used for food or fiber (fur, hide, etc.), coldblooded species (amphibians and reptiles), horses not used for research, fish, invertebrates (crustaceans, insects, etc.), or rats of the genus Rattus and mice of the genus Mus bred for use in research are not covered. Birds are covered under the AWA but we have not yet established specific regulatory standards for them.

**Items in Controversy:** APHIS has faced intense scrutiny and legal challenges from AWA licensees, animal protection groups, and concerned citizens, as well as Congressional inquiries, about its inspection activities at regulated facilities and sanctions levied for AWA violations. Certain issues—such as the welfare of elephants and big cats in circuses and zoos, dogs sold by breeders and dealers, orcas in exhibition, and primates used in laboratory research—are focal points for public attention and attract local and national press coverage.

**Industry, Consumer, and Congressional Interest:** APHIS receives a large volume of inquiries expressing concerns about the welfare of regulated animals. Although most industry partners work closely with APHIS to ensure they meet AWA standards, certain breeders and exhibitors consistently remain out of compliance with AWA standards; we have sanctioned them. Spurred by constituent and interest-group activism, Congressional offices regularly contact APHIS about its AWA-related activities. Some believe that APHIS is too intrusive or unfair in enforcement matters while others argue that APHIS does too little.
Executive Branch Position to Date: APHIS has undertaken significant actions in the past several years in response to Office of the Inspector General audits, congressional interest, and concerns from the general public, as well as internally generated initiatives. In 2013, APHIS finalized a rule amending the AWA to require dealers selling animals sight unseen over the Internet to be licensed. As with many animal welfare issues, this action generated intense congressional and public interest both for and against the rule. The following year, the Agency finalized a rule required by the 2008 Farm Bill to prohibit imports of most dogs into the United States for resale, research, or veterinary treatment unless the dogs are vaccinated, healthy, and at least 6 months old. In response to provisions in the FY 2016 Consolidated Appropriations Act, APHIS also stopped issuing or renewing AWA licenses for Class B “random” dealers selling animals from various sources, some believed to be illegitimate. In early 2016, the Agency published for public comment a proposed rule amending the AWA to further support the humane handling, care and treatment of marine mammals such as orcas in captivity; the comments are under review. APHIS also issued a policy promoting humane handling of newborn and infant exotic cats, such as tigers and lions, which risked illness and even death as a result of direct contact with the public, and held three public listening sessions on broader issues involving the handling of dangerous animals. In addition, APHIS has published a proposed “de minimis” rule authorized by the 2014 Farm Bill exempting certain businesses that are small or infrequently exhibit certain animals—as well as owners of household pets that are exhibited occasionally and meet other criteria—from AWA license/oversight requirements. Public comments are due in early November 2016. Beginning that month, APHIS will perform regular inspections of animals at 37 USDA Agricultural Research Service research facilities to ensure AWA compliance. APHIS is planning a public symposium in spring 2017 focused on social enrichment and housing for primates.

To ensure fair and effective AWA enforcement, APHIS regularly reviews its internal processes, including its civil penalty guidelines, and reaches out to licensees and registrants to enhance their understanding of their obligations under the AWA. Further, although the AWA does not apply to privately owned pets, APHIS supports pets during emergencies. After Hurricane Katrina (2005), APHIS created an Emergency Programs division to work with the Federal Emergency Management Agency, States, and others to safeguard public safety and animal welfare by supporting collaborative capacity building in animal emergency management. Examples demonstrating the effectiveness of this effort include the Colorado airlift of over 800 animals accompanying owners evacuated from flood zones (2013) and recent Louisiana flooding (2016) where pets/animals were evacuated with their owners from flooded areas and sheltered.

4. Public Contact with Dangerous Animals

**Issue:** APHIS is considering revising the Animal Welfare Act (AWA) regulations governing handling and public contact of dangerous animals. APHIS’ main focus is ensuring the welfare of animals while striving to develop and enact the most appropriate measures to protect animals from any potential harm that can result from being handled by humans. Some members of the public, animal interest groups and the regulated community have strong and divergent views on the subject.

**Public Policy Reason for APHIS Involvement:** Congress directed the Secretary of Agriculture to enforce the provisions of the Animal Welfare Act. APHIS’ extensive animal health capabilities and regulatory experience position it particularly well to oversee certain aspects of animal welfare.

**APHIS’ Statutory/Regulatory Scope:** The Animal Welfare Act and its associated regulations require the enforcement by USDA (APHIS) of federally established standards of care and treatment for certain warm-blooded animals bred for commercial sale, used in research, transported commercially or exhibited to the public. This docket applies to the latter category.

**Items in Controversy:** APHIS receives many public complaints related to the handling of animals, including handling resulting in injuries to animals and the public. During follow-up inspections, APHIS often documents evidence of noncompliance with AWA handling regulations.

**Industry, Consumer, and Congressional Interest:** More than 70 AWA-licensed exhibitors allow public contact with dangerous animals. APHIS has issued internal and external guidance interpreting the handling regulations, particularly as they relate to the handling of large felids (big cats). On average, APHIS initiates 45 investigations each year related to the handling of animals, including cases that resulted in significant injuries to, and the deaths of, animals and members of the public. Within the past decade, approximately 74 percent of those cases involved exhibitors of animals.

**Executive Branch Position to Date:** When APHIS promulgated current handling regulations, APHIS stated “exhibitors do not have the right to allow contact between public and dangerous animals,” but the regulatory text itself is less clear on this point. In 2000, APHIS published a handling policy in the Federal Register for public comment, and, in 2004, withdrew this policy from consideration noting “any clarification of the regulations should take place through rulemaking.” Thereafter, in 2007, a licensed exhibitor sued APHIS in Federal District Court alleging APHIS’ interpretation of the handling regulations to restrict contact between juvenile and adult large felids (big cats) and the public was arbitrary and capricious. Although the District Court found APHIS’ interpretation of the regulations was not unreasonable (and the Fourth Circuit Court of Appeals affirmed this decision), APHIS is repeatedly challenged during both inspections and administrative enforcement proceedings regarding this interpretation, and exhibitors often seek to circumvent the handling regulations.
On August 5, 2013, APHIS published in the Federal Register for comment a petition filed by the Humane Society of the United States on behalf of a broader coalition of stakeholders to prohibit public contact with big cats, bears, and nonhuman primates. The published petition (Docket No. APHIS-2012-0107) received more than 15,000 public comments. Officials reviewed all comments and found overall support for the basis of the petition. As a result, APHIS published a notice on June 24, 2016, reopening the comment period for the petition to explore the possibility of revising the Animal Welfare Act (AWA) regulations governing handling of and public contact with dangerous animals. APHIS also hosted a series of listening sessions that allowed participants to provide oral comments and hear responses on handling regulations. Archived audio recordings and written transcripts of these sessions can be found at: https://www.aphis.usda.gov/aphis/ourfocus/animalwelfare/handling-dangerous-animals-feedback-page. APHIS officials are carefully reviewing the more than 6,000 comments they received on or prior to the August 31, 2016, closing of the reopened comment period, and they will evaluate and address all feedback before proceeding with any decisionmaking on this matter.

Additionally, on April 4, 2016, APHIS notified all affected USDA license holders of their regulatory responsibilities under the AWA to ensure that newborn and infant nondomestic cats 28 days of age or younger are provided preventive and responsive veterinary care and adequate housing and nutrition, and to ensure that these animals are handled safely and protected from harm. Licensees must handle these animals in a manner that does not expose them to any form of public contact, including public feeding and handling. The guidance document is located at https://www.aphis.usda.gov/publications/animal_welfare/2016/tech-neonatal-nondomestic-cats.pdf.

Potential Alternative Approaches: [b][5] Deliberative Process Privilege
Biotechnology Regulatory Services

1. **Proposed 340 Regulations**

**Issue:** USDA uses science-based regulatory systems to allow for the safe development, use, and trade of products derived from new agricultural technologies. USDA continues to regulate the importation, interstate movement, and field-testing of newly developed genetically engineered (GE) organisms that qualify as "regulated articles" to ensure they do not pose a threat to plant health before they can be commercialized. These science-based evaluations facilitate the safe introduction of new agricultural production options and enhance public and international confidence in these products. As a part of this effort, the Animal and Plant Health Inspection Service (APHIS) will publish a proposed rule to revise its regulations regarding the regulation of GE organisms.

**Public Policy Reason for APHIS Involvement:** APHIS’ mission is to protect plants from plant pests and noxious weeds, and is conducted under the authority of the PPA. There’s a critical need to make the current regulations more relevant in light of significant scientific advances and the risk assessment experience gained over the years. APHIS plans to better align its regulations with its statutory authority, align its regulatory oversight with risks to plant health, and ensure its regulatory program is more consistent with the current status of the science of genetic engineering.

**APHIS’ Statutory/Regulatory Scope:** When current biotechnology regulations were codified in 1987, the PPA had not yet been passed and the existing regulations were written pursuant to the Federal Plant Pest Act of 1957. The Plant Protection Act of 2000 gives APHIS authority to regulate organisms that are plant pests, noxious weeds, or both, and pose a risk to plant health. Amongst other changes, the proposed revisions will more closely align our regulations with the PPA to allow APHIS to regulate GE organisms that may pose a plant pest or noxious weed risk.

**Items in Controversy:** In March 2015, USDA withdrew a 2008 proposed rule to change the regulations. The 2008 proposed revisions were extensive and included significant changes to the scope of the regulations and the mechanics of APHIS’ regulatory oversight. APHIS received more than 88,300 comments on the 2008 proposed rule, indicating the proposed scope and many of the provisions of the rule were unclear, needed additional rigor, were far-reaching and overly restrictive. APHIS received concerns regarding what future criteria might be used to determine what organisms would fall under APHIS regulatory jurisdiction. Concerns regarding oversight of crops that produce pharmaceutical and industrial compounds and increased regulatory burden are just a few examples of the complex issues raised by commenters. Therefore, APHIS withdrew the 2008 proposed rule and sought additional input from stakeholders.

In 2015, following the withdrawal of the 2008 proposed rule, APHIS reached out to the public for input with a series of webinars and through a public comment period to start a fresh dialogue with stakeholders on future proposed rulemaking. We received more than 220,000 comments. After considering those comments, on February 5, 2015, APHIS published a Notice of Intent (NOI) to prepare a programmatic environmental impact statement (EIS), as required for any
significant rule change. The Agency is thoroughly considering all public input submitted during the 75-day public comment period on the NOI as we develop the draft programmatic EIS and the new proposed rule.

The goal of the proposed regulation is to consider a broader range of potential harms, prevent potential gaps in oversight, improve clarity and transparency of risk assessments, and regulate by specifically identifying and including all GE organisms that may pose plant pest or noxious weed risks. Although APHIS will be conducting initial reviews of certain types of GE organisms that are not now subject to review, overall the proposed rule will lead to substantial regulatory relief that fosters innovation through a more efficient, risk-based system. APHIS will stay within the statutory authority of the PPA, and the public will have ample opportunity to comment on the proposed rule and the draft programmatic EIS. Based on the comments already received on the NOI, APHIS has modified the alternatives considered in its draft programmatic EIS.

Revising the current regulations will help ensure the appropriate oversight by the regulatory system and increase transparency, while continuing to provide a framework that fosters innovation to address some of society’s most pressing challenges.

Industry, Consumer, and Congressional Interest: Biotechnology itself is a controversial subject, with strong convictions both from those who oppose it and those who support it. Industry organizations currently regulated by APHIS are generally supportive of the concept of revising the regulations to reflect scientific advances and to better align regulation with risk. Some special interest groups/NGOs oppose genetic engineering in general and tend to resist any change they perceive as resulting in less regulation. Congressman Aderholt (R-AL) of the House Agriculture Appropriations Subcommittee has historically been interested in APHIS’ biotechnology and regulatory efforts.

Executive Branch Position to Date: APHIS has been communicating about a new rule throughout the Executive Branch for nearly two years, and has strong support from the Executive Office of the President, as well as our Coordinated Framework partners in Health and Human Services’ Food and Drug Administration and the Environmental Protection Agency, and from other USDA agencies. In September 2016, APHIS sent the proposed rule to the Office of Management and Budget for its review as part of the formal rulemaking process. When that review process is complete, APHIS intends to publish the proposed rule for public comment.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege
2. **Coordinated Framework**

**Issue:** The White House Office of Science and Technology Policy (OSTP) is leading a process to modernize the Federal regulatory system for products of biotechnology. This is to ensure that Federal regulatory agencies with jurisdiction over biotechnology products keep pace with rapidly changing science, without creating barriers to future innovation and competitiveness. The Executive Office of the President released two documents on September 16, 2016 as part of that effort.

**Public Policy Reason for APHIS Involvement:** The Coordinated Framework for the Regulation of Biotechnology (CF) describes the comprehensive Federal regulatory policy for ensuring the safety of biotechnology products and is comprised of the regulatory authorities and review efforts of the Food and Drug Administration (FDA), the Environmental Protection Agency (EPA), and the USDA. Advances in science and technology have dramatically altered the biotechnology landscape, enabling the development of products not envisioned when the CF was published. In addition, the complexity of the array of regulations and guidance documents developed by the three primary Federal agencies can make it difficult for the public to understand how the safety of biotechnology products is evaluated. Navigating the regulatory process for these products can be challenging, especially for small companies.

**APHIS’ Statutory/Regulatory Scope:** USDA’s authority to regulate genetically engineered (GE) plants falls under the Plant Protection Act (PPA). Under the PPA, APHIS regulates certain GE organisms that may be plant pests and pose a risk to plant health. The update of the CF is especially timely for USDA as it considers options for revising its regulations for the field-testing and development of new GE organisms. APHIS plans to better align its regulations with its statutory authority, better align its regulatory oversight with risks to plant health, and ensure its regulatory program is more consistent with the evolving science of genetic engineering. These activities support the goals of the OSTP in its effort to modernize the Federal regulatory system for products of biotechnologies.

**Items in Controversy:** The current regulatory system for the products of biotechnology effectively protects health and the environment. However, in some cases, unnecessary costs and burdens associated with regulatory uncertainty about agency jurisdiction, and lack of predictability of timeframes for review, for example, have grown. Updating the CF and laying the foundation for future updates is intended to help ensure the appropriate oversight by the regulatory system and increase transparency, while continuing to provide a framework for advancing innovation to address some of society’s most pressing challenges.

**Industry, Consumer, and Congressional Interest:** Biotechnology itself is a controversial subject, with strong convictions both from those who oppose it, and those who support it. Chairman Aderholt (R-AL) of the House Agriculture Appropriations Subcommittee has historically been interested in APHIS’ biotechnology and regulatory efforts.

**Executive Branch Position to Date:** APHIS, FDA, and EPA have been working closely with the Executive Office of the President (EOP) to modernize the CF.
On July 2, 2015, the EOP directed FDA, EPA, and USDA to update the CF by clarifying current roles and responsibilities, to develop a long-term strategy to ensure that the Federal biotechnology regulatory system is prepared for the future products of biotechnology, and to commission an expert analysis of the future landscape of biotechnology products to support these efforts. For the last 14 months, these agencies have analyzed Federal regulation of biotechnology products, reviewed more than 900 comments submitted in response to a Request for Information, and conducted three public meetings in different regions of the country, with presentations, case studies, and break-out “listening sessions.”

EOP released two products of this effort: the *Update to the Coordinated Framework for the Regulation of Biotechnology*, and the *National Strategy for Modernizing the Regulatory System for Biotechnology Products*.

The *Update to the Coordinated Framework for the Regulation of Biotechnology* offers the public a complete picture of the regulatory structure that provides oversight for the products of modern biotechnology, and present clarifying information about agency roles, responsibilities, and coordination. On September 22, 2016, the OSTP published a notice in the Federal Register asking for public comments on the proposed update to the CF. Comments will be accepted through November 1.

The *National Strategy for Modernizing the Regulatory System for Biotechnology Products* sets forth a 5-year vision for ensuring that the Federal regulatory system is equipped to assess efficiently the risks, if any, associated with future products of biotechnology while supporting innovation, protecting health and the environment, maintaining public confidence in the regulatory process, increasing transparency and predictability, and reducing unnecessary costs and burdens.

FDA, EPA, and USDA have also commissioned a report by the National Academies of Sciences, Engineering, and Medicine, titled “*Future Biotechnology Products and Opportunities to Enhance Capabilities of the Biotechnology Regulatory System.*” The report is expected to be released at the end of 2016 and will be used by the agencies to: 1) gain a better understanding of future products and how they fit within the U.S. regulatory system; 2) consider any necessary updates to scientific assessments; 3) consider any necessary updates to regulatory processes or procedures; and 4) enhance communication with stakeholders.
3. **Significant Biotechnology Issues**

**Issue:** The Federal government has been regulating genetically engineered (GE) organisms since 1987. As part of the regulatory process, APHIS ensures that developers, growers, and others take important steps to prevent unauthorized releases of GE organisms. However, there remain several significant issues, including the coexistence of GE crops with non-GE and organic crops, herbicide resistant weeds, the labeling of GE products and new and emerging technologies used to modify plant genes that require further consideration by both APHIS and other Federal agencies.

**Public Policy Reason for APHIS Involvement:** The biotechnology industry—valued worldwide at $280 billion—creates products that can improve medical care and increase agricultural production. While American farmers and consumers can benefit from the products, it is important to ensure that they do not pose a risk to America’s agricultural and natural resources. APHIS works to ensure new GE crops will not pose plant health risks when released into the environment.

**APHIS’ Statutory/Regulatory Scope:** The Plant Protection Act gives APHIS authority to regulate certain GE organisms that might pose a risk to plant health. APHIS regulates the introduction—meaning the importation, interstate movement, and field-testing—of certain organisms derived through biotechnology that may pose a plant pest risk.

**Items in Controversy:**

- **Coexistence:** USDA’s policy has been to support all forms of agriculture, including GE, non-GE and organic, and to strengthen coexistence among these agricultural production systems. In order to maintain the integrity of differentiated markets, farmers employ a variety of practices to prevent the accidental comingling of GE crops with other crops. When comingling does happen, some stakeholders have the strong opinion that the companies who patent, promote, and profit from GE products should be responsible for covering the losses associated with the impacted crops and for taking measures to prevent this from occurring in the future. Currently, there is no compensation mechanism for farmers impacted by unintended presence of GE in non-GE production. USDA is working with an Advisory Council (AC21) to identify measures that can promote and strengthen coexistence. These include:
  - Engaging stakeholders and seeking public input on how to foster communication and collaboration to strengthen coexistence.
  - Funding or conducting research relevant to crop stewardship and gene flow risk mitigation under USDA’s Biotechnology Risk Assessment Grants program.
  - Development of an approach for examining seed purity of holdings in the USDA/Agriculture Research Service National Plant Germplasm System.
- **Herbicide Resistant Weeds:** The Environmental Protection Agency (EPA) is currently the only Federal agency with authority to implement weed resistance management through the Federal Insecticide, Fungicide, and Rodenticide Act. APHIS’ role in this effort is to promote the use of best management practices during GE field trials, especially for field trials of herbicide resistant crops. APHIS is collaborating USDA’s Natural Resources Conservation Service, the Office of Pest Management Policy, the EPA, and the Weed Science Society of America to better understand impediments to the adoption of weed management strategies and to identify ways to encourage producers to adopt diverse tactics for weed management, including herbicide control.

- **Labeling:** APHIS has no direct role in the labeling of GE products. The Food and Drug Administration has issued labeling guidance for companies who wish to voluntarily label their products, and several food companies are doing so. Additionally, States have considered laws to mandate labeling for food products. In July 2016, Congress passed a disclosure law that requires most food packages to carry a text label, symbol or electronic code to indicate whether the food contains biotech material. The President signed the bill on August 1, 2016; this law preempts any state laws. The authority provided by the July 2016 law was delegated to the Agricultural Marketing Service.

- **Gene Editing Technology:** Several methods of gene editing (Zinc Fingers, TALENs and CRISPRs) are now being used to modify crops. For example, in 2015, APHIS responded to two inquiries regarding the need for regulation for products developed with CRISPRs. For both products, a white button mushroom developed by Penn State, and waxy corn developed by DuPont Pioneer, the only change to the plant genome was a deletion. APHIS determined that neither product falls under APHIS regulations because no genetic material from plant pests was inserted into the final genomes. APHIS also concluded that neither plant presents a risk to plant health as weeds. However, APHIS regulates GE plants produced using genome editing techniques if plant pest DNA is inserted in the final product or otherwise poses a risk to plant health.

**Industry, Consumer, and Congressional Interest:** There are a wide variety of viewpoints on these issues - some stakeholders believe that GE products are too dangerous and need more regulation (or should be banned), while others believe that APHIS should expedite the deregulation of products. Consumers are very supportive of product labeling. In 2015, Congressman Bishop (D-GA) asked about coexistence, and Congresswoman Pingree (D-ME) asked about “superweeds” as part of the House Agriculture Appropriations hearing. Congresswoman Pingree also states that consumers want to know what is in their food (labeling) and growers do not want their crops contaminated.

**Executive Branch Position to Date:** APHIS supports all forms of agriculture. We hear the concerns of all types of farmers and where able, are providing dedicated resources to address public concerns.
International Services

1. Engagement with Cuba

Issue: The decision to extend diplomatic relations to Cuba has already led to greater movement of people; ultimately, it may also entail increased U.S. agricultural exports and the lifting of the current U.S. embargo on Cuban imports. Given decades of limited contact, however, relatively little is known about the current state of Cuban agriculture, including its plant and animal pests and diseases. On the first official USDA visit to Cuba since 1961, focused on strengthening bilateral agricultural engagement, Secretary Vilsack recommended that Cuba complete detailed pest risk analyses to start the decisionmaking process for exports when the embargo is lifted. If trade restrictions are lifted and the United States allows imports from Cuba, domestic producers may be concerned about the introduction of potentially harmful plant and animal pests and diseases under APHIS’ purview, including screwworm and classical swine fever—both eradicated in the United States—and possibly fruit flies and other threats.

Public Policy Reason for APHIS Involvement: APHIS safeguards U.S. agricultural and natural resources against the entry, establishment, and spread of significant pests and diseases, while facilitating the safe and fair trade of agricultural products.

APHIS’ Statutory/Regulatory Scope: In accordance with the Plant Protection Act and the Animal Health Protection Act, APHIS safeguards U.S. agriculture from potentially harmful plant and animal pests and diseases that may be present in Cuba.

Items in Controversy: APHIS’ Cuban counterparts wish to begin exporting agricultural products to the United States. Similarly, many U.S. agricultural industries and States are interested in opening or expanding markets for U.S. products—particularly rice, wheat, soybeans, pork, poultry, and corn—to Cuba.

Industry, Consumer, and Congressional Interest: In 2015, the United States exported $148 million worth of agricultural products to Cuba. U.S. poultry and soybean producers account for a large share of these exports and have a vested interest in expanded trade relations. Other industry groups, including the American Farm Bureau Federation, the American Feed Industry Association, the International Dairy Foods Association, the National Farmers Union, and the U.S. Grains Council have also expressed significant interest in a more open Cuban market. During the November 2015 USDA visit to Havana, Secretary Vilsack was accompanied by APHIS Administrator Kevin Shea, U.S. Senator Jeff Merkley (D-Oregon), and U.S. Representatives Terri Sewell (D-Alabama), Suzan DelBene (D-Washington), and Kurt Schrader (D-Oregon).

Executive Branch Position to Date: For many years, APHIS has sought to stay current on potential Cuban agricultural risks through its offices in Puerto Rico, the Dominican Republic, Haiti, and Trinidad and Tobago. APHIS has also participated in regional initiatives such as CaribVET and the Caribbean Plant Health Directors Forum, which facilitates information exchange between APHIS and Cuban regulatory counterparts. APHIS has supported U.S.
exporters through such successful actions as working with Cuban counterparts to lift bans on U.S. poultry imports related to highly pathogenic avian influenza and ensuring Cuban recognition of the United States as a country at negligible risk for bovine spongiform encephalopathy.

Along with the signing of a Memorandum of Understanding establishing bilateral cooperation in the U.S. and Cuban agricultural and forestry sectors, APHIS has been involved in workplan negotiations to develop relationships with Cuban animal and plant health counterparts and address risks from established pests and diseases in Cuba. APHIS recently sent an employee on detail to Cuba to facilitate information exchanges between APHIS plant and animal health experts and their Cuban counterparts.

Potential Alternative Approaches:

Plant Protection and Quarantine

1. **Argentine Lemon Imports**

**Issue:** Argentina has requested that APHIS amend its regulations to allow the importation of lemons from the northwest region of that country into the United States. APHIS approved market access for Argentine lemons in 2000, but in October 2001 the U.S. citrus industry filed a lawsuit opposing this decision and APHIS stopped importations.

In 2013, Argentina requested consultations with the United States through the World Trade Organization (WTO) regarding market access for Argentine lemons. In response, in April 2014 APHIS completed a pest risk analysis, and in June 2015 conducted a site visit. In May 2016 APHIS used this information to publish a proposed rule (Docket No. APHIS-2014-0092-0001) that would allow the importation of lemons from Northwest Argentina under a systems approach. The systems approach would require a series of safeguards to effectively mitigate pest risk.

In September 2016, after an extended comment period that ended on August 10, 2016, APHIS conducted another site visit during peak growing season to verify that Argentina had implemented the proposed mitigation measures. The Agency then shared its findings with industry and other stakeholders that its site visit confirmed that Argentina has a system of safeguards in place to mitigate any pest risk. If the Office of Management and Budget (OMB) designates the rule not significant, APHIS intends to publish a final rule by December 2016. If it is deemed significant, publication would likely be 3 to 4 months later.
Public Policy Reason for APHIS Involvement: APHIS safeguards U.S. agriculture and natural resources against the entry, establishment, and spread of significant pests, while facilitating the safe and fair trade of agricultural products.

APHIS’ Statutory/Regulatory Scope: APHIS regulates the importation of fruits and under the Plant Protection Act and our regulations in “Subpart—Fruits and Vegetables” (7 CFR 319.56-1 through 319.56-74).

Items in Controversy: Argentina began consultations through the WTO and, if the rule is not finalized, would likely proceed with the dispute. If this rule is finalized, the U.S. citrus industry may again attempt to block imports through legal action, as it did 2001.

Industry, Consumer, and Congressional Interest: There is both support for and opposition to the rule. There is congressional support from representatives of States with large ports who believe there would be an economic benefit to granting market access. Industry and legislators from citrus-growing States strongly oppose the rule. Congresswoman Rosa DeLaura (D-CT) also expressed concerns that the United States would make regulatory concessions due to WTO involvement.

Executive Branch Position to Date: APHIS has determined the systems approach will mitigate pest risk; the current administration believes the rule is necessary to strengthen the trade relationship with Argentina and avoid issues with the WTO.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

2. European Union (EU) Apple and Pear Imports

Issue: The EU requested that APHIS amend its regulations to replace the current preclearance program with a systems approach for the importation of apples and pears from certain member countries: Belgium, Germany, France, Italy, Poland, Portugal, Spain, and the Netherlands. Under the current preclearance program, we require producers in the exporting countries to contribute to a trust fund to cover the cost of APHIS inspection in the exporting country, as well as any risk mitigation measures. The systems approach, which combines a series of risk mitigation measures, would eliminate this preclearance inspection protocol and rely on individual countries’ National Plant Protection Organization to ensure that producers carry out required risk mitigation activities in fields and packing houses. APHIS plans to conduct an annual audit of the systems approach and works with the Department of Homeland Security’s Customs and Border Protection to carry out inspections of arriving apple shipments to ensure compliance with the U.S. import requirements.

In 2015, APHIS published a risk management document that outlined risk mitigation measures necessary to address previously identified pest risks. These measures are essentially the same as
those used in the current preclearance program. APHIS published a proposed rule (Docket No. APHIS-2015-0073-0001) in January, 2016 reflecting the change to a systems approach.

**Public Policy Reason for APHIS Involvement:** APHIS safeguards U.S. agriculture and natural resources against the entry, establishment, and spread of significant pests, while facilitating the safe and fair trade of agricultural products.

**APHIS’ Statutory/Regulatory Scope:** APHIS regulates the importation of fruits and under the Plant Protection Act and our regulations in “Subpart—Fruits and Vegetables” (7 CFR 319.56-1 through 319.56-74).

**Items in Controversy:** Poland was a late addition to the list of countries seeking market access. However, unlike the other countries on the list, APHIS has not completed a separate pest risk assessment for Poland because that country’s pests were previously identified and analyzed in published materials.

**Industry, Consumer, and Congressional Interest:** Industry and some legislators have expressed concern about pest risk generally and specifically with regard to Poland. In March 2012, the EU banned the import of U.S. apples based on their reduced tolerance level for a chemical used by U.S. producers to mitigate disease risk. U.S. stakeholders are concerned about the resulting trade imbalance.

**Executive Branch Position to Date:** APHIS determined the systems approach will mitigate the risk of pest introductions and that imports would not pose a threat of pest introduction. APHIS is proceeding with decision making at this time.

**Potential Alternative Approaches:** [b](5) Deliberative Process Privilege

**3. Potatoes to Mexico**

**Issue:** The U.S. potato industry has long wanted market access for U.S. fresh, table-stock potatoes to all of Mexico, but efforts toward this goal have met a series of ongoing roadblocks. In 2003, APHIS and Mexico’s Ministry of Agriculture, Livestock, Rural Development, Fish, and Food (SAGARPA) signed an operational work plan that allowed immediate access for U.S. fresh, table-stock potatoes to Mexican markets within a 26-kilometer border zone. Provisions in the work plan also anticipated that expansion of market access for U.S. table-stock potatoes to all of Mexico would be phased in over time. Exports of U.S. seed potatoes for planting were excluded from this agreement.

In the spring of 2014, APHIS published a new regulation to authorize Mexico to export fresh table-stock potatoes to the United States, and SAGARPA issued new regulations allowing the long-awaited access for U.S. table-stock potatoes to all States in Mexico. APHIS and
SAGARPA then signed new work plans to harmonize the two countries’ mutual trade in potatoes. Beginning on May 19, 2014, U.S. exporters shipped about 15.5 million pounds of product into Mexico’s expanded markets. However, after just a few weeks of expanded access, a Mexican court issued an injunction suspending SAGARPA’s new potato regulations in response to a series of lawsuits filed by the National Confederation of Potato Producers. Under the injunction, U.S. potato exporters were allowed continued access to the original 26-kilometer border area. Mexican exporters to date have not shipped any fresh potatoes to the United States.

On May 26, 2016, SAGARPA officially cancelled its 2014 regulation, and on June 6, 2016 provided APHIS with a new work plan for comment, which both APHIS and U.S. industry considered to be too restrictive. APHIS provided its comments to SAGARPA on June 10, 2016. On July 15, 2016, Mexican President Peña Nieto issued a presidential order authorizing the market expansion for U.S. fresh table-stock potatoes to all Mexico as a temporary measure until SAGARPA could publish new regulations for the import of U.S. table-stock potatoes. However, on July 20, a Mexican court issued yet another injunction that suspended President Nieto’s executive order.

U.S. industry representatives have estimated that U.S. table-stock potato exports could increase from the approximately $40 million worth of fresh potatoes currently exported to the 26-kilometer border zone to $150 million or more if U.S. exporters had market access to all of Mexico for table-stock potatoes.

Public Policy Reason for APHIS Involvement: APHIS safeguards U.S. agriculture and natural resources against the entry, establishment, and spread of significant pests, while facilitating the safe and fair trade of agricultural products.

APHIS’ Statutory/Regulatory Scope: Under the Plant Protection Act, APHIS has authority to establish import regulations to safeguard U.S. agriculture. As the recognized National Plant Protection Organization for the United States, APHIS is authorized to represent overall U.S. agricultural interests in bilateral trade negotiations concerning the import and export of agricultural commodities. As a signatory of the International Plant Protection Convention (IPPC), APHIS plays a key leadership role in protecting the world’s plant resources from pests and diseases. APHIS’ membership in the IPPC fosters international relationships on behalf of our stakeholders to support new market access, market expansion, and market retention for U.S. exports.

Items in Controversy: The plaintiffs representing Mexico’s potato producers claim that imported U.S. table-stock potatoes, although labeled for consumption only, would put Mexico’s agriculture at risk from as many as 60 quarantine pests and diseases because the potatoes could be diverted for agricultural production in Mexico. One of the bilaterally agreed-upon phytosanitary mitigations in the 2014 work plan required U.S. potato shipments to be pretreated with an anti-sprouting solution that would minimize any risk of the potatoes being diverted for agricultural purposes. Under the IPPC to which both the United States and Mexico are signatories, the intended use of a commodity must be taken into account when establishing any phytosanitary restrictions on a commodity.
Industry, Consumer, and Congressional Interest: The U.S. potato industry supports the Federal Government’s efforts to press at all levels for a resolution that would allow full access to Mexico’s fresh potato market. APHIS has not received any Congressional inquiries on this issue since 2011.

Executive Branch Position to Date: Although the Office of the U.S. Trade Representative has closely monitored this situation, the resolution of this matter remains within Mexico’s court system.

Potential Alternative Approaches: [b]Deliberative Process Privilege

4. Fruit Flies/Sterile Fruit Fly Facilities

Issue: U.S. agriculture is at risk from exotic fruit flies that could enter the United States across our southern border as well as through infested host plants, fruits, and vegetables that unintentionally or illegally enter the country. Southern Texas faces a continuous threat from introductions of Mexican fruit fly (Mexfly), and Florida and California experience frequent introductions of Mediterranean fruit fly (Medfly) and Oriental fruit fly (OFF). Medfly, OFF, Malaysian fruit fly, and melon fly are established in Hawaii and continually threaten the mainland. Because the larvae of these exotic species can feed on more than 400 host plants and render fruit inedible, they are among the most destructive pests of fruits and vegetables around the world. The establishment of any of these species within the continental United States would cause significant economic losses from the damage to host commodities, the costs associated with implementing control measures, and the loss of export markets.

To prevent the introduction and establishment of exotic fruit flies, APHIS employs a proven strategy involving surveillance trapping, quarantine restrictions, port of entry inspections, and mating disruption using sterile insect technique. Use of the sterile insect technique (SIT) has remained a key component of its cooperative exotic fruit fly control programs for over 30 years. SIT involves the mass-rearing of sterilized exotic fruit flies. When released, sterile male fruit flies mate with wild females, which disrupts natural breeding and the production of progeny because the female’s eggs remain unfertilized. Through continuous releases, this form of mating disruption significantly reduces wild fly populations and aids eradication.

USDA maintains cooperative programs with the governments of Mexico, Guatemala, and Belize, which employ SIT and other mitigation strategies to diminish the populations of exotic fruit flies in those countries. These cooperative efforts reduce destruction of fruit, improve local food production, and decrease the pest risk to the United States.
APHIS also operates domestic SIT facilities in California, Florida, and Texas. The California and Florida facilities currently receive sterile Medfly pupae from the facility in Guatemala, and the Texas facility receives some supplemental Mexfly pupae from Guatemala. The domestic facilities rear and release hundreds of millions of sterile Mexflies and sterile male Medflies each week for ongoing preventive release efforts and domestic outbreak eradication campaigns against these two pests. However, APHIS and State cooperative fruit-fly program managers have completed comprehensive evaluations of all of the domestic SIT facilities and determined that these facilities were all beyond their useful lifespan, have inefficiencies that lead to production losses, and—in some cases—pose health and safety concerns for workers. New domestic facilities would also allow for a significant increase in the quantities of sterile Medflies and Mexflies produced, which could enable the United States to become self-sustaining in sterile fruit-fly production and provide a reserve capacity for mitigating any future outbreaks required to protect U.S. agricultural resources. Because the landowners of the Florida facility have opted not to renew the lease that will expire in 2017, work to replace that facility has already begun.

**Public Policy Reason for APHIS Involvement:** APHIS’ efforts, in cooperation with State officials and industry stakeholders, to prevent exotic fruit flies from becoming established in the United States directly protects approximately $5 billion in citrus and tree fruit production.

Although one of the long-term goals of APHIS’ Fruit Fly Exclusion and Detection Program is to eradicate Medfly throughout Guatemala, the more realistic aim—given current resources and available technology—is to prevent Medfly’s northward movement into Mexico and the United States.

**APHIS’ Statutory/Regulatory Scope:** The Plant Protection Act authorizes APHIS to take action against plant pests that cause damage to agricultural assets, to prevent such pests from entering and establishing in the United States, and to cooperate with other countries in taking such actions.

**Items in Controversy:** Due to violence and security issues in areas surrounding the northern border of Mexico, Mexfly surveillance and SIT preventive-release activities in these regions have significantly decreased and in some cases stopped. This has significantly increased the Mexfly threat to Texas. Because all of the domestic SIT facilities in Florida, Texas, and California are in a serious state of physical decline and need to be replaced, APHIS will need additional funding to replace all of those facilities and ensure production of sufficient quantities of sterile fruit flies to protect vulnerable agricultural areas of the United States.

**Industry, Consumer, and Congressional Interest:** Susceptible producers in the South and Southwest, and in the citrus industry in particular, strongly support APHIS’ safeguarding efforts and fruit fly eradication campaigns. Industry, most notably Texas Citrus, has asked Congressman Vela (D-TX) and others to seek Congressional funding for upgrades to SIT facilities that produce and release sterile fruit flies in Florida, California, and Texas. Congressman Rooney (R-FL) has questioned APHIS’ capacity to produce sufficient quantities of sterile Mexfly.
Executive Branch Position to Date: APHIS’ total appropriation for its domestic and international exotic fruit fly eradication and control efforts totaled $59.6 million in fiscal year 2016. Through this funding, APHIS maintains a cooperative, nationwide trapping and surveillance program, which serves as an early warning system for pest introductions. In addition, USDA continues to prioritize cooperative programs with foreign governments. APHIS’ efforts also include mounting domestic quarantine eradication campaigns in response to exotic fruit fly introductions. During the past two years, unprecedented numbers of exotic fruit fly introductions have occurred in Florida, Texas, and California. All Medfly and OFF infestations in the mainland United States have now been eradicated, but five of the eight Mexfly quarantines established in southern Texas during the year remain in place.

The House Appropriations Committee included $30 million for APHIS in the FY 2017 Agriculture Appropriations.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

5. Citrus Health Programs

Issue: The presence in the United States of exotic citrus diseases, especially citrus canker and Huanglongbing (HLB, aka citrus greening)—which is spread by the Asian citrus psyllid (ACP)—hampers the ability of commercial citrus industries to produce, harvest, process, domestically move, and internationally export healthy fruit and clean plant stock. APHIS supports citrus health-related activities through its Citrus Health Response Program (CHRP) and its leadership in USDA’s HLB-Multiagency Coordination (MAC) Group.

APHIS has established Federal quarantines for citrus canker, HLB, and ACP in parallel with quarantines already imposed at the State level.

- The entire State of Florida, as well as portions of Louisiana and Texas, are quarantined for citrus canker.
- The entire States of Florida and Georgia, as well as portions of Louisiana, Texas, and California, are quarantined for HLB. All of Guam, Puerto Rico, the U.S. Virgin Islands, and the Northern Mariana Islands are also quarantined for HLB. The biology of HLB does not lend itself to early detection or eradication.
- The entire States of Florida, Georgia, Alabama, Mississippi, Louisiana, Arizona, and Texas, as well as portions of South Carolina, Nevada, and California, are quarantined for ACP. All of Guam, the Northern Mariana Islands, and American Samoa are also quarantined for ACP.
Public Policy Reason for APHIS Involvement: The United States ranks third overall in citrus production globally, and the packinghouse-door value of U.S. citrus production in 2015 was more than $3 billion. In addition, approximately 100,000 U.S. jobs are generated from the harvesting, packing, processing, transportation, and retail sale of fresh and processed citrus fruit and citrus nursery stock production.

APHIS' Statutory/Regulatory Scope: Section 412(a) of the Plant Protection Act of June 20, 2000, as amended, 7 U.S.C. 7701, provides APHIS with broad authority to prohibit or restrict the movement in interstate commerce of any plant, plant part, article, or means of conveyance if necessary to prevent the introduction or dissemination of a plant pest, including citrus pests/diseases.

Items in Controversy: Although tree removal is the best way to stop the spread of HLB and citrus canker, there has been some resistance to removing trees, especially from residential citrus owners. Additionally, trees infected by HLB can take years to develop symptoms, further fostering opposition to tree removal. Industry is pushing for early detection technologies, but regulatory applicability of these technologies has not been established. There has also been some resistance to spray programs to control ACP populations. Each citrus-producing State—in particular Florida and California—has different priorities, diverse approaches to disease management, and wants a larger share of CHRP funding.

Industry, Consumer, and Congressional Interest: The citrus industry is a strong supporter of CHRP. Congressman Rooney (R-FL) represents a citrus-growing district and submitted questions for the record about the proposed decrease in Federal cost-share for CHRP during budget hearings. In July 2016, Congressman Denham (R-CA) inquired about funding sources to help California combat HLB. Congress provided $20 million in 2-year funding for FY 2014/15 to help establish the HLB MAC Group, and provided an additional $5.5 million in two-year funding for its continuation in FY 2016/17.

Executive Branch Position to Date: Secretary Vilsack established the HLB-MAC in December 2013 as a means to coordinate the response of Federal, State, and industry in order to reduce the impact of HLB on the U.S. citrus industry. The HLB-MAC’s mission is to provide producers with the practical tools and solutions they need in the near-term to allow them to remain economically viable until longer-term solutions are developed. The HLB-MAC’s priority projects include field-testing antimicrobials and mitigations such as thermotherapy, establishing model groves, and enhancing biological controls for ACP.

CHRP’s mission is to compile best practices to sustain the U.S. citrus industry, maintain grower's continued access to export markets, and safeguard citrus-growing States against a variety of citrus diseases and pests. CHRP provides guidelines for nursery stock product compliance and fruit inspection, treatment, and certification, and funds operational activities, such as surveillance and monitoring, packing house inspections, and release of biocontrol agents to suppress ACP.
6. Agricultural Quarantine Inspection (AQI) User Fees

Issue: In October 2015, APHIS published a final rule in the Federal Register to update the AQI user fee rates. The Agency had two goals: 1) ensuring that collections for each fee type covers the costs associated with that fee and did not over-charge or under-charge by fee type and 2) increasing overall revenue to cover program costs adequately and maintain a reasonable reserve. APHIS lowered two of the existing fees (international airline passengers and commercial rail cars) and raised four fees (commercial aircraft, commercial vessels, and trucks—for both individual crossings and decals). Additionally, APHIS added new fees for international cruise ship passengers and for monitoring treatments of imported commodities such as fruits and vegetables. [See table below for a comparison of old and new fees.]

Public Policy Reason for APHIS Involvement: Through the AQI program, APHIS and the Department of Homeland Security’s Customs and Border Protection (CBP) safeguard U.S. agricultural and natural resources from the introduction of invasive pests and diseases associated with the movement of people and goods around the world. APHIS collects user fees for AQI services conducted at ports of entry in connection with the arrival of imports, means of conveyance, and passenger baggage. These services are designed to prevent the entry of foreign pests and diseases that could harm U.S. agricultural or natural resources. APHIS had last updated AQI user fees in December 2004. Since then, there has been an 82 percent increase in the value of imported goods, a 42 percent increase in international passengers, and CBP has added hundreds of inspectors and invested in X-ray machines and other technology, as well as canine teams. Prior to the 2015 revisions, AQI user fee collections had not kept pace with the costs of the program. CBP’s personnel costs in particular had increased significantly since the last time the fees were updated due to grade increases in journey-man level inspector positions and increases in the number of inspection personnel.

APHIS’ Statutory/Regulatory Scope: The Food, Agriculture, Conservation, and Trade (FACT) Act of 1990 authorized USDA to implement user fees to cover AQI costs associated with international arrivals. APHIS continues to receive appropriated funds for AQI inspections of passenger baggage and cargo traveling from Hawaii and Puerto Rico to the mainland United States to prevent pest and disease introductions from these locations. Following the establishment of DHS in 2003 (based on the Homeland Security Act of 2002), the inspection function at ports of entry (with the exception of inspections of imported plants) transferred to CBP. DHS also has appropriated funds to cover inspections of pedestrians and bus passengers entering the United States, among other things. APHIS continues to collect AQI user fees and transfers a portion of the AQI collections to CBP to cover that Agency’s costs. APHIS continues to assess risks associated with imports, set import regulations and inspection policies, inspect imported plant shipments, train CBP agricultural specialists and detector dog teams, monitor fumigations and other treatments of imported commodities, and provide the scientific support
necessary for the program, among other things. This account is subject to the sequestration of mandatory funds each year.

**Items in Controversy:** The industries affected by the increased fees as well as those affected by the newly implemented fees have objected to the new rates. The Air Transit Association filed a lawsuit on May 13, 2016, objecting to the new rate for commercial aircraft, which increased from $70.75 to $225.00. The complaint alleges that APHIS’ final rule updating the AQI fees does not comply with several provisions of the FACT Act, which requires that the fees associated with each fee type cover the costs of services for that fee type and not cross-subsidize inspection activities for other classes of fee payers. It states that APHIS did not provide adequate information demonstrating the $225 fee was necessary to cover costs of inspecting aircraft and states that the commercial aircraft fee itself is not authorized by the FACT Act, among other items. With assistance from APHIS, the U.S. Department of Justice filed an answer to the complaint and filed the administrative record. Plaintiffs’ motion for summary judgment is due in March, 2017.

The bulk of the collections under the new rates began mid-year in FY 2016, and APHIS is still evaluating collection levels under the new fees. We anticipate FY 2016 collections will total approximately $675 million. While this reflects a substantial increase from the previous year, the initial projection was approximately $727 million. APHIS will continue to evaluate AQI collections and determine whether they are adequate to maintain the program. [See table below showing AQI collections and spending.]

**Industry, Consumer, and Congressional Interest:** While agricultural stakeholder groups support the AQI program, AQI fee payers—particularly the airline and commercial trucking industries—objected to the new rates. When APHIS published the proposed rule, members of Congress requested and APHIS agreed that the public comment period be extended by 60 days.

**Executive Branch Position to Date:** When developing the new rates, APHIS contracted with an independent firm to review the AQI user fee schedule to determine what adjustments were needed to ensure fees are commensurate with the cost of the AQI program. The company conducted an extensive analysis, and—based on its recommendation—APHIS implemented activity based costing models to help track costs related to the various fee types. APHIS conducted significant outreach to affected industries, including holding six stakeholder engagements throughout the process of developing a proposed rule. APHIS carefully considered the public comments on the proposed rule and the feedback received through the various stakeholder meetings, calls, and webinars, and made several adjustments in the final rule in response to information provided by stakeholders. One of the changes involves phasing in a new fee—treatment monitoring services—over 5 years and lowering the full fee from the proposed $375 rate (which included costs built in for overtime pay for employees) to $237 (however, reimbursable overtime would be charged for services provided outside of normal business hours).
7. **Farm Bill Section 10007**

**Issue:** APHIS is charged with implementing Section 10007 of the 2014 Farm Bill (Agricultural Act of 2014) to prevent the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. Section 10007 contains the Plant Pest and Disease Management and Disaster Prevention program with projects organized around six goal areas: enhancing plant pest/disease analysis and survey; targeting domestic inspection activities at vulnerable points in the safeguarding continuum; increasing identification capacity and enhancing and strengthening pest detection technology; safeguarding nursery production; conducting outreach and education; and enhancing mitigation and rapid response capabilities. It also contains the National Clean Plant Network (NCPN) with a focus on supporting clean plant center networking, diagnostics, therapeutics, and foundation plantings. Through these programs, APHIS provides funding to a variety of entities, including State departments of agriculture, academic partners, non-profit organizations, and other Federal agencies. APHIS accepted suggestions for FY 2017 projects for the Plant Pest and Disease Management and Disaster
Prevention Program from July 11, 2016, through August 19, 2016. A panel of USDA, State, and industry representatives are evaluating these projects on specific goal areas that represent critical needs and opportunities to strengthen, prevent, detect, and mitigate invasive pests and diseases. APHIS is accepting suggestions for the National Clean Plant Network from August 17, 2016, through October 26, 2016.

Public Policy Reason for APHIS Involvement: APHIS safeguards U.S. plant health against introductions of foreign pests and diseases through a variety of exclusion, early detection, and mitigation programs. The Farm Bill program enhances APHIS’ efforts to detect new plant pests and diseases and provides a source of funds for rapid response to small-scale outbreaks of plant pests and diseases. Through the NCPN, the program also provides sources of disease-free, high-value nursery stock to growers, enabling them to import desirable varieties of items such as grapevines, stone fruit trees, and berries (among others) from other countries without posing disease risks to existing agricultural production. The program also produces clean materials from domestic stock. APHIS continually evaluates pest and disease threats to U.S. agriculture and engages in regular communication with stakeholders and government partners, providing the Agency with knowledge of the most pressing plant health issues.

APHIS’ Statutory/Regulatory Scope: Section 10007 of the 2014 Farm Bill combined two programs previously authorized in the 2008 Farm Bill – formerly Sections 10201 for the Plant Pest and Disease Management and Disaster Prevention Program and Section 10202 for the NCPN. The 2014 Farm Bill provided permanent authorization for the annual transfer of funds from USDA’s Commodity Credit Corporation at the rate of $62.5 million in FY 2014 through FY 2017, and $75 million in FY 2018 and beyond. At least $5 million must go towards NCPN. This account is subject to the sequestration of mandatory funds each year. In FY 2017, $58.187 million will be available after sequestration is applied.

Items in Controversy: As required by the Farm Bill, APHIS seeks input from the National Plant Board, State departments of agriculture, and land grant universities to develop overall goals for the program and review project suggestions. APHIS has also consulted the Specialty Crop Farm Bill Alliance, industry organizations, other Federal Agencies, and non-governmental stakeholders to develop goals and review annual spending plans. Each year, APHIS receives more project suggestions than it can fund, and cooperators sometimes raise concerns when a specific project does not receive funding.

Industry, Consumer, and Congressional Interest: The program has broad support from APHIS stakeholders and Congress, including the Agriculture Committees and the Appropriations Committees.

Executive Branch Position to Date: Since 2009, APHIS has funded more than 2,200 projects in 50 States and 2 U.S. territories, supporting a variety of stakeholders, including Federal, State, academic, Tribal, and private entities. In FY 2016, APHIS provided Plant Pest and Disease Management and Disaster Prevention funding to 50 States plus Guam and Puerto Rico to implement 412 projects suggested by universities, States, Federal agencies, nongovernmental organizations, non-profits and Tribal organizations. For NCPN, APHIS supported 22
suggestions in 17 States that focus on providing high-quality propagative plant material for fruit trees, grapes, hops, berries, citrus, roses and sweet potatoes that is free of targeted plant pathogens and pests.

Major projects funded by the 2014 Farm Bill include eradication of exotic fruit fly outbreaks, nationwide surveys of honey bee pests and diseases, support of canine detector teams in California and Florida, and response to the giant African snail in Florida, among many others.

APHIS has also used portions of PPDM funding to initiate emergency programs for emerging and high-priority pests impacting agricultural resources, such as the giant African snail in Florida, the European grapevine moth in California, and the coconut rhinoceros beetle in Hawaii.

Potential Alternative Approaches: [b][5] Deliberative Process Privilege

**Veterinary Services**

1. **Highly Pathogenic Avian Influenza (HPAI)**

   **Issue:** The 2014-2015 outbreak of highly pathogenic avian influenza (HPAI) was the worst animal disease outbreak in U.S. history, affecting commercial premises, backyard flocks, captive birds, and wild birds in 21 States and costing USDA more than $1 billion. Nearly 50 million commercial birds (7.5 million turkeys and 42.1 million egg-layer and pullet chickens) were depopulated or died from the disease. The outbreak involved several H5 Eurasian-origin strains of the virus that caused substantial mortality. While these strains were not transmitted to people, there is always a chance that HPAI can mutate and become infectious to humans. The longer the virus circulates, the greater the chance this can happen.

   APHIS coordinated the Federal and State response to the outbreak—which included cleaning and disinfection, environmental sampling, and restocking of affected facilities—in addition to enhancing wild bird surveillance efforts. Although APHIS’ response was swift and comprehensive, one of the biggest lessons learned was that the Agency’s capacity to effectively address large animal health events has eroded over the years. Current funding for animal health activities is below levels that were available to APHIS 10 years ago. For fiscal year 2017, APHIS requested an additional $30 million to improve its readiness for responding to animal health emergencies. APHIS would use that funding to rebuild its workforce and optimize its emergency readiness and response capabilities.

   **Public Policy Reason for APHIS Involvement:** The American public and industry expect the Federal Government to lead efforts to protect U.S. agriculture and natural resources from threats posed by exotic animal and plant pests and diseases. APHIS partners with States and industry to preview costly animal diseases outbreaks and protect U.S. poultry and livestock.
Further HPAI-related losses to the U.S. poultry industry could be catastrophic and cause billions of dollars in damage to allied industries as well as to the local and national economy. Poultry and poultry product shortages and price increases could result for consumers.

**APHIS’ Statutory/Regulatory Scope:** The Animal Health Protection Act, 7 United States Code 8301 et seq., authorizes the Secretary of Agriculture to, among other things, detect, control, or eradicate any disease or pest of livestock. This authority has been delegated to APHIS.

**Items in Controversy:** During the 2014-2015 HPAI outbreak, APHIS used indemnity calculators (i.e., formulas) to determine the fair market value of birds that were destroyed as part of the disease response. Egg layer and turkey producers raised concerns about these formulas. While APHIS is working to finalize proposed changes in response to some of these concerns, the changes likely will not fully satisfy those producer organizations that have proposed alternative formulas, including formulas that compensate owners for downtime. APHIS’ position has been that paying for downtime losses essentially provides a safety net to producers that insurance, not indemnity payments, should provide.

**Industry, Consumer, and Congressional Interest:** As a result of the outbreak, the poultry and turkey industries incurred roughly $1 billion and $530 million dollars respectively in direct losses. Egg layer and turkey producers did not believe APHIS’ indemnity payments adequately covered the losses their industries incurred and as a result, asked for changes to APHIS’ indemnity calculators. Local economies and allied industries in some particularly hard-hit areas such as Minnesota and Iowa also suffered substantial losses, and the overall economy-wide losses were estimated at $3.3 billion (including losses due to international trade impacts). Additionally, egg supplies decreased and costs rose for consumers. Public health agencies and animal advocacy organizations also have a considerable stake in this issue, given the possible human health implications of HPAI and animal welfare concerns involved.

The U.S. Senate Agriculture, Nutrition, and Forestry Committee held a hearing on the impact of the HPAI outbreak on the poultry sector in July 2015. Congressional representatives, particularly those representing affected districts, have contacted USDA about logistical aspects of the response, producer indemnification and APHIS’ calculators, and vaccine development and use.

**Executive Branch Position to Date:** The Administration made over $1 billion available to address the 2015-2016 HPAI outbreak, and the FY 2017 President’s budget request included an increase of $30.338 million to improve APHIS’ readiness for responding to animal health emergencies, in part based on lessons learned during the HPAI outbreak. APHIS has taken steps to prepare for future cases, including improving wild bird surveillance to enable early detection; improving capabilities to rapidly detect HPAI in domestic poultry and depopulate affected flocks within 24 hours; and, streamlining the indemnification process so that producers can be compensated fairly and return to production quickly. APHIS also has conducted planning meetings with industry to promote improved biosecurity practices and design a biosecurity auditing system to ensure that these practices are followed.
In February 2016, APHIS published an interim rule that, among other things, provided a formula to allow indemnity payments to be split between poultry and egg owners and their contracted growers. Such a system was already in place for low pathogenicity AI. The interim rule also required owners and contract growers to provide a statement certifying that a biosecurity plan was in place at the time HPAI was detected in order to receive indemnity. Although APHIS’ epidemiological investigations concluded there was not enough evidence to pinpoint a specific pathway or pathways for the spread of the virus, comprehensive and stringent biosecurity practices are crucial to reducing the risk of HPAI infection from wild birds, equipment, and clothing.

APHIS also implemented a new indemnity calculator for egg layers following robust internal discussions about what factors should inform appropriate indemnity amounts for these birds. The new calculator took effect on October 1, 2016, and will be used for any future indemnity payments. It was not applied retroactively.

One of the challenges in determining fair market value for laying hens is the lack of an active market price. Generally, these birds are owned by one company throughout their lifecycle, and few bird prices are publicly available because laying hens are rarely sold at auction. The previous layer calculator estimated the value of the birds at the time of depopulation. When proposing a new calculator, APHIS added to that estimate a percentage of farm earnings that would have resulted from the lost egg production. APHIS also proposed putting a “floor” in place to ensure producers would never lose money on the production cost of their birds, even when economic circumstances would have created a loss.

USDA’s Office of the Chief Economist then recommended—and APHIS implemented—changes that made the calculator more reflective of a fair-market transaction. For example, the new calculator no longer has a “floor” in place, which means it is possible under some circumstances that indemnity payments may not fully cover a producer’s production costs. The new calculator also determines fair market value based on net farm income ratio (the amount of net income generated per dollar of production cost). While the new calculator addresses concerns raised by producers and is not expected to change indemnity payments dramatically, future indemnity rates could be higher or lower than the rates under the previous calculator.

Currently, USDA has not approved using vaccine as part of an HPAI response because that would likely lead many export markets to ban all U.S. poultry. But APHIS is obtaining a reliable supply of vaccine should outbreaks occur that cannot be controlled through the typical depopulation approach, a decision that would be made only in conjunction with industry and State partners. APHIS has issued requests for proposals for vaccine manufacturers to supply a variety of Eurasian-origin, H5 vaccines.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege
2. Brucellosis and Bovine Tuberculosis (TB) Program

**Issue:** On December 16, 2015, APHIS published a proposed rule in the Federal Register to update its brucellosis and bovine TB program regulations. Under the proposed rule, APHIS would, among other things, move from categorizing the disease statuses of entire States—or large regions within States—to establishing standards that States and Tribal Nations would meet for disease surveillance, epidemiological investigations, and affected herd management. By using program compliance rather than disease prevalence—which is already extremely low—to determine statuses, States and Tribes will no longer run the risk of status downgrades and statewide restrictions and testing requirements if sporadic cases appear. Rather, they can focus their disease control efforts on specifically designated herds or areas. APHIS officials are carefully reviewing all issues raised in the comments received and considering the need for changes to the proposed provisions.

**Funding Requests To Depopulate TB-Affected Herds in Texas and Michigan:** To address TB-affected herds, APHIS routinely uses one of two strategies: depopulating an entire herd and paying indemnity, or a test-and-remove approach, where regular testing with removal of reactor animals continues while the herd is under quarantine until it is determined with a high degree of confidence that the herd is TB-free. When determining a strategy, APHIS considers a scientific model to determine the probability of removing infection, as well as the size of the herds, potential indemnity costs compared to funds available, and State and owner preferences.

In fiscal year (FY) 2015, the Secretary transferred $17.89 million in emergency funding from the Commodity Credit Corporation for TB eradication efforts in Texas and Michigan. In FY 2016, the Secretary approved an additional transfer of $23.90 million to depopulate an additional dairy herd in Texas and address additional TB findings throughout the United States. The Office of Management and Budget (OMB)
Public Policy Reason for APHIS Involvement: APHIS partners with States and industry to prevent and manage costly animal diseases outbreaks and protect U.S. poultry and livestock.

APHIS’ Statutory/Regulatory Scope: Under the Animal Health Protection Act, APHIS works to protect U.S. agriculture from livestock pests and diseases.

Items in Controversy: Although APHIS developed the regulations collaboratively with States, Tribes, and industry, stakeholders raised concerns during the comment period about the perceived burden on the States to define their plans to prevent and mitigate disease occurrences. Also, the Senate Appropriations Committee included a directive for APHIS to report to Congress on the amount of State and Federal funding needed to implement the rule prior to finalizing it.

Industry, Consumer, and Congressional Interest: Several legislators expressed concerns that testing requirements outlined in the proposed rule would harm deer and elk farmers. The National Assembly of State Animal Health Officials (NASAHO) would like to consult with APHIS before we publish the final rule to discuss how the Agency intends to address the comments received. Some State officials who provided separate feedback from the NASAHO comments stated opposition or requested consultation with APHIS.

Executive Branch Position to Date: APHIS believes that the proposed regulatory changes will allow the brucellosis and bovine TB programs to be most effective at protecting animal health. Regarding its emergency funding request, APHIS believes that depopulating the TB-affected herd in Texas will enable the Agency to eradicate the current outbreaks and to prevent disease spread. APHIS will conduct stakeholder outreach and discussion regarding potential future cost sharing for indemnity regulations.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

3. Foot-and-Mouth Disease (FMD) Vaccine

Issue: There has not been an outbreak of FMD, a devastating, highly contagious viral livestock disease, in the United States since 1929. Although APHIS has comprehensive, overlapping safeguards in place to protect against FMD and is prepared to swiftly respond should an outbreak occur, vaccine would be critical to effective control or eradication should the outbreak be widespread. Current inventory in the North American FMD vaccine bank is 2.5 million doses
per strain of the 10 FMD strains of greatest risk to North America. This amount is insufficient to address a medium or large-scale outbreak. APHIS estimates that we would need a minimum of approximately 25 million vaccine doses for each of the 10 FMD strains of greatest concern to provide the optimum level of protection. This would cost approximately $130 million. APHIS’ current appropriations for FMD preparedness total $1.4 million.

The U.S. stockpile of FMD vaccine is currently housed at the Plum Island Animal Disease Center (PIADC) in New York and is managed cooperatively with Canada and Mexico. Currently, all FMD vaccine is acquired from foreign manufacturers because the live FMD virus cannot be maintained on the U.S. mainland by law. However, USDA’s Agricultural Research Service (ARS)—working at PIADC—has developed novel vaccine platforms that do not require traditional live FMD virus production techniques. These novel vaccine techniques are not yet commercially available, and it likely will be years before they can be used.

FMD is endemic in much of the world and remains a major threat to U.S. agriculture. While not a public health or food safety issue, FMD is highly infectious in all cloven-hoofed animals—including cattle, sheep, goats, and swine—and can spread rapidly and widely. Its presence in the United States, if unchecked, could cause billions of dollars in damage to animal agriculture industries, producers, and local economies through lost export markets; cause product shortages and price increases for consumers; and threaten the security of the U.S. food supply.

Public Policy Reason for APHIS Involvement: Only a Federal agency would have the interstate authorities and access to resources necessary to respond to a significant FMD outbreak. APHIS partners with States and industry to preview costly animal diseases outbreaks and protect U.S. poultry and livestock.

APHIS’ Statutory/Regulatory Scope: The Animal Health Protection Act authorizes the Secretary of Agriculture to, among other things, detect, control, or eradicate any disease or pest of livestock. This authority has been delegated to APHIS.

Items in Controversy: Federal-industry cost sharing is one possible solution APHIS has discussed with industry to help fill the vaccine gap. However, the cattle and swine industries, citing Homeland Security Presidential Security Directive Number 9, “Defense of United States Agriculture and Food”, believe that filling the gap is a matter of food security and is solely a Federal responsibility. Although sufficient quantities of vaccine would be valuable, APHIS’ import requirements reduce the threat of FMD dramatically, and surveillance systems would expedite detection of the disease.

Industry, Consumer, and Congressional Interest: The U.S. livestock sector has expressed concern that an FMD outbreak in the United States could cause severe economic ramifications for local economies and communities, as well as associated businesses (e.g., trucking and livestock markets). Some industry representatives believe vaccine use could minimize disruptions by reducing animal movement restrictions and the number of animals that would need to be depopulated as part of an emergency response effort. The House Agriculture Livestock Subcommittee held an FMD vaccine hearing in February 2016.
Executive Branch Position to Date: APHIS is committed to safeguarding U.S. agriculture against an FMD incursion and is prepared to respond swiftly in the event of an outbreak, using vaccine as resources permit. APHIS has joined Australia, Canada, Mexico, and New Zealand in signing an arrangement to share their limited amounts of FMD vaccines in the event of an outbreak. APHIS will continue working with industry to identify ways to close the vaccine gap.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

Issue: Since 2004, the U.S. Department of Homeland Security (DHS) and USDA have worked closely to fulfill the Homeland Security Presidential Directive 9 mandate for the agencies to plan to establish safe, secure, state-of-the-art agriculture biocontainment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic diseases (those that can pass between animals and humans). The NBAF—a $1.25 billion next-generation biocontainment facility under construction in Manhattan, Kansas—is the result of DHS’ and USDA’s planning efforts. The NBAF will replace existing, aging biocontainment laboratories located at the Plum Island Animal Disease Center (PIADC) in Orient Point, New York. DHS plans for the NBAF to be fully operational in 2023 with registration of select agents (i.e., bio-agents that have the potential to pose a severe threat to public, animal, or plant health, or to animal or plant products) by December 2022.

Public Policy Reason for APHIS Involvement: APHIS is charged with safeguarding the health of U.S. livestock by rapidly detecting and responding to any accidental or intentional introduction of a foreign animal disease. Foreign animal diseases, such as highly infectious foot-and-mouth disease (FMD), have the potential to inflict billions of dollars in livestock and trade losses and threaten the U.S. food supply. The NBAF will provide USDA scientists with larger and more technologically sophisticated laboratory facilities, including biosafety level (BSL)-4 biocontainment capacity, which will exceed PIADC’s BSL-3 laboratory capacity. With BSL-4 capacity, USDA scientists will be able to conduct diagnostics, and research and develop countermeasures for high-consequence zoonotic diseases of livestock such as those caused by Ebola virus, Hendra virus, and Nipah virus, which are potentially lethal to both humans and animals.

APHIS’ Statutory/Regulatory Scope: USDA was in charge of all operations at the Plum Island facility from 1954 until June 2003, when operational responsibility transferred from USDA to DHS, in accordance with the Homeland Security Act of 2002. APHIS’ Foreign
United States Department of Agriculture  
2016 Presidential Transition  
Animal and Plant Health Inspection Service (APHIS) 

Animal Disease Diagnostic Laboratory, located at Plum Island, continues to provide the capabilities, including training, for early detection and diagnosis of an accidental or intentional introduction of a foreign animal disease. APHIS’ laboratory personnel also work closely with USDA’s Agricultural Research Service (ARS) to develop diagnostic methods and test vaccines to protect U.S. agriculture from foreign animal disease. The APHIS laboratory is the custodian of the North American FMD Vaccine Bank.

Under the Public Health, Security, and Bioterrorism Preparedness and Response Act of 2002, USDA has the authority to regulate the use, possession, and transfer of certain biological agents and toxins, including the FMD virus. The Food, Conservation, and Energy Act of 2008 directs the Secretary of Agriculture to issue a permit to the Secretary of Homeland Security to transfer live FMD virus to a single research facility that is a successor to the Plum Island facility, provided that the facility meets all of USDA’s regulatory requirements under the Federal Select Agent Program. NBAF is the successor facility.

**Items of Controversy:** Although there is a broad consensus among industry and policymakers that the NBAF is necessary to protect U.S. livestock from high-consequence foreign pathogens, there has been some concern about the Kansas location due to its proximity to a large cattle population and the potential for tornados.

**Industry, Consumer, and Congressional Interest:** The Senate Appropriations Committee report on the FY 2017 Agriculture Appropriations Bill encourages DHS and USDA to work together on a plan for the future operation of NBAF, including consideration of the appropriate agency to manage the facility. DHS Senate Appropriations includes the same language. The Senate has included $4 million for USDA ($3 million for APHIS and $1 million for ARS) for workforce development for NBAF. The House passed H.R. 1887, which would delay the required sale of PIADC while the Government Accountability Office studies possible uses for the island. The bill has been sent to the Senate for consideration. DHS released its 180-page report to Congress on the sale of Plum Island in July 2016. USDA has no concerns with the bill as long as there is no lapse between departure from PIADC and full operation of NBAF. USDA and DHS continue to plan for the transition from PIADC to NBAF. Kansas State University holds an industry meeting on an annual basis to share ideas, recommendations, needs, and collaboration possibilities to help develop the framework necessary for NBAF to protect the Nation’s animal health and food supply. Kansas committed a total of $307 million toward the construction of NBAF.

**Executive Branch Position to Date:** USDA officials have signed a memorandum of understanding with DHS and Kansas that affirms the mutual desire to broaden cooperative bio/agro defense activities, interactions, and collaborations. USDA is preparing budgets for the development of the USDA workforce at NBAF and for transition activities. USDA continues to participate in DHS-organized working groups to coordinate transition planning.

**Potential Alternative Approaches:** [b](5) Deliberative Process Privilege
5. **Cattle Fever Ticks**

**Issue:** Cattle fever (bovine babesiosis) is a severe and often fatal disease of cattle transmitted by cattle fever ticks (CFT) and southern cattle ticks. APHIS’ Cattle Fever Tick Eradication Program (CFTEP) aims to eliminate the disease from the U.S. cattle population, working cooperatively with the Texas Animal Health Commission (TAHC). In 1943, APHIS and the TAHC eradicated cattle fever and the ticks from the continental United States, with the exception of a permanent quarantine “buffer” zone between Texas and Mexico, extending more than 500 miles from Del Rio, Texas, to the Gulf of Mexico. APHIS has requirements to ensure that cattle in this zone or imported from Mexico do not spread the ticks into free areas. Given the role of wildlife in spreading CFT, APHIS and the TAHC have been working with the U.S. Fish and Wildlife Service (FWS) to develop a strategy for eradicating these ticks in wildlife, particularly deer and non-native nilgai antelope, on three FWS wildlife refuges in and around Cameron County, Texas.

**Public Policy Reason for APHIS Involvement:** APHIS partners with States and industry to prevent and manage costly animal diseases outbreaks and protect U.S. poultry and livestock.

**APHIS’ Statutory/Regulatory Scope:** Under the Animal Health Protection Act, APHIS works to protect U.S. agriculture from CFT and other livestock pests and diseases.

**Items in Controversy:** To eradicate CFT in wildlife on the largest of the three FWS refuges—Laguna Atascosa National Wildlife Refuge (LANWR)—APHIS and the TAHC have been working with FWS to reach agreement on harvesting nilgai on the property, implementing a plan for cattle grazing, and allowing feeders with ivermectin-treated corn to be placed in the area to help reduce the spread of CFT. FWS is now working with a non-profit agency to harvest nilgai from the LANWR. APHIS, FWS, and the TAHC are currently working on a plan for cattle grazing as a research project. Negotiating this agreement has been difficult due to the competing interests of hunters, refuge managers, and animal health officials.

In addition, APHIS is working with FWS to conduct biological and environmental assessments on feeding ivermectin-treated corn to white-tailed deer both on and off refuge property in Cameron and Willacy counties. APHIS’ Environmental and Risk Analysis Services unit is close to completing an environmental assessment (EA) on feeding ivermectin-treated corn to white-tailed deer off of LANWR. Once complete, APHIS will present the EA to FWS’ Ecological Services, which will issue a biological opinion on the use of ivermectin off refuge. APHIS expects its use to be approved.

**FWS’ Restrictions on the Use of Ivermectin on LANWR:** Under the Refuge Improvement Act of 1997, FWS determines if a specific activity can be conducted on a Federal wildlife refuge. In the spring of 2016, APHIS submitted a formal request to FWS to use ivermectin-treated corn on
LANWR. FWS has reviewed APHIS’ request and determined that the use of ivermectin on the refuge does not meet its mission goals or compatibility use guidelines due to secondary environmental effects. During the week of October 17, 2016, FWS issued a scientific opinion paper against using ivermectin on LANWR. As of October 24, 2016, APHIS was preparing a response to FWS’ scientific opinion paper, outlining why the Agency disagrees with their findings. However, FWS is not obligated to look at or acknowledge APHIS’ response once received. The next step in the process is for FWS to issue a formal response to APHIS’ request declining use of ivermectin on refuge. Once received, APHIS has the right to appeal FWS’ formal response.

**Industry, Consumer, and Congressional Interest:** Congress, U.S. cattle producers, and dairy and beef industry organizations are very supportive of the CFTEP.

**Executive Branch Position to Date:** In 1906, APHIS created the CFTEP to combat CFT. The Agency continues to carry out the program in cooperation with the TAHC, with the goal of eliminating all tick outbreaks that occur outside the permanent quarantine zone.

APHIS committed $2.4 million from its contingency fund in FY 2015 to expand CFT eradication efforts in Cameron and Willacy Counties in Texas. In FY 2016, APHIS committed an additional $1.7 million in contingency funds to continue those efforts, as well as to address quarantined trace pastures in Kleberg and Starr Counties, Texas.

**Potential Alternative Approaches:**

6. **Antimicrobial Resistance (AMR)**

**Issue:** AMR is a global issue affecting public and animal health. There is growing concern that bacteria that cause disease in people and animals are developing more resistance to the antibiotics used for treatment. The issue has become more urgent with the occurrence of bacterial isolates resistant to existing antimicrobial drugs, the decreasing availability of effective antimicrobial drugs and absence of new ones in the pharmaceutical pipeline, and the lack of incentives and funding for research into alternatives. In fiscal year 2014, APHIS worked with agencies across the Federal Government to develop a National Strategy for Combating Antibiotic-Resistant Bacteria. This document covers a broad array of potential government efforts to address AMR in human and animal health and was the forerunner to the National Action Plan for AMR released in 2015. In December 2014, USDA released its own AMR Action Plan. Under the plan, APHIS and other USDA agencies are using an integrated, One Health approach for surveillance and monitoring, research and development, and education and outreach.

For its part, APHIS is determining patterns, purposes, and impacts of antibiotic use in food animals and monitoring antibiotic drug susceptibilities of bacterial organisms in food-producing
animals and associated products and production environments. APHIS is also identifying management practices, antibiotic alternatives, and other mitigations that may help to reduce AMR in bacteria in food-producing animals and their production environments, and to improve stewardship and judicious use of existing antimicrobials.

Public Policy Reason for APHIS Involvement: APHIS and other USDA agencies are uniquely positioned to contribute to the body of scientific knowledge about AMR, specifically about the role of antimicrobial use in livestock, given their in-depth knowledge of the management practices and technologies associated with animal health, welfare, productivity, and food safety.

The Food and Drug Administration (FDA) is the primary regulatory agency for antibiotic use in animals. However, USDA and FDA work together closely to identify and mitigate emerging threats to America’s food supply. APHIS is charged with safeguarding U.S. animal health. As part of its mission, the Agency operates the National Animal Health Monitoring System (NAHMS), which collects data on farm management and animal health practices, as well as on the prevalence and economic importance of livestock diseases and associated risk factors. FDA relies on the science-based information that APHIS and other USDA agencies generate about antibiotic drug use, AMR patterns, and livestock and poultry management practices to inform its policy and regulatory decisions. FDA also taps into USDA’s extensive network of collaborative relationships with producers and industry organizations as part of its outreach.

APHIS’ Statutory/Regulatory Scope: Under the Animal Health Protection Act, APHIS works to detect, control, or eradicate any disease or pest of livestock.

Items in Controversy: Some believe that the use of antimicrobial drugs in agriculture is one of the primary drivers for the emergence and spread of AMR in bacteria. Current understanding of the factors that contribute to levels of AMR in various settings and the specific role of antimicrobial use in agriculture in the selection for AMR in bacteria is incomplete.

Industry, Consumer, and Congressional Interest: Several legislators, the American Veterinary Medical Association, industry groups, and public health interest organizations have expressed concerns about the emergence and spread of antibiotic-resistant bacteria and inquired about Federal agencies’ plans to address antibiotic use in animal agriculture.

Executive Branch Position to Date: The President’s FY 2017 budget request included an increase of $10 million to provide on-farm surveillance, measure antimicrobial drug use by livestock and poultry producers, and develop education and outreach materials to promote the judicious use of antimicrobials.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege

[158]
increasing costs, as seen in the last few years. In addition, without increased funding, APHIS would be unable to plan for and carry out most of the new activities outlined for the Agency in the USDA AMR Action Plan.

**Wildlife Services**

1. **Predator Damage Management**

**Issue:** APHIS (through its Wildlife Services program) resolves human/wildlife conflicts and protects agriculture, human health and safety, personal property, and natural resources from wildlife damage and wildlife-borne diseases in the United States. As part of this effort, APHIS protects livestock from predators, including wolves, grizzly bears and black vultures.

**Public Policy Reason for APHIS Involvement:** The North American Model for Wildlife Conservation has stated that wildlife should be managed in trust for the people by government agencies based on science. APHIS is charged with protecting agriculture, human health and safety, property, and natural resources from disease and damage caused by wildlife. Livestock losses attributed to predators cost producers more than $137 million annually, according to the most recent surveys by National Agriculture Statistics Service. In FY 2015, APHIS provided assistance in dealing with damage caused by predators to producers in the western United States with livestock valued at more than $2.5 billion.

**APHIS' Statutory/Regulatory Scope:** The Animal Damage Control Act of 1931, as amended, gives APHIS broad authority to conduct activities “in the control of nuisance mammals and birds and those mammal and bird species that are reservoirs of zoonotic diseases.” The statute allows APHIS to conduct cooperative programs with funding from State, local, or private entities.

**Items in Controversy:** Animal advocacy groups oppose the Agency’s use of lethal control in managing wildlife conflicts. A recently published research paper out of the University of Wisconsin is questioning the long-term efficacy of lethal predator control and receiving interest; other researchers disagree with these findings. Wolf populations and movements are closely monitored by animal advocacy organizations.

**Industry, Consumer, and Congressional Interest:** Livestock industries strongly support APHIS’ predatory control work, and livestock producers share in the costs of the activities they request. Congress is generally supportive of APHIS’ wildlife management efforts; the House included report language in the appropriation directing APHIS to prioritize and document the process that allows USDA to help States and local livestock producers manage wolves. Representatives from Minnesota have encouraged funding for APHIS’ wolf work. However, many animal advocacy groups decry any lethal control activities APHIS conducts.

**Executive Branch Position to Date:** APHIS prevents and reduces livestock predation through education, technical assistance to producers, and management programs. APHIS plays a major role in the management of wolves and grizzly bears in the United States. APHIS personnel work
with State wildlife agencies, the U.S. Fish and Wildlife Service (FWS) and Tribal Nations to conduct wolf damage management programs, and provided additional services to capture and mark wolves and grizzly bears for research and population monitoring. In cooperation with State and Federal wildlife agencies, APHIS removes depredating wolves to resolve conflicts. Most of this work is cooperatively funded with appropriated money as well as funding from State or local sources.

To avoid or reduce predation, APHIS provides technical advice (education and educational materials) to producers on preventative measures, which are then implemented by producers themselves. In FY 2016, APHIS conducted 29 Predator Management Workshops to educate more than 1,000 producers on these methods, such as the use of guard dogs.

In FY 2015, APHIS responded to more than 1,000 incidents of reported wolf depredations on livestock or other resources, and removed 385 wolves (one of which was unintentionally removed). Approximately 44 percent of the requests for assistance were from the Great Lakes Region where wolves remain listed as endangered in Michigan and Wisconsin and threatened in Minnesota. Depending on the legal status of the wolf (delisted, threatened, endangered), the primary management authority (FWS or State Department of Wildlife) varies from State to State. Except where wolves are listed as endangered, the appropriate management authority provides APHIS with authorization to control wolves that prey on domestic animals or pose a risk to human safety. Where endangered, wolves can only be controlled when there is a direct risk to human safety.

APHIS also conducts research on alternative approaches. For example, the reintroduction of the gray wolf to the Northern Rockies marks a tremendous success for conservationists, but also resulted in increased conflicts with livestock producers. Many western ranchers use livestock protection dogs to deter predation by coyotes, but some commonly used species of dogs are not effective against wolves and grizzly bears, which sometimes kill these traditional breeds. APHIS scientists initiated a series of studies to evaluate three larger breeds of dogs that Europeans have successfully used to deter livestock predation by wolves.

In the last 30 years, populations of black vultures have increased in both abundance and range, due to the highly adaptive nature of the bird. Black vultures, which prey on livestock, are protected by the Migratory Bird Treaty; removing birds, nests or eggs, requires a permit from FWS. In FY 2015, APHIS conducted direct control work in 18 States, removing 4,239 black vultures and dispersing an additional 49,755. APHIS’ direct control work for black vultures is 100 percent funded by cooperators.

Potential Alternative Approaches: [b](5) Deliberative Process Privilege
2. **Feral Swine**

**Issue:** Feral swine have quickly established themselves throughout the nation, increasing from 1 million animals in 17 States to about 5 million animals in 38 States in the last 20 years, making them one of the fastest growing invasive species in the United States. In FY 2014, APHIS implemented a national, cooperative cost-share program to slow – and eventually stop – the leading edges of population spread; eliminate swine populations where possible; and control swine numbers to achieve acceptable levels in other States.

**Public Policy Reason for APHIS Involvement:** The total cost of feral swine damage in the United States is $1.5 billion annually; recently collected data currently under review may estimate the total at $2 to $2.5 billion. Invasive swine damage crops, residential property, and sensitive ecosystems. They potentially can spread livestock and zoonotic diseases (classical swine fever, swine brucellosis, pseudorabies, swine influenza and porcine reproductive and respiratory syndrome, among others). APHIS is charged with protecting agriculture, human health and safety, property, and natural resources from disease and damage caused by wildlife.

**APHIS’ Statutory/Regulatory Scope:** Executive Order 13112, signed in 1999, directs Federal agencies to “detect and respond rapidly to and control populations of (invasive) species…., and monitor invasive species populations…” The Animal Damage Control Act of 1931, as amended, gives APHIS broad authority to conduct activities “in the control of nuisance mammals and birds and those mammal and bird species that are reservoirs of zoonotic diseases.” The statute allows APHIS to conduct cooperative programs with funding from State, local, or private entities.

**Items in Controversy:** Some private entities consider the removal of feral swine to compete with local businesses and recreational hunting. Some animal interest groups are opposed to any lethal control measures.

**Industry, Consumer, and Congressional Interest:** The pork industry strongly supports efforts to minimize the contact of feral swine with domestic livestock populations. In 2015, Chairman Aderholt (R - AL), of the House Agriculture Appropriations Subcommittee inquired about the success of the program to date. Additionally in 2015, Rep. Mike Conaway (R-TX), Chairman of the House Agriculture Committee visited a feral swine field operation in Texas to see the tools and techniques APHIS and its partners use.

**Executive Branch Position to Date:** Congress authorized a new program in 2014, and has since appropriated $20 million annually for this nationwide program. In FY 2015, APHIS had operational programs in 41 States and two territories in cooperation with State agencies, and had received permission from landowners to conduct feral swine activities on 127 million acres. In FY 2016, access to conduct activities on property increased to 152 million acres.

In FY 2015, APHIS and partners successfully eliminated feral swine from four States - Washington, Idaho, New York, and Maryland. In FY 2016, APHIS and partners successfully eliminated feral swine from an additional two States - New Jersey and Wisconsin. These States will continue to be monitored for two additional years to ensure successful elimination. Feral
swine populations are still low enough that elimination is considered possible in 19 States. In the other 16 States, efforts have been focused on suppressing feral swine populations and minimizing damage to resources.

APHIS’ National Wildlife Research Center evaluated a toxicant and delivery system and is pursuing the registration of this toxicant with the Environmental Protection Agency. APHIS also researched a feral swine DNA detection process that would enable the agency to detect the presence of feral swine in an area and quickly remove them.

Every State has different laws and a different natural environment; the APHIS strategy is to provide funding and other resources to State programs and support them at a National level while allowing flexibility to manage operational activities at a local level. Task forces developed State-level management control plans that outline management goals and objectives, ranging from elimination of feral swine populations to management of individual populations.

APHIS has also initiated collaborative efforts with Mexico and Canada to monitor feral swine along the borders.

**Potential Alternative Approaches:** [b](5) Deliberative Process Privilege

3. **Aquaculture Predation**

**Issue:** APHIS resolves human/wildlife conflicts and protects agriculture, human health and safety, personal property, and natural resources from wildlife damage and wildlife-borne diseases in the United States.

**Public Policy Reason for APHIS Involvement:** Aquaculture is an important industry in the United States; however, wildlife depredation, especially by fish-eating birds, is significantly impacting production. Annual fish production in the United States is valued at $1.4 billion. The aquaculture industry incurs approximately $25 million in costs associated with bird damage and damage prevention. Nearly 70 percent of catfish producers reported some losses to wildlife.

**APHIS’ Statutory/Regulatory Scope:** The Animal Damage Control Act of 1931, as amended, gives APHIS broad authority to conduct activities “in the control of nuisance mammals and birds and those mammal and bird species that are reservoirs of zoonotic diseases.” The statute allows APHIS to conduct cooperative programs with funding from State, local, or private entities. APHIS also partners with the U.S. Fish and Wildlife Service (FWS) to address conflicts arising from birds covered under the Migratory Bird Treaty Act. Upon request, APHIS works with aquaculture producers to obtain a depredation permit from the FWS to remove birds such as cormorants from production areas.
Items in Controversy: Some States have raised concern regarding the loss of Congressional directive funding for aquaculture depredation. Animal advocacy groups have filed lawsuits challenging FWS’s National Environmental Policy Act processes that authorize the Agency’s use of lethal methods to address cormorants. The group claimed that FWS did not provide transparency in their actions, and did not adequately address cumulative effects on cormorant populations. In May, 2016, a judge vacated two major depredation orders, one related to aquaculture protection. FWS declined to appeal the judge’s decision, and is re-evaluating a path forward.

Industry, Consumer, and Congressional Interest: The aquaculture industry is strongly supportive of our bird damage prevention efforts. In 2015, in response to the Secretary’s Appropriations Hearing, APHIS was asked to respond regarding the future of funding to address cormorant control activities to protect natural resources in the Lake Champlain region. Since the removal of the Congressionally directed funding (approximately $94,000 annually) in 2012, the State of Vermont has expressed the difficulty in finding funding to address cormorant control.

Executive Branch Position to Date: In FY 2015, APHIS provided assistance to baitfish and crawfish producers, catfish farmers, fish hatcheries, sport fish producers for pond stocking, and tropical fish producers in 13 States under a special depredation order for aquaculture. APHIS also conducted double-crested cormorant damage management in 36 States in FY 2015. And on a year-round basis, APHIS provides operational and technical assistance to aquaculture producers, specifically on roost management of double-crested cormorant, harassment of fish-eating birds on catfish facilities, and helping farmers with the FWS depredation permit process.

Upon the May 2016 court decision ordering FWS to vacate its aquaculture depredation orders, APHIS suspended all lethal cormorant removal work. APHIS is consulting with FWS to determine next steps. In the meantime, APHIS will continue to conduct night roost harassment techniques to disperse birds from roosting near aquaculture ponds. APHIS will continue to provide technical assistance (education on the use of non-lethal management techniques) to impacted cooperators.

APHIS’ National Wildlife Research Center’s field station in Starkville, Mississippi, is developing methods to reduce the impacts of fish-eating birds on aquaculture stocks. Current research is gathering information about the abundance, distribution, and foraging behavior of fish-eating birds, the economic impacts associated with their foraging activities, and the diseases they transmit at aquaculture facilities. This information will help develop new techniques for reducing damage.

Funding for aquaculture damage management has been FY 2015: $388,000; FY 2016: $759,000; FY 2017: $759,000 (estimate).
