A regulation is a legally binding rule developed by an agency. For that reason, rulemaking is a thorough, time consuming, and often complicated process that provides opportunity for the public to provide input on regulations before they are finalized. The process is governed by the Administrative Procedures Act and several Executive Orders. Rulemaking can take from several months to several years. Factors affecting the timeline include the complexity of the issues involved; the availability of data needed for economic, risk, or environmental analyses; the extent of public participation in the rulemaking, and the number and nature of comments received; the priority of the rulemaking relative to other Agency rulemakings under development at the same time; and whether the rule requires review by the Office of Management and Budget. Some also require consultations with State and local government, and Indian Tribes.

From January through June 2017, APHIS will continue the rulemaking process for the proposed regulatory actions listed below whose comment periods closed and for which we published no final regulatory decision prior to the end of fiscal year (FY) 2016. APHIS will update its rulemaking priorities following any published update to the Current Unified Agenda of Regulatory and Deregulatory Actions, including:

- the proposed rule for amending the horse protection regulations (published 7/26/16; comments due 10/26/16);
- the proposed rule for the importation of live sheep, goats, and certain other non-bovine ruminants, and products derived from sheep and goats, with regard to transmissible spongiform encephalopathies such as bovine spongiform encephalopathy (BSE) and scrapie (published 7/8/16; comments due 9/16/16);
- the proposed rule to update our National Environmental Policy Act regulations (published 7/20/16; comments due 10/19/16);
- the proposed rule for establishing de minimis exemptions from the Animal Welfare Act (published 8/4/16; comments due 11/2/16);
- the proposed rule for the importation of lemons from Argentina (published 5/10/16; comments due 8/10/16);
- the proposed rule for marine mammals (published 2/3/16; comments due 5/4/16)
- the proposed rule for the select agents program (published 1/19/16; comments due 3/21/16);
- the proposed rule for brucellosis and tuberculosis (TB) (published 12/16/15; comments due 5/16/16);
- the proposed rule to establish performance standards for importation and interstate movement of fruits and vegetables (Q56 expansion) (published 9/9/14; comments due...
11/10/14; comment period reopened 12/04/14; comments due 1/09/15; comment period reopened 2/06/15; comments due 3/10/15); 

- the proposed rule for scrapie (published 9/10/15; comments due 11/9/15; comment period reopened 11/16/15; comments due 12/09/2015);

- the proposed rule for the forfeiture regulations (published 5/21/2013; comments due 7/22/13); and,

- the interim rule to specify conditions for payment of indemnity claims for highly pathogenic avian influenza (HPAI) (published and effective 2/9/16; comments due 4/11/16).

(See Important Policies and Regulations for additional information about many of these proposed rules.)

APHIS will also continue to address petitions to deregulate genetically engineered plants, including:

- a petition from Scotts and Monsanto to deregulate creeping bentgrass genetically engineered for resistance to the herbicide glyphosate (notice published 1/08/2016; comments due 3/8/16; notice of environmental impact statement published 9/30/2016; comments due 11/14/16).

- a petition from ArborGen Inc. to deregulate freeze tolerant eucalyptus lines designated 427 and 435, which have been genetically engineered to be more tolerant of cold conditions (notice published 2/27/2013; comments due 4/29/2013; draft environmental impact statement and Endangered Species Act findings submitted to the Department of the Interior, Fish and Wildlife Service 4/2015).

**January 2017**

**Pet Bird Home Quarantine Business Process Improvement (BPI)**

In January 2017, APHIS expects to move into phase 2 of its Pet Bird Home Quarantine BPI, which will focus on increasing the effectiveness of the process for bringing certain pet birds into the United States and permitting them to be quarantined at home rather than a Federal quarantine facility. This change will allow APHIS to improve communication with importers before and after the birds arrive in the United States and improve the Agency’s oversight of the birds from pre-export through import, quarantine, and release. In FY 2017, APHIS plans to share data regarding the improvements with stakeholders.

**New APHIS Inspection Facility in Eagle Pass, TX**

APHIS insulated cattle entering the United States from Mexico at several locations along the United States-Mexico border to ensure they are free of specific diseases and pests that could harm domestic livestock and impact trade. The current APHIS livestock inspection facility in Eagle Pass, TX, is not suitable for long-term use for several reasons, including concern for employee safety due to violence in the region. APHIS is working to lease/build new space in Eagle Pass while maintaining operations in the current space. The lease is anticipated to be in place by the end of 2016 with construction beginning in early 2017 and a goal for occupancy by
the end of FY 2017. Industry is very interested in, and has been asking questions about, the new facility. APHIS anticipates moving facilities will have only minimal operational impact to stakeholders.

**Expansion of the Systems Approach Program for the Export of Hass Avocado from Mexico into the United States**
APHIS, in collaboration with its Mexican counterpart, SENASICA, and avocado industry representatives, will sign an operational work plan that includes measures for the inclusion of avocado-producing areas in Mexico into the avocado import program. This program facilitates the safe importation of this commodity into the United States.

**Announce Projects Approved for Funding Through Farm Bill Section 10007**
APHIS plans to announce the projects that will receive $62.5 million in overall funding in 2017 through the Farm Bill’s Section 10007. Section 10007 funding is split between two programs: the Plant Pest and Disease Management and Disaster Prevention Program, and the National Clean Plant Network (NCPN). Of the overall funding distributed, at least $5 million will go to NCPN. APHIS – with input from stakeholders – chooses projects that are best aligned with the Agency’s specific goals for preventing the introduction or spread of plant pests and diseases that threaten U.S. agriculture and the environment. A variety of entities, including State departments of agriculture, academic partners, non-profit organizations, and other Federal agencies carry out these 10007 projects.

**Broad Offsetting Collection Activities (Audit # 100332)**
The U.S. Government Accountability Office (GAO) is reviewing the different types of collection authorities that regulatory agencies use and how those agencies balance autonomy and Congressional oversight. The tentative due date for the report is January 31, 2017.

**Safety of Imported Beef from Countries with Foot-and-Mouth Disease (Audit #100294)**
GAO is reviewing USDA’s processes to ensure that beef from foreign sources is disease-free and safe for import into the United States. This includes a review of how USDA determines the potential risk to U.S agriculture from beef imported from countries with a recent history of foot-and-mouth disease, the methods USDA uses to verify animal health data received from foreign agricultural authorities seeking approval to export beef to the United States, and how USDA decides what specific conditions foreign entities should meet before their beef products may be imported. The tentative due date for the report is January 31, 2017.

**February 2017**

**Certification of a Second Irradiation Facility in Vietnam for the Treatment of Commodities Intended for Export to the United States**
APHIS, in partnership with the Vietnam National Plant Protection Organization, will finalize the certification process to approve a second irradiation facility in Hanoi, Vietnam. Under the purview of a preclearance program, local producers will be able to treat their fruit closer to growing areas and expedite the export inspection and certification process of commodities to be shipped to the United States.
Completion of Recommendations from Reviews of Fast-Track Action Committee on Select Agent Regulations (FTAC-SAR) and Federal Experts Security Advisory Panel (FESAP)

APHIS and the Centers for Disease Control and Prevention (CDC) manage the Federal Select Agent Program (FSAP). The program oversees the possession, use and transfer of biological select agents and toxins that have the potential to pose a severe threat to public, animal or plant health or to animal or plant products. FSAP is leading implementation for 19 recommendations stemming from White House-driven reviews of the FTAC-SAR and FESAP.

Implementation of an Offshore Certification Program for the Importation of Ornamental Cuttings into the United States

APHIS has partnered with the U.S. greenhouse industry to develop a voluntary certification program for overseas (i.e., offshore) facilities that produce ornamental cuttings to be exported to the United States. This means that APHIS will audit and certify the offshore facilities to produce the cuttings. This will standardize facility operating procedures, streamline inspections, and provide APHIS with additional safeguards against the entry of plant pests and pathogens on ornamental cuttings.

Highly Pathogenic Avian Influenza (Audit # 100668)

USDA’s Office of the Inspector General is reviewing any threats the highly pathogenic avian influenza virus may pose to public health, agriculture, or the economy in the United States; steps the Federal Government is taking to address these threats; and what gaps remain for addressing any future threats.

Implementation of Suspension and Debarment Tools in the U.S. Department of Agriculture

USDA’s Office of the Inspector General is reviewing USDA’s controls to ensure agencies initiate and refer USDA program violators for Suspension and Debarment actions.

N/A
Publication: Results of Infectious Salmon Anemia Virus (ISAV) Surveillance
The APHIS aquaculture program supports producers, promotes good farming practices, and monitors for disease in aquaculture. In 2012, in response to unofficial ISAV findings in British Columbia, APHIS, multiple State and Federal agencies, and Tribal entities launched a surveillance program to detect if ISAV is present in wild and farm-raised salmon in the Pacific Northwest. Infectious salmon anemia is a serious viral disease that affects farmed Atlantic salmon in several areas of the world, and its presence in British Columbia would have raised concerns about the potential impact to wild fish populations and commercial aquaculture in Alaska and Washington. The surveillance effort concluded in FY 2016 with 4,000 animals sampled and tested and no evidence of the virus found.

Wild Bird Surveillance for Highly Pathogenic Avian Influenza (HPAI)
APHIS coordinates the U.S. interagency surveillance efforts for HPAI in wild birds. The goals of this effort are to maximize our ability to detect avian influenza viruses in wild waterfowl in the United States, detect virus spread to new areas, provide a flexible surveillance framework to monitor wild dabbling duck populations for influenza reassortants and introductions of new viruses, and estimate the prevalence of new influenzas once detected. Between July 2016 and APHIS and its State and Federal partners will collect about 30,000 samples from migratory waterfowl in 47 States and test them for HPAI. Progress on this sampling effort will be posted weekly on the APHIS avian influenza web page.
# Appendix A: Acronyms

This appendix includes acronyms that are not used in this document, but are frequently used in APHIS documents.

WHAT WE DO: OUR MISSION

GIPSA facilitates the marketing of cereals, oilseeds, and related agricultural products, and protects fair trade practices, financial integrity, and competitive markets for livestock, meat, and poultry for the overall benefit of producers, consumers, and American agriculture. GIPSA fulfills its mission through the service provided by three program areas: (1) Packers and Stockyards Program (PSP); and (2) Grain Regulatory Program (GRP). The Inspection and Weighing Services are managed by GRP; and (3) Inspection and Weighing Services.

WHO WE ARE: OUR WORKFORCE

We employ over 700 people across the country. While GIPSA physically has offices and staff in 32 States and the District of Columbia, our presence and services extend nationwide, including Puerto Rico.

WHO WE SERVE: OUR CONSTITUENTS

Through our network and structure, GIPSA helps American agriculture — from farmers and ranchers to handlers, processors, and exporters — market the Nation’s livestock, poultry, meat, grain, and related commodities here at home and abroad.

KEY UPCOMING DECISIONS

- What regulatory changes should GIPSA undertake to implement the 2008 Farm Bill direction regarding the Packers and Stockyards Program?

BUDGET HIGHLIGHTS FY 2016

Total Budget Authority: $98.0 million
- Inspection & Weighing Mandatory User Fees: 56%, or $54.9 million
- Discretionary: 44%, or $43.1 million
  - Packers and Stockyards Program: 24%, or $23.1 million
  - Grain Regulatory Program: 20%, or $20.0 million

FY 2016 Budget Authority

- Packers and Stockyards
- Grain Regulatory
- Inspection and Weighing Services
I. **Organizational Overview**

Agency’s Mission/Strategic Plan

Mission Statement:

GIPSA facilitates the marketing of cereals, oilseeds, and related agricultural products, and protects fair trade practices, financial integrity, and competitive markets for livestock, meat, and poultry for the overall benefit of producers, consumers, and American agriculture.

Key Performance Measures, Grain Regulatory Program (GRP)

Percent of market-identified quality attributes needed for trading for which GIPSA has provided standardization

This performance measure focuses on GIPSA’s role in providing the technology to measure grain quality and quantity, ensuring the market has access to reliable information which, in turn, reduces market risk and increases market efficiency. In FY 2015, GIPSA met its target of providing standardization for 97 percent of market identified attributes. Additionally, GIPSA projects that it will be positioned to provide standardization for 98 percent of market identified attributes in FY 2016 and again in 2017.

Percent accuracy of grain inspection certificates

GRP instituted changes to its quality assurance practices and made automation enhancements through FGIS online, resulting in the ability to accurately measure and capture data that was not previously available. GIPSA measures certificate accuracy through a comprehensive review of certificates issued through its Certificates program and third-party programs, and warehoused in the FGIS online Inspection Data Warehouse. GIPSA conducts quality management audits of official service providers. Official service providers include field offices, official agencies, and state agencies. As part of the review, GIPSA identifies and quantifies certificate accuracy for a subset of certificates issued. Certificate errors are identified and provided to the official service provider for correction and establishment of procedures to prevent their recurrence. In FY 2015, GIPSA is estimating certificate accuracy at 90 percent and aims to improve accuracy to 91 percent and 92 percent, respectively, in FY 2016 and FY 2017.

Organization’s History

The Grain Inspection, Packers and Stockyards Administration (GIPSA) was established October 20, 1994, under the authority of the Agriculture Reorganization Act of 1994 (P.L. 103-354), to administer the programs and functions of the Federal Grain Inspection Service (FGIS) and the Packers and Stockyards Administration under the umbrella of one agency. The mission of the agency is to facilitate the marketing of cereals, oilseeds, and related agricultural products, and protects fair trade practices, financial integrity, and competitive markets for livestock, meat, and poultry for the overall benefit of producers, consumers, and American agriculture.

PSP activities are authorized by the Packers and Stockyards Act of 1921 (P&S Act), as amended, and Section 1324 of the Food Security Act of 1985. These activities are currently funded through appropriations. GIPSA’s PSP is responsible for administering the P&S Act, which prohibits unfair, deceptive, and fraudulent practices by market agencies, dealers, packers, swine contractors, and live poultry dealers in the livestock, poultry, and meatpacking industries. The P&S Act makes it unlawful for a regulated entity to engage in unfair, unjustly discriminatory, or deceptive practices. Packers, live poultry dealers, and swine contractors are also prohibited from engaging in specific anti-competitive practices. PSP conducts two broad types of activities—regulatory and investigative—in its administration and enforcement of the P&S Act. PSP activities cover two general areas:
United States Department of Agriculture
2016 Presidential Transition
Grain Inspection, Packers, and Stockyards Administration (GIPSA)

GIPSA’s FGIS, which is carried out under the authority of the United States Grain Standards Act, as amended (USGSA), and the Agricultural Marketing Act of 1946 (AMA), is currently funded through two sources: appropriations and user fees. FGIS promotes and enforces the accurate and uniform application of the USGSA and applicable provisions of the AMA; identifies, evaluates, and implements new or improved techniques for measuring grain quality; and establishes and maintains testing and grading standards to facilitate the marketing of U.S. grain, oilseeds, and related products.

FGIS Inspection and Weighing Services are also authorized under both the USGSA and the AMA. The USGSA requires the mandatory inspection and weighing of grain at export ports by GIPSA or delegated State agency personnel, and the permissive inspection and weighing of grain at domestic locations by designated State and private agency personnel. The USGSA also requires GIPSA to supervise all official inspection and weighing activities. On a request basis, GIPSA performs inspection of rice and related commodities under the AMA. Both statutes require GIPSA to collect user fees to fund the costs of operations including the supervision and administration of Federal grain inspection and weighing activities.
Organizational Chart

The Grain Inspection, Packers and Stockyards Administration (GIPSA) facilitates the marketing of livestock, poultry, meat, cereals, oilseeds, and related agricultural products, and promotes fair and competitive trading practices for the overall benefit of consumers and American agriculture.

Supersedes GIPSA chart dated July 31, 2006.
Biographies of career staff in key leadership positions

**Randall Jones**  
**Deputy Administrator, Federal Grain Inspection Service**  
202-720-9170, Randall.D.Jones@usda.gov

Since July 2008, Randall Jones has served as the Deputy Administrator, Federal Grain Inspection Service, Grain Inspection, Packers and Stockyards Administration (GIPSA) of the United States Department of Agriculture (USDA). As Deputy Administrator, Mr. Jones provides oversight of FGIS, which facilitates the marketing of U.S. grain and related agricultural products by providing the market with the official U.S. quality standards and methods to assess product quality; maintaining the integrity of the U.S. grain marketing system and overseeing America's national inspection system, a network of third-party Federal, State and private providers that provide impartial, user-fee funded official inspection and weighing services.

Prior to joining GIPSA, Mr. Jones served as Associate Deputy Administrator of the USDA Agricultural Marketing Service's Livestock and Seed Program. During his tenure, he oversaw research and promotion programs for beef, pork, lamb and soybeans; livestock and grain market reporting; domestic and foreign seed trade activities; and quality management programs to market seed and meat products domestically and internationally. He also was directly involved in the development and implementation of a new research and promotion program for sorghum. Before his service with the Agricultural Marketing Service, Mr. Jones served more than 16 years in various management positions with the USDA Farm Service Agency and the former Agricultural Stabilization and Conservation Service.

Mr. Jones received his Bachelor of Science from Virginia Tech in Blacksburg, Virginia. He is a native of Grayson County in southwest Virginia, where he grew up on a beef cattle and dairy farm.

**Marianne Plaus**  
**Director, Management and Budget Services**  
202-690-3460, Marianne.Plaus@usda.gov

Since August 2009, Ms. Marianne Plaus has served as the Management and Budget Services (MBS) Division Director of the Grain Inspection, Packers and Stockyards Administration (GIPSA). Marianne provides leadership in planning and directing a wide range of budgetary and administrative functions for the Agency. These include the Agency's budget execution and formulation activities, strategic planning and performance measurement oversight, management and internal control program, employee development and training, safety and health, continuity of operations, regulatory and issuance management, and Freedom of Information Act and Privacy Act.

Marianne began her career with USDA in July 1988 with the Federal Grain Inspection Service (FGIS), Standards and Procedures Branch as an Agricultural Marketing Specialist.
In 1994, Marianne joined the Office of the Deputy Administrator for FGIS. As the Special Assistant, she served as the senior policy advisor to the Deputy Administrator of FGIS and managed a diverse array of Administration, Departmental, and Agency initiatives, such as those related to biotechnology, strategic and workforce planning, and customer service. In 2002, Marianne advanced into the position of Chief of GIPSA’s Market and Program Analysis Staff. During this time, Marianne assisted the Agency by also serving as the Acting Deputy Director of the Field Management Division and the Chief of the Data and Information Analysis Staff for prolonged periods.

Marianne is from upstate New York and earned a Bachelor of Science Degree in Agronomy at Cornell University and a Master of Science Degree in Agronomy at the University of California, Davis.

Kevin N. Smith
Director, Civil Rights Staff
202-690-3640, Kevin.N.Smith2@usda.gov

Kevin Smith currently serves as GIPSA’s Director, Civil Rights Staff, a position he assumed in January 2012. In this role, he is responsible for administering the civil rights program, providing direction and leadership in the development and implementation of civil rights policies, and procedures while managing equal employment opportunity issues, and ensuring civil rights compliance. He provides vision and ensures adherence to civil rights concepts, principles, services and employment for all employees, applicants, clients and new hires.

Kevin joined GIPSA/Civil Rights Staff in 2006, as the Deputy Director/Complaints Manager. Prior to his employment with USDA, he served as a Senior EEO Specialist/Team Lead for the Office of the Administrative Assistant to the Secretary of the Army, Directorate of Equal Employment Opportunity, at the Pentagon. Kevin started his career in the EEO field as an EEO intern before eventually serving as a Senior EEO Specialist at the 18th Airborne Corp at Fort Bragg, NC. Prior to his employment at Fort Bragg, Kevin served as an Industrial Engineering Technician and Aircraft Electronics Worker at the Naval Aviation Depot in Jacksonville Florida.

Kevin is a graduate of the Federal Executive Institute. He grew up in Jacksonville, FL, currently lives in Oxon Hill, MD, and has two sons, Joshua and Tyler.
Daniel Knight
Information Technology Business Director & Chief Information Officer
202-720-0265, Daniel.Knight@usda.gov

Daniel Knight was selected as the Grain Inspection, Packers and Stockyards Administration (GIPSA) Information Technology (IT) Business Director in May 2012. His daily responsibilities include overseeing the IT Staff to support agency mission critical systems. His division consists of Cyber Security, Application Development and Network, Telecom, Sever and Client Services, IT Asset Management, and Capital Planning and Investment Controls. He directly advises the Administrator on all IT initiatives and communicates the vision to all employees and stakeholders. Dan chairs the GIPSA Change Control Board and Executive Information Technology Investment Review Board (EITIRB). He is an active member on several USDA committees and working groups and in these roles, he establishes and supports Inter-Agency Agreements with all USDA agencies and other federal agencies. He implements and supports all major government IT initiatives; this includes Enterprise Architecture, Shared Services, Data Center Consolidation, HSPD-12 and other Cyber Security activities. Through streamlining efforts and implementing shared services, Dan has been able to provide a higher level of support for GIPSA staff and a cost avoidance on IT Services of an estimated $1.2 Million. This cost avoidance turned into a re-investment on GIPSA’s future IT services.

Before joining GIPSA, Dan started his career at USDA in 1993 after serving an enlistment from 1987 to 1992 in the U.S. Navy. He has serviced four USDA sub-agencies: Farm Service Agency (FSA), Animal and Plant Health Inspection Service (APHIS), Food Safety and Inspection Service (FSIS) and the Office of the Chief Information Officer (OCIO). He has a Bachelor of Science in Criminology from the University of Maryland University College.

Dan brings with him over 28 years of Federal experience managing and overseeing numerous large scale information technology initiatives at GIPSA, within several other USDA agencies, and the Navy.

Biographies of political staff in key leadership positions

Larry Mitchell
Administrator, Grain Inspection, Packers and Stockyards Administration
202-720-0219, Larry.Mitchell@usda.gov

Larry Mitchell was appointed Administrator of the United States Department of Agriculture (USDA), Grain Inspection, Packers and Stockyards Administration (GIPSA) on June 3, 2012. He is responsible for a variety of programs that facilitate the marketing of livestock, poultry, meat, cereals, oilseeds, and related agricultural products, and to promote fair and competitive trading practices for the overall benefit of consumers and American agriculture. GIPSA’s programs directly and significantly impact two key sectors of American agriculture.
Before joining GIPSA, Mr. Mitchell served as the Associate Director of the Office of Advocacy and Outreach at USDA and previously served as Deputy Administrator for Farm Programs of the Farm Service Agency (FSA) of USDA and Deputy Vice President at Commodity Credit Corporation in the 1990s.

In the interim, Mr. Mitchell served in the private and nonprofit sectors as President of K Street Research, Inc. and as Chief Executive Officer of the American Corn Growers Association. Prior to serving at USDA in the 1990s, Mitchell held the position of Vice President of Government Relations for the National Farmers Union in Washington, D.C., Director of Federal and State Relation for the American Agriculture Movement, Editor of the AAM Reporter and as an independent consultant and writer on American farm issues. Before coming to Washington in 1989, Mr. Mitchell was a grain and cotton farmer in Texas. Mr. Mitchell earned a Bachelor’s degree from Tarleton State University in Plant and Soil Science.

Susan Keith
Deputy Administrator, Packers and Stockyards Program
202-720-7051, Susan.B.Keith@usda.gov

Susan Keith was appointed Deputy Administrator, Packers and Stockyards Program, Grain Inspection, Packers and Stockyards Administration (GIPSA) of the United States Department of Agriculture (USDA) on March 24, 2013. Ms. Keith is responsible for programs that ensure fair and competitive marketing for the livestock, meat, and poultry industries for the benefit of American Agriculture. Programs under the direction of the Deputy Administrator include fostering fair and open competition, and guarding against deceptive and fraudulent practices affecting the movement and price of meat animals and their products. The Packers and Stockyards Program also protects consumers and members of the livestock, meat, and poultry industries from unfair business practices, which can unduly affect meat and poultry distribution and prices.

Before joining GIPSA, Ms. Keith served as Senior Counselor to the General Counsel of the USDA Office of the General Counsel. Prior to her tenure at the Department of Agriculture, Ms. Keith served as General Counsel for the U.S. Senate Committee on Agriculture, Nutrition, and Forestry. During the 1990’s, Ms. Keith worked for the National Corn Growers on legislative and policy matters. She began her Federal career as a Legislative Assistant to Congressman Dave Nagle. Prior to coming to the Washington, D.C. area, she practiced law in Waterloo, Iowa. Ms. Keith earned a Juris Doctorate from the University of Iowa and a Bachelor of Arts degree from Coe College.

• GIPSA employs a workforce of 737 employees of which the following are full-time and intermittent:
  o Full-time: 643 employees
• Intermittent: 94 employees in support of FGIS.
• Of our total workforce, 27.2% are eligible to retire within the next year.
• Our headquarters is located in Washington, D.C., which houses 10% of our workforce.
• GIPSA’s grain-related field activities are located in 7 field offices (Grand Forks, North Dakota; Kansas City, Missouri; League City, Texas; New Orleans, Louisiana; Portland, Oregon; Stuttgart, Arkansas; and Toledo, Ohio), 1 Federal/State office in Olympia, Washington, and 3 sub offices. While not all work is conducted by federal employees, grain-related field activities offers official inspection and weighing services in all areas of the United States and services for U.S. grain exported through Canadian ports. These activities are conducted by either federal employees or individual contractors, or through cooperative agreements with official agencies, such as a State agency.
• PSP field activities are located in 3 regional offices (Atlanta, Georgia; Aurora, Colorado; and Des Moines, Iowa) with 43 resident agents, 5 resident auditors, 2 market inspectors, and 6 resident agent supervisors.
• Of GIPSA’s 643 permanent employees, 56% are in unions and 44% are non-union.
• GIPSA’s staffing in Mission Critical Occupations (MCOs) is shown in the table below:

II. Policies and Regulations

Statutory Authorities

The Grain Inspection, Packers and Stockyards Administration (GIPSA) was established October 20, 1994, under the authority of the Agriculture Reorganization Act of 1994 (P.L. 103-354), to administer the programs and functions of the former Federal Grain Inspection Service (FGIS) and the Packers and Stockyards Administration.

PSP activities are authorized by the Packers and Stockyards Act of 1921 (P&S Act), as amended, and Section 1324 of the Food Security Act of 1985. GIPSA’s PSP is responsible for administering the P&S Act, which prohibits unfair, deceptive, and fraudulent practices by market agencies, dealers, packers, swine contractors, and live poultry dealers in the livestock, poultry, and meatpacking industries.

Inspection and Weighing Services are authorized under both the USGSA and the AMA. The USGSA requires the mandatory inspection and weighing of grain at export ports by GIPSA or delegated State agency personnel, and the permissive inspection and weighing of grain at domestic locations by designated State and private agency personnel. The USGSA also requires GIPSA to supervise all official inspection and weighing activities. On a request basis, GIPSA performs inspection of rice and related commodities under the AMA. Both statutes require GIPSA to collect user fees to fund the costs of operations including the supervision and administration of Federal grain inspection and weighing activities.

Important Policies and Regulations

Scope, Unfair Practices, Undue Preference and Advantage, Tournament Systems and Poultry Growing Arrangements

On May 18, 2016, the Executive Branch published the 2016 Spring Agenda. The Unified Agenda and Regulatory Plan reports data on regulatory and deregulatory actions under development throughout the Federal Government. The Agenda includes work plans for three Packers and Stockyards regulations – scope and unfair practices, final rule stage; tournament systems and poultry growing arrangements, proposed rule stage; and undue preference and advantage, proposed rule stage.

Since passage of the FY 2012 appropriations act, and subsequent appropriations acts, USDA has been precluded from working on certain proposed regulatory provisions related to the Packers and Stockyards Act (Act). The Consolidated Appropriations Act, 2016 does not include the prohibition. USDA must determine how to respond to the opportunity to revisit the regulations that were proposed in June 2010.
GIPSA predominantly releases notices and updates to existing regulations, which are not normally deemed significant/ economically significant by the Office of Information and Regulatory Affairs (OIRA).

Overview of the policy/regulation review process

GIPSA must effectively respond to the dynamic business environments in which the grain and livestock industries operate. Like many segments of American agriculture, these industries are experiencing rapid changes such as mergers, acquisitions, vertical integration, and increased automation. These changes shape how GIPSA operates and provides services. Working with our partners, stakeholders, and customers, GIPSA will monitor external factors that affect the market and aggressively pursue regulatory and policy updates that respond to current and emerging trends and practices.

To establish policy, GIPSA operates in strict compliance with the Administrative Procedures Act (5 USC §551 et seq.). GIPSA uses an inclusive approach to policy making when issues are identified by stakeholders and places a priority on stakeholder engagement. GIPSA interacts directly with industry on issues of mutual interest and concern, and with delegations from other countries, both governmental and market participants, to carry out the agency’s mission. P&SP must address stakeholder and congressional concerns with the goals of strengthening relationships, enhancing understanding of our mission, and building support for the work we do. GIPSA also works closely with the Grain Inspection Advisory Committee, authorized und the U.S. Grain Standards Act and administered under the rules of Federal Advisory Committee Act (FACA), which provides advice to GIPSA on the implementation of the USGSA and AMA by the agency. Through these stakeholder engagements, GIPSA is able to identify and prioritize policies and regulations.

FGIS Designation as an Official Agency

Any person, State, or local government may apply for designation as an official agency to perform official inspection and/or weighing services. Section 79(f)(1)(A) of the U.S. Grain Standards Act (USGSA) lists the conditions and criteria for designation, and Section 79(f)(1)(B) says that an applicant must be better able to provide service than any other applicant for designation. Applications for designation should be filed with GIPSA, according to the Federal Register notice which requests applicants for designation to perform official services. GIPSA evaluates each applicant for designation to determine whether the applicant meets the conditions and criteria contained in Sections 79(f)(1)(A) and (B) of the USGSA, and Section 800.199 of the regulations. Some factors GIPSA considers in determining which applicant is better able to provide service are past performance, quality and timeliness of service, commitment to excellence and customer service, cooperation with GIPSA, willingness and ability to purchase and use new technology, stability and adequacy of resources, the cost of official services, comments received, and the accuracy and detail of applications.
Regulated Entities Under the Packers and Stockyards Act

Those engaged in the business of marketing livestock, meat, and poultry in commerce are subject to the P&S Act. These include stockyards, commission firms, and livestock auctions. They include order buyers and livestock dealers. They include meat packers, meat brokers, meat wholesalers and distributors. They also include swine contractors and live poultry dealers. Farmers and ranchers are not subject to the P&S Act when they buy livestock for their own feeding purposes, or when they market their own livestock.

A business may be classified as a market agency, if it buys or sells livestock on a commission basis, or furnishes stockyard services; dealer, if it buys and sells livestock either on its own account or as the employee or agent of the vendor or purchaser; packer, if it buys livestock for slaughter, manufactures or prepares meats or meat food products for sale or shipment, or markets meats, meat food products, or livestock products in an unmanufactured form acting as a wholesale broker, dealer, or distributor; live poultry dealer, if it purchases live poultry, obtains live poultry under a poultry growing arrangement for slaughter or sells it for slaughter by another; swine contractor, if it obtains swine under a swine production contract for slaughter or sells it for slaughter by another.

Market agencies and dealers must register with GIPSA's Packers and Stockyards Program (P&SP) and obtain sufficient bond coverage before operating. Packers that purchase over $500,000 of livestock a year must have a sufficient bond in place to operate. "Bond" refers to either a surety bond or its financial equivalent.

GAO and OIG Audits

GIPSA does not have any significant reports from the last four years issued by external groups.

III. Congressional Relations and Issues

Overview

- Farmer Fair Practices Rules
  - Several Members and both the authorizing and appropriating committees of Congress have been very interested in the Farmer Fair Practices Rules. A few members are supportive of protecting livestock producers and poultry growers, but the thrust of the interest has been those members interested in continuing to block regulations.
  - Secretary Vilsack was questioned about the rules at his hearing in September before the Senate Agriculture, Nutrition and Forestry Committee. The Chairman and two other committee member submitted questions for the record regarding the rulemaking.
  - Chairman Conaway of the House Agriculture Committee wrote to Secretary Vilsack on October 20, 2016, regarding the rules.
• Elimination of the budget obligation limitation on Inspection and Weighing Fees Collected under the United States Grain Standards Act.

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

GIPSA collaborates with other Federal agencies on various methods development initiatives as well as laboratory and service delivery processes. GIPSA collaborates with the Agricultural Research Service for direct research, and as a means to facilitate cooperative agreements with universities.

GIPSA works closely with the Foreign Agricultural Service to promote trade through support of Cochran program fellows at export locations and at GIPSA’s National Grain Center. GIPSA also works with the Office of Chief Scientist. Since 2009, FGIS has provided sampling and testing services for Corn Soy Blend and Corn Soy Blend Plus, and testing services only for the specialized food: Super Cereal Plus (2014). These commodities are purchased by the Farm Service Agency (FSA) as part of the U.S. Agency for International Development’s (USAID) international food aid assistance programs.

The Grain Inspection, Packers and Stockyards Administration (GIPSA; the customer) has a long standing agreement with the Animal and Plant Health Inspection Service’s (APHIS) Marketing and Regulatory Programs Business Services (MRPBS; the shared service provider) under which APHIS/MRPBS provides certain administrative, financial, and personnel services. This arrangement has been in place since the 1990s as part of the Marketing and Regulatory Programs Management Consolidation Plan.

Under the agreement, APHIS/MRPBS provides GIPSA with the following:

• Acquisition and Asset Management Services - procurement; real and property management; fleet management; and printing, distribution, mail, and copier services.
• Civil rights legal representation services.
• Financial Management Services – financial policies and programs; accounting and payment services; debt management; and billings and collections.
• Human Resources Services – background investigations; LincPass; employee relations; reasonable accommodations; employment classification, recruitment, and hiring; leave and compensation; and retirement and insurance benefits.
• GIPSA collaborates with APHIS by providing laboratory and scientific expertise to support investigations into inadvertent releases of genetically events. GIPSA also performs phytosanitary inspections on behalf of APHIS at export locations.

The USDA Food Safety and Inspection Service (FSIS) has provided technical expertise for GIPSA labor relations through a shared services agreement since 2015.
GIPSA maintains a memorandum of understanding (MOU) with the Food and Drug Administration (FDA) to report actionable levels of deleterious substances in grain and commodity shipments. Under this MOU, GIPSA also performs sanitation inspections on behalf of FDA while performing inspections at commodity plants.

In 2016, GIPSA signed an MOU with the Canadian Grain Commission to promote more cooperation between the two regulatory agencies, including sharing labor services for U.S. grain transshipped through Canada.

GIPSA’s P&SP collaborates with the National Agricultural Statistics Service and with the Agricultural Marketing Service. The P&SP works with both of these USDA agencies to share information regarding livestock markets. P&SP also works closely with USDA Office of the General Counsel on civil enforcement activities and with the Office of Inspector General on criminal enforcement activities. In addition, P&SP shares some statutory authority regarding competition with the Department of Justice and the Federal Trade Commission.

**Stakeholder group overview**

**Packers and Stockyards Program**

**American Farm Bureau Federation (AFBF)**
Website: [http://www.fb.org/](http://www.fb.org/)
Description: AFBF is the unified national voice of agriculture, working through grassroots organizations to enhance and strengthen the lives of rural Americans and to build strong, prosperous agricultural communities.
Engagement: GIPSA representatives typically meet with AFBF one or two times a year.

**Campaign for Contract Agriculture Reform (CCAR)**
Description: CCAR is a national alliance of organizations working to provide a voice for farmers and ranchers involved in contract agriculture, as well as the communities in which they live. The goal of the campaign is to assure that the processor-producer relationship serves as a fair partnership rather than a dictatorship.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with CCAR two or three times a year.

**Farm Aid**
Website: [https://www.farmaid.org/](https://www.farmaid.org/)
Description: Farm Aid works with local, regional and national organizations to promote fair farm policies and grassroots organizing campaigns designed to defend and bolster family farm-centered agriculture.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with Farm Aid two or three times a year.
Food and Water Watch
Website: https://www.foodandwaterwatch.org/
Description: Food & Water Watch champions healthy food and clean water for all.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with Food and Water Watch two or three times a year.

Livestock Marketing Association (LMA)
Website: http://lmaweb.com/
Description: LMA describes itself as the leading advocate for the livestock marketing industry, serving as the voice for local livestock auction markets on state and federal legislative and regulatory issues.
Key Issues: implementation of the laws and regulations that affect market agencies.
Engagement: GIPSA representatives meet frequently with LMA.

National Cattlemen’s Beef Association (NCBA)
Website: http://www.beefusa.org/
Description: NCBA is the marketing organization and trade association for U.S. cattle farmers and ranchers.
Key Issues: regulations affecting meat packers and possible interaction with livestock marketing arrangements.
Engagement: GIPSA representatives meet with NCBA frequently.

National Chicken Council (NCC)
Website: http://www.nationalchickencouncil.org/
Description: NCC is the national, non-profit trade association whose primary purpose is to advocate for the broiler industry.
Key Issues: regulations affecting live poultry dealers.
Engagement: GIPSA representatives typically meet with NCC one or two times a year.

National Family Farm Coalition (NFFC)
Website: http://nffc.net/
Description: NFFC represents family farm and rural groups whose members face the challenge of the deepening economic recession in rural communities.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with NFFC two or three times a year.

National Farmers Union (NFU)
Website: https://nfu.org/
Description: NFU represents family farmers, fishers, and ranchers across the country, with formally organized divisions in 33 states. NFU utilizes a grassroots structure to develop policy positions.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with NFU two or three times a year.
National Pork Producers Council (NPPC)
Website: http://nppc.org/
Description: NPPC, representing 43 affiliated state associations, works to ensure that the U.S. pork industry remains a consistent and responsible supplier of high-quality pork to domestic and international markets.
Key Issues: regulations affecting meat packers and possible interaction with livestock marketing arrangements.
Engagement: GIPSA representatives meet with NPPC frequently.

National Sustainable Agriculture Coalition (NSAC)
Website: http://sustainableagriculture.net/
Description: NSAC is an alliance of grassroots organizations that advocates for federal policy reform to advance the sustainability of agriculture, food systems, natural resources, and rural communities.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with NSAC two or three times a year.

National Turkey Federation (NTF)
Website: http://www.eatturkey.com/
Description: NTF serves as the national advocate for the turkey farmer and processors-representing their point of view to Congress and federal agencies.
Key Issues: regulations affecting live poultry dealers.
Engagement: GIPSA representatives typically meet with NTF one or two times a year.

North American Meat Institute (NAMI)
Website: https://www.meatinstitute.org/
Description: NAMI is a national trade association that represents companies that process 95 percent of meat and 70 percent of turkey products in the United States.
Key Issues: regulations affecting packers.
Engagement: GIPSA representatives typically meet with NAMI one or two times a year.

Organization for Competitive Markets (OCM)
Website: http://competitivemarkets.com/
Description: OCM is a national, non-profit public policy research organization dedicated to returning the food and agricultural sector to supply-demand based competition.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with OCM one or two times a year.

Ranchers-Cattlemen Action Legal Fund, United Stockgrowers of America (R-CALF USA)
Website: http://www.r-calfusa.com/
Description: NPPC, representing 43 affiliated state associations, works to ensure that the U.S. pork industry remains a consistent and responsible supplier of high-quality pork to domestic and international markets.
Key Issues: regulations affecting meat packers and possible interaction with livestock marketing arrangements.
Engagement: GIPSA representatives meet with R-CALF one or two times a year.

**Rural Advancement Foundation International – USA (RAFI)**
Website: Website: [http://rafiusa.org/](http://rafiusa.org/)
Description: RAFI’s mission is to cultivate markets, policies, and communities that sustain thriving, socially just, and environmentally sound family farms.
Key Issues: competitive markets, fair treatment for livestock producers and poultry growers.
Engagement: GIPSA representatives typically meet with RAFI two or three times a year.

**Federal Grain Inspection Service**
**American Association of Grain Inspection and Weighing Agencies (AAGIWA)**
Website: [http://www.aagiwa.org/](http://www.aagiwa.org/)
Type: Trade Association
Membership: 34 official agency members and 14 associate members
Description: AAGIWA is the national association that represents the interests of State and private agencies who carry out official inspection and weighing services under the USGSA through designations and delegations.
Key Issues: Grain standards, instructions, regulations, training.
Engagement: AAGIWA invites GIPSA representatives to its annual meeting and to call in to periodical conference calls to discuss issues. GIPSA seeks input from AAGIWA when revising or implementing policy.

**Canadian Grain Commission (CGC)**
Website: [https://www.grainscanada.gc.ca/index-eng.htm](https://www.grainscanada.gc.ca/index-eng.htm)
Type: Foreign Government
Description: The CGC is a Canadian government entity that works in the interest of grain producers in Canada. CGC establishes grain quality standards, and regulate grain handling.
Key Issues: Grain Quality, grain weighing, storage, handling, delivery, research.
Engagement: In 2016, GIPSA signed an MOU with the Canadian Grain Commission to promote more cooperation between the two regulatory agencies, including sharing labor services for U.S. grain transshipped through Canada. GIPSA tries to meet in person with the CGC once a year.

**North American Export Grain Association (NAEGA)**
Website: [http://naega.org/](http://naega.org/)
Type: Trade Association
Membership: 26 members
Description: NAEGA is a not for profit trade association consisting of private and publicly owned companies and farmer-owned cooperatives involved in and providing services to the bulk grain and oilseed exporting industry.
Key Issues: Trade, export laws, GIPSA regulations, privatization of inspection, biotechnology.
Engagement: GIPSA keeps regular contact with NAEGA representatives concerning potential changes to policy that impact member organizations.
United States Department of Agriculture  
2016 Presidential Transition  
Grain Inspection, Packers, and Stockyards Administration (GIPSA)

National Grain and Feed Association (NGFA)  
Website: https://www.ngfa.org/  
Type: Trade Association  
Membership: 1,126 organizations  
Description: NGFA is a non-profit trade association that represents and provides services for grain, feed and related commercial businesses. Its activities focus on enhancing the growth and economic performance of U.S. agriculture.  
Key Issues: Trade, transportation, biotechnology, safety, GIPSA regulations  
Engagement: GIPSA keeps regular contact with NGFAA representatives concerning potential changes to policy that impact member organizations.

U.S. Dry Pea and Lentil Council  
Website: http://www.pea-lentil.com/  
Type: Trade Association  
Membership: 6 organizations  
Description: The USA Dry Pea & Lentil Council (USADPLC) is a non-profit organization that promote and protect the interests of growers, processors, warehousemen and sellers of dry peas, lentils and chickpeas in the United States.  
Key Issues: Marketing, research, education.  
Engagement: U.S. Dry Pea and Lentil Council meets with FGIS once a year and other various USDA agencies.

USA Rice Federation  
Website: https://www.usarice.com/  
Type: Trade Association  
Description: The USA Rice Federation is the global advocate for all segments of the U.S. rice industry with a mission to promote and protect the interests of producers, millers, merchants and allied businesses.  
Key Issues: Trade, regulations, conservation  
Engagement: FGIS attends their annual meeting in New Orleans.

U.S. Rice Producers Association  
Website: http://www.usriceproducers.com/  
Type: Trade Association  
Description: Represents all rice producers to enhance rice markets domestically and internationally.  
Key Issues: Research, rice education, quality.  
Engagement: FGIS meets with the U.S. Rice Producers on a yearly basis. Currently conducting a Rice mill study due to some of their concerns.

U.S. Grains Council (USGC)  
Website: http://www.grains.org/  
Type: Trade Association  
Description: U.S. Grains Council is an organization that focuses on developing the U.S. grain markets and improving trade for U.S. grain around the world.  
Key Issues: Grain Quality, trade.
Engagement: GIPSA assists the U.S. Grains Council (USGC) in conducting the annual export corn quality survey. The survey results are provided to USGC so they can advise importers worldwide on what is available for sale, the cost, and the advantages of U.S. corn. Assisted USGC in conducting sorghum quality survey. The survey results assist USGC in analyzing sorghum crop quality data and working with trading partners if any crop quality issues arise.

U.S. Wheat Associates
Website: http://www.uswheat.org/
Type: Trade Association
Description: U.S. Wheat Associates is an organization that focuses on developing the U.S. wheat market around the world.
Key Issues: Wheat quality, international trade.
Engagement: GIPSA conducts a Wheat Export Cargo Survey and a Weed Seed Survey with the U.S. Wheat Associates. The survey results help U.S. Wheat Associates advise importers worldwide on what wheat is available for sale, the cost, and the advantages that U.S. wheat has over the competition.

NGFA-NAEGA Industry Workshop
- Twice a year; one meeting with Gulf Exporters and one meeting with the Pacific Northwest Exporters.
- Discuss regional concerns and issues.

American Association of Grain Inspection & Weighing Agencies (AAGIWA) Board Meetings & Annual Meeting
- FGIS is often invited to participate in AAGIWA Board meetings and Annual Meeting.
- Discuss current issues.

Grain Inspection Advisory Committee
Type: Federal Advisory Committee Act (FACA)
Membership: The committee is comprised of 15 members
How are members chosen: GIPSA typically solicits new members each year through a Federal Register notice. The Secretary of Agriculture selects and appoints new members.
Schedule for selection: Members serve 3-year terms on the Committee. Ten members’ terms’ will expire in April 2017.
Statutory and Regulatory Basis: The USDA Grain Inspection Advisory Committee is authorized under Section 21(e) of the United States Grain Standards Act (Act). The Committee convenes twice annually to advise GIPSA on the programs and services the Agency delivers under the Act. Members and alternate members do not require any affiliation, but rather are selected to represent all segments of the grain industry, including grain producers, processors, merchandisers, handlers, exporters, consumers, grain inspection agencies, and scientists.
Meeting Schedule: The Committee convenes twice annually, generally in May/June and November/December. The next meeting is scheduled for October 19-20, 2016, in Portland,
United States Department of Agriculture
2016 Presidential Transition
Grain Inspection, Packers, and Stockyards Administration (GIPSA)

Oregon. The spring meeting, timeframe and place, will be voted on by the members at the October meeting.

**Compensation:** Committee members serve without compensation, but are reimbursed for travel expenses.

**Recent engagements with stakeholder group**

**Grain Inspection Advisory Committee**
The next Grain Inspection Advisory Committee meeting is scheduled for October 19-20, 2016 in Portland, Oregon. The spring meeting, timeframe and place, will be voted on by the members at the October meeting.

Previously, the Grain Inspection Advisory Committee met May 17-18, 2016 at GIPSA’s National Grain Center in Kansas City, Missouri. Information regarding this meeting can be found at [https://www.gipsa.usda.gov/fgis/advisorycommittee.aspx](https://www.gipsa.usda.gov/fgis/advisorycommittee.aspx).

V. **Top Issues**

**Hot Topics**

**Farmer Fair Practices Rules**
Since passage of the Consolidated and Further Continuing Appropriations Act, 2012, USDA had been precluded from working on certain proposed regulatory provisions related to the Packers and Stockyards Act (Act). These proposed regulations included provisions to clarify that it is not necessary to find harm to competition in order to find that a packer, swine contractor, or live poultry dealer has engaged in an unfair, unjustly discriminatory, or deceptive practice or device or has given an undue or unreasonable preference or advantage.

The Consolidated Appropriations Act, 2016 does not include the prohibition. USDA intends to issue an interim final rule to clarify that it is not necessary to establish harm to competition in order to prove that a packer, swine contractor, or live poultry dealer has engaged in an unfair or unjustly discriminatory practice. USDA intends to propose regulations to establish the kinds of conduct or action that would be considered unfair under the Act without a showing of harm to competition. USDA also intends to propose a regulation to establish criteria for live poultry dealers who use a poultry grower ranking system to determine the amount of compensation poultry growers receive.

**Other Packers and Stockyards Program Regulations**
Congress recently passed legislation to clarify that online or video livestock auctions that handle the proceeds of the sale are subject to the Packers and Stockyards Act and to authorize electronic payments by packers, livestock market agencies, and livestock dealers. GIPSA will review current regulations to determine what changes are
necessary to make the regulations consistent with the amendments to the Packers and Stockyards Act.

GIPSA has also identified regulations that are out of date and should either be updated or eliminated. These regulatory changes are less critical than the Farmer Fair Practices rules and the regulatory changes that are necessary to address the statutory changes.

**Reevaluating the Budget Obligation Limitation on Inspection and Weighing Fees Collected Under the United States Grain Standards Act**

Currently, the annual appropriations act includes a budget obligation limitation on fees collected from inspection and weighing services which allows the Grain Inspection, Packers and Stockyards Administration (GIPSA) to operate its Federal Grain Inspection Service’s official inspection and weighing program. This program provides both mandatory and voluntary services, including a variety of inspection, weighing, and related services on grains, pulses, oilseeds, and processed and graded commodities. These services extend to both domestic and international markets, with services being mandatory for exports. These mandatory services include official weighing of the majority of grain exported from the United States and of intercompany barge grain received at export port locations; official inspection of the majority of grain exported from the United States; and testing of all corn exported from the United States for aflatoxin prior to shipment, unless the contract stipulates testing is not required.

In FY 2014, GIPSA experienced a dramatic increased demand for export inspection services in direct response to an increase of more than 35 percent in grain exports. In FY 2015 grain exports were higher than the record in FY 2014 and are anticipated to continue to increase through FY 2017. Demand for inspection services will increase with a continued increase in export volumes because of the statutory requirement to inspect and weigh export grain. To meet the increased demand for services, grain exporters and handlers are opening new export facilities that require around the clock service by GIPSA, thus increasing GIPSA’s costs. Additionally, GIPSA’s cost for installing inspection laboratories at these new facilities is approximately $200,000 each. In order to support mandatory official inspection and official weighing services along with the voluntary domestic services, and continue to meet the demand of the domestic and foreign grain and related commodity markets, the limitation on official inspection and official weighing services expenses that is currently in place needs to be eliminated.

GIPSA has executed various cost containment initiatives to limit obligations while meeting increased demand for services. GIPSA has limited supply and equipment purchases and changed hiring practices to optimize cost-efficient use of intermittent, part-time, and full-time employees to minimize overtime. Beginning in calendar year 2017, GIPSA will annually adjust its export inspection fees based on a rolling 5-year average of the volume of grain exports so that it maintains an operating reserve of between three to six months, ensuring a direct link between the user fees and the volume of grain exports.
United States Department of Agriculture  
2016 Presidential Transition  
Grain Inspection, Packers, and Stockyards Administration (GIPSA)

Timeline

Packers and Stockyards Program  
Assuming that the Farmer Fair Practices Rules are published in the Federal Register in November or December 2016, with a 60-day comment period, the new administration will have to first determine whether to extend the comment period. I would anticipate that decision before mid-February, 2017. Once the comment period closes, the program will have to review comments and decide how to proceed on the proposed rules.

The President recently signed P.L. 114-237, which amended the Packers and Stockyards Act to define market agency to include livestock sales conducted online through video or other electronic methods and to allow packers, market agencies, and dealers to pay for livestock by wire, electronic fund transfer, or any other method determined appropriate. The new administration will need to review existing regulations and decide how to proceed with rules to implement the amendments to the Packers and Stockyards Act.

Federal Grain Inspection Service  
No key decisions or program actions are anticipated in the first six months of the new administration, through June 30, 2017.

WHO WE ARE: Natural Resources and Environment (NRE)

The Office of the Under Secretary of Agriculture for Natural Resources and Environment promotes the conservation and sustainable use of natural resources on the Nation’s private working lands, and sustains production of clean air and water, recreational opportunities, wildlife habitat and other goods and services that the public demands of the National Forests and Grasslands. The Under Secretary is responsible for the day-to-day operations of the United States Forest Service (FS) and Natural Resources Conservation Service (NRCS), and serves as the principal advisor to the Secretary of Agriculture on policy to promote the conservation, restoration and sustainable use of the Nation’s natural resources.

WHO WE ARE: OUR WORKFORCE

- FS includes over 28,000 full time employees and NRCS over 10,000.
- 10,000 – 12,000 temporary employees are hired annually by FS (May – Sept.)
- Offices and research stations distributed throughout the 50 states, the Pacific Islands and Caribbean

WHO WE SERVE: OUR CONSTITUENTS

NRE agencies work with state and tribal natural resource managers and working farm, forest and ranchland owners across the country to help them achieve their stewardship goals. FS works with diverse groups who rely upon the nation’s forests and grasslands for recreation, community economic development, clean air and water and wildlife habitat.

KEY UPCOMING DECISIONS

Regional Conservation Partnership Program:
Early 2017 decisions on program focus for the fourth funding round for this partner-driven stewardship program, which will invest over $200 million in 2018.

Fire Suppression Budget and Forest Management Reform:
A number of alternative proposals have been put forward during the 114th Congress to address the chronic problem of budgeting for wildland fire and its attendant impacts to non-fire programs at the Forest Service. Most also include provisions to accelerate the pace and scale of forest restoration. Further push for legislative solutions or implementation will require the immediate attention of the next Administration.

BUDGET HIGHLIGHTS FY 2016

NRCS 2016 budget authority was nearly $4.5 billion, of which roughly 77 percent was mandatory and 23 percent discretionary. NRCS has seen relative consistency in budget authority over the past several years.

FS budget authority in FY 2016 was $6.38 billion ($5.68B – discretionary; $704M in mandatory). 56% of discretionary authority is attributed to Fire. This is up from 16% in 1995.

Organizational Chart

USDA Natural Resources and Environment

Under Secretary

Chief of Staff

Deputy Under Secretary (Natural Resources Conservation Service)

Chief of the Natural Resources Conservation Service

Deputy Under Secretary (Forest Service)

Chief of the Forest Service*

Special Assistant

Senior Advisor

Confidential Assistant

In addition, the office of the Under Secretary includes two detailed positions from NRCS and Forest Service who serve as staff assistants to the Deputy Under Secretaries. The office also includes three executive assistants and one administrative support position.

Lastly, the office provides leadership for the Department on behalf of the Secretary in his role as Chair of the Council. The RESTORE Executive Director reports to the Council.

* Denotes non-political career SES position
Biographies for career and political staff in key leadership positions

Robert Bonnie
Under Secretary for Natural Resources and Environment
202-720-7173, Robert.bonnie@osec.usda.gov

Robert Bonnie is Under Secretary for Natural Resources and Environment at the US Department of Agriculture, a post he has held since August, 2013. In that role, he oversees the work of the US Forest Service (FS) and Natural Resources Conservation Service (NRCS). He also works with the Secretary, other USDA agencies, and other federal partners on climate change policy. Bonnie joined USDA in 2009 as a Senior Advisor to Secretary of Agriculture Tom Vilsack for environment and climate change. Prior to that, he was vice president for land conservation for the Environmental Defense Fund. He grew up on a farm in Kentucky and now lives in Virginia.

Ann Mills
Deputy Under Secretary for Natural Resources and Environment (NRCS)
202-720-7173, Ann.mills@osec.usda.gov

As Deputy Under Secretary for Natural Resources and Environment, Ann C. Mills has responsibility for the Natural Resources Conservation Service (NRCS), the federal agency with primary responsibility for working with private landowners to conserve, maintain and improve their natural resources. America’s farms, ranches and forests provide 87% of the surface supply of drinking water in America. USDA programs play a significant role in protecting the nation's supply of clean abundant water.

Mills brings to this position 20 years of policy and management experience with government and nonprofit conservation advocacy. Most recently, as a senior executive at American Rivers, Mills led the implementation of programs to develop sustainable solutions for flood and drought mitigation and water quality improvement across the country including urban and rural watersheds in Northern California's Sierras and Bay Delta; the Columbia, Missouri and Mississippi river basins; the Great Lakes; and the Chesapeake Bay. Mills also served as a senior staff person for Senate Democratic Leader Tom Daschle, chief of staff to California Lt. Governor Leo McCarthy and legislative assistant to then-Congressman Richard Durbin and Congressman James McClure Clarke. She holds a Master’s Degree from the Lyndon B. Johnson School of Public Affairs at The University of Texas at Austin, and a BA in Political Science from Tufts University.
Leslie Jones  
Deputy Under Secretary for Natural Resources and Environment (FS)  
202-720-7173, Leslie.jones@osec.usda.gov  

Leslie Jones has worked in conservation for more than two decades. As Deputy Under Secretary for Natural Resources and Environment, she has responsibility for the Forest Service, the federal agency with responsibility for 193 million acres of National Forest System lands. The Forest Service also provides financial and technical assistance through its State and Private Forestry programs to States, municipalities and a host of community partners across all landscapes. She also served as Chief of Staff to the Under Secretary and Senior Advisor. Prior to joining the Obama Administration she was General Counsel for The Wilderness Society, served in leadership positions in the New England land trust community, and worked as an attorney for the Vermont Attorney General. She holds a Juris Doctor and Masters of Environmental Law from Vermont Law School and a BA in Human Ecology from College of the Atlantic. She grew up on both coasts, in California and Maine, and now lives in Virginia.

Patrick Holmes  
Chief of Staff to the Under Secretary for Natural Resources and Environment  
202-720-7173, Patrick.holmes@osec.usda.gov  

Patrick Holmes serves as Chief of Staff to the Under Secretary for Natural Resources and Environment at USDA. In his current role, Patrick provides coordination, communication, management, and counseling the Office of the Under Secretary and supports execution of a diverse suite of priorities facing the Department, including climate and energy, conservation finance, public-private partnerships, and forest restoration. Prior to joining the Obama Administration at USDA, Patrick has worked for the Colorado Conservation Trust, the Somoran Institute, the Yale Center for Business and Environment and the State of the Rockies Project. He is a graduate of the Yale School of Forestry and Environmental Studies and Colorado College, a past fellow of the Kinship Conservation Institute and a Wyss Scholar.

Meryl Harrell  
Senior Advisor to the Under Secretary for Natural Resources and Environment  
202-720-7173, Meryl.Harrell@osec.usda.gov  

Meryl Harrell serves as Senior Advisor to the Under Secretary for Natural Resources and Environment at USDA. In her current role, Meryl is responsible for policy issues related to the Forest Service, including recreational access and economic activity, land management planning, job training opportunities for youth and veterans, and other natural resource management issues. She previously served as Chief of Staff to the Under Secretary and as a Special Assistant to the Under Secretary. Prior to joining USDA in 2009, she worked for the Obama campaign in Wisconsin and on the Transition, and has worked on public lands policy at The Wilderness Society. Meryl received her J.D. from the Yale Law School and an A.B. in geosciences and environmental studies from Princeton University. She is also an alum of the Teton Science School, where her love of rocks turned into a passion for public lands. Meryl enjoys camping and hiking.
Justin Ehrenwerth
Executive Director of the Gulf Coast Ecosystem Restoration Council [Career]
justin.ehrenwerth@restorethegulf.gov

Justin R. Ehrenwerth serves as Executive Director of the Gulf Coast Ecosystem Restoration Council (Council). Created by the RESTORE Act of 2012 and comprised of the Governors of the five Gulf Coast States and Secretaries from six federal agencies, the Council is responsible for restoring and protecting the natural resources, ecosystems, fisheries, marine and wildlife habitats, beaches, coastal wetlands and economy of the Gulf Coast. Prior to joining the Council, Ehrenwerth served as Chief of Staff to the Deputy Secretary of Commerce. Previously, Ehrenwerth served as Assistant Counsel to the President in the White House Counsel’s Office where he was a member of the Oversight and Litigation group representing the White House in Congressional investigations and advising Federal agencies on oversight matters. During the first two years of the Obama administration, Ehrenwerth served in the Department of Commerce’s Office of General Counsel.

Ehrenwerth has held leadership positions on a number of national and statewide political campaigns including the Obama for America and Kerry-Edwards campaigns. He has been active in the non-profit sector having worked at the University of Pittsburgh Institute of Politics and the Northern California Grantmakers. He also served as a Marshall-Brennan Constitutional Literacy Teaching Fellow as well as a Coro Fellow in Public Affairs. Ehrenwerth currently serves on the Board of the Coro Center for Civic Leadership.

Ehrenwerth is a summa cum laude graduate of Colby College and holds an MA in Philosophy, Politics and Economics from the University of Oxford and a J.D. from the University of Pennsylvania Law School.

Overview of Agency Programs and Operations

The Office of the Under Secretary of Agriculture for Natural Resources and Environment promotes the conservation and sustainable use of natural resources on the Nation's private working lands, and sustains production of clean air and water, recreational opportunities, wildlife habitat and other goods and services that the public demands of the National Forests and Grasslands. The Under Secretary is responsible for the day-to-day operations of the United States Forest Service and Natural Resources Conservation Service and serves as the principal advisor to the Secretary of Agriculture on policy to promote the conservation, restoration and sustainable use of the Nation’s natural resources, often in coordination with other USDA agencies and offices. In addition, the Office of the Under Secretary provides leadership and counsel to the Secretary in his role as Chair of the Gulf Coast Ecosystem Restoration Council. In response to the Deepwater Horizon spill, in July 2012 the Resources and Ecosystems Sustainability, Tourist Opportunities, and Revived Economies of the Gulf Coast States Act (RESTORE Act) established the Gulf Coast Ecosystem Restoration Council (Council). The Council is responsible for helping to restore the ecosystems and economies of the Gulf Coast region by developing and overseeing implementation of a Comprehensive Plan and prioritizing projects to receive funding from
appropriate BP settlement funds. Finally, the Office provides political leadership for the Department on a host of conservation, climate change, public lands, and natural resource initiatives led by offices of the White House.

**Forest Service – Overview**

*Mission and Responsibilities:* The mission of the Forest Service is to sustain the health, diversity, and productivity of the Nation’s forests and grasslands to meet the needs of present and future generations. The Forest Service manages 193 million acres in 44 States and territories—154 national forests, 20 national grasslands, and one prairie comprising 30 percent of all federally owned lands. The agency also provides financial and technical assistance through its State and Private Forestry programs to States, municipalities and a host of community partners across all landscapes, including 426 million acres of private forest land, 69 million acres of State forest land, 19 million acres of Tribal forests, and 130 million acres of urban and community forests. The Forest Service is comprised of nine Regional Offices, where regional foresters serve as the senior executive leaders coordinating activities between national forests and grasslands (overseen by forest supervisors), monitoring activities on those lands to ensure quality operations, providing guidance for forest plans, and allocating budgets to the forests.

The Forest Service is one of the largest forestry research organizations in the world, with seven research stations, two Technology and Development Centers, 80 Experimental Forests, a Forest Products Laboratory, and a Geospatial Service and Technology Center that support scientific advances in resource management. Through its International Programs office, the agency works with more than 80 countries worldwide to support sustainable management and protection of forests, providing assistance and sharing best practices. The State and Private Forestry (S&PF) organization of the Forest Service reaches across the boundaries of National Forests to States, Tribes, communities and non-industrial private landowners. S&PF is the federal leader in providing technical and financial assistance to landowners and resource managers to help sustain the nation’s forests and protect communities from wildland fires.

Various activities on Forest Service lands contribute more than $36 billion to America’s economy each year supporting nearly 450,000 jobs. The Forest Service is the preeminent federal wildfire fighting agency, providing the lion’s share of the personnel and assets needed to protect communities and resources from the threats of increasingly catastrophic wildfire events. Of note, Forest Service receives its discretionary appropriations through Title III of the regular Interior, Environment, and Related Agencies appropriations bill. In some years, the FS has received additional discretionary monies through supplemental appropriations bills.

**Program and Initiative Highlights:**

*Accelerating Forest Restoration on National Forests*

In 2012, the Forest Service issued a strategy aimed at *Increasing the Pace of Restoration and Job Creation on Our National Forests*. The health of our forest ecosystems, watersheds, and forest dependent communities is in jeopardy amid increased threats of wildfire, drought, development,
insects and disease. Restoration offers an antidote, building resilience for forests and communities alike. The Forest Service restoration strategy emphasizes collaboration, and endeavors to move beyond the conflicts which have characterized forest policy in the past and toward a shared vision that allows environmentalists, forest industry, local communities, and other stakeholders to work collaboratively toward healthier forests and watersheds, safer communities and more vibrant local economies. The foundation of the strategy is the Forest Planning Rule, published in 2012, which sets guidelines for adaptive land management plans for our National Forest System. The Agency’s goal is to ensure an adaptive land management planning process that is inclusive, efficient, collaborative and science-based to promote healthy, resilient, diverse and productive National Forests and Grasslands.

A key component of the restoration strategy is the Collaborative Forest Landscape Restoration Program (CFLRP). In the five years since the initial CFLRP projects began, the program has improved more than 1.33 million acres for wildlife habitat; treated more than 1.45 million acres to reduce the risk of catastrophic fire; treated more than 84,500 acres of land to achieve healthier condition through timber sales; and contributed to generating an average of 4,360 jobs per year. Moreover, CFLRP projects attracted new partners and built community relationships, leveraging more than $76.1 million in matching funds. A CFLRP five year progress report is available here. Other strategies include:

- Improving the efficiency of restoration project planning under the National Environmental Policy Act (NEPA) through larger, landscape-scale approaches, partnerships with collaboratives, and the use of a host of adaptive and streamlined tools;
- Expanding markets for forest products, including biomass energy and green building materials such as cross-laminated timber that support forest restoration, create local economic opportunity, and reduce environmental impacts (see the U.S. Tall Wood Building Prize Competition);
- Implementing new provisions of the 2014 Farm Bill such as the Good Neighbor Authority, which authorizes federal agencies to enter into cooperative agreements or contracts with state foresters to conduct restoration projects on federal forestland when similar and complementary restoration services are being performed on adjacent state or private lands; and
- Launching a new Joint Chiefs’ Landscape Restoration Program--- a partnership between Forest Service and the Natural Resource Conservation Service to design and implement treatments where private and public lands meet, and where restoration objectives cross ownership boundaries.

A 2015 accomplishments report details these and other major efforts of the Forest Service to accelerate the pace and scale of forest restoration. The agency has also led collaborative initiatives building partnerships with other USDA agencies, corporations, utilities, industry and conservation groups to further advance restoration goals. Examples include:

- Through the Wood to Energy Initiative, Forest Service has partnered with the Rural Business Cooperative Service, Rural Utilities Service, Farm Service Agency, others at USDA and relevant industry trade-associations to support
over 240 wood energy projects since 2009, and advance mutual goals for coordination and communications.

- Working with Coca-Cola North America, the Forest Service has forged a partnership to restore and protect damaged watersheds on national forests restoring over one billion liters of water in areas important to Coke’s bottling facilities. The partners have committed to double that outcome through 2018.

- Across the West, partnerships with water utilities and municipalities to reduce the risk of catastrophic wildfire to municipal water supplies have brought together new partners to invest in the Forest Service’s restoration objectives. For instance Denver Water entered into 5-year partnership bringing over $18 million in outside investment and the City of Flagstaff passed a voter approved bond initiative to invest $10 million to protect the city’s water system. A recent report from the World Resources Institute highlights these and related partnerships.

Budgeting and Responding to the Increase of Wildfire

Our forest and grassland resources are at risk due to uncharacteristically severe wildfires, severe outbreaks of insects and disease, drought and invasive species, all exacerbated by a changing climate. Many states have recently experienced the largest and/or most destructive fires in their history. Fire seasons are longer, 78-days longer since 1970 on average. Decades of fire suppression have led to increases in fuels in many forest types across the country. The area affected by an epidemic of mountain pine beetle in the West has reached 32 million acres on the national forests alone. California is facing a particularly critical situation as a result of five year drought and related stressors. Surveys estimate that 66 million trees died from 2010 to October 2015 in California, with millions more dying over the course of the next several seasons. Finally, the increase of homes in the wildland urban interface—the area where forests and communities meet—is making wildfire suppression more complex, more dangerous for firefighters, and more expensive.

The Forest Service has the most experienced, well trained, and effective wildland fighting force in the world, which it coordinates alongside other state and federal firefighting forces. Through the nation’s largest wildfire fighting workforce and aviation and equipment fleet, the Forest Service uses risk management approaches to facilitate and promote wildland firefighter safety while protecting lives, homes and property from wildfire threats. In an average year, the Forest Service responds to over 50,000 wildfires burning nearly 6 million acres. At the peak of the 2015 season, a record setting year in which 10 million acres burned from 68,151 wildland fires, over 150 helicopters, 30 fixed-wing air tankers and 32,000 personnel were deployed—most of these resources were contributed by the Forest Service.

Working with the U.S. Department of the Interior and the wildland fire community, the Forest Service developed a long-term National Cohesive Wildland Fire Management Strategy with three primary components: (1) restoring and maintaining resilient landscapes; (2) developing fire-adapted communities; and (3) responding to wildfire safely, effectively, and efficiently.
Comprehensive fire budget reform is necessary to meet the funding needs of all forest service programs and to ensure the agency can continue to support all three components of the National Cohesive Strategy.

The impact of the rising cost of suppression on the Forest Service’s budget is detailed in a 2014 Report on the state by state impacts of fire transfer, and a 2015 Forest Service Report: Rising Firefighting Costs Raises Alarms. Presently the Administration is engaged in dialogue with congressional authorizers, appropriators and key champions to pursue a comprehensive solution to the Agency’s fire budget challenges. As part of a potential solution, dialogue is also occurring around a series of proposed forest management reforms aimed at increasing the pace and scale of restoration.

Because wildfire knows no jurisdictional bounds, the Forest Service’s State and Private Forestry programs are an integral component of our state, local and tribal partnerships. Rural firefighting resources are often the first line of defense in meeting expanded protection needs for wildland-urban interface fires. They provide nearly 80% of initial attack on wildland fires in the United States. The Forest Service has a variety of programs to help State and rural firefighters enhance their departments with equipment, training and communications, including the Federal Excess Personal Property (FEPP) program and the Volunteer Fire Assistance Program (VFA). The Forest Service also works with communities to focus on advance planning that can protect them from the risk of wildland fire, for example, helping them become fire adapted communities through the development of Community Wildfire Protection Plans (CWPPs) and the Firewise program. CWPPs help communities address wildfire response, community preparedness, and structure protection. Through CWPPs, communities can influence how and where federal agencies prioritize the reduction of hazardous fuels. The Firewise program is a multi-agency effort to help homeowners, community leaders, planners, and developers work together to protect people, property, and natural resources from the risk of wildland fire—before a fire approaches. The Firewise program emphasizes wildfire readiness and responsible community design, including fire-resistant building materials and landscaping.

Improving Recreation Access and Economic Opportunity
Outdoor experiences are a critical way the American public connects with the Forest Service, with more than 160 million visits to National Forests and Grasslands annually. The outdoor recreation economy supports 6.1 million direct jobs, $80 billion in federal, state and local tax revenue and $646 billion in spending each year. America’s vast system of public forests and grasslands provides opportunities for over 165 million visitors each year to recreate and support local economies through tourism. These recreational uses support approximately 200,000 full and part time jobs and contribute over $13 billion to local communities each year ranging from hiking group, to off-highway vehicle users to four season ski resorts. Forest Service recreation special use permits provide organized access for service providers who take groups of people to national forests and grasslands to experience outdoor recreation, while allowing the Forest Service to manage visitor volume in specific locations and protect resources. In 2016, the agency began taking steps to improve access such as:

- Streamlining the process to receive or renew a recreation special use permit, making it simpler and faster through the use of existing agency authorities;
United States Department of Agriculture
2016 Presidential Transition
Natural Resources and Environment Mission Area (NRE)

- Increasing staff capacity and the consistency of the permit process across the country by developing new standardized training programs and exploring new staffing strategies;
- Encouraging managers to take greater advantage of allowable waivers when a special use permit is not required, for example, where a proposed use would have only nominal impact on lands, resources, and programs or operations; and
- Investing in technology to improve business tools and data that support recreation special uses, including developing an electronic permit application process.

Additionally, Forest Service has partnered with USDA Rural Development’s Community Economic Development (CED) Division and NIFA to jointly educate each other’s field-based contacts on how they can leverage each other in supporting rural communities in using recreation as an economic driver. FS’ partnership with CED has resulted in the development of a Recreational Economy Resource Guide – a common tool that agencies can use to train staff and have a unified material to market available resources to the public around the recreational economy.

**Engaging New and Underrepresented Stewards**

Our Nation’s forests and grasslands, community green spaces, and urban forests all play a critical role in fostering healthy and sustainable communities, and offer opportunities for all Americans to connect with the outdoors. Through volunteer, employment, and diverse partnership strategies, the Forest Service is engaging a new generation of stewards while safeguarding important values derived from the nation’s forests. Examples include:

- Through the 21st Century Conservation Service Corps (21CSC), the Forest Service works with over 190 partners to provide job training and employment opportunities for thousands of young Americans and veterans to protect and restore our natural and cultural resources. Since 2014, we supported more than 10,000 jobs and training opportunities each year through 21CSC. Programs like 21CSC serve to engage new populations in the benefits of public lands, and help to create the next generation of thoughtful and engaged conservationists.
- The nation’s American Indian and Alaska Native people retain histories, values, and spiritual underpinnings that are inextricably intertwined with America’s forests; especially with the national forests. Many of these cultural and physical connections predate establishment of the United States and the National Forest System. Through more than 100 meetings with tribal members and other outreach, a set of recommendations were reached to enhance consultation, protection, respectful interpretation and appropriate access to culturally significant lands and resources known as Sacred Sites. A new final rule ensures that federally recognized Indian tribes have access to forest products for traditional and cultural purposes.
- In partnership with state forestry agencies, the Forest Service helps over 7,000 communities plan, manage, and grow urban forests through the Urban and Community Forestry Program and the National Urban and Community Forestry Advisory Council’s Ten Year Action Plan. Well-maintained urban forests can help
provide a host of benefits such as mitigating climate and extreme weather impacts, enhancing public health, improving water quality by reducing storm water runoff, and enhancing community livability.

- In the U.S. South, through partners such as the U.S. Endowment for Forestry and Communities, the Federation of Southern Cooperatives, the Forest Service and NRCS are providing forestry, land tenure and technical services to help prevent the loss of African-American owned forests and helping to resolve heirs’ property problems across three states – Alabama, North Carolina and South Carolina.
- The Forest Service operates 27 Job Corps Civilian Conservation Centers in coordination with the Department of Labor, which offer educational and vocational training to about 5,000 economically disadvantaged youth (see hot issues section for additional background regarding outstanding budget and closure issues with the program).

New tools and Research for a Changing Climate

The Forest Service has been the leading Federal agency in developing the tools, programs and policies to advance climate adaptation planning. Recently, the agency collaborated with the U.S. Global Change Research Program to publish a report on accomplishments by federal agencies in adapting to climate change. To date, one-third of national forest units have completed, or are in the process of completing, climate change vulnerability assessments and an adaptation strategy.

Adaptation planning is founded on partnerships between Forest Service research stations and national forest resource managers in collaboration with other federal and state agencies, tribes, and local stakeholders. The USDA Climate Hubs were established in February of 2014 to deliver science-based knowledge, practical information and program support to farmers, ranchers, forest landowners, and resource managers to support climate-informed decision-making in light of the increased risks and vulnerabilities associated with a changing climate. An online and interactive Adaptation Workbook, offers a structured process to consider the potential effects of climate change on forest ecosystems and design forest management and conservation actions that can help prepare for changing conditions. The process is completely flexible to accommodate a wide variety of geographic locations, scales, forest types, and management goals.

Our forests – national forests as well as private and other public forests – provide an important ecosystem service in the form of carbon sequestration – the uptake and storage of carbon in forests and wood products. This service is becoming more valuable as the impacts of greenhouse gas emissions are becoming more fully understood and experienced. The Forest Service has always led efforts to practice, develop, and demonstrate sound and sustainable management of forest-based resources; the management of forest carbon is no exception. The Forest Service has developed regional carbon assessment reports to help forest managers and the public understand how much carbon is stored in forest ecosystems and harvested wood products.

Alongside NRCS, Forest Service is a key contributor to the Department’s Building Blocks for Climate Smart Agriculture and Forestry Initiative—an effort to leverage existing programs to
United States Department of Agriculture  
2016 Presidential Transition  
Natural Resources and Environment Mission Area (NRE)

support conservation practices and technologies that reduce emissions, increase carbon storage and help build resilience, while also creating new economic opportunities in Rural America. Through efforts to enhance reforestation in the aftermath of wildfire, improve soil health, improve nutrient management, grow markets for long-lived wood products, partner with livestock producers, support urban forestry and others, USDA has created a framework for climate action for farmers, ranchers and forest landowners that is compatible with their stewardship and economic goals. Many of these technologies and practices are already in high demand by producers, industry and relevant associations.

Natural Resources Conservation Service (NRCS) – Overview

Mission and Responsibilities: NRCS improves the health of our Nation’s natural resources while sustaining and enhancing the productivity of American agriculture. Seventy-percent of the nation’s land is privately owned and tended to. NRCS’ expert staff work with partners to create voluntary, incentive-based solutions that help the Nation’s farmers, ranchers and forest landowners evaluate and deploy options to enhance their stewardship within the context of their business operations. NRCS’s natural resources conservation programs help people reduce soil erosion, enhance water supplies, improve water quality, increase wildlife habitat, and reduce damages caused by floods and other natural disasters.

Voluntary conservation works, providing predictability and certainty for producers and improving environmental outcomes. Example initiatives include:

- Through Working Lands for Wildlife (WLFW), NRCS works with conservation partners and private landowners to restore populations of declining wildlife species, to provide regulatory certainty and to strengthen and sustain rural economies. Private lands are essential for providing habitat for nearly two-thirds of all species listed as threatened or endangered under the Endangered Species Act (ESA). Assistance is available to producers through Farm Bill conservation programs who want to make conservation improvements to their land, which not only benefits the species and habitat but also helps them strengthen their operations by lowering input costs and improving efficiency and yields. WLFW also gives peace of mind to participating producers. As long as they maintain the conservation practices and systems that benefit the targeted species, they can continue their farming, ranching and forest operations and remain compliant with the ESA regulatory responsibilities for up to 30 years. In part because of these voluntary efforts, the U.S. Fish and Wildlife Service has either delisted or taken off the candidate list six species since September 2014 – determining that these populations were now healthy enough that they did not warrant Federal protections under the Endangered Species Act (ESA).

- Through the Mississippi River Basin Healthy Watersheds Initiative (MRBI), NRCS has invested significantly in high-priority water quality projects and delivered on the ground benefits. For example, as a result of MRBI conservation efforts, Arkansas was able to remove two stream segments from the State’s Clean Water Act 303(d) impairment designation. In 2014, Oklahoma removed nine more streams from its 303(d) list as a result of Farm Bill tools and worked with partners,
farmers, ranchers and other landowners. Oklahoma now ranks second in the nation for EPA-recognized water quality success stories.

- Through the WaterSmart-EQIP partnership under the National Drought Resilience Partnership, NRCS and the Bureau of Reclamation have partnered to help water districts and producers on private working lands better conserve water resources, improve water and energy efficiency, and provide a strengthened federal response to ongoing and potential drought across 13 states in the West. Through the partnership, NRCS supports on-farm water delivery system improvements that complement irrigation system infrastructure improvements made by the Bureau of Reclamation.

- Since 2010, NRCS has been working through the StrikeForce for Rural Growth and Opportunity initiative to assist farmers and ranchers in communities that face persistent poverty. NRCS and other USDA agencies are focusing assistance and outreach in over 770 counties, parishes, boroughs, and census areas, and Indian reservations in 20 states to jump start collaboration and investment in these communities.

- Through the Sentinel Landscapes partnership NRCS and partners aim to accomplish three critical goals: preserve agricultural lands, assist with military readiness, and restore and protect wildlife habitat. In this unique collaboration, the U.S. Department of Agriculture, Department of Defense, and Department of the Interior work with state, local, and private partners to preserve and restore natural lands important to the nation’s defense mission. The basic premise is to preserve and restore habitat around the military base to ensure at-risk species can survive, while also improving military readiness by ensuring training activities can proceed unimpeded.

- Since 2009, targeted agricultural conservation investments of nearly $1 billion are putting the agricultural community on its way toward meeting or exceeding key goals for cleaner water and a healthier ecosystem in the Chesapeake Bay. USDA has a goal of helping to install conservation practices on 4 million acres of farmland in these priority areas by 2025. NRCS and its conservation partners have worked with farmers to install practices on 1.6 million acres in priority areas since 2010 — about 41 percent of the 2025 goal.

A key element of NRCS’ conservation approach comes through technical assistance to landowners to develop a voluntary conservation plan. Voluntary conservation plans can be developed for a farm, ranch, private non-industrial forestry operation, or shellfish or aquaculture operation. The plans:

- Inventory and assess the condition of natural resources on/around an operation;
- Contain valuable information about the land and the operation like maps, soil type, and native plants and animal species that may be present; and
- Discuss alternatives for meeting landowner objectives and natural resource needs.

NRCS plans give operators one tool that may be helpful in weighing tradeoffs and accessing financial incentives. NRCS’ major financial incentive programs are the Environmental Quality Incentives Program (EQIP) and the Conservation Stewardship Program (CSP) and the
United States Department of Agriculture
2016 Presidential Transition
Natural Resources and Environment Mission Area (NRE)

**Agricultural Management Assistance Program** (AMA). NRCS also offers easement programs to eligible landowners to conserve working agricultural lands, wetlands, grasslands and forestlands.

**Deploying Partnerships and Leveraging Resources**
The Regional Conservation Partnership Program (RCPP), launched in 2015, brings a radically different approach to investing in natural resource conservation and empowers local communities to work with multiple partners, farmers and ranchers to design and invest in regional solutions that work best for them. As this [video](#) details, with participating partners investing along with USDA, our $1.2 billion investment in RCPP over the five-year Farm Bill is expected to leverage an additional $1.2 billion from partners for a total of $2.4 billion for innovative conservation work. RCPP puts partners in the driver seat, and lets them draw from NRCS suite of conservation programs to create change, examples include:

- The Tri-State Western Lake Erie Basin Phosphorous Reduction Initiative. A recent algal bloom crisis left 400,000 residents in the Toledo, Ohio area without water to drink, bathe or cook. The coalition brings together more than 40 partnering organizations from Michigan, Ohio and Indiana to reduce phosphorus runoff into Lake Erie, targeting funding to the streams and rivers that have the largest impact on water quality in the lake.

- A coalition of partners led by the Illinois Corn Growers and the University of Illinois was awarded a $5.3 million RCPP agreement for implementation of the Precision Conservation Management (PCM) effort to help farmers reduce nutrient loss from their fields by adapting precision technology, data and farm business management principles to the nutrient loss and conservation. PCM is a service program that combines farm business and financial practices with precision technology and data management to help farmers better integrate and manage conservation on their farms. It will provide analysis, technical assistance, financial assistance and data assessment to help reduce complexity and manage risks associated with the nutrient loss efforts. PCM combines $9.86 million in private matching contributions.

- In Colorado, the state’s Energy Office was awarded 1.1 million in RCPP funds to support energy efficiency improvements, matched by 1.3 million from the Colorado Energy Office (CEO). Funds will help finance energy and water saving projects identified through CEO’s Colorado Dairy and Irrigation Efficiency Program. Over the two-year grant period, the efficiency improvements are expected to achieve over 5,250 MWh of electricity savings and 524,000 gallons of water savings annually, and will provide additional environmental benefits to Colorado’s agricultural producers.

**Measuring Results, Stewarding Public Resources and Streamlining Conservation Delivery**
Measuring the results of conservation and the hard work of farmers is essential to demonstrating meaningful impact. The Conservation Effects Assessment Project (CEAP) is an NRCS-led multi-agency effort to quantify the environmental effects of conservation practices and develop the science base for managing the agricultural landscape. CEAP embodies a model of shared leadership, leveraging funding and expertise of more than 60 Federal and State agencies.
universities, and non-profit organizations to guide USDA conservation policy and program development and help farmers and ranchers make more informed decisions for their land. NRCS’ Science and Technology

As NRCS improves the way it measures the impacts of programs, the agency is also pursuing new ways to better reach producers, enable high-quality, science based planning, and streamline business processes for the agency and producers alike. Conservation Client Gateway is a secure online web application that gives landowners and land managers, operating as individuals, the ability to track their payments, report completed practices, request conservation assistance, and electronically sign documents anytime, anywhere. Conservation Client Gateway provides users the flexibility to determine when they want to engage with NRCS online and when they prefer in-person conservation planning assistance. Client gateway is part of a broader effort to put more boots on the ground, improve service to producers and create new efficiencies.

As more funds are delivered for conservation, robust accounting and documentation procedures must be in place to manage public funds responsibly. Over the past several years, NRCS has made significant improvements such as enhancing the agency’s internal controls over financial resources, reducing potential information technology security risks, and strengthening the reporting of its financial obligations. Specifically, NRCS implemented system enhancements to preclude improper payments resulting in NRCS meeting its improper payment rate target for the first time in FY2016. Additionally, improvements to the annual internal control review process, and robust testing and validation has led to early identification and remediation of potential weaknesses.

Prior to 2016, NRCS did not have the capacity to perform multiple concurrent vulnerability assessments (source code and running application scans) with existing hardware. Not only was the goal to implement a modern scanning platform that services the growing NRCS IT portfolio, but to provide vulnerability assessment services across the USDA. In order to achieve these objectives the Information Technology (IT) Security Division designed and constructed a private cloud of state of the art vulnerability assessment tools from IBM, HP and other commercial vendors. The IT Security Division collaborated with National Information Technology Center (NITC) and Agriculture Security Operations Center (ASOC) to operationalize the Enterprise Vulnerability Assessment (EVA) virtual scanning platform. EVA version 1.0 provides the NRCS with the capability to perform up to 352 scans at once.

External Auditors identified findings of non-compliance with Federal Information Security Management Act (FISMA) audit log requirements on the Web-based Total Cost Accounting System (WebTCAS) and Protracts/FundManager applications. To resolve these findings the IT Security Division designed an agency-wide application logging and management solution which captures auditable events that exceed FISMA requirements. The IT Security Division formed a working group comprised of NRCS Application Project Teams, NRCS Production Support Operations (PSO) and NITC to implement the Application Audit Logging Solution (AALS) on WebTCAS and Protracts/FundManager. With the implementation of AALS the audit findings against WebTCAS and Protracts/FundManager were closed.

14
Independent auditors found that NRCS has made continued improvement in financial reporting processes and controls and financial management for information technology systems, ensuring that the infrastructure is robust and data safeguarded.

Fostering Conservation Innovation

Through NRCS’ Conservation Innovation Grant (CIG) program, USDA is investing in projects that promote creativity and problem-solving in conservation. Since 2009, 368 CIGs have been awarded to support conservation approaches and technologies that develop new technologies and investments in natural resource conservation and help farmers and ranchers make their operations more resilient. Through CIG, NRCS has pioneered initiatives in emerging environmental markets for greenhouse gas and water quality credits among others. The agency supports the coalition on Agricultural Greenhouse Gases (C-AGG), the National Network for Water Quality Trading—facilitated by the Willamette Partnership, and the Conservation Finance Practitioners Roundtable led by the Conservation Finance Network (a program of the Conservation Fund)—three networks that bring together experts and grant recipients to advance lessons learned and scale new innovations in conservation. Example efforts include:

- In North Dakota’s Prairie Pothole region, a CIG helped develop the methodology needed to quantify, and create a market for, carbon stored in grasslands. Thanks to USDA’s support, in partnership with Ducks Unlimited, The Climate Trust and the Bonneville Environmental foundation, in 2014 Chevrolet purchased almost 40,000 tons of greenhouse gasses from ranchers to partially offset the company’s carbon emissions.

- In Oregon, the Freshwater Trust worked with Willamette Partnership and a number of other organizations, agencies and regulators to develop the standards, calculation methodologies, verification procedures, and state policies necessary to allow for the trading of credits for water temperature in Oregon. Through the project, the city of Medford, OR worked with farmers, ranchers and other private landowners to plant shade trees to cool the Rogue River in order to meet its regulatory compliance requirements for cooling wastewater and protecting salmon habitat.

- In the city of Peoria, Illinois, Fresh Coast Capital is piloting an innovative approach to financing green infrastructure through impact investing in agroforestry and vegetable farming. The project will serve as a model for expansion with privately funded impact investment capital throughout Peoria and into 40 or more cities facing both land vacancy and stormwater compliance challenges.

- In partnership with major food companies, agricultural investors, and conservation-minded farmers, the Xerces Society is developing a first-of-its-kind certification program that incentivizes the large-scale adoption of pollinator conservation through a marketing-driven platform. This program, known as Bee Better Farming, will leverage scalable investments from the private sector to develop clearly defined pollinator conservation metrics that will be rewarded with a formally recognized certification.
The Nature Conservancy is developing impact investment blueprints for Gulf of Mexico restoration that outline how public funding can be used to attract private investment funds to conservation, greatly expanding the impact of various Deepwater Horizon settlement funds. The blueprints will be combined with a pipeline of specific deal opportunities to provide place-based examples of how private investment can complement settlement funds and support voluntary working lands conservation and restoration.

**Gulf Ecosystem Restoration Council (RESTORE) – Overview**

Spurred by the Deepwater Horizon oil spill, the RESTORE Act was signed into law by President Obama on July 6, 2012. The Act calls for a regional approach to restoring the long-term health of the valuable natural ecosystems and economy of the Gulf Coast region. The RESTORE Act dedicates 80 percent of civil and administrative penalties paid under the Clean Water Act, after the date of enactment, by responsible parties in connection with the Deepwater Horizon oil spill to the Gulf Coast Restoration Trust Fund (Trust Fund) for ecosystem restoration, economic recovery, and tourism promotion in the Gulf Coast region. This effort is in addition to the restoration of natural resources injured by the spill that is being accomplished through a separate Natural Resource Damage Assessment (NRDA) under the Oil Pollution Act. A third and related Gulf restoration effort is being administered by the National Fish and Wildlife Foundation (NFWF) using funds from the settlement of criminal charges against BP and Transocean Deepwater, Inc.

In addition to creating the Trust Fund, the RESTORE Act established the Council. The Council is currently chaired by the Secretary of the U.S. Department of Agriculture (USDA) and includes the Governors of the States of Alabama, Florida, Louisiana, Mississippi and Texas, and the Secretaries of the U.S. Departments of Army, Commerce, Homeland Security and the Interior, and the Administrator of the U.S. Environmental Protection Agency. The Council has oversight of the expenditure of 60 percent of the funds made available from the Trust Fund. The Chair is selected by the states and appointed by the President. Commerce was the Chair from 2012-2015. USDA became Chair this year. There is no defined term for the Chair.

Following publication of an Initial Plan completed in 2013, Council members collaborated to develop an initial funded priorities list of projects using a process that emphasized public input, transparency, and coordination with other restoration programs. Each proposal underwent a rigorous science review by three external experts from both inside and outside the Gulf region to assess whether the project utilized best available science.

The Council’s Initial Comprehensive Plan outlined a process to guide the development, evaluation and selection of Council-Selected Restoration Component activities to ensure consistency with the Priority Criteria set forth in the RESTORE Act as well as the Council’s goals and objectives. Through a new comprehensive plan, expected to be finalized in December of 2016, the Council has reaffirmed and retained key elements of this process while supplementing it
with guidance based on lessons learned over its first three years of operation. The draft Comprehensive Plan Update is intended to improve Council decisions by:

- Reinforcing the Council’s goals and objectives;
- Setting forth an initial Ten-Year Funding Strategy;
- Establishing the Council’s vision for Gulf restoration;
- Increasing collaboration among Council members and partner restoration programs;
- Providing for advancement of large-scale projects and programs;
- Refining the process for ensuring that the Council’s decisions are informed by the best available science; and
- Improving the efficiency, effectiveness and transparency of Council actions.

The Council has a staff of approximately 20 professionals, overseen by Executive Director Justin Ehrenwerth who reports to the Council as a whole. USDA provides administrative support for the council staff, who are career civil servants.

There are two important issues for the Restore Council which an incoming Administration will need to address. First, in October, OMB and CEQ issued a federal memorandum on permitting and environmental review of large scale Gulf restoration projects. It will be important to implement the policies outlined in the memo by encouraging greater coordination and collaboration amongst federal agencies to speed restoration. Second, the new Comprehensive Plan calls for a series of public meetings to begin developing restoration projects for the next round of funding. Those meetings will begin in 2017 and will require input from the Council Chair.

II. Top Issues/Hot Topics

Timeline

See below

Mission Area Issues

| Wildfire Suppression Budget Fix and Forest Management Provisions | More than 150 bipartisan Congressional members have voiced strong support to remedy the Forest Service’s growing budget dilemma resulting from the skyrocketing costs for fire suppression, which now consume more than 56 percent of the agency’s budget. This trend, resulting from hotter, more severe wildfires and longer fire seasons erodes the agency’s ability to meet its mission in other critical programs like forest restoration, recreation and services to the public. If this trend continues, it is projected that fire suppression will consume more than 70 percent of the agency’s budget by 2020. The agency has already experienced a 40 percent drop in workforce while needs for increased restoration to foster forest ecological resilience are rising rapidly. Several pieces of draft legislation have been introduced. Pending the outcome of this Congress, work will be needed to implement reform or seek additional congressional action. | January-June 2017 |
| Farm Bill Revision | The 2014 Farm Bill expires in September 2018, but Congress will hold hearings and begin the work of rewriting the next Farm Bill early in 2017. Significant attention will be paid to implementation of the 2014 Farm Bill Forest Service authorities and whether to amend or expand existing (or create new) authorities to assist the Forest Service in accomplishing their missions. The 2014 Farm Bill significantly expanded the tools that will support the ability of the Forest Service to accomplish restoration work on the ground. Among the tools include permanent authorization for stewardship contracting and the Good Neighbor Authority. In addition, the 2014 Farm Bill provided the Forest Service with an increased ability to address insect and disease infestations. For NRCS, anticipated topics of interest in the new Farm Bill may include but are not limited to the Regional Conservation Partnership Program (RCPP), Conservation Stewardship Program (CSP) reinvention, Chesapeake Bay restoration efforts, and conservation compliance activities. This is likely to be a difficult reauthorization | Ongoing |
The Forest Service continues to advance mineral withdrawal applications and processes in several locations throughout the National Forest System. A mineral withdrawal refers to prohibited actions for a specified parcel of land for a defined period of time, usually 3, 5, or 20 years. Withdrawal action prohibits all mining activities under the 1872 Law, except actions that have been authorized under an approved Plan of Operations on mining claims with prior valid existing rights. The Forest Service works in conjunction with the Department of the Interior and Bureau of Land Management to process withdrawals as the authority for mineral withdrawals rest with the Secretary of Interior. There have been several pieces of legislation in the 114th Congress relating to mineral withdrawal on National Forest System lands.

The Northwest Forest Plan (NWFP) was an amendment to multiple forest plans on Forest Service and BLM managed public lands in western Washington, Oregon and northern California. The NWFP is widely perceived to be a regional plan requiring change with a high level of consistency. These forest plans are over 20 years old, and per the National Forest Management Act, are in need of plan revision. The issue is how to revise individual National Forest plans in this broader landscape context, especially since the BLM is currently revising its plans for its O&C lands in the region.

The NWFP has a substantial record of broad scale monitoring and science. The latest monitoring results (20 year NWFP monitoring report) have revealed issues related to managing wildfire, reduced populations of the endangered northern spotted owls, and timber harvest levels below projections of the NWFP. A science synthesis intended to provide a scientific framework for making changes to plans in the Northwest is in its final
stages, and is expected to be released in November 2016. This work will be formally peer reviewed by the Ecological Society of America and is considered to be a highly influential science assessment by the White House Office of Management and Budget. There is active consideration to develop a bioregional assessment to determine what actions to take in the future.

| **EPA and Biomass Energy** | EPA has not resolved longstanding regulatory and permitting issues associated with CO2 emissions from biogenic sources. Short-rotation agricultural feedstocks and forest biomass feedstocks offer potential opportunities to displace fossil fuel consumption and support energy independence and economic development goals. In the case of forests, markets for wood products can also be important to provide incentives for maintaining working forests from conversion to other uses and for supporting forest restoration costs across all forest landownerships. Uncertainty in EPA’s treatment of biogenic carbon under the stationary sources permitting program and the Clean Power Plan, has created disincentives for investment in bioenergy solutions. This issue is polarizing and of great interest to a number of industry and environmental stakeholders. USDA research, economists and forest inventory and analysis programs can be helpful to assess the impacts of bioenergy policy decisions. EPA continues work through the Science Advisory Board to take input on this topic. EPA is also working to finalize a biogenic accounting framework that would assist states in making permitting decisions regarding different bioenergy projects or programs. | Ongoing |

| **Rosemont Mine (Arizona)** | Rosemont Copper Mine is a proposed open pit copper mine with mixed ownership, including 3,670 acres of NFS lands on the Coronado National Forest. The proposed mine is currently undergoing a permitting review process under the direction of the Forest Service and the US Army Corps of Engineers. T&E species, air quality, surface water quality, and groundwater impacts are all issues. Supplemental Information Reports were completed in response to official objections. The Coronado National Forest reviewed the US Fish and Wildlife Service’s final Biological Opinion based on the Forest’s submittal of a Supplemental Biological Assessment. The FS Record of Decision for the project is awaiting signature but is on hold until the Army Corps of Engineers signs the ROD for issuance of the 404 Clean Water Act permit. FS cannot authorize a locatable operation until it is compliant with Clean Water Act | To Be Determined pending Corps of Engineers permit. |
requirements. The FS ROD should be signed after compliance with CWA.

| Job Corps Program Budget and Closures | The Forest Service operates 27 Job Corps Civilian Conservation Centers, which offer educational and vocational training to about 5,000 economically disadvantaged youth. Forest Service centers have operated since 1964 through an interagency agreement with Department of Labor (DOL), which manages the overall Job Corps program and other centers. Working with DOL, we are in the process of closing the Ouachita Job Corps Center in Arkansas, and have been implementing performance improvement measures across the Forest Service system. Over the past 5 years, DOL has consistently reduced the budget it provides to the Forest Service to run Job Corps Civilian Conservation Centers, including reducing FS center allocations at greater percentages than the system overall. Every year for the past few years, USDA has had to negotiate with DOL to reduce the degree of their cuts to prevent workforce impacts like RIFs. At the same time, Forest Service has been working to address two closures, implement performance improvements across the system, be responsive to new DOL system-wide safety measures, and manage a federal workforce. The program also delivers service to the National Forest System— for example, FS fire management officers are now at every center training students in fire response, and more than 1,000 Job Corps students deployed to support fire prevention and response efforts across the country in 2015.

This year, DOL’s initial budget allocation was for a budget of $151.8M – a reduction of more than $3.5M from the previous PY budget of $155.5M. USDA appealed and requested an increase of $4.7M above DOL’s initial allocation for a budget of $156.5M, including to address DOL concerns such as the need to fill 150 critical staff vacancies, including for safety and security, counseling, trades and residential living.

DOL has in the past charged that USDA centers are more expensive to run. Last summer, DOL audited the FS Job Corps budget and found that, in fact, on a per capita basis, USDA centers are at the lower end of the scale in terms of per student cost. Forest Service Centers often carry higher human capital expenditures including different salary and benefits packages for our workforce as opposed to some of the contracted centers managed by | Ongoing |
| Resolution Copper Minerals Development (Arizona) | Within the Southeast Arizona Land Exchange and Conservation Act of 2013, there is a proposed copper mine. The National Forest and private lands identified for exchange will be appraised. After the lands are exchanged, 4,430 acres will still be NFS lands. Significant issues include a proposed bill for the designation of Oak Flat (on the National Forest land that is to exchanged) as a Traditional Cultural Property, and potential impacts to Native American Sacred Sites, Threatened and Endangered species, air quality, surface water quality, and groundwater. If requested by Resolution, special use permits for drilling and mine development will keep moving forward for issuance per the Act. Public scoping is in progress for the Resolution Mine Plan/Land Exchange EIS. In addition, a Final EA for baseline data collection for a tailings facility was released Jan. 15, 2016. The objection process was completed on May 16, 2016, and the forest is addressing the Southwest Regional Forester direction. | Fiscal Year 2017 |
| Building Blocks for Climate Smart Agriculture and Forestry | Both NRCS and Forest Service are playing leadership roles in a strategy to advance conservation practices and technologies that reduce greenhouse gas emissions and increase carbon storage in trees and soils as part of the U.S. Commitment to reduce emissions by 26-28% over 2005 levels by 2025. Through a series of voluntary and incentive-based programs, USDA and its partners plan to reduce greenhouse gas emissions and increase carbon sequestration by 120 million metric tons of carbon dioxide equivalent by 2025. The strategy is called the Building Blocks for Climate Smart Agriculture and Forestry. Through efforts to enhance reforestation in the aftermath of wildfire, improve soil health, improve nutrient management, grow markets for long-lived wood products, partner with livestock producers and others, USDA has created a framework for climate action for farmers, ranchers and forest landowners that is compatible with their stewardship and economic goals. Many of these technologies and practices are already in high demand by producers, industry and relevant associations. Efforts to increase and measure practice adoption in partnership with USDA’s Climate Change Program Office will be required to sustain a voluntary approach to climate solutions for agriculture and forestry and to meet our international commitments. | Ongoing |
### National Drought Resilience Partnership (NDRP)

Significant drought is impacting three regions of the US: California and other western states have been in drought for going on 5 years; and more recently, Northeastern states from Maine to New Jersey; and Southeastern states including parts of Georgia, Tennessee, Alabama and Mississippi. Long-term forecasts suggest more frequent and intense droughts. Led by NRE, multiple USDA agencies have mobilized to support long-term drought strategies on public and working lands. USDA has also emerged as a leader among federal agencies, serving as the permanent co-chair and the administrative home for the National Drought Resilience Partnership, a 13-federal agency partnership established by the President in March of 2016 through a Presidential Memorandum, tasked working collaboratively across the federal government to support state and local strategies long term drought resilience strategies. We are responsible for managing the NDRP. The Under Secretary serves as Co-Chair of the NDRP Principals Committee and the Deputy Under Secretary for Conservation co-chairs the NDRP Steering Committee. NRE’s Confidential Assistant serves as the Executive Secretariat, managing day-to-day activities. The NDRP Steering Committee is required to report progress to the Principals Committee and the White House Council on Climate Preparedness and Resilience in March of 2017. The most recent NDRP progress report can be found on the USDA website.

### Deepwater Horizon Settlement Funds – RESTORE and NRDA

USDA is the Chair of the Gulf Coast Ecosystem Restoration Council (RESTORE). The Office of the Under Secretary staffs the Secretary in his role as chair. USDA is also a member of the Natural Resource Damages Assessment (NRDA) Trustee Council, which is responsible for planning and carrying out restoration projects to address the injury that occurred as a result of the Deepwater Horizon oil spill disaster that began on April 20, 2010. The Deputy Under Secretary for Conservation has been serving as the Secretary’s designee on the NRDA Trustee Council, which is providing general oversight of seven Trustee Implementation Groups that are developing restoration projects and plans to accomplish the significant work needed for the Gulf. Development of these projects is guided by the programmatic restoration plan finalized in 2016 as part of the legal settlement with BP for up to $8.8 billion, a subset of the historic settlement of $20 billion that also provided funds to the RESTORE Council. The development of these plans is ongoing and initial rounds of restoration payments will begin to be disbursed beginning in the Spring of 2017. The USDA - NRCS,
United States Department of Agriculture  
2016 Presidential Transition  
Natural Resources and Environment Mission Area (NRE)

| **Forest Service Recreation Modernization Effort** | Gulf Coast Ecosystem Restoration Team (GCERT) based in Madison, Mississippi, is staffing USDA’s engagement on NRDA and RESTORE, with oversight from the Under Secretary’s office. | Ongoing |

Forest Service recreation special use permits provide organized access for service providers who take groups of people to national forests and grasslands to experience outdoor recreation, while allowing the Forest Service to manage visitor volume in specific locations and protect resources. In September 2016, the agency began taking steps to improve access such as:

- Streamlining the process to receive or renew a recreation special use permit, making it simpler and faster through the use of existing agency authorities;
- Increasing staff capacity and the consistency of the permit process across the country by developing new standardized training programs and exploring new staffing strategies;
- Encouraging managers to take greater advantage of allowable waivers when a special use permit is not required, for example, where a proposed use would have only nominal impact on lands, resources, and programs or operations; and
- Investing in technology to improve business tools and data that support recreation special uses, including developing an electronic permit application process.

Implementation of these and other improvements to support recreation access will be an ongoing need.

---

GAO and OIG Audits

| **Office of Inspector General’s 2017 Audit of Forest Service Efforts to Improve Quality of Work Environment** | In spring 2017, the Forest Service expects the Office of Inspector General to conduct an audit of the agency’s efforts to improve the work environment. Since 2012, the Forest Service has progressed significantly to improve the quality of its work environment for all employees. Agency leaders have placed specific focus on the Pacific Southwest Region, the largest unit in the Forest Service which employs a workforce of 6000, which also hosts the largest firefighting workforce. The agency paid serious attention to complaints from women firefighters who have alleged discrimination and harassment in the agency. Six women filed a putative class complaint; it hasn’t been certified, however. In four years the agency has undertaken a number of aggressive actions to address allegations— | Spring 2017 |
including investigating every allegation and taking appropriate disciplinary actions. The agency has also made significant investments to improve the workplace. Specifically, the agency revamped the Employees Relations organization and increased the number of Employee Relations professionals who assist agency leaders in investigating, assessing and addressing employee misconduct; the Forest Service contracted a 3rd party to conduct a climate assessment of the work environment in the Pacific Southwest Region to address employee concerns for harassment and discrimination. A comprehensive action strategy resulted from that assessment; the agency has also instituted civil rights, harassment and antidiscrimination training for agency leaders, supervisors and employee relations professionals; the agency invested in a telephone hotline for employees to report allegations of harassment and discrimination. The Forest Service redesigned the Civil Rights Organization for more effective and consistent program delivery. In addition, the agency invested in new data systems to monitor and address workplace trends in the agency’s field units. In August 2016, The Forest Service finalized and began implementing a new Anti-harassment Policy, which raises a standard conduct and makes clear a zero tolerance of any form of harassment, including bullying; it imposes a standard for all employees to immediately report any form of harassment and institutes protocols to protect victims and hold accountable those responsible for harassment. It is one of the strictest policies in USDA.

| Highly Erodible Land and Wetland Conservation Compliance | Eligibility for most USDA financial assistance programs is contingent on a program participant’s compliance with the highly erodible land (HELC) and wetland (WC) conservation compliance provisions, as required under the Food Security Act of 1985. In the 2014 Farm Act, Congress re-linked crop insurance subsidies to conservation compliance, which triggered these requirements for an additional segment of agriculture. The new requirements were implemented smoothly, without much push back. However, some conservation groups are positioning to re-start the discussion for further strengthening compliance requirements. Farm groups already have voiced concerns, which could tee this up for the Farm Bill reauthorization in 2017. A recent audit report from USDA’s Office of Inspector General (Audit Report 50601-0005-31) has also raised congressional interest in compliance implementation. The report looked at various aspects of compliance implementation including the dataset used to select tracts | Ongoing |
for review and the guidance for the field activities associated with conducting compliance status reviews. NRCS will have implemented all recommendations by December 31, 2016 and has briefed the House and Senate Agriculture Committees on progress.
WHAT WE DO: OUR MISSION
Our mission at the Forest Service is to sustain the health, diversity, and productivity of the Nation’s forests and grasslands to meet the needs of present and future generations. The agency manages 193 million acres of national forests and grasslands, and supports the sustainable stewardship of nearly 650 million acres of non-Federal forest land. Communities depend on natural resources from forests and grasslands for their livelihoods and well-being - these lands generate over $36 billion annually. The key programs that contribute to our mission are Preparedness, Suppression, Integrated Resource Restoration, Hazardous Fuels, Research, and Recreation.

WHO WE ARE: OUR WORKFORCE
- Over 28,000 full time employees
- 10,000 – 12,000 temporary employees hired annually during peak season (May – Sept.)
- Offices and research stations distributed throughout 48 States and Puerto Rico

WHO WE SERVE: OUR CONSTITUENTS
The National Forests and Grasslands offer rich natural resources, breathtaking scenery, and clean, abundant drinking water for millions of Americans. The agency partners to support the sustainable stewardship of non-federal forests. The agency also has the world’s largest forestry research organization.

KEY UPCOMING DECISIONS
- Next Generation Airtanker. The 2015 Omnibus provided $65 million to acquire aircraft for the next-generation airtanker fleet to support the agency’s strategy to modernize and enhance firefighting mobility, effectiveness, efficiency and safety. A contract award is anticipated by the summer of 2017.
- Fire funding fix. Continue supporting the proposal to fund wildland fire suppression of the costliest, most catastrophic fires (1 to 2% of fires) using an “off-budget” disaster cap adjustment.

BUDGET HIGHLIGHTS FY 2016
- Total budget authority (BA) in FY 2016 was $6.384B ($5.68B in Discretionary BA; $704M in Mandatory BA).
- 56% of the discretionary BA is attributed to Fire. This is up from 16% in 1995.
- A supplemental appropriation of $700M to repay accounts for “fire transfer” in FY 2015 is not counted toward FY 2016 budget authority.
I. **Organizational Overview**

**Agency’s Mission/Strategic Plan**

The mission of the Forest Service is to sustain the health, diversity, and productivity of the Nation’s forests and grasslands to meet the needs of present and future generations.

**Strategic Goal 1. Sustain Our Nation’s Forests and Grasslands**
- Strategic Objective A. Foster resilient, adaptive ecosystems to mitigate climate change
- Strategic Objective B. Mitigate wildfire risk
- Strategic Objective C. Conserve open space

**Strategic Goal 2. Deliver Benefits to the Public**
- Strategic Objective D. Provide abundant clean water
- Strategic Objective E. Strengthen communities
- Strategic Objective F. Connect people to the outdoors

**Strategic Goal 3. Apply Knowledge Globally**
- Strategic Objective G. Advance knowledge
- Strategic Objective H. Transfer technology and applications
- Strategic Objective I. Exchange natural resource expertise

**Management Goal 1. Excel as a High-Performing Agency**
- Management Objective A. Recruit a diverse workforce
- Management Objective B. Promote an inclusive culture
- Management Objective C. Attract and retain top employees

Organization’s History

Federal forest management dates back to 1876 when Congress created the office of Special Agent in the U.S. Department of Agriculture to assess the quality and conditions of forests in the United States. In 1881 the Department expanded the office into the Division of Forestry. A decade later, Congress passed the Forest Reserve Act of 1891 authorizing the President to designate public lands in the West into what were then called “forest reserves.” Responsibility for these reserves fell under the Department of the Interior until 1905 when President Theodore Roosevelt transferred their care to the Department of Agriculture’s new Forest Service after Congress formally established it to provide quality water and timber for the nation’s benefit. Gifford Pinchot led this new agency as its first Chief, charged with caring for the newly renamed national forests. Historic milestones of the Forest Service are listed below:
• **1891**- The Forest Reserve Act allowed the President to establish forest reserves from public domain land.

• **1897**- The Organic Act provided that any new reserves would have to meet the criteria of forest protection, watershed protection, and timber production, thus providing the charter for managing the forest reserves, later called national forests, for more than 75 years.

• **1905**- The Forest Service was formally established in 1905, previously these federal lands were known as Forest Reserves.

• **1911**- The Weeks Act allowed the establishment of Eastern National Forests. The law created a National Forest Reservation Commission and authorized federal funds to purchase lands on the watersheds of navigable streams.

• **1960**- The Multiple Use Sustained Yield Act directed the agency to manage for multiple uses including: water, forge, wildlife and fisheries, wood, and recreation.

• **1976**- The National Forest Management Act changed forest planning by obliging the Forest Service to use a systematic and interdisciplinary approach to resource management.

• **1976**- The Federal Land Policy and Management Act is best summarized by the term ‘multiple-use’. The Act directed the management of the public lands and their various resource values so that they are utilized in the combination that will best meet the present and future needs of the American people.

Forest Service (FS)

Biographies of career staff in key leadership positions

Thomas L. Tidwell
Chief
202-205-8439, ttidwell@fs.fed.us

During his 39 year career with the Forest Service, Tom Tidwell has served in a variety of positions at all levels of the agency, including as district ranger, forest supervisor, and legislative affairs specialist in the Washington Office. As deputy regional forester for the Pacific Southwest Region, Tom facilitated collaborative approaches to wildland fire management, roadless area management, and other issues. As regional forester for the Northern Region, Tom strongly supported community-based collaboration in the region, finding solutions based on mutual goals and thereby reducing the number of appeals and lawsuits.

In 2009, after being named Chief, Tom set about implementing the Secretary of Agriculture’s vision for America’s forests. Under his leadership, the Forest Service is restoring healthy, resilient forest and grassland ecosystems—ecosystems that can sustain all the benefits that Americans get from their wildlands, including plentiful supplies of clean water, abundant habitat for wildlife and fish, renewable supplies of wood and energy, and more. Such benefits are at risk from the effects of climate change, and Tom has led the way in forging a national response. Under Tom’s leadership, the Forest Service has charted a national roadmap for addressing climate change through adaptation and mitigation. The Forest Service is taking steps to help ecosystems adapt to the effects of a changing climate while also taking action to mitigate climate change, partly by reducing greenhouse gas emissions.

Tom has facilitated an all-lands approach to addressing the challenges facing America’s forests and grasslands, including the overarching challenge of climate change. Such challenges cross borders and boundaries; no single entity can meet them alone. Under Tom’s leadership, the Forest Service is working with states, Tribes, private landowners, and other partners to restore ecosystems on a landscape scale.

Daniel J. Jirón
Associate Chief
202-205-1779, djiron@fs.fed.us

With more than 29 years in public service and natural resources management, Dan Jirón was appointed Associate Chief of the Forest Service July 2016. Dan serves as the direct senior executive support to the Chief of the Forest Service. This leadership role includes advancing strategic goals of the agency: Sustaining the Nation’s Forests and Grasslands; Delivering Benefits to the Public; Applying Scientific-Based Knowledge Globally; and Exceling as a High Performing Agency. In addition, he plays a lead role for the agency in carrying out the Secretary of Agriculture’s “All Lands Approach” to forest management, as well as in transformative efforts to enhance diversity and inclusion in the Agency’s culture.
Dan assists the Chief in overseeing delivery and achievement of the agency’s mission, stewarding 193 million acres of national forests and grasslands, leading a workforce of 28,000 permanent employees and serving the American public. Further, Dan has demonstrated an exceptional ability to forge strong relationships with partners and communities to sustain and restore the nation’s healthy, resilient forests and grasslands ecosystems—ecosystems that can sustain all the benefits that Americans get from their wildlands, including plentiful supplies of clean water, abundant habitat for wildlife and fish, renewable supplies of wood and energy.

Prior to this appointment, Dan served in variety of leadership positions including Regional Forester of the Rocky Mountain Region; Deputy Regional Forester in the Pacific Southwest Region; Forest Supervisor of the Santa Fe National Forest; District Ranger on the Salt Lake Ranger District of the Uinta-Wasatch-Cache National Forest; District Ranger on the South Park Ranger District of the Pike and San Isabel National Forest, Comanche and Cimarron National Grasslands; Director of Communications and Legislative Affairs of the Intermountain Region, National Press Officer in Washington, DC and aide to United States Senator Ben Nighthorse Campbell of Colorado.

Dan earned a Bachelor’s degree from Colorado State University-Pueblo and a Master’s degree from Regis University of Denver.

**Angela V. Coleman**  
**Chief of Staff**  
202-205-0998, **acoleman@fs.fed.us**

Angela Coleman serves as Chief of Staff of the Forest Service, Washington D.C. She accepted this appointment January 2015. In this assignment, she oversees Chief’s Office daily operations and staff, issues management, Office of Communications and Legislative Affairs programs. She provides senior-level support to the Chief of the agency and the Executive Leadership Team to advance and deliver the agency’s natural resource conservation mission.

Prior to this assignment, Angela served as the Associate Deputy Chief, Business Operations. In that role, she guided integration of the agency’s people-focused programs in Human Resource Management, Civil Rights, Employee Relations, Recruitment and Retention advance corporate efforts to create an inclusive, diverse work environment. She also served as Associate Deputy Chief, Research and Development, where she assisted in leading scientific and technology advancement to support natural resource management. Before that, she served as Deputy Regional Forester for the Pacific Southwest Region for National Forests located in California and parts of Nevada. Prior to this position, she served as Chief of Staff to the Deputy Chief of the National Forest System, Forest Service in Washington, DC. In that capacity, she provided direct assistance to the Deputy Chief as a senior advisor on policy, personnel, and issue management.
Before joining the Washington Office Deputy Chief’s staff, Angela served seven years as Regional Communications Director for the Forest Service, Southern Region in Atlanta. A native of Phenix City, Alabama, Angela’s career with the Forest Service spans more than 22 years.

Antoine Dixon  
Chief Financial Officer  
202-205-0429, aldixon@fs.fed.us

Tony Dixon has contributed more than 25 years to the Agency as a veteran leader in natural resources management and public service. He currently serves as the Chief Financial Officer for the Forest Service, a position he has held since July 2016. In this capacity, he is responsible for overseeing financial management, execution of the Agency’s six billion dollar budget, and management of more than 500 employees. His goals are to achieve sound financial management, improve financial reporting, and develop internal controls that ensure compliance with accounting principles, standards, applicable laws, as well as fulfilling Office of Management and budget requirements.

Prior to this assignment, he worked as the National Director of Strategic Planning, Budget, and Accountability. He provided management and oversight of the execution, formulation, and presentation of the agency’s budget. He also guided development and implementation of the agency’s new strategic plan and its performance and accountability measures.

Tony launched his career as a cooperative education student on the Routt National Forest in Steamboat Springs, CO. He has served in a variety of positions and geographical locations, including the National Director of the Forest Service Job Corps Program, Deputy Regional Forester of the Rocky Mountain Region, and Forest Supervisor of the National Forests in Mississippi. He also served as the Deputy Regional Director of Public Affairs in the Atlanta-based Southern Regional Office and held a number of positions in the National Headquarters in Washington, DC, including Program Analyst, Legislative Affairs Specialist, Deputy Area Budget Coordinator, and Chief of Staff for the Deputy Chief of the National Forest System.

Tony has a bachelor’s degree in marketing and forestry from Alabama A&M University and a master’s degree in administration from Central Michigan University.

Leslie Weldon  
Deputy Chief, National Forest System  
202-205-1689, lweldon@fs.fed.us

In November 2011, Leslie Weldon was named Deputy Chief for National Forest System with the Forest Service. In this role, Leslie is the lead executive responsible for policy, oversight and direction for natural resource programs that guide management of 193 million acres of national forests and grasslands. The Forest Service stewards these lands using current science and information to achieve sustainable multiple-use management, using an ecological approach, to provide a range of benefits to the American people.
Leslie’s 35-year career with the Forest Service began in 1981 as a summer hire monitoring seedlings, fighting forest fires, and surveying spotted owls on the Mt. Baker-Snoqualmie National Forest in Washington. During this time she began training in fisheries through the coop-education program. After receiving her Bachelor’s degree in Biological Sciences from Virginia Tech, she was hired as a fisheries biologist for three districts on the Mt. Baker-Snoqualmie National Forest.

Leslie served as Regional Forester for the Northern Region of the Forest Service, Forest Supervisor for the Deschutes National Forest in Bend, Oregon, and External Affairs Officer in the Office of the Chief. In this capacity she was responsible for several national programs including, Legislative Affairs, Office of Communication, Press Office, and the National Partnership Office.

**Vicki Christiansen**  
**Deputy Chief, State and Private Forestry**  
202-205-1657, vcchristiansen@fs.fed.us

Vicki Christiansen is the Deputy Chief for State and Private Forestry programs. She provides leadership and oversight to the agency’s Fire and Aviation Management program and State and Private programs that provide technical and financial assistance to State agencies and other landowners and resource managers of the Nation’s urban and rural forests. These programs enhance state and local entities ability to protect communities and the environment from wildland fires, insects, disease, and invasive plants.

Vicki has gained more than 36 years of wildland fire and natural resource leadership experience, including six years with the Forest Service and nearly 30 years of service in the states of Arizona and Washington. During her Forest Service career, Vicki has played a prominent role leading the “Life First” effort that further advances our intention to significantly increase the odds of everyone returning home safely. In addition, she’s a stalwart for the all lands management approach to maintaining health and resiliency of forests, namely through her contributions to the National Cohesive Wildland Fire Management Strategy. Vicki has built a stellar reputation within the forestry and wildland fire management community, forging strong ties and working collaboratively with leaders at the state, regional and national levels. She has become an unwavering voice for creating an inclusive, diverse workforce. She brings a wealth of knowledge, leadership and service to her new role.

Vicki has served as Associate Deputy Chief in State and Private Forestry, Washington Office and previously worked as Deputy Director of Fire and Aviation Management. Prior to her Forest Service career, Vicki served as Arizona State Forester and Director of the Arizona Division of Forestry where she oversaw protection of 22 million acres of state and private lands in Arizona. Vicki chaired the Wildland Fire Committee for the National Association of State Foresters. In addition, she served as Washington State Forester as a part of her 26-year career with the state’s Department of Natural Resources. She launched
her career as a wildland firefighter while in college and later accepted a permanent position in Washington as a forester. In that role she oversaw reforestation of state trust lands in the Mt. Saint Helens blast zone. She subsequently accepted other assignments where she focused on managing state trust lands and regulating forest practices on state and private lands.

In addition to credentials in wildland fire management and specialized expertise as a fire line-blasting advisor, Vicki earned a bachelor’s degree in forest management at the University of Washington. She maintains ties to number of organizations within the natural resources conservation and fire management community.

**Lenise Lago**  
**Deputy Chief, Business Operations**  
202-205-1707, llago@fs.fed.us

Lenise Lago has served as Deputy Chief for Business Operations since 2011. She provides leadership and oversight for all the administrative functions for the agency which include Safety, Job Corps, and Sustainable Operations, and oversees the work of more than 4,000 employees.

From 2009-2011, Lenise served as Deputy Regional Forester of the Pacific Northwest Region. In this position, she provided oversight for Recreation, Lands, Minerals, Engineering, Public Affairs, Civil Rights, Human Resources, Acquisition Management and Data Resource Management for the Region, in addition to co-chairing the regional labor management forum.

Lenise moved to Washington, DC, to become Assistant Budget Director in October 2003 and became Forest Service Budget Director in November 2006. Lenise prepared and presented five Agency Budget Requests to Congress and accompanied the Chief as a witness at the annual budget hearings for three budget cycles. Lenise worked very closely with Congressional Staff on a number of funding bills including annual appropriations and emergency supplemental appropriations for hurricanes, wildfires, and the American Reinvestment and Recovery Act.

Lenise worked briefly in the forest products industry before joining the Forest Service in 1989. She has worked in a variety of Planning, Budget, and Resource Management jobs. She has had assignments on two Ranger Districts, two National Forests, and two Regional Offices all within Montana, Oregon and Washington.

A native of Athens, Georgia, Lenise attended the University of Georgia where she earned a Bachelor’s Degree in Timber Management and a Master of Forest Resources from the University of Georgia’s Warnell School of Forest Resources.
Dr. Carlos Rodriguez-Franco  
Acting Deputy Chief, Research and Development  
202-205-1665, crodriguezfranco@fs.fed.us

Dr. Carlos Rodriguez-Franco currently serves as the Acting Deputy Chief for Research and Development where he provides national leadership for basic and applied natural resources research.

Before taking on his current assignment, Dr. Rodriguez-Franco was Associate Deputy Chief for R&D. He has also served as Research and Development Director for Sustainable Forest Management Research, Executive Lead for Cultural Transformation, a Scientist Liaison, and International Affairs Specialist with U.S. Department of Agriculture’s Agricultural Research Service.

Prior to joining the U.S. Department of Agriculture, he worked 25 years with the National Institute of Forestry, Agriculture and Animal Husbandry Research in Mexico.

Dr. Rodriguez-Franco has a doctorate in Forest Sciences from Yale University. He has written 90 scientific articles related to silviculture and forest management published in Mexico and the United States. Dr. Rodriguez-Franco authored a book in Spanish entitled “Sampling Designs Applied to Forest Inventories.” Other contributions include participation in the “Forestry Compendium” and the book “Pines of Silvicultural Importance” published by CAB International, and a chapter in the book “Urban Air Pollution and Forests: Resources at Risk in the Mexico City Air Basin” published by Springer Verlag.

Doug Crandall  
Director, Legislative Affairs  
202-205-1637, dcrandall@fs.fed.us

Doug Crandall has been Director of Legislative Affairs for the Forest Service since 2007.

During this time he also completed two assignments for the Secretary of Agriculture, first as Acting Assistant Secretary of Congressional Relations for one year, and second as Acting Deputy Under Secretary of Natural Resources and Environment for five months.

Previously to this, for eight years, he was Staff Director for the Subcommittee on Forests and Forest Health, with jurisdiction in the U. S. House of Representatives over most legislation and oversight concerning the Forest Service and Bureau of Land Management.

He also served with the Society of American Foresters as Policy Director, the National Forest Foundation as Vice President, and the American Forest and Paper Association as Director responsible for National Forest issues. Prior to that, he spent ten years managing a lumber company in Livingston, MT, and four years on the Brazilian Amazon, first as a forester and float-plane pilot, then as a plywood mill manager. Doug graduated with a BS
in Forestry from Oregon State University where he was selected as Most Outstanding Graduating Senior by the faculty. He has been a member and officer of numerous forestry, industry, conservation and community organizations.

**Tracy Perry**  
**Director, Law Enforcement and Investigations**  
202-605-4869, tperry@fs.fed.us

Tracy Perry has served as Director of Law Enforcement and Investigations for the Forest Service since July 2016. In this position, he provides management and oversight for over 650 employees responsible for public and employee safety and resource protection on 193 million acres of national forests and grasslands throughout the country.

Prior to accepting the role of Director, Tracy served as Deputy Director of Law Enforcement and Investigations for more than 6 years. In that position, he provided oversight and technical supervision to nine Special Agents in Charge and four Assistant Directors located at various duty locations throughout the nation. He also provided legal advice and technical guidance to National and Regional level Line and Staff Officers related to law enforcement issues on national forests and grasslands.

Tracy has worked for the Forest Service Law Enforcement and Investigations program since 1989. During his 27 year Forest Service career, he has worked at the District level as a Law Enforcement Officer, at the Forest level as a Special Agent, at the Regional level as Assistant Special Agent in Charge and at the National level as Deputy Director, Acting Director, and now Director. He was instrumental in the development of the agency’s national case management policy, the Law Enforcement and Investigations National Recruitment Plan and the National Timber Theft Prevention Plan.

His formal education includes a Bachelor’s Degree in Forensic Science from Jacksonville State University and a Master’s Degree in Criminal Justice, also from Jacksonville State University. He is a graduate of the FBI National Academy program (Session 194) and the Federal Executive Institute’s Leadership for a Democratic Society program.

He is a member of the International Association of Chiefs of Police, the National Sheriffs’ Association, the Western States Sheriffs Association, and the National Organization of Black Law Enforcement Executives.

**Erin O’Connor**  
**Director, Office of Communications**  
202-205-1470, eoconnor@fs.fed.us

Erin O’Connor has served as Director for the Forest Service Office of Communication since 2015. She oversees all national communication programs, including web and social media programs, national media issues and creative media. Erin advises the Chief on media and corporate communications, and is developing a new digital engagement program. She keeps the Department of Agriculture’s Office of Communications and the office of the Under Secretary for Natural Resources and Environment apprised of decisions
made for communications strategy at the national level. Erin also maintains close communication ties with all regional public affairs offices and research stations nationwide.

Erin was named Strategic Communications director in the Intermountain Region in July 2004, and served on the Regional Leadership Team. She provided advice and counsel across all disciplines for 12 national forest and grassland administrative units in six states. Erin maintained close relationships with Congressional delegations by working closely with staff members and Washington Office legislative specialists. She also coordinated special events, including two regional events in honor of the centennial anniversary of the Forest Service.

Erin moved to Ogden, Utah, in September 2001 to serve as deputy director for Strategic Communications for the Intermountain Region. She oversaw development of the region’s website and implemented it as a tool for sharing information with the public. She also served as an incident information officer during the events surrounding the deaths of two Forest Service firefighters who lost their lives battling the Cramer Fire.

Erin worked for a short time with the National Park Service before joining the Forest Service in 1989. She has worked in a variety of positions, including firefighter, wilderness ranger, and district ranger, but most often in public affairs. She has had assignments on three ranger districts, one forest supervisor’s office, and one regional office across California, Nevada and Utah.

Erin O’Connor grew up in Long Island, New York. She holds a Bachelor’s Degree in Forest Management from Washington State University.

Cynthia West
Executive Director, Office of Sustainability and Climate Change
202-205-0838, cdwest@fs.fed.us

Dr. Cynthia West has contributed 24 years of public service with the Forest Service and has extensive experience in forest economics and ecology, forest products, and ecosystem services research and research management. In 2015 Dr. West was appointed as the Executive Director of the newly formed Office of Sustainability and Climate Change for the Forest Service. In this assignment she is provides leadership to guide policy addressing sustainable operations and incorporating climate considerations into land management programs and priorities for the agency. As executive lead, she ensures the Forest Service meets national requirements for developing and implementing climate adaptation/mitigation plans and sustainability reporting.

Prior to this appointment she served in to leadership positions in the national office of the Forest Service since 2012 as Associate Deputy Chief for Research & Development and Director for Resource Use Sciences. She has extensive experience in research management, as Deputy Station Director for the Forest Service, Pacific Northwest Research Station (PNW) in Portland, OR for nine years before entering Senior Executive Service. In this position, she provided oversight for the Station’s research programs across
ten laboratories and eleven experimental forests in Alaska, Washington, and Oregon. Before joining the PNW Station in 2002, Dr. West served as Department Head of Forest Products at Mississippi State University (MSU). Prior to MSU she served for nine years with the Forest Service in the Northeastern Research Station as a researcher and project leader conducting economics and international wood products trade research and industry development in Princeton, West Virginia and at Virginia Tech in Blacksburg, Virginia where she served as Adjunct Faculty in the Wood Science Department.

Dr. West received a bachelor’s degree in forest management, a master’s degree in marketing and management, and a Ph.D. in wood science, all from Virginia Polytechnic Institute and State University.

**Theodore (Ted) Hale Gutman**  
**Director, Office of Civil Rights**  
202-205-0998, theodorehgutman@fs.fed.us

Ted Gutman serves as National Director, Office of Civil Rights for Forest Service, Washington D.C. Ted has helped to shape the Agency’s new civil rights program with a vision to inspire everyone to belong, contribute and succeed.

Ted has served in numerous capacities in his approximately sixteen year career with the federal government including serving as the Director of the Complaints Adjudication Division, Office of the Assistant Secretary of Civil Rights and Deputy Human Resource Director for Marketing and Regulatory Programs Business Services.

Mr. Gutman came to the Agency from private practice serving as the In-house Counsel for EKA Health and Mobility Systems, a small health equipment corporation in Prince George’s County. Ted has a long history of serving the public both in the public and private sectors including working with the President’s Committee on Employment for Persons with Disabilities and supporting the needs of the community with Catholic Charities Legal Network and the in his studies and pro bono work with District of Columbia School of Law.

**Valdis E. Mezainis**  
**Director, International Programs**  
202-644-4621, vmezainis@fs.fed.us

Dr. Valdis E. Mezainis, Director of International Programs, came to the Forest Service from the USDA Foreign Agricultural Service, where he had been the Director of the Research and Scientific Exchange Division since 1988. He served as Director of the Office of International Cooperation and Development’s International Training Division from 1985-1988. Prior to that, Dr. Mezainis held several positions with the Peace Corps.

A native of Chicago, Illinois, Dr. Mezainis earned his Bachelor of Science degree in biology from Loyola University (Chicago). He received his master’s degree in fisheries and aquatic ecology from Auburn University in 1977, and a doctor of philosophy degree in
soil and water science from the University of Arizona, where Gamma Sigma Delta named him the outstanding graduate student in the College of Agriculture.

Dr. Mezainis has worked worldwide in international development for over 40 years and has had long-term residential assignments in India and Cameroon. He has received numerous federal government achievement awards throughout his career including the Presidential Rank Award given to members of the Senior Executive Service for outstanding public service.

**Total:** $6,846,306 $6,067,285 $5,835,626 $5,665,615 $5,369,101 $6,169,127 $5,928,695 $7,084,136
The Forest Service’s discretionary funds are appropriated through the Interior, Environment, and Other Related Agencies Appropriations Subcommittee. This is different from other USDA agencies who work through the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Subcommittee.

The agency’s discretionary budget has been relatively flat when considering fiscal years 2015 and 2016 (enacted) and the FY 2017 Request. The FY 2016 Enacted levels inflate the budget authority received because of a one-year increase to the FLAME Reserve Account of $520 million. The increase was programmed by Congress when a fire funding fix could not be agreed upon. The FY 2017 President’s budget requests an “off-budget” suppression cap adjustment and negated the need to request FLAME Reserve funding. On balance, the three fiscal years displayed below are operationally flat.

Of note is that Congress appropriates wildfire management funding to both the Forest Service and the Department of Interior through the Interior Appropriations bill, and the agencies jointly coordinate wildfire management. The Forest Service covers 193 million acres of National Forest System land, while the Department of Interior manages 400 million acres of national parks, wildlife refuges, and preserves, Indian reservations, and other public lands. The Forest Service provides aviation assets for the federal government, which significantly drives up its costs (from FY2007-2016, the Forest Service received an average of 76% of total wildfire management appropriations whereas the Department of Interior received 24%).
The Forest Service faces two related but distinct challenges from the rising costs of fire suppression. First, wildland firefighting (suppression) activities are currently funded within the U.S. Department of Agriculture (Forest Service) and Department of Interior budgets, based on a 10-year rolling average. Using this model, the agencies must average firefighting costs from the past 10 years to predict and request costs for the next year. When the average was stable, the agencies were able to use this model to budget consistently for the annual costs associated with wildland fire suppression. Over the last few decades, however, wildland fire suppression costs have increased as fire seasons have grown longer and the frequency, size, and severity of wildland fires have increased. The growth in fire suppression costs has steadily consumed an ever-increasing portion of the agencies' appropriated budgets, including at a rate of roughly $100 million a year over the last few years for the Forest Service. Today the agency spends over 50 percent of its budget on fire suppression.

The second challenge is that when appropriated resources fall short, as they did in 2015 by $700 million, the Forest Service is forced to transfer funds from non-fire programs to cover the cost of suppression beyond appropriations in any given fiscal year. These mid to late season transfers stop projects, cause uncertainty and instability in planning, and impact the agency's ability to implement projects. The impact of the rising cost of suppression on the Forest Service’s mission is detailed in a 2014 Report on the state by state impacts of fire transfer, and a 2015 Forest Service Report: Rising Firefighting Costs Raises Alarms.

The Forest Service’s discretionary budget increased 12% ($607 million) in FY 2016 compared to the FY 2015 enacted level. The primary reason for the change was an increase of $520 million to the FLAME Wildfire Suppression Reserve Fund – a fund available to the Forest Service after the Suppression appropriation has been exhausted. Congress elected to appropriate such a high level of funding at the point when a fire funding fix looked unlikely to pass Congress during FY 2016 appropriation negotiations.

See Agency Budget Tables_Forest Service_FINAL.xlsx for a complete history of annual funding levels for both discretionary and mandatory accounts.

**Financial Management**

As an agency, we effectively manage our program of work within our approved budget authority. There are internal controls in place at all levels of the agency to ensure programs and activities are managed effectively to achieve desired outcomes while avoiding overspending. In FY 2017, we will continue to pay attention to how we manage programs to ensure we are spending funds as effective and efficient as possible to achieve the performance outcomes expected. Some specific steps include:

- **Project planning.** This provides an opportunity for us to reach our goal of effective program and fund management; therefore, Regions/Station/Area establish a preliminary program annually by late September.

- **Program oversight and compliance.** The process for program oversight and compliance reviews is consistent with direction issued by OMB, and
implemented by USDA, to broaden A-123 internal control standards beyond financial controls into program management and oversight. The objectives of the reviews under the approach are to evaluate the: 1) effectiveness and efficiency of operations, 2) reliability of financial and program reporting, 3) compliance will applicable laws, regulations, and policy, and 4) alignment with strategic goals, congressional intent, and mission results.

- **Mid-year Reviews.** To ensure funds are managed within unit allocations at the budget line item level, units develop and implement a program of work consistent with their allocations to avoid overspending. To ensure this occurs, all RSA and the WO complete a mid-year review by mid-May and submit the results of the review to the CFO and Director of Strategic Planning, Budget & Accountability. The review includes an analysis of Region/Station/Area budget allocations, program of work, expected performance accomplishments, and projected spending through the end of the fiscal year, along with any corrective actions required to ensure programs are within budget allocations.

The Forest Service employs a workforce of 39,063 employees of which the following are full-time and part-time:
- Full-time: 27,529 employees
- Part-time: 11,534 employees

The Forest Service employs additional seasonal employees to provide support during peak months. From May through September, we hire 10,000 to 12,000 additional seasonal employees to fight forest fires and assist in field work (e.g., data collection).

Of our total workforce, 17% are eligible to retire within the next year.

Our headquarters is located in Washington, D.C., which houses 2% of our workforce.

The Forest Service has 9 regional offices, 7 research stations, and 1 office administering State & Private Forestry programs in the northeast. The following are the names and locations of each:

- **National Forest System Regional Headquarters**
  - Region 1, Northern Region – Missoula, MT
  - Region 2, Rocky Mountain Region – Golden, CO
  - Region 3, Southwest Region – Albuquerque, NM
  - Region 4, Intermountain Region – Ogden, UT
  - Region 5, Pacific Southwest Region – Vallejo, CA
  - Region 6, Pacific Northwest Region – Portland, CA
  - Region 7, Southern Region – Atlanta, GA
  - Region 8, Eastern Region – Milwaukee, WI
  - Region 9, Alaska Region – Juneau, AK

- **State and Private Forestry**
  - Northeastern Area – Newtown Square, PA

- **Research and Development Stations**
  - International Institute of Tropical Forestry – headquartered in San Juan, Puerto Rico
  - Pacific Northwest Research Station – headquartered in Portland, OR
  - Pacific Southwest Research Station – headquartered in Albany, CA
  - Rocky Mountain Research Station – headquartered in Fort Collins, CO
  - Northern Research Station – headquartered in Newtown Square, PA
  - Southern Research Station – headquartered in Asheville, NC
  - Forest Products Laboratory – headquartered in Madison, WI
II. Policies and Regulations

Statutory Authorities

Agricultural Act of 2014 - Insect and Disease Infestation Designation – Amends the Healthy Forests Restoration Act (HFRA) to require designation of an insect and disease priority treatment area in at least one National Forest per State, if requested by the Governor. Treatments in those areas may be conducted in accordance with the authorities provided for fuels treatments in HFRA and also may be categorically excluded. Also, authorizes $200,000,000 per year for these activities through 2024.

- Good Neighbor Authority – Expands Colorado Good Neighbor Act authority (CGNA) to Puerto Rico and all States with National Forest System lands. (Also includes BLM managed lands) Through this authority the Secretary of Agriculture, via cooperative agreement or contract, can permit State agencies to perform watershed restoration and forest management services on National Forest System lands when similar and complementary restoration services are being performed on adjacent State or private lands.

- Cultural and Heritage Cooperation Authority – authorized the reburial of human remains and cultural items on National Forest System lands; prevents the unauthorized disclosure of information regarding human remains or cultural items on National Forest System lands; authorizes tribal access to National Forest System lands for traditional and cultural purposes; and authorized the Forest Service to provide forest products to Indian tribes for traditional and cultural purposes.

Collaborative Forest Landscape Restoration (CFLR) – The Omnibus Public Land Management Act of 2009 authorizes the Collaborative Forest Landscape Restoration Fund, establishing a Treasury fund to be used to pay up to 50 percent of the cost of carrying out and monitoring ecological restoration treatments on National Forest System land. The Act authorizes $40,000,000 for each of fiscal years 2009 through 2019, to remain available until expended. Actual appropriated amounts have varied by year.

Cooperative Forestry Assistance Act of 1978 – Authorizes cooperation and assistance to non-Federal forest landowners and communities in rural forest management, urban and community forest management, production of timber and other forest resources, insect and disease control, rural fire prevention and control, forest management and planning assistance, and technology implementation. Includes authorization for many State and Private Forestry programs, including the Forest Stewardship Program, the Forest Legacy Program, and the Urban and Community Forestry Program.

Healthy Forests Restoration Act (HFRA) of 2003 – Title I of HFRA provides for expedited environmental review, a pre-decisional Forest Service administrative review process, and other measures on National Forest and Bureau of Land Management (BLM) lands that are
at-risk of catastrophic fire. Titles II through VI authorize various forest health restoration programs, including promoting the use of woody biomass, creating the Health Forest Reserve Program, and providing watershed forestry assistance.

Multiple Use Sustained-Yield Act of 1960 – Clarifies forest lands are to be administered for outdoor recreation, range, timber, watershed, wildlife, and fish. Authorized and directed the development and administration of the renewable surface resources of the National Forests for multiple use and sustained yield of the several products and services obtained there from.

National Forest Management Act (NFMA) of 1976 – The NFMA requires that the Forest Service prepare and revise at fifteen-year intervals a land management plan (LMP) for each national forest to provide for multiple use and sustained yield of the products and services obtained from the forest. NFMA also establishes restrictions on timber harvest, such as provisions that harvest can only occur where soil, slope or other watershed conditions will not be irreversibly damaged. The Act directs the Secretary to develop regulations to set out the process for the development and revision of land management plans.

Organic Administration Act of 1897 – Provides authority for the administration, protection, and management of the National Forests, for the purposes of improving and protecting the forest, securing favorable conditions of water flows, and to furnish a continuous supply of timber for the use and necessities of citizens of the United States. The Act also directs the Secretary of Agriculture to protect National Forests against destruction by fire and depredations.

Secure Rural Schools and Community Self-Determination Act of 2000 – The SRS Act provides for payments to States that are distributed to counties in which National Forests are situated. Under the Act, a county elects to receive a share of the State’s 25-percent payment (a receipts-based payment) or a share of the State payment (a formula-based payment). Funding for the payments is from receipts from National Forests and, to the extent of any shortfall, amounts in the Treasury not otherwise appropriated. The SRS Act was originally enacted in 2000, substantially amended and reauthorized in 2008, and since then has been reauthorized year-to-year, except for the most recent reauthorization which authorized payments for fiscal years 2014 and 2015. No further SRS payments may be made unless the SRS Act is reauthorized. If it is not, payments to States will revert to the substantially less 25-percent payments.

Weeks Act of 1911 – Sections 1 and 2 authorize land acquisition for watershed protection and timber production. One of the primary authorities for land acquisition with Land and Water Conservation Fund moneys.
**Important Policies and Regulations**

**Significant Policies/Regulations Finalized Within the Last Year**

No significant policies/regulations were finalized within the last year. The three policy/regulatory actions that were finalized within the last year were non-significant policy/regulatory actions.

**Significant Policies/Regulations Open for Comment**

There are currently no policies/regulations (significant or non-significant) that are open for comment.

**Significant Policies/Regulations Pending OMB clearance**

- Colorado Roadless-North Fork Coal Mining Exception (36 CFR part 294)--Final Rule; Target publication date November 2016 (currently at OMB for review)
- Administrative Issuances; Involving the Public in the Formulation of Forest Service Directives (36 CFR part 216)--Final Rule; Target publication date November 2016 (currently in FS clearance)
- Mitigation for Adverse Impacts (36 CFR part 224)--Proposed Rule; Target publication date December 2016 (currently in Department clearance)
- Commercial Filming Wilderness (FSH 2709.11)--Final Directive and Interim Final Rule; Target publication date November 2016 (currently pending OMB designation; expected to be significant)
- Small Business Timber Sale Set-Aside Program (FSH 2409.18)--Proposed Directive; Target publication date January 30, 2017 (currently pending SBA rule publication)

On average, two new Forest Service policies/regulations are released (notification of pending action added to the regulatory agenda) per year. The remainder are pending actions carried over from year to year. Of these new regulations, 50% (at least one per year, on average) is deemed significant by the Office of Information and Regulatory Affairs (OIRA). In 2015, the Forest Service Regulatory reviewed its pending regulatory actions, and identified its highest priority actions. Twenty-five percent (5 out of 20) have been deemed significant by OIRA. However, over the last 15 years, OIRA has never designated a Forest Service regulation economically significant.

**Overview of the policy/regulation review process**

Federal agencies operate under the U.S. Code and the Code of Federal Regulations. These laws help form our directives and policies on how we manage national forests and grasslands. The agency’s directives consist of the Forest Service Manual and Handbooks, which organizes the agency's policy, practice, and procedure. The system serves as the primary basis for the internal management and control of all programs and the primary source of administrative direction to employees. The Forest Service typically implements program changes through issuance of new policies or revision of policy within this existing agency regulatory framework.
The Forest Service strives to seek public input in its policy and regulation review process. The National Forest Management Act of 1976 (NFMA) requires the Forest Service to offer a public notice and comment period on the formulation of standards, criteria and guidelines applicable to Forest Service programs, i.e., policy manuals and handbooks. Historically, when a determination is made that prior public notice and comment is warranted for a proposed policy action, the Forest Service has followed the requirements of the Administrative Procedures Act and OIRA guidance for regulatory review. The Forest Service has recently been revising its process in 36 CFR part 216 - Administrative Issuances; Involving the Public in the Formulation of Forest Service Directives. The agency also regularly consults with Indian tribes per Executive Order 13175.

Periodically, new regulatory actions are needed to implement new statutory provisions, such as the Farm Bill enacted every 5 years. Pursuant to the National Forest Management Act of 1976, the agency is required to update its forest plans every 15 years, which it did most recently in the 2012 Planning Rule and accompanying directives.

III. Congressional Relations and Issues

Overview

The Forest Service works with a number of congressional authorizing committees and subcommittees because of the mission areas represented. These include the Senate Committee on Energy and Natural Resources, the Senate Committee on Agriculture, Nutrition and Forestry, the House Committee on Natural Resources including the Subcommittee on Federal Lands, and the House Committee on Agriculture including the subcommittee on Conservation and Forestry.

The Forest Service’s discretionary funds are appropriated through the Interior, Environment, and Other Related Agencies Appropriations Subcommittee. This is different from other USDA agencies who work through the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Subcommittee.

Fire Suppression Budget

The Forest Service faces two related but distinct challenges from the rising costs of fire suppression. First, wildland firefighting (suppression) activities are currently funded within the U.S. Department of Agriculture (Forest Service) and Department of Interior budgets, based on a 10-year rolling average. Using this model, the agencies must average firefighting costs from the past 10 years to predict and request costs for the next year. When the average was stable, the agencies were able to use this model to budget consistently for the annual costs associated with wildland fire suppression. Over the last few decades, however, wildland fire suppression costs have increased as fire seasons have grown longer and the frequency, size, and severity of wildland fires have increased. The growth in fire suppression costs has steadily consumed an ever-increasing portion of the agencies' appropriated budgets, including at a rate of roughly $100 million a year over the last few years for the Forest Service. Today the agency spends over 50 percent of its budget on fire suppression. The second challenge is that when appropriated resources fall short, as they did in 2015 by $700 million, the Forest Service is forced to transfer funds from non-fire programs to cover the cost of suppression beyond appropriations in any given fiscal year. These mid to late season transfers stop projects, cause uncertainty and instability in planning, and impact the agency's ability to implement projects.

Since the FY 2015 President’s Budget, the Administration has proposed a new way of funding wildland fire suppression using a disaster cap adjustment. That proposal would require the FS to budget for 70% of the 10-year average. It would also allow the agency to draw on funding appropriated government-wide for disasters for certain kinds of large fires and when suppression funding is exhausted.

The proposal, which is consistent with the Wildfire Disaster Funding Act (WDFA) introduced in the 113th and 114th Congresses, also ensures accountability for accessing the disaster funds and provides the opportunity for greater or sustained investment in
restoration, fire risk reduction, and public safety programs by not necessitating fire transfers from non-fire programs.

A number of alternative proposals have been put forward during the 114th Congress including (among others) the Resilient Federal Forests Act (HR 2647) introduced by Rep. Bruce Westerman, the Wildfire Budgeting, Response and Forest Management Act (offered by Sens. Murkowski, Crapo, Wyden, Risch), and Emergency Wildfire and Forest Management Act of 2016 (S. 3085) from Sen. Pat Roberts. The Administration has not endorsed any of these proposals, however we continue to work with all parties toward a comprehensive solution.

Farm Bill Implementation

The 2014 Farm Bill significantly expanded the tools that will support the ability of the agency to accomplish restoration work on the ground. The tools included permanent authorization for stewardship contracting and the Good Neighbor Authority. In addition, the 2014 Farm Bill provided the Forest Service with an increased ability to identify and treat priority insect and disease infestation areas.

The Good Neighbor Authority (GNA) provided permanent authority to the Forest Service and the Bureau of land Management (BLM) to enter into cooperative agreements or contracts with States and Puerto Rico to allow the States to perform watershed restoration and forest and rangeland management services on National Forest System lands when similar and complementary restoration services are being performed on adjacent State or private lands. As of August, the Forest Service has executed 48 GNA agreements with 20 states to implement a wide variety of projects including fuels reduction treatments, insect and disease projects, treating noxious weeds, executing timber related activities and wildlife habitat projects.

Section 8204 of the Farm Bill amends the Healthy Forest Restoration Act of 2003 (HFRA) to address qualifying insect and disease infestations on National Forest System lands. To date, the Chief has designated approximately 55 million acres of National Forest System lands. Within the designated areas, the Farm Bill provides the authority to use the expedited National Environmental Policy Act (NEPA) procedures for an Environmental Assessment or Environmental Impact Statement or the use of the newly legislated Categorical Exclusion (CE). This provides the Forest Service with an increased ability to address insect and disease infestations. Projects carried out using the new legislated CE are developed and implemented through a collaborative process and must comply with other relevant laws (ESA, Clean Water Act, etc.). Fifty eight projects have been proposed under the Farm Bill Insect and Disease provisions.

Section 8205 of the Farm Bill amends the Health Forest Restoration Act of 2003, granting permanent authority to the Forest Service (and BLM) to enter into stewardship contracts or agreements with private persons or public and private entities to perform services to achieve land management goals that meet local and rural community needs. The Forest
United States Department of Agriculture
2016 Presidential Transition
Forest Service (FS)

Service accomplished approximately 38,000 acres of hazardous fuels treatments and improved over 40,000 acres of terrestrial habitat in Fiscal Year 2015 using the authority.

Secure Rural Schools and Community Self-Determination Act of 2000 (SRS Act)

The SRS Act provides for payments to States that are distributed to counties in which National Forests are situated. Under the Act, a county elects to receive a share of the State’s 25-percent payment (a receipts-based payment) or a share of the State payment (a formula-based payment). Funding for the payments is from receipts from National Forests and, to the extent of any shortfall, amounts in the Treasury not otherwise appropriated. The SRS Act was originally enacted in 2000, substantially amended and reauthorized in 2008, and since then has been reauthorized year-to-year, except for the most recent reauthorization which authorized payments for fiscal years 2014 and 2015. No further SRS payments may be made unless the SRS Act is reauthorized. If it is not, payments to States will revert to the substantially less 25-percent payments, impacting many local government services.

The Forest Service SRS payments for FY 2015 made in FY 2016 totaled over $272 million and benefitted 41 states and the Commonwealth of Puerto Rico in support of local schools and roads and for other purposes. The $272 million is comprised of $245 million in payments under Titles I and III as well as over $26 million in Title II funding to complete projects proposed by approximately 120 collaborative Resource Advisory Committees (RAC) for the benefit of Federal lands. Achieving RAC quorums has been a challenge due largely to small population size limits in many rural areas, internal requirements to have two applicants for each member opening, statutory requirements of the SRS for required skills and interest representation, and the complexities of navigating Federal Advisory Committee compliance. This issue has been raised by several members of Congress.

Minimum Wage Clause for Special Uses Permits

The Forest Service authorizes a number of recreational activities on National Forest System (NFS) lands through a recreational special use permit system. On February 12, 2014, President Obama signed Executive Order (EO) 13658, “Establishing a Minimum Wage for Contractors,” to raise the minimum wage to $10.10 for workers on federal construction and service contracts, concession contracts, and contracts involving federal property or lands and related to offering services for the general public. The Department of Labor (DOL) issued regulations to implement the EO effective December 8, 2014. The regulations require covered contracts to include the $10.10 minimum wage starting January 1, 2015. To comply, the Forest Service began adding the minimum wage clause to new permits as of January 1, 2015.

Recreation special use permit holders and their associated trade organizations lobbied federal agencies and congress that the minimum wage clause was detrimental to their businesses.
Subsequently, section 110 of DOL’s 2016 Appropriations Act stated that “None of the funds made available by this Act may be used to implement, administer, or enforce the Establishing a Minimum Wage for Contractors regulation” for federal permits specifically relating to offering seasonal recreational services or seasonal recreation equipment rental, other than lodging and food services associated with these activities. The Forest Service interpreted this language to mean that the agency was unable to implement the DOL regulations on minimum wage. However, OGC advised the Forest Service that section 110 applies only to DOL, not the Forest Service.

In June 2016, the agency received DOL guidance that raises an additional concern of potential financial liability for the agency and its special use permit holders. Specifically the DOL Frequently Asked Questions address the effect of section 110 regarding their minimum wage rule and support OGC’s interpretation that the Forest Service is unaffected by the appropriations rider and is required to comply with the DOL minimum wage rule. In addition, the Frequently Asked Questions iterate that DOL can still enforce the rule for federal permits other than for seasonal recreational services or seasonal recreation equipment rental, as well as for lodging and food services associated with these activities.

Land and Water Conservation Fund

In 1965, Congress created the Land and Water Conservation Fund (LWCF) to embody its bipartisan commitment to safeguard natural areas, water resources and our cultural heritage, and to provide recreation opportunities to all Americans. It is currently authorized through 2018. The LWCF provides a vital opportunity for the National Forest System to acquire and protect important lands in order to support healthier forests, safer communities and more vibrant local economies. Land acquisition is part of the larger agency strategy to create a resilient and productive system of forests and grasslands that provide economic and environmental stability to communities across America. Land acquisition and the LWCF is a key strategic tool for furthering agency and Administration initiatives, particularly for recreation and public access, as well as restoration and watershed protection to mitigate the effects of climate change.

Federal Lands Recreation Enhancement Act

The Federal Lands Recreation Enhancement Act (FLREA) authorizes 5 agencies; National Park Service, Fish and Wildlife Service, Bureau of Land Management, Bureau of Reclamation and Forest Service to collect and spend recreation fees to improve recreation services and experiences for visitors to federal recreational lands and waters.

Originally passed in 2004, the Act has been extended several times and is currently set to expire September 30, 2018.

The five agencies collect over $260 million in recreation fees annually – of which, the Forest Service collects approximately $65 million, or about 20 percent of the agency’s total recreation budget.
Recreational Shooting

The demand for dispersed and developed recreational shooting areas has greatly increased in areas where the wildland-urban interface — the area where forests and communities meet — has rapidly expanded, such as Colorado’s Front Range and around urban areas in California, New Mexico, and Arizona. Many local Forest Service units struggle with trash, dumping, resource damage, lead management, and safety related issues, including numerous complaints from homeowners and other recreationists. These issues often affect state, county, and municipal agencies as well.

Though approximately less than 2 percent of NFS lands are affected by closure orders restricting discharge of firearms there has been Congressional interest in restricting the ability of the Forest Service and Interior agencies to close areas to shooting. The Forest Service continues to lead an educational effort with our partner Tread Lightly! to actively address inappropriate behaviors that affect access through our Respected Access is Open Access campaign. In addition we are working with interest groups including members of the Federal Lands Hunting, Fishing and Shooting Sports Roundtable, the Wildlife Hunting Heritage Conservation Council (FACA group), state, county, and local governments, and members of Congress to address constituent concerns.

Water Rights and Groundwater

Several members of Congress, primarily from western states, have demonstrated interest in restricting the ability of federal land management agencies to exercise existing authorities to manage diversion and use of water on federal lands to ensure continued sufficiency of water for authorized uses. There is also concern that field direction providing guidance for the evaluation of management activities on groundwater resources represents an attempt to assert federal management over groundwater. Several bills have been introduced in both Houses over the last few Congresses that would have far-reaching consequences for multiple-use management, including a scenario where water rights for water originating on NFS lands and used for multiple-use purposes could be separated from the land, potentially affecting existing land uses and precluding future uses. Another potential consequence could be unfettered diversion and use of water on federal lands. These bills could also limit the ability of responsible officials to fully consider and base decisions on the effects of surface or subsurface activities on groundwater resources. Terms and conditions for land use authorizations intended to protect existing land uses and potential future multiple uses would also be affected.

The initial drivers for the proposed legislation appeared to come from ski industry concerns about a Forest Service directive governing diversion and use of water on NFS lands under
ski area permits, and from a Forest Service directive addressing groundwater resources and the links between surface and groundwater resources on NFS lands. In 2015, the Forest Service issued a final directive for new water clauses for ski areas on NFS lands after providing notice and an opportunity for public comment on the proposed clauses. The new ski area water clauses ensure water originating, diverted, and used on NFS lands for ski area purposes will be available for those purposes in the future. The final directive does not require ski area permit holders to acquire ski area water rights in the name of the United States or to transfer ski area water rights to the United States. The final directive accomplishes the Forest Service’s objective of long-term availability of water to sustain ski area uses by focusing on sufficiency of water for operation of ski areas prior to permit issuance, during the permit term, and upon permit termination or revocation, when ski area assets are sold. By focusing on the long-term availability of water for ski areas on national forests, the final directive supports the public’s desire for long-term recreational opportunities ski areas provide and the economies of the local communities that depend on their revenue. The Forest Service has sought to address remaining constituent and Congressional concerns in these areas, and has suspended issuance of groundwater-related directives while actively working with state water agencies to formulate mutual understanding and agreement on this subject. However strong interest remains in legislation to curtail the land management agencies’ authority to protect federal lands in connection with diversion and use of water on federal lands and effects on groundwater from management activities on federal lands.

Small Business Timber Sale Set-Side Program

The Forest Service provides saw logs in accordance with the Small Business Act (Pub. L. 85-536 as amended) and the National Forest Management Act (Pub. L. 94-588 as amended). Timber is regularly sold from the federal forests managed by the Forest Service and the Bureau of Land Management. On occasion, timber is sold from federal forests which are under the supervision of the U.S. Fish and Wildlife Service, the U.S. Department of Defense, the U.S. Department of Energy, and the Tennessee Valley Authority. Collectively, these agencies are considered the “sales agencies.”

The Small Business Administration’s (SBA) Natural Resources Sales Assistance Program is intended to ensure small businesses obtain a fair share of government property sales and leases through small business set-asides. SBA and the sales agencies jointly set aside timber sales for bidding by small concerns when market data demonstrates that small businesses would not obtain their fair share under open sales. In 1971, USDA and SBA signed a Memorandum of Understanding (MOU) intended to accomplish the declared policy of Congress that a fair proportion of the total sales of Government property be made to small business enterprises defined by SBA (Small Business Act. 15 U.S.C. 631, et seq.).

In the 1980s and 1990s, efforts to protect species habitat and watersheds in compliance with federal law and regulation resulted in dramatic changes to the United States timber industry. These changes included reduced timber harvests on federal and private lands which in turn caused market failures for timber mills that could not adapt and retool. As a result, many small timber mills (western mills in particular) have been forced to close. As
such, the Small Business Timber Set-Aside Program has become increasingly important to ensure that a “fair proportion” of federal timber is available for purchase by qualified small business concerns.

The SBA proposes to include saw timber volume from Stewardship Integrated Resource Timber Contracts (IRTCs) and Integrated Resource Service Contracts (IRSCs) in the small business market share calculations, pursuant to the set-aside program (13 CFR 121.507d). Currently, sawtimber volume from IRTC and IRSCs is not considered in calculating the small business market share for a market area. In addition, SBA proposes appraising set-aside sales to the nearest small business mill to reflect the estimated cost to an eligible bidder (13 CFR 121.507e). The Forest Service is concerned that SBA’s proposal does not show a clear rationale for change of the current regulation; both for inclusion of stewardship sales and changing the appraisal point for set-aside sales to the nearest small mill. The Forest Service conducted an econometric analysis and provided it to SBA to inform SBA’s rule proposal; no further econometric analysis work by the FS is planned. SBA’s Proposed Rule was published on September 27, 2016.

**Job Corps Civilian Conservation Centers (JCCCC)**

Job Corps is the nation’s largest residential, educational, and career technical training program that prepares economically disadvantaged youth, ranging in age from 16 to 24, for productive employment. USDA Forest Service operates 27 Job Corps Civilian Conservation Centers (JCCCCs) that span seven Forest Service regions, 23 national forests and grasslands and 17 states with a capacity to house, educate, and train over 5,200 enrollees. JCCCCs are operated by the Forest Service in partnership with the U.S. Department of Labor. Job Corps, modeled after the Depression-era Civilian Conservation Corps, was created in 1964 by the Economic Opportunity Act.

Besides conservation training, Job Corps students at Civilian Conservation Centers offer hands-on training in over 30 vocational trades including: urban forestry, food service and culinary arts, cement masonry, welding, business technology, painting, heavy equipment operations, carpentry, bricklaying, wildland firefighting and forestry.

In 2011, the Department of Labor implemented a reform initiative to improve the performance of Job Corps Centers, in particular, chronic low performing centers. During this time, Congress also requested reform of chronic low performing centers. In 2013, the Department of Labor established criteria to identify a chronic low performing center. Based on this criteria, in 2014 the Treasure Lake Job Corps Civilian Conservation Center in Oklahoma, which is managed by the Forest Service, was identified as the lowest performing center in the nation, and was closed in 2015. In 2016, a second Job Corps Civilian Conservation Center, the Ouachita center located in Arkansas, was identified for closure. The Ouachita JCCC employees have been given Reduction-In-Force (RIF) notices and the RIF effective date is Dec 2, 2016. By this date, all employees must be reassigned or separated, unless a temporary extension has been granted for specific purposes (none known to date). Activities on the JCCCC following December 2, 2016, will be related to disposition of facilities, equipment, etc.
In 2014, Congress passed the Workforce Innovation and Opportunity Act which included a new set of performance measure criteria. Early rankings using the new criteria placed several Forest Service Job Corps Conservation Centers in the lower rankings overall. In 2015 and 2016, the Forest Service worked to improve performance of those low performing centers. In July 2016, all but two centers out of 27 managed by the agency have improved their performance, and these two centers remain in the bottom rankings. The Forest Service has committed to work with the Department of Labor to improve the performance of these two centers to continue success of the Job Corps program.

Over the past three years, the CCC program budget has decreased from $192 million in PY 2011 to $154 million in PY 2015. In PY 2013, the budget was decreased $19 million in one year, which meant the agency had to initiate a major re-organization to reduce the number of federal employees without implementing a reduction in force or a furlough. The Job Corps program was able to manage within its budget while transforming the organization to be more nimble and efficient.

**National Timber Sale Program**

Timber sales remain a viable tool to achieve Forest Plan objectives such as maintaining, enhancing, and restoring watershed conditions, improving forest health and providing forest products. Conventional timber sales, stewardship contracts and agreements, and Good Neighbor agreements are essential tools where timber harvest is used to meet landscape restoration, maintenance, and enhancement goals. Timber sales contribute to local and regional economies, generate revenue, and offset costs. In FY 2015 about 71 percent of the total timber volume sold was generated through traditional timber sale contracts with the remainder through stewardship contracts and agreements. The volume of timber sold and harvested on NFS land is increasing. For example, in 2008, nearly 2.4 billion board feet was sold from NFS lands and, in 2015, nearly 2.9 billion board feet was sold.

Stewardship contracts may be used for treatments to improve, maintain, or restore forest or rangeland health; restore or maintain water quality; improve fish and wildlife habitat; and reduce hazardous fuels that pose risks to communities and ecosystem values.

Stewardship contracting allows the Forest Service to apply the value of timber or other forest products removed as an offset against the cost of services received, apply excess receipts from a project to other authorized stewardship projects, select contracts and agreements on a "best value" basis, and award a contract or agreement up to ten years which may stimulate long term investment in the local community.

Adequate funding is essential to maintaining and increasing the volume of timber available to support the forest products industry. Dedicated timber sale funding, including appropriations, permanent funds, and trust funds, has declined 39 percent from FY 1998 to FY 2015 when adjusted for inflation, and resulted in a corresponding 50 percent reduction in staff. The timber sale program also relies directly or indirectly on additional National
Forest System Budget Line Items (BLIs), Hazardous Fuels, and Capital Improvement and Maintenance funds.

National Environmental Policy Act (NEPA) Efficiencies

The National Environmental Policy Act (NEPA) was the first major environmental law in the United States. The environmental review process under NEPA provides an opportunity for the public to be involved in the Federal agency decision-making process. It requires Federal agencies to consider environmental effects that include, among others, impacts on social, cultural, and economic resources, as well as natural resources.

The NEPA process can be complicated and sometimes lengthy, but the Forest Service has made great strides in the pursuit of efficiencies in recent years. An important way to increase the pace and scale of forest restoration and management is to improve the efficiency of planning timber sales and stewardship contracts. We are working to identify and implement process improvements and efficiencies that help with increasing the pace and scale of restoration, while also engaging the public and developing well-planned projects.

The Forest Service is developing new approaches to NEPA in the wake of catastrophic fires. On the Rim Fire, which burned 257,000 acres in the summer of 2013, the Stanislaus National Forest finalized both an Environmental Assessment for hazard tree removal and an Environmental Impact Statement for restoration and salvage in one year. This lessened the potential for future catastrophic fire by reducing the fuel load and captured some of the perishable economic value of the fire-killed trees through timber salvage. The agency coordinated with the Council on Environmental Quality, which approved Alternative Arrangements to expedite the NEPA process.

The Forest Service is also planning and implementing projects across larger areas, which increases NEPA efficiency and thereby spreads costs across more acres, and provides a longer term and more certain timber supply for local mills. One such example, the Mountain Pine Beetle Response Project on the Black Hills National Forest, implemented a landscape scale approach across 200,000 acres for treating current and future pine beetle outbreaks.

In the Southwest, the Forest Service signed an Environmental Impact Statement for the Four Forest Restoration Initiative, covering about one million acres in the Coconino and Kaibab National Forests. This project was one of the Council on Environmental Quality’s NEPA Pilot Projects, which were projects nominated for employing innovative approaches to completing environmental reviews more efficiently and effectively.

The agency has established additional categorical exclusions for restoration work, has expanded the use of focused environmental assessments, is using adaptive management to allow our decisions to last longer, and is better training employees to take advantage of new efficiencies.

Important relationships with other Federal Departments or organizations

<table>
<thead>
<tr>
<th>Federal Agency</th>
<th>Relationship</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.S. Agency for International Development (USAID)</td>
<td>USDA Forest Service International Programs promotes sustainable forest management and biodiversity conservation internationally. International Programs has three main staff units: Technical Cooperation, Policy, and Disaster Assistance. Both Technical Cooperation and Disaster Assistance work closely with the United States Agency for International Development (USAID). Technical Cooperation develops and manages natural resource projects overseas on a wide range of topics (i.e. fire management and forest health). There are two main disaster programs: Disaster Assistance Support Program (DASP) and the Disaster Mitigation Program. Funded by USAID's Office of Foreign Disaster Assistance, DASP trains and mobilizes personnel domestically to respond and mitigate foreign disasters, such as the drought in Ethiopia and the locust response in West Africa. The Disaster Mitigation Program, on the other hand, trains and provides technical expertise to partners overseas in emergency preparedness, response and disaster mitigation.</td>
</tr>
</tbody>
</table>
The Forest Service plays a key role in formulating policy and coordinating U.S. support for the protection and sound management of the world's forest resources. It works closely with the Environmental Protection Agency to this end.

The Forest Service works closely with the Farm Service Agency (FSA), which administers the Biomass Crop Assistance Program (BCAP) to provide financial assistance to owners and operators of agricultural and non-industrial private forest land who wish to establish, produce, and deliver biomass to processing facilities not in the immediate proximity of the area of treatment.

The Forest Service coordinates closely with DOI’s Office of Wildland Fire to provide strategic leadership and oversight to advance the three goals of the National Cohesive Wildfire Strategy to: 1) restore and maintain fire-resilient landscapes; 2) create fire-adapted communities that will withstand the effects of a wildfire without the loss of life and/or property; and 3) safely and effectively respond to wildfire.

The Forest Service also works extensively with DOI under the Service First authority to improve customer service by providing streamlined, one-stop shopping across agency jurisdictional boundaries for public land users. This allows the agencies to conduct activities jointly or on behalf of one another; collocate in Federal offices; make reciprocal delegations of their respective authorities, duties and responsibilities; and, transfer funds on an annual basis for multi-year projects.

The Forest Service and DOI work together with local stakeholders to identify large natural areas where Land and Water Conservation Fund funds can achieve the most important shared conservation and community goals in the highest priority landscapes using Collaborative Landscape Planning (CLP) initiative. Since the Collaborative Landscape Initiative was launched in 2013, investments of more than $190 million have restored and led to stabilization of critical landscapes in Montana’s Crown of the Continent, the California Desert, and the longleaf pine ecosystem of Florida and Georgia, among others.

The U.S. Forest Service and USDA’s Natural Resources Conservation Service are working together to improve the health of forests where public and private lands meet. Through the Joint Chiefs’ Landscape Restoration Partnership, the two USDA agencies are restoring landscapes, reducing wildfire threats to communities and landowners, protecting water quality and enhancing wildlife habitat. A total of $107 million was jointly invested in 39 projects between FY 2014 and FY 2016.
The U.S. Forest Service contracts with private companies to provide airtankers to drop fire retardant as part of wildfire suppression efforts. But during periods of high wildfire activity, often there aren’t enough contracted airtankers to meet demands. During these periods of need, Modular Airborne Fire Fighting Systems (MAFFS) are used. MAFFS are portable fire retardant delivery systems that can be inserted into military C-130 aircraft without major structural modifications to convert them into airtankers when needed.

The MAFFS program, created by Congress in the early 1970s, is a joint effort between the U.S. Forest Service and Department of Defense (DoD). The U.S. Forest Service owns the MAFFS equipment and supplies the retardant, while the DoD provides the C-130 H and J model aircraft, flight crews, and maintenance and support personnel to fly the missions. There are a total of 8 MAFFS ready for operational use. MAFFS are important because they provide a “surge” capability that can be used to boost wildfire suppression efforts when commercial airtankers are fully committed or not readily available. They can discharge their entire load of up to 3,000 gallons of retardant in less than five seconds, covering an area one-quarter of a mile long by 100 feet wide, or make variable drops. Once the load is discharged, it can be refilled in less than 12 minutes.

### Shared service provider or customer information

<table>
<thead>
<tr>
<th>Activity</th>
<th>Shared Service Provider or Customer?</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Recreation.gov Contract: Led efforts on behalf of 12 federal agencies to select the new Recreation.gov contractor to provide both reservation services and trip-planning information for federal lands in the United States through a contractor-supported Recreation.gov website, customer support centers and recreation database service, connecting millions with federal recreation opportunities, reservations, and activities. The contract is unique as the fees collected from the customers pay for the services provided under the contract, resulting in only minimal administrative costs for the federal agencies.</td>
<td>Shared Service Provider</td>
</tr>
<tr>
<td>Procurement Strategic Sourcing: Awarded multi-million dollar contracts on behalf of USDA, DoD and DoI saving over $9M in personnel and contract costs, including the Global Navigation Satellite Systems (USDA-wide), Recreation.gov system (FS, Army Corps, NPS, etc.), and all-risk incident support (FS &amp; DOI).</td>
<td>Shared Service Provider</td>
</tr>
</tbody>
</table>
Customer Help Desk: Forest Service serves as the USDA lead for the customer help desk (CHD) strategic sourcing vehicle, with a contract ceiling of $98 million that promotes the USDA Blueprint for Shared Services. In its first year, the contract achieved $1 million in savings through efficiencies of a single Departmental contract. Forest Service successfully transitioned its CHD to the new strategic sourcing vehicle in Q1 FY 2016.

Property Programs: Through the Department of Defense (DoD) Firefighter Property Program (FFP), we help our state cooperators acquire more than $169 million worth of firefighting and emergency services equipment in 2016. Through the Federal Excess Personal Property Program (FEPP), we help State Foresters acquire more than 23,000 pieces of equipment for their wildland fire programs in 2016.

USDA Regional Hubs: Provide leadership to deliver science-based knowledge and practical information to farmers, ranchers and forest landowners to support decision-making related to climate change. FS leads three hubs (PNW, NE, and SE) and two sub-hubs (Midwest and Caribbean).

Stakeholder group overview

The key issues and areas of engagement are listed in the table under “Objective”.

Recent engagements with stakeholder group

The following tables list formally established Federal Advisory Act Committee Act Committees that are used by the Forest Service to seek the advice and assistance of citizens (not employed by the federal government) on issues associated with agency programs and policies.

### National Urban and Community Forestry Advisory Council

Objective: The purpose of the Council is specifically to:
1. Develop a national urban and community forestry action plan in accordance with Section 9 (g)(3)(A-F) of the Act;
2. Evaluate the implementation of that plan; and
3. Develop criteria for, and submit recommendations with respect to the urban and community forestry challenge cost-share program as required by Section 9 (f)(1-2) of the Act.

### PNW National Scenic Trail Advisory Council

Objective: The Council will advise and make recommendations to the Secretary of Agriculture, through the Chief of the Forest Service, on matters relating to the Pacific Northwest National Scenic Trail (Pacific Northwest Trail), as described in the Act. The Council will be solely advisory in nature. Advice or recommendations of the Council will be given only with respect to the matters relating to the Pacific Northwest Trail. The Council will be asked to provide advice on the selection of rights-of-way, standards for the erection and maintenance of markers along the Trail, and the administration of the Trail.

### PROVINCIAL ADVISORY COMMITTEES (PACs)

Objective: Each PAC provides advice regarding implementation of a comprehensive ecosystem management strategy for Federal land within three ecological provinces and the entirety of the Okanogan-Wenatchee and Deschutes National Forests. They seek to promote public understanding and, where possible, consensus on approaches to managing forest ecosystems, wildlife and fish, and human uses of the forest.

Objective: The purpose of the Unions is to represent bargaining unit employees over matters pertaining to grievances and conditions of employment.

V. **Top Issues**

**Hot Topics**

*Key Policy Issues (Listed in order of importance)*

<table>
<thead>
<tr>
<th>Issue</th>
<th>Brief Description</th>
<th>Timeline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wildfire Suppression Budget Fix</td>
<td>More than 150 bipartisan Congressional members have voiced strong support to remedy the Forest Service’s growing budget dilemma resulting from the skyrocketing costs for fire suppression, which now consume more than 56 percent of the agency’s budget. This trend, resulting from hotter, more severe wildfires and longer fire seasons erodes the agency’s ability to meet its mission in other critical programs like forest restoration, recreation and services to the public. If this trend continues, it is projected that fire suppression will consume more than 70 percent of the agency’s budget by 2020. The agency has already experienced a 40 percent drop in workforce while needs for increased restoration to foster forest ecological resilience are rising rapidly. Several pieces of draft legislation have been introduced. Pending the outcome of this Congress, work will be needed to implement reform or seek additional congressional action.</td>
<td>January-June 2017</td>
</tr>
</tbody>
</table>
| **Tongass Plan Amendment-Delayed Reaction** | The Forest Service anticipates plans to issue the Tongass National Forest Plan Amendment on December 22, 2016. The purpose of the Tongass Plan Amendment is to expedite the transition from old-growth timber harvesting toward a forest products industry that uses predominantly second-growth or young-growth forests on the Tongass National Forest in Alaska. The amendment would allow young growth timber harvest in riparian, beach and estuary fringe, and old growth reserve areas because there is inadequate young-growth timber available to meet demand outside these areas. By allowing timber harvest in these areas, the transition to a largely second growth program would happen in 16 years.

The Tongass Plan Amendment also sustains and recognizes the aquatic resources, fishing and recreation tourism economy benefits that come from the Tongass. Although this amendment is based on the recommendations from the Tongass Advisory Committee, the plan amendment is very controversial. We anticipate strong opposition and critique from Members of Congress, the timber industry, and environmental groups. Senator Lisa Murkowski and Congressman Don Young are opposed to the plan amendment and are working on bills to block it because they believe more time is necessary for the timber industry to make the transition from old to young growth timber. The timber industry believes the amendment will cause many of the major timber operators that depend on Tongass timber to file bankruptcy and close their mills. Litigation is likely from some environmental organizations that want to eliminate old-growth harvesting. Other organizations’ positions vary from wanting a transition to a young-growth timber program starting within 5 years to a delay of at least 30 years. | January–June 2017 |
| **California Tree Mortality** | The west slope of the southern Sierra Nevada of California is facing one of the largest tree mortality events in recorded history. Since 2010, an estimated 66 million trees have died in California due to increasing temperatures, an unprecedented and ongoing drought, bark beetle and other insect infestation, and high tree densities— with an estimated 29 million trees dying in 2015 alone. Trees will continue to succumb as California enters its fifth consecutive year of drought. Three forests are at the epicenter of this event, with approximately one | Ongoing |
millions of acres of dead and dying trees on the Stanislaus, Sierra, and Sequoia National Forests. Tree mortality is being addressed in phases: The first phase uses a triage approach in which National Forests are removing dead and dying trees to help protect public and employee safety from falling trees and reduce wildfire risk in high hazard areas near communities, in recreation sites, along roads, trails, and utility corridors. To date, the Forest Service has treated 30,000 acres out of one million acres of dead and dying trees on the three national forests. The second and third phases further address hazardous fuels conditions and incorporate restoration activities in the tree mortality areas. The agency collaborates with the CA Governor’s Tree Mortality Task Force to coordinate and prioritize response. Senator Feinstein has also raised the visibility of the issue—she asked the Department of Agriculture for $38 million for 19 related projects.

<thead>
<tr>
<th>Office of Inspector General’s 2017 Audit of Forest Service Efforts to Improve Quality of Work Environment</th>
<th>Spring 2017</th>
</tr>
</thead>
<tbody>
<tr>
<td>In spring 2017, the Forest Service expects the Office of Inspector General to conduct an audit of the agency’s efforts to improve the work environment. Since 2012, the Forest Service has progressed significantly to improve the quality of its work environment for all employees. Agency leaders have placed specific focus on the Pacific Southwest Region, the largest unit in the Forest Service which employs a workforce of 6000, including the largest firefighting workforce. The agency paid serious attention to complaints from women firefighters who alleged discrimination and harassment in the agency. Six women filed a putative class complaint in September, 2014; it hasn’t been certified, however. Since 2012, the agency has undertaken a number of actions to address allegations, including investigating every allegation and taking appropriate disciplinary actions. The agency has also made significant investments to improve the workplace. Specifically, the agency revamped the Employees Relations organization and increased the number of Employee Relations professionals who assist agency leaders in investigating, assessing and addressing employee misconduct.; The Forest Service also contracted a third party to conduct an assessment of the work environment in the Pacific Southwest Region to address employee concerns about harassment and discrimination which resulted in a comprehensive action strategy. The agency also instituted civil rights, harassment and antidiscrimination training for</td>
<td></td>
</tr>
</tbody>
</table>
agency leaders, supervisors and employee relations professionals, and invested in a telephone hotline for employees to report allegations of harassment and discrimination. The Forest Service redesigned the Civil Rights Organization for more effective and consistent program delivery. In addition, the agency invested in new data systems to monitor and address workplace trends in the agency’s field units. In August 2016, The Forest Service finalized and began implementing a new Anti-harassment Policy, which raises the standard of conduct to zero tolerance for harassment, including bullying. The new Policy also imposes a standard for all employees to immediately report any form of harassment, and institutes protocols to protect victims and hold accountable those responsible for harassment. It is one of the strictest policies at USDA.

| Temporary Relief from Log Exports | The “Forest Resources Conservation and Shortage Relief Act of 1990, as amended”, (P.L. 101-382) prohibits the export of unprocessed timber from the contiguous states, outside of Alaska, west of the 100th meridian. It was enacted to protect the domestic timber market. The Secretary of Agriculture can make an exception for species that have been declared surplus to domestic needs after a public notice and review process. It can take up to 2 years to go through the process to declare a species surplus to domestic needs. Presently, only Port Orford Cedar and Alaskan Yellow Cedar are on this exception list. The combination of fire and insect killed timber in California has created more volume than the local mills can handle, thus slowing down the efforts to restore access, protect citizens, and move wood to market. There is interest from Senator Feinstein and other stakeholders to allow export of this dead timber in a timely fashion. It would require Congressional relief from the present processes in place to declare timber surplus to domestic needs. | January-June 2017 |

| Climate Hubs | The USDA Climate Change Hubs were established in summer 2013 to support farmers, ranchers, and land managers in adapting to and mitigating the impacts of climate change. FY 2016 advances included helping the Department implement the Building Blocks, adding three more agencies to the fund (FSA, RMA and APHIS), and coordinating USDA climate change activities across many more agencies. In FY 2016, Climate Hubs transitioned to a new structure that includes permanent staff, detailers, and | Fiscal Year 2017 |
Fellows. Significant programmatic accomplishments include:

- **Regional vulnerability assessments** are available for each region. This information is providing key information to land manager stakeholders and their advisors. These are available at the hubs website, which came online this year. These assessments have been useful in communicating climate risks, especially through social media. A cross-regional team continues to make improvements. The “Tool Shed” has come online. This is a one-stop-shop of tools to help farmers, ranchers and forest land managers make climate-informed management decisions. This effort is also being used to do a gap analysis to see where the Hubs need to invest in the development of new “tools,” or if they need to modify existing tools. The Hubs website’s “Tool Shed” is connected to the **White House’s Climate Resilient Toolkit**.

New tools, or modifications of existing tools, are being developed in many regions. The Northern Research Station’s adaptation toolkit is now being modified for the agriculture sector. We have also provided information synthesis, adaptation options, and updates through a series of databases and newsletters.

In 2017, the Hubs will continue to coordinate with the Cooperative Extension climate change efforts. Most 1862 Land Grant Universities are working closely with the Hubs, and they are continuing to reach out to the 1890 and 1994 Land Grant Universities.

In FY 2017, there is a need to transition the Hubs from Forest Service leadership to USDA’s Office of the Chief Economist’s Climate Change Program Office.

| Trail of Tears tribal consultations | In 2012, Secretary Vilsack released a report calling for USDA and the Forest Service to work more closely with tribal governments in the protection, respectful interpretation and appropriate access to Indian sacred sites. At the same time, a Sacred Sites Memorandum of Understanding was signed by DOD, USDA, DOI, DOE, and ACHP to improve the protection of and tribal access to Indian sacred sites | Fiscal Year 2017, ongoing |
on federally managed land. After erosion controlling features were mistakenly constructed in the Trail of Tears National Historic Trail in 2014, the Forest Service has been working to rebuild trust and strengthen our relationship with the Cherokee and Creek Tribes by consulting with and listening to their guidance as we restore this sacred place. The Trail of Tears and Unicoi Turnpike have been designated as sacred sites, and consultation is underway with the Tribes to determine and incorporate protection in land management plans. This consultation will be ongoing during FY 2017 and affects six National Forest units in the Southern Region and two in the Eastern Region. A letter of apology will be presented to tribes from the Forest Service at the annual “To Bridge a Gap” conference in Tulsa, OK in February 2017.

Major Upcoming Programmatic Decisions
(Listed in order of importance)

<table>
<thead>
<tr>
<th>Upcoming Decision</th>
<th>Brief Description</th>
<th>Timeline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Next Generation Airtanker</td>
<td>The 2015 Omnibus provided $65 million to acquire aircraft for the next-generation airtanker fleet to support the agency’s strategy to modernize and enhance firefighting mobility, effectiveness, efficiency and safety.</td>
<td>A contract award is anticipated by the summer of 2017.</td>
</tr>
<tr>
<td>Atlantic Coast Pipeline Permitting (Virginia and West Virginia)</td>
<td>The Atlantic Coast Project, a proposed 600 mile long interstate natural gas pipeline regulated by the Federal Energy Regulatory Commission (FERC), would cross about 19.7 miles of National Forest System (NFS) lands in West Virginia (5.4 miles on the Monongahela National Forest [MNF]) and Virginia (14.3 miles on the George Washington National Forest [GWNF]). The proponent is Atlantic Coast Pipeline, LLC (ACP), a joint venture of companies that includes Dominion Resources, Duke Energy, Piedmont Natural Gas, and AGL Resources. The proposed purpose of the pipeline is to provide a dependable supply of natural gas for electric utilities and households in east coast states. Through its special uses permit program, the Forest Service will make decisions on the use and occupancy of NFS lands for the proposed pipeline. The project scope and its potential resource impacts have generated a high level of public interest. On May 3, 2016, FERC published its Notice of Intent to prepare an environmental impact statement (EIS) to address</td>
<td>Fiscal Year 2017</td>
</tr>
<tr>
<td>Resolution Copper Minerals Development/Land Exchange (Arizona)</td>
<td>Within the Southeast Arizona Land Exchange and Conservation Act of 2013, there is a proposed copper mine. The National Forest and private lands identified for exchange will be appraised. After the lands are exchanged, 4,430 acres will still be NFS lands. Significant issues include a proposed bill for the designation of Oak Flat (on the National Forest land that is to exchanged) as a Traditional Cultural Property, and potential impacts to Native American Sacred Sites, Threatened and Endangered species, air quality, surface water quality, and groundwater. If requested by Resolution, special use permits for drilling and mine development will keep moving forward for issuance per the Act. Public scoping is in progress for the Resolution Mine Plan/Land Exchange EIS. In addition, a Final EA for baseline data collection for a tailings facility was released Jan. 15, 2016. The objection process was completed on May 16, 2016, and the forest is addressing the Southwest Regional Forester direction.</td>
<td>Fiscal Year 2017</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>Rosemont Copper Mine Permitting (Arizona)</td>
<td>Rosemont Copper Mine is a proposed open pit copper mine with mixed ownership, including 3,670 acres of NFS lands on the Coronado National Forest. The proposed mine is currently undergoing a permitting review process under the direction of the Forest Service and the US Army Corps of Engineers. T&amp;E species, air quality, surface water quality, and groundwater impacts are all issues. Supplemental Information Reports were completed in response to official objections. The Coronado National Forest reviewed the US Fish and Wildlife Service’s final Biological Opinion based on the Forest's submittal of a Supplemental Biological Assessment. The FS Record of Decision for the project is awaiting signature but is on hold until the Army Corps of Engineers signs the ROD for issuance of the 404 Clean Water Act permit. FS cannot authorize a locatable operation until it is compliant with Clean Water Act requirements. The FS ROD should be signed after compliance with CWA.</td>
<td>To Be Determined pending Corps of Engineers permit.</td>
</tr>
<tr>
<td>Mineral Withdrawals</td>
<td>The Forest Service continues to advance mineral withdrawal applications and processes in several locations throughout the National Forest System. A mineral withdrawal refers to prohibited actions for a specified parcel of land for a defined period of time, usually 3, 5, or 20 years. Withdrawal action prohibits all mining activities under the 1872 Law, except actions that have been authorized under an approved Plan of Operations on mining claims with prior valid existing rights. The Forest Service works in conjunction with the Department of the Interior and Bureau of Land Management to process withdrawals as the authority for mineral withdrawals rest with the Secretary of Interior. There have been several pieces of legislation in the 114th Congress relating to mineral withdrawal on National Forest System lands.</td>
<td>Ongoing</td>
</tr>
</tbody>
</table>

| Northwest Forest Plan Amendment | The Northwest Forest Plan (NWFP) was an amendment to multiple forest plans on Forest Service and BLM managed public lands in western Washington, Oregon and northern California. The NWFP is widely perceived to be a regional plan requiring change with a high level of consistency. These forest plans are over 20 years old, and per the National Forest Management Act, are in need of plan revision. The issue is how to revise individual National Forest plans in this broader landscape context, especially since the BLM is currently revising its plans for its O&C lands in the region. The NWFP has a substantial record of broad scale monitoring and science. The latest monitoring results (20 year NWFP monitoring report) have revealed issues related to managing wildfire, reduced populations of the endangered northern spotted owls, and timber harvest levels below projections of the NWFP. A science synthesis intended to provide a scientific framework for making changes to plans in the Northwest is in its final stages, and is expected to be released in November 2016. This work will be formally peer reviewed by the Ecological Society of America and is considered to be a highly influential science assessment by the White House Office of Management and Budget. There is active consideration to develop a bioregional assessment to determine what actions to take in the future. | 11/2016 – 3/2017 |
United States Department of Agriculture
2016 Presidential Transition
Forest Service (FS)

**Release of Land Management Plans for National Forests and Grasslands**

No Records of Decisions for forest plan revisions are expected during the January – June 2017 time period. The Francis Marion National Forest in South Carolina projects its Record Of Decision to be released in December 2016.

A revision process is already underway for the land management plan for the Nantahala and Pisgah National Forests in North Carolina. A robust public involvement and collaborative process is being used to develop a draft plan and draft environmental impact statement, scheduled for release to the public in the spring, 2017.

**Ongoing Regulatory Actions & Court Actions**

*(Listed in order of importance)*

<table>
<thead>
<tr>
<th>Regulatory Action</th>
<th>Brief Description</th>
<th>Timeline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Colorado Roadless Rule</td>
<td>The Forest Service and USDA are preparing a final rule to reinstate a narrow provision of the 2012 Colorado Roadless Rule (CRR)—the North Fork Coal Mining Exception. The Exception applies to 19,500 acres of the 4.2 million acres of Colorado Roadless Areas designated by the CRR. The exception allows temporary road construction for coal mining-related surface activities. This rulemaking effort responds to a Colorado District Court decision that vacated the Exception because of a failure to comply with the National Environmental Policy Act.</td>
<td>December 2016/January 2017</td>
</tr>
<tr>
<td>Mitigation Policy</td>
<td>The Presidential Memo entitled “Mitigating Impacts on Natural Resources from Development and Encouraging Related Private Investment” (Nov. 2015) requires agencies to establish policy for implementation. OMB found the agency’s proposed mitigation rule to be a significant regulatory action, which affected the approach and trajectory of the agency’s efforts to move forward on a national mitigation framework. A cost-benefit analysis and a small business impact analysis were completed, along with a reformulated timeline for the completion of internal and external outreach. The clearance process was initiated in August 2016. Tribal consultation was initiated with a draft of the proposed rule on June 1, 2016, and will run through the end of the public comment period following publication. Tribal, public, and staff webinars will be conducted.</td>
<td>Dec.16/Jan.17 (proposed rule in FR, draft technical guidance &amp; training modules) Fall 17 (draft directives &amp; information clearinghouse)</td>
</tr>
</tbody>
</table>
following initiation of the public comment period to clarify the content and objectives of the proposed rule. The Agency plans to begin development of detailed directives after the proposed rule is published, with publication of draft directives targeted for fall 2017. In order to meet the intent of the Presidential Memo and EO 13604, the Agency is working on a suite of mitigation tools, including technical and mitigation banking guidance, case studies, training modules, and an information clearinghouse. Draft training and guidance materials will be available for use in early 2017.

<table>
<thead>
<tr>
<th>Small Business Administration, SBA, Set Aside Policy</th>
<th>The Small Business Administration published a Proposed Rule – Small Business Timber Sale Program, in the Federal Register on September 27, 2016. The Federal Register notice provides for a 60-day public comment period. Subsequent steps would be for the SBA to respond to all comments received, and develop a final rule for Federal Register publication. The schedule is yet to be determined, but a summer 2017 publication date is anticipated, with implementation occurring 30-days after publication. After SBA’s rule has been implemented, the Forest Service would then develop a Proposed (Policy) Directive for public notice and comment. The agency anticipates this to occur late fall/winter 2017-18.</th>
<th>SBA’s Proposed Rule published 9/27/16. SBA’s final rule anticipated for publication summer 2017. Forest Service Proposed Policy Directive anticipated late fall/winter 2017-18.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Forest Service Land Management Planning Rule Amendment</td>
<td>The 2012 Planning Rule (36 CFR Part 219, Planning Subpart A—National Forest System Land Management Planning) does not clearly explain how to amend plans developed under the 1982 rule without revising the entire plan to meet 2012 Planning Rule resource requirements. The field and our public are confused by this lack of clarity. The Agency published a proposed amendment to the 2012 Planning Rule in October 2016 to clarify that plan amendments do not need to meet all of the substantive requirements for sustainability, plant and animal diversity, multiple uses, and timber requirements. OMB has designated this action as non-significant but does request review of comments following the 30-day comment period. Final Rule publishing is anticipated in January 2017.</td>
<td>12/16 – 01/17</td>
</tr>
</tbody>
</table>
### Farm Bill Revision

The 2014 Farm Bill significantly expanded the tools that support the agency’s ability to accomplish restoration work on the ground. Among the tools include permanent authorization for stewardship contracting and the Good Neighbor Authority. In addition, the 2014 Farm Bill provided the Forest Service with an increased ability to address insect and disease infestations.

The 2014 Farm Bill expires in September 2018, but Congress will hold hearings and begin the work of rewriting the next Farm Bill early in 2017. Significant attention will be paid to implementation of the 2014 Farm Bill authorities and whether to amend, expand existing, or create new authorities to assist the Forest Service in accomplishing its mission.

<table>
<thead>
<tr>
<th>Litigation</th>
<th>Brief Description</th>
<th>Timeline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sage Grouse Litigation</td>
<td>The Forest Service and Bureau of Land Management are named in eight lawsuits challenging the Government’s sage-grouse management decisions amending land use plans for federally-managed lands in six western states. Region 4 is responsible for completing the Forest Service Administrative Record (17,000 documents, 171,300 pages). These eight lawsuits are filed in six different federal courts. Although claims are similar, differences exist in key allegations. The case filed on September 25, 2015, in the Court for the District of Columbia by Governor Butch Otter and the Idaho State Legislature, along with the case filed in Nevada on September 23, 2015 by Western Exploration are fully briefed. Although the Government may succeed on defending the initial lawsuits, projects and plan amendments will likely be challenged in the foreseeable future.</td>
<td>10/20/2016 – Oral Arguments begin. Decision could occur any time after 11/01/2016</td>
</tr>
<tr>
<td>Salix Court Case</td>
<td>In Salix v. USFS (also known as Cottonwood Environmental Law Center v. USFS), plaintiffs claimed a failure to re-initiate consultation on lynx critical habitat under the Endangered Species Act. On May 16, 2013, the US District Court for the District of Montana found the Forest Service violated the Endangered Species Act. The Government subsequently appealed to the 9th Circuit which affirmed a Montana District Court’s ruling on June 17, 2015. The 9th Circuit decision is in conflict with a 10th Circuit decision. The Government filed a Petition for Certiorari to Supreme Court on May 16.</td>
<td>October 2016</td>
</tr>
</tbody>
</table>
2016. The Supreme Court is expected to rule on the case by October 3, 2016.

**Idaho Elk Collaring**

On January 6, 2016, the Forest Supervisor on the Salmon-Challis National Forest signed a Decision and issued a Special Use Permit to the Idaho Department of Fish & Game authorizing helicopter landings within the Frank Church – River of No Return Wilderness Area to collar elk. On January 7, 2016, plaintiffs filed suit in the Court for the District of (Idaho Wilderness Watch v. Vilsack). Plaintiffs claim violations of the Wilderness Act (actions not necessary to meet minimum requirements) and NEPA (not doing an EIS; too narrow “purpose and need”; failure to take a “hard look” at the impacts). Oral argument occurred on August 23, 2016. We expect a court ruling shortly.

WHAT WE DO: OUR MISSION

NRCS is the nation’s premier private lands conservation agency. For more than 80 years, NRCS’ voluntary, incentive-based approach to conservation has helped farmers, ranchers, and private forest managers make conservation investments that support their communities, protect natural resources, and sustain thriving agricultural operations. With technical and financial assistance based on sound science and innovation, we help those who grow our food and fiber improve water quality, promote wildlife habitat, increase resilience to climate change and drought, build healthy soil, and feed the world.

WHO WE ARE: OUR WORKFORCE

More than 10,000 NRCS employees are in every state and the Caribbean and Pacific Island Areas, with 85 percent of our staff in the field. Staff are in 2,476 locations, often collocated with partners in service centers across the country.

WHO WE SERVE: OUR CONSTITUENTS

We work with farmers, ranchers, and private forest land owners to plan and implement voluntary conservation on private agricultural lands. We also engage a wide array of partners to leverage expertise and investment to deliver innovation and landscape-level conservation.

KEY UPCOMING DECISIONS

Conservation Stewardship Program: In late 2016, NRCS will implement significant revisions to CSP. Decisions on impacts and modifications will be needed in mid-2017 to position the next sign-up.

Conservation Compliance: Following audit reports, additional policy direction and guidance will be needed, with potential for legislative language decisions.

Regional Conservation Partnership Program: Early 2017 decisions on program focus for the fourth funding round for this partner-driven stewardship program, which will invest over $200 million in 2018.

BUDGET HIGHLIGHTS FY 2016

NRCS 2016 budget authority was nearly $4.5 billion, of which roughly 77 percent was mandatory and 23 percent discretionary. NRCS has seen relative consistency in budget authority over the past several years. The two largest conservation programs, the Environmental Quality Incentives Program and the Conservation Stewardship Program, constitute roughly 62 percent of the budget.

FY 2016 Budget Authority

- Conservation Operations: 34.3%
- Emergency Watershed Protection Program: 19.1%
- Environmental Quality Incentives Program: 27.5%
- Conservation Stewardship Program: 9.4%
- Agricultural Conservation Easement Program: 2.1%
- Regional Conservation Partnership Program: 4.1%
- Other Programs: 3.5%
I. Organizational Overview

Agency’s Mission/Strategic Plan

NRCS Mission Statement - “Helping People Help the Land”
NRCS improves the health of our Nation’s natural resources while sustaining and enhancing the productivity of American agriculture. We achieve this through strong partnerships with private landowners, managers, and communities to conserve, restore, and enhance the lands and water upon which people and environment depend.

- **Strategic Goal 1** – Deliver High-Quality Science and Technology for Voluntary Private Lands Conservation
  - Objective 1.1 – Enhance conservation planning with science based tools and information
- **Strategic Goal 2** - Promote Productive Working Lands and Healthy Waters
  - Objective 2.1- Improve soil health, productivity, diversity, and resilience
  - Objective 2.2- Enhance and improve water quality and water quantity
  - Objective 2.3- Provide habitat for diverse and important fish and wildlife species
  - Objective 2.4- Improve local air quality and increase carbon sequestration
- **Strategic Goal 3**- Protect and Enhance Productive Agricultural Landscapes
  - Objective 3.1- Keep productive agricultural lands in farming, ranching, and forest landscapes
  - Objective 3.2 - Protect and manage wetland resources to create landscape scale benefits
- **Strategic Goal 4**- Support Healthy Watersheds and Diverse Land Use and Communities
  - Objective 4.1- Protect communities and people through rehabilitated watershed structures
  - Objective 4.2 - Manage landscape-scale natural resource concerns to create enduring solutions
- **Management Initiative 1**- Increase Organizational Effectiveness and Efficiency
  - Objective 1.1- Strengthen and modernize the delivery of products and services
  - Objective 1.2 – Advance financial management capabilities
- **Management Initiative 2**- Create a Climate of Inclusion and Foster Diversity
  - Objective 2.1- Expand opportunities to deliver conservation products and services to new and underserved customers
  - Objective 2.2- Employ, develop, and retain a highly skilled and diverse workforce

Organization’s History

The mission of the Natural Resources Conservation Service is “Helping People Help the Land.” The agency accomplishes its mission by providing products and services that enable people to be good stewards of the Nation’s soil, water, and related natural resources on non-Federal lands. The formation of the Soil Conservation Service (SCS) marked the beginning of the Federal government’s enduring commitment to conserving natural resources on private lands. Originally established by Congress in 1935, the agency was later renamed NRCS pursuant to Public Law 103-354, the Department of Agriculture Reorganization Act of 1994 (7 U.S.C. 6962). From the beginning, the agency brought a national focus to the emerging resource issues of the Dust Bowl era: prevention of wind and water erosion. Desperate to retain its productive Midwest soils, the Nation turned to SCS for technical guidance and advice on minimizing the impacts of erosion. Although the Dust Bowl has passed, the relationship between landowners and the agency remains.

Over the last 80 years, the agency expanded its services to become a conservation leader for all natural resources: soil, water, air, plants, and animals. Now, as NRCS, its primary focus is to ensure that private lands are conserved, restored, and made more resilient to environmental challenges, like climate change. NRCS is a primary contributor to achieving the USDA Strategic Goal that ensures our national forests and private working lands are conserved, restored, and made more resilient to climate change, while enhancing water resources. This is accomplished through a variety of programs aimed at preserving and restoring our private lands, mitigating the effects of climate change, and making the landscape more resilient. NRCS partners with private landowners to provide technical and financial assistance to help protect farm and ranch lands and private forestland.

Seventy percent of the land in the United States is privately owned, making stewardship by private landowners and land managers absolutely critical to the health of our Nation’s environment. These are the people who make day-to-day decisions about natural resource use and management on non-Federal lands, and NRCS offers them the technology, technical and financial assistance needed to benefit the resources, sustain productive lands, and maintain healthy ecosystems.

Science and technology are the critical foundation to effective conservation. NRCS experts from many disciplines come together to help landowners conserve natural resources in efficient, smart, and sustainable ways. Whether developed in a laboratory or on the land, NRCS science and technology helps landowners make the right decisions for every natural resource concern.

NRCS’s Conservation Delivery System provides services directly to the landowner or land manager in cooperation with conservation districts. Conservation districts are units of local government created by State law and exist in every county and territory of the United States. Conservation districts are responsible for providing guidance to the agency on local resource concerns and serving as the voice of the local community on resource issues.
NRCS also works in partnership with State and local agencies, locally elected or appointed farmer committees, Federal agencies, tribal governments, and private sector organizations to encourage cooperation and facilitate leveraging of the financial and technical resources these groups can offer. By bringing together groups that have a common and vested interest in the local landscape, community, or watershed, NRCS facilitates collaboration among groups that collectively support sustainable agriculture and maintain natural resource quality.

Under this umbrella of agency mission and local cooperation, NRCS employees help landowners and land managers understand the natural processes that shape their environment, how conservation measures can improve the quality of that environment, and what conservation measures will work best on their land. NRCS employees provide these services directly to the customer. Field offices at USDA Service Centers are in nearly every county and territory of the United States. NRCS employees’ technical expertise and understanding of local resource concerns and challenges result in conservation solutions that last. In the words of the first NRCS Chief, Hugh Hammond Bennett – “If we take care of the land, it will take care of us.”

Natural Resources Conservation Service (NRCS)

Organizational Chart
Biographies of career staff in key leadership positions

Leonard Jordan
Associate Chief, Conservation
202-720-4531, Leonard.Jordan@wdc.usda.gov

Leonard Jordan has served as the Associate Chief of Conservation since 2012. In this role, Leonard leads the agency’s conservation mission area, including all of NRCS’ conservation programs, science and technology, resource assessment, and activities related to strategic natural resource planning.

From January 2009 to 2012, Leonard served as the Regional Conservationist for the East and Southeast. Before assuming this role, he served in a variety of positions across the agency’s disciplines, including Deputy Chief for Strategic Planning and Accountability, Division Director of Conservation Planning and Technical Assistance, Director of the Conservation Easement Programs Division, State Conservationist for both Georgia and Washington and worked in five states as Assistant State Conservationist, Area Conservationist, Area Resource Conservationist, Area Agronomist, District Conservationist, Soil Conservationist, and Conservation Technician. Leonard is a native of Tennessee and graduated from Tennessee State University with a degree in agronomy.

Tom Christensen
Associate Chief, Operations
202-720-5811, Thomas.Christensen@wdc.usda.gov

Tom Christensen has served as the Associate Chief for Operations since 2014. In this role, Tom is the Chief Operating Officer for NRCS and leads the agency’s business operations, including budget and financial management, human resources management, information technology, procurement and property, strategic planning and accountability, enterprise business initiatives, and continuity of operations and emergency preparedness.

From 2009 to 2014, Tom served as the Regional Conservationist for NRCS’s Central Region. Before assuming this role, he served in a variety of positions across the agency’s disciplines, including Deputy Chief for Programs, Director of Financial Assistance Programs, Director of Conservation Operations, Director of Animal Husbandry and Clean Water Programs, Agency Chief Information Officer, State Conservationist in Illinois, Assistant State Conservationist in Idaho, Area and District Conservationist in New York and Soil Conservationist in multiple North Carolina locations.

Tom graduated from Rutgers University with a Bachelor of Science degree in Forest Management. He received a Master of Science degree in Renewable Natural Resources Conservation from the University of Connecticut.
Kevin Wickey  
Regional Conservationist, Central  
202-720-2193, Kevin.Wickey@wdc.usda.gov

Kevin Wickey has served as the Regional Conservationist for the Central Region since 2015. In this role, Kevin oversees the conservation programs and activities of the 12 Central states (Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, Oklahoma, South Dakota, Texas, and Wisconsin).

From 2007 to 2015, Kevin served as the State Conservationist for West Virginia. Before assuming this role, he served in a variety of positions across the agency’s disciplines, including Soil and District Conservationist, GIS and State Resource Inventory Specialist, IT Project Manager, and Assistant State Conservationist—Technology, and Student Trainee Soil Conservationist.

Kevin is a native of southern Michigan, and he earned a Bachelor of Science degree in Forestry at Michigan Technological University in 1985.

Gayle Barry  
Regional Conservationist, Northeast  
202-720-2197, gayle.barry@wdc.usda.gov

Gayle Barry has served as the Regional Conservationist for the Northeast Region since 2016. In this role, Gayle oversees the conservation programs and activities of the 14 Northeast states (Connecticut, Delaware, Maine, Massachusetts, Maryland, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont, and West Virginia).

Prior to this position, Gayle served as the Deputy Chief for Management. Before assuming this role, she served in a variety of positions across the agency’s disciplines, including Deputy State Conservationist, Director of Public Affairs, and Branch Chief for Legislative Affairs.

Her career with the agency began in 1986 as a Student Intern in Montana, where her experiences on her family’s 2000 acre cattle, alfalfa and wheat operation began her passion for conservation. Her family was named the Conservation Farmers of the Year by the Gallatin Soil and Water Conservation District.
James Tillman  
**Regional Conservationist, South**  
202-720-2197, James.Tillman@wdc.usda.gov

James E. Tillman Sr. serves as the Regional Conservationist for the Southeast. In this role he oversees NRCS conservation programs and activities for the 11 Southeast states (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia) and the Caribbean Area.

James served as State Conservationist in Georgia for nine years. Prior to that, he was the Deputy State Conservationist in California and served as Assistant State Conservationist for Programs and Acting State Administrative Officer in Texas. In Illinois, James served as the Assistant State Conservationist for Resource Assessment and Technology.

In his 32-year career with NRCS, James has also held positions as Soil Conservationist, District Conservationist, Resource Conservationist, and USDA/1890 Liaison Officer. He has worked in seven states (Kansas, Missouri, Oklahoma, Illinois, Texas, California and Georgia) and Washington, DC.

James obtained a Bachelor of Science degree in Agricultural Economics from the University of Arkansas at Pine Bluff.

Astor Boozer  
**Regional Conservationist, West**  
202-690-2194, Astor.Boozer@wdc.usda.gov

Astor Boozer has served as the Regional Conservationist for the West since 2012. In this role, Astor oversees the conservation programs and activities of the 13 West region states (Alaska, Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Pacific Islands Area, Utah, Washington, and Wyoming).

From 2009 to 2012, Astor served as the State Conservationist of New York. Before assuming this role, he served in a variety of positions in 8 states and across the agency’s disciplines, including Technician, Soil Conservationist, District Conservationist, Area Conservationist, Water Quality Specialist, and National Program Manager for Conservation Reserve and Healthy Forest Reserve Programs, and many others.

A native Texan, the West is close to his roots, he grew up on a farm and ranch cow calf operation where he learned about crop and beef production, conservation, wildlife habitat and caring for the land.

Astor has a Bachelor of Science degree in Agriculture from Prairie View A&M University.
Biographies of political staff in key leadership positions

**Jason Weller**
Chief
202-720-7246, Jason.Weller@wdc.usda.gov

Jason Weller has served as Chief of NRCS since July 2013. As Chief, he oversees programs that help protect the environment, preserve our natural resources and improve agricultural sustainability through voluntary, private-lands conservation. He leads a staff of more than 10,000 employees across the country and manages a budget of about $4 billion.

From December 2012 to July 2013, Jason served as Acting Chief of NRCS. Before assuming this role, he served as Acting Associate Chief for Conservation and as Chief of Staff where he worked alongside Chief Dave White and the agency’s national and state leaders to plan and implement strategic conservation initiatives and conduct the annual business operations of the agency.

Prior to joining NRCS, Jason served as a staff member for the U.S. House Appropriations Subcommittee on Agriculture where he provided oversight and crafted bills to fund USDA programs and activities. He also served on the U.S. House Budget Committee where he helped construct the annual congressional budget for agriculture, environment and energy programs. Before that, Jason worked with the White House Office of Management and Budget where he assisted with the development and implementation of the budget for USDA conservation programs.

Before coming to Washington, DC, Jason worked for several years with the California State Legislature where he provided fiscal and policy recommendations on a variety of natural resource conservation and environmental protection issues. Jason is a native of northern California. He earned his undergraduate degree from Carleton College in Northfield, Minnesota, and a graduate degree in public policy from the University of Michigan.

Jason and his wife have two young daughters and live in Maryland.

**Kirk Hanlin**
Assistant Chief
202-720-7246, Kirk.Hanlin@wdc.usda.gov

USDA Secretary Tom Vilsack appointed Kirk Hanlin as Assistant Chief of NRCS in July 2013. As Assistant Chief, he is central to the agency’s leadership team, providing oversight and guidance for implementation of NRCS programs which help protect the environment, preserve the nation’s natural resources and improve agricultural sustainability through voluntary conservation on private lands.

Before joining NRCS, Kirk served in the Clinton White House for eight years and was appointed...
by President Bill Clinton in 1997 as Special Assistant to the President. In this role he worked directly with the President and was responsible for briefing him daily on issues related to events both domestically and internationally. Kirk was also responsible for coordination and ongoing communication with all levels of individuals and groups related to the President’s daily activities.

He also has extensive experience in the private sector, including serving as Vice President and adviser to the CEO of UAI, Inc. and Executive Vice President and Senior Adviser to the CEO of EnerGenetics Energy LLC. Kirk has more than 30 years of executive level experience in the government and private sector.

Kirk is a native of Hancock County, Illinois growing up on the banks of the Mississippi River in a family with generations of both farmers and towboat captains. His roots have given him a deep appreciation for protecting the land and rivers for future generations.

Kirk earned an associate degree from Southeastern Iowa Community College and a bachelor’s degree in political science from Western Illinois University. Kirk maintains two homes – one in Arlington, Virginia and one overlooking the Mississippi River in Nauvoo, Illinois.

United States Department of Agriculture  
2016 Presidential Transition  
Natural Resources Conservation Service (NRCS)

Budget Authority FYs 2009-2016

Discretionary

All amounts represent the budget authority (BA) available after sequestration. The Conservation Operations appropriation includes the Conservation Technical Assistance (CTA), Soil Survey, Plant Materials Centers (PMC), and the Snow Survey and Water Supply Forecasting (SSWSF) Programs. Grazing Lands was previously separated in the budget, but in 2012 was shifted back into CTA. Watershed Projects and Watershed Protection are no-year appropriations within the Conservation Operations appropriation. Watershed Operations (P.L. 78-534) and Small Watersheds (P.L. 83-566) were appropriated as the Watershed and Flood Prevention Operations, and had $20M of unobligated balances rescinded in FY 2015. The Emergency Watershed Protection Program (EWPP) received emergency supplemental appropriations in FY 2012 and FY 2013, and regular appropriations in FY 2015 and FY 2016. The Water Bank Program received no funding in FY 2013. Resource Conservation and Development received funding in FY 2011 to finalize the program.

The CTA Program provides agricultural producers and others with the knowledge and conservation tools they need to conserve, maintain, and improve the natural resources on the lands they manage. The CTA Program is the backbone of the agency’s conservation delivery system. Many customers begin their relationship with NRCS through requests for assistance that later evolve into a conservation plan that may include cost-share assistance through Farm Bill programs.

Soil survey is an essential tool for regional and local conservation planning that allows people to manage natural resources. Scientists and policy makers use soil survey information in studying climate change and evaluating the sustainability and environmental impacts of land use and management practices. Soil surveys are used by planners, engineers, farmers, ranchers, developers, and home owners to evaluate soil suitability and make management decisions for farms, home sites, subdivisions, commercial and industrial sites, and wildlife and recreational areas.

The SSWSF Program collects high elevation snow data in the Western United States and provides managers and users with snowpack information, other climatic data, and water supply forecasts. The water supply forecasts are used by individual farmers and ranchers; water resource managers; Federal, State, and local government agencies; municipal and industrial water providers; hydroelectric power generation utilities; irrigation districts; fish and wildlife management agencies; reservoir project managers; recreationists; Tribal Nations; and the countries of Canada and Mexico.
NRCS’s PMC develop vegetative solutions to “core” natural resource concerns such as soil stabilization, soil health and productivity, and water quality. PMCs also focus on emerging national priorities such as enhancement of pollinator habitat to support agricultural production, habitat for at-risk species such as sage grouse, and development of information and alternate procedures to assist organic producers.

The Water Bank program focuses technical and financial assistance on flooded cropland, flooded hay and pasture land, and flooded forestland. The purposes of the Water Bank Program include: 1) preserving and improving major wetlands as habitat for migratory waterfowl and other wildlife; 2) conserving surface waters; 3) reducing soil and wind erosion; 4) contributing to flood control; 5) improving water quality; 6) improving subsurface moisture; and 7) enhancing the natural beauty of the landscape. The intent of the program is to keep water for the benefit of migratory wildlife.

Through the Watershed and Flood Prevention Operations program, NRCS cooperates with State and local agencies, tribal governments, and other Federal agencies to prevent damage caused by erosion, floodwater, and sediment, to further the conservation, development, utilization, and disposal of water, and advance the conservation and utilization of the land.

The Emergency Watershed Protection Program reduces hazards to life and property in watersheds damaged by severe natural events. An emergency exists when a watershed is suddenly impaired by flood, fire, drought, wind, or other natural causes that result in threats to life and property. The emergency area need not be declared a national disaster area to be eligible for assistance; however, a Presidential disaster declaration is one method for establishing eligibility.

The Watershed Rehabilitation program provides dam rehabilitation financial and technical assistance to communities for addressing public health, safety concerns, and environmental impacts of aging dams.

**Mandatory**

All amounts represent the budget authority (BA) available after applicable sequestration, changes in mandatory programs (CHIMPs), re-appropriations and rescissions are applied. The Agricultural Act of 2014 repealed three easement programs – the Wetlands Reserve, Grassland Reserve, and Farm and Ranch Lands Protection Programs; three financial assistance programs – the Agricultural Water Enhancement, Wildlife Habitat Incentive, and Chesapeake Bay Watershed Programs; and the Cooperative Conservation Partnership Initiative, which continue to be serviced through unobligated balances from BA available or recovered from prior year authorization. These repealed programs’ purposes are now included in the Agricultural Conservation Easement Program (ACEP), the Environmental Quality Incentives Program (EQIP),
and the Regional Conservation Partnership Program (RCPP) through new authorizations. The RCPP receives direct funding, but also has authority to use up to seven percent of ACEP, EQIP, and HFRP budget authority, and up to seven percent of the new authorized acres of the Conservation Stewardship Program (CSP), to complete RCPP projects. The Voluntary Public Access and Habitat Incentives Program and Wetlands Mitigation Banking Program received one-time funding in FY 2014. The Small Watershed Rehabilitation Program received one-time funding in FY 2014, but has re-appropriated funding from prior CHIMPs that was restricted to $73M in new obligations in FY 2015 and $0 in FY 2016.

Workforce by Program Area

- Conservation Planning: 37%
- Financial Assistance Programs: 49%
- Easement Programs: 7%
- Science and Technology: 6%
- Watershed Rehabilitation: 1%
This provides the historical trend of the organization’s total workforce for the period FY 2009 through FY 2016. The historical trend uses Staff Years and is broken down by Headquarters and Field.

The following are important statistics of the current workforce, which represent a snapshot as of August 6, 2016:

- NRCS currently employs a workforce of 10,485 permanent employees:
  - Full-time: 10,391 employees
  - Part-time: 94 employees
- NRCS employs additional intermittent or seasonal employees to provide support during busier months. Currently, NRCS employs 109 employees in this category.
- Of our total workforce, 18 percent are eligible to retire within the next year and about 32 percent in five years.
- Our headquarters is officially located in the Washington, DC National Capital Region. The total headquarters staff represents 15 percent of the workforce. The Washington DC National Capital Region houses 24 percent of the total headquarters staff with the balance distributed across the country. The agency headquarters is comprised of staff located at the National Employee Development Center in Fort Worth, Texas, the National Information Technology Center in Fort Collins, Colorado, East National Technology Support Center (NTSC) in Greensboro, North Carolina, Central NTSC in Fort Worth, Texas, West NTSC in Portland, Oregon, National Design, Construction, and Soil Mechanics Center in Fort Worth, Texas and Lincoln, Nebraska, National Water Management Center in Little Rock, Arkansas, National Water and Climate Center in Portland, Oregon, National Soil Survey Center in Lincoln, Nebraska, National Geospatial Center of Excellence in Fort Worth, Texas, and staff assigned to headquarters organizational units located in Washington, D.C. National Capital Region as well as staff assigned to those organizational units who are located throughout the country.
- NRCS has presence in every state, the District of Columbia, and the Caribbean and Pacific Islands Areas, with staff distributed in 2,476 locations to work directly with our constituents.
- NRCS defined 19 Mission Critical Occupations (MCO), which include about 80 percent of the current workforce (8,357 employees). The agency is in the process of reviewing the current MCO list. Among the top number of key occupations, NRCS has:
  - 4,120 Soil Conservationists, representing 39 percent of the workforce;
  - 1,143 Soil Conservation Technicians, representing 11 percent of the workforce;
  - 591 Soil Scientists, representing 6 percent of the workforce;
  - 534 Biologists, representing 5 percent of the workforce;
  - 447 Civil Engineers, representing 4 percent of the workforce, and
  - 389 Agricultural Engineers, representing 4 percent of the workforce.
- NRCS has a highly educated workforce. 6,968 employees have a bachelor’s, equivalent or higher education, representing 66 percent of the workforce;
- A total of 276 employees are in bargaining units, representing almost 3 percent of the workforce.
II. Policies and Regulations

Statutory Authorities

Agricultural Conservation Easement Program (ACEP)

**Authority:** Section 2301 of the Agricultural Act of 2014, Pub. L. 113-79 added Subtitle H to Title XII of the Food Security Act of 1985.

**Summary:** The Agricultural Conservation Easement Program (ACEP) has two enrollment components. Under the first component, the Agricultural Land Easement component, NRCS helps Indian tribes, state and local governments or non-governmental organizations protect working agricultural lands by providing financial assistance toward the purchase of conservation easements. The purpose of the Agricultural Land Easement component is to limit non-agricultural uses of the protected land. Under ACEP’s second component, the Wetland Reserve Easement component, NRCS provides financial and technical assistance directly to private landowners to restore, protect, and enhance wetlands through the purchase of Wetland Reserve Easements. The Agricultural Act of 2014 authorized funding for ACEP through FY 2018.

**Regulations:** 7 CFR part 1468 – Interim final rule to implement changes mandated by Agricultural Act of 2014 published February 2015 – The final rule was published on October 18, 2016.

**Delegations of Authority:** 7 CFR 2.20 (as amended by Final Rule published on July 30, 2014), Under Secretary for Natural Resources and Environment, and 2.61 (as amended), Chief of the Natural Resources Conservation Service.

Agricultural Management Assistance Program (AMA)

**Authority:** 7 U.S.C. 1524(b) (section 524(b) of Federal Crop Insurance Act, as added by section 133(b) of the Agriculture Risk Protection Act of 2000, Pub. L. 106-224, 114 Stat. 387 and amended by section 2501 of the Farm Security and Rural Investment Act of 2002, Pub. L. 107-171 and by section 2801 of the Food, Conservation, and Energy Act of 2008, Pub. L. 110-246). The Agricultural Act of FY 2014 did not make any changes to the Agricultural Management Assistance Program and the funding for the program is $10 million each fiscal year, of which NRCS receives 50 percent. This program has permanent funding authority, and is currently funded.

**Summary:** Technical and financial assistance to producers in certain designated states (where participation in federal crop insurance has been low) to construct or improve watershed management structures or irrigation structures; plant trees for windbreaks or for water quality improvement; or to mitigate financial risk through production diversification or resource conservation, including soil erosion control, integrated pest management, or transition to organic certification.

**Regulations:** 7 CFR Part 1465.
United States Department of Agriculture
2016 Presidential Transition
Natural Resources Conservation Service (NRCS)

Policy Manual: 440 CPM Part 521; 440 CPM Part 512 Conservation Program Contracting
Delegations of Authority: 7 CFR 2.20(a)(3)(xviii), Under Secretary for Natural Resources and
Environment, and 2.61(a)(18), Chief of the Natural Resources Conservation Service.

Agricultural Water Enhancement Program (AWEP) (Consolidated into RCPP)
Authority: Repealed by Section 2706 of the Agricultural Act of 2014, Pub.L. 113-79, AWEP’s functions were consolidated into the Regional Conservation Partnership Program (RCPP), authorized by Section 2401 of the Agricultural Act of 2014. Section 2706 provides for the continued validity of agreements and contracts entered into under AWEP prior to February 7, 2014, the date of enactment of the Agricultural Act of 2014. Once prior year AWEP funds are exhausted, Section 2706 authorizes the use of RCPP funds to continue to carry out AWEP agreements and contracts entered into prior to February 7, 2014. AWEP was originally authorized by section 2510 of the Food, Conservation, and Energy Act of 2008, Pub. L. 110-246 and AWEP was a component of the Environmental Quality Incentives Program under Chapter 4 of Subtitle D of Title XII of the Food Security Act of 1985.

Summary: AWEP provides technical and financial assistance to EQIP-eligible producers who implement water enhancement activities on their farm or ranch. AWEP was a component of EQIP, but since it had funding authority, it is separately identified.

Regulations: N/A
Delegation of Authority: See EQIP.

Chesapeake Bay Watershed Initiative (CBWI) (Consolidated into RCPP)
Authority: Repealed by Section 2709 of the Agricultural Act of 2014, Pub. L. 113-79 CBWI’s functions were consolidated into the Regional Conservation Partnership Program (RCPP), authorized by Section 2401 of the Agricultural Act of 2014. Section 2709 provides for the continued validity of agreements, contracts, and easements entered into under CBWI prior to February 7, 2014, the date of enactment of the Agricultural Act of 2014. Once prior year CBWI funds are exhausted, Section 2709 authorizes the use of RCPP funds to continue to carry out CBWI agreements, contracts, and easements entered into prior to February 7, 2014. CBWI was originally authorized by Section 2605 of the Food, Conservation, and Energy Act of 2008, Pub. L. 110-246. CBWI operated through applicable Subtitle D programs, though it had separate mandatory funding, authorized at $50 million for FY 2013.

Summary: CBWI provides assistance to producers in the Chesapeake Bay Watershed to implement practices to improve water quality and water quantity in the Chesapeake Bay. Though CBWI is implemented through other programs, it also had funding authority, and is therefore included here for completeness.

Regulations: Funds are implemented through applicable Subtitle D programs.
Delegations of Authority: Delegations are through applicable Subtitle D programs.
Colorado River Basin Salinity Control Program (Consolidated into EQIP)

**Summary:** Technical and financial assistance to private landowners for on-farm measures to control agriculture-related salinity loading of Colorado River. NRCS funds these activities through the Environmental Quality Incentives Program (EQIP).

**Regulations:** N/A. See EQIP.

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xii), Under Secretary for Natural Resources and Environment, and 2.61(a)(12), Chief of the Natural Resources Conservation Service.

Conservation Innovation Grants (CIG)

**Authority:** Section 1240H of chapter 4, subtitle D, Title XII of the Food Security Act of 1985, 16 U.S.C. 3839aa-8. CIG is authorized as a part of EQIP.

**Summary:** Grants to governmental and nongovernmental organizations and persons for projects that involve producers who are eligible for EQIP and stimulate innovative approaches for environmental enhancement in conjunction with agricultural production, such as credit/market systems for pollution reduction and carbon sequestration practices, and that leverage EQIP funds with funds from State and local government and private organizations. The Agricultural Act of 2014 authorized funding for CIG through FY 2018.

**Regulations:** 7 CFR §1466.27

**Delegations of Authority:** See EQIP.

Conservation of Private Grazing Land Program (CPGL)

**Summary:** Provides voluntary technical assistance to owners of grazing lands for resource planning, and the evaluation and application of conservation practices.

**Regulations:** 7 CFR Part 610, subpart D, sections 610.31- 610.32

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(l), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(xii), Chief of the Natural Resources Conservation Service.

Conservation Security Program (Security)

authority for NRCS to continue to make payments on existing Security contracts entered into prior to FY 2009, and NRCS receives an apportionment each year to make payments on these prior contracts.

**Summary:** Provides technical and financial assistance to producers who advance the conservation of soil, water, air, energy, water, plant and animal life, and other conservation purposes on tribal and private agricultural lands.

**Regulations:** 7 CFR Part 1469.

**Policy Manual:** 440 CPM Part 518; 440 CPM Part 512 Conservation Program Contracting.

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(D), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(iv), Chief of the Natural Resources Conservation Service.

**Conservation Stewardship Program (CSP, Stewardship)**

**Authority:** Title XII, subtitle D, chapter 2, subchapter B of the Food Security Act of 1985, 16 USC 3838d-3838g, as added by Section 2301 of the Food, Conservation, and Energy Act of 2008, Pub. L. 110-246. Section 2101 of the Agricultural Act of 2014, Pub. L. 113-79 re-authorized the Stewardship Program and made minor adjustments to its administration.

**Summary:** Provides financial and technical assistance to participants for the conservation, protection, and improvement of soil, water, and other related natural resources, and for any similar conservation purposes. The Agricultural Act of 2014 authorized funding for CSP contracts enrolled through FY 2018.

**Policy Manual:** 440 CPM Parts 507 and 508 (Conservation Stewardship Program; 440 CPM Part 512 Conservation Program Contracting

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(D), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(iv), Chief of the Natural Resources Conservation Service.

**Conservation Technical Assistance (CTA) Program**

**Authority:** Pub.L. 74-46, 49 Stat. 163, 16 U.S.C. 590a-590f, 590q

**Summary:** Technical assistance for protection of public and private land resources against soil erosion and related resource damage. The CTA Program is funded under annual appropriations.

**Regulations:** 7 CFR Part 610.

**Policy Handbook:** National Planning Procedures Handbook (NPPH) Title 180 Part 600

**Delegations of Authority:** 7 CFR 2.20(a)(3)(iii), Under Secretary for Natural Resources and Environment, and 2.61(a)(3), Chief of the Natural Resources Conservation Service.

**Emergency Watershed Protection Program (EWPP)**

**Authority:** Section 216 of Pub.L. 81-516, 33 U.S.C. 701b 1; and section 403.of the Agricultural Credit Act of 1978, Pub.L. 95-334, 16 U.S.C. 2203, as amended by section 382 of

Summary: Technical and financial assistance, including purchase of floodplain easements, for emergency flood control measures to protect watersheds affected by natural disasters;

Delegations of Authority: 7 CFR 2.20(a)(3)(iv)(B) and (G), Under Secretary for Natural Resources and Environment, and 2.61(a)(4)(ii) and (vii), Chief of the Natural Resources Conservation Service

Environmental Quality Incentives Program (EQIP)

Summary: Technical and financial assistance to farmers/ranchers to protect/improve soil, water, and related natural resources, including grazing lands, wetlands, and wildlife habitat; replaced the Agricultural Conservation Program, Colorado River Basin Salinity Control Program, Great Plains Conservation Program, and the Water Quality Incentives Program. The Agricultural Act of 2014 authorized funding for EQIP through FY 2018.

Policy Manual: 440 CPM Part 515; 440 CPM Part 512 Conservation Program Contracting

Delegations of Authority: 7 CFR 2.20(a)(3)(xiii)(H), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(viii), Chief of the Natural Resources Conservation Service.

Farm and Ranch Land Protection Program (FRPP) (Consolidated into ACEP)

Authority: Repealed by Section 2704 of the Agricultural Act of 2014, Pub. L. 113-79. FRPP functions were consolidated into the Agricultural Conservation Easement Program (ACEP), authorized by Section 2301 of the Agricultural Act of 2014, Pub. L. 113-79. Section 2704 of the Agricultural Act of 2014 provides for the continued validity of agreements and easements entered into under FRPP prior to February 7, 2014, the date of enactment of the Agricultural Act of 2014. Once prior year FRPP
funds are exhausted, Section 2704 authorizes the use of ACEP funds to continue to carry out FRPP agreements and easements entered into prior to February 7, 2014. FRPP was originally authorized by section 2503 of the Food Security and Rural Investment Act of 2002, Pub.L. 107-171, and was reauthorized by section 2401 of the Food, Conservation, and Energy Act of 2008, Pub. L. 110-246, 16 U.S.C. 3838h-3838i. (A predecessor program was authorized by section 388 of the Federal Agriculture Improvement and Reform Act of 1996, Pub.L. 104 127, 110 Stat. 888, 1020-21.)

**Summary:** Provides matching funds to help purchase development rights to keep productive farm and ranchland in agricultural uses. Working through existing programs, USDA partners with State, tribal, or local governments and non-governmental organizations to acquire conservation easements or other interests in land from landowners. USDA provides up to 50 percent of the fair market easement value of the conservation easement.

**Regulations:** 7 CFR Part 1491.

**Policy Manual:** 440 CPM Part 519; Common Easement Provisions 440 CPM Part 527

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(E), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(v), Chief of the Natural Resources Conservation Service.

---

**Farmland Protection Policy Act**

**Authority:** 7 U.S.C. 4201 et seq.

**Summary:** Provide policy and criteria for the conservation of farmland. Activities are funded through Conservation Operations appropriations.

**Regulations:** 7 CFR Part 658.

**Delegations of Authority:** 7 CFR 2.20(a)(3)(ii), Under Secretary for Natural Resources and Environment, and 2.61(a)(2), Chief of the Natural Resources Conservation Service

---

**Grassland Reserve Program (GRP) (Consolidated into ACEP)**

**Authority:** Repealed by Section 2705 of the Agricultural Act of 2014, Pub. L. 113-79. GRP easement functions were consolidated into the Agricultural Conservation Easement Program (ACEP) and GRP rental contract functions were consolidated into the Conservation Reserve Program. Section 2705 of the Agricultural Act of 2014 provides for the continued validity of agreements, contracts, and easements entered into under GRP prior to February 7, 2014, the date of enactment of the Agricultural Act of 2014, and the continued use of funds made available during FY 2009-2013 for such agreements, contracts, and easements. Section 2705 also authorizes the use of ACEP funds to continue to carry out GRP agreements, contracts, and easements entered into prior to February 7, 2014. GRP was originally authorized by section 2401 of the Food Security and Rural Investment Act of 2002, Pub.L. 107-171, 16 U.S.C. 3838n-3838q.

**Summary:** Provides technical assistance and funding to states administering rental or conservation easement programs to private landowners.

**Regulations:** 7 CFR Part 1415.

**Policy Manual:** DM-9500-012; Common Easement Provisions 440 CPM Part 527
Delegations of Authority: 7 CFR 2.20(a)(3)(xiii)(Q), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(xvii), Chief of the Natural Resources Conservation Service (shared delegation with the Farm Service Agency).

Healthy Forest Reserve Program (HFRP)
Summary: Enrollment of private lands through use of easements (30 year or not more than 99 years) or 10 year cost-share agreements to promote recovery of threatened or endangered species, improve biodiversity, and enhance carbon sequestration. If conservation activities on enrolled land result in net benefit for listed, candidate, or other species, the Secretary shall make available to the landowner safe harbor or similar assurances under sections 7(b)(4) or 10(a)(l) of the ESA. Funding has not been triggered in recent years, though HFRP easements have been funded through the Regional Conservation Partnership Program.
Delegations of Authority: 7 CFR 2.20(a)(3)(xx), Under Secretary for Natural Resources and Environment, and 2.61(a)(19), Chief of the Natural Resources Conservation Service

Highly Erodible Land and Wetland Conservation
Summary: Highly erodible land and wetland conservation requirements as conditions of eligibility for USDA program benefits. Activities are funded through Conservation Operations annual appropriations.
Regulations: 7 CFR Part 12
Delegations of Authority: 7 CFR 2.20(a)(3)(xiii)(A), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(i), Chief of the Natural Resources Conservation Service

Land Inventory and Monitoring Program
Authority: 7 U.S.C. 1010a
Summary: Conduct inventory of soil, water, and related resource conditions. Activities are funded through Conservation Operations annual appropriations.
Regulations: N/A.
Delegations of Authority: 7 CFR 2.20(a)(3)(iii)(E), Under Secretary for Natural Resources and Environment, and 2.61(a)(3)(v), Chief of the Natural Resources Conservation Service
Plant Materials Center (PMC) Program
Authority: 16 U.S.C. 590a-590f, 590q
Summary: Evaluation of plant materials and plant materials technology for solving natural resource problems and improving the utilization of natural resources. PMC activities are funded through Conservation Operations annual appropriations.
Regulations: 7 CFR Part 613
Delegations of Authority: 7 CFR 2.20(a)(3)(iii)(D), Under Secretary for Natural Resources and Environment, and 2.61(a)(3)(iv), Chief of the Natural Resources Conservation Service

Regional Conservation Partnership Program (RCPP)
Summary: The Regional Conservation Partnership Program (RCPP) consolidates the purposes and functions of four former programs: AWEP, CBWI, CCPI, and Great Lakes Basin. RCPP promotes the implementation of conservation activities through agreements with eligible partners, through conservation program contracts with producers, and easements with private landowners. RCPP helps implements conservation projects that may focus on water quality and quantity, soil erosion, wildlife habitat, drought mitigation and flood control or other regional priorities. RCPP is implemented through four covered programs: ACEP, CSP, EQIP, and HFRP. The Agricultural Act of 2014 authorized funding for RCPP through FY 2018. Funding consists of 7% of each covered program’s annual allocations and an additional $100 million per fiscal year.
Regulations: RCPP is incorporated into covered Program regulations (ACEP, CSP, EQIP, and HFRP).

Resource Conservation and Development (RC&D) Program
Summary: Technical and financial assistance to local governments and organizations for conservation and development of land and related natural resources of rural areas.
Funding has not been triggered in recent years.
Delegations of Authority: 7 CFR 2.20(a)(3)(vi), Under Secretary for Natural Resources and Environment, and 2.61(a)(6), Chief of the Natural Resources Conservation Service
United States Department of Agriculture
2016 Presidential Transition
Natural Resources Conservation Service (NRCS)

**Rural Abandoned Mine Program (RAMP)**

*Authority:* Section 406 of the Surface Mining Control and Reclamation Act of 1977, Pub.L. 95-87, 30 U.S.C. 1236

*Summary:* Technical and financial assistance under contracts with landowners to reclaim abandoned surface coal mine sites in rural areas. Funding has not been triggered in recent years.

*Regulations:* 7 CFR Part 632

*Delegations of Authority:* 7 CPR 2.20(a)(6), Under Secretary for Natural Resources and Environment, and 2.61(a)(22), Chief of the Natural Resources Conservation Service

**Rural Clean Water Program**

*Summary:* Technical and financial assistance to rural landowners to implement Best Management Practices to reduce agriculture-related nonpoint source water pollution.

Funding has not been triggered in recent years.

*Regulations:* 7 CFR Part 634

*Delegations of Authority:* 7 CFR 2.20(a)(ix), Under Secretary for Natural Resources and Environment, and 2.61(a)(9), Chief of the Natural Resources Conservation Service

**Search and Rescue**

*Authority:* 7 U.S.C. 2273.

*Summary:* NRCS personnel, vehicles, communication equipment, and other equipment or materials may be used in local search and rescue operations when requested by responsible local public authorities in response to emergencies caused by tornadoes, fires, floods, snowstorms, earthquakes, and similar disasters. Funded with emergency supplemental funding.

*Regulations:* N/A.

*Delegations of Authority:* 7 CFR 2.20(a)(xi), Under Secretary for Natural Resources and Environment, and 2.61(a)(11), Chief of the Natural Resources Conservation Service

**Snow Survey Program**

*Summary:* Conduct snow surveys and make water supply forecasts. Activities are funded through Conservation Operations annual appropriations.

*Regulations:* 7 CFR Part 612.

*Delegations of Authority:* 7 CFR 2.20(a)(iii)(C), Under Secretary for Natural Resources and Environment, and 2.61(a)(3)(iii), Chief of the Natural Resources Conservation Service

**Soil and Water Resources Conservation Assistance**

United States Department of Agriculture
2016 Presidential Transition
Natural Resources Conservation Service (NRCS)

**Summary:** Provide financial (cost share and incentives) and technical assistance to farmers and ranchers to implement natural resource conservation practices in areas that are not designated as priority areas under section 1230(c) of the Food Security Act of 1985 (16 U.S.C. 3830(c)). Funding has not been triggered in recent years.

**Regulations:** N/A.

**Delegations of Authority:** N/A.

**Soil and Water Resources Conservation Act (RCA)**

**Summary:** Conduct national appraisal of soil, water, and related resources and other measures to promote conservation. This authority sunsets in 2018. Appraisal and report to be prepared on 5-year intervals. Activities are funded through Conservation Operations annual appropriations.

**Regulations:** N/A.

**Delegations of Authority:** 7 CFR 2.20(a)(iii)(C), Under Secretary for Natural Resources and Environment, and 2.61(a)(8), Chief of the Natural Resources Conservation Service.

**EXPIRES:** December 31, 2018.

**Soil Survey Program**

**Authority:** 16 U.S.C. 590a-f, and q; 42 U.S.C. 3271-3274.

**Summary:** Preparation and distribution of soil surveys. Activities are funded through Conservation Operations annual appropriations.

**Regulations:** 7 CFR Part 611

**Delegations of Authority:** 7 CFR 2.20(a)(iii)(B), Under Secretary for Natural Resources and Environment, and 2.61(a)(3)(ii), Chief of the Natural Resources Conservation Service

**Voluntary Public Access and Habitat Incentives Program (VPA-HIP)**

**Summary:** The Voluntary Public Access and Habitat Incentive Program (VPA-HIP) is a competitive grants program that provides public access for wildlife-dependent recreation, including hunting or fishing, under programs implemented by State or Indian tribes. The Agricultural Act of 2014 authorized funding for this program through FY 2018.

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(U), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(xxi), Chief of the Natural Resources Conservation Service as amended by Final Rule published on July 30, 2014 (79 Fed. Reg. 44101).
Watershed Protection and Flood Prevention Operations (WFPO)

**Summary:** Planning and installation of structural/nonstructural measures to prevent or mitigate flooding in rural areas, improve water quality, and provide for recreation and water supply facilities; river basin surveys and planning. Section 13 of the Flood Control Act of 1944 authorized 11 specific flood control projects. Funding has not been triggered in recent years. However, the Regional Conservation Partnership Program can provide funding for projects using Watershed Operations authorities, other than Watershed Rehabilitation Program, for projects in Critical Conservation Areas.

**Delegations of Authority:** 7 CFR 2.20(a)(iv), Under Secretary for Natural Resources and Environment, and 2.61(a)(4), Chief of the Natural Resources Conservation Service

Watershed Rehabilitation Program (Rehab)

**Authority:** Watershed Protection and Flood Prevention Act, Public Law 83-566, 16 U.S.C. Section 1012.

**Summary:** Rehabilitation of structural measures near, at, or past their evaluated life expectancy to extend their service life and meet applicable safety and performance standards including decommissioning of the structure. Funding is generally through annual appropriations, while the Agricultural Act of 2014 made $250 million, to remain available until expended, for the Watershed Rehabilitation Program.

**Regulations:** 7 CFR Part 621 (river basin planning), Part 622 (watershed/flood control projects).

**Policy Manual:** M_180_NOM; H_210_NEH

**Delegations of Authority:** 7 CFR 2.20(a)(iv), Under Secretary for Natural Resources and Environment, and 2.61(a)(4), Chief of the Natural Resources Conservation Service

Wetlands Reserve Program (WRP) (Consolidated into ACEP)

**Authority:** Repealed by Section 2703 of the Agricultural Act of 2014, Pub. L. 113-79. WRP easement functions consolidated into the Agricultural Conservation Easement Program (ACEP). Section 2703 provides for the continued validity of agreements, contracts, and easements entered into under WRP prior to February 7, 2014, the date of enactment of the Agricultural Act of 2014, and the continued use of funds made available during FY 2009-2013 for such agreements, contracts, and easements. Section 2703 also authorizes the use of ACEP funds to continue to carry out WRP agreements, contracts, and easements entered into

**Summary:** Technical and financial assistance to landowners to develop and implement wetland restoration plans and to protect the restored wetlands through long term contracts or easements.

**Regulations:** 7 CFR Part 1467.

**Policy Manual:** 440 CPM Part 514; Common Easement Provisions 440 CPM Part 527

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(C), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(iii), Chief of the Natural Resources Conservation Service.

### Wildlife Habitat Incentive Program (WHIP) (Consolidated into EQIP)

**Authority:** Repealed by Section 2707 of the Agricultural Act of 2014, Pub. L. 113-79. WHIP functions were consolidated into the Environmental Quality Incentives Program (EQIP). Section 2707 provides for the continued validity of agreements and contracts entered into under WHIP prior to February 7, 2014, the date of enactment of the Agricultural Act of 2014. Once prior year WHIP funds are exhausted, Section 2707 authorizes the use of EQIP funds to continue to carry out WHIP agreements and contracts entered into prior to February 7, 2014. WHIP was originally authorized by Title XII, subtitle D, chapter 5, section 1240N of the Food Security Act of 1985, 16 U.S.C. 3839bb l. (Its predecessor program was authorized by section 387 of the Federal Agriculture Improvement and Reform Act of 1996, Pub.L. 104-127, 110 Stat. 888, 1020).

**Summary:** Technical and financial assistance to landowners to develop wildlife habitat.

**Regulations:** 7 CFR Part 636.

**Policy Manual:** 440 CPM Part 517; 440 CPM Part 512 Conservation Program Contracting.

**Delegations of Authority:** 7 CFR 2.20(a)(3)(xiii)(J), Under Secretary for Natural Resources and Environment, and 2.61(a)(13)(i), Chief of the Natural Resources Conservation Service.

### Important Policies and Regulations

NRCS finalized three significant program regulations and associated policies within the last year, including the Agricultural Conservation Easement Program (ACEP) final rule (published October 18, 2016, 81 Fed. Reg. 71818), the Conservation Stewardship Program (CSP) final rule (published March 10, 2016, 81 Fed. Reg. 12573), and the Environmental Quality Incentives Program (EQIP) final rule (published May 12, 2016, 81 Fed. Reg. 29471). A description of the three program rulemaking efforts is described below.
Agricultural Conservation Easement Program (ACEP) Final Rule

ACEP provides financial and technical assistance to help conserve agricultural lands and wetlands and their related benefits. Under the Agricultural Land Easements component, NRCS helps Indian tribes, state and local governments and non-governmental organizations protect working agricultural lands and limit non-agricultural uses of the land. Under the Wetlands Reserve Easements component, NRCS helps to restore, protect and enhance enrolled wetlands.

On February 27, 2015, NRCS published an interim final rule with request for comments in the Federal Register (80 Fed. Reg. 11032) that promulgated the Agricultural Conservation Easement Program (ACEP) regulations at 7 CFR part 1468 in order to implement the new consolidated easement program authorized by the Agricultural Act of 2014 (the 2014 Act). In particular, the 2014 Act consolidated the Wetlands Reserve Program (WRP), the Farm and Ranch Lands Protection Program (FRPP), and the Grassland Reserve Program (GRP) into a single program, ACEP. The Agricultural Land Easement component is patterned after the former FRPP with the land eligibility aspects of the former GRP included. The Wetland Reserve Easement component is patterned after WRP. Land previously enrolled in the three contributing programs is considered enrolled in the new ACEP.

NRCS originally solicited comments on the interim final rule for 60 days ending April 28, 2015. NRCS extended the comment period an additional 30 days to May 28, 2015, to provide interested parties additional time to review the new regulatory provisions and associated policy (80 Fed. Reg. 24191).

NRCS received 102 timely submitted responses to the rule, constituting 1069 discrete comments. The comments were generally supportive with recommendations for improvement. Most comments related to the ALE component of the program. In particular, most recommendations pertained to program eligibility, minimum easement deed terms and requirements, the criteria for the agricultural land easement plan, and ranking.

The ACEP final rule, published October 18, 2016 (81 Fed. Reg.71818), responds to public input and makes changes warranted based on such comment. These changes include:

- Incorporating more fully that ACEP purposes include protecting grazing uses and related conservation values by restoring and conserving eligible land. Changes have been made where program purposes and ranking criteria are identified.
- Clarifying the requirements for program participation as it relates to certified and not-certified eligible entities.
- Making minor editorial changes to fix incorrect references and typographical errors.
Conservation Stewardship Program (CSP) Final Rule
CSP helps agricultural producers maintain and improve their existing conservation systems and adopt additional conservation activities to address priority resources concerns. Participants earn CSP payments for conservation performance—the higher the performance, the higher the payment.

The Agricultural Act of 2014 (the 2014 Act) made mandatory changes to CSP which NRCS incorporated in an interim rule published on November 5, 2014 (79 Fed. Reg. 65835), with request for public comment. Additionally, NRCS made some minor changes to make the regulation easier to read, and more importantly, the easier to understand.

NRCS extended the CSP interim rule’s comment period through January 20, 2015 (79 Fed. Reg. 76867), and NRCS received 227 timely submitted responses to the rule, constituting 483 comments. Overall, the commenters supported the changes made by the interim rule and the CSP final rule, published March 10, 2016 (81 Fed. Reg. 12573), confirmed those changes, responded to the comments received by the public comment, and made a few minor changes that NRCS determined were warranted based upon such comment, including:

- Replacing the requirements that at least one additional conservation activity must be scheduled, installed, and adopted in the first fiscal year of the contract to requiring the additional conservation activity within twelve months of entering into a CSP contract. NRCS also provides flexibility with respect to the timing associated with completion of enhancements and adoption of resource conserving cropland rotations where such flexibility is needed to meet greater stewardship levels.
- Removing the specific dollar amount ($1000) associated with a minimum contract payment and replacing it with language to indicate that the minimum contract payment would depend on a rate determined equitable by the Chief based upon the effort required by a participant to comply with the terms of the contract. NRCS is also extending its availability to all participants.
- Clarifying the difference between a transfer of land and a resulting transfer of contract rights, the requirement of a participant to notify NRCS about any loss of control of land under contract, when a new producer becomes eligible for payment, and the circumstances when partial or full termination of the contract may be appropriate.

Environmental Quality Incentives Program (EQIP) Final Rule
EQIP provides financial and technical assistance to agricultural producers in order to address natural resource concerns and deliver environmental benefits such as improved water and air quality, conserved ground and surface water, reduced soil erosion and sedimentation or improved or created wildlife habitat.
The Agricultural Act of 2014 (the 2014 Act) made mandatory changes to EQIP which NRCS incorporated in an interim rule published on December 12, 2014 (79 Fed. Reg. 73953), with a 60-day public comment period.

The EQIP interim rule’s comment period closed February 10, 2015. NRCS received 331 comments from 65 respondents to the interim rule, and the topics that generated the greatest response include the irrigation history requirement waiver, wildlife funding, and funding for animal feeding operations.

Overall, the commenters supported the changes made by the interim rule and the EQIP final rule, published May 12, 2016 (81 Fed. Reg. 29471), confirmed those changes, responded to the comments received by the public comment, and made a few minor changes that NRCS determined were warranted based upon such comment. These changes clarify that:

- EQIP is a covered program under RCPP,
- A participant is responsible for implementing practices consistent with a forest management plan on land addressing forest resource concerns, but complete implementation is not required given the long time-frames identified within such plans; and
- The process governing transfer of EQIP contract rights, including the difference between a transfer of land and a resulting transfer of contract rights, the requirement of a participant to notify NRCS about any loss of control of land under contract, when a new producer becomes eligible for payment, and the circumstances when partial or full termination of the contract may be appropriate.

Additionally, NRCS plans to launch a significant policy revision for CSP (“CSP Reinvention) for FY 2017. NRCS Reinvention will be implemented through a change to the CSP policy manual. Policy manuals provide guidance to NRCS employees about how to administer NRCS conservation programs within the structure of NRCS program regulations as described more fully above. CSP Reinvention improves program transparency, simplifies program procedures for customers and NRCS staff alike, explores new technology transfer which will be offered through the program, strengthens cooperation with other agencies and partners to implement robust outreach activities, and incorporates changes to address emerging priorities such as soil health, other agency initiatives, and local sensitive areas issues.

Overview of the policy/regulation review process

**Regulatory Development:** NRCS promulgates regulations to provide the participation framework necessary to implement the voluntary conservation programs authorized by statute. The Farm Bill is the primary source of NRCS program authority, though conservation programs are authorized by a range of statutory authorities as identified above. Upon receipt of the Secretary’s delegation of authority, NRCS develops regulatory work plans for each program or statutory provision that the Agency identifies as requiring additional clarification through
rulemaking. The regulatory work plans provide a summary of the mandatory changes made by the statute as well as the discretionary policy areas that will be addressed in the rule. NRCS sends the regulatory work plans, through USDA, to the Office of Management and Budget (OMB) for approval. OMB designates a rule as “significant” or “not significant.” There is a formal and systematic clearance process for the draft rules both within NRCS and USDA. Within NRCS, the clearance process depends upon the subject matter of the rule. Before sending NRCS rules and their associated impact analyses to OMB, several Departmental clearances are required including: the Under Secretary for Natural Resources and Environment, Office of General Counsel, Office of the Chief Economist, and the Office of Budget and Program Analysis. The Office of the Secretary makes the final decision whether to send a rule to OMB.

**Policy Development:** To ensure consistent administration of conservation programs, NRCS develops internal policy guidance for its programs and activities. The Division Director within the Programs Deputy Area works with the Team Leaders and Specialists to identify when policy is needed to convey guidance to States or within National Headquarters about program implementation. The Team Leader assigns the appropriate Specialist as the Author to begin drafting the national policy. Once the Author has developed a draft, the Subject matter experts (SME) review and provide edits. The Author will incorporate all edits as appropriate. A clean (edited) policy document, along with the routing names on the NRCS-ADS-017 signed by the Editor, are sent into Agency clearance. All program policies require the signatures of the appropriate Team Leader, Division Director, Policy Specialist, and the Deputy Chief for Programs. The Deputy Chief for Programs is the final clearance approval for program policy documents prior to submittal to NRCS e-Directives for posting. Program leads hold net training sessions with applicable State staff about new policy developments and associated performance expectations. Program sign-up is continuous with regular cut-off periods, with the exceptions of CIG and RCPP which are implemented through Notices of Funding Availability or Requests for Applications.

**GAO and OIG Audits**

**Lists of significant reports from 2013 - 2016**

**2013** – OIG has broadened Challenge 6 to incorporate not only the Forest Service’s role in improving the stewardship of natural resources, but the Natural Resources Conservation Service’s efforts as well.  

**2014** - OIG amended challenges to include several additional issues. Last year’s emerging issue regarding the Risk Management Agency’s crop insurance program has been incorporated into Challenge 6, which addresses USDA’s stewardship of natural resources, and Challenge 8, which
addresses improper payments. A new challenge has been added (Challenge 11) for USDA concerning performance measures.

2015 - OIG has undertaken a significant revision of how the management challenges are presented. The intent is to provide the Secretary and other policymakers with a document that responds more fully to their needs and explains more clearly how challenges are identified, addressed, and resolved.

Most notably, OIG has consolidated the 11 challenges from our 2014 management challenges into 7 challenges. While the issues USDA faces are much the same in 2015 as in 2014, instead of discussing those challenges as affecting individual agencies, OIG has expressed them in terms of issues that cut across the entire Department. Thus, while the Natural Resources Conservation Service (NRCS) continues its work to improve natural resources stewardship (last year’s Challenge 6), we discuss this issue as part of this year’s Challenge 3, USDA Needs to Strengthen Program Performance and Performance Measures. (See Appendix B for a description of how 2014’s challenges have been consolidated into 2015’s challenges.

2016 –Annually, OIG assesses the previous year’s challenges to determine if those are still critical challenges. OIG examines recently issued audit reports to identify critical issues that remain topical and where corrective action has not been satisfactorily implemented; identifies repeated inquiries or hotline trends in risk areas; assesses ongoing audit and investigative work to identify new issues; and analyzes new programs and activities that pose significant challenges due to size and complexity. OIG may remove a challenge if USDA has fully implemented our recommendations or if agencies have shown significant improvement. FY 2016 Management Challenges_082616.pdf

Note: Bracketed Month and year is audit initiation timeframe. Example: (November, 2012)

Link to all the above OIG Audit Reports are located at: 
https://www.usda.gov/oig/rptsauditsnrcls.htm

Government Accounting Office (GAO)

Office of Inspector General (OIG)

This audit will be mentioned in the Semi-Annual Report to Congress due to the Agency is still working on reaching a management decision on Recommendation 6 by September 30, 2016.

III. Congressional Relations and Issues

NRCS Legislative Affairs Overview and Responsibilities:

The NRCS Legislative Affairs Division works closely with the Department’s Office of Congressional Relations to coordinate all congressional interactions for the Agency. Primary responsibilities include preparing testimony, materials, and Agency witnesses for hearings and briefings, responding to congressional inquiries, providing congressional notifications, tracking legislation, and providing technical assistance on legislative language. The following provides a brief summary of current key topics or issues for which there is particular interest on the part of Congress:

FARM BILL REAUTHORIZATION
The current Farm Bill is authorized through 2018 and discussions are starting on the key issues to be considered in the reauthorization process. Typically, and at the request of Authorizers, NRCS provides program data and participates in information exchanges while the new bill is being crafted. The agency also responds to requests to review proposed legislation to analyze the impacts it could have on agency operations and customers.

Anticipated topics of interest in the new Farm Bill may include but are not limited to the Regional Conservation Partnership Program (RCPP), Conservation Stewardship Program (CSP) reinvention, Chesapeake Bay restoration efforts, and conservation compliance activities. This is likely to be a difficult reauthorization process, with tight funding levels and multiple priorities across the various Farm Bill titles. In the reauthorization of the farm bill in 2014, the committees were challenged to reduce overall spending by $23 billion while making responsible farm bill investments. The conservation title alone was reduced by $6 billion, resulting in funding cuts for every program.

CHESAPEAKE BAY
In the past several months the role of voluntary conservation programs in helping to restore the health of the Chesapeake Bay has become of significant interest. The Chesapeake Bay Program office along with other interest groups have charged that progress toward the 2017 targets set out in the Total Maximum Daily Load (TMDL) is lagging, which in turn has increased scrutiny on the total investment in the watershed. This is exacerbated by elimination of the Chesapeake Bay Watershed Program (CBWP), which was consolidated into the new Regional Conservation Partnership Program (R CPP) in the 2014 Farm Bill and effectively eliminated an average of about $50 million in annual earmarked funding for the Bay states. Starting in the summer, there have been increasing calls for USDA and NRCS to increase funding for conservation in the watershed.
In September 2016, USDA hosted an event to highlight the positive signs in the Chesapeake Bay, which is in its best health in the past few decades. Many of these positive signs are a result of conservation efforts. For example, the agriculture sector provided over 50 percent of the phosphorus and 75 percent of the sediment runoff reductions from 2009 - 2015. The House Subcommittee on Conservation and Forestry held a hearing on September 22, 2016 to highlight the positive impact of conservation programs. Nevertheless, other congressional offices have pressed the Administration to come up with additional resources despite overall conservation program cuts that affect producers nationwide. Since early summer, NRCS has worked with EPA and Pennsylvania State to target additional funds to accelerate conservation efforts. Collectively, over $28 million was directed to a 3-pronged strategy (build technical resources, fund additional conservation, and target outreach), which was announced at the October 4, 2016 Chesapeake Bay Commission Executive Council meeting. Responses were generally positive, but did not diminish the continued call for additional federal investment. Given the significant congressional interest in this issue, it is likely that increased resources to support Chesapeake Bay conservation will remain a priority issue.

**DUNS/SAM NUMBERS AND CONSERVATION PROGRAMS**

The Federal Funding Accountability and Transparency Act of 2006 (FFATA) and pursuant regulations published by OMB require entities to have an active System for Award Management (SAM) registration and a Dun and Bradstreet Universal Numbering System (DUNS) number in order to do business with the Federal government. NRCS programs are affected because they constitute an award of Federal financial assistance and most farmers or ranchers are organized as business entities so they do not benefit from the individual exemption, despite the modesty of agricultural operations compared with other entities such as large military contractors, which receive government contracts or financial assistance awards.

Lack of awareness of the regulation and annual requirement created a significant payment issue for nearly 15,000 program participants in FY 2015. NRCS quickly implemented a streamlined process to resolve the issue, however, as an annual requirement, it may trigger a problem for program participants in the coming year. As a result of this issue and related annual registration burden for relatively modest conservation program assistance, legislation was introduced in the House and Senate that would eliminate this requirement for agriculture. The bills are expected to move forward in the next congressional session.

**EMERGENCY WATERSHED PROTECTION PROGRAM (EWPP)**

The Emergency Watershed Protection Program (EWPP) helps local communities relieve imminent hazards to life and property caused by floods, fires, windstorms, and other natural occurrences that cause watershed impairments. The EWPP has two distinct options for assisting landowners in affected areas: EWP-Recovery and EWP-Floodplain Easements.
EWPP funding typically comes from emergency supplemental appropriations following disasters, such as the $180 million appropriated in response to Hurricane Sandy. In the past two fiscal years, Congress has appropriated over $235 million for EWPP. These additional appropriations not only flag the growing awareness of the need to support local sponsors in disaster response, but has also allowed NRCS to fund all local projects on the EWPP waitlist. With increasing variability and intensity of weather events, EWPP is likely to receive more attention in Congress as a vehicle to assist communities in disaster recovery.

HIGHLY ERODIBLE LAND AND WETLAND CONSERVATION COMPLIANCE
Eligibility for most USDA financial assistance programs is contingent on a program participant’s compliance with the highly erodible land (HELC) and wetland (WC) conservation compliance provisions, as required under the Food Security Act of 1985. In the 2014 Farm Act, Congress re-linked crop insurance subsidies to conservation compliance, which triggered these requirements for an additional segment of agriculture. The new requirements were implemented smoothly, without much push back. However, some conservation groups are positioning to re-start the discussion for further strengthening compliance requirements. Farm groups already have voiced concerns, which could tee this up for the Farm Bill reauthorization in 2017.

A recent audit report from USDA’s Office of Inspector General (Audit Report 50601-0005-31) has also raised congressional interest in compliance implementation. The report looked at various aspects of compliance implementation including the dataset used to select tracts for review and the guidance for the field activities associated with conducting compliance status reviews. NRCS will have implemented all recommendations by December 31, 2016 and has briefed the House and Senate Agriculture Committees on progress.

Relevant Congressional Committees
NRCS programs and activities are primarily within the jurisdiction of the House and Senate Committees overseeing agricultural issues and agricultural appropriations. Annually, following the release of the President’s budget, NRCS testifies before the House Committee on Appropriations, Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies to highlight key elements and initiatives. The Agency also is routinely called to testify in oversight hearings before House and Senate Agriculture Committees. Agency watershed programs are of interest to the respective House and Senate Committees with water resource responsibilities and Agency representatives meet annually with staff to discuss funding and activities.

The following lists the key Committees and respective Subcommittees with which the agency routinely interacts:

- House Committee on Agriculture
  - Subcommittee on Conservation and Forestry
- House Committee on Appropriations
Recent Hearings:
On September 22, 2016, Chief Weller testified before the House Committee on Agriculture, Subcommittee on Conservation and Forestry to discuss agriculture, conservation, and the shared effort to restore the health of the Chesapeake Bay.

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

NRCS works closely with a wide number of USDA agencies and other Federal departments where we have shared interests and mission objectives. Through these partnerships, we are able to leverage resources to address targeted priorities.

The following summarizes key federal partnerships and provides examples of shared activities:

**USDA Agencies**

**Farm Service Agency (FSA)**

- Participates on the State Technical Committee, which provides advice to the State Conservationist.
- Participate in the appeals process for NRCS decisions under Title XII of the Food Security Act of 1985
- Establishes farm records for NRCS program applicants
- Completes producer eligibility determinations and certifications for Conservation Compliance and Adjusted Gross Income limitation purposes

**Forest Service (FS)**

- Provides technical input with respect to NRCS conservation practices for private forest lands
- Coordinates with NRCS and program participants who have leases of public land as
part of their agricultural operation to ensure mutual resource concerns are met

- Shares administrative responsibilities for the Emergency Watershed Protection Program for emergencies on Forest system lands
- Participates on the State Technical Committee

**Risk Management Agency (RMA)**

- Shares administrative responsibilities under Conservation Compliance provisions (7 CFR part 12)
- Shares program administration responsibilities for the Agricultural Management Assistance Program

**Agricultural Marketing Service (AMS)**

- Provides technical input related to organic provisions under NRCS conservation programs
- Coordinates technical input related to interface between producer best practices and NRCS conservation practice technical specifications and standards

**Other Federal Agencies**

**Department of the Interior**

- **Fish and Wildlife Service (USFWS)** participates on the State Technical Committee, provides project specific technical input related to wetland and wildlife issues, and assists NRCS in meeting its consultation responsibilities under the Fish and Wildlife Coordination Act and the Endangered Species Act; for example the interagency partnership supporting Working Lands for Wildlife discussed in Section VI (a)
- **Bureau of Indian Affairs (BIA)** must ensure that no Tribal member exceeds payment limitations under applicable NRCS programs. BIA also confirms that the participant has adequate control of land and approves forest management plans on lands administered by the BIA
- **Bureau of Land Management (BLM)** coordinates with NRCS and program participants who have leases of public land as part of their agricultural operation to ensure mutual resource concerns are met
- **Bureau of Reclamation (BuRec)** coordinates with NRCS on certain agricultural conservation related water issues in the western states. For example, NRCS is partnering with the Bureau to leverage Water Smart and Environmental Quality Incentives Program funding to increase water conservation in targeted western areas.
- **United States Geological Service (USGS)** assists with evaluating the effectiveness of NRCS conservation practices in addressing water quality and related concerns
Department of Commerce

- National Oceanic and Atmospheric Administration (NOAA) coordinates with respect to weather and climate issues
- National Marine Fisheries Service (NMFS) coordinates with respect to NRCS and program participant compliance with the Endangered Species Act

U.S. Environmental Protection Agency (EPA) coordinates with respect to environmental compliance responsibilities of NRCS program participants, including wetland technical information, water quality issues, and air quality issues

Department of Defense (DOD) coordinates the Sentinel Landscapes partnership that strengthens the economies of farms, ranches, and forests; conserves habitat and natural resources; and protects vital test and training missions conducted on military installations that anchor the landscapes.

- Army Corps of Engineers (COE) coordinates with respect to emergency responses under Stafford Act, provides input with respect to NRCS and program participant responsibilities under the Clean Water Act, and coordinates with respect to watershed projects.

Other Stakeholders:

In addition to other federal and private stakeholders, the U.S. Department of Agriculture (USDA), Natural Resources Conservation Service (NRCS), established the Labor-Management Forums following Executive Order 13522. NRCS has bi-monthly meetings on various topics concerning maintaining and enhancing the working relationships within the Agency. We have three local unions located in Illinois; Fort Worth, Texas; and San Juan, Puerto Rico. Provided below are the details for each union:

Local #3356-American Federation of Government Employee (AFGE), covering the state of Illinois. All professional and nonprofessional employees, including WAE career, and career-conditional employees of USDA-NRCS are covered under this Collective Bargaining Agreement (CBA). Illinois has approximately 206 bargaining unit employees. Local 3356 President is, Stephanie Bradley, Soil Conservation Technician.

Local #3839-American Federation of Government Employee (AFGE), covering Fort Worth, Texas. All nonprofessional employees employed by USDA-NRCS are included in this CBA. Fort Worth, Texas has approximately 62 bargaining unit employees. Local 3839 President is, Rhonda New, Data Collector.

Local #0055-American Federation of Government Employee (AFGE), covering San Juan, Puerto Rico. All professional and nonprofessional employees are considered a part of this
bargaining unit at USDA-NRCS. San Juan, Puerto Rico has approximately 36 bargaining unit employees. Local 0055 President is, Lydia Bravo, retired USDA-NRCS bargaining unit employee.

Federal Advisory Committees
The Chief of the Natural Resources Conservation Service (NRCS) chairs the Agricultural Air Quality Task Force (AAQTF) established to address agricultural air quality issues. AAQTF promotes USDA research efforts and identifies cost-effective ways the agriculture industry can improve air quality. It also helps better coordinate activities and resources among USDA agencies and other federal partners such as the Environmental Protection Agency. The Task Force is charged with:

- Advising the Secretary of Agriculture on air quality and its relationship to agriculture based on sound scientific findings;
- Reviewing research on agricultural air quality supported by federal agencies;
- Promoting intergovernmental (federal, state, local and tribal) coordination in establishing agricultural air quality policy to avoid duplication of efforts; and
- Ensuring that air quality conservation practices supported by USDA are based on peer reviewed research and are economically feasible for agricultural producers.

Stakeholder group overview

NRCS maintains a core partnership with four organizations: the National Association of Conservation Districts (NACD), the National Association of State Conservation Agencies (NASCA), the National Association of State Departments of Agriculture (NASDA), the National Association of Resource Conservation and Development Councils (NARC&DC), and the National Conservation District Employees Association (NCDEA). NRCS works closely with these partners and their local offices to provide technical assistance, engage in producer outreach, and determine local priorities. NRCS attends the organizations' local, regional, and national conferences, and the NRCS National Leadership Team Meeting takes place during the NACD annual conference. In many field offices, NRCS employees are co-located with conservation district employees. Primarily, the core partners are interested in supporting NRCS's technical and financial assistance programs, engaging in Farm Bill discussions, and providing conservation planning assistance.

At the National level, NRCS hosts briefings on a periodic basis (every 2 months) with agriculture and conservation groups to discuss topics of interest and provide agency updates. These groups
include the core industry and conservation and environmental groups in the national capital region. Examples of these groups include the National Association of Conservation Districts, Land Trust Alliance, The Nature Conservancy, Soil and Water Conservation Society, National Cattlemen’s Beef Association, National Corn Growers Association, National Cotton Council, and the American Farm Bureau Federation.

Recent engagements with stakeholder groups

- June 27, 2016 – National Bi-monthly Briefing Conservation issues and program status briefings held with key agricultural and conservation organizations. The discussions centered on recent program awards, new conservation effects assessment results, the July 6 announcement of the conservation strategy for the Gulf of Mexico, and the status of the Conservation Stewardship Program improvement effort.
- August 31, 2016 – Detailed briefing with key agricultural and conservation partners to preview the changes in the Conservation Stewardship Program. The response was uniformly positive and followed by several positive public notices from the various interest groups as well as a commitment to support program implementation through their respective memberships.
- September 8-9, 2016 – The USDA Agricultural Air Quality Task Force (AAQTF) meeting in Sacramento CA.
- September 29, 2016 – Annual meeting with the National Association of State Conservation Agencies (Branson, MO) where senior Agency leadership briefed partners on core priorities including conservation planning, enterprise initiatives, and programmatic issues.

V. Top Issues

Hot Topics

Key issues for the conservation mission include policy, program, coordination, and innovation, largely of an ongoing or implementation nature. Regulatory actions related to Farm Bill implementation have been completed, while key implementation activities are ongoing as outlined in the timeline.

- **Chesapeake Bay** – Issues center on conservation investments to support continuing progress toward the Chesapeake Bay TMDL and EO 13508 goals as well as coordinating efforts across the federal family. This is a congressional issue as described in Section III (a), but also a continuing dialogue with the Chesapeake Bay Executive Council, congressional offices, and external interest groups. While significant progress is being made, the challenge is to continue support under a declining budget scenario with implications for generating greater state and external partner participation. A significant component of the effort going forward will focus on increasing partner
participation in the Regional Conservation Partnership Program (RCPP). As a result of a September 29, 2016 meeting with Senator Cardin (D-MD), USDA committed to working collaboratively with the Senator’s office and Chesapeake Bay states to improve participation in RCPP. Efforts are underway to host a workshop with key partners in the region in early 2017 to prepare for participation in the next round of RCPP, which are planned for April 2017.

**Conservation Innovation Grants (CIG)** – Through CIG, NRCS has pioneered new approaches to expand conservation tools and partnerships. Specifically in the past few cycles, CIG has encouraged proposals that are building out environmental markets as a vehicle for broadening agricultural participation in addressing community and regional level natural resource issues. Many of the leading water quality trading markets—such as in the Ohio River Basin, Pacific Northwest, and the Chesapeake Bay watershed—have been developed with financial and technical support from CIG. A number of innovative voluntary carbon market transactions—including one in 2014 in which Chevrolet purchased carbon credits generated on ranches in North Dakota—are products of CIG projects. More recently CIG has encouraged partners to tap into emerging conservation finance and “pay for success” ideas that have promise for expanding agricultural conservation. To date, three PFS projects have been funded—two related to endangered/at-risk species mitigation and one on forest restoration—with the practitioners are trying to show proof-of-concept. We are in the very early stages of bringing these innovations to the mainstream of conservation tools. Reviewing and selecting promising CIGs that further these innovations will be important to sustaining the momentum. Technical review will take place in late January 2017 with awards anticipated in March 2017. Perhaps as important as the financial resources available through CIG for the development of market-based approaches, NRCS provides resources to sustain three “networks” that serve to support CIG project awardees. The National Network on Water Quality Trading, the Coalition on Agricultural Greenhouse Gases, and the Conservation Finance Practitioners Roundtable also serve as communities of practice that where participants can voice obstacles and challenges and work together to overcome them.

**Northwest Indian Fisheries Commission (NWIFC)** – Over the past few years, the NWIFC has been engaged in an ongoing effort to require NRCS to increase its standard width for riparian buffers to achieve aquatic system, specifically salmon habitat, recovery and improvement, in the name of supporting treaty rights. Further the Commission has stated its objective to have the agency condition program participation on the achievement of these treaty rights objectives. NRCS went through a technical process to re-evaluate and strengthen the riparian buffer technical requirements, including technical evaluation tools to make sound, site-specific buffer width recommendations that reflect rainfall, soils, topography, landscape structure and complexity, among other factors that affect conservation practice performance and which vary widely across the State. Despite significant collaboration and
implementation of a strengthened technical process, NWIFC position has not shifted. In May 2016, NWIFC issued a written request for the issue be elevated to the White House. Work is ongoing to design a regional meeting to include the tribes, relevant agency representatives, and senior administration officials in January 2017 to reach a resolution to this issue.

- **Landscape Conservation Initiatives (LCI)** – Over the past eight years, NRCS has undertaken a number of high profile conservation initiatives to focus science and programmatic resources to address key natural resource conservation priorities. While initially subject to scrutiny for focusing of farm bill programs, these efforts have generated unprecedented success and forged new federal-state partnerships essential to success. For example, the USFWS decision to not list the Greater Sage Grouse was directly related to the collaboration and conservation work accomplished through the Working Lands for Wildlife (WLFW) Sage Grouse Initiative (SGI); and additional recovery and prevented listing examples include Oregon Chub and Louisiana Black Bear – delisted; Bi-State Sage Grouse, Arctic Fluvial Grayling, New England Cottontail – not listed. The agency has targeted other resource issues through the Mississippi River Healthy Watersheds, Western Lake Erie Basin, and Gulf of Mexico, for example. These LCI efforts are integrated into the Agency business and budget process but are not statutory in nature so require continued commitment and management to ensure continuity. At about 18 percent of the agency budget, this targeting effort has demonstrated exceptional results.

- **Water Resources** – Water quality and quantity concerns are on the rise nation-wide. In addition to the Chesapeake Bay, NRCS is working with a diversity of partners in a significant number of states to reduce nutrient and sediment delivered to streams, lakes and coastal areas across the country, including the Great Lakes, Lake Okeechobee, Mississippi River Basin, and the Gulf of Mexico. Climate change and increasing weather variability, including more frequent and intense events such as flooding and droughts are creating an urgent need to help agricultural producers make their operations more resilient. In October of 2016 NRCS established a Water Advisory Committee to coordinate the agency’s existing and significant investments to address these challenges. NRCS is also supporting the federal National Drought Resilience Partnership, which is charged with coordinating federal resources to support state, tribal and local drought resilience strategies. Agency initiatives, such as the Soil Health Initiative, are core vehicles for targeting and delivering assistance to increase farm and ranch resilience to extreme weather events.

- **Climate Change** – The Building Blocks for Climate Smart Agriculture and Forestry is USDA’s framework for helping farmers, ranchers, and forestland owners respond to climate change. The initiative supports the US commitment reduce emissions by up to 28 percent
United States Department of Agriculture
2016 Presidential Transition
Natural Resources Conservation Service (NRCS)

over 2005 levels by 2025. NRCS plays a leadership role in four of the strategy’s building blocks, including: Soil Health, Nitrogen Stewardship, Livestock Partnerships, and Grazing and Pasture Lands. The effort relies on voluntary, incentive-based conservation to reduce greenhouse gas emissions, increase carbon sequestration, and expand renewable energy production in the agricultural and forestry sectors.

- **Conservation Stewardship Program (CSP) Reinvention** – The 2014 Farm Bill made several important changes to CSP, including raising the bar for conservation and signaling the opportunity to replace the complex and opaque conservation measurement tool (CMT) with a field- and farmer-friendly approach to program participation. NRCS received significant public input on CSP through the Farm Bill process as well as through separate listening sessions held in 2014 and 2015. The CSP revisions build on this input to make the program more understandable (e.g. producers clearly understand payments as outlined in their contracts), connect conservation activities to natural resource issues more clearly (CSP program enhancements linked to conservation practice standards), provide more conservation options for producers (increased flexibility with selecting activities and offering a greater selection of enhancements)), and better connect to results on the ground to support performance based improvements. NRCS field staff will have a more transparent set of tools to enroll participants, and a process that is aligned with other farm bill conservation programs (i.e. application evaluation ranking tool developed similar to that used for EQIP). The CSP remodel also provides flexibility for states to tailor to fit their resource priorities. Fiscal year 2017 will be the first enrollment year under the new, streamlined CSP with November 2016 being the target for beginning the new sign up period. State program and technical staff participated in a weeklong training session which is being followed by hands-on field training throughout October.

- **Commitment to Historically Underserved Producers** – Through directed efforts, NRCS has made significant headway in increasing access and engaging groups who may have not historically participated in conservation programs. NRCS’ partnership with RD’s Community Economic Development (CED) Division has driven investments into persistently poor communities across the country, where 90 percent of counties with the highest poverty rates in the country are rural. NRCS has been a leader in the USDA's StrikeForce initiative, which started in 2010. Altogether, 970 counties, parishes, boroughs, and census areas in 25 states and Puerto Rico are eligible for StrikeForce participation. Since the initiative began, NRCS has increased conservation program participation in these communities by 160 percent. In FY 2015 alone, NRCS obligated over $30 million to assist nearly 15,000 farmers with making conservation improvements that benefit their operations, their resources, and their communities. StrikeForce is making important gains, but will need continued commitment as targeted individuals and communities transition into sustainable and economically viable paths.
• **Blueprint for Stronger Service Initiative** – NRCS transitioned its administrative professionals in Human Resources (HR), Budget and Financial Management (BFM), and Procurement and Property (P&P) under a single national structure in October 2015 and the transition will continue over the next year as the agency builds capacity. Below are highlights of the key areas:

  o Human Resources (HR): Building administrative capacity and improving the hiring process are among the agency’s top priorities. Since implementing the new administrative service model, NRCS established several hiring milestones to help maximize short- and long-term effectiveness and efficiency. The agency’s goal was to hire 750 individuals nationwide between April 1 and September 1, 2016, and reached this milestone by August 16. NRCS has achieved more than 50 percent of its ultimate goal of 1,500 hires by March 31, 2017. As of September 23, the agency has hired nearly 1,000 individuals who are supporting NRCS conservation efforts across the country.

  o Budget and Financial Management (BFM): One of NRCS’s top priorities is to demonstrate effective controls over its business processes and the use of the funding provided to the agency. NRCS can demonstrate its controls are effective by obtaining an opinion on its financial statement audit from the USDA Office of Inspector General and KPMG, the organization that conducts the agency’s financial statement audit on behalf of OIG. The results obtained by NRCS on its FY 2015 financial statement audit confirmed the improvements made in its financial processes are positively affecting the agency’s accountability and credibility. NRCS will complete work on the audit in November 2016. The goal for the FY 2016 financial statement audit is to obtain at least a balance opinion, which would set the stage for obtaining an opinion in FY 2017.

  o Procurement and Property (P&P): The Procurement and Property staff is achieving tangible results and continues to implement internal and external customer-enhancing features, including: 1) updating and automating grants and agreements policies and processes, 2) identifying and processing high priority contracting projects to strengthen NRCS external partnerships, 3) assessing real property agency-wide to adhere to USDA’s space optimization efforts, 4) recognizing the environmental value and cost reduction benefits of leasing newer, safer, and more fuel efficient vehicles – leading USDA’s Vehicle Leasing Conversion Initiative, and 5) exploring hiring flexibilities (e.g., veterans, persons-with-disabilities) to build capacity and further expand customer service.

• **Conservation Delivery Streamlining Initiative (CDSI)**: The objective of the CDSI is to enable NRCS and its partners to spend more time working directly with clients to develop better conservation plans. To achieve this CDSI will provide improved toolsets to further enable the conservation planning process and eliminate, automate and/or re-assign administrative tasks
associated with financial assistance programs. CDSI has three integrated components – the Conservation Desktop, Mobile Planning Tool, and the Conservation Client Gateway, a web-based tool for USDA clients. Conservation Client Gateway (CCG) was deployed to all individual clients in May 2015, allowing them to (1) request technical and financial assistance; (2) access their conservation plans, schedules, applications, and contracts; (3) review and electronically sign plans, applications, and contracts; and (4) document completed practices and request and track their payments. The Conservation Desktop (CD) is the next component to be deployed followed by the Mobile Planning Tool (MPT). CD will provide the full suite of conservation planning and technical tools for our staff on the desktop computer, while MPT will allow planners to take these tools directly to the field to use with clients and then upload data directly to CD on return to the office. Development of CD and MPT is currently underway with phased deployment beginning in 2017 and continuing to 2019. The full implementation of CDSI will allow the Agency to redirect over 1,500 staff years from administrative, duplicative, and inefficient tasks to providing direct technical assistance to clients, returning an annual value of over $131 million.

- **New and Beginning Farmers**– Paving the way for the next generation of America’s Farmers and Ranchers is a strategic investment in the nation’s security and helps support a new generation of conservation-engaged farmers and ranchers. NRCS provides key leadership to the Department-wide new farmer collaborative efforts. Between 2009 and 2015, NRCS more than doubled the financial investment in assisting beginning farmers put conservation systems in place to improve their natural resources and the productivity of their operations.

- **Local and Regional Food Systems** – NRCS contributes to the Know Your Farmer, Know Your Food (KYF2) initiative to serve farmers and ranchers, many of whom get their start or diversify into farmers markets, Community Supported Agriculture (CSAs) networks, and other direct markets or intermediate markets like food hubs, institutions or local retail in their local communities. KYF2 staff also work with NRCS field offices on a targeted outreach strategy to small, organic, and local food farms on EQIP/high tunnels. The NRCS high tunnel program continues to be in high demand nationwide. Since 2010, NRCS has supported 17,580 high tunnels for a total of $119.1 million. This effort has brought new stakeholders to NRCS offices, allowing us to offer additional services and conservation assistance to local and regional food systems producers. NRCS engages with RD’s Community Economic Development (CED) staff in the field to use EQIP funding for high tunnel projects that are of interest to farmers engaged in growing local foods. Access to this program allows farmers to extend their growing seasons, thereby providing a longer supply window for food hub co-ops and natural food retail co-ops. In alignment with this initiative, NRCS is increasingly engaging with urban agriculture, from conservation planning and
technical assistance for urban farmers to work with USDA’s Urban Agriculture Working Group project to develop an Urban Agriculture Toolkit.

- **Organic Production** – Between 2009 and 2015, NRCS has worked with more than 6,800 farms and provided more than $115 million in assistance through the Environmental Quality Incentives Program (EQIP) Organic Initiative. NRCS also works with the Agricultural Marketing Service’s (AMS) National Organic Program to improve services to the organic sector. In FY2016, NRCS began tracking organic producer participation in all programs and estimated that 2 percent of conservation program financial assistance was awarded to self-identified organic producers. Planned priorities for organic agriculture include increased outreach to organic producers regarding opportunities in conservation programs (e.g., CSP, EQIP), increasing the availability of technical assistance for organic farm planning, and identifying conservation practices to support grazing standards for non-ruminant organic livestock.

- **Pollinators** – More than 30 percent of our food relies on insect pollination. USDA estimates that honey bees support $15 billion in crop production, while wild native bees supply an estimated $3 billion in pollination services. In 2014, NRCS initiated a targeted pollinator effort to help farmers and ranchers in the Midwest and Northern Great Plains improve the health of honey bees during summer foraging. The effort to date has enrolled more than 45,500 acres of honey bee habitat under the Environmental Quality Incentives Program (EQIP). In 2016, NRCS introduced a new targeted 10-state effort to help agricultural producers provide food and habitat for monarch butterflies in the Midwest and southern Great Plains to help combat the iconic species’ decline. Producer participation in these conservation efforts are helping to improve essential monarch butterfly reproductive and migrating habitat. During the pilot year, NRCS enrolled 12,844 acres in new monarch butterfly habitat under EQIP. NRCS is continuing both the honey bee and monarch butterfly efforts into 2017. Under the Conservation Stewardship Program, NRCS has enrolled about 10,000 acres of pollinator specific habitat over the past five years. NRCS also supports other pollinator-related efforts, such as a new private-public partnership among NRCS, The Xerces Society, and General Mills, Inc. to increase support for pollinator habitat conservation planning.

AGENCY BRIEFING MATERIAL

The Agency template contains the following sections:

I. **Organizational Overview**

   - Agency Fact Sheet
   - Agency’s Mission/Strategic Plan
   - Overview of Agency Programs and Operations
   - Key Mission Delivery Performance Measures
   - Organization’s History
   - Organizational Chart
   - Biographies for Career and Political Staff in Key Leadership Positions
   - Organizational Budget and Financial Management
   - Enterprise Workforce Data

II. **Policies and Regulations**

   - Statutory Authorities
   - Important Policies and Regulations
   - Overview of the Policy/Regulation Review Process
   - GAO and OIG Audits

III. **Congressional Relations and Issues**

   - Overview

IV. **Internal and External Stakeholders**

   - Important Relationships with Other Federal Departments or Organizations
   - Stakeholder Group Overview
   - Recent Engagements with Stakeholder Groups

V. **Top Issues**

   - Hot Topics
   - Timeline

**Appendix A: Acronyms**
WHAT WE DO: OUR MISSION
The Food Safety and Inspection Service (FSIS) is the public health regulatory Agency within USDA responsible for ensuring that domestic and imported meat, poultry, and processed egg products are safe, secure, wholesome, and accurately labeled. FSIS also enforces the Humane Methods of Slaughter Act (HMSA), which requires that all livestock at federally inspected establishments be handled and slaughtered humanely. In March 2016, FSIS established a new program for federal inspection of certain fish of the order Siluriformes, including catfish, transferring responsibility from the Food and Drug Administration (FDA).

WHO WE ARE: OUR WORKFORCE
- FSIS has nearly 9,300 permanent employees located across the country in nearly 6,400 establishments.
- Ten District Offices
- Three Labs
- 127 Import Establishments at Ports of Entry

WHO WE SERVE: OUR CONSTITUENTS
FSIS holds monthly meetings with consumer and industry stakeholder groups to discuss public health and related policy issues. FSIS partners with Federal agencies to carry out its mission, as well as with 27 state meat and poultry inspection programs that provide inspection to over 1,900 small and very small establishments.

KEY UPCOMING DECISIONS
- Natural Labeling
  - FSIS currently has policy guidance that states criteria for the term “natural”.
  - Over the past ten years, there have been numerous petitions and comments requesting changes and/or clarifications to these guidelines.
  - FSIS is in the process of proposing to amend the Federal meat and poultry products inspection regulations to define the conditions under which the voluntary claim “natural” may be used on the label or in the labeling of meat and poultry products to clarify and resolve these issues.

BUDGET HIGHLIGHTS FY 2016
FSIS overall budget is $1,014,871 and has been relatively consistent with no major changes.
- 80% of budget is for salaries and benefits for nearly 9,300 permanent employees
- FSIS has created efficiencies to cover increased costs and changes in programs.

FY 2016 Budget Authority

- Federal FSIS: 3.41%
- PHDCIS: 0.360%
- International: 1.60%
- State FSIS: 6.06%
- Codex: 88.57%
I. **Organizational Overview**

**Agency’s Mission/Strategic Plan**

FSIS activities contribute to USDA’s FY 2014-2018 Strategic Goal 4, “Ensure that all of America’s children have access to safe, nutritious, and balanced meals.

FSIS recently published the FY 2017-2021 Strategic Plan, which builds on prior successes and reflects emerging issues that FSIS faces in ensuring that the food products we regulate are safe to eat. This plan will guide us going forward and is briefly outlined below. Our Vision and Mission, as well as our Core Values—Accountable, Collaborative, Empowered, and Solutions-Oriented—frame the goals, outcomes, objectives, and measures in this Plan. The FY 2017-2021 Strategic Plan contains 3 goals, 6 outcomes, 15 objectives, and 24 measures.

Following the FY 2017-2021 Strategic Plan are the measures and results FSIS was able to attain under the previous FY 2011-2016 Strategic Plan.

**FY 2017-2021 Strategic Plan**

**Vision:** Everyone’s food is safe.

**Mission:** Protecting the public’s health by ensuring the safety of meat, poultry, and processed egg products.

Goal 1. Our first and primary mission goal, “Prevent Foodborne Illness and Protect Public Health,” directly represents the day-to-day work of a large majority of our employees.

Outcome 1.1 Prevent Contamination
Outcome 1.2 Limit Illness from Regulated Products

Goal 2. Our secondary mission goal, “Modernize Inspection Systems, Policies, and the Use of Scientific Approaches,” represents key methods and approaches we intend to use to enhance how we realize our food safety and public health mission.

Outcome 2.1 Improve Food Safety and Humane Handling Practices through Adoption of Innovative Approaches
Outcome 2.2 Enhance Access to Complete and Accurate Information to Inform Decisions

Goal 3. Our third goal, “Achieve Operational Excellence,” pinpoints key areas where we seek improvement in how we do business to better support achieving our first two goals and our overall mission.

Outcome 3.1 Maintain a Well-Trained and Engaged Workforce
Outcome 3.2 Improve Processes and Services
FSIS FY 2011-2016 Strategic Plan

Vision: A trusted public health regulatory agency committed to preventing foodborne illness.

Mission: Protect consumers by ensuring that meat, poultry, and processed egg products are safe, wholesome, and correctly labeled and packaged.

- Contains three Strategic Themes
  1) Prevent Foodborne Illness
  2) Understand and Influence the Farm-to-Table Continuum
  3) Empower People and Strengthen Infrastructure

- Contains eight Goals
  1) Ensure that Food Safety Inspection Aligns with Existing and Emerging Risks
  2) Maximize Domestic and International Compliance with Food Safety Policies
  3) Enhance Public Education and Outreach to Improve Food-Handling Practices
  4) Strengthen Collaboration Among Internal and External Stakeholders
  5) Effectively Use Science to Understand Foodborne Illness and Emerging Trends
  6) Implement Effective Policies to Respond to Existing and Emerging Risks
  7) Empower Employees with Training, Resources, and Tools
  8) Develop, Maintain, and Use Innovative Methodologies, Processes, and Tools

Overview of Agency Programs and Operations

- Food Safety (FS) activities contribute to USDA’s FY 2014-2018 Strategic Goal 4, “Ensure that all of America’s children have access to safe, nutritious, and balanced meals.

- The Food Safety Mission Area has one primary Agency/Program, the Food Safety and Inspection Service (FSIS). FSIS just published its FY 2017-2021 Strategic Plan which builds on prior successes and reflects emerging issues that FS faces in ensuring that the food products we regulate are safe to eat. This plan will guide us going forward and is briefly outlined below. Our Vision and Mission, as well as our Core Values—Accountable, Collaborative, Empowered, and Solutions-Oriented—frame the goals, outcomes, objectives, and measures in this Plan. The FY 2017-2021 Strategic Plan contains 3 goals, 6 outcomes, 15 objectives, and 24 measures. Following the FY 2017-2021 Strategic Plan are the measures and results FSIS was able to attain under the previous FY 2011-2016 Strategic Plan.
Key Mission Delivery Performance Measures

The following are the FSIS FY2011-2016 Corporate Performance Measures and Results.

**FSIS FY 2011-2016 Corporate Performance Measure 1:**
**Percentage of Broiler Plants Passing the Carcass Salmonella Verification Testing**

In 2011, FSIS established a performance standard for *Salmonella* in broiler carcasses. This standard is designed to encourage industry to control for *Salmonella* and reduce the potential for human exposure. Failure to meet this standard serves as a proxy for heightened exposure potential to the public.

<table>
<thead>
<tr>
<th>Percent of Broiler Plants Passing the Carcass Salmonella Verification Testing Standard /1/</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percent   89%     90%     90%     92%     96%     Met     95%     95%</td>
</tr>
</tbody>
</table>

**FSIS FY 2011-2016 Corporate Performance Measure 2:**
**Total Number of Salmonella, Lm, and E. coli O157:H7 Illnesses from Products Regulated by FSIS**

FSIS measures its performance on reducing foodborne illness in terms of total *Salmonella*, *Lm*, and *E. coli O157:H7* illnesses from all FSIS regulated meat, poultry, and processed egg products. Estimates of total illness from all FSIS-regulated products are based on pathogen-specific case rates from CDC FoodNet data and simple food attribution estimates derived from CDC’s Foodborne Disease Outbreak Surveillance System (FDOSS) database, and are anchored to pathogen-specific illness reduction Healthy People 2020 goals. FSIS uses a simple foods attribution methodology with a rolling 3-year window of outbreak data from the publicly available CDC FDOSS database.

<table>
<thead>
<tr>
<th>Total (All) Illness Measure (Salmonella, Lm and E. coli O157:H7) /2/</th>

</thead>
<tbody>
<tr>
<td>Total Illnesses  491,353</td>
</tr>
</tbody>
</table>
FSIS FY 2011-2016 Corporate Performance Measure 3: Percent of Establishments with a Functional Food Defense Plan

FSIS began measuring the status of industry’s voluntary adoption of food defense plans through annual surveys of FSIS Inspection Program Personnel (IPP) in 2006. The survey questions determine whether each FSIS-inspected establishment has a functional food defense plan (i.e., the plan is documented; measures are in place to address outside security, inside security, personnel security, and incident response; the plan was tested in the last year; and the establishment reviewed their plan in the past year).

| Percent of Establishments with a functional Food Defense Plan /3/ |
|---|---|---|---|---|---|---|
| Percent | 75% | 77% | 83% | 84% | 85% | Unmet | 90% | 90% |

Organization’s History

The Secretary of Agriculture established the Food Safety and Inspection Service (FSIS) on June 17, 1981, pursuant to legislative authority contained in 5 U.S.C. 301 that permits the Secretary to issue regulations governing the United States Department of Agriculture (USDA). The mission of FSIS is to ensure that the Nation’s commercial supply of meat, poultry, and processed egg products is safe, wholesome, and correctly labeled and packaged through inspection and regulation of these products. FSIS is composed of two major inspection programs: (1) Meat and Poultry Inspection and (2) Egg Products Inspection.

1. The Meat and Poultry Inspection Program is authorized by the Federal Meat Inspection Act (FMIA) as amended and the Poultry Products Inspection Act (PPIA). The purpose of the program is to ensure that meat and poultry products are safe, wholesome, and correctly labeled through inspection and regulation of these products so that they are suitable for commercial distribution for human consumption. The FY 2008 Farm bill amended the FMIA to make siluriformes an amenable species and upon approval of the Fish inspection rule in FY 2015, FSIS will begin inspection of siluriformes under the FMIA. FSIS also enforces the Humane Methods of Slaughter Act through the program, which requires that all livestock at Federally-inspected establishments be handled and slaughtered in a humane way. FSIS conducts inspection activities at Federally-inspected meat and poultry establishments; and for State programs, the agency ensures that State meat and poultry inspection programs have standards that are at least equivalent to Federal standards. FSIS also ensures that meat and poultry products imported to the United States are produced under standards equivalent to U.S. inspection standards, and facilitates the certification of regulated products. FSIS’ science-based inspection system, known as the Hazard Analysis and Critical Control Point (HACCP) system, places emphasis on the identification, prevention, and control of foodborne hazards. HACCP requirements include meeting sanitation, facility, and operational standards, and other prerequisite programs to control pathogen contamination and produce safe and unadulterated food.
2. The Egg Products Inspection Program is authorized by the Egg Product Inspection Act (EPIA). The program’s purpose is to ensure that liquid, frozen and dried egg products are safe, wholesome, and correctly labeled through continuous mandatory inspection of egg processing plants that manufacture these products. FSIS also ensures processed egg products imported to the United States are produced under standards equivalent to U.S. inspection standards, and facilitates the certification of exported regulated products.

During 2014, the agency maintained headquarters offices in the Washington D.C. metropolitan area; 10 district offices; the Policy Development Division in Omaha, Nebraska; laboratories at Athens, Georgia, St. Louis, Missouri, and Alameda, California; the Financial Processing Center in Des Moines, Iowa; the Human Resources Field Office in Minneapolis, Minnesota; and a nationwide network of inspection personnel in 6,389 Federally regulated establishments in 50 States, Puerto Rico, Guam, and the Virgin Islands. Included are 350 establishments operating under Talmadge-Aiken Cooperative Agreements. A Talmadge-Aiken plant is a Federal plant with State inspection program personnel operating as Federal inspectors under Federal supervisors. Much of the agency’s work is conducted in cooperation with Federal, State, and municipal agencies, as well as private industry.
The Office of Food Safety (OFS) is one of seven mission areas that comprise the Department of Agriculture. OFS includes one agency: the Food Safety and Inspection Service (FSIS). The Office typically consists of one Under Secretary for Food Safety, one or more Deputy Under Secretaries, a Chief of Staff and a Confidential Assistant. Below is the Organizational Chart for the FSIS.
Alfred V. Almanza was appointed Deputy Under Secretary for Food Safety by the U.S. Department of Agriculture’s (USDA) Secretary Thomas J. Vilsack in September 2014, after having served as Administrator of USDA’s Food Safety and Inspection Service (FSIS) since June 2007. Mr. Almanza will simultaneously serve as Acting Administrator, continuing to lead nearly 9,400 employees in the agency’s mission to protect public health.

In 1978, Mr. Almanza began his FSIS career as a food inspector in a small slaughter plant in Dalhart, Texas. During his 36-year career with FSIS, Mr. Almanza moved up quickly from that entry level position – serving as Labor Management specialist, District Manager of the Agency’s Dallas District Office, and ultimately Administrator of FSIS. His experiences in the field and headquarters have made him extraordinarily qualified to lead the agency.

During his tenure as Administrator, Mr. Almanza focused on modernizing inspection and identifying ways to make the Agency more efficient and effective. He spearheaded the development of the New Poultry Inspection System which redirects FSIS inspection to a more balanced and efficient approach while simultaneously reducing pathogen levels in young poultry slaughter establishments. It is anticipated that the new approach will prevent thousands of illnesses from *Salmonella* and *Campylobacter*. In addition, Mr. Almanza’s regulatory strategies against potentially deadly *E. coli* O157:H7 have significantly reduced illnesses from this pathogen. Under his leadership, FSIS implemented a zero-tolerance policy for six additional strains of *E. coli* that are responsible for human illness. He also led the development of new *Campylobacter* and *Salmonella* performance standards, which hold slaughter establishments accountable for reducing these pathogens in young chickens and turkeys. In 2006 the positive *Salmonella* testing rate was 16%; today it is less than 7%. In 2013, FSIS released the *Salmonella* Action Plan, which outlines the agency’s key steps towards reducing the incidence of *Salmonella* contamination.

Under Mr. Almanza’s leadership, FSIS launched the Public Health Information System (PHIS), a modern repository for all data about public health trends and food safety violations at nearly 6,400 FSIS-regulated plants across the country. Since 2011, PHIS has streamlined data collection and access for the agency.

As part of USDA’s Blueprint for Stronger Service, Mr. Almanza determined that FSIS could streamline resources by reducing the number of district offices from 15 to 10. The district consolidation helped to improve efficiency, consistency, and integration by more evenly distributing the circuits, establishments, and FSIS employees that each district office oversees. Furthermore, Mr. Almanza reorganized headquarters offices and staff to improve organizational efficiency and the ability to better target existing resources.
Mr. Almanza led the development of the FSIS FY 2011-2016 Strategic Plan, which includes results-oriented performance measures. The plan includes 30 distinct, quantifiable performance measures that support eight larger goals. In 2012, he led the development of the internal Annual Performance Plan, which included specific outcomes linked to the Strategic Plan. The plan bridges the FSIS Strategic Plan with Senior Executive Service individual performance standards, and presents three ‘key results’ to be achieved by each Program Area. The transparency provided by this integration of plans makes it possible for each employee to clearly see how his or her work relates to the FSIS mission.

Mr. Almanza is mindful of the more than 8,400 FSIS field employees in his day-to-day tasks. Recognizing that FSIS employees are the agency’s greatest asset, Mr. Almanza works diligently to foster productive relationships. In the most recent FSIS employee survey, top ten results indicate employees like their work, understand how it relates to the agency’s goals, have a sense of accomplishment, and believe in being held accountable.

Brian Ronholm
Deputy Under Secretary for Food Safety [Political]
202-720-0350, Brian.Ronholm@osec.usda.gov

Brian Ronholm was named Acting Under Secretary for Food Safety in December 2013. He oversees the policies and programs of the Food Safety and Inspection Service (FSIS), USDA's public health regulatory agency that ensures that the nation's commercial meat, poultry, and egg products are safe, wholesome, and correctly labeled. He also chairs the U.S. Codex Policy Steering Committee, which provides guidance to U.S. delegations to the Codex Alimentarius Commission.

Mr. Ronholm joined USDA in April 2011 as Deputy Under Secretary for Food Safety. In this position, he was part of a leadership team that implemented significant new policies that have enhanced consumer protection, including: zero tolerance for six strains of pathogenic E. coli in raw beef; a common sense 'test and hold' requirement prohibiting food from entering commerce before critical test results are confirmed; tough new performance standards for Salmonella and the first ever performance standard for Campylobacter in poultry; and improved capabilities for tracing contaminated meat.

Prior to joining USDA, Mr. Ronholm served as an Agriculture Appropriations associate on the staff of Congresswoman Rosa L. DeLauro, managing a wide range of issues related to the House Appropriations Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies in support of the former chairwoman. Mr. Ronholm was actively involved in many comprehensive legislative efforts to improve food safety and nutrition, including the 2008 Farm Bill, the Child Nutrition Reauthorization bill, and the FDA Food Safety Modernization Act.

He earned a master's degree in political management at The George Washington University and an undergraduate degree in finance from California State University at Hayward.
Carmen Rottenberg  
FSIS Deputy Administrator  
202-692-4207, Carmen.Rottenberg@fsis.usda.gov

Carmen Rottenberg was appointed Deputy Administrator of the Food Safety and Inspection Service (FSIS) at USDA in April 2016. In this position, she plays an integral role in ensuring that FSIS continues to fulfill its core mission to protect public health by keeping harmful meat, poultry, and processed egg products out of commerce and to keep consumers safe from foodborne pathogens.

Ms. Rottenberg has direct oversight of the Agency’s five year Strategic Plan and she oversees the development of the FSIS Annual Performance Plan each year. Prior to becoming Deputy Administrator, Ms. Rottenberg served as the Chief Operating Officer for FSIS. Since joining FSIS in 2007, she has served in various leadership roles in the Agency, including Deputy Director of the Civil Rights Staff and Chief of Staff to the Administrator.

Ms. Rottenberg holds a B.A. in Political Science and Philosophy from Hope College in Holland, MI and a Juris Doctorate degree from American University’s Washington College of Law. Ms. Rottenberg began her Federal government career in the Federal Trade Commission’s Office of General Counsel, and prior to joining FSIS, Ms. Rottenberg was a law clerk at a small law firm in Fairfax, VA.

Jane Doherty  
International Coordination Executive, Office of the Administrator  
202-708-8769, Jane.Doherty@fsis.usda.gov

Jane Doherty was appointed the International Coordination Executive in the Food Safety and Inspection Service (FSIS) at USDA in May 2014. She supports FSIS Strategic Goal 2, to enhance compliance of domestic and foreign-produced products with safety regulations and guidance. Part of that mission includes ensuring that criteria for measuring equivalence of a foreign food safety system will be more closely aligned with existing and emerging domestic food safety regulations and policies.

Ms. Doherty brings a wealth of expertise to FSIS, with over twenty-four years working in international negotiations and government policy involving trade, food safety and environmental policies and issues. Prior to joining the USDA, she was the Director of Sanitary and Phytosanitary Affairs at the Office of the United States Trade Representative (USTR). She acted as the Chief Negotiator for the United States on trade policy affecting food safety, animal and plant life and health issues. Under her leadership, the USTR achieved groundbreaking trade agreements with Canada, the European Union, and Japan related to USDA organic equivalence arrangements, which eliminated trade barriers for organic producers while maintaining USDA’s quality standards.

Ms. Doherty earned a Bachelor of Sciences in International Affairs and a Juris Doctorate from George Washington University.
Steven A. Fisher  
Chief Financial Officer (CFO)  
202-720-8700, Steven.Fisher@fsis.usda.gov

Steven A. Fisher has served as the Chief Financial Officer (CFO) at USDA’s Food Safety and Inspection Service (FSIS) since June 2014. The Office of the CFO (OCFO) is responsible for supporting food safety, protecting public health, and ensuring food defense requirements through strategic planning, budgeting and ensuring sound financial management practices and strong fiscal stewardship of the resources provided to FSIS by Congress.

As CFO, Mr. Fisher is responsible for providing executive and technical leadership, as well as policy advice, on financial management and accounting operations, systems, and plans; and budget formulation, execution, and budget-performance integration. Mr. Fisher also serves as the agency’s Performance Improvement Officer in support of the Government Performance and Results Act, leading and coordinating the agency’s strategic planning, and performance monitoring and reporting activities.

Mr. Fisher has over 20 years of experience in the financial management and strategic planning arena. Just before joining FSIS, he directed critical support functions as the Acting Deputy Executive Director and CFO of the Federal Trade Commission (FTC). As the CFO for FTC he led that agency in attaining 6 consecutive nationally recognized accountability awards (Certificate of Excellence in Accounting Reporting). Prior to his roles at FTC, Mr. Fisher has held several executive positions within the Department of Defense (DoD), including serving as the Director of the Business Integration Office, Office of the Secretary, where he helped lead the Department’s efforts to modernize its legacy business systems by implementing major Enterprise Resource Planning (ERP) systems.

Mr. Fisher has been an active Certified Public Accountant for 23 years and is also a Certified Government Financial Manager and a Certified Fraud Examiner. He earned his Master’s degree in Information Systems from the University of Maryland, and a Bachelor’s degree in Business Administration from Loyola University in Baltimore, Maryland.

Janet B. Stevens, PMP  
Chief Information Officer (CIO)  
202-205-9950, Janet.Stevens@fsis.usda.gov

Janet B. Stevens, PMP, has served as the Chief Information Officer (CIO) at USDA's Food Safety and Inspection Service (FSIS) since April 2007. The Office of the CIO is responsible for supporting food safety, protecting public health, and ensuring food defense requirements through the development, implementation and protection of secure information systems, data and infrastructure.

Ms. Stevens oversees innovative and award-winning technical work associated with the deployment of cyber security systems for FSIS. She has also led several USDA eGovernment initiatives. She participated in the development of Federal recommendations for public web sites
Ms. Stevens is a proponent of social media and other innovative methods of communication and data as avenues to improve outreach efforts with other departments and stakeholders, both within and outside of FSIS, as well as to improve data streams for the analysis of information available on the internet. She is dedicated to providing the best customer service possible, for internal FSIS employees and external stakeholders. She ensures that all FSIS employees have the IT tools necessary to fulfill the mission of protecting public health.

As CIO, Ms. Stevens leads the FSIS efforts in protecting the integrity of data and information. In 2012, Ms. Stevens received the U.S. Government Information Security Leadership Award for leadership of FSIS accomplishments in cyber security process and policy improvements.

Previously, Ms. Stevens was the Director of the FSIS Web Services Staff from 2004 to 2006 and was the Director of the Management Controls Technology Staff from 2006 until April 2007. She began her career at USDA in 1991 as a writer/editor for the Economic Management Service (now part of the Economic Research Service). In 1998, she became the web manager for the Risk Management Agency (RMA). At RMA, she also served as the acting Public Affairs Director. Ms. Stevens is a graduate of George Mason University, where she earned a Bachelor of Arts in English with a concentration in Communications in 1991.

Terri Nintemann
Assistant Administrator, Office of Data Integration and Food Protection (ODIFP)
202-690-6486, Terri.Nintemann@fsis.usda.gov

Ms. Terri Nintemann was appointed as Assistant Administrator of the Office of Data Integration and Food Protection (ODIFP) in the Food Safety and Inspection Service (FSIS) in June 2011, having served as Acting Assistant Administrator since September 2010. Ms. Nintemann leads the collection, analysis, and integration of Agency data across program areas. She also oversees the development and implementation of procedures to prepare for, respond to, and recover from food emergencies. Additionally, she is responsible for oversight of the agency’s food defense activities.

Under her leadership, FSIS has taken steps to increase data availability and transparency. She led the development of annual sampling plans, started for Fiscal Year 2012, which provide a comprehensive summary of the agency’s sampling activities. Prior to the annual sampling plans, she led an agency wide effort to document the history of FSIS sampling programs, which was released in 2011. Her office has also re-implemented the public health regulations decision criterion, one of the key criteria to use inspection findings to inform agency decision making.

Under Ms. Nintemann’s leadership, ODIFP also led a broad review of the agency’s microbiological sampling programs and initiated efforts to better design those programs to estimate prevalence. Finally, she has led the agency’s reporting through Public Health Information System with reports now available for Federal, state and industry users. She serves as the lead for FSIS Strategic Goal 4: Strengthen Collaboration among Internal and External Stakeholders to Prevent Foodborne Illness.
Ms. Nintemann is the chair of the FSIS Enterprise Steering Board, which leads Agency reviews of or implementation of new initiatives that impact multiple program areas. She is also a tri-lead, along with two other executives, of the FSIS Data Coordination Committee, which coordinates Agency data activities and provides feedback on data analysis within FSIS. Ms. Nintemann is the FSIS representative to the USDA Security Council, charged with improving coordination of security activities—physical and information—within the Department, and she also represents FSIS on the Federal Border Interagency Executive Council, which is focused on interagency collaboration regarding imports. Additionally, she serves on the Secretary’s Executive Resources Board as a FSIS mission area representative.

A lifelong agricultural enthusiast and Minnesota native, Ms. Nintemann joined FSIS in 2003 as the Deputy Assistant Administrator of the Office of Public Affairs, Education, and Outreach. In 2006, she was named Assistant Administrator of the office, now known as the Office of Public Affairs and Consumer Education. Prior to joining USDA, Ms. Nintemann was a professional staff member and legislative director for the Senate Committee on Agriculture, Nutrition, and Forestry from 1992 to 2003. She served as a legislative director for Congressman Dave Camp from 1991 to 1992. From 1986 to 1991 she was a staff member for Senator Rudy Boschwitz. Ms. Nintemann’s passion for public service is rooted in her participation in FFA and 4-H as a young adult. She graduated from the University of Minnesota in 1986 with a Bachelor of Science degree in Animal Science and a minor in Ag Economics.

William “Bill” Smith  
Assistant Administrator (AA), Office of Field Operations (OFO)  
202-720-8803, William.Smith@fsis.usda.gov

Mr. William C. “Bill” Smith was named the Assistant Administrator for the Office of Field Operations (OFO) in the Food Safety and Inspection Service (FSIS) at USDA in July of 2014. He previously served as AA for OFO and is now beginning his second assignment leading this program area. In this role, he is responsible for ensuring that food safety inspection aligns with existing and emerging risks to minimize existing and emerging food safety hazards. He also oversees animal welfare activities conducted every day by nearly 7,800 employees in nearly 6,400 meat, poultry, and processed egg, and import facilities.

The Assistant Administrator for OFO focuses on consistent and standardized application of food safety policies by the field employees in the 10 district offices under his purview and places a particular emphasis on providing field inspectors with adequate training so that they can correctly interpret the laws that they are charged with implementing.

Prior to his current role in OFO, Mr. Smith was the Assistant Administrator for the Office of Investigation, Enforcement and Audit (OIEA) where he managed the Agency’s investigation and enforcement resources, State and foreign audit programs, and litigation functions to protect public health and respond to food safety and food defense issues associated with the handling, sale, and distribution of meat, poultry, and processed egg products in-commerce. His staff of 156 investigators worked to ensure compliance at over 150,000 facilities in commerce.
Mr. Smith has 38 years of experience in inspection and enforcement of food safety and other consumer protections, from working as an in-plant inspector to positions in FSIS headquarters. He managed the launch of the Hazard Analysis and Critical Control Point (HACCP) program in the late 1990s. The rule clarified the respective roles of government and industry in food safety efforts. The HACCP program has been a critical factor in the overall decline of bacterial foodborne illnesses since 1996.

Mr. Smith graduated from Kansas State University in 1974 with a degree in Biological Science.

Michael Watts
Assistant Administrator, Office of Outreach, Employee Education and Training (OOEET)
202-205-0194, Michael.Watts@fsis.usda.gov

Michael Watts joined the U.S. Department of Agriculture in May 2003 and has been a Food Safety and Inspection Service (FSIS) Assistant Administrator for the Office of Outreach, Employee Education and Training (OOEET) since October 2012. His current role complements a career spent cultivating his expertise in civil rights, diversity management and training development and delivery. As Assistant Administrator of OOEET, his mission is to provide executive leadership and oversight for training and developing the FSIS workforce. Mr. Watts is responsible for ensuring that employees have the critical skills and training they need to support the Agency mission and to be successful. In addition, he focuses on identifying and reducing skill gaps in the workforce to ensure that the Agency has a talented cadre of professionals who are prepared to protect the American public from foodborne illnesses.

From May 2007 to October 2012, Mr. Watts led civil rights initiatives in the Department from two roles within the Office of the Assistant Secretary for Civil Rights. He held the positions of Civil Rights Director for the Department and Director of the Office of Compliance, Policy, Training and Cultural Transformation

Before joining USDA, Mr. Watts was the State of Minnesota’s Assistant Commissioner of Diversity and Equal Opportunity, an executive position in the Department of Employee Relations, a cabinet-level office that reported to the Governor. Mr. Watts began his career in the military, where he developed a solid foundation of experience in training management. After leaving the military and completing law school, he worked as Equal Employment Opportunity Manager for the Department of Veterans Affairs – Birmingham VA Medical Center in Birmingham, Alabama.

Mr. Watts has a keen interest in mediation and dispute resolution, which led him to earn his Juris Doctorate at the Cumberland School of Law at Samford University in Birmingham, Alabama. Watts received his Masters’ Degree at Webster University in St. Louis, Missouri in Administration of Justice and Human Relations. He is a graduate of the University of Alabama, where he earned a Bachelor’s degree in Political Science and Criminal Justice. He is also a graduate of the US Army Command and General Staff College, the Marine Corps Command and Staff College, and the Harvard Kennedy School of Government Senior Managers in Government Course.
Carol Blake
Assistant Administrator, Office of Public Affairs and Consumer Education (OPACE)
202-720-3884, Carol.Blake@fsis.usda.gov

Carol Blake was appointed as the Assistant Administrator for the Office of Public Affairs and Consumer Education (OPACE) in the Food Safety and Inspection Service (FSIS) in November of 2011. As the leader for OPACE, Ms. Blake manages efforts to ensure that all segments of the farm-to-table chain receive valuable food safety information. Her extensive communications experience with FSIS and USDA provides a solid foundation to lead OPACE initiatives.

As Assistant Administrator of OPACE, Ms. Blake oversees the communication of public health messages to consumers and develops strategies to gain appropriate attention from news and other media outlets. During her time with USDA, she has seen a wide range of technology advancements that have helped raise the profile of FSIS in the ever-evolving world of 21st century communications. Under her leadership, FSIS has modernized its website into a mobile friendly public health tool for consumers and led innovative outreach using social media. In her current role, she leads efforts that directly link to FSIS’ strategic goal to increase the number of consumers who follow safe food handling practices through education and awareness campaigns. She ensures that the public can receive critical food safety information through a variety of social media, leads the Agency in its development of apps and consumer tools, and pursues partnerships with government and non-government organizations to obtain consumer data that ultimately shape additional consumer education opportunities. Ms. Blake is committed to being fiscally responsible in her quest to advance consumer education and awareness.

In August 2008, Ms. Blake was named the Director of OPACE's Congressional and Public Affairs Office. Since joining FSIS in 1999, she held positions that include press officer, public affairs specialist, and deputy director for correspondence and FOIA. Prior to joining FSIS, Ms. Blake handled media and communication initiatives for the Agricultural Marketing Service and USDA’s Office of Communications.

Though Ms. Blake didn’t set out determined for a career at USDA, she feels a strong connection with the Department, as her grandfather was the head of what is now USDA’s Office of Budget and Program Analysis. Ms. Blake’s earliest formal experience at USDA entailed working as a clerk with the Forest Service during college breaks. She graduated from Randolph-Macon College with a degree in English.

Peter Bridgeman
Acting Assistant Administrator, Office of Management (OM)
202-720-4425, Peter.Bridgeman@fsis.usda.gov

Peter Bridgeman was recently appointed as the Acting Assistant Administrator of the Food Safety and Inspection Service’s (FSIS) Office of Management (OM). In this position, he leads OM in improving the overall management and effectiveness of FSIS programs by providing a full range of administrative and support services, to include: Human Resources Management
United States Department of Agriculture
2016 Presidential Transition
Food Safety and Inspection Service (FSIS)

Mr. Bridgeman has extensive leadership experience with FSIS, having previously served in executive leadership positions within the Office of Investigation, Enforcement and Audits and the Office of the Chief Financial Officer. Additionally, he has held leadership positions with the Office of Public Health Science and the Office of Field Operations during his 31 year career with FSIS.

A native a Pittsburgh, PA, Mr. Bridgeman served for four years in the U.S. Navy, successfully completing the Naval Nuclear Power School program, where he studied Nuclear Physics and Reactor Principles. Pete also studied at Rutgers University and Edison State College in New Jersey, where he majored in Business Administration and minored in Journalism.

Carl A. Mayes
Assistant Administrator, Office of Investigation, Enforcement and Audit (OIEA)
202-720-0294, Carl.Mayes@fsis.usda.gov

Mr. Carl A. Mayes was appointed Assistant Administrator (AA) for the Office of Investigation, Enforcement and Audit (OIEA) in the Food Safety and Inspection Service (FSIS) at USDA in February 2015. He leads the Agency’s surveillance and investigation activities for incidents of foodborne illness outbreaks, recalls, natural disasters and intentional contamination. Mr. Mayes also oversees state and foreign audit programs and enforcement and litigation functions.

Mr. Mayes joined FSIS in August 2009 and was named the Deputy, Chief Information Officer for the Office of the Chief Information Officer (OCIO) in 2012. As OCIO’s Deputy Chief Information Officer he was responsible for implementing OCIO’s technology plan for modernizing the Agency’s applications and infrastructure. In October 2014, he was appointed to serve as OIEA’s Acting Assistant Administrator.

Prior to joining FSIS, Mr. Mayes was with the Defense Intelligence Agency (DIA) where he served as the Mission Application Division Chief for Counterintelligence (CI) and Human Intelligence (HUMINT) software applications overseeing the daily operations of over 200 personnel. Mr. Mayes entered Federal service in 2006 with the Counterintelligence Field Activity (CIFA) where he worked closely within the United States Intelligence Community (I.C.) with such agencies as the Air Force Office of Special Investigations (AF OSI), Naval Criminal Investigative Service (NCIS), the U.S. Army Intelligence and Security Command (INSCOM) and other I.C. members to further U.S. national objectives.

Previously, Mr. Mayes spent 21 years in the United States Air Force (USAF) where he served as the Deputy Inspector General for the 480th Intelligence Wing (IW) at Langley Air Force Base (LAFB). While serving as USAF’s Deputy Inspector General he managed Fraud, Waste & Abuse complaints and audits, as well as compliance and quality assurance inspections for units actively involved in wartime and contingency operations worldwide. Before moving into this position, Mr. Mayes was the Squadron Superintendent for the 27th Intelligence Support
Squadron at LAFB, where he ensured personnel were trained and available to meet the organization’s mission of processing near-real-time intelligence, and disseminating Intelligence, Surveillance and Reconnaissance information worldwide. During his time with the USAF, Mr. Mayes also served as the Chief of Database Services, 82nd Computer Support Squadron, LAFB, where he led a team managing and maintaining a multi-million dollar U.S. State Department payroll system. Mr. Mayes was stationed at different bases stateside and overseas during his time with USAF and spent his first 12 years with the Security Forces performing law enforcement and security duties.

Mr. Mayes graduated from Georgia College & State University in Milledgeville, Georgia with a Masters of Business Administration and received a Masters of Management Information Systems from the University of Illinois at Springfield. He holds a dual Bachelor of Science degree in Computer Information Systems/Management and Accounting/Management from Park University, Parkville, MO.

**Dr. David Goldman**  
**Assistant Administrator, Office of Public Health Science (OPHS)**  
202-720-2644, David.Goldman@fsis.usda.gov

Dr. David Goldman was appointed in November 2004 as Assistant Administrator for the Office of Public Health Science (OPHS) at the Food Safety and Inspection Service (FSIS) and serves as the Acting Chief Medical Officer for the Department. He was formerly Director of the Human Health Sciences Division at FSIS, joining the agency in 2002. He is a family practice and preventive medicine/public health physician, and a member of the Commissioned Corps of the U.S. Public Health Service (USPHS).

Dr. Goldman oversees the OPHS, which provides expert scientific analysis, advice, and recommendations on all matters involving public health and science that are of concern to FSIS. During his time in OPHS, Dr. Goldman has led the creation and implementation of a comprehensive scientific agenda that focuses on the Agency’s most significant needs, including updating the National Residue Program, analyzing environmental contaminants, developing a plan to meet the Healthy People 2020 goals for *Salmonella* illness reduction, and communicating scientific measures to mitigate the risk of *Listeria* contamination at retail. He is the Agency’s point person during foodborne illness outbreaks, collaborating and coordinating with other public health leaders throughout government to support a swift and effective response. The FSIS labs are also under his purview.

Among his other duties, Dr. Goldman is a co-lead for USDA’s participation in the One Health initiative, a worldwide strategy for expanding interdisciplinary collaborations and communications in all aspects of diseases for humans, animals and the environment. One Health seeks to advance health care for the 21st century and beyond by accelerating biomedical research discoveries, enhancing public health efficacy, and expeditiously expanding the scientific knowledge base for zoonoses.
In August of 2013, the USPHS named Dr. Goldman as its new Chief Professional Officer for the medical category. In this capacity, Dr. Goldman serves as the primary point of contact between the Office of the Surgeon General and the 800+ physicians in the PHS. Since 2005, Dr. Goldman has served as the Surgeon General’s Policy Advisory Committee representative for USDA to represent any needs of FSIS to HHS with respect to 22 officers detailed here.

Dr. Goldman spent 10 years in the US Army Medical Corps in both family practice and preventive medicine. He then spent 3 ½ years at the Virginia Department of Health, first as a District Health Director, then briefly as the Deputy State Epidemiologist, before joining the Public Health Service. He is board-certified in both Family Medicine and General Preventive Medicine/Public Health and continues to see patients 1 day per month at a free clinic in Virginia. He received his Bachelor of Arts from the University of Virginia in 1979, a Doctor of Medicine degree from the University of Virginia in 1988, and his Master of Public Health in Epidemiology from the University of Washington in 1996.

Dan Engeljohn, PhD
Assistant Administrator, Office of Policy and Program Development
202-205-0495, Daniel.Engeljohn@fsis.usda.gov

Dan Engeljohn, PhD has been with the U.S. Department of Agriculture since 1979 and was named Assistant Administrator for the Office of Policy and Program Development (OPPD) in the Food Safety and Inspection Service (FSIS) at USDA in July of 2014. In this position, he leads the development of Agency policies and the development and publication of numerous FSIS policy documents, including regulations, instructions to the field, and guidance to industry.

Dr. Engeljohn directs staff that conducts economic analyses for regulations and Agency policy; reviews and approves labels for meat, poultry and egg products; and reviews and approves the use of new technologies and ingredients in meat, poultry, and egg products. His responsibilities also include development of Agency policy and instructions to the field concerning import and export of meat, poultry, and egg products.

Prior to his current position, he served as Assistant Administrator for the Office of Field Operations and was responsible for ensuring that the risk management policies for food safety and animal welfare were effectively conducted by nearly 7,800 employees in nearly 6,400 meat, poultry, and processed egg, and import facilities. Dr. Engeljohn also previously served as the Assistant Administrator for the OPPD. In his 26 years with OPPD, he developed food safety policies and procedures to ensure that FSIS fulfills its mission. In his 34 years of experience as a government regulator of the food industry, Dr. Engeljohn has served as a scientific spokesperson on food safety strategies, including food irradiation and pathogen control procedures.

Dr. Engeljohn earned a PhD in Nutrition, at Howard University, Washington, DC, specializing in Human Experimental Nutrition, and has taught an introductory nutrition course at the university for 17 years. He received his Bachelor’s and Masters’ degrees at the University of Illinois, Champaign-Urbana.

Food Safety and Inspection Service (FSIS)

Current Workforce by Program Area

- Food Safety and Inspection Service employs a workforce of over 9,700 employees of which the following are full-time and part-time:
  - Full-time: 9,341 employees
  - Part-time/Other: 518 employees
    - Among these people are our Frontline workforce that works in approximately 6,389 federally regulated establishments, 3 FSIS laboratories and 127 import establishments at ports of entry.
- FSIS employs 354 Other than permanent, and 150 Temporary and Indefinite workers to fill in for employees in their absence.
- Of our total workforce, 35% are eligible to retire within the next year.
- 6,620 members of our workforce are Bargaining Unit Employees.
- Our headquarters is located in Washington, D.C. which houses 7% of our workforce.
- FSIS has 10 District offices, 3 Labs and 4 Regional offices.
- Approximately 90% of our Employees are Frontline workers who work directly on the Food Safety Mission by verifying that the processing of meat, poultry, and liquid egg products comply with statutory requirements. The remaining employees provide vital mission critical support service roles in ensuring the safety of America’s food supply and public health.

II. Policies and Regulations

Statutory Authorities

FSIS is responsible for administering the Federal Meat Inspection Act (FMIA) (21 U.S.C. 601-695), the Poultry Production Inspection Act (PPIA) (21 U.S.C. 451-470), the Egg Products Inspection Act (EPIA) (21 U.S.C. 1031-1056), the Humane Methods of Slaughter Act of 1978 (HMSA) (7 U.S.C. 1901 – 1906), and select sections of the Agricultural Marketing Act of 1946 (AMA) (7 U.S.C. 1622 and 1624). The FMIA and the PPIA ensure meat and poultry products distributed in commerce for human consumption are safe, wholesome, and correctly labeled through inspection and regulation of these products. Under the EPIA, FSIS ensures that liquid, frozen, and dried egg products distributed in commerce for human consumption are safe, wholesome, and correctly labeled. The HMSA requires that the handling and slaughtering of livestock be carried out only by humane methods. FSIS also operates a voluntary fee-for-service inspection program for exotic animals, rabbits, and non-amenable poultry, along with several other voluntary services, under the AMA.

Important Policies and Regulations

FSIS publishes on average four final rules per year and three proposed rules per year. Approximately 50% of FSIS regulations are designated significant or economically significant by the Office of Information and Regulatory Affairs.

Policies Finalized within the Last Year

- Descriptive Designation for Needle- or Blade-Tenderized (Mechanically Tenderized) Beef Products (Final Rule Published May 18, 2015; Effective Date: May 17, 2016)

- Eligibility of Lithuania to Export Meat and Meat Products to the United States (Final Rule Published August 31, 2015; Effective Date: October 30, 2015)

- Mandatory Inspection of Fish of the Order Siluriformes and Products Derived from Such Fish (Final Rule Published December 2, 2015)

- Records to be Kept by Official Establishments and Retail Stores that Grind Raw Beef Products (Final Rule Published December 21, 2015; Compliance Date: October 1, 2016)

- New Performance Standards for Salmonella and Campylobacter in Not-Ready-to-Eat Comminuted Chicken and Turkey Products and Raw Chicken Parts and Changes to Related Agency Verification Procedures: Response to Comments and Announcement of Implementation Schedule (Notice Published February 11, 2016)

- Classes of Poultry (Final Rule Published April 13, 2016; Effective Date: January 1, 2018)
• Electronic Export Application and Certification Charge; Flexibility in the Requirements for Export Inspection Marks, Devices, and Certificates; Egg Products Export Certification (Final Rule Published June 29, 2016; Effective Date: August 29, 2016; Applicability Date for certain provisions: June 29, 2017)

• Eligibility of Namibia to Export Meat Products to the United States (Final Rule Published July 13, 2016; Effective Date: September 12, 2016)

• Requirements for the Disposition of Non-Ambulatory Disabled Veal Calves (Final Rule Published July 18, 2016; Effective Date: September 16, 2016)

• Statements That Bioengineered or Genetically Modified (GM) Ingredients or Animal Feed Were Not Used in the Production of Meat, Poultry, or Egg Products (Notice and Guidance Document Published August 24, 2016; Comment Period Ends October 24, 2016)

Proposed Rules Issued within the Last Year

• Elimination of Trichinae Control Regulations and Consolidation of Thermally Processed, Commercially Sterile Regulations (Proposed Rule Published March 28, 2016)

• Eligibility of Honduras to Export Poultry Products to the United States (Proposed Rule Published April 13, 2016)

• Eligibility of the Republic of Poland to Export Poultry Products to the United States (Proposed Rule Published April 20, 2016)

Rules at OMB

• Revision of the Nutrition Facts Panels for Meat and Poultry Products and Updating Certain Reference Amounts Customarily Consumed (Currently in OMB Clearance)
Overview of the Policy/Regulation Review Process

FSIS issues policies and regulations to lower the incidence of pathogens that cause foodborne illness and limit the occurrence of outbreaks in our regulated products. Millions of Americans and consumers around the world depend on the work of FSIS to keep them safe. As a public health agency, FSIS uses science to achieve the statutory mission laid out for us by Congress. Science drives our policy, which drives our inspection that ensures that we are prepared to address existing and new food safety threats.

FSIS prevents foodborne illness by:

- Issuing instructions to its personnel performing food safety inspection activities at more than 6,000 establishments nationwide through FSIS Directives and Notices, and ensuring that inspection aligns with existing and emerging risks;

- Maximizing international compliance with food safety policies by issuing regulations that address foreign countries’ equivalence to the U.S. inspection system;

- Issuing regulations to address the causes of outbreaks and improve traceback procedures when there is an outbreak;

- Issuing regulations and policies to address new and evolving risks by using science to understand foodborne illness and emerging trends; and

- Issuing regulations to modernize inspection systems.

FSIS also issues policies and regulations to advance other important goals, including:

- Ensuring that animals are handled humanely at slaughter; and

- Ensuring that regulated products are properly packaged and labeled so consumers have access to important information about the product.

Finally, FSIS issues policies and regulations when legislation requires it or when FSIS grants a petition for rulemaking (e.g., from a stakeholder, consumer group, or individual).

III. Congressional Relations and Issues

Overview
The following issues have been issues of importance to Congress and/or issues that have been the subject of a high volume of congressional correspondence and inquiries.

- Catfish/Equivalency:

  As mandated in the 2008 and 2014 farm bills, the U.S. Department of Agriculture’s (USDA) Food Safety and Inspection Service (FSIS) completed and published the final rule “Mandatory Inspection of Fish of the Order Siluriformes and Products Derived from Such Fish” (80 FR 75590), which applies to all fish in the order of Siluriformes and products derived from such fish, on December 2, 2015. The final rule became effective on March 1, 2016, and includes an 18-month transition period that ends on September 1, 2017. FSIS will fully enforce the regulatory requirements described in the final rule on September 1, 2017.

  The 18-month transition period also applies to imported Siluriformes fish and fish products. Shipments of imported products are being selected for reinspection, and therefore sampling, based on specific targeting criteria including past compliance history provided by FDA. Sample analyses include: speciation, residues (pesticide, drugs, and dyes) and Salmonella. A complete list of contaminants can be found at: http://www.fsis.usda.gov/wps/portal/fsis/topics/science/laboratories-and-procedures/guidebooks-and-methods/chemistry-laboratory-guidebook. When any imported or domestic Siluriformes products fail testing requirements, FSIS has taken action, including rejecting shipments and issuing a recall.

  In May 2016, the Senate passed a resolution of disapproval of the FSIS Siluriformes Inspection rule. The resolution is currently awaiting House action. Should the resolution be enacted, jurisdiction of Siluriformes inspection will revert back to FDA.

- Oversight Issues:

  The Food Safety and Inspection Service, as the Agency responsible for ensuring that the nation's commercial supply of meat, poultry, and egg products is safe, wholesome, and correctly labeled and packaged, frequently interacts with plants and related businesses in the course of taking regulatory actions. For slaughter plants and processing facilities, this can mean taking regulatory control actions, withholding the marks of inspection, and or suspension actions as defined under Rules of Practice. Throughout any course of regulatory action being taken by FSIS, the affected plant or business can work with FSIS frontline supervisors, the District Office, or the Small Plant Help Desk in order to take the steps necessary to regain compliance. In some cases, if an individual or plant does not agree with FSIS procedure or protocol for a specific action, they will contact their federal representatives who are then in contact with FSIS.
United States Department of Agriculture
2016 Presidential Transition
Food Safety and Inspection Service (FSIS)

- Small Plant Access:

The ability of small plants to connect with and form relationships with federal regulating entities has been discussed and/or questioned in recent congressional hearings. FSIS strongly encourages that plant or business management to reach out to the District Office, the local Front Line Supervisor, or the Small Plant Help Desk in order to take the steps necessary to understand and comply with the FSIS regulations. It is a high priority of FSIS to ensure that smaller plants and processing facilities are given every opportunity to qualify for the FSIS Grant of Inspection.

- Labeling:

FSIS is the Agency responsible for ensuring the truthful and accurate labeling of the nation's commercial supply of meat, poultry, and egg products. In the course of managing this task, FSIS develops and provides labeling guidance, policies, and administers programs to protect consumers from misbranded and economically adulterated meat, poultry, and egg products. The FSIS Labeling Staff in the Office of Policy and Program Development (OPPD) works to ensure that all labels are truthful and not misleading. Congress is increasingly paying attention to these issues given the rise in consumer attention to genetically engineered products, organic products, and the use of certain terms and raising claims on labels, such ‘natural’, ‘grass fed,’ free range,’ and ‘humanely raised’. In addition, FSIS reviews and approves all labels for packaging, which can gain congressional attention if the individual or producer applying for the label wants particular attention paid to his/her product.

- Horse Slaughter:

In 2007, the U.S. Court of Appeals, Fifth Circuit ruling effectively closed any U.S. plants slaughtering horses for human food consumption. The FY 2008, FY 2009, and FY 2010 appropriations acts prohibit the use of funds to pay the salaries or expenses of personnel to inspect horses under the Federal Meat Inspection Act (FMIA) and the Humane Methods of Slaughter Act (HMSA). This prohibition was first passed in the 2006 appropriations act and was automatically renewed via the 2007 continuing resolution. Similar to previous funding bills, FSIS is barred under the FY 2016 Consolidated Appropriations Act from spending funds to perform ante-mortem inspection of horses at slaughter intended for human consumption. Under the funding ban contained in the fiscal year 2016 omnibus appropriations legislation, FSIS is also not permitted to operate a fee for service program for the inspection of horses for human consumption. State inspection programs would likewise be barred from using Federal funds to perform ante-mortem inspection, which likely would effectively mean that States also could not institute ante-mortem inspection of equines intended for human consumption. No horse slaughter establishment can operate legally without the presence of FSIS inspection program personnel. The FMIA requires inspection of amenable species intended for human consumption, including horses. Meat from amenable species that have not been inspected cannot be shipped or sold for human consumption. There is no equivalency process for the inspection of horse meat slaughtered for human
consumption, since the inspection is not allowed under current law; therefore imports of horse meat for human consumption is not permissible.

IV. **Internal and External Stakeholders**

**Important relationships with other Federal Departments or organizations:**

- U.S. Department of Agriculture (USDA)
  - Animal and Plant Health Inspection Service (APHIS)
  - Grain Inspection, Packer, and Stockyards Administration (GIPSA)
  - Office of Budget and Program Analysis (OBPA)
  - Agricultural Research Service (ARS)
  - National Agricultural Statistics Service (NASS)
  - Office of the General Counsel (OGC)
  - Agricultural Marketing Service (AMS)
  - Foreign Agricultural Service (FAS)
  - Office of the Chief Economist (OCE)
  - Office of the Chief Information Officer (OCIO)
  - Food and Nutrition Service (FNS)
  - National Institute of Food and Agriculture (NIFA)
- Centers for Disease Control and Prevention (CDC)
- Food and Drug Administration (FDA)
- Customs and Border Protection (CBP)
- U.S. Trade Representative (USTR)
- Foreign Governments
- State Departments of Health
- State Departments of Agriculture
- Government Accountability Office (GAO)
- Office of Management and Budget (OMB)
- Occupational Safety and Health Administration (OSHA)
- Department of Homeland Security (DHS)

**Stakeholder Group Overview**

- Academia and Academic Professional Organizations (AAPOs)
- American Academy of Family Physicians
- American Veterinary Medical Association (AVMA)
- Consumer Interest Groups
- Council to Improve Foodborne Outbreak Response (CIFOR)
- FSIS-inspected establishments/industry representatives
- National Advisory Committee on Meat and Poultry Inspection (NACMPI)
- National Advisory Committee on Microbiological Criteria for Foods (NACMCF)
- National Joint Council (NJC) of Food Inspection Locals, American Federation of Government Employees (AFGE)
- Partnership for Food Safety Education
- State Departments of Health officials
State Meat and Poultry Inspection Directors and Inspection Personnel (for 27 state cooperative MPI programs)

Recent Engagements with Stakeholder Groups

- FSIS holds monthly consumer and stakeholder group meetings.
- Beginning quarterly meetings with humane handling stakeholders.
- FSIS holds meetings with small and very small slaughter processing establishments.
- All recent stakeholder and consumer meetings can be found: http://www.fsis.usda.gov/wps/portal/fsis/newsroom/meetings/officials-calendar-of-meetings/officials-calendar-of-meetings

V. Top Issues

Hot Topics

Implementation of Mandatory Inspection of Siluriformes
Provisions of the 2008 and 2014 Farm Bills amended the Federal Meat Inspection Act, mandating FSIS inspection of Siluriformes fish. On December 2, 2015, FSIS published a final rule requiring inspection of fish of the Order Siluriformes and products derived from such fish. The final rule became effective on March 1, 2017, switching oversight of these products from the Food and Drug Administration to FSIS. FSIS will continue to implement the mandatory inspection of fish of the order Siluriformes and products derived from such fish. FSIS is currently in the 18-month transitional period (transition to complete implementation) where it is exercising broad enforcement discretion. On September 1, 2017, FSIS will begin fully enforcing the regulatory requirements. As stated in the final rule, if a foreign country would like to remain eligible to export Siluriformes fish and fish products to the U.S. on and after September 1, 2017, it must make a written request to initiate the equivalence process and provide a complete equivalence packet.

Sampling Programs and Pathogen Reduction Performance Standards
Salmonella bacteria are among the most frequent causes of foodborne illness. These bacteria can reside in the intestinal tract of food animals. Salmonella contamination of raw products occurs during slaughter operations, as well as during the live-animal rearing process (e.g., on-farm contamination can coat the exterior of the animal and remain attached to the skin). Currently, events that cause contamination of raw carcasses cannot be eliminated through the commercial production and slaughter practices employed in the United States. Contamination can be minimized, however, with the use of proper sanitary dressing procedures and by the application of antimicrobial interventions during slaughter and thereafter during fabrication of the carcasses. FSIS uses the pathogen reduction performance standards to ensure that eligible establishments are consistently controlling or reducing harmful bacteria on raw meat and poultry products. In February 2016, FSIS announced new performance standards for Salmonella and Campylobacter in not ready-to-eat comminuted chicken and turkey products and raw chicken parts and changes to FSIS’s verification sampling program. FSIS is considering developing a new Salmonella performance standard for ground beef product.

FSIS also maintains many Shiga toxin-producing Escherichia coli (STEC) sampling projects for domestic establishments, imported products, and raw ground beef in retail. FSIS is considering beginning analyzing raw ground beef, raw ground beef components, and bench (purchased) trimmings for non-O157 STEC

China Equivalency
The People’s Republic of China (PRC) is currently eligible to export processed poultry products to the United States if the products are derived from poultry slaughtered in the United States or in other countries eligible to slaughter and export poultry to the United States. The PRC is seeking an equivalence determination from FSIS to be able to export to the United States poultry
products from birds slaughtered in the PRC. FSIS has reviewed the PRC’s laws, regulations, and poultry slaughter inspection system as implemented. Upon final determination of China’s equivalence with the recently implemented Modernization of Poultry Slaughter Inspection Final Rule, FSIS will move forward with the rulemaking process to propose to list China as eligible to export to the U.S. poultry product derived from poultry slaughtered in China. Should a rule become final, slaughtered poultry, or parts or other products thereof, processed in certified PRC establishments, would be eligible for export to the United States.

Local and Regional Food Systems
FSIS recognizes the growth of local and regional food systems, and aims to support producers engaged in local and regional markets. We value the collaboration with the Know Your Farmer, Know Your Food (KYF2) team to better serve new and beginning farmers and ranchers, many of whom get their start in farmers markets, Community Supported Agriculture, and other direct markets in their local communities. We also know that as local and regional food systems mature, the demand for local food is expanding beyond direct markets and into major grocery stores, restaurants, and schools, often through the work of food hubs and other intermediaries. Most recently, FSIS has partnered with KYF2 partners, including the Food and Nutrition Service (FNS) and Rural Development (RD), to develop clear, simple guidance documents on local meat, poultry, and eggs for school buyers, food hubs, and farmers markets. We look forward to continuing work with Know Your Farmer, Know Your Food (KYF2) to improve programs for these producers, make sure we are reaching the right audiences, and offer a more cohesive, service-oriented “One USDA” to our customers.

FSIS Priorities for Local and Regional Food Systems:

- Host “New Plant 101” webinar geared towards potential new processors with limited regulatory knowledge. The webinar will outline the basics of FSIS regulations to help remove technical barriers to new plant start-up.
- Coordinate with KYF2 on additional outreach opportunities to local food community and continue to engage with other USDA agencies to maintain awareness of other USDA programs that could provide assistance or opportunities to meat/poultry processors.
- Continue current efforts (events, website, etc.) to promote Small Plant Help Desk and assist local meat and poultry stakeholders.

Use of the Voluntary Claim “Natural” on Labeling of Meat and Poultry Products
FSIS currently has policy guidance that states the criteria for when “natural” may be used in the labeling of meat and poultry products. However, there has been much controversy over which products qualify to be labeled as “natural.” FSIS was petitioned by Hormel in 2006 to initiate rulemaking to codify the definition of the voluntary claim “natural” and clarify the circumstances under which the claim may be used in the labeling of meat and poultry products. In 2006, FSIS also received over 12,000 comments in response to a public meeting and a Federal Register Notice on the “natural” claim. In 2009, FSIS received over 7,500 comments in response to an advanced notice of proposed rulemaking asking for comments on the seven major issues raised in the 2006 proceedings. In 2014, Consumer Reports’ Food Safety and Sustainability Center and various other consumer and animal welfare advocacy organizations petitioned FSIS to issue an
interpretive rule to prohibit use of the claim “natural” in the labeling of meat and poultry products. The Agency will seek to clarify and resolve issues surrounding use of the “natural” claim in the labeling of meat and poultry products.

**Declare Antibiotic-Resistant (ABR) Strains of Salmonella Adulterants**

The Center for Science in the Public Interest petitioned FSIS in 2014 requesting that FSIS issue an interpretive rule to declare ABR strains of Salmonella Hadar, Salmonella Heidelberg, Salmonella Newport, and Salmonella Typhimurium to be adulterants in all raw meat and raw poultry products. There is much media and public interest in ABR pathogens. A few members of Congress are also interested.

**Genetically Modified Organism (“GMO”) Labeling**

FSIS will evaluate all labels with GMO or non-GMO claims. Examples of acceptable negative claims related to the nonuse of GMO feed or ingredients for single-ingredient products include, “Pasture raised beef fed a vegetarian diet with no bioengineered ingredients,” “Chicken raised on a diet containing no genetically engineered ingredients,” or “Derived from beef fed no GMO feed.” Examples of acceptable non-GMO claims for multi-ingredient products include, “Contains No GMO ingredients,” “No genetically modified ingredients,” “Ingredients used are not bioengineered,” and “No genetically engineered ingredients through the use of modern biotechnology.” FSIS recently published guidelines for establishments that wish to use these types of claims on the labeling of meat, poultry and egg products. Because FSIS does not have the ability to independently verify negative claims for ingredients or feed, FSIS has required establishments that make these claims to comply with standards established by a third-party certifying organization. FSIS currently requires that the third-party certifying organization’s standards be publicly available on a web site and the label or labeling disclose the web site address of the third-party certifying organization. For products that qualify for an “organic” claim under the NOP, establishments are not required to provide FSIS with additional documentation for approval of negative claims. FSIS is also collaborating with AMS on the use of these claims with respect to the recently enacted Public Law 114-216 instructing AMS to publish regulations that will provide criteria for mandatory labeling of GMO containing ingredients.

**FSIS and AMS Labeling Coordination**

Both FSIS and Agricultural Marketing Service (AMS) have a role in the labeling of meat and poultry products. FSIS is responsible for reviewing all labeling claims made on these products and ensuring that they are truthful and not misleading. Through the Process Verified Program, AMS works with companies on a voluntary basis to verify certain marketing claims. Stakeholder interest in marketing claims, such as grass fed, humanely raised and natural, has increased in recent years and USDA has been criticized when AMS and FSIS have not been perfectly aligned on the meaning of certain claims. In response to stakeholder feedback and in an effort to ensure improved coordination between the agencies, FSIS and AMS are working together on standard operating procedures to ensure coordination and collaboration on labeling issues (for example, AMS consultation on a standard’s validity, and new labeling policies and regulations that would affect both agencies). In addition, FSIS is working with AMS to develop a plan to post the standards for labeling claims in an online “reading room,” in order to increase transparency and
reduce consumer confusion. Finally, the agencies are working together to determine the scope of potential umbrella rulemaking that would include a number of marketing claims, as well as stronger verification requirements.

**Timeline**

January 2017, the Agency is expecting to:
- Participate as a co-sponsor of the Partnership for Food Safety Education conference, which seeks to communicate and share how to change consumer behavior through education.

February 2017, the Agency is expecting to:
- Issue a proposed rule to define the conditions under which the voluntary claim “natural” may be used on the label or in the labeling of meat and poultry products.
- Issue a final rule to amend the Federal meat inspection regulations to eliminate the requirements for both ready-to-eat (RTE) and not-ready-to-eat (NTRE) pork and pork products to be treated to destroy trichina (Trichinella spiralis) because the regulations are inconsistent with the Hazard Analysis and Critical Control Point (HACCP) regulations, and these prescriptive regulations are no longer necessary. This final rule would also consolidate the regulations on thermally processed, commercially sterile meat and poultry products (i.e., canned food products containing meat and poultry).

March 2017, the Agency is expecting to:
- Work with Department of Defense to develop a Memorandum of Understanding (MOU) to formalize and strengthen collaboration on food safety and food defense issues in the U.S. and abroad.

April 2017, the Agency is expecting to:
- Issue a final rule to amend the poultry products inspection regulations to list Honduras as eligible to export poultry products to the United States.
- Issue a final rule to amend the poultry products inspection regulations to list Poland as eligible to export poultry products to the United States.
- Issue notice to the union of intent to bargain the Agency Labor Management Agreement.

May 2017, the Agency is expecting to:
- Issue a proposed rule to amend its labeling regulations to establish criteria for when meat products derived from calves can be called "veal."
• Continue the multi-year multi-agency (CDC, FDA, ARS, FSIS) initiative to enhance the level of detail when characterizing individual pathogen strains by conducting whole genome sequencing (WGS). The result will be improved speed and efficiency in the analysis and reporting of regulatory results which will allow for a higher level of accuracy when identifying and preventing foodborne illnesses and containing outbreaks.

July 2017, the Agency is expecting to:

• Implement an electronic export application and certification system, which will be a component of the Agency’s Public Health Information System (PHIS).

MISSION AREA BRIEFING MATERIAL

The Mission Area template contains the following sections:

I. Organizational Overview

   Mission Area Fact Sheet
   Organizational Chart
   Biographies for Career and Political Staff in Key Leadership Positions
   Overview of Agency Programs and Operations
   Budget and Staffing Summary

II. Top Issues/Hot Topics

   Timeline
   Mission Area Issues
   GAO and OIG Audits
AGENCY BRIEFING MATERIAL

Each Agency template contains the following sections:

I. **Organizational Overview**

   Agency Fact Sheet  
   Agency’s Mission/Strategic Plan  
   Key Mission Delivery Performance Measures  
   Organization’s History  
   Organizational Chart  
   Biographies of Career Staff in Key Leadership Positions  
   Biographies of Political Staff in Key Leadership Positions  
   Organizational Budget and Financial Management  
   Enterprise Workforce Data

II. **Policies and Regulations**

   Statutory Authorities  
   Important Policies and Regulations  
   Overview of the Policy/Regulation Review Process  
   GAO and OIG Audits

III. **Congressional Relations and Issues**

   Overview

IV. **Internal and External Stakeholders**

   Important Relationships with Other Federal Departments or Organizations  
   Stakeholder Group Overview

WHAT WE DO: OUR MISSION
The Research, Education, and Economics (REE) mission is responsible for advancing scientific knowledge related to food and agriculture through research, extension, and education. Four agencies (and the Office of the Chief Scientist) comprise the REE Mission area: Agricultural Research Service (ARS), Economic Research Service (ERS), National Agricultural Statistics Service (NASS), National Institute of Food and Agriculture (NIFA). Also, the Under Secretary is USDA’s Chief Scientist with USDA-wide responsibilities for scientific integrity and coordination of research and education. The National Agricultural Research, Extension, Education, and Economics (NAREEE) Advisory Board provides advice to the Secretary and Congress on relevance and adequacy of REE programs.

WHO WE ARE: OUR WORKFORCE
REE Agency Employment (approximations):
- ARS: 7,700 Employees
- ERS: 360 Employees
- NASS: 950 Employees
- NIFA: 390 Employees
- OCS: 7 Employees
- REE: 10 Employees

WHO WE SERVE: OUR CONSTITUENTS
REE provides scientific research, economic research and analysis, and statistical information to inform USDA program and policy decisions, science-based solutions to farmers and agriculture industry, and educational programs for the next generation workforce.

KEY UPCOMING DECISIONS
- National Action Plan for Combating Antibiotic Resistant Bacteria (CARB): Whether to request funding from the REE agencies and across other Mission Areas of USDA for CARB activities as a priority initiative.
- The Billion-Ton Bioeconomy Initiative: In February 2017 USDA and DOE are expected to sign an MOU supporting Bioenergy R&D and Joint Vision. Following the MOU signing, the launch of the Interagency Action Plan on the Bioeconomy is expected.
- U.S. Farm Income Forecasts: The first ERS release for 2017 will happen in February. Forecasts are used by USDA and its stakeholders to inform perspectives on the financial health of the U.S. agricultural economy.

BUDGET HIGHLIGHTS FY 2016
- REE Undersecretary Office $893,000 in Office of the Secretary’s budget
- Mission area agencies total appropriation in FY 2016 is over $3.3 billion.
- Office of the Chief Scientist and the NAREEE Advisory Board funded through REE agencies
- REE appropriation in inflation adjusted dollars is less than in 2010

October 28, 2016
The Office of the Under Secretary of Research, Education, and Economics currently has 10 staff members, including the Under Secretary, Dr. Cathie Woteki. The Deputy Under Secretary, Dr. Ann Bartuska, is a career USDA employee. The positions of Chief of Staff, Senior Advisor, and Confidential Assistant are currently filled by political appointees. The Communications Director and Public Affairs Specialist positions are filled by career USDA employees. The two executive assistants and the program assistant are also career USDA employees.

**Biographies for career and political staff in key leadership positions**

**Dr. Catherine (Cathie) Woteki**  
**Under Secretary for Research, Education, and Economics and Chief Scientist (Political)**  
202-720-5923, catharine.woteki@osec.usda.gov

Dr. Catherine Woteki is Under Secretary for United States Department of Agriculture's (USDA) Research, Education, and Economics (REE) mission area, as well as the Department's Chief Scientist. Her responsibilities include oversight of the four agencies that comprise REE, the Agricultural Research Service (ARS), National Institute for Food and Agriculture (NIFA), Economic Research Service (ERS), National Agricultural Statistics Service (NASS), and the Office of the Chief Scientist. The National Agriculture Library and National Arboretum, are within ARS and thus, also fall under this mission area.

Before joining USDA, Dr. Woteki served as Global Director of Scientific Affairs for Mars, Incorporated, where she managed the company's scientific policy and research on matters of health, nutrition, and food safety.

From 2002 to 2005, she was Dean of Agriculture and Professor of Human Nutrition at Iowa State University, where she was also the head of the Agriculture Experiment Station. Dr. Woteki served as the first Under Secretary for Food Safety at USDA from 1997 to 2001, where she oversaw U.S. Government food safety policy development and USDA's continuity of operations planning. Dr. Woteki also served as the Deputy Under Secretary for REE at USDA in 1996.

Prior to going to USDA, Dr. Woteki served in the White House Office of Science and Technology Policy as Deputy Associate Director for Science from 1994 to 1996. During that time she co-authored the Clinton Administration’s policy statement, “Science in the National Interest.” Dr. Woteki has also held positions in the National Center for Health Statistics of the U.S. Department of Health and Human Services (1983 to 1990), the Human Nutrition Information Service at USDA (1981 to 1983), and as Director of the Food and Nutrition Board of the Institute of Medicine at the National Academy of Sciences (1990 to 1993). During her tenure as Director of the Food and Nutrition Board she had direct responsibility for twenty-seven studies and co-authored a nutrition book entitled Eat for Life which became a Book of the Month Club selection.

Dr. Woteki’s research interests include nutrition, food safety policy, risk assessment, and health survey design and analysis. She is the author of over sixty refereed scientific articles and twelve books and technical reports.
In 1999, Dr. Woteki was elected to the Institute of Medicine of the National Academy of Sciences, where she has chaired the Food and Nutrition Board (2003 to 2005). She received her M.S. and Ph.D. in Human Nutrition from Virginia Polytechnic Institute and State University (1974). Dr. Woteki received her B.S. in Biology and Chemistry from Mary Washington College (1969).

Dr. Ann Bartuska  
Deputy Under Secretary for Research, Education, and Economics  
202-720-5923, ann.bartuska@osec.usda.gov

Dr. Ann M. Bartuska is Deputy Under Secretary for USDA's Research, Education, and Economics (REE) mission area. She came to REE in September, 2010 from the USDA Forest Service, where she was Deputy Chief for Research & Development, a position she had held since January 2004. She served as Acting USDA Deputy Undersecretary for Natural Resources and Environment from January - October of 2009, and was the Executive Director of the Invasive Species Initiative of the Nature Conservancy from 2001-2004. Prior to this, she was the Director of the Forest and Rangelands staff in the Forest Service in Washington, DC.

Dr. Bartuska is an ecosystem ecologist with degrees from Wilkes College (B.S.), Ohio University (M.S.) and West Virginia University (Ph.D.). She represents USDA on the Committee on Environment, Natural Resources and Sustainability of the White House National Science and Technology Council. Bartuska is currently on the Multi-disciplinary Expert Panel (MEP) of the Intergovernmental Panel on Biodiversity and Ecosystem Services (IPBES), chartered by UNEP, and is active in the Ecological Society of America, serving as Vice-President for Public Affairs from 1996-1999 and as president from 2002-2003. She has served as co-chair of the Science and Technology for Sustainability Roundtable of the National Academies, on the Board of the Council of Science Society Presidents, and is a member of AAAS (American Association for the Advancement of Science) and SACNAS (Society for the Advancement of Chicanos and Native Americans in Science).

Dr. Chavonda Jacobs-Young  
Administrator, Agricultural Research Service  
202-720-3656, c.jacobsyoung@ars.usda.gov

Dr. Chavonda Jacobs-Young has served as Administrator of the U.S. Department of Agriculture's chief scientific in-house research agency since February 2014. Previously, Dr. Jacobs-Young had served as ARS Associate Administrator for National Programs, where she led the Office of National Programs, which manages the research objectives of the Agency, and the Office of International Research Programs, which is responsible for ARS' liaison with its international partners.

Prior to moving into her roles at ARS, Dr. Jacobs-Young served as the Director of the Office of the Chief Scientist at USDA, where she was responsible for facilitating the coordination of scientific leadership across the Department to ensure that research supported by, and scientific advice provided to, the Department and external stakeholders were held to the highest standards of intellectual rigor and scientific integrity. She served as the Acting Director for USDA's National
Institute of Food and Agriculture, and has served as a senior policy analyst for agriculture in the White House Office of Science and Technology Policy.

Dr. Jacobs-Young is a native of Georgia. She holds M.S. and Ph.D. degrees in Wood and Paper Science and a B.S. degree in Pulp and Paper Science and Technology from North Carolina State University. She also is a graduate of American University's Executive Leadership in Public Policy Implementation Program.

**Dr. Mary Bohman**  
**Administrator, Economic Research Service**  
202-694-5000, mbohman@ers.usda.gov

Dr. Bohman joined ERS in 1997 and previously served as Director of the Agency's Resource and Rural Economics Division, Deputy Director for Research in the Market and Trade Economics Division (MTED), and Chief of MTED's Europe, Africa, and Middle East Branch. Other public-sector positions held include details to the White House Office of Science and Technology Policy and to USDA's Under Secretary for Farm and Foreign Agricultural Services. From 1990 to 1997 she was on the Agricultural Sciences faculty at the University of British Columbia.

Mary is a member of the Agricultural & Applied Economics Association, the Association of Environmental and Resource Economists, and the International Association of Agricultural Economists. She serves as Co-Chair of the Global Steering Committee for the Global Strategy for Agricultural and Rural Statistics under the United Nations Statistical Commission.

Dr. Bohman received her Ph.D. from the Department of Agricultural Economics, University of California, Davis and her B.S. from the School of Foreign Service, Georgetown University.

**Hubert Hamer**  
**Administrator, National Agriculture Statistics Service**  
202-720-3896, hubert.hamer@nass.usda.gov

Before becoming administrator, Mr. Hamer served as director of the Statistics Division, which produces and releases more than 400 national statistical reports each year covering the agency’s crops, livestock, economic, demographic, environmental, and census programs. He also served as executive director of the NASS Agricultural Statistics Board (ASB) and executive director of the Advisory Committee on Agriculture Statistics. From May 2000 until April 2010, Hamer was NASS Associate Deputy Administrator for Field Operations, overseeing 24 state field offices as well as the Training and Career Development Office.

Hamer completed the program for Senior Managers in Government at Harvard University’s John F. Kennedy School of Government in 2004 and completed the Office of Personnel Management (OPM) Executive Potential Program in 1994. As part of the OPM program, he served as a fellow with the Senate Budget Committee and worked on the staff of the Secretary of Agriculture.
Hamer was born on a small livestock and row crop farm in Benton County, Mississippi, and later continued his development in Grand Junction, Tennessee. He is a graduate of Tennessee State University.

**Dr. Sonny Ramaswamy**  
**Director, National Institute of Food and Agriculture (Political-term)**  
202-720-4423, sonny@nifa.usda.gov

Dr. Sonny Ramaswamy was appointed by President Barack Obama in 2012 to serve as Director of the National Institute of Food and Agriculture. The Director of NIFA serves a six-year term based on legislation and is also subject to reappointment for an additional six-year term.

Prior to starting at NIFA, Dr. Ramaswamy held a number of academic positions, including: Dean of Oregon State University’s College of Agricultural Sciences; Director of Purdue’s Agricultural Research Programs; university distinguished professor and head of Kansas State’s Entomology Department; and professor of entomology at Mississippi State.

Dr. Ramaswamy received his B.S. degree in agriculture and M.S. degree in entomology from the University of Agricultural Sciences, Bangalore, India. His doctorate is in entomology from Rutgers University. He is also a graduate of Harvard University’s Management Development Program.

**Kim Green**  
**Director of the Office of the Chief Scientist**  
202-720-3444, kim.green@osec.usda.gov

Ms. Kim Green was selected to be the Director of the Office of the Chief Scientist in 2014, after eight years of service to USDA within the Food Safety and Inspection Service (FSIS). She held several positions with FSIS, including Acting Deputy Assistant Administrator, Director of the Food Defense and Assessment Staff, and Director of the Data Analysis and Integration Staff. She served as Acting District Manager for the Denver District of the Office of Field Operations, responsible for public health and food safety for the Agency's largest operational region, stretching from Nebraska to Guam. Ms. Green was on detail with the Natural Resources Conservation Service in 2014. Before joining USDA, Ms. Green was Vice President for Research, Science, and Technical Affairs for the International Bottled Water Association.

She holds a Bachelor of Science Degree in Chemistry and a Master of Science in Geochemistry, both from The Colorado School of Mines. She was appointed to the U.S. Army Science Board and served from 1991-1997. Ms. Green is the author or co-author of more than 30 peer-reviewed scientific publications.
Overview of REE Programs and Operations

Mission Statement:
The Research, Education, and Economics (REE) mission area of the U. S. Department of Agriculture has Federal leadership responsibility for advancing scientific knowledge related to food and agriculture through research, extension, and education.

Priority Goals:
Building on REE’s 2010 “A Roadmap for USDA Science,” the REE Action Plan, first developed in 2012 and revised in 2014, establishes goals and priorities for USDA science and education. It includes strategies and actions to help coordinate efforts to achieve these goals:

- Goal 1: Local and Global Food Supply and Security
- Goal 2: Responding to Climate and Energy Needs
- Goal 3: Sustainable Use of Natural Resources
- Goal 4: Nutrition and Childhood Obesity
- Goal 5: Food Safety
- Goal 6: Education and Science Literacy
- Goal 7: Rural-Urban Interdependence and Prosperity

Several goals have sub-goals to provide programmatic emphasis. For each goal or sub-goal, strategies are identified that provide a vision for how the goals can be supported. Through alignment with the various components in the REE plan, USDA agencies demonstrate that their programs support the stated goals, which in turn support the broader Departmental goals, set forth by the Secretary of Agriculture.

The Research, Education, and Economics (REE) mission area works to address the challenges that exist today and those that will confront the country in the future. Through the combined efforts of all REE scientists, researchers, and partners, USDA has created a robust infrastructure to perform world-class science and to deliver classroom and community education and transfer technologies from the labs to the private sector for commercialization.

Major Programs in REE:
The Agricultural Research Service (ARS) is the largest intramural research agency of USDA. ARS has a workforce comprised of life and physical scientists, engineers, and veterinarians who represent a wide range of disciplines and work at more than 90 locations across the country and at 5 overseas laboratories. The ARS research agenda is broad, with about 750 research projects organized under 4 major program areas: Nutrition, Food Safety, and Quality; Animal Production and Protection; Natural Resources and Sustainable Agricultural Systems; and Crop Production and Protection.
The Economic Research Service (ERS) is USDA’s primary source of economic information and analysis, and economic and social science research. The mission of ERS is to inform and enhance public and private decision making on economic and policy issues related to agriculture, food, the environment, and rural development.

The National Agricultural Statistics Service (NASS) is USDA’s statistical agency. NASS conducts hundreds of surveys every year and prepares reports covering virtually every aspect of U.S. agriculture. The statistical data provided by NASS is essential to the public and private sectors for making effective policy, production, and marketing decisions on a wide range of agricultural commodities. NASS also conducts statistical science research on survey design, sampling, and other methodological issue areas. NASS works closely with the States in determining their agricultural profiles.

The National Institute of Food and Agriculture (NIFA) is the primary extramural research, education, and extension funding agency of USDA. Its mission is to invest in and advance agricultural research, education, and extension to solve societal challenges. Some of funding opportunities are specific to the Land-Grant University System, and others open to participation by other academic institutions, government agencies, non-governmental organizations, and even private sector entities.

About 94 percent of NIFA funds are used for program grants that are distributed to science professionals around the country to fund innovative solutions to local and global challenges. Grant recipients include colleges and universities across the nation, including the 112 1862, 1890 and 1994 Tribal Land-Grant Institutions; Hispanic-serving institutions; non-land grant colleges; and other academic organizations. Approximately 51 percent of funding is distributed to programs at land-grant universities and other colleges based on eight legislated formulas, generally referred to as “capacity” funding. Partnerships with federal agencies and other entities leverage NIFA’s investments. Approximately four percent of the NIFA programs support higher education and youth development-related efforts, including 4-H programs through the Cooperative Extension System.

Other USDA Organizations: While other USDA organizations do not directly fall within REE mission area jurisdiction (ex: Forest Service (FS) Research and Development (R&D)), their contribution is vital to USDA’s science agenda. Forest Service R&D provides the basic and applied science that underpins the agency’s efforts to promote resilient forests and sustainable communities that can adapt to forest threats such as climate change, fire, and insect and disease infestations. The knowledge and information gained from this research benefits the American public by improving the health and productivity of the Nation’s forests, and the quality of life of communities by providing protection from fire, improving water and air quality, and supporting other ecosystem services in both urban and rural communities.
Program Planning and Evaluation:
The Department’s Office of the Chief Scientist (OCS) was established pursuant to the 2008 Farm Bill. OCS assists USDA’s Chief Scientist in providing strategic coordination of the science that informs the Department’s decisions, policies, and regulations that affect all aspects of U.S. food and agriculture and related landscapes and communities. OCS advises the Chief Scientist, as well as agency leadership and senior staff across the Department, on science policy and science issues. The Office further participates with the Chief Scientist and agency leadership and senior staff in developing and communicating critical policy and program management decisions. Externally, the OCS provides liaison between the Department and other federal entities, as well as members of academia, and industry groups, in identifying and addressing issues of high scientific priority. The OCS ensures the preparation and dissemination of a broad range of information resource documents critical to policy and decision-making processes. OCS Senior Advisors conduct analytical or policy studies and projects that promote the strategic interests of the U.S. Government.

The Office provides Departmental leadership and coordination for the formulation, administration, interpretation and evaluation of the Department’s science and research integrity policies and initiatives. It ensures that research supported by and scientific advice provided to the Department and its stakeholders is held to the highest standards of intellectual rigor and scientific integrity.

The National Agricultural Research, Extension, Education, and Economics Advisory Board (NAREEEAB) provides advice to the Secretary of Agriculture, Congress and land-grant colleges and universities on top priorities and policies for food and agricultural research, education, extension and economics. The Board is made up of 25 members, each of which represents a specific category of U.S. agricultural stakeholders, as mandated by Congress. The Board is charged to provide recommendations to the Under Secretary of the Research, Education, and Economics mission area on the draft strategic plan and to conduct an annual review of the relevance of the REE programs and activities to the established priorities and the adequacy of funds for those programs. The NAREEE Advisory Board also provides advice and recommendations to the Secretary, Congress, and the land-grant colleges and universities on the National Genetic Resources Program; and on the Citrus Disease Research and Extension Program and the Specialty Crop Research Initiative through mandated annual consultations with the National Institute of Food and Agriculture. The NAREEE Advisory Board recently appointed 7 new members. 15 members of various subcommittees of NAREEE are currently being reviewed for appointment. NAREEE has an additional 9 members whose terms will expire in September 2017 and a solicitation to accept nominations for these members will be posted in early spring 2017. NAREEE is exempt from the chartering requirements of the Federal Advisory Committee Act (7 USC 2123(f)).

The National Agricultural Statistics Service (NASS) Advisory Committee on Agricultural Statistics (ACAS) advises the Secretary of Agriculture on the scope, timing, content, etc., of the periodic censuses and surveys of agriculture, other related surveys, and the types of information to obtain from respondents concerning agriculture. ACAS currently has 9 members with terms expiring in January 2017 and, nominations to replace these members are currently being accepted for review. The ACAS charter is current and will not be up for renewal until August 15, 2018.
### Budget and Staffing Summary

The Research, Education, and Economics appropriation in 2016, in inflation adjusted dollars is less than in 2010.

**Office of the Chief Scientist**
The 2008 Farm Bill authorizes funding for OCS’ operation through the transfer of funds from agencies within REE.

**National Agricultural Research, Extension, Education, and Economics (NAREEE) Advisory Board**
The National Agricultural Research, Extension, and Teaching Policy Act of 1977, as amended, sets a cap of $500,000 annually (including staff salaries) for the operation of the NAREEE Advisory Board. The REE mission area agencies share in the cost of the Board based on an established percentage: Economic Research Service – 10%; National Agricultural Statistics Service – 10%; Agricultural Research Service – 40%; National Institute of Food and Agriculture – 40%.

**II. Top Issues/Hot Topics**

**Timeline**
The REE Action Plan Report on progress will be compiled over the first few months of 2017. The REE Report to Congress will be compiled simultaneously. There are several board meetings that will take place in the beginning of 2017 including the CARB Advisory Council in January. The BRDi Board meets quarterly, with the first meeting likely to take place in late March. In April, a meeting of the Foundation for Food and Agriculture Board meeting including *ex officio* members will occur. The NAREEE Board will also meet in April. The CARB Advisory Council will convene again in May.
Mission Area Issues

- **Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria (PACCARB):** The PACCARB was established in September 2015 by the HHS Secretary in consultation with the Secretaries of Agriculture and Defense. The [charter](#) describes PACCARB’s role to provide advice, information, and recommendations regarding programs and policies intended to support and evaluate the implementation of the Combating Antibiotic Resistant Bacteria (CARB) Executive Order 13676, including the National Strategy and the **National Action Plan for Combating Antibiotic-Resistant Bacteria**. OCS works with HHS, DoD and the PACCARB co-chairs supporting interagency meetings, coordinating USDA participation and inputs to PACCARB, and serving as Alternate Ex-Officio.

- **Billion-Ton Bioeconomy Initiative:** Seven agencies constitute the U.S. Government’s Biomass Research and Development Board which developed the billion ton bioeconomy initiative. USDA along with other agencies engaged in clean energy research and development are working to find innovative ways to accelerate results. In February 2017 USDA and DOE are expected to sign an MOU supporting Bioenergy R&D and Joint Vision. Following the MOU signing, the launch of the Interagency Action Plan on the Bioeconomy is expected.

- The Economic Research Service’s **U.S. Farm Income Forecasts** are updated three times per year, including the first release for 2017 that will take place during the first half of February. The ERS farm income and finance program measures, forecasts, and explains indicators of economic performance for the U.S. farm sector and farm businesses by resource region and commodity specialization. The program's data and analysis are used by USDA and its stakeholders to better understand factors related to the financial health of the U.S. agricultural economy. The analysis is useful in identifying subsectors and business types that are performing particularly well, or poorly, relative to past trends and to other types of farms. Financial performance measures include the farm sector's receipts and expenses; gross and net value added; and both net cash farm income and net farm income. Measures also include changes in the sector's assets, debt, and overall wealth, as well as financial ratios that depict solvency, liquidity, and efficiency. Taken together, the measures summarize the financial condition of the farm sector.

- The **USDA Climate Hubs** were established in 2014 to develop and deliver science-based, region-specific information and technologies to agricultural and natural resource managers; to enable climate-informed decision-making; and direct land managers to USDA agency programs and regional partners to build resilience to climate variability. Five Hubs are hosted by ARS and five are hosted by the FS. The Hubs focus on partnership development, stakeholder engagement, regional assessments, information synthesis, tool development, adaptation demonstrations, education, research outreach and translation.
- **Scientific Integrity:** In December 2015, the Chief Scientist, in consultation with the USDA Science Council, accepted recommendations made by the Departmental Scientific Integrity Officer (DSIO) to revise DR 1074-001. In accordance with the delegations of authority specified in Title 7 CFR 2.21a(11)(iv), the Under Secretary for REE, as the USDA Chief Scientist, has primary responsibility for “[developing] mechanisms to address scientific integrity within the Department.” Accordingly, the Chief Scientist has overall responsibility for the USDA Scientific Integrity Policy, which was established by the issuance of Departmental Regulation (DR) 1074-001 (“Scientific Integrity”) on May 10, 2013. In December 2015, the Chief Scientist, in consultation with the USDA Science Council, accepted recommendations made by the Departmental Scientific Integrity Officer (DSIO) to revise DR 1074-001. A revised version of the DR and an accompanying procedural manual were subsequently drafted by the DSIO in collaboration with USDA agency and staff office representatives (i.e., the Agency Scientific Integrity Officers), and entered into the USDA Directives clearance system in June 2016. As of October 6, 2016, final clearances for issuance of the revised DR and manual were pending.

- **The National Agricultural Research, Extension, Education, and Economics (NAREEE) Advisory Board:** The NAREEE Board’s Citrus Disease Subcommittee will meet February 2-3, 2016, to conduct the annual mandated consultation with the National Institute of Food and Agriculture on the agenda and annual priorities and budget for the Citrus Disease Research and Extension (CDRE) Program. The Citrus Disease Subcommittee will draft and issue a letter of recommendations to USDA in the 2nd quarter of 2017. These recommendations will potentially influence the Request for Pre-Proposal Applications for the CDRE program.

- **The Foundation for Food and Agriculture Research (FFAR)** was authorized by Congress as part of the 2014 Farm Bill and operates as a non-profit corporation leveraging public and private resources to increase the scientific and technological research, innovation, and partnerships critical to boosting America's agricultural economy. Congress initially provided $200 million for FFAR which must be matched by non-federal funds as FFAR identifies and approves projects. The REE Under Secretary, with the support of the Office of the Chief Scientist, is delegated by the Secretary to lead the USDA review of proposed FFAR activities to ensure that the Foundation’s work complements USDA activities. USDA and FFAR are in the process of finalizing a Memorandum of Understanding between USDA and the Foundation. The MOU will formalize the working relationship between USDA and FFAR, as FFAR becomes a partner in supporting the research initiatives of USDA. The Board adopted an aggressive plan to spend down the $200M by the end of 2018. The majority of the funds will be allocated to challenge areas the Board identified and a proportion of funds will be held for other priorities that may arise. We are asked to submit ideas for specific projects we would like FFAR to undertake within both categories (challenges and other opportunities). All of which is dependent on finding non-Federal partners with matching funds. Concerns remain about oversight of financial matters within FFAR.
United States Department of Agriculture  
2016 Presidential Transition  
Research, Education, and Economics Mission Area (REE)

- **National Bio and Agro-Defense Facility (NBAF):** Since 2004, DHS and USDA have worked closely to fulfill the Homeland Security Presidential Directive 9 mandate for the agencies to plan to establish safe, secure, state-of-the-art agriculture biocontainment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic diseases (those that can pass between animals and humans). The NBAF—a $1.25 billion next-generation biocontainment facility under construction in Manhattan, Kansas—is the result of DHS’ and USDA’s planning efforts (including APHIS and ARS). The NBAF will replace existing, aging biocontainment laboratories located at the Plum Island Animal Disease Center (PIADC) in Orient Point, New York. DHS has received all of the NBAF construction funds and plans for the NBAF to be fully operational in 2023. USDA is working closely with DHS on the transition planning for the move from PIADC to NBAF. In its version of the 2017 appropriations bill, the Senate Agriculture Appropriations Subcommittee included language encouraging DHS and USDA to work together on a plan for the future operation of NBAF, including consideration of the appropriate agency to manage the facility. As a result, USDA and DHS face several complex technical and financial questions, including: long term administration costs, technical expertise in managing a facility with private sector tenants, and any additional management requirements for BSL-4 level facilities. It is estimated that it will require significant sums to operate the facility. Any transition to USDA would require a corresponding increase in resources for USDA.

- **The National Animal Health Laboratory Network (NAHLN):** is the Nation’s system for surveilling for animal disease. R&D is needed to support the 5 pillars related to high consequence animal disease threats: Prepare, Prevent, Detect, Respond, and Recover (PPDRR). R&D is inadequately funded and most pillars are far from completion. The National Institute of Food and Agriculture (NIFA) has no reliable stream of sufficient funding to engage the extramural scientific community leaving the animal health-resource challenged Agricultural Research Service to do most of the work through intramural research. A competitive program prioritizing R&D imperatives within and between all 5 PPDRR pillars would be a great boost to agriculture security. NIFA’s Food and Agriculture Defense Initiative (FADI) needs approximately $30-40 M for improving infrastructure. The NAHLN provides a framework for a network of labs to coordinate emerging disease detection. Samples often go to university labs rather than federal labs and there are differences across universities in capabilities, equipment, and resources. A negative test in one university may not be as reliable if another university has better capabilities to analyze samples. Laboratories with different capabilities using different technologies must be able to communicate. Without harmonized processes and coordination, early detection is challenging. Presently, much work is being accomplished through good will. For example, APHIS provides fee for service for surveillance but labs are doing more than they are being funded for: the situation will not continue indefinitely. The Federal Government is dependent on the civilian sector to provide reagents. If there is an event for which there is only one or a few supplier(s) of reagents and they become overwhelmed or are unable to produce, testing will not be possible. NIFA funding to laboratories through the NAHLN has been cut approximately 40% and is insufficient for
infrastructure maintenance and response. In 2006, NAHLN was able to respond to three foreign animal diseases. By 2014, that number has only risen to four because of decreased funding.

- The **Global Open Data for Agriculture and Nutrition** (GODAN) is a partnership of over 370 partners from national governments and nongovernmental, international, and private sector organizations seeking to make data on agriculture and nutrition open, available, useable, and accessible for unrestricted use worldwide. The Office of the Chief Scientist coordinates the U.S. Government participation in the GODAN initiative. It is anticipated that both the chairs of the 2017 G7 and the G20, Italy and Germany respectively, will take up the open data for agriculture and nutrition topic as a priority for their terms.

- **China Garden**: The Chinese government recently agreed to fund the construction of the National Chinese Garden Project (China Garden) at the National Arboretum. Official groundbreaking was scheduled to take place in late October 2016. The Chinese government has agreed that they will hire and pay directly all contractors. Previously, the National China Garden Foundation (NCGF) was identified to be the hiring authority and as such, there were concerns on the availability of funds to pay for construction. The recently completed MOU with the Chinese government makes clear the new intent of the Chinese to hire, manage and pay for all contractors related to the construction of the China Garden. The MOU also includes provisions to protect the interests of the U.S. National Arboretum since authority to direct the operations of the contractors will no longer reside with NCGF. Additional provisions include hours of access to, and prohibiting any contractor housing on Arboretum grounds. Finally, the Chinese indicated their intent to complete construction in 3 years. The next steps are for NCGF to raise the endowment for maintenance and to monitor all aspects of construction through an Owners’ Representative hired specifically for that role.

**Under Secretary’s Board Commitments**
The Under Secretary serves on the following boards:

- Biomass Research and Development Board (BRDB)
- National Science and Technology Council (NSTC) Committee on Homeland and National Security (CHNS)
- NSTC Committee on Science (CoS)
- NSTC Committee on Technology (CoT)
- NSTC Task Force on Ebola-Response Science and Technology
- NAREEE Advisory Board
- Foundation for Food and Agriculture
- Global Research Alliance
- China MOST Joint Working Group
- India Joint Working Group
Deputy Under Secretary’s Board Commitments
The Deputy Under Secretary serves on the following boards:

- NSTC Committee on Environment, Natural Resources, and Sustainability (CENRS)
- NSTC Committee on Science, Technology, Engineering, and Math (CoSTEM)
- Chair, NSTC subcommittee on Global Change Research
- 4H Board of Trustees
- NAS Science and Technology For Sustainability Roundtable
- Vice-Chair Civil Applications Committee (CAC)
- Co-chair NSTC Interagency Working Group on Scientific Collections

</table>
WHAT WE DO: OUR MISSION

The Agricultural Research Service (ARS) is the U.S. Department of Agriculture’s chief in-house scientific agency. ARS conducts research on agricultural problems of high national and global priority. Our job is finding solutions to challenges that affect our stakeholders every day from field to table. Our research ensures high-quality, safe food, and other agricultural products; assesses the nutritional needs of Americans; sustains a competitive agricultural economy; enhances the natural resource base and the environment and provide economic opportunities for rural citizens, communities, and society as a whole.

WHO WE ARE: OUR WORKFORCE

- Roughly 7700 employees at 90 locations around the Nation, including the National Arboretum, National Agricultural Library, and 4 overseas laboratories
- Scientific personnel including roughly 1600 scientists, 3500 support scientists and technicians, and 250 Post Docs
- About 2500 programmatic and administrative personnel, including program leaders, librarians, information technology and administrative specialists

WHO WE SERVE: OUR CONSTITUENTS

ARS serves the public, producers, commodity groups, non-governmental organizations, the academic and scientific communities, state and local governments, and Federal action and regulatory agencies such as APHIS, FSIS, NRCS, FS, EPA, DOE, NIH, and others.

KEY UPCOMING DECISIONS

- In FY 2012, ARS completed a Capital Investment Strategy to modernize and/or rebuild critical facilities housing high priority research. The FY17 budget includes a request of $94.5 million to make much needed investments in Salinas, California and Frederick, Maryland. A decision is required on the level of support for ARS capital investments in the FY 2018 President’s Budget.
- ARS is undertaking an assessment of the Administrative and Financial Services Division, which serves the REE agencies. The assessment, slated for completion in February 2017 and performed in partnership with the National Academy of Public Administration, may result in organization structure changes. As such, a reorganization package, per Departmental Regulation 1010, will possibly be submitted in February or March timeframe. Decision points may possibly include restructuring the organization and relocation of employees.

BUDGET HIGHLIGHTS FY 2016

- $1.36 billion discretionary budget, including $1.12 billion for research programs (including NAL), $20.1 million for repair and maintenance, $5.1 million for GSA rent and DHS security payments, and $212.1 million for Buildings and Facilities (B&F). The graph reflects only research programs.
- Since 2015, ARS has been appropriated $257.1 million in B&F ($212.1 million in FY 2016 and $45 million in FY 2015), which provides resources for seven (7) of 21 projects identified in the 2012 Capital Investment Strategy.

2016 ARS Research Program

- Product Quality/Value Added
- Livestock Production
- Livestock Protection
- Crop Production
- Crop Protection
- Food Safety
- Human Nutrition
- Environmental Stewardship
- National Agricultural Library
I. **Organizational Overview**

**Agency’s Mission/Strategic Plan**

**Mission Statement**
ARS conducts research to develop and transfer solutions to agricultural problems of high national priority and provide information access and dissemination to:
• Ensure high-quality, safe food, and other agricultural products;
• Assess the nutritional needs of Americans;
• Sustain a competitive agricultural economy; and
• Enhance the natural resource base and the environment and provide economic opportunities for rural citizens, communities, and society as a whole.

**Vision**
Lead America towards a better future through agricultural research and information.

**The ARS Strategic Plan**

**Key mission delivery performance measures**

ARS’ key performance measures for its research are defined in its FY 2012-2017 Strategic Plan. Given the fundamental nature of research programs, these are qualitative in nature, as are the indicators listed annually in ARS’ Annual Performance Plan. These performance measures and indicators are also part of the Agency’s annual budget submission. ARS reports progress and outcomes for these measures and indicators in its Annual Performance Report. The ARS Strategic Plan and the combined ARS Annual Performance Report for FY 2015 and Performance Plan for FY 2016-2018 can be found on the [Plans and Reports page of ARS’ web site](https://www.ars.usda.gov/ARSUserFiles/00000000/StrategicPlan/USDAARSFY2012-2017StrategicPlan.pdf). Older reports are available through the [GPRA archive](https://www.ars.usda.gov/ARSUserFiles/00000000/StrategicPlan/USDAARSFY2012-2017StrategicPlan.pdf).

ARS’ Strategic Research Goals, Performance Measures, and Indicators for the past five years are listed below. Progress (outcomes and impacts) made annually for these indicators is narrative and contained in the annual performance report referenced above.

**Goal 1.1 - Enable Americans to make health-promoting, science-based dietary choices.**

Performance Measure: Monitor nutrient composition of food supply and consumption by Americans while conducting research on life stage nutrition and metabolism. Strengthen the scientific basis for dietary guidance for health promotion and disease prevention and develop strategies for prevention of obesity and related diseases.
Indicators:
- ARS will survey, release data on, and analyze national food consumption patterns of Americans.
- ARS will develop new methods, conduct food composition analyses, and compile databases for known, emerging, and new classes of nutrients.
- ARS will develop new methods, conduct food composition analyses, and compile databases for known, emerging, and new classes of nutrients and for branded food items.
- ARS will identify dietary and lifestyle intervention strategies to prevent obesity and promote healthy food choices and eating behaviors.
- ARS will determine the functions, bioavailability, interactions, and requirements for known, emerging, and new classes of nutrients across the lifecycle.
- ARS will publish new findings on metabolic processes that are affected by nutrient intake.
- ARS will discover genetic or epigenetic factors that influence physiologic responses to diet or changes in gene expression in response to dietary intake.
- ARS will identify processes and methods whereby agriculture production influences the nutritional value of the food supply.

Goal 1.2 – Protect food from pathogens, toxins, and chemical contamination during production, processing, and preparation.

Performance Measure: Develop new technologies that assist ARS customers in detecting, identifying and controlling foodborne diseases associated with the consumption of animal products that affect human health.

Indicators:
- ARS will determine how population systems in animals, plants, or the environment, or any combination of these influence the safety of food. Determine the conditions under which microorganisms exist. Determine how microorganisms may in turn influence the conditions prevailing in the environment. Ensure that these technologies can be utilized by regulatory agencies, producers and/or processors to help assure safe food products.
- ARS will develop an understanding of bacterial, viral, and fungal pathogenicity through a systems biology approach. Utilize this data for pathogen intervention and control, modeling, and providing data for the development of risk assessments by regulatory agencies. Ensure that these technologies can be utilized by regulatory agencies, producers and/or processor to help assure safe food products.
- ARS will develop innovative methods and advanced technology systems that rapidly and accurately detect, identify, and differentiate the most critical and economically important foodborne bacterial, viral, and protozoan pathogens. Ensure that these technologies can be utilized by regulatory agencies and/or producers to help assure safe food products.
- ARS will develop intervention and control strategies that will help to significantly decrease or eliminate pathogens in food animals and their derived products (eggs/milk), seafood, and plant crops (produce/grains/tree nuts) during critical periods of production and processing. Develop and subsequently combine new/innovative processing technologies using the intelligent hurdle concept. Ensure that these technologies can be utilized by producers and/or processors to help assure safe food products.
• ARS will develop bioinformatic databases and tools, and predictive user-friendly models to understand pathogen behavior and acquisition of virulence characteristics under various stress conditions. Determine the key risk factors of human pathogens in foods, and evaluate systems interventions for their impact, which will enable regulatory/action agencies to make critical food safety decisions that impact public health.

• ARS will develop innovative methods and advanced technology systems that rapidly and accurately detect and identify veterinary drugs, chemical residues, heavy metals, persistent organic pollutants, and biological toxins derived from bacteria, fungi, and plants. Evaluate contaminant toxicity and mechanism of action. Provide data which will enable regulatory/action agencies to make critical food safety decisions that impact public health.

• ARS will develop approaches to understand the development, persistence, and transmission of antimicrobial resistant (AMR) genetic elements that result in antimicrobial resistant foodborne pathogens. Develop and validate assays to rapidly detect and assess AMR pathogens. Develop and evaluate alternatives to antibiotics to reduce the development of AMR in foodborne pathogens.

Goal 1.3 – Enhance the economic viability and competitiveness of U.S. agriculture by maintaining the quality of harvested agricultural commodities or otherwise enhancing their marketability, meeting consumer needs, developing environmentally friendly and efficient processing concepts, and expanding domestic and global market opportunities through the development of value-added food and nonfood technologies and products, except energy and fuels.

Performance Measure: Develop methods and technologies to better define, measure, preserve or enhance quality and improve utilization of food crops, animals and agricultural fibers, as well as non-food, non-fuel biobased products and sustainable technologies/processes.

Indicators:
• ARS will develop technologies leading to new or improved products from bio-based (agricultural) renewable resources, residues, and wastes.
• ARS will develop new or improved methods to measure or predict marketable and or nutritional quality, or to sort by quality.
• Enable commercially-viable post-harvest technologies for non-food biobased products and for value-added non-food processing.
• Develop new or improved methods to measure, predict, enhance or reduce impacts to food marketability, nutritional quality, new bioactives and functional foods, and/or food processing technologies.

Goal 2.1 – Integrated, effective, and safe water resource management.

Performance Measure: Develop technology and practices to promote improvement of integrated, effective and safe water resource management.
Indicators:
• ARS will develop new or improved guidelines, technologies, and/or knowledge to increase the effectiveness of agricultural water management.
• ARS will develop new or improved guidelines, technologies, and/or knowledge to reduce erosion and sedimentation from agricultural lands and/or improve water quality.
• ARS will develop new or improved knowledge, tools, technologies, guidelines, and/or conservation practices to better protect water resources, improve the overall effectiveness of USDA conservation programs, and/or improve watershed management and ecosystem services in agricultural landscapes.

Goal 2.2 – Improve quality of atmosphere and soil resources, understand effects of climate change.

Performance Measure: Improve quality of atmosphere and soil resources; understand effects of climate change through development of knowledge and technologies.

Indicators:
• ARS will assess the potential risks and benefits to agricultural systems from climate change, and develop agricultural management practices and decision support strategies that enable producers to take advantage of the beneficial effects, and adapt to the adverse effects of climate change.
• ARS will develop management practices and decision tools to improve soil quality, protect the environment, and contribute to the sustainability of agricultural systems.
• ARS will assess the greenhouse gas emissions from agricultural systems and develop methods for reducing the emissions.

Goal 2.3 – Enable new biorefining technologies to support an economically robust biorefining industry.

Performance Measure: Enable new commercially-viable technologies to (1) convert agricultural materials and byproducts into fuels and other marketable products, and (2) reduce risks and increase profitability in existing industrial biorefineries.

Indicators:
• ARS will enable technologies that can reduce business risks, increase the value of co-products, and/or expand the number of revenue streams for existing biorefineries.
• ARS will enable technologies for the production of new biofuels which are compatible with the Nation’s existing fuel distribution infrastructure.

Goal 2.4 – Effectively and safely manage and use manure and other agricultural and industrial byproducts in ways that maximize their potential benefits while protecting the environment and human and animal health.

Performance Measure: Effectively and safely manage and use manure and other agricultural and industrial byproducts in ways that maximize their potential benefits while protecting the environment and human and animal health.
Indicators:
• ARS will increase utilization of manure nutrients and resources.
• ARS will reduce manure pathogens and Pharmaceutically Active Compounds (PACs).
• ARS will reduce atmospheric emissions from animal production facilities.
• ARS will develop beneficial uses of agricultural, industrial, and municipal byproducts.

Goal 2.5 - Develop and transfer economically viable and environmentally sustainable production and conservation practices, technologies, plant materials and integrated management strategies, based on fundamental knowledge of ecological processes, that conserve and enhance the nation's diverse natural resources found on its range, pasture, hay, and turf lands.

Performance Measure: Develop and transfer economically viable and environmentally sustainable production and conservation practices, technologies, plant materials and integrated management strategies, based on fundamental knowledge of ecological processes, that conserve and enhance the Nation's diverse natural resources found on its range, pasture, hay and turf lands.

Indicators:
• ARS will provide improved germplasm and cultivars that can be released for pasture, harvested forages, turf, biofuels, rangeland restoration, and conservation. (2014, 2015, 2016, 2017, 2018)
• ARS will provide forage, pasture, and rangeland management technologies and strategies that reduce inputs while improving livestock performance and sustaining the environment.

Goal 2.6 – Develop integrated solutions to solve challenges related to agricultural system productivity, profitability, energy efficiency, and natural resource stewardship.

Performance Measure: Develop integrated solutions to solve challenges related to agricultural system productivity, profitability, energy efficiency, and natural resource stewardship.

Indicators:
• ARS will develop integrated solutions to solve challenges related to agricultural system productivity, profitability, energy efficiency, and natural resource stewardship.
• ARS will develop integrated solutions to increase agricultural system productivity, profitability and natural resource stewardship with metrics to describe the sustainability of the solutions.

Goal 3.1 – Protect, expand, and enhance the United States’ crop genetic resource base, increase scientific knowledge of crop genes, genomes, biological processes and systems, and deliver economically and environmentally sound technologies that improve the production efficiency, quality, health and value of the nation’s crops.
Performance Measure: Develop knowledge, strategies, systems and technologies that maximize the production efficiency of our annual, perennial, greenhouse and nursery cropping systems. Develop new technologies and tools contributing to improving these systems to meet current and future food crop production needs of diverse consumers, while ensuring economic and environmental sustainability and production efficiency, health, and value of our nation’s crops.

Indicators:
• ARS will breed superior new crops, varieties, and enhanced germplasm.
• ARS will devise innovative approaches to crop genetic improvement and trait analysis.
• ARS will expand crop genomic information resources and advanced bioinformatic capabilities.
• ARS will conserve and encourage the use of plant and microbial genetic resources and associated information.
• ARS will expand fundamental knowledge of plant biological and molecular processes.
• ARS will develop more effective means for plant biotechnology risk assessment.
• ARS will develop more effective methods to enhance biotechnology for crop improvement.
• ARS will develop crop production strategies to optimize crop genetic potential, mitigate losses due to biotic and abiotic stresses, and increase production efficiency.
• ARS will improve pollinator health, bee systematics and germplasm lines, and pollination.

Goal 3.2 – Protect our nation’s crops.

Performance Measure: Provide scientific information to increase our knowledge of plant genes, genomes and biological and molecular processes to protect crops and cropping systems from the negative effects of pests and infectious diseases. Develop sustainable control strategies for crop pests and pathogens based on fundamental and applied research that are effective and affordable, while maintaining food safety and environmental quality.

Indicators:
• ARS will continue to identify and characterize genes of insect, nematode, and plant pathogen resistance in crop plants, closely related non-crop species, and other species, to enhance opportunities for developing host plant resistance, and to incorporate such genes into commercially acceptable varieties.
• Continue to identify and characterize resistance genes in crop plants for insect, nematode, and plant pathogens, to enhance opportunities for developing host plant resistance, and to incorporate such genes into commercially acceptable varieties.
• ARS will continue to develop fundamental knowledge about biology and ecology that provides the foundation for strategies to exclude, accurately detect and identify, and mitigate arthropod and nematode pests, weeds, and plant pathogens.
• ARS will perform applied research and development to provide new, useful and safe products to exclude, accurately detect and identify, and mitigate arthropod and nematode pests, weeds, and plant pathogens.
Goal 4.1 – Provide scientific information and biotechnologies to enhance management practices that will ensure an abundant supply of competitively priced animal and aquaculture products.

Performance Measure: Provide scientific information to maximize the production efficiency of our food animal production systems. Develop new technologies and tools contributing to improve those systems to meet current and future food animal production needs of diversified consumers, while ensuring economic and environmental sustainability and animal well-being.

Indicators:
• ARS will identify underlying genetic and/or physiologic mechanisms relating to food animal production and production efficiencies for traits associated with growth physiology, nutrient utilization, reproductive physiology, health, and well-being in food animals.
• ARS will develop genomics infrastructure and tools to efficiently identify genes, their function, and interactions with environmental factors for exploitation in genome enabled improvement programs for food animals.
• ARS will develop and improve sustainable production systems for food animals; incorporating strategies to optimize production system efficiency while ensuring economic and environmental sustainability.
• ARS will characterize nutrient requirements of food animals; measure nutrient availability of traditional and nontraditional feedstuffs; and develop strategies for improving nutrient use efficiency.
• ARS will characterize food animal germplasm for traits of importance and continue to increase the inventory of germplasm stored within the National Animal Germplasm Repository to preserve biodiversity.

Goal 4.2 - Prevent and control pests and animal diseases that pose a threat to agriculture, public health, and the well-being of American citizens.

Performance Measure: Provide scientific information to protect animals, humans, and property from the negative effects of pests and infectious diseases. Develop and transfer tools to the agricultural community, commercial partners, and government agencies to control or eradicate domestic and exotic diseases and pests that affect animal and human health.

Indicators:
• ARS will describe 5 new discoveries or developments significant for their scientific or applied value.
• ARS will form new partnerships and continue old partnerships with industry, universities, and other government agencies in order to promote production and marketing of new methods for detection and identification of animal pathogens, arthropods that transmit pathogens, and arthropods that destroy property; including genetic markers, new methods of detecting gene sequences or antibodies or proteins, and comprehensive guides to morphological identification.
• ARS will form new partnerships and continue old partnerships with industry, universities, and other government agencies in order to promote production and marketing of inventions that protect animals from pathogens or manage arthropods that transmit pathogens or damage property.

Organization’s History

The Agricultural Research Service (ARS) was established on November 2, 1953, pursuant to authority vested in the Secretary of Agriculture by 5 U.S.C. 301 and Reorganization Plan No. 2 of 1953, and other authorities. ARS is the principal in-house research agency of the U.S. Department of Agriculture (USDA). Congress first authorized federally supported agricultural research in the Department of Agriculture Organic Act of 1862, which established what is now USDA. That statute directed the Commissioner of Agriculture “to acquire and preserve in his Department all information concerning agriculture which he can obtain by means of books and correspondence, and by practical and scientific experiments.” The scope of USDA’s agricultural research programs has been expanded and extended more than 60 times since the Department was created.
Organizational Chart

United States Department of Agriculture
2016 Presidential Transition
Agricultural Research Service (ARS)

ARSC conducts research to develop and transfer solutions to agricultural problems of high national priority and provide information access and dissemination to: ensure high-quality, safe food, and other agricultural products; assess the nutritional needs of Americans; sustain a competitive agricultural economy; enhance the natural resource base and the environment and provide economic opportunities for rural citizens, communities, and society as a whole.
Biographies of career staff in key leadership positions

**Dr. Chavonda Jacobs-Young**  
Administrator  
202-720-3656, c.jacobsyoung@ars.usda.gov

Dr. Chavonda Jacobs-Young has served as Administrator of the U.S. Department of Agriculture's chief scientific in-house research agency since February 2014. Previously, Dr. Jacobs-Young had served as ARS Associate Administrator for National Programs, where she led the Office of National Programs, which manages the research objectives of the Agency, and the Office of International Research Programs, which is responsible for ARS' liaison with its international partners.

Prior to moving into her roles at ARS, Dr. Jacobs-Young served as the Director of the Office of the Chief Scientist at USDA, where she was responsible for facilitating the coordination of scientific leadership across the Department to ensure that research supported by, and scientific advice provided to, the Department and external stakeholders were held to the highest standards of intellectual rigor and scientific integrity. She served as the Acting Director for USDA's National Institute of Food and Agriculture, and has served as a senior policy analyst for agriculture in the White House Office of Science and Technology Policy. In that position she supported the President's science adviser and others within the Executive Office of the President on a variety of agricultural scientific activities and worked across the Federal Government to improve interagency cooperation and collaboration on high-priority scientific issues.

Dr. Jacobs-Young is a native of Georgia. She holds M.S. and Ph.D. degrees in Wood and Paper Science and a B.S. degree in Pulp and Paper Science and Technology from North Carolina State University. She also is a graduate of American University's Executive Leadership in Public Policy Implementation Program.

**Dr. Steven Kappes**  
Associate Administrator for Research Programs  
301-504-5084, steven.kappes@ars.usda.gov

Dr. Steven Kappes became the ARS Associate Administrator for National Programs in August 2016. Until his appointment, Dr. Kappes served as the Deputy Administrator for Animal Production and Protection (APP) in the Office of National Programs since 2005. The APP program includes animal production, animal health, entomology, aquaculture and animal well-being research in cattle, pigs, sheep, horses, trout, catfish and salmon. The APP staff also includes the ARS Biosafety Officer.

Dr. Kappes is leading the ARS Big Data initiative and he recently served as a senior advisor for animal protection and production in the USDA Office of the Chief Scientist. He had worked with USDA agencies on issues related to animal health and production, herbicide resistance, and biosafety and biocontainment in high and maximum biocontainment laboratories.
United States Department of Agriculture
2016 Presidential Transition
Agricultural Research Service (ARS)

Dr. Kappes has co-chaired a U.S. Government interagency biosafety taskforce and is a co-chair of the National Science and Technology Council Subcommittee on Foreign Animal Disease Threats. He also is a member of the USDA One Health Joint Working Group and he is working with USDA agencies and Food and Drug Administration to address issues on antimicrobial resistance.

Dr. Kappes' previous positions within ARS were a research scientist at the U.S. Meat Animal Research Center, Clay Center, Nebraska, an ARS National Program Leader for the Food Animal Production national program and Director of the U.S. Meat Animal Research Center.

Dr. Simon Liu
Associate Administrator, Research Management and Operations
202-720-3658, simon.liu@ars.usda.gov

Dr. Simon Y. Liu has served as Associate Administrator for Research Management and Operations since February 2015. He previously served as Director of the National Agricultural Library (NAL), which serves as the central library for the U.S. Department of Agriculture and is one of the four National Libraries of the United States. NAL is world's largest and most accessible research library specializing in agriculture.

Before joining NAL, Dr. Liu served as Associate Director of the National Library of Medicine (NLM) and Director of the NLM Computer and Communications System. Prior to his service at NLM, he held leadership positions with the U.S. Departments of Justice and Treasury, following work in the private sector where he led information system development and space mission studies to support NASA mission and operations.

He attended university in his native Taiwan and pursued graduate studies in the United States, where he earned master's degrees in Computer Science, Business Administration, and Government from Indiana University, the University of Maryland, and Johns Hopkins University. He has earned two doctoral degrees: an Ed.D in Higher Education Administration and a Ph.D. in Computer Science from George Washington University. He also serves as an adjunct faculty member with graduate school appointments at several of these institutions.

Dr. Liu is active in professional societies and associations and has served as the Editor-in-Chief of an information technology magazine and editor of four journals in the past 20 years. Dr. Liu has published a book and more than 80 book chapters, journal articles, and conference papers.
Mr. Joon Park  
Deputy Administrator, Administrative and Financial Management  
202-690-2575, joon.park@ars.usda.gov

Mr. Park began his service on September 2012 as the Deputy Administrator for Administrative & Financial Management (AFM). As the Deputy Administrator for AFM, Mr. Park leads an organization of over 400 business professionals throughout the United States that provide human resources, financial management, acquisition, property management, facilities engineering, safety, travel, information technology and extra mural agreements services to the four USDA Research, Economics & Education (REE) agencies.

Mr. Park has held other positions with the USDA Agricultural Research Service to include serving as the ARS Human Resources Director in Beltsville, MD from 2010 – 2012 and as the ARS South Atlantic Area Deputy Area Director for Business Management in Athens, GA from 2007 – 2010. Prior to joining USDA in 2007, Mr. Park served as the H-60 Director of Logistics with the Department of the Navy, Naval Air Systems Command (NAVAIR) in Patuxent River, MD. Mr. Park began his Federal service in 1996 through the Navy Acquisition Intern Program. Mr. Park graduated from Liberty University in 1996 with a B.S. degree in Government and received his Master of Business Administration (MBA) from The Johns Hopkins University in 2002. In addition, Mr. Park is a graduate of the Federal Executive Institute in Charlottesville, VA, the National Security Studies Program at the George Washington University in Washington, D.C, the Key Executive Leadership Certificate Program at the American University in Washington D.C, and the USDA Senior Executive Service Candidate Development Program (SESCDP).

Dr. Sharon Drumm  
Chief of Staff  
202-720-4465, sharon.drumm@ars.usda.gov

As Chief of Staff for ARS, Sharon is the main point of contact for others in the Department on information and matters related to ARS. Dr. Drumm oversees legislative affairs and directs numerous projects in ARS focusing on business process efficiency, employee and organizational culture, and communications.

Dr. Drumm held prior positions in ARS as Strategic Planner and the Agency Performance Office and served for over a year as Budget Coordinator in the Research, Education, and Economics Mission Area of USDA. She has been in ARS for 19 years, joining the Federal government as a Presidential Management Intern after closing up a successful private survey research and management consultant business. In the distant past, Sharon was Director of the American University’s Campaign Management Institute and Lobbying Institute, Assistant Director of the University’s Center for Congressional and Presidential Studies, and worked for Congressman George Sangmeister on Capitol Hill. Sharon received her Ph.D. from American University in Political Science, with emphasis on public administration, policy analysis, and American government.
Mr. Michael Arnold  
Director of Budget  
202-720-4421, michael.arnold@ars.usda.gov

As Director of the Budget and Program Management Staff, Mr. Arnold oversees the formulation and execution of the ARS budget and is a senior advisor to the Administrators.

Mr. Arnold began his career with the ARS Budget and Program Management Staff in 1995 as an appointee in the Student Career Experience Program (SCEP). After obtaining his Bachelors of Science degree in Accounting in 1996 from the University of Maryland Eastern Shore and his MBA from American University in 1998, he accepted a position as a Budget Analyst with BPMS. In 2006, Mr. Arnold was named Special Assistant to the Director of the Budget and Program Management Staff. In 2006, he also served on assignment with the U.S. House of Representatives Agriculture Appropriations Subcommittee. Mr. Arnold became the Deputy Director of BPMS in 2008 and was appointed Director in 2009.

Dr. Sheryl H. Kunickis  
Director, USDA Office of Pest Management Policy  
202-720-5375, Sheryl.Kunickis@osec.usda.gov

Dr. Sheryl Kunickis has served as Director of the USDA Office of Pest Management Policy (OPMP) since May 2010. In this capacity, she represents USDA on the Pesticide Program Dialogue Committee, an EPA Federal Advisory Committee. During her time as OPMP Director, Dr. Kunickis has also served as the Acting Director in the Office of the Chief Scientist.

Prior to her current position, Dr. Kunickis served as the Director of the USDA Natural Resource Conservation Service (NRCS) Remote Sensing Laboratories (RSLs), and served a 1-year detail at the White House Council on Environmental Quality as the Deputy Assistant Director for Agriculture, Lands, and Wildlife.

Additionally, Dr. Kunickis has served as the National Agricultural Research Coordinator and was responsible for managing a partnership between the Agricultural Research Service (ARS), National Institute of Food and Agriculture (NIFA), and NRCS; a Soil Scientist/Landscape Analyst for the NRCS Soil Survey Division; and a Soil Scientist with responsibilities for Soil Survey work in North Carolina and New York.

Dr. Kunickis earned her Ph.D. in Soil Science from North Carolina State University, and her M.S. and B.S. in Agronomy from Brigham Young University. She received an USDA Honor Award for Management Excellence from Secretary in 2010. In 2003-2004, she was selected a Department of Commerce Science and Technology Fellow.
Dr. Pamela Starke-Reed  
**Deputy Administrator Nutrition, Food Safety and Quality**  
301-504-4788, [pamela.starke-reed@ars.usda.gov](mailto:pamela.starke-reed@ars.usda.gov)

Dr. Starke-Reed is the Deputy Administrator for Nutrition, Food Safety and Quality Utilization of Agricultural products at the Agricultural Research Service (ARS), USDA. Dr. Starke-Reed also serves as the Ethics Officer and Scientific Integrity Officer for ARS. She came to ARS, leaving the National Institutes of Health (NIH) where most recently she served 12 years as Deputy Director of the Division of Nutrition Research Coordination, coordinating the ongoing nutritional sciences, obesity and physical activity research at NIH. Her previous positions include 10 years with the NIH National Institute on Aging as Director of the Office of Nutrition and Program Director for the Nutrition and Metabolism and Protein Structure and Function research programs. She has also served as Biologist with the Food and Drug Administration’s Center for Food Safety and Applied Nutrition and Assistant Professor with the Department of Medicine of George Washington University (GWU) in Washington DC. Since 1991, Dr. Starke-Reed has served as Adjunct Professor with the GWU Medical Center in Washington D.C. She earned her B.S. in Biology at St Lawrence University in Canton, NY and her Ph.D. in Pathology at Hahnemann University in Philadelphia, Pennsylvania.

Dr. Starke-Reed is well known throughout the human nutrition community for her efforts at NIH to link nutritionals sciences research with research on physical activity to help better understand how the quality of diet and physical activity contribute to health and disease/obesity. As part of that effort, she was co-chair of the Subcommittee on Dietary Reference Intakes of the Interagency Committee on Human Nutrition Research (ICHNR). In February 2014 Dr. Starke-Reed was named Co-Executive Secretary for the (ICHNR) under the Chairs of Dr. Cathie Woteki (OCS and Undersecretary USDA) and Dr. Karen DeSalvo (ASH/HHS). The ICHNR is a trans-federal government committee established to improve coordination and increase the effectiveness and productivity of Federal agencies engaged in nutrition research; members include representatives from USAID, USDA, DOC, DOD, DHHS, DVA, NASA, NSF, EPA, FTC, NOAA, VA, and the White House Office of Science and Technology Policy. Dr. Starke-Reed represents ARS and/or USDA on several trans-federal government committees including the Food Safety Technical Committee in CODEX Alimentarius, as well as several International committees/programs in Food Safety research. She also represents ARS in the Quality and Utilizations of Agricultural products on National and international working groups. Dr. Starke-Reed has published numerous papers and book chapters and currently serves on the editorial board of the Journal of Nutritional Biochemistry and as Associate Editor for Nutrition Reviews.
Dr. Sally Schneider  
Deputy Administrator Natural Resources and Sustainable Agricultural Systems  
301-504-7987, sally.schneider@ars.usda.gov

Dr. Schneider has served as the ARS Deputy Administrator for Natural Resources and Sustainable Agricultural Systems (NRSAS) since January 2014. NRSAS includes the national research programs covering air, soil, water, bioenergy, climate change mitigation and adaptation, modeling, remote sensing, sustainability, precision agriculture, pasture/forage/rangelands, and agricultural systems. NRSAS staff also provide leadership to the Long-term Agroecosystem Research (LTAR) network and the Climate Hub network.

Prior to becoming the Deputy Administrator, NRSAS, Dr. Schneider served in the ARS Office of National Programs as the National Program Leader for Specialty Crops and the IR-4 (minor use pesticides) program. Dr. Schneider served for 13 years on the United Nations Environmental Programme (UNEP) Methyl Bromide Technical Options Committee.

Before joining ARS’s headquarters staff, Dr. Schneider led research teams on crop simulation and modeling in North Carolina, precision agriculture in Washington, and alternatives to methyl bromide in California.

Dr. Schneider earned a Ph.D. in Plant Pathology/Nematology from the University of California, Riverside and a B.S. in Mathematics/Computer Science from the University of California, Riverside. She also completed a USDA Graduate School training program in Systems Engineering and the SES Candidate Development Program with USDA and American University.

Dr. Maureen Whalen  
Deputy Administrator National Program Crop Production and Protection  
301-504-6252, maureen.whalen@ars.usda.gov

Dr. Maureen Whalen has served as Deputy Administrator for ARS Crop Production and Protection National Programs in the ARS Office of National Programs since February 2016. The Crop Production and Protection programs include, plant genetic resources, genomic and genetic improvement, plant diseases, crop protection and quarantine, and crop production.

Prior to joining the Office of National Programs, Dr. Whalen was Associate Director of the Northeast Area in ARS and before that, of the Pacific West Area. She previously served as Assistant Director of the Pacific West Area. She joined ARS as Research Leader of the Crop Improvement and Utilization Research Unit in the Western Regional Research Center in Albany, CA. Her research focused on secondary metabolism in plants.

Before joining ARS, Dr. Whalen was a Professor of Biology at San Francisco State University, where she directed a research and training program in molecular plant pathology, in addition to teaching cell and molecular biology to graduates and undergraduates. She served as program director of NIH-funded minority institution infrastructure and training grants. After postdoctoral
research in molecular plant pathology in the Department of Plant Pathology, University of California, Berkeley, she joined the Biology faculty at Colby College in Maine, as a Clare Boothe Luce Professor. Dr. Whalen received her Ph.D. degree in Botany at the University of California, Berkeley, and her B.S. degree in Biological Sciences at Cook College at Rutgers University.

Ms. Eileen Herrera
Acting Director Office of International Program
301-504-4521, eileen.herrera@ars.usda.gov

Eileen M. Herrera was selected Acting Director, Office of International Program August, 2016 upon the unplanned departure of the Program Director. Ms. Herrera has served as Deputy Director of the Office of International Research Programs (OIRP), Agricultural Research Service (ARS), U.S. Department of Agriculture (USDA) since 2009, where she oversees the program management and implementation staff and assists the Agency’s leaders with planning the overall research mission, goals, and policies of ARS’s international research programs. Ms. Herrera is ARS’s primary point of contact for the U.S. Government’s major food security initiative, Feed the Future (FtF) including overseeing ARS’s research under the Norman Borlaug Commemorative Research Initiative (NBCRI), and is the USDA Research, Education, and Economics (REE) lead to coordinate the mission area input into the Global Food Security Strategy under the new Global Food Security Act (GFSA).

Ms. Herrera served as the U.S. Correspondent as well as the U.S. representative on the Governing Board for the Organization for Economic Co-operation and Development (OECD) Collaborative Research Program, and was the U.S. Secretariat for the U.S.-EC Task Force on Biotechnology Research. Ms. Herrera is the principal point of contact in ARS for international activities with Sub Saharan Africa and has served as the primary USDA contact for the USG international science and technology programs. Prior to coming to ARS in late 1999, Ms. Herrera worked at the Research and Scientific Exchanges Division of USDA’s Foreign Agricultural Service (FAS) for 10 years, managing cooperative multi-lateral projects in the Middle East, Central and Eastern Europe, Spain and Brazil in a variety of agricultural research areas. Ms. Herrera was a Peace Corps Volunteer in the Democratic Republic of Congo and a State Department Intern at the U.S. Embassy in Jordan. She has a Masters in International Management from the American Graduate School of International Management (Thunderbird).

Dr. Andrew Hammond
Pacific West Area Director
510-599-6060, andrew.hammond@ars.usda.gov

As Area Director of the Pacific West Area, Dr. Hammond oversees implementation of ARS research carried out in eight states from Washington State to Hawaii. The Area Director's Office provides administrative, technical and budgetary assistance to our locations

Dr. Hammond has been in Federal service for 38 years. He served two years in the U.S. Peace Corps (Philippines) and has served 36 years ARS. He began his career in Beltsville, Maryland as
a Research Animal Scientist, followed by 14 years as Research Leader of the Subtropical Agricultural Research Station, Brooksville, Florida. In August 1998, he became the Assistant Area Director for the Pacific West Area and was located at Albany, California. In August 2000, he was appointed Associate Area Director of the South Atlantic Area, stationed at Athens, Georgia. In May, 2004, he transferred back to the Pacific West Area Office as Associate Area Director. And in April 2008 he was named Pacific West Area Director. Andy obtained his B.S. degree in Animal Science from Oregon State University and advanced degrees (M.S. and Ph.D.) in Nutrition from Washington State University.

Dr. Larry Chandler
Plains Area Director
970-492-7057, larry.chandler@ars.usda.gov

As Area Director for the Plains Area, Dr. Chandler oversees the implementation of 85 to 100 research projects at 22 research locations in 10 states. The Area Director's Office provides administrative, technical and budgetary assistance to our locations.

Dr. Chandler received his Ph.D. in entomology from Texas A&M University. He joined USDA-Agricultural Research Service in 1982 and has served in several positions including Research Entomologist in Weslaco, TX (1982-1989), Research Entomologist in Tifton, GA (1989-1994), Research Leader of the Northern Grain Insects Research Laboratory in Brookings, SD (1994-1999), Director of the Red River Valley Agricultural Research Center in Fargo, ND (1999-2004), Associate Director of the Northern Plains Area in Fort Collins, CO (2004-2008), and Director of the Midwest Area in Peoria, IL (2008-2012). He transferred back to Fort Collins, CO in 2012 and currently serves as the Director for the Northern Plains Area. During his active research career he conducted research on IPM of horticultural and field crop insect pests. He has previously served as the ARS Technical Coordinator for the Corn Rootworm Areawide Pest Management Program, the ARS Coordinator for the National Sclerotinia Initiative, and chair/co-chair of the ARS Information Technology Advisory Group.

Dr. Robert Matteri
Midwest Area Director
309-681-6602, robert.matteri@ars.usda.gov

As Director of the Midwest Area, Dr. Matteri oversees research implementation at 13 locations in over 9 states.

Dr. Matteri joined ARS in 1991 as a Research Physiologist in the Animal Physiology Research Unit, Columbia, Missouri. In 1992, he became the unit's Research Leader. In 2001, Dr. Matteri became Assistant Director of the Pacific West Area in Albany, CA, and was subsequently named the Associate Director. Dr. Matteri earned a B.A. in Zoology at Humboldt State University, Arcata, CA. He completed graduate studies in Stress Physiology and Endocrinology at the University of California-Davis, earning M.S. and Ph.D. (1984) degrees in Animal Physiology.
His graduate work revealed previously unknown mechanisms for the negative effects of stress hormones on reproduction.

**Dr. Deborah Brennan**  
**Southeast Area Director**  
662-686-5266, deborah.brennan@ars.usda.gov

As Director of the Southeast Area, Dr. Brennan oversees the implementation of 544 research projects at 62 research units and 5 worksites in 13 states and territories.

Dr. Brennan joined ARS in 2002 as an Associate Area Director in Stoneville, Mississippi. She came from APHIS where she was a Veterinary Medical Officer. While working for APHIS Dr. Brennan was also Area Veterinarian in Charge of the State of Mississippi and worked cooperatively with Mississippi Department of Agriculture and Commerce and the Mississippi Board of Animal Health on a variety of State and Federal animal health programs and instrumental in the eradication of Brucellosis from the State of Mississippi. Dr. Brennan received a Bachelor of Science degree, cum laude, in Biology and Chemistry from Texas A & M University Commerce, a DVM Ph.D. from Texas A & M College of Veterinary Medicine. Dr. Brennan also has a Masters in Public Administration from Kutztown University in Pennsylvania.

**Dr. Dariusz Swietlik**  
**Northeast Area Director**  
301-504-6078, dariusz.swietlik@ars.usda.gov

As Director of the Northeast Area, Dr. Swietlik oversees implementation of research at 15 research centers and laboratories and 9 worksites located in 13 states from Maine to Tennessee and the District of Columbia. These include the U.S. National Arboretum in Washington D.C., and Beltsville Agricultural Research Center (BARC) in Maryland, the largest and most comprehensive agricultural research complex in the world.

Prior to his current position, Dr. Swietlik served as the Director of North Atlantic Area and Director and Research Leader of the USDA-ARS Appalachian Fruit Research Station in Kearneysville, West Virginia. Before joining the USDA-ARS, Dr. Swietlik was a Full Professor of Plant Physiology with the Texas A&M University-Kingsville where he was involved in research, academic teaching and extension work on citrus crops. He also was the Assistant Director of the Citrus Center as well as the Texas A&M University Agricultural Research and Extension Center in Weslaco, Texas. Originally from Poland, he came to the United States in 1980 as a Senior Fulbright Scholar and conducted research on fruit crops at the USDA, ARS, Beltsville Agricultural Research Center in Beltsville, Maryland followed by a Research Associate (Post-Doctoral) position with the West Virginia University. Dr. Swietlik holds a PhD degree in Pomology and an MS degree in Soil Chemistry and Plant Nutrition.
Mr. Paul Wester, Director
National Agricultural Library
301-504-5248, paul.wester@ars.usda.gov

As Director of the National Agricultural Library, Mr. Wester oversees the work of one of four national libraries of the United States that houses one of the world's largest collections devoted to agriculture and its related sciences.

Mr. Wester started his Federal Service at the National Archives and Records Administration (NARA) in June 1990 at the Washington National Records Center. From 1994 until 2002, he served in a variety of management capacities in NARA’s regional records services operation. In late 2002 Paul began leading NARA’s national records management programs, culminating in his service as the first Chief Records Officer for the U.S. Government from March 2011 until October 2015. Mr. Wester holds an undergraduate degree in history and Master of Arts and Master of Library Science degrees from the University of Maryland.

Ms. Mojdeh Bahar
Assistant Administrator for Technology Transfer
301-504-6735, mojdeh.bahar@ars.usda.gov

Ms. Bahar has broad responsibility for managing the intellectual property that evolves from the research program of the Agency and serves as a resource for management of intellectual property and technology transfer across the USDA.

Ms. Bahar came to ARS from NIH, where she served as the Chief of the Cancer Branch at the Office of Technology Transfer. There she led a team responsible for marketing, patenting and licensing NIH and FDA inventions in the areas of cancer, gene therapy, and biological response modifiers. Prior to that, Ms. Bahar was an Examiner with the United States Patent and Trademark Office (USPTO). During her tenure at the NIH, she first served as the Regional Coordinator for the Mid-Atlantic Region of the Federal Laboratory Consortium for Technology Transfer (FLC) from 2008 to 2011 and then as the National Chair from 2011 to 2013. A patent attorney registered to practice before the USPTO, the State of Maryland, the United States District Court for the District of Maryland, and the United States Court of Appeals for Federal Circuit, Ms. Bahar is also a Certified Licensing Professional (CLP). She is a graduate of the University Of Maryland School Of Law. She also received a Master of Arts degree from New York University and a Bachelor of Science degree with Honors in Chemistry and French from Dickinson College.

Mr. Paul Gibson
Chief Information Officer
301-504-5600, paul.gibson@ars.usda.gov

Mr. Gibson leads ARS information technology operations and planning to ensure that ARS scientists and all who support them have access to the cutting-edge technology they need to do their job. In this role, he provides strategic leadership and direction for a program encompassing
information technology policy, cybersecurity, networking, application development and infrastructure operations to support a distributed and nationwide scientific research program. Before entering this position, Mr. Gibson served as Associate CIO at USDA’s Economic Research Service (ERS) where he oversaw strategic IT planning, priority setting, and review of agency information technology initiatives in support of the ERS program of research. He contributed to the work of the Interagency Working Group on Digital Data, including its recent publication, "Harnessing the Power of Digital Data for Science and Society." While at ERS, he also served as Assistant Administrator, responsible for ERS program performance and accountability activities and as Information Resource Manager for the Market and Trade Economics Division, where he led an international team that created the Agricultural Market Access Database, which enables extensive analysis of trade restrictions in global agricultural markets. Prior to joining USDA, Mr. Gibson served as an International Economist at the U.S. International Trade Commission. Mr. Gibson holds an M.S. in Information Management from Syracuse University and a Federal Chief Information Officer Certification from National Defense University. He also holds an M.A. in International Affairs from George Washington University and a B.A. from the University of Wisconsin, Madison.

Dr. Don McLellan
Director, Office of Outreach, Diversity, and Equal Opportunity
202-720-6161, donald.mclellan@ars.usda.gov

Dr. Donald McLellan is a native of Dillon, South Carolina. He holds a B.S (’85) and M.S. (’87) in Agribusiness from South Carolina State University and a Ph.D. in Human and Community Resource Development from the College of Agriculture at The Ohio State University.

Dr. McLellan currently serves as the Director of the Office of Outreach, Diversity and Equal Opportunity (Civil Rights) with the Agricultural Research Service (ARS) at the United States Department of Agriculture (USDA). Prior to joining ARS/USDA, he served as the Director for the Office of Human Resources and Diversity Relations for the College of Agricultural & Environmental Sciences at the University of Georgia. In 2004 He was awarded a German Marshall Fellowship in recognition of his work as an emerging U.S. Leader. His transatlantic assignments has included: Brussels, Belgium; Copenhagen, Denmark; Budapest, Hungary; Barcelona, Spain; Paris, France; Elmau, Germany; and most recently Tremezzo, Italy.

During his tenure at the University of Georgia, Dr. McLellan also served as the Director of the University of Georgia’s Young School pre-collegiate Research and International Apprenticeship Program. This program was designed to attract high achieving minority students to the field of scientific research and technology at the University of Georgia with international sites, which included Ghana Africa and Costa Rica, and Honduras, Central America. In 2006 he was honored as a National Role Model by Minority Access, Inc. in partnership with the Secretary of Health and Human Services and the National Institute of Health for Exemplary Achievements in Expanding Opportunities for others.
Dr. McLellan’s past work experiences also include the following Universities: The Ohio State University, Office of the Vice President for Student Affairs; Clemson University, Cooperative Extension Services, South Carolina State University, Cooperative Extension Service.

**Mr. Chris Bentley**  
**Director, Office of Communications**  
301-504-1636, christopher.bentley@ars.usda.gov

As Director of Communications for ARS, Mr. Bentley leads an office of 23 communications specialists in coordinated efforts to promote ARS.

Before joining ARS, Mr. Bentley served as the Press Secretary and Chief of Media Relations for U.S. Citizenship and Immigration Services (USCIS) in the Department of Homeland Security (DHS). Immediately before his appointment to USCIS Headquarters, Mr. Bentley served as the Public Affairs Officer for the Baltimore District of the former Immigration and Naturalization Service within the Department of Justice. He is a Gulf War veteran and also worked as Communications Coordinator for the Blinded Veterans Association and as a broadcast journalist in the United States Army prior to joining DHS. Mr. Bentley graduated Lasalle University with a Masters in Communication.

**Biographies of political staff in key leadership positions**

ARS does not have any political staff.
Organizational Budget and Financial Management

1/ 2016 figure is revised upward from the President's Budget submission.
2/ 2015 data are estimates, as actuals are currently not available.
Enterprise Workforce Data

Workforce Data FY 2009- FY 2016

GS Level Distribution

- GS 01-04: 0.6%
- GS 05-07: 17.6%
- GS 08-12: 40.6%
- GS 13-15: 32.6%
- Other: 8.1%
- ES: 0.6%
- ARS employs a workforce of 7,656 employees of which the following are full-time and part-time (Includes all permanent and temporary employees as of AUG 2016)
  - Full-time: 6,915 employees
  - Part-time & Intermittent: 741 employees.
- ARS employs seasonal employees to provide support during busier months. During the spring & summer of 2016, ARS hired 601 seasonal employees.
- ARS employs 1968 temporary employees.
- Of our total workforce, 20% are eligible to retire within the next year.
- ARS headquarters is located in Beltsville, Maryland, which houses 8% of our workforce
- ARS has 5 Area Offices (located in Albany, California, Fort Collins, Colorado, Peoria, Illinois, Stoneville, Mississippi, and Beltsville, Maryland. ARS has 90 research locations in the United States (located in most states), plus 4 overseas locations around the world.
- 25% of the employees stationed in the field offices are Ph.D. scientists.

II. Policies and Regulations

Statutory Authorities

Important Policies and Regulations

ARS internal Policies and Procedures (P&P), bulletins and manuals govern the work of employees. ARS is also governed by USDA Departmental Regulations. Three that get the most reference in the dealings with the public and USDA are featured here.

Scientific Integrity Policy

USDA Departmental Regulation DR 1074-001 establishes the USDA Scientific Integrity Policy and provides instruction and guidance to Departmental leadership, employees and contractors to ensure the highest level of integrity in all aspects of the Department's involvement in scientific and technical processes and analysis. It includes guidance to decision makers as they develop public policies based on sound science relevant to food, agriculture, natural resources, rural development, and related issues. This information will ensure public confidence by articulating the principles of scientific integrity and roles and responsibilities of all USDA employees, including career staff and political appointees, in maintaining these principles within the Department of Agriculture.
This policy covers use of scientific information, information quality and peer review, Dual-Use Research of Concern, participation in professional societies, awards and honors, research misconduct, and reporting processes.

**Scientific Publications**
Documentation of scientific results and objective interpretations of their significance and applicability to the public are among the major products of ARS research. Publication in non-USDA media is a primary form of this documentation and an essential means for communicating ARS research to other scientists and to ARS customers, partners, and stakeholders. All who participate in the preparation and review of a manuscript for publication have a responsibility to contribute to the objective and effective communication of ARS research findings. The quality and utility of ARS publications reflect on the authors as well as the Agency as a whole.

This policy relays criteria for determining authorship and review processes within the Agency, including the requirements for handling publications for Dual Use Research of Concern, publications with implications for intellectual property, and issues on topics of prominence in the public eye or policy arena.

**Animal Care and Use**
ARS leadership recognizes the significant scientific advances and benefits to the health and well-being of animals and the public that have been achieved through the conscientious use of live animals in research, testing, and teaching, and is committed to ensuring the highest standards of animal care and use, as defined through the Animal Welfare Act Regulations (AWAR) and other relevant Federal guidelines and policies.

This policy describes the core principles that serve as a foundation for the compassionate care and ethical oversight of all animals that are used in ARS research activities. In accordance with the laws, regulations, and policies that pertain to research involving live animals, an appropriately constituted and qualified IACUC must be designated for every ARS location that conducts research with animals. The IACUC of record for each ARS location must be granted absolute authority to ensure all animals are treated humanely and receive care that is consistent with prevailing standards for the species and the type of research that is conducted.

**Overview of the policy/regulation review process**

Although ARS does not publish regulations or policy, there exists a rigorous 5-year program and project management review cycle. In any given year, roughly 20% of ARS’ program, and therefore projects, are beginning anew.

There are roughly 700 research projects in ARS, and each is part of one or more of 17 ARS National Research Programs. These programs are planned in consultation with many people inside and outside ARS. This ensures that the programs are relevant to customer, stakeholder, and partner priority needs. Each National Program has an Action Plan that coordinates and dictates the objectives of every research project in the National Program. The Action Plan
covers the next 5 years of work in that program area. All action plans comprise the ARS Strategic Plan, along with management initiatives.

Every single ARS research project is peer reviewed by scientific panels to ensure the continued excellence of the agency’s research. The panels consist of non-ARS scientists. The reviews are arranged through our Office of Scientific Quality Review, in a process mandated by the 1998 Farm Bill.

Scientists prepare annual reports on each of their projects; National Program teams prepare summaries of accomplishments for each National Program. Links to program reports can be found by clicking on any of the National Programs listed here. You will find links to project reports by visiting here and entering search terms for projects of interest. Towards the end of the cycle covered by our 5-year strategic plan, National Program teams evaluate each program's scope and accomplishments with the help of Customers, Stakeholders, and Partners, and begin planning for the next 5-year cycle.

**GAO and OIG Audits**

- **02703-0001-10**-Procurement Oversight Audit of the Invasive Plant Research Laboratory Contract, dated September 7, 2012
- **02703-0002-10**-Procurement Oversight Audit of the Red River Valley Agricultural Research Center Contract, dated June 28, 2012

- **50601-0002-22**, Department’s Controls over Prioritizing and Funding of Agricultural Research, February 24, 2016

27
III. Congressional Relations and Issues

Overview

Animal Welfare and the US Meat Animal Research Center (USMARC)
Following a January 2015 New York Times article that alleged animal abuse at the ARS U.S. Meat Animal Research Center (USMARC) in Clay Center, Nebraska, ARS has made considerable efforts to increase the transparency of the handling and use of animals in its research programs. This topic received attention during the House Appropriations Committee hearings. Five percent of ARS’ 2016 appropriations were held back on condition of the Secretary of Agriculture certification that all ARS animal research locations have a fully functioning Institutional Animal Care and Use Committee (IACUC) and that ARS update their Animal Welfare Policy and Procedures (P&P). The Secretary of Agriculture certified these requirements on June 17, 2016. In addition, Senate Report 114-82 requires ARS to enter into an agreement with Animal and Plant Health Inspection Service (APHIS) to have APHIS conduct routine inspection of ARS animal research facilities to ensure humane treatment of their animals. This agreement was executed on February 11, 2016. Furthermore, ARS is required to provide the Senate and House Appropriations Committees with quarterly reports detailing efforts to improve and ensure animal welfare programs follow animal welfare regulations. A USDA Office of the Inspector General (OIG) audit of the allegations (release is expected in autumn 2016) concludes there are no systematic problems with animal welfare at USMARC. ARS has agreed to implement all five recommendations from the audit (the fifth recommendation went through negotiation and ARS and OIG successfully reached management decision).

Southeast Poultry Research Laboratory (SEPRL)
The biocontainment facilities of the Southeast Poultry Research Laboratory in Athens, Georgia, are outdated with insufficient capacity and new facilities have been a top ARS priority for several years. As of FY 2016, Congress has appropriated full funding of $158.7 million for construction and a contract for the design-build phase is expected to be awarded by April 2017. The new facilities, which are expected to open in 2023, will include approximately 288,000 gross square feet (GSF) in 9 buildings.

China Garden
Ground-breaking on the 12-acre Chinese Garden at the U.S. National Arboretum in Washington, D.C. is expected during fall 2016. The Gardens is a collaborative project between the United States (USDA is lead USG entity) and the People’s Republic of China, which has agreed to fund all of the construction costs. The U.S.-based non-profit National China Garden Foundation will coordinate construction and subsequent fund-raising to cover future maintenance and operating costs. The 443-acre Arboretum is a research facility for the USDA Agricultural Research Service. This project continues to be of interest to the Friends of the
National Arboretum (FONA), an independent non-profit organization established to enhance support for the Arboretum. FONA works extensively with Congress in support of USNA.

National Bio- And Agro- Defense Facility (NBAF)
The Department of Homeland Security’s (DHS) NBAF is the next-generation biocontainment facility under construction in Manhattan, Kansas. NBAF will replace existing, aging biocontainment laboratories located at the Plum Island Animal Disease Center (PIADC) in Orient Point, New York. DHS has received all of the NBAF construction funds and plans for the NBAF to be fully operational in 2023. The Senate’s version of the FY 2017 Agriculture Appropriations Bill and the Homeland Security Appropriations Bill includes identical report language encouraging DHS and USDA to work together on a plan for the future operation of NBAF, including consideration of an appropriate agency to manage the facility.

Major Capital Investments
In 2012, at the request of the Secretary and Congress, ARS completed an extensive review of the agency’s laboratory portfolio and developed a plan for future capital investments. The review, reported as the “Capital Investment Strategy” (CIS), highlighted the agency’s aging infrastructure and recommended modernization of selected priority facilities. Many of these facilities are at the limit or well in excess of their “functional lifespan” according to engineering standards. Congress appropriated $257 million in fiscal years 2015 and 2016 to address high priority facility needs as identified in the CIS. The FY 2017 President’s Budget requests an additional $94.5 million for the modernization of two laboratories: Foreign Disease- Weed Science Research Laboratory in Frederick, Maryland; and the Agricultural Research Technology Center in Salinas, California. These two laboratories are among the agency’s highest priorities based on criteria developed (i.e., research program importance and facility condition) in the CIS report.

BEP land interest in BARC
The U.S. Bureau of Engraving and Printing (BEP) has expressed interest in acquiring 100 acres of ARS land at the Beltsville Agricultural Research Center in Beltsville, Maryland for its future facilities. ARS and BEP are in the initial stage of seeking legislative authorities to exchange the land for fair market value and coordinating with GSA and USDA officials on the planning. This has been discussed with both the House Oversight Committee and House Ag Committee. In addition, Congressman Hoyer’s office was briefed on this authority on Oct 24, 2016 with Office of Congressional Relations.

Excess property on the Beltsville Agricultural Research Center
Unused and vacant properties at the Beltsville Agricultural Research Center (BARC) was briefly mentioned at a September 2016 hearing by the House Committee on Oversight and Government Reform Subcommittee on Transportation and Public Assets. Dr. Gregory Parham, Assistant Secretary for Administration, represented USDA at the hearing, though he was only asked whether he had visited BARC. Prior to the hearing, ARS staff provided congressional committee staffs with a briefing on the status of BARC facilities, which included a tour of buildings at various locations (including the 100-acre site being considered by the U.S. Bureau of Engraving and Printing (BEP) for a satellite production facility). Legislative authority could preempt limitations on selling BARC land based on Maryland Land Use Code § 25-211 (2014): Zoning
IV. **Internal and External Stakeholders**

**Important relationships with other Federal Departments or organizations**

ARS collaborates with, provides research data to, and shares leadership of federal research initiatives with many other Federal agencies in support of their missions, including:

- **Department of Agriculture**
  - Agricultural Marketing Service
  - Animal and Plant Health Inspection Service
  - Center for Nutrition Policy and Promotion
  - Economic Research Service
  - Farm Services Agency
  - Food Safety Inspection Service
  - Foreign Agricultural Service
  - Forest Service
  - Grain Inspection, Packers, and Stockyards Administration
  - National Agricultural Statistics Service
  - National Institute of Food and Agriculture
  - Natural Resources Conservation Service
  - Rural Development

- **Department of Commerce**
  - National Oceanographic and Atmospheric Administration
  - National Institute for Standards and Technology

- **Department of Defense**
  - Air Force
  - Army
  - Army Corps of Engineers
  - Defense Threat Reduction Agency
  - Navy

- **Department of Energy**
  - Office of Science
  - Office of Energy Efficiency and Renewable Energy

- **Department of Health and Human Services**
  - Agency for Healthcare Research and Quality
  - Centers for Disease Control and Prevention
  - Food and Drug Administration
  - National Institutes of Health

- **Department of Homeland Security**
  - Science and Technology Directorate

- **Department of the Interior**
  - Bureau of Indian Affairs
  - Bureau of Land Management
  - Bureau of Reclamation
United States Department of Agriculture
2016 Presidential Transition
Agricultural Research Service (ARS)

- National Park Service
- United States Fish and Wildlife Service
- United States Geological Survey
- Department of State
  - United States Agency for International Development
  - Bureau of International Security and Nonproliferation/Cooperative Threat Reduction Office
- Department of Transportation
- Department of Veterans Affairs
- Environmental Protection Agency
- Federal Bureau of Investigation
- Labor Unions
  - American Federation of Government Employees
    - AFGE 43
    - AFGE 1331
    - AFGE 1657
    - AFGE 2315
    - AFGE 3147
    - AFGE 3247
    - AFGE 3748
  - National Federation of Federal Employees (NFFE) 1752
- National Aeronautics and Space Administration
- National Science Foundation
- Smithsonian Institution

ARS participates in joint Federal initiatives and activities led by the White House Office of Science and Technology Policy, the National Science and Technology Council, and numerous other Federal committees and work groups.

ARS works on a number of specific collaborations worth noting:

- ARS coordinates on international issues with Department of State, including regular communication on a number of science and technology platforms; participation in joint committee meetings such as those with the European Union, Egypt, Brazil, South Africa, India, and China; over 15 years of cooperation in irrigation management in support of peaceful interactions in the Middle East, and collaboration with foreign scientists in the former Soviet Union on topics of mutual interest through the International Science and Technology Center in Astana, Kazakhstan.
- ARS regularly coordinates with USDA Foreign Agricultural Service personnel in Offices for Agricultural Affairs and Agricultural Trade Offices in Embassies around the world regarding bilateral issues, travel processes/warnings/restrictions, and facilitating communication with local research organizations.
- ARS collaborates extensively with Department of Homeland Security and APHIS in the planning of the National Bio and Agro-Defense Facility in Manhattan, Kansas, which in 2023 will replace the Plum Island Animal Disease Center in Orient Point, NY where ARS administers research programs on foreign animal diseases.
• ARS collaborates with the Department of Commerce, National Institute of Standards and Technology to develop and validate standards. Examples include: SRM3280 Multivitamin/Multielement Tablets; and SRM3246 Ginkgo biloba (Leaves)
• ARS is the vice-chair of USDA’s Civil Rights Council and collaborates with the Smithsonian Institution on the development of EEO education curricula.
• ARS provides the following services to the Economic Research Service, the National Agricultural Statistics Service and the National Institute of Food and Agriculture through its Administrative and Financial Management unit:
  o Human Resources,
  o Acquisition,
  o Personal and Real Property,
  o Financial Management and Agreements,
  o Travel, and
  o Safety.
• ARS provides information and information technology services to the Economic Research Service, the National Agricultural Statistics Service and the National Institute of Food and Agriculture through its Office of the Chief Information Officer. ARS utilizes Enterprise Content Management provided by Rural Development.
• ARS’ National Agricultural Library provides access to electronic journals through its DigiTop program to:
  o Department of Agriculture
    • Animal and Plant Health Inspection Service
    • Economic Research Service
    • Food and Nutrition Service
    • Food Safety and Inspection Service
    • Foreign Agricultural Service
    • Forest Service
    • National Agricultural Statistics Service
    • National Institute of Food and Agriculture
    • Natural Resources Conservation Service
  o Department of Homeland Security
    • Science and Technology Directorate
• The National Agricultural Library is a Federal Repository Library and also provides data repository, information clearinghouses, and web site services to:
• Department of Agriculture
  o Center for Nutrition Policy and Promotion
  o Forest Service
  o Research, Education, and Economics Mission Area
  o National Agricultural Research, Education, Extension, and Economics Advisory Board
  o National Institute of Food and Agriculture
  o Natural Resources Conservation Service
  o Rural Development
• Department of Transportation
• Smithsonian Institution
The Director of the National Agricultural Library is an ex-officio member of the National Library of Medicine’s Board of Regents.

ARS utilizes foreign visitor J-1 Visa processing services provided by the Forest Service.

**Stakeholder group overview**

ARS develops and implements National Programs (each of which contain a number of research projects) through a five year cycle that starts with stakeholder input meetings. Over the past five years, almost 2,000 different stakeholders and stakeholder organizations have participated in these meetings. These include:

- Producers – more than 350 participating including:
  - National producer organizations
  - State producer organizations
  - Individual producers – farmers, ranchers, beekeepers, aquaculture producers, etc.
- Business associations – more than 30 representing commercial interests in a particular sector
- State Boards and Commissions – more than 50 State-chartered groups representing a variety agricultural and environmental interests
- Federal Advisory Committees, including the National Agricultural Research, Extension, Education, and Economics Advisory Board (NAREEE Board) and Advisory Committee on Biotechnology & 21st Century Agriculture (AC21)
- Companies – more than 350 ranging from small business to global enterprises
- Environmental groups – more than 40
- International – more than 50 representing foreign governments, organizations, and universities
- Science societies – a dozen representing an array of disciplines
- State Agencies – more than 50
- Native American Tribes – seven tribes and tribal organizations
- Universities – 125 different U.S. universities

Most of these participated in multiple stakeholder input meetings providing guidance to ARS on future priorities for and desired products from its research programs. Each brings both shared and unique agricultural challenges to the table covering the scope of economic, nutritional, environmental, food security, and other needs of U.S. agriculture.

In addition, ARS routinely holds workshops on a given national challenge in which it seeks stakeholder input; often these workshops are held jointly with other Federal Agencies.

Finally, ARS scientists, National Program Leaders, and administration meet regularly with stakeholders who bring specific research needs to the agency’s attention.
Recent engagements with stakeholder groups

ARS had the following meetings in Fiscal Year 2016 where stakeholder input and consultation occurred.

National Program workshops – the purpose of these workshops is to identify stakeholder priorities and obtain input on the development of the next five year Action Plan for the National Program:

- 101 – Food Animal Production, May 23 and 25, 2016 (joint with the National Institute of Food and Agriculture)
- 301 – Plant Genetic Resources, Genomics, and Genetic Improvement, September 27, 2016

Climate Hub Outreach Activities

ARS houses and staffs five of the ten Regional Climate Hubs (Northern Plains, Southern Plains, Southwest, the California sub-Hub, and Midwest. Understandably, each region of the United States has unique production and environmental challenges. The Climate Hubs, through USDA and partner programs, offer regionally relevant tools, strategies management options, and technical support to farmers, ranchers and forest land owners to help them adapt to climate change. The Hubs direct land managers to USDA agencies that can provide program support to enable them to implement climate-informed management practices. The Hubs build networks that facilitate the flow of knowledge and information, and because they are regional they are able to provide focused support to targeted populations and stakeholders within that specific region.

For our diverse producers and stakeholders, the Hubs translate climate change projections into potential local impacts on the agricultural and forestry sectors. Using this information, along with data on past trends, the Hubs provide periodic regional assessments of risk and vulnerability to help land managers better understand the potential impacts of a changing climate. The Hubs provide outreach, education, and extension to farmers, ranchers, forest landowners, and rural communities on science-based risk management through the land grant universities, Cooperative Extension, USDA service agencies, and public/private partnerships.

Climate Hub activities include, but are not limited to:

- Assessing the impacts of climate extremes and changes on agricultural systems
- Understanding the climate-related information needs of producers and professionals;
- Synthesizing and translating climate science and research into useable tools and products;
- Demonstrating climate-smart adaptation strategies, techniques, and management practices;
- Building partnerships among federal, state, Tribal, NGO, and private sector organizations;
- Educating and communicating to regional audiences about climate-related risks and resources.
Recent Climate Hub Engagements

- The Southwest Climate Hub focused on collaboration with Cooperative Extension Service (CES) for fiscal year 2016 (FY16) and increasing tribal outreach. Key partners included New Mexico State University (NMSU) CES, University of Arizona (UA) CES, University of Nevada CES, UC Davis CES, California Department of Food and Agriculture (CDFA), NRCS, U.S. Forest Service, California Hub, Southern Plains Hub, South Central CSC, Southwest CSC, Southern Rockies LCC, Desert LCC, CLIMAS RISA, and NDMC.
- The Caribbean Climate Hub hosted a roundtable meeting with USDA Secretary Tom Vilsack and local USDA leaders and producers in May 2016. USDA Blog: Secretary Vilsack Visits Puerto Rico to Talk Climate Change and Caribbean Agriculture.
- The Pacific Northwest, Northeast, Southeast, Northern Plains, and Southern Plains Climate Hubs led workshops on the Building Blocks for Climate Smart Agriculture.
- The Northeast Climate Hub hosted a Partners meeting with 50 participants focused on Land-Grant Universities.
- The Northwest Regional Climate Hub (NRCH) held a 3-day workshop in Kennewick, WA 9-11 March to bring stakeholders together to plan a coordinated approach to meet needs related to climate mitigation and adaptation in the Pacific Northwest.

ARS Headquarters also participated in the following specific workshops with stakeholders in FY 2016:

- ARS-FSIS Food Safety stakeholder & customer research workshop, March 7-10, 2016
  - **Reason for Engagement:** Reporting & discussing food safety program activities, research priorities & concerns related to new 2016-2020 NP108 Food Safety research cycle.
  - **Relevant Outcomes:** The workshop brought together senior administrators, managers & scientists representing various Federal agencies & academia undertaking food safety research, & regulatory & public health oversight. Discussions & information presented at workshop informed participants of priorities & needs to be undertaken during next 5-years. This occasion was also a means to continue strengthening inter-departmental collaborations and address future USDA & DHHS initiatives.

  - **Reason for Engagement:** Discuss ARS research and programs related to animal health, budget implications, priority areas and other opportunities.
  - **Relevant Outcomes:** Exchange of information on research priorities for the U.S livestock industries and provided the framework for future engagement at the USAHA annual conference in Greensboro, NC, October 2016.

- Alternatives to Antibiotics workshop, Ames, Iowa, April 5-7, 2016
  - **Reason for Engagement:** Obtained input from the livestock industries on priorities for research on new and innovative veterinary medical countermeasures that could reduce the use of medically important antibiotics.
United States Department of Agriculture
2016 Presidential Transition
Agricultural Research Service (ARS)

- **Relevant Outcomes**: Provided important information to ensure ARS’s research programs on antimicrobial resistant bacteria are relevant to the needs of the U.S. livestock and poultry industries.

- **Pioneering Partnerships with National Bio and Agro-defense Facility (NBAF) Symposium, Manhattan, Kansas, May 9-10, 2016**
  - **Reason for Engagement**: Obtain input from university partners and stakeholders on maximizing the relevance and impact of NBAF.
  - **Relevant Outcomes**: Provided important information for the development of a science and technology national action and implementation plan for NBAF.

- **American Association Swine Veterinarians meeting with NIFA and ARS, Washington, D.C., May 17, 2016**
  - **Reason for Engagement**: Further develop and enhance USDA research, education, and extension plans that are responsive to the needs of the swine industry through increased communication and coordination of active USDA intramural and extramural research projects and other initiatives with AASV leadership.
  - **Relevant Outcome**: Provide updates on the research needs of the swine health community, such as the need for additional research and development of veterinary medical countermeasures for foreign animal diseases, including alternatives to antibiotics.

- **NIFA and ARS Combating Antibiotic-Resistant Bacteria (CARB) Stakeholder Workshop, Webinar, July 19, 2016**
  - **Reason for Engagement**: To discuss, prioritize, and develop strategies to help address the most pressing animal health research, education, and extension needs related to antimicrobial resistance.
  - **Relevant Outcome**: Provided important information that will guide USDA’s CARB research program to ensure relevance and impact.

- **National Cattlemen’s Beef Association, Washington, D.C., August 12, 2016**
  - **Reason for Engagement**: Further develop and enhance ARS’s animal health research plans that are responsive to the needs of U.S. cattle industry.
  - **Relevant Outcomes**: Provide updates on the research needs of the cattle health community, such as the need for additional research and development of veterinary medical countermeasures for foreign animal diseases, including alternatives to antibiotics.

- **Shell Fish Meeting, Washington, D.C., February 1, 2016**
  - **Reason for Engagement**: Meeting requested by Pacific Coast Shellfish Growers Association and the East Coast Shellfish Growers Association to engage ARS and NIFA Leadership on industry priorities.
  - **Relevant Outcomes**: Stakeholders communicated priorities, including the need for improved genetic stocks on each coast and the need to address ocean acidification.
V. **Top Issues**

**Hot Topics**

**ANIMAL WELFARE**
Over the past 2 years, ARS has revamped and enhanced its review of animal research proposals and the care of its animals following a January 2015 New York Times article that alleged mistreatment during research at the U.S. Meat Animal Research Center (USMARC) in Clay Center, Nebraska.

ARS has also entered into an agreement with the USDA Animal and Plant Health Inspection Service (APHIS) to register all locations that use animals in research and to allow unannounced inspections beginning in November 2016 to ensure compliance with the Animal Welfare Act. ARS has made considerable efforts to increase the transparency of the handling and use of animals in its research programs.

The actions ARS has taken during 2016 have complied with requirements outlined in Senate Report 114-82 for ARS-operated and co-located facilities (APHIS registration and inspection), and the Agency has filed quarterly reports to both the Senate and House Appropriations Committees on animal welfare actions taken. Additionally, ARS’ actions have vastly improved its oversight capabilities, created solid procedures in providing for the animals in its research, and instituted a superior animal handling training program.

ARS is currently awaiting the release of a USDA Office of Inspector General Audit of the allegations (expected release October 2016). A preliminary version of the audit concluded there are no systematic problems with animal welfare at USMARC. ARS has agreed to implement all five recommendations from the audit.

**HUANGLONGBING (CITRUS GREENING)**
Huanglongbing (HLB), also known as citrus greening disease, is currently the greatest threat to the citrus industry worldwide, and is present in all 32 citrus-producing counties in Florida. The disease also has been found in a small number of residential locations in Texas and southern California. The bacterium that causes the disease is transmitted by the Asian citrus psyllid (ACP) from infected to healthy trees.

A Multiagency Coordination group (MAC), which is being led by ARS and APHIS representatives, was established by the USDA Secretary to develop and implement a unified research strategy to fight citrus greening. MAC projects funded from FY 2014 to FY 2016 included research for thermotherapy and chemical treatments of trees; biocontrol and areawide management of the psyllid vector; early disease detection; and advanced field trials of citrus rootstocks and sweet orange scions thought to be tolerant of the disease. Funds are administered by APHIS.

ARS research efforts target every aspect of citrus greening — the ACP vector, the presumed bacterial pathogen, and the citrus host through the development of resistant varieties. ARS scientists are working with other Federal and university researchers and industry to coordinate its research activities.
NATIONAL BIO- AND AGRO-DEFENSE FACILITY
The principal U.S. foreign animal disease research facility is located at the Plum Island Animal Disease Center (PIADC) on an island 2 miles off Long Island, New York. Operated by the Department of Homeland Security (DHS), PIADC is the only laboratory in the Nation authorized to work on high-consequence, live foot-and-mouth disease (FMD) viruses. The ARS Foreign Animal Disease Research Unit at PIADC is the primary USDA laboratory responsible for conducting research on foreign animal diseases of livestock, such as FMD, classical swine fever, and African swine fever.

PIADC lacks the infrastructure to work with biosafety level-4 (BSL-4) zoonotic agents and has inadequate BSL-3 space. Homeland Security Presidential Directive 9 identified the need for new state-of-the-art agriculture biocontainment laboratories for studying foreign animal and zoonotic diseases. In response, DHS and USDA initiated plans for the National Bio- and Agro-Defense Facility (NBAF) to be built at Kansas State University in Manhattan, Kansas. Construction began in spring 2013, and NBAF is slated for completion in 2020 and expected to be fully operational by the end of 2023.

Once the NBAF facility is complete, ARS and APHIS will move staff and foreign animal disease research, diagnostics, and training from PIADC to Manhattan, Kansas. NBAF’s enhanced level of security and larger research spaces will allow ARS to increase scientific staff and expand its foreign animal disease program, including priority biological disease threats and potentially dangerous new and emerging diseases that may threaten U.S. animal production. One outstanding question still to be resolved is which department — DHS or USDA — will provide primary management and oversight of facility operations.

The Senate’s version of the FY 2017 Agriculture Appropriations Bill and the Homeland Security Appropriations Bill includes identical report language encouraging DHS and USDA to work together on a plan for the future operation of NBAF, including consideration of an appropriate agency to manage the facility.

HIGHLY PATHOGENIC AVIAN INFLUENZA
Highly pathogenic avian influenza (HPAI) virus is responsible for serious disease and high mortality rates in poultry and wild birds and, if detected, can lead to immediate closure of international trade markets in poultry and poultry products for that country.

ARS scientists are experts in working with highly dangerous animal pathogens, and have access to the high-containment laboratories needed to study dangerous livestock and poultry pathogens. This gives USDA critical capacity for countering biological threats to agriculture and public health, and for addressing the needs of action and regulatory agencies, partners, and stakeholders quickly.

In the worst animal disease outbreak in U.S. history, HPAI viruses infected wild birds in Washington State in December 2014, which quickly spread to chicken layer and turkey farms in other states, resulting in the eventual loss of 49 million birds. ARS scientists quickly implemented a rapid response research program to understand the virulence, host
range, and transmission capabilities of these emerging viruses. Within weeks they had developed a rapid molecular test to detect the virus and transferred it to APHIS. ARS scientists also engineered a vaccine and transferred the vaccine to a commercial partner for development. Although the immediate threat has diminished, the commercial partner obtained a product license and was awarded a contract to manufacture the vaccine for the U.S National Veterinary Stockpile for use in future outbreaks.

**ZIKA VIRUS**

There is currently no vaccine available for the Zika virus, and ARS has not been involved in Zika research. However, ARS scientists have done extensive and long-running research on biting insects and mosquitoes, particularly the two species — the yellow fever mosquito (*Aedes aegypti*) and Asian tiger mosquito (*Aedes albopictus*) — known to transmit the Zika virus.

As part of that research, ARS is:

- Investigating whether Zika virus can infect birds, including poultry;
- Developing attractants, repellents, and biopesticides for mosquito population surveillance and control; and
- Working closely with the American Mosquito Control Association and others involved in U.S. mosquito control to develop better mosquito surveillance and control methods.

**ANTIMICROBIAL RESISTANCE**

The presence of antibiotic-resistant bacteria in foodborne, animal, and human pathogens can reduce the usefulness of existing antibiotics and may increase the risk of more severe infections and hospitalizations. The FDA, which is the primary regulatory agency for antibiotic use in animals, relies on USDA research about antibiotic use and antimicrobial resistance (AMR) in agricultural production to inform its policy and regulatory decisions.

ARS scientists are involved in research on AMR mechanisms and ecology and methods to improve control and mitigation of AMR development and transmission in agro-ecosystems, such as livestock feedlots and other environments. Additionally, ARS collaborates with FDA, CDC, and FSIS on the National Antimicrobial Monitoring System (NARMS), the primary monitoring system for AMR surveillance, to assess AMR in production animals, retail meats, and humans. A report on the surveillance data was just recently completed and approved through ARS. It should be available soon through the FDA/NARMS Web page: [www.fda.gov/AnimalVeterinary/SafetyHealth/AntimicrobialResistance/NationalAntimicrobialResistanceMonitoringSystem/ucm059103.htm](http://www.fda.gov/AnimalVeterinary/SafetyHealth/AntimicrobialResistance/NationalAntimicrobialResistanceMonitoringSystem/ucm059103.htm). NARMS also holds a public meeting every 2 years; the next meeting is in the early planning phase.

Working with NARMS, ARS scientists recently isolated the first bacteria from pigs containing a plasmid that causes resistance to colistin, one of the antibiotics used as a last resort to treat Salmonella in humans.
ARS scientists also conduct research to develop and evaluate alternatives to antibiotics for the prevention and treatment of diseases in animal production, including food safety pathogens. This includes development of vaccines, microbial-derived products, immune-related products, phytochemicals, and chemicals and enzymes with potential to reduce the use of medically important antibiotics in animal agriculture.

**ARSENIC IN RICE**
FDA has proposed Guidance for Industry on the allowable levels of inorganic arsenic in rice used for infant cereals in the United States, which could affect U.S. rice producers.

In 2015, USDA’s Office of the Chief Scientist provided FDA with substantive comments on draft documents concerning inorganic arsenic in rice. In these documents (most importantly, the Risk Assessment and Guidance for Industry), FDA reviewed evidence supporting chronic toxicity of inorganic arsenic and proposed establishing a maximum level of 100 ppb of inorganic arsenic in infant rice cereal. On April 6, 2016, FDA released the Risk Assessment along with the Guidance for Industry.

ARS is working to provide important key data needed by rice producers, breeders, and regulators to better understand how to address the challenge of arsenic in rice. ARS carries out research on arsenic in rice in Stuttgart, Arkansas; Beltsville, Maryland; and Grand Forks, North Dakota. Rice research is also conducted at 10 other U.S. locations.

For 2017, ARS scientists will:
- Continue efforts to breed rice varieties that reduce arsenic uptake and sequestration in the grain;
- Develop alternative water management practices that reduce exposure to arsenic in the soils, while preserving yield; and
- Work with industry on the deployment of the new arsenic analysis technology.

**COFFEE BERRY BORER**
The coffee berry borer (CBB) is a serious invasive pest that reduces coffee yield and degrades quality and now affects all coffee-producing areas, including Hawaii, the only U.S. state where coffee is grown. Hawaiian coffee is a valuable commodity because of its high quality, but the Hawaii Department of Agriculture has now quarantined coffee leaving infested areas.

ARS scientists are working with Hawaiian officials and university researchers on a number of efforts to eliminate or control this threat, including:
- Supporting an Areawide Integrated Pest Management (IPM) program for the CBB, a multi-year project involving ARS laboratories in Hawaii, Maryland, and New York. Since 2013, ARS has committed $1 million annually to the CBB IPM program;
- Developed application strategies for a microbial control product, *Beauveria bassiana*, to reduce the level of CBB infestations in fields;
Developing methods to synchronize crop ripening to create a berry-free production interlude that would interrupt the CBB life cycle without reducing yields; and

- Investigating other organic and sustainable agricultural methods for CBB control, including insect predators, parasitoids, and nematodes that attack CBB.

**ORGANIC RESEARCH**

Organic production is one of the fastest-growing segments of U.S. agriculture, and organic techniques have been shown to provide environmental benefits, such as increased soil carbon sequestration, reduced nutrient runoff, and increased on-farm biodiversity.

ARS has incorporated organic production elements into many research projects, allocating about $95 million from 2009-2015 for organic research at multiple locations. Research focuses on developing sustainable practices that enhance organic agricultural productivity, profitability, energy efficiency, and natural resource stewardship. These sustainable production systems also incorporate consumer preferences for organic produce and supply chain economic information, which allows producers to expand market opportunities. ARS organic research is coordinated with other agencies through the USDA Organic Working Group.

**POLLINATOR HEALTH**

Honey bees and other pollinators are essential for food security, contributing $15 billion in added crop value via pollination. The honey bee industry has been struggling with high rates of bee mortality, including Colony Collapse Disorder, a phenomenon in which worker bees in a colony abruptly disappear or die, for more than 10 years. The causes of this mortality remain unclear, although it may be associated with a combination of challenges pollinators face that include pathogens, parasites, environmental stress, natural habitat loss, and exposure to pesticides.

ARS conducts research on bee and pollinator health primarily at four laboratories, each with a unique regional advantage and research role: Baton Rouge, LA, honey bee breeding; Beltsville, MD, honey bee pests and diseases; Tucson, AZ, honey bee nutrition and Africanized bees; and (soon) Albany/Davis, CA, longitudinal studies and integrative research.

Recent ARS work of significance includes:

- Research on improving bee nutrition health, controlling the Varroa mite and other pests and pathogens, understanding the effects of pesticides on colonies, setting up longitudinal studies to determine causes and evaluate treatments for bee mortality, and establishing a bee genebank to preserve valuable germplasm for breeding; and
- Completing, with APHIS, a nationwide survey of bee health that sets baseline values for pest and disease prevalence; and

In June 2014, President Obama issued a memorandum creating a Federal strategy to promote the health of honey bees and other pollinators, part of which included the establishment of a Pollinator Health Task Force that ARS and other USDA agencies participate.
The White House Office of Science and Technology Policy requested an analysis of the gaps that exist in pollinator research. The ARS report submitted in June 2016 detailed research priorities that included:

- Improving methods for assessing combinations of mortality factors;
- Conducting epidemiological studies and developing decision support software;
- Conducting multi-factorial studies to determine the causes of mortality;
- Curating bee collections and preserving bee germplasm;
- Developing new bee husbandry tools and decision models and software;
- Determining the effects of pesticides and finding means to mitigate pesticide exposure;
- Developing gene editing tools for use in bees; and
- Developing new means for controlling Varroa.

**SCIENTIFIC INTEGRITY**

USDA’s Scientific Integrity Policy is detailed in Departmental Regulation (DR) 1074-001 Scientific Integrity, which provides guidance to Departmental leadership, employees, and contractors to ensure the highest level of integrity in the Department's involvement in scientific and technical processes and analysis. The DR establishes procedures for addressing concerns and/or alleged violations of scientific integrity policy by a USDA employee/contractor.

In addition, ARS has recently revised its processes for publication of scientific research on prominent topics to ensure that information disseminated by ARS scientists and staff meets the criteria for objective scientific research and results, and aligns with the USDA Scientific Integrity Policy. It is ARS policy to ensure scientists can communicate their research findings without political interference or inappropriate influence, as long as they comply with USDA policies and procedures for planning and conducting scientific activities, reporting scientific findings, and reviewing and releasing scientific products. Communications must remain within the bounds of scientific findings.

The Agency Scientific Integrity Officers (ASIOs) and Agency Research Integrity Officers (ARIOs) have agreed to proposed revisions to DR 1074-001 (Scientific Integrity) and new DM 1074-001 Procedures for Responding to Allegations of Scientific Integrity-Related Misconduct. USDA Science Council members had no objections or concerns about the proposed revisions or implementation of the draft directives, which are currently undergoing formal review and clearance.

**SOUTHEAST POULTRY RESEARCH LABORATORY (SEPRL)**

The U.S. National Poultry Research Center in Athens, Georgia, is home to the Southeast Poultry Research Laboratory (SEPRL) and six other laboratories that collectively conduct research on most aspects of poultry production and poultry products. The Center employs 134 ARS staff, including 42 scientists who are involved in research on antimicrobial resistance, avian diseases (including HPAI), bacterial epidemiology, general microbiology, toxicology, and egg safety and quality.
During FY 2016, ARS merged the administrative functions of the Avian Disease and Oncology Laboratory (ADOL) in East Lansing, Michigan, into SEPRL, making ADOL a work site of SEPRL.

SEPRL laboratories are mostly outdated with insufficient capacity, and modernizing the biocontainment facilities has been an ARS top priority for several years. As of FY 2016, Congress had appropriated full funding ($159 million) for the new facilities, which are expected to open in 2023. Modernization will result in approximately 277,494 gross square feet in 5 new buildings and 2,800 gross square feet in four renovated facilities. ARS expects to award a contract for the design-build phase by April 2017.

SCREW-WORM ERADICATION EFFORTS
New World screwworms are fly larvae (maggots) that can infest livestock and other warm-blooded animals, including people, most often by entering an animal through an open wound to feed on the animal’s living flesh. In October 2016, APHIS confirmed the presence of the screwworm in Key deer from National Key Deer Refuge in Big Pine Key, Florida, and the first local infestation in the United States in 34 years. In response, the Florida Commissioner of Agriculture declared an agricultural state of emergency in Monroe County, Florida.

ARS and APHIS have been involved in the response efforts, which include fly trapping to determine the extent of the infestation, releasing sterile flies to prevent reproduction (an ARS-developed technology), and disease surveillance to look for additional cases in animals. The initial goal will be to keep the infestation from spreading to new areas in Florida that could jeopardize the cattle industry there and to eradicate the screwworm flies from the affected Keys.

An important component of USDA’s efforts to keep screwworm flies out of the United States is the Screwworm Eradication Program that was initiated by the United States and Mexico in 1972, which ARS supports by providing research support and technical advice to APHIS. The U.S. and Panamanian governments currently collaborate on producing and releasing more than 1.5 billion sterile screwworm fly pupae each year near the border between Panama and Colombia to maintain a barrier that keeps the flies from spreading into Central America.

CAPITAL INVESTMENT STRATEGY
In 2012, in response to a Congressional directive, ARS surveyed the conditions of buildings at its 90 locations and developed a Capital Investment Strategy (CIS). The survey was to assess the merit and priority for fully funding pending major facility renovation and replacement projects and are aligned to research mission program priorities. The 2012 CIS continues to guide ARS facility capital investment priorities and has been instrumental in communicating the Agency’s infrastructure funding needs to Congress.

To date, Congress has fully funded five of ARS’ top eight CIS priorities. Design funding for two others were included in President’s FY 2016 budget request, and construction funding for those two projects are included in the President’s FY 2017 budget, which has not been acted on by Congress as of October 2016.
ARS is in the process of updating the CIS for 2018 to validate/modify the long-term facility needs to support research requirements for the distant future.

AFM ASSESSMENT
ARS is undertaking an assessment of the Administrative and Financial Services Division (AFM) — which includes the human resources, financial management, property management, and purchases and contracts functions — to assess the structure, processes, and resources employed in the delivery of these services to the REE agencies.

The assessment is being performed in partnership with the National Academy of Public Administration, whose members have been meeting with ARS and REE employees since August 2016 to gather service complaints and complements, best practices, and suggestions for improvements to service. The Academy is expected to compile its discussions and complete its work on the assessment by February 2017. The findings of the assessments may result in organizational structure changes to AFM with an aim at improving services, triggering the need for a Departmental Reorganization Package (DR1010).

Hot Topics – Office of Pest Management Policy

OPMP INTERACTION WITH ARS LEADERSHIP AND THE DEPUTY SECRETARY
The Office of Pest Management Policy (OPMP) was created in 1997 in response to grower concerns about EPA’s implementation of the Food Quality Protection Act of 1996 (FQPA). While OPMP is administratively under ARS, the Director of OPMP works under the direction of the Office of the Secretary. OPMP serves as the Department’s focal point for pesticide issues and all issues related to pest management, and OPMP staff provide Departmental coordination on agricultural biotechnology issues including the internal Biotechnology Coordinating Committee and the Secretary’s Advisory Committee on Biotechnology and 21st Century Agriculture (AC21).

Congress and other stakeholders are keenly aware of the work OPMP provides in support of growers. For the past 4 years OPMP has been specifically recognized by the House and/or Senate Agricultural Appropriations Committees in appropriations bills.

Interactions with ARS leadership are administrative only in scope; all work efforts and policy direction are directed by the Deputy Secretary. The Director of OPMP meets with the Deputy Secretary monthly in person (or more often as needed) and is in contact via e-mail regularly. In addition, the Director works with a Senior Policy Advisor to the Secretary and frequently responds to requests from the Secretary. During interagency review on relevant rulemakings, the Director of OPMP represents USDA at meetings with OMB and receives direction from the Deputy Secretary. The director also works closely with the Chief Economist, and on specific issues, the Chief Economist and the OPMP Director represent USDA at meetings with OMB.

RELATIONSHIP OF OPMP WITH EPA
Under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), the Administrator of the Environmental Protection Agency (EPA) is required to consult with the Secretary of Agriculture at various points. The Office of Pest Management Policy (OPMP), working under the direction of the Office of the Secretary, specifically the Deputy Secretary, serves in this
capacity and provides input to EPA in various formal and informal capacities. USDA provides accurate information about all aspects of agricultural production and provides an assessment of the impacts of EPA’s proposals on U.S. agriculture.

The goals are to ensure EPA’s efforts concerning agriculture are fully informed with the facts and the most up-to-date science, and to convey to EPA the implications of their decisions on the agricultural community. USDA provides reliable data and information to EPA on the benefit, costs, and overall effects of proposed EPA regulatory actions, including the registration review of pesticides. USDA also engages in informal dialogue with EPA to convey the importance of providing U.S. agriculture with safe and effective tools to protect crops and increase agricultural productivity.

However, under FIFRA and related statutes, EPA has sole responsibility for interpreting any USDA-provided information, drawing conclusions, and taking regulatory actions based on the information. While USDA has taken issue with some of EPA’s assumptions and conclusions, USDA recognizes that EPA is faced with multiple and complex scientific challenges, and available data are sometimes ambiguous or uncertain. The repeated challenge of EPA actions in court, particularly in the arena of endangered species protection, further complicates EPA’s ability to prioritize actions based solely on scientific considerations. EPA does solicit extensive public comments at multiple stages of the registration review process for each pesticide. USDA has provided comprehensive comments on several pesticides, and encourages all interested parties to continue to do so in the future. Throughout this process, USDA remains committed to supplying EPA with the best available data on pesticides and U.S. agriculture, and looks forward to providing feedback and suggestions on EPA registration decisions and other regulatory actions.

**REVOCATION OF CHLORPYRIFOS TOLERANCES**

EPA proposed the revocation of all chlorpyrifos tolerances which would potentially result in severe impacts for domestic agricultural production and international trade. USDA has strongly voiced concerns regarding the science, data quality, and lack of transparency. EPA has until March 30, 2017 to inform the Court as to whether or not they will deny the petition which was filed several years ago.

**EPA CONSULTATION ON PESTICIDE REGISTRATIONS – ENDANGERED SPECIES ACT AND FEDERAL FUNGICIDE & RODENTICIDE ACT CONFLICTS**

EPA must consult with the Fish and Wildlife Service and the National Marine Fisheries Service on all actions including pesticide registrations. Historically, they have had strong conflict and resulting Biological Opinions could not be implemented by EPA and/or had mitigation measures that were impossible for agriculture. They recently completed the first three Biological Evaluations that showed that between 80-96% of endangered species are impacted due to overly conservative assumptions. These have taken three years and there is another year of work. The process is unsustainable and has frustrated registrants and the agricultural community. USDA has no formal role in consultation but have attempted to engage.
GLYPHOSATE
EPA is currently reviewing whether or not glyphosate, one of the most widely used herbicides in the United States, causes cancer. Their Scientific Advisory Panel (SAP) was scheduled to meet last month, but EPA postponed until the end of 2016. USDA is closely watching how the science unfolds. While EPA’s white paper indicates they do not believe it causes cancer, the postponement has raised concerns as it was related to the membership of the SAP.

DICAMBA REGISTRATION
USDA-APHIS announced determinations of nonregulated status for Monsanto Company’s soybeans and cotton that are resistant to glyphosate and dicamba in January 2015. Genuity Bollgard II with Roundup Ready Flex cotton and Roundup Ready 2 Xtend soybean seed have been available for purchase since 2015. The seed contains traits that allow in-season use of dicamba and/or glyphosate herbicides in cotton and soybean production along with other desirable agronomic and insect management traits. However, while glyphosate is registered for use with these crops, the EPA registration of dicamba for use in the crop season is still pending. In 2016, some growers in some mid-western states chose to use the product off label, resulting in very widespread and serious crop damage. Recently, a producer was killed in a dispute over the dicamba drift damage. USDA has strongly requested that EPA get this product registered (responsibly) for the next growing season.

ATRAZINE ECOLOGICAL RISK ASSESSMENT AND REGISTRATION REVIEW
Atrazine has been used in the United States for weed control in field corn, sweet corn, grain sorghum, sugarcane, citrus, and warm-season turfgrass for over 50 years. The benefits of atrazine compared to alternatives include excellent crop safety; broad range weed control; applicability in minimum, no-till, and conventional tillage; and economy of use. The draft ecological risk assessment, which draws heavily from conservative model estimations, concludes that atrazine is highly detrimental to amphibians, fish, birds, mammals, etc. - the ecosystem, effects that have not been seen under actual field conditions. USDA, as well a stakeholders across the USA, provided public comments on the serious concerns with the risk assessment. EPA intends to release the atrazine human health risk assessment late 2016.

Appendix A: Acronyms

AD — Area Director, the SES line manager in each of ARS’ 5 geographic areas
AA — ARS Associate Administrator (for Research Operations or Research Programs)
AC — ARS Administrator’s Council
AFGE — American Federation of Governmental Employees
AFM — ARS Administrative and Financial Management, which services ARS and the rest of the REE Agencies
APD — Acquisition and Property Division
ARIS — Agricultural Research Information System (ARS’ project system of record)
CD — ARS Center Director, the SES line manager at a number of larger research centers in ARS
ODEO — ARS Office of Outreach, Diversity and Equal Opportunity
ARS OC — ARS Office of Communications
ARS OCIO — ARS Office of the Chief Information Officer
Axon — the ARS intranet
BARC — Beltsville Agricultural Research Center
BARD — Binational Agricultural Research and Development (U.S. and Israel)
BPMS — ARS Budget and Program Management Staff
DAAFM — ARS Deputy Administrator for Administrative and Financial Management
Cat 1 or Cat 4 — Category 1 & 4 - Research Scientists in ARS
CRADA — Cooperative Research and Development Agreement
CRIS — Current Research Information System
EBSC — ARS AFM Eastern Business Service Center
FD — ARS AFM Facilities Division
FMAD — ARS AFM Financial Management and Agreements Division
HRD — ARS AFM Human Resources Division
Lead SY — Lead Scientist (on a research project)

WHAT WE DO: OUR MISSION

The Economic Research Service (ERS) anticipates trends and emerging issues in agriculture, food, the environment, and rural America and conduct high-quality, objective economic research to inform and enhance public and private decision making. As a Federal Statistical Agency, ERS provides timely, objective data on the well-being of America’s farmers, consumers, natural resources, and rural communities.

WHO WE ARE: OUR WORKFORCE

- We employ about 360 people, including roughly 240 economists and other social scientists. Communication, IT, and administrative professionals support our research mission.
- All staff work at headquarters in Washington, DC.

WHO WE SERVE: OUR CONSTITUENTS

ERS provides data and research findings to inform USDA and other Federal policy and program decisions. State and local government officials, Non-Government Organizations, agribusiness companies and farmers, and the food industry rely on ERS statistics and reports.

KEY UPCOMING DECISIONS

- **U.S. Farm Income Forecasts**: ERS farm income forecasts are updated three times per year, including the first release for 2017 that will take place during the first half of February. Forecasts are used by USDA and its stakeholders to inform perspectives on the financial health of the U.S. agricultural economy.
- **Report to Congress: International Trade and Tropical Deforestation**: In response to a request in the FY 2016 Senate Appropriation Committee Record, ERS will submit a Report to Congress that analyzes the relationship between international trade in agricultural commodities and tropical deforestation, placing U.S. trade and consumption in an international context.

BUDGET HIGHLIGHTS FY 2016

- **ERS Single-Line Budget Authority**: $91 million
  - Discretionary Authority: 94%
  - Reimbursable authority: 6%
- Addresses the highest priority policy questions and research data needs within our discretionary authority to focus resources on most policy-relevant economic issues.
- Systematically consults with stakeholders to sharpen priorities and research investments.
I. **Organizational Overview**

USDA’s Economic Research Service is a primary source for economic data, research, and analysis that informs both public and private sector decisions makers in the food and agricultural sector. ERS’s economic research touches on topics related to all USDA mission areas.

**Agency’s Mission/Strategic Plan**

The mission of USDA’s Economic Research Service is to anticipate trends and emerging issues in agriculture, food, the environment, and rural America and to conduct high-quality, objective economic research to inform and enhance public and private decision making.

ERS provides research, data, and analysis to enhance the understanding of policy makers, regulators, program managers, and those shaping debate on economic and policy issues. ERS economic forecasts are used both by decision makers as well as other researchers in the food and agricultural sector. Research and market outlook findings are published in USDA reports and academic journal articles. In order to reach our stakeholders, ERS invests in clearly communicating our research, outlook and statistics through our website, a digital monthly magazine, *Amber Waves*, a daily Chart of Note distributed to subscribers via email and Twitter, and interactive data tools.

ERS’s strategic goals correspond to the four programmatic USDA strategic goals as outlined in the table below:

<table>
<thead>
<tr>
<th>USDA Strategic Goal</th>
<th>USDA Strategic Objectives</th>
<th>ERS Research Program Area</th>
<th>Key Outcome</th>
</tr>
</thead>
</table>
| **Strategic Goal 1:** Assist rural communities to create prosperity so they are self-sustaining, repopulating, and economically thriving. | **Objective 1.1:** Enhance Rural Prosperity  
**Objective 1.2:** Create Thriving Communities  
**Objective 1.3:** Support a Sustainable and Competitive Agricultural System | Rural Prosperity and a Competitive Agricultural System | Economic research and analysis that enhances understanding by policy makers, regulators, program managers, and those shaping public debate of economic issues affecting rural development, rural well-being, farm business and household income, and rural communities. |
<table>
<thead>
<tr>
<th>USDA Strategic Goal</th>
<th>USDA Strategic Objectives</th>
<th>ERS Research Program Area</th>
<th>Key Outcome</th>
</tr>
</thead>
</table>
| **Strategic Goal 2:** Ensure our national forests and private working lands are conserved, restored, and made more resilient to climate change, while enhancing our water resources. | **Objective 2.1:** Restore and Conserve the Nation’s Forests, Farms, Ranches, and Grasslands  
**Objective 2.2:** Lead Efforts to Mitigate and Adapt to Climate Change  
**Objective 2.3** Protect and Enhance America’s Water Resources | Climate, Energy, and Natural Resource Conservation | Economic research and analysis that enhances understanding by policy makers, regulators, program managers, and those shaping public debate of economic issues related to developing Federal farm, natural resource, and rural policies and programs that respond to the challenges of climate change and the need to protect and maintain the environment while improving agricultural competitiveness and economic growth. |
| **Strategic Goal 3:** Help America promote agricultural production and biotechnology exports as America works to increase food security. | **Objective 3.2:** Ensure U.S. Agricultural Resources Contribute to Enhanced Global Food Security  
**Objective 3.2:** Enhance America’s Ability to Develop and Trade Agricultural Products Derived from New Technologies  
**Objective 3.3:** Support Sustainable Agriculture Production in Food-Insecure Nations | Global Food Supply and Security | Economic research and analysis that enhances understanding by policy makers, regulators, program managers, and organizations shaping public debate of economic issues related to adoption of economically and environmentally sustainable technologies to support enhanced food security, factors affecting trade of U.S. agricultural products (including products produced using biotechnology), strategies to reduce trade barriers and increase markets for U.S. products (including biotechnical exports) |
| **Strategic Goal 4:** Ensure that all of America’s children have access to safe, nutritious, and balanced meals. | **Objective 4.1:** Increase Access to Nutritious Food  
**Objective 4.2:** Promote Healthy Diet  
**Objective 4.3:** Protect Public Health by Ensuring Food is Safe | Food Choices, Nutrition, and Food Safety | Economic research and analysis that enhances understanding by policy makers, regulators, program managers, and those shaping public debate of economic issues related to improving the efficiency, efficacy, and equity of public policies and programs relating to domestic food prices and availability at home, consumer food choices, nutrition and health outcomes, nutrition assistance programs, and protecting consumers from unsafe food. |
ERS conducts agency-wide strategic planning exercises every five years with our next planned round scheduled for 2017-2018. Within each of ERS’s individual divisions, priority project planning occurs annually and strategic goals and medium-term planning occurs every 2-3 years. Both the 5-year agency-wide and division-level medium-term planning exercises include stakeholder interaction ad feedback to improve ERS understanding of customer needs and views. Stakeholders include both USDA policy officials, other Federal decision makers, and agricultural and food industry sector participants. Our most recent strategic plan is available on our website at: http://ers.usda.gov/about-ers/strategic-plan.aspx.

Key mission delivery performance measures

ERS Key Performance Indicators allow for tracking of outcomes that demonstrate impact of research, data, and analyses. Recent measures are presented in the table below:
<table>
<thead>
<tr>
<th>Key Performance Indicator (KPI)</th>
<th>Strategic Goal</th>
<th>Actual</th>
<th>Target</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inform policy officials and stakeholders on policy issues through briefings on research findings (number of briefings)</td>
<td>1,2,3,4</td>
<td>45</td>
<td>39</td>
</tr>
<tr>
<td>Provide research, data, and analysis on policy relevant issues at the request of key decision makers and policy officials (number of staff analyses produced)</td>
<td>1,2,3,4</td>
<td>487</td>
<td>518</td>
</tr>
<tr>
<td>Federal Register Notice and other Government Use (number of notices citing ERS research and/or data)</td>
<td>1,2,3,4</td>
<td>44</td>
<td>34</td>
</tr>
<tr>
<td>Visits to ERS Web site (FY 2012); Number of page views (FYs 2013-2015) using Adobe Cloud software</td>
<td>1,2,3,4,5*</td>
<td>4.6 Mil.</td>
<td>8 Mil.</td>
</tr>
<tr>
<td>Customer satisfaction with the ERS Website (score on a 0-100 scale from Foresee website satisfaction survey)</td>

</tbody>
</table>

*Note that USDA Goal 5 is: Create a USDA for the 21st century That Is High-Performing, Efficient, and Adaptable. This Goal crosses all research topics and speaks to efficiencies in agency performance.
Organization’s History

The Economic Research Service (ERS) was established in 1961 from components of the former Bureau of Agricultural Economics principally under the authority of the Agricultural Marketing Act of 1946 (7 U.S.C. 1621-1627). ERS has been located at various office spaces in Washington, D.C. during its 55 year history and all of its staff have been located in Washington, D.C. for the past 20 years. Over time, the mission of ERS - and of USDA - has broadened from a focus on the farm economy to reflect the changed environment of our food and agriculture system, and now includes research on food safety, nutrition, natural resources, trade and international agriculture, and the environment.

ERS has established a reputation for timeliness, high quality, depth, and objectivity in analyzing front-burner issues and enhancing the field of agricultural economics. Recent work has informed debates on food deserts, biofuels and renewable energy, rural broadband investment, conservation programs and practices, US farm programs including Federal crop insurance, the role of agricultural research, and the effect of regional trade agreements on U.S. agriculture.

ERS has consistently and effectively combined incisive analysis with cutting-edge technology. The agency pioneered the development of econometric models of national and international agricultural commodity markets in the 1970s, following this with other models that underpin much of ERS's analysis. Most recently, ERS has developed:

- Geospatial online mapping tools to integrate and display data and research results geographically - including data on the rural economy, farm program distribution, and indicators of access to affordable and nutritious food.
- Pioneered the application of emerging behavioral economics methods to food and agricultural policy issues through both intramural and extramural research programs.
- Expanded the ability for USDA, in collaboration with FNS and NASS, to collect primary data on both consumers and farmers through the National Food Acquisition and Purchase Survey (FoodAPS) and Agricultural Resource Management Survey (ARMS) surveys.
- Expanded cooperation and coordination across Federal agencies in the use of administrative data to enhance research capabilities and improve the understanding of Federal food and farm policy programs.

Biographies of career staff in key leadership positions

**Dr. Mary Bohman**  
**Administrator**  
202-694-5000, mbohman@ers.usda.gov

Dr. Mary Bohman is the Administrator of ERS. She joined ERS in 1997 and previously served as Director of the Agency's Resource and Rural Economics Division, Deputy Director for Research in the Market and Trade Economics Division (MTED), and Chief of MTED's Europe, Africa, and Middle East Branch. Other public-sector positions held include details to the White House Office of Science and Technology Policy and to USDA's Under Secretary for Farm and Foreign Agricultural Services. From 1990 to 1997 she was on the Agricultural Sciences faculty at the University of British Columbia. Dr. Bohman received her Ph.D. from the Department of Agricultural Economics, University of California, Davis and her B.S. from the School of Foreign Service, Georgetown University.

**Greg Pompelli**  
**Associate Administrator**  
202-694-5002, pompelli@ers.usda.gov

Greg Pompelli serves as the Associate Administrator, with primary responsibilities including overall agency operations, serving as the Agency’s Scientific and Research Integrity Officer, and administering its Research Position Classification System. Prior to joining the Administrator’s Office, he served as the Associate Director for the Market and Trade Economics Division, the Chief of the Animal Products, Grains and Oilseeds Branch, Chief of the Global Agricultural Markets Branch, and leader of the Geo-Spatial Economic Analysis team. Before joining ERS in 2000, Pompelli was an associate professor in the Department of Agricultural Economics and Rural Sociology at the University of Tennessee, an economic analyst with Sunkist Growers, Inc., and a loan officer with the Sacramento Bank for Cooperatives. Dr. Pompelli received a Ph.D. and an M.S. from the University of California-Davis and a B.S. from Pennsylvania State University.

**Ephraim Leibtag**  
**Assistant Administrator**  
202-694-5349, eleibtag@ers.usda.gov

Ephraim Leibtag is Assistant Administrator at ERS. He currently manages the agency's Staff Analysis Program, tracks agency metrics, output, and impacts, and represents the agency in various Federal working groups and committees. He previously served as Deputy Director for Research in ERS's Food Economics Division where he was responsible for directing the research program of the Division as well as oversight of all publications, briefings, and presentations of Division staff. Dr. Leibtag received his Ph.D. and M.A. from the University of Maryland at College Park and a B.A. in Economics from Yeshiva University.
Tony Williams
Director of the Information Services Division
202-694-5101, Tony.Williams@ers.usda.gov

Tony Williams is Director of the Information Services Division. He joined ERS in 2015 and lead ERS information technology, website, and publication efforts. Previously, Mr. Williams served as Assistant Division Chief for Information Technology (IT) in the Demographic Surveys Division of the Census Bureau with the responsibility of developing, directing and coordinating IT support and application development of mathematical statistical techniques in support of the design and conduct of the statistical programs in the demographic field. Previously Mr. Williams served as Senior Project Manager in the Operations Services Staff of the Justice Management Division, Department of Justice, directing the migration of component infrastructure into the Justice Data Center. He has also held private sector positions including as a Senior Software Engineer at AT&T. Mr. Williams received his B.S. in Math/Computer Science from California University of Pennsylvania and a M.B.A. in Finance from Virginia Tech University. He also holds a Masters Certificate in Project Management from George Washington University.

Marca Weinberg
Director of the Resource and Rural Economics Division (RRED)
202-694-5478, weinberg@ers.usda.gov

Marca Weinberg is Director of the Resource and Rural Economics Division (RRED). She previously served as RRED Associate Director and Chief of the division's Resource, Environmental, and Science Policy Branch. In her current position, she leads the agency climate change research program, and has served on inter-departmental efforts on sustainability indicators, water use and water quality. More generally, she leads a program of research, analysis and data collection to support policy makers and program managers concerned with conservation, rural development, and the structure and performance of the farm sector. Her primary research focus was on estimating costs, benefits, and distributional implications of policy design options for addressing the environmental impacts of agricultural production and of the non-commodity services agriculture provides. Dr. Weinberg received a Ph.D. and an M.S. in Agricultural Economics from the University of California, Davis, and a B.S. in Political Economy of Natural Resources from the University of California, Berkeley.
Jay Variyam  
Director of ERS Food Economics Division  
202-694-5457, jvariym@ers.usda.gov

Jay Variyam is the Director of ERS’s Food Economics Division. He leads its food policy research focused on federal food and nutrition assistance programs, use of behavioral economics to understand and improve diet quality, the economic effects of food taxes and subsidies, food availability, affordability, and access, assessing the economic cost of foodborne diseases, investigating the market and regulatory factors that drive food safety investments, and the characteristics of food markets and the interplay among consumers, government regulation, and food markets. A major emphasis is on developing consumer and food market data, including data on food prices, household food purchases, consumer dietary behaviors, and time use. He is a steering committee member of the National Collaborative on Childhood Obesity Research (NCCOR) and a member of the Interagency Council on Human Nutrition Research. Dr. Variyam holds a Ph.D. in agricultural economics from the University of Georgia. He completed his M.A. in agricultural economics and B.Sc. in agriculture at the Kerala Agricultural University, Kerala, India.

Gopinath (Gopi) Munisamy  
Director of ERS Market and Trade Economics Division  
202-694-5201, gmunisamy@ers.usda.gov

Gopinath (Gopi) Munisamy is Director of ERS’s Market and Trade Economics Division. He oversees a program of economic research and analysis on U.S. and global economic and policy factors affecting the structure and performance of agricultural markets and trade. Before joining ERS, he served on the faculty at Oregon State University in the Department of Agricultural and Resource Economics, and he chaired the Executive Committee of the International Agricultural Trade Research Consortium. Dr. Munisamy received a Ph.D., in Agricultural and Applied Economics from the University of Minnesota, his M.A. in Agricultural Economics from the Indian Agricultural Research Institute in New Delhi and a Bachelor’s degree in Agricultural Sciences from Tamil Nadu Agricultural University, India.

Enterprise Workforce Data

![Graph showing workforce FY 2009-FY 2016](image)

![Pie chart showing GS level distribution](image)
ERS employs a workforce of 364 employees, of which the following are full-time and part-time:

- Full-time: 354
- Part-time: 10

ERS employs 6 temporary employees.

- Of our total workforce, 83 employees, or 23%, are eligible to retire within the next year.
- All ERS employees are located in the Washington DC headquarters office. ERS has no field offices.
- 239 or 66% of ERS’s employees are Economists, Social Science Analysts, Operations Research Analysts or Statisticians.

II. Policies and Regulations

Statutory Authorities

ERS was established in 1961 principally under the authority of the Agricultural Marketing Act of 1946 (7 U.S.C. 1621-1627). Delegations of authority are made by the Under Secretary for Research, Education, and Economics to the ERS Administrator to: (1) Conduct economic research on matters of importance to cooperatives (2) Conduct economic and social science research and analyses relating to: (i) Food and agriculture situation and outlook; (ii) The production, marketing, and distribution of food and fiber products, including studies of the performance of the food and agricultural sector of the economy in meeting needs and wants of consumers; (iii) Basic and long-range, worldwide, economic analyses and research on supply, demand, and trade in food and fiber products and the effects on the U.S. food and agriculture system, including general economic analyses of the international financial and monetary aspects
of agricultural affairs; (iv) Natural resources, including studies of the use and management of land and water resources, the quality of these resources, resource institutions, and watershed and river basin development problems; and (v) Rural people and communities, as authorized by title II of the Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1621–1627), and the Act of June 29, 1935, as amended (7 U.S.C. 427). No legislation has recently or will soon expire.

Important Policies and Regulations

ERS does not write policy or regulations or administer any programs. ERS primarily conducts research and provides data and information to decision makers. ERS is one of 13 Principal Statistical Agencies in the Federal Government and is guided by OMB Statistical Directives 1 and 4. Statistical Directive 1 focuses on the importance of public trust in statistical agencies to conduct objective statistical activities. Directive 4 provides guidelines on the release of statistical products that covers ERS reports. The stated goal is “to maximize the quality, objectivity, utility and integrity of information, including statistical information provided to the public.” The Directive states that, “Unless otherwise specified in statute, statistical agencies or units are directly and solely responsible for the content, quality, and dissemination of their products.” See: https://www.whitehouse.gov/omb/inforeg_statpolicy for more details about these directives.

Overview of the policy/regulation review process

ERS does not write policy or regulations, but has a comprehensive peer and interagency review process for both its research and data products. All original ERS research conforms to USDAs’ Information Quality Policy and Scientific Integrity Policy as well as OMB’s Information Quality for Peer Review Policy. Research reports are reviewed by technical academic reviewers and both the subject matter and name of peer reviewers are provided on ERS’s website at: http://ers.usda.gov/about-ers/peer-reviews.aspx. The ERS Data Product Quality Standards describe the principles that ERS follows to ensure quality standards are met by all ERS data products. All ERS data products must meet each standard of purpose, utility, objectivity, transparency, integrity, and accessibility.

GAO and OIG Audits

ERS did not have any GAO, OIG, or other audits during the past 4 years and complies with all requests for information when contacted by GAO, OIG, or similar oversight organizations.
III. Congressional Relations and Issues

Overview

ERS occasionally is asked to conduct research and submit findings as a Report to Congress. Previous examples of these types of reports include: *Trends in U.S. Local and Regional Food Systems: A Report to Congress* and *Measuring the Indirect Land-Use Change Associated with Increased Biofuel Feedstock Production: A Review of Modeling Efforts: Report to Congress*. Currently, ERS is preparing a new Report to Congress with a draft title: *International Trade and Tropical Deforestation: A Report to Congress*. Based on a request from Senate Report 110-134 accompanying S. 1800, the 2008 Agricultural, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Bill, ERS was asked to analyze the impacts of U.S. trade and import of food and commodities on global forest loss, and to identify potential U.S. policies that could reduce U.S. impacts on tropical forest loss.

The ERS report will analyze the patterns of deforestation in major deforesting countries including Argentina, Bolivia, Brazil, Paraguay, Indonesia, and Malaysia. Deforestation in South America is linked with production of beef and soybeans, while deforestation in Indonesia and Malaysia is linked with production of palm oil and wood products. The report will provide an historical tracking of production and international trade of forest-risk commodities and an economic model that considers potential policy options. The draft report is scheduled to go through USDA review and clearance during the next few months and then be submitted to Congress by December 2016. ERS does not have any other pending activities related to Congress.

All request for Reports to Congress are submitted through USDA’s standard clearance process and are sent to the requesting Congressional office. ERS can only release these reports publicly if approved to do so by the requesting Congressional office.

Our other primary interactions with Congress include responding to questions regarding economic research and data and participating in hearings and briefings when invited to do so. ERS is usually included in the annual budget and appropriations hearings for REE and occasionally is asked to testify at hearings related to food and agricultural policies for which ERS research is relevant to the discussion (food prices, food assistance programs, farm sector health, and the rural economy).
Relevant Committees

House Committee on Agriculture
   Subcommittees:
   Biotechnology, Horticulture, and Research
   Nutrition
   Livestock and Foreign Agriculture

House Committee on Appropriations
   Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies

Senate Committee on Agriculture, Nutrition, and Forestry
   Subcommittee on Nutrition, Specialty Crops, and Agricultural Research

Senate Committee on Appropriations
   Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

ERS works closely with its fellow REE agencies to ensure broad coverage of agricultural science research and statistics and collaborates on projects of mutual interest. ERS also consults with USDA program agencies to learn more about key policy questions that may motivate research projects and works with other Federal agencies on joint research and data projects.

Partner agencies are listed below in 4 categories:

1. REE Mission Area: NASS, ARS, NIFA
2. Other USDA: AMS, APHIS, CNPP, FNS, FS, FSIS, NRCS, OBPA, OCE, RD, RMA, FAS, FSA
3. Other Federal Statistical Agencies: BEA, BLS, Census
4. Other Federal Agencies: USAID, EPA, FDA, GAO, OMB, OSTP, USTR

ERS also consults with international economic development and research groups including FAO and OECD.

In terms of shared services, ERS works in partnership with the Administrative and Financial Management unit in USDA’s ARS to receive Human Resources services (hiring, retirement, personnel actions, personnel security, employ assistance and work-life programs, workers’ compensation, and policy), acquisitions and procurement, extramural agreement administration,
United States Department of Agriculture
2016 Presidential Transition
Economic Research Service

financial and budget Management administration, time and attendance, and travel and relocation support. ERS receives shared payroll, and technical financial services from the USDA’s National Finance Center. Finally, ERS receives shared computing, network, and network security monitoring services from USDA’s National Information Technology Center.

Stakeholder group overview

ERS works with other research institutions on projects of mutual interest including methodological and technical reviews with the National Academy of Sciences on research and data quality across the agency, the National Collaborative on Childhood Obesity Research and the Food Research and Action Center on food economics, food choices, and food assistance program issues, the Farm Foundation on research topics related to farming and the rural economy, and the International Agricultural Trade Research Consortium (IATRC) on agricultural trade research topics. ERS also funds extramural research with other research institutions, especially academic institutions, through research grants and co-operative agreements that enable ERS researchers and academics to work jointly on projects of mutual interest to ERS and the University.

Recent engagements with stakeholder group

The National Collaborative on Childhood Obesity Research includes representatives from CDC, NIH, USDA, and the Robert Wood Johnson Foundation. Jay Variyam, FED Division Director is a member of the Steering Committee, and ERS’s Joanne Guthrie and Lisa Mancino are organizing a joint NCCOR workshop on promoting healthy food purchases among SNAP participants called “Moving from Test Market to All Markets: Translating Food Purchasing Research into Evidence-based Strategies to Improve the Purchase of Healthier Items”, October 17, 2016.

ERS co-sponsored a summit, jointly with the Farm Foundation, on “Antibiotic Stewardship: Policy, Education and Economics” in January 2016. More than 180 producers, economists, government agency staff and representatives from livestock, veterinary and feed industry organizations participated in the summit. The summit program examined how agriculture and animal health can be full partners with the human medical community in a fully integrated national action plan to reduce and mitigate antibiotic resistance.

ERS sponsored a conference in October 2015 to commemorate 20 years of US food security research at ERS. Participants included the Food Research and Action Center, the Center for Budget and Policy Priorities, the Congressional Hunger Center, the Institute of Medicine, Witnesses to Hunger, Bread for the World Institute, ConAgra Foods, American Enterprise Institute and many academics and think tanks.

In September 2015, an ERS co-sponsored Soil Renaissance Workshop brought more than 100 economists, researchers and practitioners together to discuss the economics of soil health. The multidisciplinary workshop laid the foundation for an ongoing program of research on the economics of soil health. The participants—from government, foundations, non-profits, academia and the private sector—gathered to learn about and discuss the science and economics
of soil health. Through 14 presentations, 5 posters, and 3 group discussion sessions, the workshop explored the economics of soil health.

In 2013, ERS contracted with the Farm Foundation to arrange listening sessions with agricultural industry groups representing a wide range of ERS stakeholders. The objective was to gather insight as to whether MTED’s research, outlook and data products are meeting stakeholders’ needs. Between February 2013 and July 2014, eleven focus groups were conducted, mostly at trade shows and industry conventions. These listening sessions were professionally managed by an independent third party, and followed a structure format. The results revealed a strong appreciation for ERS outlook and data products. The findings were used in creating a Commodity Outlook Program Strategic Plan that continues to guide efforts and investments in this program.

V. Top Issues

Key Topics

No immediate decisions regarding key policy issues, major upcoming programmatic decisions, or ongoing regulatory actions are on the horizon for ERS from an agency perspective. However, ERS often provides research findings and data through our staff analysis program to USDA decision makers involved in program and policies in other USDA mission areas (FFAS, FNCS, FS, MRP, NRE, and RD). Two of our most cited statistics are farm income forecasts (next update scheduled for the week of February 6, 2017) and domestic food security estimates (next update scheduled for September 6, 2017).

The latest information on those two topics, as well as selected 2-page backgrounder based on ERS research and data are presented below. In addition, USDA leaders can contact ERS Assistant Administrator Ephraim Leibtag (eleibtag@ers.usda.gov or 202-694-5349), who oversees ERS’s Staff Analysis response team, to receive information from ERS to inform food and agricultural policies and decisions.

Well-being of the Farm Sector

The ERS farm income and finance program measures, forecasts, and explains indicators of economic performance for the U.S. farm sector and farm businesses by resource region and commodity specialization.

ERS publishes estimates and forecasts of farm income, wealth, and household well-being based on responses to USDA’s annual Agricultural Resource Management Survey (ARMS) and information provided by USDA’s National Agricultural Statistics Service (NASS), Farm Service Agency (FSA), Risk Management Agency (RMA), and other sources of sector-level information.
Farm Sector Weakness Forecast to Continue Into 2016

- Net cash farm income for 2016 is forecast at $94.1 billion, and net farm income at $71.5 billion. Both measures are forecast to decline for the third consecutive year after reaching recent highs in 2013 for net farm income and 2012 for net cash income.
- Direct government farm program payments play an important role in the financial performance of the farm economy, accounting for over 14 percent of the sector’s net cash income in 2016—the highest percentage since 2006. In 2016, farm program payments are forecast to rise by 24.8 percent to $13.5 billion.
- Overall, the farm sector holds approximately $2.5 trillion in wealth—the net measure of assets and debt—and it is largely held in agricultural real estate, which accounts for 83 percent of the total value of farm assets.

Farm Businesses

*Farm businesses are defined as operations with gross cash farm income of over $350,000 or smaller operations where farming is reported as the operator's primary occupation.*

- Though farm businesses represent 41 percent of the total number of farms, they account for over 90 percent of the value of agricultural production and hold a majority of the assets and debt in the sector.
- Average net cash farm income (NCFI) for farm businesses is forecast at $102,200 in 2016, down 4.2 percent from 2015, the lowest level since 2011 in both nominal and real terms.
- The 4.2 percent decline expected in 2016 follows a double-digit decline in 2015 after average NCFI reached an historic high of $121,600 in 2014.

Farm Households

The well-being of farm-operator households differs from the financial performance of the farm sector or of farm businesses. Farm-operator households often have nonfarm investments, jobs, businesses, and other links to the nonfarm economy in addition to their farming interests.

- The median income of farm households increased steadily over 2010-14, reaching an estimated $81,637 in 2014. After declining in 2015 to $76,538, median household income is forecast to fall slightly further in 2016 to an expected $76,282, due to projected lower farm income.
- Median farm income earned by farm households is forecast to be -$1,353 in 2016. Most farm households earn all of their income from off-farm sources—median off-farm income is forecast to increase 2.5 percent, from $67,500 in 2015 to $69,159 in 2016.
Net sector farm income and net cash income, 2000-2016F

Note: F- forecast
Data as of August, 2016.

ERS updates its U.S. farm sector income and wealth statistics data three times per year in February, August, and November.
U.S. Household Food Security

In 2015, 12.7 percent of American households were food insecure. Food-insecure households had difficulty at some time during the year providing enough food for all their members due to a lack of resources. Food-secure households have consistent, dependable access to enough food for active, healthy living. USDA’s Economic Research Service produces an annual report *Household Food Security in the United States* and has been monitoring food insecurity in U.S. households since 1995.

Key statistics related to household food insecurity in the U.S. include:

- The percentage of U.S. households that were food insecure increased in 2008 and peaked at 14.9 percent in 2011, the highest recorded percentage since national monitoring of food security began in 1995. The cumulative decline in food insecurity from 2011 (14.9 percent) to 2014 (14.0 percent) was statistically significant.

- From 2014 to 2015, food insecurity declined from 14.0 percent to 12.7 percent. This was the largest year-to-year decline in food insecurity since the 2007-2009 recession ended.

- In 2015, 5.0 percent of U.S. households had very low food security. In this more severe range of food insecurity, the food intake of some household members was reduced and normal eating patterns were disrupted at times during the year due to limited resources. The decline from 5.6 percent in 2014 was statistically significant.

- In 2015, rates of food insecurity were substantially higher than the national average for households with incomes near or below the Federal poverty line, households with children headed by single women or single men, women and men living alone, and Black- and Hispanic-headed households.

- Household food security is a complicated issue that is influenced by a number of factors at many levels. Characteristics of individuals, such as disability status and employment, and characteristics of households, such as income, affect the likelihood of food insecurity. Beyond the individual and family, local, State, and National factors are also important. For example, research has shown that food prices at the local level are related to the likelihood a household is food insecure and national food prices are associated with national food insecurity trends. Research suggests State-level policies that may improve food security include those that increase the availability of affordable housing, promote access to and the use of Federal nutrition assistance programs, or that reduce the total tax burden on low-income households.

Turning specifically to food insecurity among children:

- In 2015, children and adults were food insecure at times during the year in 7.8 percent of households with children, down from 9.4 percent in 2014. At times during 2015, these households were unable to provide adequate, nutritious food for their children.
• Food insecurity among children had declined from a recessionary peak of 11.0 percent in 2008 to 7.8 percent in 2015 and was at the lowest recorded level from 1998 to 2015.

• While children are usually shielded from the disrupted eating patterns and reduced food intake that characterize very low food security, both children and adults experienced instances of very low food security in 0.7 percent of households with children in 2015. In these households, caregivers reported that children were hungry, skipped a meal, or did not eat for a whole day because there was not enough money for food. The decline from 1.1 percent in 2014 was statistically significant.

• Previous research has found that food insecurity impacts children’s health, educational outcomes, and development. Children in food-insecure households are more likely than their otherwise similar peers in food-secure households to have to repeat a grade, have poorer physical and mental health, more frequent illnesses, lower math achievement, and other problematic outcomes.

Federal nutrition assistance programs aim to decrease food insecurity:
• In 2015, about 59 percent of food-insecure households in the food security survey reported that in the previous month, they had participated in one or more of the three largest Federal nutrition assistance programs (SNAP, WIC, and National School Lunch Program).

• Research must account for the fact that food-insecure households are more likely to participate in food assistance programs which makes it hard to measure any ameliorating effects of the programs. Complex analysis using research methods to account for this “self-selection” measurement issue has shown that participation in Federal nutrition assistance programs, SNAP in particular, reduces food insecurity. Additionally, studies that look at the size of SNAP benefits have found that additional SNAP benefits improve food security status.

About the data:
• Data for the ERS food security reports come from an annual survey of about 40,000 households conducted by the U.S. Census Bureau. ERS sponsors the survey and analyzes the data. The food security survey asked one adult respondent per household questions about experiences and behaviors that indicate food insecurity, such as being unable to afford balanced meals, cutting the size of meals because of too little money for food, or being hungry because of too little money for food.

Upcoming policy issue:
• Child nutrition reauthorization and the Farm Bill both influence the administration of Federal nutrition assistance programs and can impact food insecurity. ERS’s national food security statistics are often cited in policy discussions around these legislative issues.
Outlook for Agricultural Trade

The outlook for U.S. agricultural trade is shaped by numerous factors—including year-to-year output variations, patterns of income growth around the world, and exchange-rate changes, foreign and domestic trade and farm policies, and regulations on food and agricultural products, investments in agricultural technology, the quality of transportation infrastructure, and the efficiency and competitiveness of the supply chain.

After 5 years of steady growth, U.S. agricultural exports declined in 2015 to $133.1 billion. U.S. imports continued to grow at 2 percent in 2015 though gains were well below the 7-percent average for 2000-15. These shifts in U.S. agricultural trade produced a trade surplus in 2015 about half of its 2014 value at $19.4 billion. Fiscal 2017 agricultural exports are projected at $133.0 billion, up $6.0 billion from the current fiscal 2016 forecast. U.S. agricultural imports are forecast at $113.5 billion, $400 million higher than current fiscal 2016 projections.

- **Product trends**
  - **Exports:** Grains and feed (including corn and wheat) have accounted for the largest share of U.S. agricultural exports over the past decade, followed by oilseeds and products (particularly soybeans), and horticultural products (such as fruit, vegetables, tree nuts, wine and essential oils). However, horticultural exports grew to 25 percent in 2015, the largest increase of any group.
  - **Imports:** In 2015, over 44 percent of U.S. agricultural imports were horticultural products, while sugar and tropical products such as coffee, cocoa, and rubber comprised over 20 percent. Imports of vegetable oils, processed grain products, and red meat have grown in recent years.

- **Market trends**
  - **Exports:** Over the past decade, East Asia—led by China, Japan, and South Korea—was the largest market for U.S agricultural products, with a collective 34-percent share. Over this period, U.S. agricultural exports to China grew 13 percent annually on average, peaking in 2012. In 2015, Canada re-emerged as the largest export market, surpassing China. Notably, in the last decade, exports to Canada and Mexico together accounted for 28 percent of total U.S. agricultural exports. The European Union (EU) is the third largest regional destination, followed closely by Southeast Asia.
  - **Imports:** Canada and Mexico are currently the largest foreign suppliers of agricultural products to the United States ($22.2 billion and $19.3 billion per year, respectively, in 2013-15), mostly consisting of consumer-oriented goods such as horticultural products, red meats, and snack foods. The EU is a close third, averaging $18.9 billion worth of U.S. agricultural imports in 2013-15, mainly horticultural products. South America—led by Brazil, Chile, and Colombia—averaged $13.7 billion in U.S. imports over the past 3 years; these imports consisted largely of horticultural, sugar, and tropical products in which it has a comparative or seasonal advantage.

---

1 USDA forecasts trade data for the fiscal year in the Outlook for U.S. agricultural trade.
• **Key Competitors:** Other top agricultural exporters include the EU (commodities in competition with the United States include: corn, wheat, beef, pork, and almonds), Brazil (soybeans, corn, cotton, beef and pork), and Canada (a leading exporter of wheat and pork). Other countries that compete with the United States are Argentina (corn, soybeans), Australia (wheat, cotton, and beef), Ukraine (wheat, corn), Russia (wheat), and India and Uzbekistan (cotton).

• **Factors shaping the outlook for agricultural trade**
  
  o **Macroeconomic Environment:** Appreciation of the dollar since late 2014 has reduced the global competitiveness of U.S. agricultural commodities, putting downward pressure on market share. Exports of bulk commodities are particularly sensitive to changes in the exchange rate, whereas consumer-oriented goods, including meat, tend to be less sensitive. A closely related shift in the macroeconomic environment has been falling income growth rates in the developing world, a key driver of global demand for agricultural exports.

  o **International Policy Environment:** Foreign food and agricultural policies affect U.S. agricultural exports. Tariffs and other policies that restrict market access are higher and more variable across agriculture than other sectors. Farm policies distort global prices and relative competitiveness, creating an uneven playing field. Differences in regulations and standards aimed at food safety, environmental sustainability or other policy goals both facilitate and add to the cost of trading food and agricultural products. In cases where such policies discriminate against imported products without scientific basis, they are considered non-tariff barriers to trade.

  o **The agribusiness environment:** U.S. competitiveness is also supported by a healthy operating environment for farmers. Technological innovations that increase yields or ensure quality enhance the competitiveness and attractiveness of U.S. products. Farmers use a reliable road, rail and shipping infrastructure to bring their harvest to buyers in a timely manner. Unlike manufacturers, farmers are rarely directly engaged in the export process. Instead, commodity trading firms and food processors are the entities that bring farm products to markets. The competitiveness and efficiency of this supply chain is key to U.S. export performance.
State of the Rural Economy

The rural economy is recovering from the Great Recession, although slowly. Between the fourth quarter of 2009 and the second quarter of 2016, rural employment grew less than 4 percent while urban employment grew more than 10 percent. While rural employment grew slowly, the rural population declined for the first time on record, declining by about 0.3 percent between 2010 and 2014 and remaining nearly constant in 2015, while population in urban areas grew nearly 1 percent per year. As a result of modestly rising employment and slightly declining population, the share of the adult population employed in rural areas has risen from a low of 54.3 percent in the fourth quarter of 2009 to 56.0 percent by the second quarter of 2016; but is still below the pre-recession level of 58.0 percent.

Household incomes have also begun to rise in rural areas in recent years, although growth in incomes has lagged growth in employment. Real median household income in rural areas declined every year from 2008 to 2012, but began to grow in 2014 and grew 3.4 percent in 2015, almost as rapid as the growth in urban real median household income in 2015 (3.6 percent). As median household incomes have begun to rise in recent years, poverty rates have fallen.

- The rural poverty rate declined from a post-recession high of 18.4 percent in 2013 to 17.2 percent in 2015.
- In the same period, rural child poverty declined from 26.2 percent to 24.3 percent.

Despite this improvement, poverty and child poverty remain higher in rural areas than in urban areas. For example, the urban child poverty rate in 2015 was 20.1 percent.

These average trends mask a great deal of diversity across rural areas. Rural median household incomes are lowest and poverty rates are highest in much of the Mississippi Delta region, the Southeast, Appalachia, and parts of the Southwest, West, and Great Plains; especially near the border with Mexico and in tribal reservation areas. High poverty in these regions is associated with low levels of educational attainment and in many cases, remoteness and lack of access to infrastructure. The trends in median household income and poverty rates since the advent of the Great Recession have been more unfavorable in rural counties that are more dependent on manufacturing than in other rural counties, especially counties dependent on farming or mining.

Rural Policy Issues

Poverty and child poverty. The Administration’s initiatives include:

- Promise Zones Initiative – a partnership between the Federal Government and local leaders in high poverty communities to improve the economy, education, public safety, public health, and other local priorities. Promise Zones receive preferential access to Federal program grants and technical assistance. USDA leads the Promise Zone efforts in rural and tribal areas and the Department of Housing and Urban Development leads in urban areas. Since 2014, twenty two Promise Zones have been designated through three rounds of a competitive selection process, including eight rural or tribal zones.

- StrikeForce for Rural Growth and Opportunity – StrikeForce is a USDA initiative to address persistent poverty across rural America, in which USDA staff partner with local
United States Department of Agriculture
2016 Presidential Transition
Economic Research Service

and state governments and community organizations on projects to promote economic
development and job creation through increased outreach and technical assistance. Since
2010, more than 1,500 StrikeForce partnerships have been established, investing more
than $23 billion in high poverty areas of rural America. StrikeForce areas include nearly
1,000 counties, parishes, boroughs, and census areas in 21 States and Puerto Rico.

- Rural IMPACT (Rural Integration Models for Parents and Children to Thrive) – a
  program led by USDA and the Department of Health and Human Services to explore a
two-generation approach to reduce rural poverty and child poverty, seeking to increase
parents’ employment and education and child and family well-being. Ten rural and tribal
communities in ten states have been selected as demonstration sites through a competitive
process since it was launched in the summer of 2015. The main emphasis of the Rural
IMPACT program is technical assistance.

Opioids epidemic and rising mortality. There is substantial concern in Congress and the
Administration about the opioids epidemic and rising mortality rates among segments of the U.S.
population; with these problems especially pronounced in rural areas. In July 2016, the
Comprehensive Addiction and Recovery Act was enacted, which will promote increased
diversion of drug violations from the criminal justice system, and increased use of treatment
options such as Naloxone. Secretary of Agriculture Vilsack is leading an interagency task force
focused on this challenge, and USDA has expanded its Rural Health and Safety Education grants
program to increase rural communities’ ability to fight the epidemic. Obtaining funds for such
efforts will continue to be an issue.
Food Safety and the Implications of the Food Safety Modernization Act on Farmers

The Food Safety Modernization Act (FSMA) is the largest reform of U.S. food safety laws in 70 years. Passed in 2011, when fully implemented FSMA will affect every stage of the food production and marketing system. FSMA is anchored by 7 foundational rules which became final in 2015 and 2016. September 2016 marked the first major compliance date for covered larger businesses under the Preventative Controls rules for Human and Animal Food. Compliance requirements for other businesses and rules are being phased in over time, and FDA continues to release guidance documents and implementation strategies.

Key Points:

- According to data from the Centers for Disease Control and Prevention (CDC), about 48 million people (1 in 6 Americans) get sick, 128,000 are hospitalized, and 3,000 die each year from foodborne diseases.

- FSMA directs FDA to establish standards for adoption of modern food safety prevention practices by those who grow, process, transport, and store food, including, for the first time, on-farm regulation of produce with respect to microbial food safety. The goal is to shift the policy focus from *ex post* reaction to food safety incidents to *ex ante* risk-based preventative action.

- Foodborne illness linked to contaminated produce is a public health concern. Research from the CDC found that 46% of foodborne illnesses in the period 1998-2008 were attributed to produce.

- ERS research showed that the 2006 spinach and 2011 cantaloupe contamination events negatively impacted producers throughout the industry even though in both cases a single firm was at fault.

- FDA published the final rule on Standards for the Growing, Harvesting, Packing, and Holding of Produce for Human Consumption (the Produce Rule) on November 27, 2015 with an effective date of January 26, 2016. Compliance for some firms begins 2 years after the effective date and is phased-in for other covered firms over a 4-year period.

- ERS, in partnership with NASS, conducted two surveys of fruit and vegetable producers--one in late 2015 and the other in late 2016--to establish a baseline of food safety practices on the eve of FSMA implementation. The most recent previous national data on produce food safety practices was from 1999. Both surveys collect data for key requirements under the Produce Rule including water quality test frequency and standard, animal manure treatment by source, animal presence in fields, worker training and
hygiene, and sanitation of equipment and tools, as well as costs for these food safety practices.

- To complement and inform survey results, ERS is conducting five case studies to assess industry progress with respect to implementing FSMA, and to identify challenges encountered based on the characteristics of farms, commodity, region, and environment. Using information from the surveys and case studies, ERS will compare current food safety practices and costs and FSMA requirements across (1) farm/firm size, (2) geographic region, and (3) marketing channels. The research will provide a comparative for eventual assessment of effectiveness of FSMA adoption.

- FSMA also applies to imported produce. The final rule on Foreign Supplier Verification Programs for Importers of Food for Humans and Animals (FSVP) includes provisions that require importers to verify that food imported into the United States has been produced in a manner that meets applicable U.S. safety standards.

- The United States currently imports about one-third of its total fresh produce needs, up from less than 20 percent in 1990. Import shares have increased for both fresh and processed produce. Mexico, Canada, Chile, and Peru are among the major suppliers for fresh produce.
Financial Stress Indicators: Farm Bankruptcy and Commercial Bank Delinquency Rates

After several years of strong growth in farm income, the sector’s overall returns have been in decline with net farm income now forecast at $71.5 billion for 2016, 42 percent below the $123.8 billion peak in 2013. While a combination of forces placed the sector on an economic rollercoaster, data so far do not indicate a commensurate increase in financial stress on farm businesses or the institutions that serve them, with many financial indicators such as debt-to-asset levels near their historic lows. We present some additional evidence on farm bankruptcies and loan delinquencies, two observable signs of financial stress.

Recent data (through the second quarter of 2016) on farm bankruptcies and loan delinquencies indicate minimal signs of financial stress in the agricultural sector. Both farm bankruptcy rates, considered a lagging indicator of financial stress, and commercial bank delinquency rates for agricultural loans, which are shown here to lead upticks in bankruptcies, are low compared to historical levels and to more recent history in the 2000s.

Chapter 12 Bankruptcy is law available only to family farmers and provides a proxy measure for farm bankruptcy levels in the U.S. The use of Chapter 12 could be limited if debt levels exceed statutory limits or under other extenuating circumstances. Figure 1 shows Chapter 12 bankruptcy filings per 10,000 farms and the two shaded areas represent the post-WW1/Great Depression agricultural crisis and the 1980s farm crisis. More recent data show that bankruptcies are relatively low now as compared to the past.

*Figure 1: Farm Numbers and Bankruptcy Rates. 1899-2016*

Figure 2 presents seasonally adjusted loan delinquency rates since 1991 relative to commercial loan volumes for agricultural production and farmland loans, based on quarterly call reports filed
with the Federal Reserve. Monitoring of delinquency rates in the agricultural lending sector provides a possible indicator of forthcoming stress. Delinquency rates show growth prior to bankruptcy jumps in the 2000’s. From the fourth quarter of 2000 through the fourth quarter of 2001 and from the third quarter of 2008 through the third quarter of 2010, the moving average of bank delinquency rates grew. These changes predated the jump in bankruptcy rates in 2003 and 2011. Current delinquency rates (Quarter 2, 2016) for production and farmland loans in the commercial bank portfolio are low in comparison to the last two decades.

*Figure 2: Delinquency rates on Commercial Bank Loans, 1991 through second quarter 2016*
Federal Tax Policy and Farmers

Federal tax policies affect the financial well-being of farm families and can also have effects on the number and size of farms, their organizational structure, and their use of land, labor, and capital. Tax policy can also affect farmers’ ability to transfer their farms to the next generation.

Significant changes in Federal income and estate tax policies have occurred over the last decade. Analyses suggest that these changes in Federal tax policies affecting both individual and business income taxes have reduced the tax burden on farm income and investment while changes to estate tax policies have greatly reduced the number of farm estates subject to the tax and the taxes owed. Despite these changes, comprehensive tax reform, especially corporate tax reform as well as other tax policy initiatives continue to be at the center of the public policy debate. These initiatives include various tax reform and other proposals by the administration, both presidential candidates as well as Congress.

Federal Income Tax Policy

The Federal income tax is the most significant tax for most farmers and as a result has the greatest potential impact on investment, management and production decisions. Two areas of Federal income tax policy have major significance to the farm sector. These include the reduced tax rate on capital gains and the accelerated recovery of capital costs through business expensing provisions.

Currently, capital gains are taxed at substantially lower rates than other ordinary income. According to the Internal Revenue Service, in 2010, about 38 percent of all farmers reported some capital gains—more than three times the share for all other taxpayers. The average amount of capital gain reported by farmers was also more than double the average capital gain reported by other taxpayers.

Farming requires large investments in machinery, equipment, and other depreciable capital. Under the present tax system, such costs may be treated as a current expense or depreciated over time, both of which lower taxable income in the year claimed. The amount that can be expensed is subject to a dollar limit, and investments above the limit must be depreciated over a specified recovery period, generally 7 years for most farm machinery and equipment.

Over the last decade, the amount that a farmer can immediately expense has been increased to encourage investment and provide tax relief to small businesses. Currently, farmers and other small businesses are allowed to expense up to $500,000 each year in capital purchases. This increased capital expensing allowance reduces the effective tax rate on farm capital and simplifies the recordkeeping burden associated with the depreciation of capital purchases, with commercial farmers the primary beneficiaries.
Federal Estate and Gift Tax Policy

Under the current Federal estate tax, individuals can transfer up to a specified amount in money and other property without incurring any Federal estate tax liability. Since 2001, the amount exempted from the Federal estate tax has increased from $675,000 to $5.45 million, while the maximum tax rate has declined from 55 percent to 40 percent. As a result, both the number of taxable estates and the amount of taxes owed have dropped dramatically.

While the aggregate importance of Federal estate and gift taxes is relatively small, their potential effect on farmers and other small business owners has been a major concern among both farmers and policymakers. These groups are more likely than the general public to owe estate taxes, and much of the concern focuses on the ability of the next generation to continue operating and investing in these family-owned businesses. For many farms, business assets account for a large share of the owner’s estate.

Over the years, a number of targeted provisions were enacted to reduce the burden of the estate tax on farmers and other small business owners. These include a special provision that allows farm real estate to be valued at its farm use value rather than its fair market value. This provision can reduce the value of a farmer’s estate up to the current limit of $1.1 million. In addition, an installment payment provision allows for the payment of any estate taxes over a period of nearly 15 years. These provisions along with the increase in the exempt amount have increased the ability of the vast majority of farmers and small business owners to transfer their farm or other businesses to the next generation free of any Federal estate tax liability.

For 2015, less than 2% of the estates of farm operators were required to file an estate tax return with only about one third of these estates owing any Federal estate taxes. Total Federal estate tax liabilities on all farm estates was estimated at about $560 million. Historically, both the number of taxable estates and taxes owed have been much higher. Federal estate tax proposals that would affect either the exempt amount or these special provisions would be of special interest to farmers.
Farmland Value Trends

Land accounts for 82% of total asset value as of 2015. Agricultural land values, therefore, serve as a critical barometer in measuring the overall health of the U.S. farm economy. As a result of historically low interest rates and strong farm earnings, farmland values have risen substantially in recent years. Farm real estate values, which include the value of both buildings and land, increased from $1,210 to $3,010 per acre since 2002, with cropland and pastureland experiencing similar gains. However, appreciation has been considerably lower over the past few years. For the first time since the Great Recession, both cropland and farm real estate experienced a modest annual decline in value, decreasing by 0.3% and 1% in nominal terms, respectively, between 2015 and 2016. Average pastureland values remained constant over the past year.

**Average U.S. farmland values, 2002-2016**

![Graph showing farmland values from 2002 to 2016]

Growth in farmland values has slowed due to a shift in expectations of the stream of net returns that owning farmland will yield, which is influenced by factors that affect the economy as a whole as well as those that are specific to the farm sector. The fact that many experts forecast that interest rates will to begin to rise in the next few years can put downward pressure on land values, as the expected future net returns from land would be lower with higher borrowing costs. Expectations of the income stream may also be changing due crop prices, which, as of July 2016, are 16% lower relative to 2011 in terms of the ratio between prices received and production costs. The 2016 USDA 10-year projections suggest that the prices of three major crops (soybeans, corn, and wheat) will all stabilize at, or grow modestly from, their current price levels, which are lower than 2011 prices.

Although national estimates provide a good indication of the overall health of the farm sector, variation in the factors that influence farmland values across the U.S. impact how region-specific
estimates change over time. For example, the highest farmland values are generally found in the Corn Belt ($6,290 in 2016), followed by the Northeast ($5,010). Land values in the Corn Belt are, to a large extent, driven by cash grain commodity prices and growing conditions, while values in the Northeast are largely influenced by non-agricultural factors, such as future development potential. In the past year, farm real estate values in the Pacific region increased by 3.4%, while values in the Northern Plains declined by over 4.3%. For cropland, the largest recent decline again comes from the Northern Plains region (5.4%), while the Delta (3.1%), Southeast (4.0%), and Pacific (2.8%) regions experienced noteworthy gains. Pastureland values in the Lake States declined 8.9% in the past year, while increases of 2.9% and 3.9% occurred in the Southeast and Delta regions, respectively.

**Farm real estate, nominal $/acre, 2016**

Organic Agriculture and Farm Profitability

Organic agriculture is one of the fastest growing segments of U.S. agriculture, with industry estimates of annual retail sales at $43 billion as of 2015. Organic producers tend to be younger and newer to farming, and organic row crop producers tend to enjoy higher net returns. Organic agriculture can also provide environmental benefits, including higher levels of soil carbon sequestration and on-farm biodiversity. ERS provides unique, ongoing analyses of the organic market, including analyses of retail price premiums, economic issues of coexistence between organic and genetically engineered crops, and the profit potential of certified organic field crop production.

ERS also supports other agencies in the development of data collection tools, such as organic certifier surveys, the development of harmonized trade codes for organic products, and the collection of information documenting market losses suffered by organic producers due to the presence of genetically engineered traits in organic products. In 2005, ERS began adding organic samples to the Agricultural Resource Management Survey (ARMS) to enable comparisons of farming practices and profitability in organic and conventional systems—and has published findings on field crop, apple and dairy sectors. ARMS is USDA's primary source of information on the financial conditions, practices and resource use of America's farm businesses.
Timeline of Key Releases January-June 2017

January 2017: Major Land Uses Data
February 2017: Farm Income Forecasts
March 2017: International Macroeconomic and Agricultural Baseline Projections
April 2017: Annual Update to ERS State Fact Sheets
June 2017: International Food Security Assessment Annual Report

Appendix A: Acronyms

FAO – Food and Agriculture Organization of the United Nations
OECD – Organization for Economic Cooperation and Development
REE – Research, Education, and Economics Mission Area within USDA
WHAT WE DO: OUR MISSION

Our mission is to provide timely, accurate, and useful statistics in service to U.S. agriculture. We conduct more than 400 weekly, monthly, quarterly, or annual surveys each year to provide data and reports that others rely on to make farm-level, business, and policy decisions related to agriculture. Every five years, we conduct the Census of Agriculture, a complete count of U.S. farms and ranches, large and small. We also conduct research on relevant cutting edge statistical issues. NASS is the official source of information on the farms, ranches, and people who provide food, feed, and fiber for the United States and the world.

WHO WE ARE: OUR WORKFORCE

- We have a current staff of 953 of which 530 reside in Headquarters units in Washington, D.C. and our National Operations Center in St. Louis, MO.
- An additional 423 staff are located in our 12 regional field offices and 33 state offices.
- Nearly 70 percent of our staff are statisticians.

WHO WE SERVE: OUR CONSTITUENTS

Farmers and ranchers, farm organizations, USDA agencies, state agriculture departments, analysts, news media, academic researchers, businesses, and community-based organizations use NASS data to evaluate, understand, and improve their agriculture-related decisions.

KEY UPCOMING DECISIONS

- Appointment of members to the Advisory Committee on Agriculture Statistics by the Secretary by April 4, 2017. NASS will have approximately 10 vacancies on our 20 member advisory committee.
- Inclusion of a budget increase for the fourth-year (FY18) of the five-year Census of Agriculture cycle. The increase will be used to fund the mailing and processing of approximately 3 million census forms.

BUDGET HIGHLIGHTS FY 2016

Budget Authority (in thousands)

- Discretionary Funds $168,443
  - Agriculture Estimates $126,266
  - Census of Agriculture $42,177

In FY 2018, the Census of Agriculture Discretionary Funds is expected to increase due to improved outreach efforts and administrating cost. NASS cooperates with agricultural stakeholders to supplement the core programs through reimbursable agreements.
I. Organizational Overview

Agency’s Mission/Strategic Plan

NASS strategic goals align with the strategic goals, major program policies, and objectives of both USDA and the Research, Education and Economics mission area. In addition, the plan focuses on developing strategies for managing human capital, financial management, and budget and performance integration, which also align with USDA’s and the REE mission area’s strategic goals.

NASS’s five strategic goals mirror our commitment to provide first-class service, state-of-the-art science, and consistent management excellence. Planning, sound management, and results measurement are an inherent part of achieving the goals and the seven key objectives NASS has identified. Table 1 shows the NASS goals and objectives in relation to USDA strategic goals.
Table 1. NASS Strategic Goals Align with USDA Goals

**Key Mission Delivery Performance Measures**

NASS performance measures are based on its mission to provide timely, accurate, and useful agricultural statistics. Census coverage and response rates contribute to accuracy and usefulness. Each NASS objective that relates to the USDA Strategic Plan has a measure for each Investment Criteria: Usefulness (relevance), accuracy (quality), and timeliness (performance). These performance measures can be summarized into four generic measures:

**Measure 1. Usefulness** – The accessibility, relevance, coherence, comparability, and usefulness of NASS official reports and products and services as measured by NASS issuing errata for fewer than 5 percent of Agricultural Statistics Board reports. These performance measures vary by goal, but get to the root of why NASS is considered the federal leading provider of agricultural statistics. Precision of data is necessary for stakeholders to be able to rely on the data to make day-to-day management decisions and eliminate unnecessary chaos in the market.

**Measure 2. Timeliness** - Percent of time official reports are released on the date and time pre-specified to data users. Agricultural statistics are at the core of many decisions made in the agriculture sector. If these data are not timely, the disruption and chaos generated would be immeasurable. This performance measure is the same for all of the goals and is calculated across all NASS reports.

**Measure 3. Census Coverage** – Percent of U.S. farms or ranches covered by the census mail list (CML) every five years. NASS strives to build the CML that covers a maximum number of farms and ranches nationwide. NASS devoted tremendous resources to the 2012 Census of Agriculture (COA) to maximize coverage rates. Online reporting nearly tripled from the 2007 census to the 2012 census, from 100,000 to more than 280,000. NASS will continue to work to improve upon this for the 2017 COA.

**Measure 4. COA Program Response Rates** – Percent of CML respondents returning a usable report. NASS strives to maximize response rates using multiple approaches to data collection. Even though response rates are historically trending downward for federal surveys, NASS strives to improve its response rate for the COA program.

## Organization's History

The National Agricultural Statistics Service was established by Secretary's Memorandum No. 1446, Supplement 1, of April 3, 1961, under Reorganization Plan No. 2 of 1953 and other authorities. The mission of the agency is to provide timely, accurate, and useful statistics in service to U.S. agriculture.

The statistical data provided by NASS are essential to the public and private sectors for making effective policy, production, and marketing decisions on a wide range of agricultural commodities. Every five years the Census of Agriculture provides comprehensive national, state, and county data as well as selected data for Puerto Rico, Guam, the U.S. Virgin Islands, and Northern Mariana Islands. USDA published its first crop report in 1863. NASS’ responsibilities are authorized under the Agricultural Marketing Act of 1946 (7 U.S.C. 1621-1627) and the Census of Agriculture Act of 1997, Public Law 105-113 (7 U.S.C. 2204g).

Organizational Chart
Biographies of Career Staff in Key Leadership Positions

Hubert Hamer  
NASS Administrator  
202-720-4333, Hubert.Hamer@nass.usda.gov

Mr. Hamer serves as NASS Administrator. He brings extensive experience in all aspects of the agency’s work. Before becoming administrator, he served as director of the Statistics Division, which produces and releases more than 400 national statistical reports each year covering the agency’s crops, livestock, economic, demographic, environmental, and census programs. He also served as executive director of the NASS Agricultural Statistics Board (ASB) and executive director of the Advisory Committee on Agriculture Statistics.

From 2010 until he became head of the Statistics Division, Hamer was chair of the Agricultural Statistics Board. As ASB chair, he led the preparation and dissemination of market-sensitive ASB reports compiled and issued under special security conditions known as Lockup. He was also responsible for promotion and outreach of the NASS mission to all stakeholders. From May 2000 until April 2010, Hamer was NASS Associate Deputy Administrator for Field Operations, overseeing 24 state field offices as well as the Training and Career Development Office.

Since joining NASS, Hamer has served in a number of capacities both in Washington, D.C., and in the Louisiana, Illinois, and Missouri field offices. While directing the Missouri office, he completed USDA’s Senior Executive Candidate Development Program and was appointed to the Senior Executive Service in 2000. Hamer completed the program for Senior Managers in Government at Harvard University’s John F. Kennedy School of Government in 2004 and completed the Office of Personnel Management (OPM) Executive Potential Program in 1994. As part of the OPM program, he served as a fellow with the Senate Budget Committee and worked on the staff of the Secretary of Agriculture.

Hamer was born on a small livestock and row crop farm in Benton County, Mississippi, and later continued his development in Grand Junction, Tennessee. He is a graduate of Tennessee State University.

Renee Picanso  
Associate Administrator  
202-720-2707, Renee.Picanso@nass.usda.gov

Ms. Picanso began her employment with NASS in January 1979 and was selected as Associate Administrator in July 2014.

Her career with NASS began as a statistician in the Arkansas field office. She then served as a statistician in the Tennessee and Texas field offices, as the deputy director in the Indiana field office and as director in the Colorado office. Her Washington, D.C., headquarters experience includes working as a statistician in the Statistics Division and as an assistant to former NASS Administrator Charles Caudill. Renee also served for two years as special assistant to Administrator Cynthia Clark and was responsible for overseeing strategic planning, performance measurement, continuous process improvement, outreach, and special projects for the agency.
Most recently, she served as director of the Census and Survey Division (CSD). In this role, she oversaw the Census of Agriculture, Survey Administration, Survey Sampling, Data Collection, and List Frame activities.

Renee grew up in North Carolina and Texas, graduated from Texas A&M University with a B.S. degree in agricultural economics, and is a 2004 graduate of USDA’s Senior Executive Service Candidate Development Program.

Joseph Parsons
Chair, Agricultural Statistics Board
Director, Methodology Division
202-690-8141, joe.parsons@nass.usda.gov

Mr. Parsons is chair of USDA’s Agricultural Statistics Board and director of the NASS Methodology Division. As ASB Chair, he leads the preparation and dissemination of market-sensitive agriculture-related forecasts and estimates.

In his 30-year career at NASS, Joe has served in leadership roles throughout the agency. From late 2011 until mid-2016, he was director of the Information Technology Division (ITD) and the agency’s Chief Information Officer. As ITD director, Parsons oversaw projects that transformed the NASS computing environment, promoting database optimization and software development essential to timely and accurate processing and analysis of official agricultural statistics. Parsons was appointed to the Senior Executive Service after completing USDA’s Senior Executive Candidate Development Program and American University’s Key Executive Leadership Certificate Program. As part of his leadership training, he served a detail as visiting executive at Statistics Canada. Earlier work at NASS included serving as director of the Nebraska field office and deputy director of the Washington field office. Parsons has also been active in the agency’s international consulting work, traveling to projects in Afghanistan, Nicaragua, and the People’s Republic of China. For several years, he taught evening mathematics and statistics courses at a local university.

Jay Johnson
Director, Eastern Field Operations
202-720-3638, Jay.Johnson@nass.usda.gov

Mr. Johnson is director of NASS Eastern Field Operations. He served as acting director for the Census and Survey Division of NASS from August 2014 to January 2015. He was certified by the Office of Personnel Management in February 2015, after completing the Senior Executive Service Career Development program.

Jay was the first director of NASS’ Great Lakes Regional Office in East Lansing, Michigan, starting in February 2013. Before that, he was the state director for the agency’s Michigan field office from 2011. Prior to his tour in Michigan, Jay served for nine years as NASS’ chief of staff as the senior advisor to the administrator on budget planning, congressional activities, and decisions that impacted the agency.

Johnson also was the National Cotton Statistician, after completing a brief tour in NASS’ Research and Development Division as a mathematical statistician exploring the use of an area frame to measure undercoverage in the Census of Agriculture. His NASS career started in 1988
as a student assistant in the Pennsylvania field office and with various assignments in the NASS Indiana and North Carolina field offices.

Johnson received his Bachelor of Science degree in Agriculture Business Management from Pennsylvania State University in 1989. He completed the coursework for a master’s degree in statistics at North Carolina State University in 1997.

**Kevin Barnes**  
**Director, Western Field Operations**  
202-720-8220, Kevin.Barnes@nass.usda.gov

Mr. Barnes is director of NASS Western Field Operations, responsible for oversight of personnel, budget, facilities, and overall operations of field offices covering 22 states.

In his 29 years of service at NASS, Barnes has served in leadership roles throughout the agency. Barnes graduated summa cum laude from the North Carolina Agricultural and Technical State University with a degree in agricultural economics and a concentration in agricultural business. Barnes worked as an agricultural statistician in the agency’s South Carolina, North Carolina, Florida, and Illinois field offices. At headquarters in Washington, D.C., he worked as a survey statistician, national commodity analyst, and head of the Commodity Surveys Section responsible for national surveys.

After serving as director of the Virginia field office, he returned to headquarters as chief of the Environmental, Economics and Demographics Branch, where he led a review of the agency’s agricultural prices program, helped lead development of new energy-related programs, and served on several Department committees and teams related to energy initiatives. He also served on the North American Tripartite Committee on Agricultural Statistics and participated in international conferences and training activities in Canada, China, and Ghana.

In 2009, Barnes earned his certification for Senior Executive Service. While detailed to the Office of Human Capital Management he led a team to complete the USDA Workforce Plan and developed the framework for the USDA Human Capital Plan. He served on detail assignments as a special assistant to USDA’s Under Secretary for Research, Economics and Education and as a staff member for former U.S. Representative Eva Clayton, 1st District, North Carolina.

**Barbara Rater**  
**Director, Census and Survey Division**  
202-720-4557, Barbara.Rater@nass.usda.gov

Ms. Rater is director of the NASS Census and Survey Division. Appointed in 2015, Barbara provides leadership and oversight to the agency’s Census Planning, Survey Administration, and Data Collection branches. She is responsible for sustaining the high quality of NASS’ census and survey data collection processes by serving as the central point of contact for operations and support activities.

As part of her 30-year career, she served as chief of the Survey Administration Branch from 2012-2015 and as director of the Maryland field office from 2006 to 2012. She has over 20 years of international development experience and expertise aimed at helping developing countries
measure agricultural productivity. Barbara started her federal government career in service to agriculture as a student trainee at the U.S. Bureau of the Census. Growing up in a military family, she is a native of Fort Leonard Wood, Missouri. Barbara received her bachelor’s degree from the University of Maryland College Park and is a graduate of the Key Executive Leadership Program at American University’s School of Public Administration.

Dr. Linda J. Young  
Chief Mathematical Statistician  
Director, Research and Development Division  
202-720-0027, Linda.Young@nass.usda.gov

Dr. Young is NASS Chief Mathematical Statistician and director of the Research and Development Division. She oversees efforts to continually improve the methodology underpinning the agency’s collection and dissemination of data on every facet of U.S. agriculture.

Prior to joining NASS, Dr. Young served on the faculties of three land grant universities: Oklahoma State University, University of Nebraska, and the University of Florida. She has three books and more than 100 publications in over 50 different journals, constituting a mixture of statistics and subject-matter journals. A major component of her work has been collaborative with researchers in the agricultural, ecological, and environmental sciences. She has been the editor of the *Journal of Agricultural, Biological and Environmental Statistics*. Dr. Young has served in a broad range of offices within professional statistical societies, including president of the Eastern North American Region of the International Biometric Society, vice-president of the American Statistical Association, chair of the Committee of Presidents of Statistical Societies, and member of the National Institute of Statistical Science’s Board of Directors. Dr. Young is a fellow of the American Statistical Association (ASA), a fellow of the American Association for the Advancement of Science (AAAS), and an elected member of the International Statistical Institute (ISI).

Joe Prusacki  
Director, National Operations Division  
314-595-9501, Joe.Prusacki@nass.usda.gov

Mr. Prusacki is director of NASS’ National Operations Division in St. Louis, MO. He grew up on a small crop and hog farm in Perry County, Illinois. He holds B.S. and M.S. degrees in agribusiness-economics from Southern Illinois University–Carbondale, as well as an M.S. in Applied Statistics from Purdue University.

Prusacki began his NASS career in 1984, working in the field office in Tennessee and then Indiana. In 1992, he transferred to Washington, D.C., where he subsequently held several positions at NASS headquarters.

Prusacki is a 2004 graduate of USDA’s Senior Executive Service Candidate Development Program and was detailed to the President’s Council of Economic Advisors from November 2003 to March 2004.
In 2006, Prusacki transferred to Des Moines to become director of NASS’ Iowa field office. He returned to Washington in April 2008 to join NASS’s Senior Executive Service team as director of the Statistics Division. In March 2014, Joe transferred to the St. Louis area to become director of NASS’ National Operations Division.

**Biographies of Political Staff in Key Leadership Positions**

NASS has no political appointees.

**Organizational Budget and Financial Management**

**The Agricultural Estimates Program**

The Agricultural Estimates Program provides objective data essential to the public and private sectors of the agriculture industry. NASS conducts scientifically designed surveys of operators of farms, ranches, and agribusinesses who provide information on a confidential basis. These scientifically designed surveys provide estimates for over 400 agricultural statistical reports that:

- Directly impact the market
- Directly contribute to the Principal Federal Economic Indicators of the United States
- Provide the only publicly available objective sources of information
- Support USDA program delivery
- Have specific legislative requirements for release

Commodity and agricultural markets use critical market-sensitive data to operate efficiently, providing a fair and equitable environment for price discovery in the marketplace. Without a federal role in responding to the need for objective data by U.S. and world consumer markets, key market information would be in the hands of a few. Individual producers and ranchers would be at a disadvantage relative to those who have resources to pay for information and could potentially expose markets to manipulation.

NASS lends technical expertise and conducts surveys for other federal agencies, state governments, and private organizations on a reimbursable basis. NASS provides support and assistance with questionnaire and sample design, data collection and editing, analysis of survey results, and training. NASS also provides technical consultation, support, and assistance for international programs under participating agency service agreements.
Census of Agriculture Program

The Census of Agriculture is taken every five years and provides comprehensive data on the agriculture economy, including data on the number of farms, land use, production expenses, value of land and buildings, farm size and characteristics of farm operators, market value of agricultural production sold, acreage of major crops, inventory of livestock and poultry, and farm irrigation practices. During the data collection year, NASS receives a significant funding increase for conducting the Census of Agriculture. Final preparations are underway for the 2017 Census of Agriculture, scheduled to be mailed to the nation’s farmers and ranchers in December 2017.

Fiscal Year 2018 marks the fourth year in the five-year funding cycle for conducting the 2017 COA. The largest portion of the funding will be used for outsourcing all necessary functions associated with mailing and processing the COA. Due to the approximately 3 million forms mailed and processed only once every five years, NASS contracts with NPC in Jeffersonville, Indiana, the same center responsible for the Census Bureau’s handling of the Decennial Census. NPC has the specialized equipment and capacity to handle the questionnaire volume associated with the COA. Outsourcing this function saves significant money for NASS during the four non-production years of the five-year COA cycle. Included in the funding increase request are expenses for outgoing and return postage for the approximately 3 million potential farmers and ranchers on the CML. In order to achieve desired response rates while holding down costs, NASS conducts three separate mailings.

| National Agricultural Statistics Service Budget Authority FY 2009-2016 (Dollars in Thousands) |

* Headquarters includes the NOC, located in St. Louis, MO.
NASS maintains a central office in Washington, D.C., and a network of 12 regional field offices in addition to 33 state offices, serving all 50 states that operate through cooperative agreements with State Departments of Agriculture or universities. In addition, NASS operates a National Operations Center in St. Louis, MO. As of September 30, 2016, NASS employed 953 staff, including 530 in the Washington, D.C., metropolitan area and National Operations Center, and 423 in field offices.

- NASS employs a workforce of 953 employees (nearly 70 percent statisticians) of which the following are full-time and part-time.
  - Full-time: 943 employees Ex: Agricultural Statistician, Mathematical Statistician, Statistical Assistant, Secretary, and other.
  - Part-time: 5 employees
  - Temporary: 3 employees
  - Intermittent: 2 employees
- NASS employs approximately 40 additional staff during the Census of Agriculture (cycle every five years).
- During the summer, NASS recruits student trainees with the intent to offer them permanent employment.
- NASS employs three temporary employees and two intermittent employees.
- Of our total workforce, 19% are eligible to retire within the next year.
- Our headquarters is located in Washington, D.C., which has 448 employees, with an additional 82 such employees in St. Louis, MO.
- NASS has 12 regional offices, with presence in all of the 33 field offices serving all 50 states, which has 423 employees.
II. Policies and Regulations

Statutory Authorities

NASS has several authorities under Title 7, Title 13, and Title 18 of the U.S. Code that cover conducting the Census of Agriculture, confidentiality of information and data security, collection of agricultural production and price data, and penalties for disclosure and false reports. Additional information can be found on each of these here.

Important Policies and Regulations

The Agricultural Statistics Board (ASB) prepares and disseminates over 400 reports every year providing the official USDA estimates on crops, livestock, and economic indicators for the agricultural industry. Market-sensitive ASB reports are compiled and issued under special security conditions known as Lockup. Additional information on ASB activates can be found in DR 1042-042 Agricultural Statistics Board. The Office of Management and Budget (OMB) has issued guidance on several laws and set forth policy directives that affect Federal principal statistical agencies. Key laws impacting NASS are the Paperwork Reduction Act (PRA) and associated OMB implementation guidance and The Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA) and associated OMB implementation guidance. OMB Statistical Policy Directives identify minimum requirements for Federal principal statistical agencies when they engage in statistical activities. This information can be found on the Statistical Programs and Standards page on OMB’s website.

Overview of the Policy/Regulation Review Process

NASS is not a regulatory agency and therefore does not have any regulatory actions of concern.

GAO and OIG Audits

NASS has no outstanding recommendations from audits completed by OIG or GAO.

OIG Audits:

The Office of Inspector General (OIG) conducted a security review of NASS lockup procedures and presented 17 recommendations to NASS on February 2014. As of May 4, 2015, NASS had received closure from the OCFO on all 17 recommendations.
III. Congressional Relations and Issues

Overview

NASS County Estimates Program
Annually, NASS contacts producers in 44 states to collect county level data on total acres planted and harvested, total yield, and productions of specific commodities. The commodities vary somewhat from state to state but include data on major grains, oilseeds, edible beans, sugar crops, cotton and tobacco. All sectors of the agricultural industry rely on NASS to produce timely and accurate acreage, yield, and production estimates.
For instance:

- USDA agencies use the information to evaluate and administer vital farm commodity, credit, conservation, disaster, insurance and loan programs.
- USDA’s Risk Management Agency uses the data to administer the Federal Crop Insurance Program.
- USDA’s Farm Service Agency uses the estimates to administer disaster assistance programs such as the Agriculture Risk Coverage (ARC) & Price Loss Coverage (PLC).
- Businesses look at the data when determining where to locate processing plants and other facilities.
- Farmers and ranchers use county production data to help them make business decisions.

July Cattle
NASS suspended the July 2016 Cattle report which was slated for release on July 22 due to budget constraints. Before deciding to suspend this report, we reviewed our estimating programs against mission and user-based criteria as well as the amount of time remaining in the fiscal year to meet our budget and program requirements while maintaining the strongest data in service to U.S. agriculture. The decision to suspend this report was not made lightly, but was necessary, given our available fiscal and program resources. We will continue to review our federal agricultural statistical programs using the same criteria to ensure we provide timely, accurate and useful statistics.

Tenure, Ownership, and Transition of Agricultural Land
The 2014 Tenure, Ownership, and Transition of Agricultural Land (TOTAL) survey is a comprehensive study of all landlord owners of agricultural land, including non-farm operators of agricultural land. This survey is a follow-on component of the Census of Agriculture program. NASS conducted the TOTAL survey in collaboration with the Economic Research Service (ERS).

The TOTAL survey collected information about farmers and ranchers who rent agricultural land to other farmers and ranchers, as well as landowners who rent out land for agricultural purposes but do not farm. The survey collected income, expense, debt, and asset information related to land ownership, transition plans, and demographic and other landlord characteristics.
NASS collected data by mail, personal interviews, and online from over 40,000 landowners across the United States. The agency mailed the forms in December 2014. NASS followed-up by phone with landlord owners who did not respond by mail to maximize response. In some special cases, NASS visited the landowners’ operation.

The TOTAL survey is part of the Census of Agriculture program, which is required by United States law (Title 7, U.S. Code). All those who received a questionnaire were required to respond even if they did not operate a farm that year.

IV. Internal and External Stakeholders

Internal Stakeholders

NASS collaborates with and provides data to many other Federal agencies in support of their missions, including:

- Internal Stakeholders
  - Agricultural Marketing Service
  - Animal and Plant Health Inspection Service
  - Agricultural Research Service
  - Economic Research Service
  - Farm Services Agency
  - Food Safety Inspection Service
  - Foreign Agricultural Service
  - Forest Service
  - National Food and Agriculture Council
  - National Institute of Food and Agriculture
  - Natural Resources Conservation Service
  - Office of the Chief Economist
  - Office of the Secretary
  - Rural Development
  - Risk Management Agency

- Stakeholders within United States Government
  - American Association of Public Opinion Research
  - Bureau of Labor Statistics
  - Council of Professional Associations on Federal Statistics
  - Energy Information Administration
  - Office of Energy Efficiency and Renewable Energy
  - Bureau of Land Management
  - Environmental Protection Agency
  - Federal Committee on Statistical Methodology
  - International Statistical Institute
  - National Academies of Science
  - National Institute of Statistical Sciences
  - National Opinion Research Center
  - Office of Management and Budget
Agricultural Marketing Service (AMS) – AMS partners with NASS through an Interagency Agreement on the Pesticide Data Program (PDP). NASS provides the statistical methodology AMS uses to administer the program. In addition, NASS identifies samples of sites where produce will be collected quarterly and analyzed for pesticide residue.

Animal and Plant Health Inspection Service (APHIS) National Animal Health Monitoring System (NAHMS) – APHIS-NAHMS has a long-standing partnership with NASS to assist with the study and monitoring of animal health in dairy cows, beef, swine, bison, equine, captive cervid, and sheep and goats. These types of livestock are surveyed on a rotating schedule from year to year.

APHIS Wildlife Services National Feral Swine Damage Management Program (WS-NFSWDMP) – APHIS-WS-NFSWDMP is a multi-faceted agency with a broad mission area that includes protecting and promoting U.S agriculture health, regulating genetically engineered organisms, administering the Animal Welfare Act, and carrying out the wildlife damage management activities. NASS partners with WS-NFSWDMP to collect data on the impact of and attitudes toward feral swine within agricultural operations.

Economic Research Service (ERS) collaborates with NASS for the collection of data via the Agricultural Resource Management Survey (ARMS). The specific purpose of ARMS is to collect, analyze, and report information on the financial performance and management, economic well-being, farm practices, household characteristics, and demographics of U.S. farms and ranches. This collection of important economic agricultural data series helps to serve the best interest of USDA, the agricultural community, and the nation.

Farm Service Agency (FSA) – NASS partners with FSA through the Agricultural Act of 2014 amendments to the Food Security Act of 1985, as amended (1985 Act). Section 2005 provides for the Secretary, acting through USDA-NASS, to conduct a survey not less frequently than once every other year of per acre estimates of county average market dry land and irrigated cash rental rates on cropland and pasture land. These data assist FSA with administering the Conservation Reserve Program (CRP). CRP is authorized by Title XII of the 1985 ACT, 16 U.S.C. 3831 et seq.

Federal Committee on Statistical Methodology (FCSM) – FCSM was created by the Office of Management and Budget (OMB) to inform and advise OMB and the Interagency Council on Statistical Policy (ICSP) on methodological and statistical issues that affect the quality of federal data. NASS staff sit on committees, contribute papers and presentations, and attend FCSM workshops.

Government Publishing Office (GPO) – GPO is the preferred provider for printing survey forms and survey materials. NASS works with GPO, providing manual and questionnaire proofs for printing. The printed questionnaires are then used to collect survey data; the manuals provide respondents and interviewers with the documentation needed for data collection.
United States Department of Agriculture  
2016 Presidential Transition  
National Agriculture Statistics Service

**General Services Administration (GSA)** – NASS’s National Operations Division (NOD) works closely with the GSA. The NOD is housed in the Charles F. Prevedel Building in Olivette, MO, a facility that is owned and managed by GSA. Building security is provided by the Department of Homeland Security (DHS), Federal Protective Service (FPS, and its contractors). The NOD meets regularly with GSA and FPS to discuss building and security issues.

**National Academies of Science (NAS)** – NASS currently has an agreement with NAS for a panel to review and recommend changes to the NASS county estimates program. A second NAS panel, co-sponsored by NASS and the Economic Research Service (ERS), will review and make recommendations on effective methods for collecting data and reporting information about U.S. agriculture given the changes and increased complexity in farm business structure.

**National Food and Agriculture Council** – In addition to NASS, the council includes other USDA agencies (NRCS, FSA, RD and APHIS, FNS, ERS, and FS) and other federal agencies. Monthly meetings are held to coordinate federal agency activities and share status of agency program updates.

**National Processing Center (NPC)** – NPC is the U.S. Census Bureau’s primary center for printing and mailing surveys. NASS contracts with NPC for complex printing and mailing of the Census of Agriculture and other surveys.

**Natural Resources Conservation Service (NRCS)** – NASS partners with NRCS to collect data for their National Resources Inventory – Conservation Effects Assessment Project. This project was initiated by the USDA in 2003 as a multi-agency effort to quantify the environment effects of conservation practices on agricultural lands. The assessment was initiated in support of the 2002 Farm Bill, which substantially increased funding for conservation programs on agricultural lands. The 2014 Farm Bill also supports the conservation efforts and programs that benefits both agricultural producers and the environment. Activities in 2015 included the enumeration of 22,500 selected points to measure the benefits and/or effects within designated watershed areas of interest.

**OMB Docket Review** – NASS conducts OMB docket reviews for non-statistical agencies within USDA that need to collect data from the public. NASS reviews the docket and makes recommendations to ensure that survey plans follow sound statistical methodology. Over the past year, NASS conducted docket reviews for the Food and Nutrition Service, Forest Service, Agricultural Management Service, and Risk Management Agency.

**Office of the Secretary (OSEC)** – Departmental Regulation DR1042-042 details that the Secretary of Agriculture or the Secretary’s Designate are required to sign NASS Agricultural Statistics Board (ASB) reports. The schedule for these reports is reviewed and approved by the Secretary’s office by September for the next calendar year.
U.S. Department of Labor, Employment and Training Administration (DOLETA) – NASS partners with DOLETA to administer the Agricultural Labor Survey. NASS publishes estimates from the survey in an aggregated manner, consistent with agency policies and past practices. All individually reported data are kept confidential and protected by law. Although NASS no longer derives a benefit from the administration of this survey, DOLETA’s Office of Foreign Labor Certification (OFLC) relies exclusively upon the agricultural wage information provided by the survey in performing its responsibilities under the Immigration and Nationality Act regarding setting an Adverse Effect Wage Rate (AEWR) for the H-2A temporary agricultural program.

USDA Organic Working Group (OWG) – NASS assists in implementing USDA Strategic Plan, Objective 1.2: increase the number of certified organic operations from 17,750 in 2014 to 20,000 by 2018 by providing quality service to certifying and transitioning organic operations. NASS staff routinely interact with inter-agency OWG representatives to determine data user needs and relevant content for its organic surveys; conducting 4 organic surveys between 2011-2017 and providing the first national data point on economic losses due to the presence of genetically engineered material.

USDA Know Your Farmer, Know Your Food (KYF2) Task Force – USDA Know Your Farmer, Know Your Food (KYF2) Task Force – The taskforce is a collaboration among USDA agencies to share information and coordinate efforts in the Department’s effort to expand local and regional food systems. NASS staff collaborated with key stakeholders within KYF2 to determine data user needs and relevant content for its inaugural 2015 Local Foods Marketing Practices Survey. NASS staff are also working with AMS and KYF2 to plan a 2017 Local Food Evaluation Conference and to adapt current farmers’ market directory survey methods for improved methodology.

External Stakeholders

Council of Professional Associations on Federal Statistics (COPAFS) – COPAFS represents individual researchers, educators, public health professionals, civic groups, and businesses that rely on the quality and accessibility of statistics that can only be effectively collected by the federal government.

National Association of State Departments of Agriculture (NASDA) – NASS maintains a cooperative agreement with NASDA for data collection of surveys and censuses. Interviewers contracted through NASDA conduct data collection for NASS. NASS staff collaborate with NASDA to continually improve data collection and management of the enumerative staff.

Relationships with Statistical Organizations – NASS maintains close relationships with many statistical organizations including, the American Statistical Association, International Statistical Institute, American Association of Public Opinion Research. NASS staff frequently contribute papers and organize sessions and presentations at conferences sponsored by these organizations. This promotes NASS’s mission and visibility within the statistical community and provides an opportunity to exchange ideas in order to better statistical practice at NASS.

Other stakeholders –NASS maintains relationships with a wide range of professional partners, including USDA’s New and Beginning Farmers and Ranchers team, National Corn
United States Department of Agriculture  
2016 Presidential Transition  
National Agriculture Statistics Service

Stakeholder group overview

Advisory Committee on Agriculture Statistics (ACAS) – The purpose of the Committee is to advise the Secretary on the conduct of the periodic censuses and surveys of agriculture, other related surveys, and the types of agricultural information to obtain from respondents. The Committee also prepares recommendations regarding the content of agriculture reports, and presents the views and needs for data of major suppliers and users of agriculture statistics. ACAS draws on the experience and expertise of its members to form a collective judgment concerning agriculture data collected and the statistics issued by NASS. This input is vital to keep current with shifting data needs in the rapidly changing agricultural environment and keep NASS informed of emerging developments and issues in the agriculture community that can affect agriculture statistics activities. The committee charter will expire on August 15, 2018. The renewal of this Committee charter is in the public interest in accordance with the duties the law imposes on the Department.

National Association of State Departments of Agriculture (NASDA) – NASDA’s mission and membership information is available at: http://www.nasda.org/About.aspx. USDA-NASS has a cooperative agreement with NASDA to collect NASS survey data. NASS senior leadership representatives meet monthly with the CEO of NASDA and staff members to discuss cooperative activities and manage the ongoing NASS data collection program.

Departments of Agriculture Directors, Commissioners and Secretaries in each State. – NASS currently has a Memorandum of Understanding with each state’s Department of Agriculture. Directors of NASS Western and NASS Eastern Field Operations, along with NASS Field Office staff, interact frequently with leaders and staff in these departments to carry out cooperative activities.

Community-Based Organizations (CBOs) – NASS Regional and State Field Office staff work closely with a number of community-based organizations to promote participation in the Census of Agriculture and ongoing NASS Surveys.

State Universities and Colleges – Through its Regional Field Office structure, NASS partners with many universities and colleges to perform data collection activities to develop survey questionnaires and identify data needs, and to promote agriculture in the various states. NASS currently has Memorandums of Understanding with several universities.

NASS Data Lab – NASS maintains a secure data lab where researchers can access NASS data for specific research projects when published data do not meet the research needs. A request detailing the data needed and analysis plan has to be approved and researchers sign an agreement to maintain confidentiality of the data. In FY16, 61 requests were approved to access data in the NASS Data Lab.

Special Tabulations – NASS accepts requests for special tabulations of data when published reports do not meet a customer’s needs. Frequently these requests involve data from the
Census of Agriculture where a customer would like a tabulation of data based on different demographic breakouts than are part of the standard Census publications. In FY16, NASS completed 49 special tabulations that are available on the NASS’s website.

**Joint Program in Survey Methodology (JPSM)** – Along with other statistical agencies, NASS provides financial support to the Joint Program in Survey Methodology at the University of Maryland. JPSM offers graduate training in the principles and practices of survey research. NASS typically has between 1 and 3 employees enrolled in the program.

**Recent engagements with stakeholder group**

NASS organizes an annual Data Users’ Meeting in cooperation with the World Agricultural Outlook Board, Economic Research Service, Agricultural Marketing Service, Foreign Agricultural Service, Farm Service Agency and the U.S. Census Bureau. The meeting, held in October, is open to the public and its purpose is to update data users on recent and pending changes in the various statistical and information programs important to agriculture, and to seek comments and input on these programs. The 2016 meeting was held on October 18, 2016.

NASS frequently hosts visitors for the release of reports produced under lockup conditions. As an example, NASS hosted several high-level members of Congress and their staff from key committees for the release of the May Crop Production Report on May 10, 2016. Another example, NASS hosted members of the Indiana Farm Bureau, Indiana Corn Marketing Council, and Indiana Soybean Alliance for the release of the August Crop Production Report on August 12, 2016.

NASDA Winter Policy meeting, February 1-3 2016. NASS engaged with leaders from state agriculture departments and federal agencies to discuss ongoing partnerships and gain updates on important policy issues relevant to state and federal agriculture leaders.

Southern Association of State Departments of Agriculture annual meeting, June 5 – 8, 2016. NASS engaged with agriculture leaders from Southern states to discuss partnerships and provide updates on NASS data collection program activities.

Northeastern Association of State Departments of Agriculture annual meeting, June 12– 15, 2016. NASS engaged with agriculture leaders from Northeastern states to discuss partnerships and provide updates on NASS data collection program activities.

Midwestern Association of State Departments of Agriculture annual meeting, June 21– 23, 2016. NASS engaged with agriculture leaders from Midwestern states to discuss partnerships and provide updates on NASS data collection program activities.

Western Association of State Departments of Agriculture annual meeting, July 18– 21, 2016. NASS engaged with agriculture leaders from Western states to discuss partnerships and provide updates on NASS data collection program activities.

NASS staff met with the publicist from the National Corn Grower Association (NCGA) on July 20, 2016. This was a work planning meeting to develop a promotional marketing plan for NCGA to support USDA-NASS in the area of improving survey response rates. We now have
a well-developed survey promotion plan for the fall and winter NASS surveys to highlight the benefits of responding.

NASS held a meeting with the Senior Legislative Director of the National Association of Wheat Growers (NAWG), August 4, 2016. NAWG is interested in partnering with NASS to improve survey response rates among NAWG membership. NAWG was given an update on the promotional efforts under way by other industry groups to promote survey response and was given an overview of several NASS surveys, including the upcoming September Crops Acreage, Production, Stocks (Crops APS) survey and the Small Grains County Agricultural Production Survey (CAPS). NASS worked to develop NAWG public relations materials that promote response to NASS surveys and highlight the benefits of survey results to the respondent.

NASS participated in the National Association of State Departments of Agriculture annual meeting, September 24–25, 2016. NASS engaged with State Departments of Agriculture leaders, federal agency leaders, and representatives from the agriculture industry to discuss ongoing partnerships, gain updates on the state of agriculture in the United States, and discuss policy issues relevant to state and federal agriculture leaders. NASS leadership updated attendees on the status of NASS program activities.

NASS Field Office staff participate in numerous meetings, tradeshows, and special events with federal, state, university, and industry stakeholders on an ongoing basis throughout the year.

V. Top Issues

Hot Topics

Census of Agriculture Program

The Census of Agriculture (COA) is conducted every five years and provides comprehensive data on the agriculture economy, including data on the number of farms, land use, production expenses, value of land and buildings, farm size and characteristics of farm operators, market value of agricultural production sold, acreage of major crops, inventory of livestock and poultry, and farm irrigation practices. During the data collection year (the fourth year of the census cycle), NASS receives a significant funding increase for conducting the Census of Agriculture. Final preparations are underway for the 2017 COA, scheduled to be mailed to the nation's farmers and ranchers in December 2017.

Fiscal Year 2018 marks the fourth year in the five-year funding cycle for conducting the 2017 COA. The largest portion of the increased funding requested for this year will be used for outsourcing all necessary functions associated with mailing and processing the COA. Due to the approximately 3 million forms mailed and processed only once every five years, NASS contracts with NPC in Jeffersonville, Indiana, the same center responsible for handling the Census Bureau’s Decennial Census. NPC has the specialized equipment and capacity to handle
the questionnaire volume associated with the COA. Outsourcing this function saves significant money for NASS during the four non-production years of the five-year COA cycle. Included in the funding increase request are expenses for outgoing and return postage for the approximately 3 million potential farmers and ranchers on the Census Mail List. In order to achieve desired response rates while holding down costs, NASS conducts follow-up mailings only to those who have not responded.

**Timeline**

Reports to be issued by the Agricultural Statistics Board in 2017 requiring signature by the Secretary (or Designee) before release.

WHAT WE DO: OUR MISSION

The National Institute of Food and Agriculture (NIFA) invests in and advances agricultural research, education, and extension to solve societal challenges, and ensure global nutritional security. We accomplish this by awarding grants that integrate research, education, and extension projects. These projects ensure that groundbreaking discoveries in the food, agricultural, natural resource, and human sciences go beyond the laboratory, and make their way into classrooms to reach people who can put knowledge into practice, and ultimately, improve the lives of all Americans.

WHO WE ARE: OUR WORKFORCE

In FY16, NIFA employed 390 employees. NIFA employees serve in the biological and social sciences, education, grants management, IT, administrative, and technical occupational series. Nearly all NIFA staff are located at the NIFA Waterfront Centre in Washington, D.C., a few blocks from USDA Headquarters.

WHO WE SERVE: OUR CONSTITUENTS

NIFA engages with public and private stakeholders such as land-grant universities, businesses, community groups, federal agencies, and science organizations to address research, education, and extension program needs, and to inform implementation and improvement of our programs.

KEY UPCOMING DECISIONS

- Decide on an approach to increase outreach to minorities and underrepresented groups and institutions to enhance their competitiveness for NIFA funding.
- Decide on the strategies needed to comprehensively identify solutions—through a systems approach—to complex agricultural challenges such as mitigating environmental and climate impacts, ensuring nutritional security, invigorating the bio-economy, improving health, and fostering the agricultural workforce.
- Develop strategies, in response to a comprehensive assessment of capacity funding programs to be completed in January 2017, to support land-grant institutions in maximizing the value of investments and to ensure capacity funds lead to measurable improvements in research and extension activities.

BUDGET HIGHLIGHTS FY 2016

- Total Budget Authority - $1.5 billion
- Agriculture and Food Research Initiative - $350 million
- Research and Education Activities - $836.3 million
- Extension Activities - $475.9 million
- Integrated Activities - $30.9 million
- Farm Bill Programs - $147.9 million (mandatory funds)
- 2013 reductions (i.e., sequestration, others) led to a $94 million loss in funding. 2013 Farm Bill authorization lapse resulted in a reduction of $130 million from 2012 levels.
I. Organizational Overview

Agency’s Mission/Strategic Plan

The mission of the National Institute of Food and Agriculture (NIFA) is to invest in and advance agricultural research, education, and extension to solve societal challenges. NIFA’s unique vision catalyzes transformative discoveries, education and engagement to address these challenges.

NIFA funds domestic extramural research, education, and extension projects and programs, some of which are available to the land-grant university system only and some are open to other organizations and entities.

NIFA’s 2014-2018 Strategic Plan includes four goals that are in alignment with the 2014 Farm Bill, the USDA Strategic Plan, and the Research, Education and Economics (REE) Action Plan (see Appendix B for USDA and REE goal crosswalk):

Goal 1: Science - Catalyze exemplary and relevant research, education, and extension programs.

Goal 2: People - Transform NIFA into a model agency with a highly motivated workforce.

Goal 3: Process - Institutionalize streamlined, effective technologies, policies, and processes.

Goal 4: Communications - Advance America’s global preeminence in food and agricultural sciences.

Organization’s History

The Food, Conservation, and Energy Act of 2008 (“2008 Farm Bill”) established USDA’s National Institute of Food and Agriculture (NIFA), formally and previously known as the Cooperative State Research, Education and Extension Service (CSREES). On Oct. 1, 2009, all authorities administered by the administrator of CSREES were transferred to the director of NIFA. NIFA is one of four agencies that support the USDA Research, Education, and Economics (REE) Mission Area. The agency coordinates efforts with other REE agencies as well as other science agencies within USDA and across the federal government. Through competitive grant programs, statutory capacity-building funding, and other grants programs, NIFA supports all of the USDA strategic goals.

NIFA’s mission is to invest in and advance agricultural research, education, and extension to solve societal challenges. NIFA provides linkages between the federal and state components of a broad-based, national agricultural research, extension, and higher education system and awards extramural funding for projects conducted in partnership with the state agricultural experiment stations, the state cooperative extension system, land-grant universities, colleges, and other research and education institutions, as well as individual researchers, community organizations, federal agencies, and non-profit organizations.

Federal funds are distributed to universities and institutions by NIFA through both capacity funding and competitive awards. Capacity awards support research and extension activities at land-grant institutions and are distributed through grants to the states on the basis of statutory formulas. Eligibility is limited to the cooperating institutions, most of which are 1862, 1890, and 1994 land-grant institutions.

NIFA administers our nation’s flagship competitive research grants program, the Agriculture and Food Research Initiative (AFRI), which supports investigator-initiated research, education, and extension initiatives that contribute to major breakthroughs in solving agricultural challenges, and helps grow the next generation of scientists. Aligned with the 2014 Farm Bill, NIFA invests AFRI funding to support substantive research, education, and extension efforts in plant health and production and plant products; animal health and production and animal products; food safety, nutrition, and health; bioenergy, natural resources, and environment; agriculture systems and technology; and agriculture economics and rural communities.

Organizational Chart

Supersedes Organization Chart of the Cooperative State Research, Education, and Extension Service Dated January 30, 2002

Date August 18, 2010
Biographies of career staff in key leadership positions

Dr. Meryl Broussard  
Associate Director for Programs, Office of the Director  
202-720-4423, mbroussard@nifa.usda.gov

Dr. Broussard serves as the Associate Director for Programs within the Office of the Director. In coordination with the Director of NIFA and the Associate Director for Operations, he provides leadership and direction for NIFA's $1.5 billion science portfolio and management oversight for NIFA’s four science Institutes, the Center for International Programs, and the Planning, Accountability, and Reporting Staff. As a key member of the Director’s leadership team and together with the Associate Director for Operations, Dr. Broussard serves as advisor, agency expert, and as a senior official in decision-making concerning agency direction and policies. In addition, he provides leadership in the planning, development, implementation, and evaluation of the major research, education, and extension programs supported by NIFA.

Dr. Broussard joined the Office of the Director as the Interim Deputy Director for NIFA in 2009 and provided agency-wide leadership for the planning and implementation of the reorganization and establishment of NIFA as mandated in the 2008 Farm Bill as one of his primary assignments. Prior to joining the Office of the Director, he served as Deputy Administrator for Plant and Animal Systems and Director of the Animal Systems team. Dr. Broussard joined the USDA in 1985 as the first National Program Leader for Aquaculture.

Dr. Broussard holds a B.S. and M.S. He received his a B.S. and M.S. in Vertebrate Zoology from the University of Memphis and his Ph.D. from Texas A&M University in Aquaculture.

Dr. Robert Holland  
Associate Director for Operations, Office of the Director  
202-720-9278, rholland@nifa.usda.gov

Dr. Holland serves as the Associate Director for Operations within the Office of the Director. In coordination with the Director of NIFA and the Associate Director for Programs, he provides leadership and direction for NIFA's $1.5 billion federal assistance programs and management oversight for the Office of Grants and Financial Management, Office of Information and Technology, Communications Staff, and Budget Staff. As a key member of the Director’s leadership team and together with the Associate Director for Programs, Dr. Holland serves as advisor, agency expert, and as a senior official in decision-making concerning NIFA direction and policies. In addition, he provides leadership for effective and efficient management of the NIFA operations including all federal assistance programs and grants management systems.

Dr. Holland began his federal career in 2011 as the Assistant Director of the Institute of Food Safety and Nutrition. Prior to joining NIFA, Dr. Holland served as the Chair of the Department of Large Animal Clinical Sciences and the Director of the Large Animal Veterinary Teaching
Hospital, College of Veterinary Medicine, at the University of Tennessee in Knoxville. Prior to this, he served as the Chair of the Department of Veterinary Diagnostic and Production Animal Medicine at Iowa State University. Dr. Holland has also held positions at Michigan State University and Virginia-Maryland Regional College of Veterinary Medicine. Before assuming university leadership roles, he was extensively engaged in food safety, environmental quality, and dairy production medicine research. Dr. Holland has authored/co-authored more than 110 publications, including 33 scientific and refereed journal publications.

Dr. Holland received a D.V.M. from Tuskegee University, a M.S. in large animal clinical sciences from Michigan State University, and a B.S. from Virginia State University. Dr. Holland also completed a residency and a postdoctoral educational fellowship at Michigan State University.

**Deputy Directors currently reporting to Dr. Meryl Broussard**

**Dr. Parag Chitnis**  
Deputy Director, Institute of Food and Production and Sustainability  
202-401-5024, parag.chitnis@nifa.usda.gov

As one of six Deputy Directors, Dr. Chitnis leads NIFA’s Institute of Food Production and Sustainability, which supports research and extension activities in plant, animal, and agricultural systems.

Prior to joining NIFA in 2014, he was a research administrator at the National Science Foundation (NSF) Division of Molecular and Cellular Biosciences, where he served as a division director, deputy division director, and program director. In addition to leading the division, he managed many inter-directorate programs at NSF, developed collaborations with agencies in other countries, and represented NSF in several interagency activities, such as the National Science Advisory Board on Biosecurity and the Nanoscale Science, Engineering, and Technology Subcommittee of the National Science and Technology Council. Prior to joining NSF, Dr. Chitnis was a professor in the Department of Biochemistry, Biophysics, and Molecular Biology at Iowa State University and an assistant professor in the Division of Biology at Kansas State University. Dr. Chitnis authored over 100 peer-reviewed or invited publications in the areas of plant biochemistry, photosynthesis and proteomics.

Dr. Chitnis has a B.S. in botany/plant breeding from the Konkan Agricultural University in India, an M.S. in genetics/biochemistry from the Indian Agricultural Research Institute, and Ph.D. in biology from the University of California at Los Angeles.
Dr. Luis Tupas  
Deputy Director, Institute of Bioenergy, Climate, and Environment  
202-401-4926, ltupas@nifa.usda.gov

Dr. Louie Tupas is the Deputy Director of the Institute of Bioenergy, Climate, and Environment (IBCE). Dr. Tupas provides leadership for addressing global change and climate issues, bioenergy and bioproducts research and development, and environmental and natural resource systems management through research, education, and extension programs.

Prior to his current position as Deputy Director, Dr. Tupas served as the Division Director and National Program Leader for Global Climate Change at NIFA. He began his federal career in 2002 as a program director in arctic sciences at the National Science Foundation. Dr. Tupas started his professional career as an oceanographer at the University of Hawaii at Manoa in 1991. He also has professional experience in aquaculture, natural products chemistry, and climate modeling. Dr. Tupas is the U.S. representative to the Asia Pacific Network for Global Change Research, and the senior U.S. official to the Global Research Alliance on Agricultural Greenhouse Gases.

Dr. Tupas received his B.S. in Marine Biology from the University of the Philippines and M.S and Ph.D. in Oceanography from the University of Tokyo. Dr. Tupas also completed a postdoctoral fellowship at the Scripps Institution of Oceanography.

Dr. Denise Eblen  
Deputy Director, Institute of Food Safety and Nutrition  
202-720-5004, Denise.r.eblen@nifa.usda.gov

As Deputy Director at Dr. Denise Eblen leads NIFA’s Institute of Food Safety and Nutrition (IFSN), which supports research, education, and extension activities in food safety, food quality, nutrition, and obesity.

Prior to joining NIFA in 2015, she held the position of acting deputy assistant administrator for the Office of Public Health Science at USDA’s Food Safety and Inspection Service (FSIS), working her way up from her introduction to FSIS as the agency’s first Food Safety Fellow in 2001. At FSIS she led the staff responsible for providing the agency with the scientific leadership necessary to support the science-based food safety programs and policies implemented by FSIS to reduce foodborne illnesses and deaths. Prior to joining FSIS she held a research associate position at USDA’s Agricultural Research Service in Wyndmoor, PA., studying the safety of produce.

Dr. Eblen holds a B.S. in Human Nutrition from the University of Ulster at Coleraine in Northern Ireland, an M.S. in Food Science from Queen’s University, Belfast, and a Ph.D. in Food Safety Microbiology from the University of Ulster at Jordanstown, Northern Ireland.
Dr. Muquarrab Qureshi
Deputy Director, Institute of Youth, Family, and Community
202-720-5305, mqureshi@nifa.usda.gov

Dr. Muquarrab Qureshi currently serves as Deputy Director, Institute of Youth, Family, and Community, which support the human and social component of NIFA food and agricultural science through research, education, and extension programs.

Prior to his current position as Deputy Director, Dr. Qureshi served as the Division Director of the Animal Systems Division within NIFA’s Institute of Food Production and Sustainability. In 2003, Dr. Qureshi joined USDA’s Cooperative State, Research, Education, and Extension Service as a National Program Leader for Animal Genetics. Prior to joining USDA, Dr. Qureshi served as a professor of Immunology, the Director of Interdisciplinary Graduate Program of Physiology, Director of Graduate Program of Poultry Science, and the Associate Dean of the Graduate School at North Carolina State University. Dr. Qureshi has received several national outstanding teaching awards, has authored 115 peer-reviewed scientific publications, and is a Fellow of the Poultry Science Association.

Dr. Qureshi has a M.S. and D.V.M. degrees from Pakistan and a Ph.D. in Immunogenetics and Immunotoxicology from Cornell University.

Deputy Directors currently reporting to Dr. Robert Holland

Ms. Cynthia Montgomery
Deputy Director, Office of Grants and Financial Management
202-401-6021, cmontgomery@nifa.usda.gov

Ms. Montgomery serves as the Deputy Director of the Office of Grants and Financial Management, which supports NIFA’s mission by administering grants, cooperative agreements, and other federal financial assistance.

Prior to joining NIFA in 2013, Ms. Montgomery was the Director of Grant Operations of the Grants Program Directorate at the federal Emergency Management Agency. She previously served as the Director of the Division of Grants Management for the Centers for Medicaid and Medicare Services for the Department of Health and Human Services (HHS). She also served as the interim Deputy Director for the Office of Administration and Management. Ms. Montgomery held several positions in the HHS Office of the Assistant Secretary for Preparedness and Response, acting director, division of grants management; acting chief grants management officer; chief of mission support and acquisition and policy; and senior contracting officer. Ms. Montgomery worked at the Department of Education in the Executive Office as a management and program analyst providing grants and contracts management guidance and at the Department of Defense as a contracting officer/specialist. Ms. Montgomery started her federal career at HHS at the Centers for Disease Control and Prevention in Atlanta, GA, where she worked as a biologist, grants management specialist, contracting specialist, and public health analyst.
Ms. Montgomery holds a B.S. degree in Biology from Northeast Louisiana State University and a M.S. in Public Administration from Georgia State University.

**Mr. Michel Desbois**  
**Deputy Director, Office of Information Technology**  
202-690-0003, mdesbois@nifa.usda.gov

As Deputy Director of NIFA’s Office of Information Technology (OIT), Mr. Desbois serves as the chief information officer (CIO) and is responsible for all information technology (IT) resources and applications for the Agency.

Mr. Desbois has served in various information technology roles for over 25 years and in a variety of acting positions while at NIFA to include acting Associate Director of Operations and acting Director of the Communications Staff. Mr. Desbois joined USDA’s Cooperative State Research, Education, and Extension Service in 2001 coming as the Director of Applications. Before coming to USDA, Mr. Desbois served as the CIO for the National Institute of Drug Abuse, at the National Institutes of Health. He also worked for the Department of Defense for 12 years as an information technology project manager. Before entering Government service, he worked as an analyst and engineer for two private companies in the Washington D.C. area.

Mr. Desbois holds a B.S. in Agricultural Engineering from Virginia Polytechnic Institute and State University and a M.S in Information Systems from George Mason University.

**Biographies of political staff in key leadership positions**

**Dr. Sonny Ramaswamy**  
**Director, National Institute of Food and Agriculture**  
202-720-4423, sonny@nifa.usda.gov

On March 9, 2012, Dr. Sonny Ramaswamy was appointed by President Barack Obama to serve as Director of the National Institute of Food and Agriculture. The Director of NIFA serves a six-year term based on legislation and is also subject to reappointment for an additional six-year term.

Prior to starting at NIFA, Dr. Ramaswamy held a number of academic positions, including: Dean of Oregon State University’s College of Agricultural Sciences; Director of Purdue’s Agricultural Research Programs; university distinguished professor and head of Kansas State’s Entomology Department; and professor of entomology at Mississippi State.

Dr. Ramaswamy has been a successful scientist, educator, and administrator. He has received research grants from many federal agencies, including CSREES/NIFA, NSF, NIH, EPA, and USAID, as well as from state agencies, commodity groups, and industry for his research in the area of integrative reproductive biology of insects. He has published over 150 journal articles,
book chapters, and a book. He is an award-winning teacher, and has mentored a number of high school, undergraduate, graduate, and post-doctoral students. He has received a number of awards and honors, including being named Fellow of the American Association for the Advancement of Science and Fellow of the Entomological Society of America.

Dr. Ramaswamy has had excellent success in capital campaigns and fund-raising to create endowments for faculty professorships, student scholarships and fellowships, including creation of the Leadership Academy at Oregon State University, support of research, extension, and outreach, infrastructure improvements, construction of new facilities for research, education, and outreach, including the Kansas State University Insect Zoo.

Dr. Ramaswamy received his B.S. degree in agriculture and M.S. degree in entomology from the University of Agricultural Sciences, Bangalore, India. His doctorate is in entomology from Rutgers University. He is also a graduate of Harvard University’s Management Development Program.

Organizational Budget and Financial Management

NIFA programs are supported by approximately 60 different program lines that provide specific legislative authority and funding amounts. NIFA receives funding through three main accounts: Research and Education Activities, Extension Activities, and Integrated Activities. NIFA appropriations are provided through discretionary funds (through the annual Agriculture Appropriations Act) and other mandatory funds; NIFA received $1.3 billion and $148 million, respectively, in FY 2016. Most mandatory funds are provided through legislation produced by Congressional authorizing committees while discretionary funds are provided through annual appropriations acts.

About 94 percent of NIFA funds are used for program grants that are distributed to science professionals around the country to fund innovative solutions to local and global challenges. Because NIFA does not have a specific appropriation to finance operations, the remaining funds are used to support NIFA operations based on a legislated administration rate that varies based on program authority.

Grant recipients include colleges and universities across the nation, including the 112 1862, 1890 and 1994 Tribal Land-Grant Institutions; Hispanic-serving institutions; non-land grant colleges; and other academic organizations. Approximately 51 percent of funding is distributed to programs at land-grant universities and other colleges based on eight legislated formulas, generally referred to as “capacity” funding. Partnerships with federal agencies and other entities leverage NIFA’s investments. Approximately four percent of the NIFA programs support higher education and youth development-related efforts, including 4-H programs through the Cooperative Extension System.

NIFA administers six mandatory programs that are authorized in the Farm Bill as well as two programs funded through other mandatory funding sources provided by laws other than appropriation acts and the outlays that result from that budget authority. Some of the work
funded through the Research and Education Activities account is integrated. Integrated projects may include a combination of at least two components of research, education, or extension. Capacity and Infrastructure-related programs include almost 58 percent of appropriations, with 5 percent of those awarded on a competitive basis. Competitively-awarded grants make up about 45 percent of funds. About 70 percent of funds are available for only one year, while the balance may be spent over multiple years.

Major changes in funding over the last four years included:

- An overall 7 percent increase in appropriations from 2009 levels;
- Current 2016 funds for the main eight statutory formula-based Capacity programs are 10.5 percent higher than 2009 levels; however funds for such programs have varied over the years;
- AFRI is USDA’s flagship Competitive Grants Program and is currently funded at 74 percent more than in 2009. In 2014, AFRI surpassed the Smith-Lever section 3 (b) and (c) capacity funds to become the largest funding line in the NIFA budget, now accounting for half of the agency’s competitive program funding;
- 2017 President’s Budget requested $700 million for AFRI ($350 million in 2016) to fund it at the fully authorized level;
- Agency funding was significantly impacted by the lapse in funding for Farm Bill programs during 2013 and sequestration reductions to discretionary funds in 2013 as well as to mandatory funds in FYs 2013, 2015, and 2016;
- Elimination of earmarks in 2010 impacted discretionary funding levels. Previously, NIFA managed about $140 million in Congressionally-earmarked projects supporting directed research and extension projects at land-grant universities. These funds were only partially restored by increases—approximately $27.7 million—provided to Capacity programs.

---

* Includes Trade and Biotechnology Activities funding in 2011, provided by the Office of the Secretary.

** Includes Native American Institutions Endowment Funds and transfers from the Office of the Secretary for Congressional Relations activities.

*** Program was merged with other research and extension programs related to pest management and is now part of Crop Protection/Pest Management line.

** Program management was moved to Office of Advocacy and Outreach.

** Funds are managed by NIFA on behalf of other USDA agencies.

*** TAAF funding managed on behalf of Foreign Agricultural Service.
Enterprise Workforce Data

Workforce FY 2009-FY 2016

GS Level Distribution
- GS 13- GS 15, 48%
- GS 8- GS 12, 37%
- GS 5 -GS 7, 13%
- ES/SES, 2%
NIFA employs a total of 390 employees. NIFA employs additional special government employees on an intermittent or temporary basis to assist with the administration of programs. These employees are active, established scientists possessing broad-based knowledge in a specific program area and have experience in research, education, and/or extension as appropriate for the program. During current fiscal year, NIFA hired an average of 57 intermittent, temporary employees for this purpose.

- NIFA employs 18 temporary employees as student trainees.
- Of our total workforce, 21 percent are eligible to retire within the next year.
- Our headquarters is located in Washington, D.C., which houses 100 percent of our workforce.
- 46 percent of the employees are in the Biological Science, Social Science, or Education occupation series and provide national leadership for our programming.
- 19 percent of the employees are in the Grants Management and Financial Administration occupational series and provide support in administering federal financial assistance grants.
- 6 percent of the employees are in the Information Technology occupation series and provide grants management system development and support services.
- The remainder are administrative and technical support staff such as program analysts, assistants, equal opportunity staff, and secretary or public affairs positions.
II. Policies and Regulations

Statutory Authorities

1. A listing of significant legislation authorizing NIFA extramural grant programs, as well as a comprehensive list of all NIFA regulations, is available on NIFA’s website. A list of the key programs is included below in item 2.

2. The following is a partial list of programs that will expire in 2018*.

FACT – Food, Agriculture, Conservation, and Trade Act of 1990  
FCEA - Food, Conservation, and Energy Act of 2008  
FSRIA – Farm Security and Rural Investment Act of 2002  
AREERA – Agricultural Research, Extension, and Education Reform Act of 1998

**Important Policies and Regulations**

**Competitive and Noncompetitive Non-Formula Federal Assistance Programs – General Award Administrative Provisions.** The National Institute of Food and Agriculture (NIFA) issues grants and cooperative agreements to, for example, colleges and universities, other Federal agencies, individuals, in support of agricultural research, education, and extension programs. The Agency's administrative provision, 7 CFR 3430 - Competitive and Noncompetitive Non-formula Federal Assistance Programs, contains, in Subparts A through E, elements common to all competitive and noncompetitive grant programs it administers. Subpart F and thereafter apply to specific grant programs. The administrative provisions specific to grant programs that have been established in 7 CFR 3430 to date and the applicable subpart include:

- Subpart F—Specialty Crop Research Initiative  
- Subpart G—Agriculture and Food Research Initiative  
- Subpart H—Organic Agriculture Research and Extension Initiative  
- Subpart I—Integrated Research, Education, and Extension Competitive Grants Program  
- Subpart J—Beginning Farmer and Rancher Development Program  
- Subpart K—Biomass Research and Development Initiative  
- Subpart L—Capacity Building Grants for Non-Land Grant Colleges of Agriculture Program  
- Subpart M—New Era Rural Technology Competitive Grants Program  
- Subpart O—Sun Grant Program  
- Subpart P—Food Insecurity Nutrition Incentive Program

There are a few modifications of 7 CFR 3430 underway. Further information about the modifications is included below.

1. Modification to Subpart G for Commodity Boards. Section 7404 of the 2014 Farm Bill amended the general administration, special considerations, and eligible entities subsections for the Agriculture and Food Research Initiative (AFRI) program, and added a special contributions requirement making it necessary to modify the program’s
With these changes, NIFA provides that it will solicit research topics from statutorily defined national and state commodity boards for research topics that the commodity boards are willing to co-fund equally with NIFA under the AFRI competitive grant program. If the topics are evaluated and found to be consistent with the AFRI statutory priorities and priorities noted in the President’s budget request related to NIFA, the topics will be incorporated in existing program areas in the relevant AFRI Request for Applications (RFA(s)). (Final Rule with request for comments RIN 0524-AA67).

2. Establishment of a new Subpart for Veterinary Services Grant Program. NIFA will add a new Subpart to 7 CFR 3430 for the Veterinary Services Grant Program (VSGP) authorized by section 7104 of the 2014 Farm Bill. In accordance with 7 USC 3151b(b)(1), NIFA is establishing VSGP for the purpose of developing, implementing, and sustaining veterinary services. The interim final rule for VSGP will include the following key sections: program purpose, definitions, eligible applicants, project types and priorities, preference, and funding restrictions. Specific requirements associated with applying for funds to relieve veterinarian shortage situations and support veterinary services will be provided in annual Requests for Applications.

NIFA has other important program-specific regulations which include:

- **7 CFR 3400**—Special Research Grants Program
- **7 CFR 3401**—Rangeland Research Grants Program
- **7 CFR 3402**—Food and Agricultural Sciences National Needs Graduate and Postgraduate Fellowship Grants Program
- **7 CFR 3403**—Small Business Innovation Research Grants Program
- **7 CFR 3405**—Higher Education Challenge Grants Program
- **7 CFR 3406**—1890 Institution Capacity Building Grants Program
- **7 CFR 3415**—Biotechnology Risk Assessment Research Grants Program
- **7 CFR 3431**—Veterinary Medicine Loan Repayment Program

Other NIFA regulations worthy of mention include:

- **7 CFR 3404**—Public Information
- **7 CFR 3407**—Implementation of the National Environmental Policy Act
- **7 CFR 3418**—Input Requirements for Stakeholder Input Requirements for Recipients of Agricultural Research, Education, and Extension Formula Funds
- **7 CFR 3419**—Matching Funds Requirement Agricultural Requirements and Extension Formula Funds at 1890 Land-Grant Institutions, Including Tuskegee University, and at 1862 Land-Grant Institutions in Areas
- **7 CFR 3434**—Hispanic-Serving Agricultural Colleges and Universities Certification Process
Overview of the policy/regulation review process

While NIFA does not promulgate many regulations, and those are mostly to implement Farm Bill statutory changes, it follows established USDA and OMB regulatory review processes for its regulations.

A list of NIFA’s capacity and schedule of competitive funding opportunities are made available on NIFA’s website, and are announced throughout the year on grants.gov. NIFA reviews requests for grant proposals through peer review process. Specific details on the panel meeting, review format, and evaluation criteria vary among programs.

III. Congressional Relations and Issues

Overview

The Agricultural Act of 2014 (2014 Farm Bill)

There is interest from Capitol Hill on the following provisions and subsequent programs of the 2014 Farm Bill. These items have been provided as background for a September 2016 Farm Bill hearing before the Senate Committee on Agriculture. Additionally, these provisions below could be discussed and revisited when the next Farm Bill is considered.

Food Insecurity Nutrition Incentive (FINI) Program (Sec. 4208)
This program helps participants in the Supplemental Nutrition Assistance Program (SNAP) increase their purchases of fruits and vegetables. FINI funding is available to local, state, and national organizations to test incentive strategies to help SNAP participants better afford healthy foods. The second year of awards were made in June 2016, with $16.8 million awarded to support this program. A list of grants is available [here](#). The fiscal year (FY) 2017 request for applications (RFA) for FINI projects was [announced](#) on October 20, 2016, with an application deadline of December 12, 2016.

Veterinary Services Grant Program (Sec. 7104)
This program was born out of concerns that long-term maldistributions in the veterinary workforce have left some rural communities with insufficient access to livestock veterinary services. The legislation emphasizes two areas: Education and Rural Practice Enhancement. In FY 2016, applications were accepted for both areas. Initial funding for the program, $2.5 million, was appropriated in FY 2016. Grants will be made available on a competitive basis to qualified entities to develop, implement, and sustain veterinary services through education, training, recruitment, placement, and retention of veterinarians, veterinary technicians, and students of veterinary medicine and veterinary technology. Grants will also be made to establish or expand veterinary practices in rural areas. NIFA released the first RFA for this program on May 4, 2016, which closed on June 17, 2016. Awards totaling $2.3 million were [announced](#) on October 17, 2016, to help relieve shortages of veterinary services through education, extension, training and support for new or existing veterinary practices in designated rural shortage areas.

Organic Research and Extension Initiative (Sec. 7211)
This program focuses on helping producers and processors who have already adopted organic standards to grow and market high quality organic agricultural products. A list of FY 2015 OREI grants, totaling $21.3 million, is available [here](#). NIFA [announced FY 2016 awards](#) totaling $17.6 million at the end of September 2016. The FY 2017 Request for Applications for OREI projects was [announced](#) on October 21, 2016, with an application deadline of January 19, 2017.
Centers of Excellence (Sec. 7214)
In 2015, NIFA established a process for designating Centers of Excellence in the food and agricultural sciences and providing these Centers with priority in the peer review process, in accordance with this section of the Farm Bill. In FYs 2015 and 2016, where competitive grant programs were best suited, NIFA allowed eligible applicants to request consideration for Centers of Excellence designation as part of their grant applications. In its first year of implementing the Centers of Excellence provision, NIFA awarded more than $41.8 million to a total of 34 projects that were qualified as Centers of Excellence. In 2015, applicants who applied for Center of Excellence designation experienced higher funding rates than the overall pool of eligible applicants. The funding rate for applicants requesting the designation was 21 percent, as compared to the funding rate for all Center of Excellence-eligible applicants, which was 16 percent. A Center of Excellence in food and agricultural research, extension, and education is a grantee whose application was not only found to be highly meritorious by a peer panel, but met additional criteria to receive the designation. This designation is specific to a grant application.

Specialty Crop Research Initiative (SCRI) Program (Sec. 7306)
The projects funded through SCRI address research and extension needs for crops that span the entire spectrum of specialty crop production, from researching plant genetics to improving crop characteristics; identifying and addressing threats from pests and diseases; improving production and profitability; developing new production innovations and technologies; and developing methods to respond to food safety hazards. In FY 2015, NIFA made 15 new awards totaling more than $40 million. Additionally, there were seven continuation awards totaling $11.7 million. A list of FY 2015 grants is available here. FY 2016 grants and abstracts are available on the NIFA reporting webpage.

Emergency Citrus Disease Research and Extension (CDRE) Program (under SCRI, Sec. 7306)
This program is intended to discover and develop tools for early detection, control, and eradication of diseases and pests that threaten domestic citrus production and processing, and provides $25 million per year in mandatory funding for the program through the Specialty Crop Research Initiative. Since the SCRI CDRE program’s inception in 2014, NIFA has granted $43.6 million in research dollars to combat the destructive citrus greening disease and other citrus pests and diseases. In FY 2014, NIFA awarded $23.5 million to fight citrus greening through CDRE. A list of FY 2015 grants, totaling $20.1 million, for this program is available here. The deadline for submission of full applications for FY 2016 funding was August 18, 2016. Awardees will be announced the first quarter of FY 2017.
Commodity Boards Provision (Sec. 7404)
This section required that the Secretary (NIFA) “establish procedures, including timelines, under which an entity established under a commodity promotion law or a State commodity board (or other equivalent State entity) may directly submit to the Secretary for consideration proposals for requests for applications that specifically address particular issues related to the AFRI priorities…the Secretary shall require that the grant be matched with an equal contribution of funds from the Commodity Boards. NIFA did not receive dedicated AFRI funds to enact this provision.

NIFA developed the current program in close cooperation with the Agricultural Marketing Service, Office of the General Counsel (including experts in commodity promotion laws), and the Office of Budget and Program Analysis. NIFA published the final rule on August 26, 2016.

NIFA received RFA idea submissions from state and national commodity groups that included a variety of submissions from both animal and plant agriculture. NIFA continues to accept submissions on a rolling basis, to be considered for next year’s RFAs. The deadline for topics proposed for inclusion in FY 2017 RFAs was July 18, 2016. Topics selected for inclusion in AFRI Programs will be included in upcoming FY 2017 RFAs.

Beginning Farmer and Rancher Development Program (Sec. 7409)
This program provides education, mentoring, and technical support for beginning farmers and ranchers across the nation. The 2014 Farm Bill mandated that at least five percent of BFRDP funding must support veterans and socially disadvantaged farmers. In 2015, about 10 percent of the funding supports veterans and farming, while about 50 percent of the funding will serve socially disadvantaged farmers and ranchers. FY 2015 grants available here. FY 2016 grants available here.

Industrial Hemp (Sec. 7606)
USDA has recently received inquiries from Kentucky Senators Mitch McConnell (R) and Rand Paul (R) regarding this section. Sec. 7606 authorized institutions of higher education and state departments of agriculture to establish industrial hemp research pilot programs in states where the production of industrial hemp is legal and subject to certain other conditions. The term “industrial hemp” includes the plant Cannabis sativa L. and any part or derivative of such plant, including seeds of such plant, whether growing or not, that is used exclusively for industrial purposes (fiber and seed) with a tetrahydrocannabinols concentration of not more than 0.3 percent on a dry weight basis. The term “tetrahydrocannabinols” includes all isomers, acids, salts, and salts of isomers of tetrahydrocannabinols. Working with federal interagency colleagues in the Department of Justice (Drug Enforcement Administration) and Department of Health and Human Services (U.S. Food and Drug Administration) to develop a shared interpretation on the parameters of what is, and is not, permissible under Section 7606, USDA announced a Statement of Principles on August 12, 2016.
During the week of September 12, 2016, NIFA issued guidance to stakeholders regarding NIFA funding of industrial hemp research. To be eligible for NIFA funding, research must take place in one of 28 states with certified pilot industrial hemp programs. Eligible applicants are institutions of higher education and state departments of agriculture. NIFA has developed multiple assurances of grantee compliance with state and federal regulations. Detailed information and eligibility requirements are available at https://nifa.usda.gov/industrial-hemp.

**Appropriations**

**1890 Matching (FY 2016 Appropriations Bill)**
The House Report No. 114-205 accompanying the 2016 Appropriations Bill directed USDA to submit a plan of action to cooperatively work with the States to meet matching fund requirements for the historically black 1890 Land-Grant Universities (LGUs). **The letter to Congress accompanying the plan of action was signed by the Secretary on September 2, 2016.** A number of funding deficits were reported by the universities that appeared to affect some 1890 LGUs’ overall budgets, thus influencing the university’s decision to request a waiver, often reflecting an unallowable request. NIFA will ensure timely and comprehensive reviews and documentation of waiver justifications and use of federal and matching funds.

**Budget Request for FY 2018 (FY 2017 Appropriations Bill)**
The House Report No. 114-531 that will accompany the anticipated 2017 Appropriations Bill states: the Committee appreciates NIFA’s efforts to provide additional information in its budget requests over the past three years. For the FY 2018 budget request, the Committee is particularly interested in the request for AFRI, and requests that the agency provide greater detail on the levels proposed to be allocated to and the expected publication date, scope, and allocation level for each request for awards to be published under each priority area specified in section 2(b)(2) of the Competitive, Special, and Facilities Research Grant Act (7 U.S.C. 450i(b)(2)).

**Agriculture and Food Research Initiative (FY 2017 Appropriations Bill)**
The Senate Report No. 114-259 that will accompany the anticipated 2017 Appropriations Bill states: Section 7406 of the Food, Conservation, and Energy Act of 2008 specifies AFRI priority areas, including an emphasis on conventional (classical) plant and animal breeding. The Committee strongly concurs with the intent of this section, and continuing its FY 2016 guidance, encourages the agency to create a distinct funding stream within the AFRI program for development of publically available, regionally adapted cultivars that are bred specifically to meet unique regional soil, climate, and cropping system conditions, for the benefit of U.S. producers, seed companies, processors and consumers. The Committee further directs the agency to report its progress in meeting this requirement.
Numerous Congressional offices have recently inquired about the Small Business Innovation Research (SBIR) grant program, which was established by the Small Business Innovation Development Act in 1982. Coordinated by the Small Business Administration, the program is currently authorized through September 30, 2017. Under the program, all federal agencies with extramural research budgets in excess of $100 million reserve a percentage for contracts or grants (currently 3 percent for FY 2016) to encourage domestic small businesses to engage in high-growth research and development that has the potential for commercialization and could lead to significant public benefit.

NIFA administers the SBIR program for USDA. The program offers competitively awarded grants to qualified small businesses to support high quality, advanced concepts research related to important scientific problems and opportunities in agriculture that could lead to significant public benefits. The program does not make loans nor award grants for the purpose of helping a business get established. In early September, USDA announced $7.4 million in SBIR FY 2016 Phase 1 funding for small businesses. In FY15, SBIR funded $22.63 million for Phase 1 (85 awardees) and Phase 2 (28 awardees) projects.

Food safety has been an issue of intense Congressional interest. The Food Safety Outreach Program, authorized by the Food Safety Modernization Act (FSMA) that was signed into law in January 2011, provides funding for an infrastructure of national and regional centers to extend food safety education, training, and technical assistance to specific audiences affected by new guidelines established under FSMA, specifically small and medium sized farms, beginning farmers, socially disadvantaged farmers, small processors, or small fresh fruit and vegetable merchant wholesalers.

The FY 2016 NIFA budget provided $5 million to support the Food Safety Outreach Program, which will build upon the national infrastructure with the focus on delivery of customized training to target audiences. FY 2016 grant proposals were solicited from local communities, to include those from community-based organizations, non-governmental organizations, food hubs, farm cooperatives, and other local groups. As directed by Congress, NIFA is the lead for this program working with FDA to actively facilitate communication and interaction. On October 19, 2016, NIFA announced more than $4.7 million in Food Safety Outreach Program grants for food safety education, training and technical assistance projects.

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

NIFA’s collaboration with federal departments, academia, and other organizations is the core of the integrated approach NIFA uses to discover and apply groundbreaking solutions to critical issues related to agriculture, food, the environment, and communities. NIFA joins together agencies, non-profit organizations, businesses, foundations, and associations — to drive innovation. Collaboration with land-grant universities and other institutions across the nation ensures that NIFA’s resources extend to all Americans to solve major societal challenges.

Federal organizations

U.S. Department of Commerce
U.S. Department of Defense
U.S. Department of Energy
U.S. Department of Health and Human Services
U.S. Department of Housing and Urban Development
U.S. Department of the Interior
U.S. Department of Education
U.S. Environmental Protection Agency
U.S. Agency for International Development
National Science Foundation
National Institutes of Health
Centers for Disease Control
United States Department of Agriculture
2016 Presidential Transition
National Institute of Food and Agriculture (NIFA)

**USDA Agencies**

Agricultural Marketing Service  
Agricultural Research Service  
Animal and Plant Health Inspection Service  
Economic Research Service  
Food and Nutrition Service  
Food Safety and Inspection Service  
Foreign Agricultural Service  
Forest Service  
Natural Resources Conservation Service  
Rural Development  

NIFA makes extensive use of USDA service centers for human resource, acquisition and information technology support. NIFA leverages the Client Technology Services (CTS) for back office information technology for such things as email, network services and SharePoint. The National Information Technology Center (NITC) provides NIFA hosting support for its servers and applications. The USDA National Finance Center provides support for NIFA’s grant applications processing. The Agricultural Research Service, Administrative and Financial Management division provides services to NIFA in human resources, travel, space, procurement, telecommunications services, and civil rights. NIFA has representatives on USDA’s Know Your Farmer, Know Your Food (KYF2) Taskforce, which coordinates local and regional food systems efforts across USDA. KYF2 conducts outreach to local/regional stakeholders about NIFA grant programs such as Food Safety Outreach Program (FSOP), Beginning Farmer and Rancher Development Program (BFRDP), Community Food Projects (CFP), Food Insecurity Nutrition Initiative (FINI) and others.

**Stakeholder group overview**

NIFA routinely meets with, hears from, and seeks formal and informal input from a wide variety of food and agriculture associations, scientific organizations, representatives from business and industry, think tanks, commodity groups, and academia. Stakeholder engagement is mission-essential to help NIFA make the right decisions on which research, education and extension programs it pursues. While the list of NIFA stakeholders is lengthy, here are a few of stakeholder groups with whom NIFA routinely interacts:

**Association of Public and Land-Grant Universities:** The Association of Public and Land-grant Universities (APLU) is a research, policy, and advocacy organization dedicated to strengthening and advancing the work of public universities in the U.S., Canada, and Mexico. With a membership of 237 public research universities, land-grant institutions, state university systems, and affiliated organizations, APLU’s agenda is built on the three pillars of increasing degree completion and academic success, advancing scientific research, and expanding engagement. The association’s work is furthered by an active and effective advocacy arm that works with Congress and the administration as well as the media to advance federal policies that strengthen public universities and benefit the students they serve. NIFA
collaborates frequently with APLU on issues of importance to make sound program and budgetary planning decisions.

**Foundation for Food and Agriculture Research:** The Foundation for Food and Agriculture Research (FFAR) builds partnerships to support innovative and actionable science addressing today’s food and agriculture challenges. The Foundation was established by the 2014 Farm Bill and charged with complementing and furthering the important work of the U.S. Department of Agriculture. Leveraging public and private resources, FFAR’s mission is to increase the scientific and technological research, innovation, and partnerships critical to enhancing sustainable production of nutritious food for a growing global population. To maximize the Foundation’s impact potential, FFAR is committed to complementing and not duplicating existing research endeavors. Five ex-officio board members, all of whom were designated by Congress, are USDA Secretary Tom Vilsack; Dr. Catherine Woteki, Under Secretary for Research, Education, and Economics and Chief Scientist; Dr. Chavonda Jacobs-Young, Administrator, Agricultural Research Service; Dr. Sonny Ramaswamy, Director, National Institute of Food and Agriculture (NIFA); and Dr. Jim Olds, representing Dr. France A. Córdova, Director of the National Science Foundation.

**National Agricultural Research, Education, Extension and Economics Advisory Board:** The National Agricultural Research, Extension, Education, and Economics Advisory Board (NAREEEAB) provides advice to the Secretary of Agriculture and land-grant colleges and universities on top priorities and policies for food and agricultural research, education, extension and economics. The Board is made up of 25 members, each of which represents a specific category of U.S. agricultural stakeholders, as mandated by Congress. NIFA staff routinely consults with the Board and informs them on a variety of NIFA programs.

**Department-Wide Community Economic Development – Internal Partnerships:** NIFA and Rural Development’s (RD) Community Economic Development (CED) Division have partnered to implement the Stronger Economies Together (SET) over the past 7 years. SET is the only resource across USDA and the federal government that allows field RD CED field staff to jointly work with NIFA’s Regional Rural Development Centers and land grant universities to deliver targeted training and technical assistance on regional planning to select rural communities. Often, geographically isolated or persistently poor rural communities are not completely prioritized or reflected in local and state comprehensive economic development plans. Through SET, USDA empowers and equips small towns to engage, get training and technical assistance on planning process, and immediately understand available partners and financing to resolve their needs and implement their regional economic development objectives.

**Specialty Crops Stakeholders:** The Specialty Crop Research Initiative (SCRI) has a history of stakeholder engagement that goes back to program inception in 2008. That engagement was formalized in the 2014 farm bill with the mandate that NIFA consult annually with the National Agricultural Research, Extension, Education and Economics Advisory Board’s Specialty Crop Committee (SCC) concerning implementation of SCRI and with the SCC
Citrus Disease Subcommittee (CDS) on implementation of the Emergency Citrus Disease Research and Extension program. These consultations occur on an annual basis. The SCC consultation will occur in August of 2017 and the CDS consultation will occur in February of 2017. In addition, there is an industry relevancy review conducted for both SCRI and CDRE as part of the funding recommendation process.

Commodity Board Stakeholders: NIFA is in its second year of implementing the 2014 Farm Bill commodity board initiative. The initiative is intended to enhance collaboration between the Agency and commodity groups as well as leveraging additional funds for critical research into areas of common interest. As part of the program, NIFA solicits eligible national and state commodity boards, and marketing to propose topics for research under a specific priority area of the Agriculture and Food Research Initiative (AFRI) competitive grants program. In FY 2016, the first year of collaboration with commodity boards, seven topics from five commodity boards were integrated into two AFRI RFAs: the Foundational Program RFA and the Food Security Challenge Area RFA. The five boards included the Kansas Wheat Commission, the National Pork Board, the Iowa Corn Promotion Board, the Washington State Potato Commission and the National Peanut Board. Collectively, these five commodity boards offered $1.7 million for research projects to be funded on topics proposed by the boards: novel pre-breeding applications for quality enhancement in hard red winter wheat; breeding for genetic resistance to wheat viruses; evaluation of various compounds as alternatives to antibiotics to treat and prevent disease in pork production; environmental influence on phenomics in crop improvement and production; understanding soil ecology to manage potato soil health; drought tolerance and efficient use of water resources in peanuts; and improved peanut and food allergy diagnostic methods.
Recent engagements with stakeholder group

Sept. 20-22, 2016: Annual Small Farms Conference, Virginia Beach, VA. National conference that addresses the needs, challenges and successes of small farmers across the country. This conference enabled NIFA to learn and listen to these small farm operators on issues and concerns of importance in order to make program and budgetary planning decisions. NIFA also updated the attendees on Agency initiatives.

Sept. 21, 2016: National Extension Directors and Administrators (NEDA) and Cooperative Extension Section (CES) meeting in Grand Teton, WY. This meeting was jointly held with the nation’s Experiment Station Section (ESS). This conference enabled NIFA to learn and listen to attendees on issues and concerns of importance in order to make program and budgetary planning decisions. NIFA also updated the attendees on Agency initiatives.

Sept. 22, 2016: NIFA meeting in Jackson Hole, WY. To enhance collaboration with representatives of the 1994 and 1862 land-grant universities. NIFA listened to concerns and issues involving the 1994s and 1862s, and will work to help build stronger relations between the two.

Sept. 25, 2016: International Congress of Entomology, Orlando, FL. The event brought together the largest delegation of entomologists in the history of the discipline. Dr. Sonny Ramaswamy delivered the keynote address: “Collaboration to Solve Global Challenges.”

Oct. 15-18, 2016: Academy of Nutrition and Dietetics, Food & Nutrition Conference & Exposition, Boston, MA. This conference enabled NIFA to learn and listen to attendees on issues and concerns of importance in order to make sound program and budgetary planning decisions. NIFA also updated the attendees on Agency initiatives.

Oct. 22-30, 2016: American Evaluation Association, Boston, MA. The American Evaluation Association is a professional association of evaluators devoted to the application and exploration of program evaluation, personnel evaluation, technology, and many other forms of evaluation. NIFA is a member of the Extension Education Evaluation Topic Interest Group. NIFA briefed attendees on a variety of topics, and held and participated training workshops and information-sharing opportunities.

Nov. 11-13, 2016: FALCON Conference, Indianapolis, IN. FALCON is a non-profit, professional association, sanctioned by motion of the AIHEC Board of Directors that represents administrators, faculty and staff at 1994 Land-Grant Institutions (Tribal Colleges and Universities). The conference included sessions on the successes in teaching, extension services, and research that benefit Native American students, communities, governments, and lands. The conference focused on research, education, and community programs at 1994 land-grant institutions conducted by students, faculty and staff. NIFA briefed attendees on a variety of topics, and held project director sessions, as well as training workshops and information-sharing opportunities.
Nov. 13-16, 2016: Association of Public and Land-grant Universities (APLU) National Conference, Austin, TX. The APLU is a research, policy, and advocacy organization dedicated to strengthening and advancing the work of public universities in the U.S., Canada, and Mexico. The conference brings together leaders in their field of study who represent all NIFA partner 1862s, 1994s, 1890 land-grant universities, other minority serving institutions, as well as our non-land grant university partners. This conference enabled NIFA to learn and listen to these leaders on issues and concerns of importance in order to make sound program and budgetary planning decisions. NIFA also updated the attendees on Agency initiatives, and honored a number of educators, teachers, researchers, and extension professionals who provided excellence in leadership to the serious societal challenges.

Nov. 16, 2016: 1890s Communicators Conference, Prairie View, TX. Dr. Sonny Ramaswamy educated attendees on the importance of communicating science to better inform Congress, the news media, communities, families, farmers/ranches on research, education and extension programs and successes.

V. Top Issues

Hot Topics

The following topics require further study, and internal and external Agency collaboration before a strategy can be reached.

Outreach to Minority Serving Institutions to Enhance their Competitiveness for NIFA Funding

Minority Serving Institutions (MSIs) have a long history of educating and serving underrepresented communities. These institutions are well positioned to foster career opportunities for minorities in food, agriculture, natural resources, and human science disciplines. They also are engaged in applied research and community-based education to improve the lives of underserved families and communities. NIFA invests approximately $171 million in targeted programs annually to build education, research and extension capacities at MSIs. However, MSIs are experiencing limited success in competing for NIFA’s non-targeted grant funding. In addition, some MSIs need assistance in enhancing grants management capacity. Hence, NIFA has amplified MSI outreach to increase awareness of funding opportunities through webinars, meeting support, informational booths, workshops and conference calls. Outreach activities also are conducted to enhance competitiveness of applications through AFRI program areas. For example, the 1890 Faculty Engagement Project provided an opportunity for 1890 faculty members to strengthen their research skills and expand their professional networks in the area of animal health, animal well-being, and food security. Additionally, a networking meeting between AFRI Food Safety and 1890 Capacity Building Program Directors was held for discussions on grant writing partnerships. The Project Director is defined as the principal from a NIFA-funded organization, who is responsible for
managing a grant project. NIFA is working to improve post-award management through site visits to review grants management practices, provide technical assistance, and share recommendations for improvement based on review findings. As a result, a significant impact of our outreach in FY 2016 is the 100 percent increase in the number of applications for the Grants for Insular Areas Program. NIFA plans to continue stakeholder engagement via targeted grantsmanship workshops, program and funding opportunities webinars, and scheduled visits with the organizational leaderships to ensure that NIFA MSI programs bring the highest value to the entities in line with the authorization and legislative intent.

**Agriculture and Food Research Initiative: Catalyzing Transformation of U.S. Agriculture Systems through a Systems Approach**

Significant increases in domestic and global agricultural production are required to feed and support a population that will exceed 9 billion by 2050. To provide sustainable solutions to addressing this global challenge, sufficient investments in scientific research, education, and extension must be made to catalyze transformation of U.S. agricultural systems. The FY 2017 President’s Budget proposes combined increases of $350 million for the Agriculture and Food Research Initiative (AFRI) Program. This increase is fundamental to supporting systems approaches that will lead to sustainable increases in U.S. agricultural productivity while invigorating the bioeconomy, improving health, and ensuring a talented agricultural workforce. To achieve a transformation that will meet our nation’s future challenges, a paradigm shift is needed in U.S. agricultural research, from focusing on individual components of the agricultural supply chain to the entire system. To realize this systems strategy, large investments must be made to support transdisciplinary teams that will be tasked with advancing conceptual, methodological and translational innovations to solving challenges across the entire agricultural value chain. Availability of sufficient funding for systems-based approaches will result in new technological, management and policy interventions to increase the efficiency of food and agricultural systems, deliver nutritional security and economic prosperity, and minimize the environmental footprint of agriculture. The FY 2017 NIFA **Explanatory Notes** provides further details on systems approaches and NIFA’s strategy for developing solutions to complex agricultural challenges.

**Study to Review NIFA’s Capacity Programs**

NIFA has funded an independent evaluation of six major capacity programs; all of which are distributed via formula. Capacity programs are under scrutiny because of: (a) the length of time they have existed; (b) the consistency of funding they have received; and (c) the breadth of the research and extension activities they cover. The study by TEConomy (http://www.teconomypartners.com) will examine impact, attribution, and outcomes; function and structure; and the role the partnership between NIFA and the land-grant universities has played in achieving goals. NIFA’s National Program Leaders (Ph.D. level scientists) provide oversight of performance measurement at the project and program levels. Grantees submit an annual progress report with updates. This evaluation will provide a summative review of capacity programs. The results will be used to determine the value of the programs to stakeholders and strengthen NIFA’s focus on evidence-based decision making; identify
research and extension gaps, and areas of improvement; and leverage the visibility and accountability of capacity programs by independent review. The results, expected by the end of January 2017, will allow senior leadership to make evidence-based program and budget decisions on the capacity grant programs.

**Addressing Threats to U.S. Ag Production**

NIFA is in the early stages to engage relevant stakeholders to 1) identify current and anticipated challenges to protect U.S. plant and animal production systems against pests, diseases and other sources of contamination; 2) describe programmatic and infrastructure requirements to effectively address these challenges; and 3) provide input on possible strategies for re-aligning and/or re-inventing the current NIFA scientific tactical sciences framework.

NIFA’s current investments consist of multiple small programs distributed across administrative and disciplinary areas:
- Food and Agriculture Defense Initiative (FADI)
  - National Plant Diagnostic Network (NPDN)
  - National Animal Health Laboratory Network (NAHLN)
  - Extension Disaster Education Network (EDEN)
- Crop Protection and Pest Management (CPPM)
- Minor Crop Pest Management (IR4)
- Food Animal Residue Analysis Database (FARAD)

NIFA intends to work with stakeholders to build a much stronger, and more integrated and coordinated infrastructure that will facilitate enhanced cooperation, leveraging of investments, protection for producers and consumers, and export trade in global markets. To this end, the University of Maryland is cooperating with NIFA to host a workshop on the College Park campus the week of February 13th.

**Infrastructure Task Force**

The research needed to catalyze transformative advancements in US agriculture requires modern spaces conducive for interdisciplinary teamwork and industry-university partnerships. Based on a recent report, a grave threat to U.S. agricultural research is posed by outdated facilities and buildings in the Land Grant University system to facilitate such research.

The October 2015 APLU-funded “Sightlines” study of our nation’s schools of agriculture found “a collective total of $8.4 billion in deferred maintenance at the buildings and supporting facilities at schools of agriculture authorized to receive U.S. Department of Agriculture (USDA) funding”. The report argues that failure to aggressively and systematically address the challenge of outdated, often unsafe, and inadequate infrastructure puts the entire system of public research and education in food, agriculture and the environment at risk. Continued neglect will lead to a reduction in the number of institutions involved in conducting such research, a reduction in the sophistication of the research that is undertaken, and a risk to
private enterprise in not having access to fundamental research findings that can fuel their innovation and translation of research into commercial application. The report further articulates that the infrastructure investments will have a direct impact on the quality of science, ensure safety in the classroom and experiment stations, and attract the best and brightest to our universities.

An APLU Infrastructure Task Force responding to the Sightlines study has identified the need for improved stewardship of facilities through adequate planning and funding of ongoing maintenance, and for investments in major renovations or new construction to replace aging and ineffective, unsafe, or inadequate research facilities. Several funding strategies have been proposed. NIFA, together with ARS, will continue to work with APLU to develop a balanced and achievable approach through both the Farm Bill and the appropriations process.

**Positive Youth Development**

USDA has a long history with Positive Youth Development (PYD) through the Cooperative Extension’s 4-H program. 4-H as a model of PYD translates the sciences of engagement, learning, and change with youth and adults who work to create sustainable community change.

Cooperative Extension, which is partially funded by NIFA, is an effective existing network that includes 500,000 volunteers and 3,500 4-H professionals. 4-H National Headquarters is housed at NIFA. The ten-year longitudinal Tufts University Positive Youth Development study, (http://4-h.org/about/research/) demonstrates that compared with their peers, youth involved in 4-H programs are:

- Nearly four times more likely to make contributions to their communities;
- Are about two times more likely to be civically active;
- Are nearly two times more likely to participate in Science, Engineering, and Computer Technology programs, and 4-H girls are two to three times more likely to take part in science programs compared with girls in other out-of-school time activities;
- 4-H’ers are nearly two times more likely to make healthier choices.

Addressing the education, employability, health, and well-being needs of underserved and underrepresented youth is an ongoing aspirational goal of the agency.

**Expanded Food and Nutrition Education Program and Formula Calculations**

NIFA’s Expanded Food and Nutrition Education Program (EFNEP) assists low-income families in acquiring the knowledge, skills, attitudes, and changed behavior necessary for nutritionally sound diets, and to contribute to their personal development and the improvement of the total family diet and nutritional well-being. For more than 45 years, EFNEP has successfully addressed critical societal concerns by employing paraprofessional staff, and influencing nutrition and physical activity behaviors of low-income families, particularly those with young children. Through a community-based, relationship-driven, hands-on educational approach, EFNEP has directly impacted economic, obesity, and food insecurity challenges that hinder the
health and well-being of this nation. NIFA is undertaking an analysis, to be completed in early 2017, to update the current EFNEP formula, developed in 1981, to better reach targeted populations—particularly underserved minorities, such as Native American populations—given changes in national demographics, poverty rates, and levels of obesity within these populations.

**Climate Change, Insect Biology, and Opportunities for the Bioeconomy**

Changes in insect and pathogen lifecycles due to changing climate patterns can have widespread effects on the environment and touch many of NIFA’s programs, including water resources, soil health, nutrient cycling, and bioenergy. The effects of introduced species are well-documented, but some endemic species are also flourishing due to changing climatic conditions. One example is the expansion of pine and spruce bark beetle infestations in the Rocky Mountains in the last two decades, leading to widespread tree mortality. By killing trees, bark beetle outbreaks can significantly influence forest carbon storage and cycling. Intense droughts and mild winters under a changing climate cause explosions of the insect populations, while the warmer temperatures have allowed beetles to move to higher elevations where trees are unusually susceptible to infestations. One NIFA-funded Coordinated Agricultural Project, the Colorado State-led Bioenergy Alliance Network of the Rockies (BANR), is quantifying the availability and feasibility of harvesting the beetle-killed biomass and converting it into low-carbon fuels and bioproducts, as well as the economic, social, and environmental consequences of utilizing such a resource. A key finding from the project is that the economics of harvesting depend heavily on the time since infestation. Older stands with more downed trees take longer to harvest, require specialized equipment, and increase the effective price of the biomass delivered to the conversion facility. Technologies such as remote sensing can help identify the timing of infestations which help inform optimum harvest windows. This project has demonstrated that availability of biomass can be quite different from availability for economical processing and conversion. Looking to the future, climate-related impacts on a range of cellulosic biomass resources are expected to become more widespread. Future projects similar to BANR will be critical in assessing the opportunity and identifying resilient approaches to contribute to the US bioeconomy in a meaningful, sustainable manner.

**AFRI Administrative Funds**

NIFA does not have a “salaries and expenses” appropriations account like other Federal agencies to cover agency operation costs. NIFA’s operating budget comes from two sources: (1) Federal Administration, a Congressional appropriation subject to the uncertainties of the appropriations process, which represents approximately 40 percent of the agency’s operating budget and (2) legislated overhead rates, which are applied to NIFA Program Appropriations, and represent approximately 60 percent of the agency’s operating budget. Three years ago, NIFA embarked on a path to:

- Enhance our national program leadership role as a science agency;
- Increase data transparency and ease of use of reporting systems; and
- Modernize our grants systems and processes.
Together with focused funding that supports the Grants Modernization Initiative, funds are needed for grants oversight activities and improvements to grants management processes and award reporting systems. Enhanced engagement with our partners is also needed for NIFA to continue the activities that most efficiently and effectively provide outstanding national program leadership for capacity building and competitive programs.

During formulation of the 2014 Farm Bill, the administrative rate for competitive programs was discussed, particularly the Agriculture and Food Research Initiative (AFRI). The administrative rate for AFRI was not increased in the 2014 Farm Bill but subsequent legislation in the Agriculture Appropriations Act increased this rate from 4 percent to 5 percent. This increase has helped support the much needed process and systems improvements that the agency needs to move to more efficient data collection and reporting processes and systems. Exploring options for greater certainty of operations funding would be helpful, to ensure NIFA continues to receive funds needed to operate with a more stable source of operating funds and that NIFA will be able to enhance the level of service provided to its customers and stakeholders.

**Grants Modernization**

NIFA is partnering with the USDA OCFO to implement ezFedGrants, a USDA enterprise-wide automated system for managing grants. The current systems and processes NIFA uses to announce, review, process, and award grants rely on antiquated legacy systems that do not fully support the entire grant administration life cycle. NIFA seeks to replace the current system with a paperless, automated technology solution that improves workflow, reduces error rates, reduces staff workload, and improves grantee customer satisfaction. The budget has included increases in funding for the past four years to support this initiative. Partial funding was received through the appropriations process. In addition to receiving systems funds, NIFA has legislative authority to use between 0 and 5 percent of funds for administrative costs, depending upon the individual program. NIFA will begin using the system for processing FY 2017 Capacity awards in the fall of 2016. External customers will have access to a portal which will provide status updates on their application/award. The portal will also allow them to submit required reports, such as the SF-425 Federal Financial Report (previously done through email). This solution will allow NIFA staff, applicants, and grantees to track grant proposals and awards throughout the grant life cycle. The Departmental solution will assist USDA and NIFA in eliminating improper payments and waste, as the solution is fully integrated with the Departments financial management system. In FY 2017, NIFA expects to automate the process for making capacity calculations and begin making competitive awards in FY 2018.

**NIFA Lease Expiration at Waterfront Centre**

The NIFA lease in the 800 9th St SW, Washington, DC – Waterfront building, expires in January of 2020. NIFA leases commercial space in the Waterfront building, not owned by GSA. We are required to submit a lease prospectus package that includes our space needs to
the Office of Management and Budget for approval March 2017. The NIFA lease will be competitively awarded. Given the construction on the area near the Waterfront building, it is likely that NIFA staff will occupy a new location in 2020. Most of NIFA’s staff is located in the Waterfront building. NIFA maintains a handful of offices for Office of the Director in the Whitten Building. One NIFA contractor is housed in the South Building. We are partnering with GSA to develop the lease prospectus package which includes our Program of Requirements for our needs in 2020. GSA manages the lease renewal process and monitors Government wide standards for allowable space based on agency employment data. GSA has contracted with an architecture and design firm known as Metropolitan Architect and Planners (MAP) to assist us with that process. GSA, USDA Office of Operations and MAP and have been actively collecting space requirements.

**Timeline**

**October 2016**

**Food Insecurity Nutrition Incentive (FINI) Request for Application (RFA)** – This competitive grant program support projects to increase the purchase of fruits and vegetables among low-income consumers participating in the Supplemental Nutrition Assistance Program (SNAP) by providing incentives at the point of purchase. Release: October 2016.

**December 2016**

**AFRI Education and Literacy Initiative Request for Application (RFA)** – The AFRI Food, Agriculture, Natural Resources, and Human Sciences Education and Literacy Initiative (formerly the AFRI Fellowships Program) focuses on developing the next generation of research, education, and extension professionals in the food and agricultural sciences. The Initiative educates professionals to lead agriculture into the future by solving current and future challenges facing our society. Release: December 2016.

**January 2017**

**AFRI Water for Food Production Systems RFA.** – The AFRI Water for Food Production Systems Challenge Area RFA is a combination of the former AFRI Water and AFRI Food Security Challenge Area RFAs. Additional information to be provided after approval by NIFA’s Office of the Director. Release: January 2017.

**Smith-Lever Special Needs Competitive Grant Program RFA.** – This competitive grant program is to address the severity of natural and human made disasters, including but not limited to, earthquakes, tornadoes, wildfires, floods, hurricanes, drought, contagious diseases, invasive mosquito-borne diseases (i.e. Zika virus), avian influenza and terrorist events. Applicants are required to provide 100 percent matching funds from non-federal sources. Applications are limited to 1862 Land-grant Institutions in the 50 states, American Samoa, Guam, Micronesia, Northern Marianas, Puerto Rico, and the U.S. Virgin Islands. Award recipients may subcontract to organizations not eligible to apply if they are necessary to
conduct the project. NIFA encourages collaboration with the 1890 and 1994 Land-grant Institutions within and across state lines. Release: January 2017.

**Grants for Insular Areas Program RFA.** – The Grants for Insular Areas Program strengthens the ability of the institutions of higher education in the insular areas (American Samoa, Guam, Micronesia, Marshall Islands, Northern Marianas, Palau, Puerto Rico & Virgin Islands) to carry out resident instruction and distance education in the food and agricultural sciences. This capacity building program demonstrates USDA’s commitment of ensuring food and agricultural sciences education in identified U.S. Pacific Island Territories. Release: January 2017.

**Food and Agriculture Defense Initiative also known as Homeland Security Program.** – This grant program supports three multi-institutional homeland security networks and is non-competitively awarded through cooperative agreements: The National Plant Diagnostic Network, the National Animal Health Laboratory Network, the Pest Information Platform for Education and Extension, and the Extension Disaster Education Network. The purpose of these homeland security networks is to provide funding to protect the food supply and agricultural production. Release: TBD.

**Agriculture Risk Management Education RFA.** – This competitive grant program funds four regional centers nationwide and a Risk Management Education Electronic Support Center to carry out regionally based programs that address agricultural risk management needs. These Centers are located in land-grant institutions in their respective regions where they conduct regional competitive programs open to Extension and farm management education professionals. Release: Winter 2017.

**NIFA Federal Assistance Policy Guide.** – The NIFA Federal Assistance Policy Guide is an agency guidance document that identifies the statutory and regulatory responsibilities of recipients of federal funds distributed by NIFA, including capacity grants, competitive grants, and grants supported by endowment interest. This Policy Statement compiles, clarifies, and updates the statutory, regulatory, and policy guidance previously distributed to capacity grant recipients as Administrative Manuals. The Policy Guide serves as a resource internally and externally and is available to the public through the NIFA web site. NIFA views the Policy Guide as a “living document.” The first version was released in October 2014. It will continue to be revised to incorporate legislation changes, clarify policies and procedures, address stakeholder concerns, and improve usability. A summary of revisions will be included in the document to help users identify any significant changes. NIFA continues to revise the Guide to implement the Agricultural Act of 2014 and USDA’s implementation of the 2 CFR part 200, “Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards.” Next update: Winter 2017.
February 2017

Forestry Research Advisory Council (FRAC) Meeting – FRAC meets in February (2017) to hold listening sessions with experts and talks about current and emerging issues affecting forests and forestry. The Council starts framing potential recommendations for its Annual Report to the Secretary. This will be held in February at the Forest Service (Yates Building).

APLU ESCOP Social Science Subcommittee (SSSC) – Annual Meeting – The SSSC recommends specific actions to help the Land-Grant system address high priority research and education issues leading to outcomes that deal with social issues in a significant, measurable way and that will generate sustained financial support. The SSSC membership is comprised of representatives from the five traditional social science disciplines within Land-grant Colleges of Agriculture in each of the four regions, Northeast, North Central, South, and West. Each discipline is also represented by the 1890 institutions, as well as by at-large members. A number of Ad Hoc and Ex Officio organizations relevant to the social sciences comprise non-voting members of the SSSC, including: the four Regional Rural Development Centers; the Farm Foundation; the Rural Policy Research Institute (RUPRI); the Board on Human Sciences; the Consortium of Social Science Associations; the Council on Food, Agricultural and Resource Economics (C-FARE); and the National Coalition for Food and Agricultural Research (National C-FAR). The SSSC answers to the ESCOP Science and Technology Committee. NIFA liaison to this group will share NIFA initiatives/opportunities that SSSC can assist with. Meeting: February 2017, Washington, D.C.

Agricultural Safety and Health Council of America (ASHCA) Federal Agency Roundtable - Annual Meeting – ASHCA proactively addresses ongoing and emerging occupational safety and health issues affecting U.S. agriculture. Federal Agency Roundtable brings together approximately 20 individuals representing 10 federal agencies/programs, to provide updates on their agency/program plans for improving safety and health issues affecting agricultural business and workers; discuss current gaps between publicly funded programs and the actual or predicted safety concerns experienced in production agriculture; and identify next steps for maintaining outcome-driven discussions between agencies and agricultural leaders committed to safety and health of agricultural workers and their families. NIFA serves as a USDA liaison to this group and will provide status on farm safety programs at NIFA. February 2017, Washington, D.C.

Addressing Threats to U.S. Ag Production Meeting – The University of Maryland is cooperating with NIFA to host a workshop on the week of February 13th in College Park, MD to discuss federal funding for addressing threats to U.S. agriculture production. The goal of the conference is to bring together stakeholders to discuss potential improvements to the current university programmatic infrastructure and funding, which will facilitate enhanced cooperation, leveraging of investments, protection for producers and consumers, and export trade in global markets. February 2017, College Park, MD.

National 4-H Leadership Conference – This conference provides a valuable professional development experience for both State 4-H Program Leaders and State 4-H Fund Development Professionals (Foundation Executive Directors). NIFA will be represented at key sessions and
will provide an update from 4-H National Headquarters related to program and policy accomplishments and upcoming initiatives. February 27 – March 2, 2017, Atlanta, GA.

**Tri-State Diversity Conference** –The 13th Annual Tri-State Diversity Conference, hosted by the land-grant universities in Kentucky, Indiana, and Ohio, will be held February 16-17 in Hebron, KY. The goal of the conference is to network and link resources to help integrate diversity into programs, policies, and practices for creating community well-being. The 2017 theme is “Breaking Down the Walls: Building Inclusive Communities.” This conference is open to all to the LGU system and includes a peer-reviewed poster and presentation component.

**AFRI Food Safety RFA.** –The AFRI Food Safety Challenge Area focuses on the societal challenge of ensuring a safe and nutritious food supply while maintaining American agriculture competitiveness. Release: February 2017.

**Tribal Colleges Research Grants Program RFA.** –This program was designed to assist 1994 land-grant institutions (tribal colleges) in building institutional research capacity through applied projects that address student education needs and solve community, reservation or regional problems. This program will continue to promote scientific research at the Tribal Colleges. Release: February 2017.

**Renewable Resources Extension Act – National Focus Funds RFA.** –This program supports innovative extension programs in forest and rangeland resources that are conducted at a multi-state, regional, or national scale. Successful applications are those that involve new and non-traditional audiences, deliver programs using new and innovate approaches, and high-risk-high payoff programs on cutting edge issues facing private forest and rangeland owners. Release: February 2017.

**Children Youth and Families At-Risk (CYFAR) Sustainable Community Projects RFA.** – CYFAR is a competitive extension grant program. Sustainable Communities Projects serve as the NIFA mechanism for funding community-based projects and expanding statewide capacity for supporting and sustaining programming for at risk-youth and families. Release: Winter 2017.

**March 2017**

**Council for Agricultural Research, Extension, and Teaching (CARET) Meeting** – CARET is a national grassroots organization created in 1982 by Association of Public and Land-grant Universities’ Division of Agriculture. CARET is composed of representatives, often land-grant university stakeholders, from the 50 states, the U.S. territories, and the District of Columbia. Its mission is to advocate for greater national support and understanding of the Land-Grant
University System's food and agricultural research, extension, and teaching programs that enhance the quality of life for all people. CARET also works with national agricultural organizations to discuss agricultural issues. CARET will hold a joint meeting with the Administrative Heads Section to discuss the FY 2018 budget recommendations of the Board on Agriculture Assembly in Alexandria, VA, March 5-8, 2017.

**Board on Human Sciences Spring Conference (BoHS)** – BoHS is an association of administrators of higher education units responsible for research/discovery, extension/outreach, and teaching/learning programs in the Human Sciences at universities across the country. Their members are committed to a national agenda that unifies disciplines within and beyond the Human Sciences to enrich people’s lives. Their annual spring conference in the Washington, DC area draws administrators from across the U.S. Alexandria, VA, March 7-10, 2016.

**National 4-H Conference** – Since 1927, National 4-H Conference administered by 4-H National Headquarters, USDA NIFA, brings together approximately 325 4-H youth members in grades 10-12 (15-19 years old), Extension Educators and 4-H Adult Volunteers from across the nation, as well as U.S. Territories. This annual event is the premier professional, civic engagement and leadership development experience of 4-H and 1) engages 4-H youth in personal development experiences that will increase knowledge, resources, and skills; 2) discusses topics affecting youth and 4-H programming nationwide; and 3) empowers and mobilizes 4-H youth to create positive social change in their communities in a meaningful and genuine way. Briefings are conducted within 15 federal agencies and the House Ag Committee to ensure youth voice on critical issues. March 25-30, 2017 – briefings to be conducted on March 28.

**AFRI Sustainable Bioenergy RFA**. – This program supports regional sustainable biofuel systems and research that addresses the impacts of bioenergy feedstock production on water resources including water quality, quantity, and conservation/reuse practices. Release: March 2017.

**Women and Minorities in Science, Technology, Engineering and Mathematics Fields Program (WAMS) RFA**. – WAMS supports research and extension activities that increase the number of women and underrepresented minorities from rural areas who pursue and complete a postsecondary degree in science, technology, engineering, or mathematics (STEM) disciplines. This capacity building program contributes to USDA’s mission of providing a diverse professional workforce in the food and agricultural sciences and STEM fields and disciplines. Release: Spring 2017.

**Healthy Homes Partnership Interagency Agreement** – The goal of the Healthy Homes Partnership is to link resources of NIFA and the state land-grant universities with the U.S. Department of Housing and Urban Development’s Office of Lead Hazard Control and Healthy
Homes for a public outreach education program that reduces housing deficiencies and risks associated with childhood diseases and injuries. This agreement support grant funding, which is administered through the Cooperative Extension System by a Coordinating Institution selected from the Land-Grant University System; administered in eight states through participating land-grant universities; and delivered locally through regional/county extension educators in those states. Release: May 2017.

**Project Director’s Meeting:** AFRI Water for Agriculture Challenge Area, AFRI Foundational Program of Bioenergy, Natural Resources and Environment (BENRE) and the National Integrated Water Quality Program (NIWQP) – AFRI and NIWQP programs will bring scientific and conservation professionals together to share learned concepts, innovative methodologies, and project successes. The principal goal is to foster the science and communication among project directors, co-project directors, collaborators and graduate students to learn and engage in discussions that will improve understanding of water, soil and agroecosystem issues in the evolving world of agriculture. At the same time it is intended to help NIFA staff interact with awardees and identify success stories and impacts resulting from funded research and help with challenges that face other project directors as they complete their project. Awardees will benefit by the sharing of new information, resources and the possible development of future collaboration that will help in the progress and successful completion of the NIFA award.

**Expanded Food and Nutrition Education Program (EFNEP) Annual Conference** – This annual conference brings together EFNEP program coordinators from every state, territory and Washington DC, along with national leadership, to discuss program successes, challenges and opportunities. Obesity, poor health, and limited physical activity are major public health concerns and EFNEP consistently demonstrates strong results by improving the health and well-being of limited resource families and youth. Additionally, EFNEP leads to financial savings for participants. NIFA representatives are presenting at the meeting and planning the event with University of Florida contractors. Date: March 2017 TBD.

**April 2017**

**Public Issues Leadership Development Conference** – Sponsored by Joint Council of Extension Professionals. This is an annual professional development meeting conducted by and for Cooperative Extension professionals. Through speakers, workshops and meetings, participants learn how to engage in U.S. public policy and the legislative process, and are presented with the opportunity to connect with their Congressional representatives to discuss Extension programs and issues. NIFA staff will be presenters at key sessions and provide updates on current and upcoming funding opportunities of interest to Cooperative Extension professionals. April 2-5, 2017, Arlington, VA.

**AgrAbility National Training Workshop** – This is an annual professional development training workshop for all current and prospective future AgrAbility grantees, partner institutions, farmers with disabilities, and farmer veterans. NIFA will be represented at key sessions, provide federal update on current and upcoming initiatives and opportunities, and
give presentations/meet with AgrAbility project directors, new staff, non-profit organization partners, and farmers receiving AgrAbility services. NTW is planned by the National AgrAbility Project (NIFA grantee). April 2017, location TBD.

4-H Military Partnership Meeting –This is an annual meeting with 4-H Extension professionals from 50 land-grant universities and Military partners (Department of Defense, Army, Air Force, Navy), Coast Guard, and National Guard and Reserve representatives. Attendance will be approximately 100 participants. Goals of the meeting are twofold: 1) 4-H and Military will strengthen their partnerships in states/communities to provide quality programs for military connected youth and families; 2) Participants will gain knowledge and skills from 4-H and Military Partner programs and resources that will enhance local support for military connected youth and families. NIFA representatives are presenting at the meeting and planning the event with lead extension institution to be determined. Mid-Spring 2017 TBD.

National Extension Energy Initiative (NEEI) Meeting –NEEI provides Extension educators professional development opportunities through sharing experiences and information, learning from successes and challenges, and building new partnerships for energy education from all program areas: Agriculture and Natural Resources; Family and Consumer Sciences; 4-H Youth Development; and Community Development. The meeting will bring together this expertise from the Cooperative Extension System supporting: sustainable and renewable energy, home and farm energy efficiency, biomass energy programs, and other energy areas. This initiative supports the federal interagency efforts of the State Energy Extension Partnership. NIFA’s liaison will participate in the meeting.

Extension Risk Management Education National Conference –This is an annual event intended for extension risk management education professionals, county educators, policy makers, and others working in the areas of risk management. The conference encourages attendees to work across systems locally, regionally and nationally to address current and future community and risk management outreach needs. NIFA provides liaisons to the conference planning committee. NIFA staff attending the conference provide an update on NIFA’s grants programs and initiatives addressing community and economic development. April 27-28, 2017, Cincinnati, OH.

AFRI Agriculture and Natural Resources Science for Climate Variability and Change RFA. –This program focuses on building a foundation of knowledge in fundamental and applied food and agricultural sciences critical for adaptive management to climate variability and change. Release: April 2017.

Rural Health and Safety Education (RHSE) Competitive Grant Program RFA. –This competitive grant program addresses the needs of rural Americans by providing individuals and families in the rural U.S. with health and safety education programs. RHSE funds health education projects from the land-grant university system that provide individuals and families living in rural areas with information as to the value of good health at any age; information to increase individual or family’s motivation to take more responsibility for their own health;
information regarding rural environmental health issues that directly impact on human health; information about and access to health promotion and educational activities; and training for volunteers and health services providers concerning health promotion and health care services for individuals and families in cooperation with state, local and community partners. Projects can focus substance abuse prevention, as well as nutrition and physical activity, healthy and safe homes, aging in place, as well as other behavioral health and human health issues. Release: April 2017.

National Extension and Research Administrative Officers Conference (NERAOC) – Sponsored by NIFA and hosted by Texas A&M AgriLife and Prairie View University. This is an annual professional development meeting conducted by and for administrative officer professionals. Through speakers, workshops and meetings, participants learn top industry practices in budget, finance, grants management, human resource management, civil rights, diversity, evaluation, accountability, and reporting. NIFA staff will be presenters at key sessions and provide updates on current and upcoming opportunities of interest to participants which include USDA-NIFA, 1862 and 1890 Land-Grant Universities, 1994 Tribal Land-Grant Colleges and Universities, and other non-Land-Grant grantee institutions. April 23-27, 2017, San Antonio, TX.

**May 2017**

National Health Outreach Conference – This is an annual event intended for health professionals, health educators, health policy makers, and others working in the areas of individual, family, and community health and wellness. The conference encourages attendees to work across systems locally, regionally and nationally to address current and future health and wellness research, education, and outreach needs. NIFA provides liaisons to the conference planning committee. NIFA staff attending the conference will provide an update on NIFA’s grants programs and initiatives addressing health and wellness. May 2-4, 2017, Annapolis, MD.

Agricultural Safety Research and Extension (North Central Education/Extension Research Activity-197 (NCERA-197)) Annual Meeting – This is a multi-state research group supported by NIFA. Members of NCERA-197 meet annually at NIFA to discuss to-date individual and joint research progress and to share recent and upcoming national-level joint reports in the areas of agricultural safety research and outreach. NIFA liaison to the group will attend. May 2017, Washington, D.C.

Children, Youth, and Families At-Risk (CYFAR) Professional Development Event for CYFAR Grantees – An annual two-day learning event with experts of multi-disciplinary blend of sessions. The speakers and presentations focus on maximizing the success of the 40+ CYFAR programs, enhancing knowledge, and presenting innovative ideas to make a positive impact in the lives of children, youth, and families at-risk. Late spring 2017 TBD.
National Urban Extension Conference – The University of Minnesota Extension is hosting the biennial National Urban Extension Conference. The conference theme is “Engaging in Collective Purpose.” The conference will provide opportunities for Extension professionals from all program areas to share their research and innovative educational strategies that address the needs of urban, suburban, and peri-urban populations as well as urban-rural interdependencies. The program planning committee plans for participants to learn about cutting edge research and to see innovative outreach efforts that successfully transfer research-based information to various urban clientele. A team from NIFA will be meeting with and briefing urban Extension colleagues. Bloomington, Minnesota, May 7-11, 2017.

Continuity of Operations Plan (COOP) National Level Exercise – COOP, as defined in the National Continuity Policy Implementation Plan and the National Security Presidential Directive-51/Homeland Security Presidential Directive-20, is an effort within individual executive departments and agencies to ensure that Primary Mission Essential Functions (PMEF) continue to be performed during a wide range of emergencies, including localized acts of nature, accidents and technological or attack-related emergencies. NIFA participates with other federal agencies in a two-day simulation to practice actions necessary to address a wide range of emergencies and to plan for ensuring that PMEF can be continued throughout, or resumed rapidly after a disruption of normal activities.

June 2017

Joint Conference between National Association of Community Development Extension Professionals and Community Development Society – This is an annual event intended for community development professionals, county educators, community development policy makers, and others working in the areas of community and economic development. The conference encourages attendees to work across systems locally, regionally and nationally to address current and future community and economic development research, education, and outreach needs. NIFA provides liaisons to the conference planning committee. NIFA staff attending the conference provide an update on NIFA’s grants programs and initiatives addressing community and economic development. June 9-11, 2017, Big Sky, MT.

American Association of Family and Consumer Sciences (AAFCS) Annual Conference and Annual Meeting of the Alliance for Family and Consumer Sciences (representing 24 organizations, agencies, and industry in FCS) – For more than 100 years, AAFCS has offered an on-site Annual Conference and Expo that includes numerous content-rich sessions and networking opportunities for FCS students and professionals across multiple practice settings and content areas. As the Association moves forward in its second century, it is committed to providing an outstanding array of research-based sessions through on-site conferences. Conferences capitalize on the best practices of past conferences, while incorporating new ideas and directions that reflect the evolution of the Association and the FCS profession. Dallas, TX, June 25-28, 2017.
Appendix A: Acronyms

The following list is some of the most frequently used acronyms.

AA – Agricultural Act of 2014
AFRI - Agriculture and Food Research Initiative
AES – Agricultural Experiment Stations
APHIS - Animal and Plant Health Inspection Service
AREERA – Agricultural Research, Extension, and Education Reform Act of 1998
ARS - Agriculture Research Service
ASAP – Automated Standard Application for Payments
AR – Authorized Representative
EDEN – Extension Disaster Education Network
EFNEP - Expanded Food and Nutrition Education Program
FACT – Food, Agriculture, Conservation, and Trade Act of 1990
GAO - General Accounting Office
HBCU – 1890 Historically Black Colleges and Universities
HLB – Huanglongbing
HSI – Hispanic Serving Institutions
IPM – Integrated Pest Management
LGU – Land-Grant Colleges and Universities
MSI – Minority-Serving Institutions
NPL – National Program Leader
NAHLN – National Animal Health Laboratory Network
NPDN – National Plant Diagnostic Network
OIG – Office of Inspector General
PPV – Plum Pox Virus
REE – Research, Education and Economics
RFA – Request for Applicants
SARE – Sustainable Agriculture Research and Education
SCRI – Specialty Crop Research Initiative
SOD – Sudden Oak Death
STEM – Science, Technology, Engineering, and Mathematics
VMLRP – Veterinary Medicine Loan Repayment Program
VSGP – Veterinary Services Grant Program

Sub-Goal 2.2: Establish a world class workforce through innovative talent management, targeted at attracting, selecting, engaging, developing and retaining talented individuals with the right technical and professional skills needed to meet our mission.

Sub-Goal 2.3: Build a high-performing, results-oriented performance culture.

Sub-Goal 2.4: Cultivate effective leadership practices that permeate the organization, promote continuous learning and innovation, and develop the next generation of food and agricultural scientists.

Goal 3: Process
Institutionalize streamlined, effective technologies, policies, and processes

Goal 4: Communications
Advance America’s global preeminence in food and agricultural sciences
WHAT WE DO: OUR MISSION

The Office of the Chief Scientist (OCS) provides strategic coordination of the science that informs the Department’s and the Federal government's decisions, policies and regulations that impact all aspects of U.S. food and agriculture and related landscapes and communities. OCS advises USDA’s Chief Scientist (also the Under Secretary for Research, Education, and Economics) and the Secretary in: Agricultural Systems and Technology, Animal Health/Production/Products; Plant Health/Production/Products; Renewable Energy, Natural Resources, and Environment; Food Safety, Nutrition, and Health; Agricultural Economics and Rural Communities. As part of our core function, we coordinate Department-wide agricultural science, research, education, and economics needs, convene the USDA Science Council, ensure work of the Department is upheld to the highest degree of intellectual rigor and scientific integrity, and support and pursue international scientific engagements.

WHO WE ARE: OUR WORKFORCE

OCS employs: 7 permanent staff. Additionally:

- 6-10 Senior Advisors annually on rotation from USDA agencies and other organizations
- 4-6 Fellows that annually serve as experts on topical areas

OCS is a Headquarters office with no field offices.

WHO WE SERVE: OUR CONSTITUENTS

Our advisors assist the Chief Scientist in carrying out Farm Bill-mandated responsibilities of coordinating agricultural research, science, extension, and education across the Department. Through the Chief Scientist we also advise the Secretary, assure integrity of science, and manage the USDA Science Council.

KEY UPCOMING DECISIONS

- Scientific Integrity: New Department Regulation (Nov. 2016). Unless this is approved under current leadership, a decision to approve will be needed.
- REE Activity Report to Congress: Due at same time as budget (Feb. 2017).

BUDGET HIGHLIGHTS FY 2016

- As authorized in the 2008 Farm Bill, agencies in the Research, Education, and Economics mission area fund the cost of the OCS. (FY2016 Operating Budget: $3.1 M)
- In accordance with the 2008 Farm Bill, the majority of OCS scientific staff supporting strategic science coordination are not permanent staff but rather on rotational assignments of up to 4 years. Historically, these staff appointments have been limited to 1 year.

FY 2016 Budget

- Science Coordination: 77%
- Strategic Planning: 11%
- Scientific Integrity: 6%
- Administrative Costs (Department Central Costs (e.g. IT, HR, Facilities); Secretarial Support): 6%
United States Department of Agriculture
2016 Presidential Transition
Office of the Chief Scientist (OCS)

I. Organizational Overview

Agency’s Mission/Strategic Plan

Mission Statement:
The Office of the Chief Scientist (OCS) assists USDA’s Chief Scientist (the Under Secretary for Research, Education, and Economics) in providing strategic coordination of the science that informs the Department’s decisions, policies and regulations that affect all aspects of U.S. food and agriculture and related landscapes and communities. OCS also ensures that research supported by and scientific advice provided to the Department and its stakeholders is held to the highest standards of intellectual rigor and scientific integrity.

Goals and Objectives for OCS: Listed below are some of the Goals and Objectives for the Office. OCS strategic goals are cross-cutting in support of the science undergirding all of the Department’s strategic goals. The OCS performance framework guides coordination through two strategic goals and seven focus areas that align with the USDA mission and vision and all 2014-2018 USDA strategic goals. The strategic goals of the Office as outlined in the legislation that created the Office include:

OCS Strategic Goal 1: Ensure that research supported by and scientific advice provided to USDA and external stakeholders are held to the highest standards of intellectual rigor and scientific integrity

- Objective 1.1 Provide leadership for the Department on Intellectual Rigor and Scientific Integrity as delineated in USDA regulations and as delegated by the Chief Scientist

OCS Strategic Goal 2: Coordinate the agricultural and natural resources research, education, and education activities of the Department

- Objective 2.1 Identify, prioritize and address emerging agricultural and natural resources research, education, and economic research needs by incorporating public and private-sector input into the Department’s science agenda
- Objective 2.2 Understand, communicate and promote the benefits of agricultural science research and how USDA components work together to advance science and to address needs and opportunities of agriculture nationally and internationally

OCS Strategic Goal 3: Achieve Operational Excellence

- Objective 3.1 Build and maintain a high-performing workforce through effective recruitment, training, and management
- Objective 3.2 Establish and follow effective and innovative processes that promote efficiency

These strategic goals provide the framework under which the Office operates and are applied across all seven specific subject matter areas of expertise including renewable energy, natural resources, and environment; food safety, nutrition, and health; plant health and production and plant products; animal health and production and animal products; agricultural systems and technology; agricultural

Office of the Chief Scientist (OCS)

economics and rural communities; and international affairs, scientific integrity, and program coordination.

**Strategic Plan:** As the Office of the Chief Scientist is a smaller and newly established (2015) USDA Staff Office, rather than an agency, it has not, to date, prepared a Strategic Plan. As such no link to a web page for a strategic Plan is provided here. However, here is the link to the Office’s website:

**Key mission delivery performance measures**

The following performance measures and strategies were developed in 2016. Baselines are currently being established.

<table>
<thead>
<tr>
<th>Objective 1.1</th>
<th>Measure: Develop, update, and publish Department-wide policies and regulations to promote and ensure scientific integrity</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Measure: Develop, update, and deploy scientific integrity training, and conduct outreach activities to broaden familiarity and understanding of USDA scientific integrity policies</td>
</tr>
<tr>
<td></td>
<td>Measure: Receive, process, assign, and provide oversight of responses to allegations of scientific integrity-related misconduct</td>
</tr>
<tr>
<td></td>
<td>Measure: Convene Departmental Scientific Integrity Review Panels to resolve scientific integrity issues that cannot be resolved at the agency level</td>
</tr>
<tr>
<td></td>
<td>Measure: Convene periodic meetings of Agency Scientific Integrity Officers (ASIOs) to keep agencies abreast of scientific integrity-related updates and to provide a forum for discussion of scientific integrity issues and best practices</td>
</tr>
<tr>
<td></td>
<td>Measure: Provide Department-wide consultation and technical assistance to agency/staff office personnel who are responding to scientific integrity-related misconduct issues</td>
</tr>
</tbody>
</table>

---

2
| Objective 2.1 | Identify, prioritize and coordinate emerging agricultural and natural resources research, education, and economic research needs by incorporating public and private-sector input into the Department’s science agenda | **Measure:** Number of high level engagements with international partners, state and federal agencies, universities, and members of the scientific community sharing and coordinating on USDA position/science research to ensure the broadest possible evaluation of a subject for each research area (for Senior Advisors) |
| Objective 2.2 | Understand, communicate and promote the benefits of agricultural science and research and how USDA components work together to advance science and to address needs and opportunities of agriculture nationally and internationally | **Measure:** Successfully plan and implement the Science Council, including quarterly meetings, informative presentations and intradepartmental voting on critical science issues. **Measure:** Produce the REE Action Plan Progress Report. **Measure:** Number of Departmental communications products and other external publications produced. |
| Objective 3.1 | Build and maintain a high-performing workforce through effective recruitment, training, and management | **Measure:** Remain adequately staffed in order to be able to support leadership needs (Target: staffing level should remain at 67% or more (4 of 6 Senior Advisors)) **Measure:** Ensure Diversity of staff. |
| Objective 3.2 | Establish and follow effective and innovative processes that promote efficiency | **Measure:** Maintain and increase knowledge of HR policies and practices to expedite hiring and other administrative practices. |
Organization’s History

The position of USDA Chief Scientist was established by section 7511 of the Food, Conservation, and Energy Act of 2008, Pub. L. No. 110-246 (June 18, 2008; the 2008 Farm Bill), which amended section 251 of the 1994 Department of Agriculture Reorganization Act. The 2008 Farm Bill specifies that the Chief Scientist be USDA’s Under Secretary for Research, Education, and Economics (REE).

The 2008 Farm Bill also required the Chief Scientist/Under Secretary to establish within the office of the Under Secretary six (6) divisions, to “be known collectively as the Research, Education, and Extension Office.” The Farm Bill provided for the Office to be staffed with up to, but not to exceed, 30 full-time equivalent positions. The bill further specified that the Office be headed by and led by USDA’s Chief Scientist.

As outlined in the 2008 Farm Bill, the Research, Education, and Extension Office (REEO)—since renamed to be the Office of the Chief Scientist-- was established to coordinate science and statistics activities of the (USDA) Department of Agriculture.

By Secretary’s Memorandum 1066-001, dated March 16, 2010, the Secretary established in the executive operations of the Department the office now known as the OCS (Enclosure 3). The Memorandum specified the responsibilities of the Office of the Chief Scientist and authorized the Under Secretary for REE and the Chief Financial Officer of USDA to approve such transfers of funds, personnel, employment authority, space, records, property, and incidentals as may be necessary to implement the provisions of the Memorandum.

On February 28, 2011, the provisions of the Secretary’s Memorandum were incorporated into Delegations of Authority from the REE Under Secretary to a Director of the OCS that reports to the Chief Scientist/Under Secretary for REE (7 C.F.R. § 2.69).

Kim Green
Director of the Office of the Chief Scientist
202-720-3444, kim.green@osec.usda.gov

Ms. Kim Green was selected to be the Director of the Office of the Chief Scientist in 2014, after eight years of service to USDA as a senior leader within the Food Safety and Inspection Service (FSIS). She held several positions with FSIS, including Acting Deputy Assistant Administrator, Director of the Food Defense and Assessment Staff, and Director of the Data Analysis and Integration Staff. She served as Acting District Manager for the Denver District of the Office of Field Operations, responsible for public health and food safety for the Agency's largest operational region, stretching from Nebraska to Guam. She is recognized both domestically and internationally as a leader in U.S. government efforts to establish food defense concepts and strategies for protecting the food supply from acts of intentional contamination. She was instrumental in establishing and then leading the first dedicated team of data analysts, statisticians, and scientists at FSIS. It is the work of that team that provides the research foundation for setting Agency policies. Ms. Green was on detail with the Natural Resources Conservation Service in 2014. As Acting National Leader for World Soil Resources, she led capacity-building efforts, and provided technical and research assistance on soil identification, erosion, and health on an international scale. Before joining USDA, Ms. Green was Vice President for Research, Science, and Technical Affairs for the International Bottled Water Association. She spent more than 15 years as a science consultant on a wide range of issues related to health, environmental risk assessment, natural resource protection, and food safety. Ms. Green is in the Senior Executive Service of USDA. She holds a Bachelor of Science Degree in Chemistry and a Master of Science in Geochemistry, both from The Colorado School of Mines. She was appointed to the U.S. Army Science Board and served from 1991-1997. Ms. Green is the author or co-author of more than 30 peer-reviewed scientific publications.

Dr. Cathie Woteki, Chief Scientist
202-720-5923, catherine.woteki@osec.usda.gov

Dr. Catherine Woteki is the Department's Chief Scientist, as well as Under Secretary for United States Department of Agriculture's (USDA) Research, Education, and Economics (REE) mission area. Her responsibilities include oversight of the four agencies that comprise REE, the Agricultural Research Service (ARS), National Institute for Food and Agriculture (NIFA), Economic Research Service (ERS), and National Agricultural Statistics Service (NASS). The National Agriculture Library and National Arboretum also fall under this mission area.

Since returning to USDA, Dr. Woteki has followed the direction established by Congress, developing the Office of the Chief Scientist, the USDA Science Council, and other coordinating programs. She has been called upon to lead scientific delegations to China and the first Meeting of Agricultural Chief Scientists held under the auspices of the G-20 leader, Mexico. Dr. Woteki is an advocate for building the platforms necessary to enhance domestic and international research for building the platforms necessary to enhance domestic and international agricultural research that include open...
access to scholarly publications, open access to germplasm collections and genetic and genomic data; accelerated innovation and technology transfer in the agricultural arena; and improved agricultural statistics.

Before joining USDA, Dr. Woteki served as Global Director of Scientific Affairs for Mars, Incorporated, where she managed the company's scientific policy and research on matters of health, nutrition, and food safety. From 2002 to 2005, she was Dean of Agriculture and Professor of Human Nutrition at Iowa State University, where she was also the head of the Agriculture Experiment Station. Dr. Woteki served as the first Under Secretary for Food Safety at USDA from 1997 to 2001, where she oversaw U.S. Government food safety policy development and USDA's continuity of operations planning. Dr. Woteki also served as the Deputy Under Secretary for REE at USDA in 1996.

Prior to going to USDA, Dr. Woteki served in the White House Office of Science and Technology Policy as Deputy Associate Director for Science from 1994 to 1996. During that time she co-authored the Clinton Administration's policy statement, "Science in the National Interest." Dr. Woteki has also held positions in the National Center for Health Statistics of the U.S. Department of Health and Human Services (1983 to 1990), the Human Nutrition Information Service at USDA (1981 to 1983), and as Director of the Food and Nutrition Board of the Institute of Medicine at the National Academy of Sciences (1990 to 1993). During her tenure as Director of the Food and Nutrition Board she had direct responsibility for twenty-seven studies and co-authored a nutrition book entitled Eat for Life which became a Book of the Month Club selection. Dr. Woteki's research interests include nutrition, food safety policy, risk assessment, and health survey design and analysis. She is the author of over sixty refereed scientific articles and twelve books and technical reports.

In 1999, Dr. Woteki was elected to the Institute of Medicine of the National Academy of Sciences, where she has chaired the Food and Nutrition Board (2003 to 2005). She received her M.S. and Ph.D. in Human Nutrition from Virginia Polytechnic Institute and State University (1974). Dr. Woteki received her B.S. in Biology and Chemistry from Mary Washington College (1969).
Organizational Budget and Financial Management

The 2008 Farm Bill authorizes funding for OCS’ operation through the transfer of funds from agencies within REE. To date, OCS’ funding was not a separate line item in the USDA budget. For FY 2015, OCS expended $2,349,525; for FY 2016, OCS expects to expend $3,146,225. The increase in operating expenses occurred because in FY 2016 OCS was able to fill more of its legislated Senior Advisor positions that were left unfilled in FY2015. In addition, services for items such as IT, HR, and Maintenance support were covered and paid out of the REE mission area office, rather than OCS. In FY2016, those charges came to OCS.

NOTE: OCS was stood up as a USDA Staff Office in January of 2015. Previous years operating costs were included in REE office costs.

Enterprise Workforce Data
• The Office of the Chief Scientist employs a workforce of 18 employees of which all are full-time.
• The Office of the Chief Scientist employs no additional seasonal employees to provide support during busier months.
• The Office of the Chief Scientist employs no temporary employees.
• Of our total workforce, 0% are eligible to retire within the next year
• Our headquarters is located in Washington, D.C., which houses 100% of our workforce
• The Office of the Chief Scientist has no regional offices/no offices in each state, county, etc. to work directly with our constituents
• 39% of the employees of the Office of the Chief Scientist are permanent employees. The remaining staff are either on detail (rotating) appointments, AAAS fellow (contractor), fellows in the USDA Fellow Experience Program, or Intergovernmental Personnel Act (IPA) Detailees.

II. Policies and Regulations

Statutory Authorities

OCS was initially established in March 2010 in accordance with the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill; Public Law Number 110-246, June 18, 2008), to assist USDA’s Chief Scientist in providing strategic coordination of the science that informs USDA’s and the Federal government’s decisions, policies, and regulations that affect all aspects of U.S. food and agriculture and related landscapes and communities. In accordance with the same legislation, the Under Secretary for USDA’s Research, Education, and Economics serves as USDA’s Chief Scientist. None of OCS’ legislation has expired or will expire within the next year.

Important Policies and Regulations

Departmental Regulation (DR) 2401-001 – USDA Intramural Research Misconduct Policies and Guidelines; issued June 18, 2008¹

Departmental Regulation (DR) 1074-001 – Scientific Integrity; issued May 10, 2013². The DR is currently under revision. The new regulation will include the DR as well as a Department Manual (DM) which will better define USDA’s policies and procedures related to scientific integrity and research misconduct. As of September 22, 2016, a revised version of the DR was in the USDA Directives clearance system. The revised DR, together with an accompanying procedural DM that is also awaiting clearance, will: clarify and strengthen existing policy provisions to promote and ensure scientific integrity throughout the Department; implement more robust and well-defined procedures

¹ NOTE: As of September 1, 2016, a substantially revised version of DR 1074-001, which incorporates DR 2401-001 into one harmonized policy document, was awaiting formal clearance for issuance through the USDA Directives System

² NOTE: As of September 1, 2016, a substantially revised version of DR 1074-001, which incorporates DR 2401-001 into one harmonized policy document, was awaiting formal clearance for issuance through the USDA Directives System
for responding to scientific integrity concerns; and clarify the roles of key USDA personnel in overseeing responses to scientific integrity concerns.

Departmental Regulation (DR) 1043-055 - Permanent Establishment of the U.S. Department of Agriculture Science Council; Issued November 19, 2015

Title 2 CFR Part 422 – Research Institutions Conducting USDA-Funded Extramural Research; Research Misconduct; initially issued as Title 7 Part 3022 on August 13, 2010, and re-issued without change as Title 2 CFR Part 422 on December 19, 2014

Departmental Regulation (DR) – Guidance on the Use of Crowdsourcing and Citizen Science – Pending

Overview of the policy/regulation review process

OCS is not a regulatory agency or office, however it does contribute to the interagency regulatory review process, as needed.

GAO and OIG Audits

Listed below are significant reports from the last 4 years issued by external groups that may denote critical issues, challenges, or opportunities for OCS.

USDA’s Controls over Prioritizing and Funding Research. Beginning in 2014, OIG conducted fieldwork in support of an audit (Audit No. 50601-0002-22) to review internal controls designed to ensure agricultural research is prioritized and funded in accordance with approved priorities, Congressional mandates, and the Department’s strategic goals and objectives. OIG’s Official Report did not identify any significant deficiencies in how USDA’s Chief Scientist and her supporting office, OCS, are ensuring that research priorities across USDA are properly identified, addressed, and coordinated. OIG’s report also found that adequate internal controls exist within the principal USDA agencies to ensure agricultural research is prioritized and funded in line with Congressional mandates and the Department’s strategic goals and objectives. https://www.usda.gov/oig/webdocs/50601-0002-22.pdf

Scientific Integrity. On March 17, 2016, the USDA Office of the Inspector General (OIG) initiated an audit (Audit No. 50601-0006-31) to assess whether USDA scientists perceive they have the ability to perform and communicate research without inappropriate influence or political interference, and to assess whether the Department’s 2013 Scientific Integrity Policy (Departmental Regulation 1074-001) has sufficient controls to ensure that USDA scientific research results are published and communicated based on the actual research performed and without undue interference. As of September 1, 2016, this audit was still ongoing.
United States Department of Agriculture  
2016 Presidential Transition  
Office of the Chief Scientist

Antimicrobial Resistance (AMR). OCS is coordinating USDA efforts related to the use of antibiotics in animal production. Significant reports related to this effort include:

Research Duplication. GAO conducted the subject study to determine the extent to which USDA’s principal research agencies (ARS and NIFA) may be duplicating each other’s research efforts so as not to achieve the most efficient use of federal research dollars. In April, 2013, the GAO released the final report, “Agricultural Research: Two USDA Agencies Can Enhance Safeguards against Project Duplication and Strengthen Collaborative Planning” (GAO-13-255) with recommendations to help further reduce the risk of duplicative research within and between ARS and NIFA and to improve the agencies’ collaborative planning. GAO recommended, among other things, that ARS issue guidance that project information be provided to CRIS on a quarterly basis and that ARS and NIFA enhance collaborative planning. USDA generally agreed with GAO’s findings, and cited benefits for three of the four recommendations. http://www.gao.gov/products/GAO-13-255

III. Congressional Relations and Issues

Overview: OCS often serves in an expert capacity providing scientific, policy, and technical advice on various agricultural science and technology research and innovation issues that are of interest and importance to the U.S. Congress. Examples of several important issues recently covered by OCS are presented below.

Scientific Integrity: In 2015, Public Employees for Environmental Responsibility (PEER), an environmentally-focused national non-profit, filed a lawsuit against USDA for: (1) refusing to consider PEER’s previously filed petition to change the USDA Scientific Integrity Policy (SIP); (2) purportedly failing to follow appropriate procedures in promulgating the SIP; and (3) implementing a provision in the SIP that PEER contends is unconstitutional because the provision purportedly infringes on the First Amendment rights of USDA scientists by restricting their communications in their capacities as citizens. During 2015, PEER also publicized a scientific integrity case involving a USDA scientist, who filed a scientific integrity complaint that was subsequently deemed to lack merit. The scientific integrity case received national media attention and triggered Congressional interest. At the request of Congressional staff, OCS provided briefings on the case to Investigative Counsel for the U.S. Senate Agriculture, Nutrition and Forestry Committee on December 3, 2015, and to staff for the House Natural Resources Committee on June 1, 2016. OCS successfully addressed the questions and concerns raised at the briefings.

REE Annual Activities Report to Congress: Congress requires the Secretary of Agriculture to submit an annual report containing a description of the agricultural research, extension, and education activities carried out by the Federal Government. The Research, Education, and Economics Mission
area, USDA Activities Report provides a comprehensive overview of the Nation’s investment in food and agricultural research, education, and economics. The report addresses various activities across the enterprise, describing how organizations—including other Federal agencies, States, institutions of higher education, and the private sector—coordinate and cooperate to ensure activities are complementary and not duplicative with those pursued and supported by USDA. The report is due each year with the budget request.

IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

OCS provides strategic coordination of the science that informs the Department’s and the Federal government's decisions, policies and regulations that impact all aspects of U.S. food and agriculture and related landscapes and communities. OCS advises USDA's Chief Scientist and the Secretary of Agriculture. OCS collaborates on approaches and policies to ensure unified and informed decision-making. OCS is also responsible for the coordination of USDA’s international agricultural science and technology activities. As such, OCS frequently collaborates with all USDA agencies and offices, including:

- **Research, Education and Economics Mission Area Office (REE) and Agencies:**
  - Agricultural Research Service (ARS)
  - Economic Research Service (ERS)
  - National Institute of Food and Agriculture (NIFA)
  - National Agricultural Statistics Service (NASS)

- **Natural Resources and Environment Mission Area Office (NRE) and Agencies:**
  - Forest Service (FS)
  - Natural Resources Conservation Service (NRCS)

- **Rural Development Mission Area Office (RD)**

- **Marketing and Regulatory Program Mission Area Office (MRP) and Agencies:**
  - Animal and Plant Health Inspection Service (APHIS)
  - Agricultural Marketing Service (AMS)

- **Farm and Foreign Agricultural Services Mission Area Office (FFAS) and Agencies:**
  - Foreign Agricultural Service (FAS)

- **Office of Food Safety**
  - Food Safety and Inspection Service (FSIS)

- **Office of the Chief Economist (OCE)**

- **Office of the General Council (OGC)**

OCS also leads and/or participates in various USDA cross-cutting organizational bodies, including:

- **Bioeconomy Coordinating Council Committee (BCCC):** OCS participates in the OCE-chaired BCCC, which shares information among agencies and networks activities on bioeconomy within USDA. The Bioeconomy Council promotes coordination and collaboration across the Department to help ensure that the Department’s numerous energy-related programs support the Department’s strategic plan, priorities, and initiatives.
• **Science Council**: OCS coordinates and provides support to USDA’s Science Council which facilitates cross-Department coordination and collaboration among all USDA agencies to ensure that science informs policy and program decisions as well as to advance the scientific discovery, technological breakthroughs and innovation required to achieve the Secretary's science and technology priorities. The Science Council members represent all USDA Mission Areas, Agencies, and Staff Offices. Chartered committees under the Science Council include: Statistics; Education Coordination; Emerging Technologies; Biorisk Management Policy; and International Agricultural Science, Technology, and Innovation. The Crowdsourcing and Citizen Science Working Group (CCS WG) is a working group under the Education Coordination Committee.

• **Agency Scientific/Research Integrity Officers**: OCS provides direction, oversight, training, and technical assistance to all USDA agencies/staff offices on scientific integrity and research misconduct issues. In addition, OCS is responsible for soliciting input on scientific integrity activities from the agency representatives on the USDA Science Council, and convening quarterly meetings of the Agency Scientific/Research Integrity Officers.

• **Antimicrobial Resistance Coordination**: OCS serves as USDA coordinator and point of contact for Federal offices on AMR and as such provides numerous regularly scheduled, and other as needed, briefings in addition to advising on the issue. OCS coordinates USDA input into the implementation of the USG National Action Plan for Combating Antibiotic-Resistant Bacteria (CARB).

• **Biotechnology Coordinating Group (BCG)**: BCG meets bi-weekly to share information about events and issues pertaining to biotechnology.

OCS frequently collaborates with, serves as experts on, and advises on USDA policy to Federal Departments and Agencies, including:

- **Department of Health and Human Services (HHS)**
  - Centers for Disease Control and Prevention (CDC)
  - Food and Drug Administration (FDA)
  - National Institutes for Health (NIH)

- **Department of Defense (DOD)**

- **Department of Commerce (DOC)**
  - National Institute for Standards and Technology (NIST)
  - National Oceanic and Atmospheric Administration (NOAA)
  - Patent and Trademark Office (PTO)

- **Department of Transportation (DOT)**
- **Environmental Protection Agency (EPA)**
- **Department of the Interior (DOI)**
- **Department of Energy (DOE)**
- **National Science Foundation (NSF)**

---

Falling within the scope of Departmental Regulation (DR) 1074-001 (“Scientific Integrity”), DR 2401-001 (“USDA Intramural Research Misconduct Policies and Guidelines”), and Title 2 CFR Part 422 (“Research Institutions Conducting USDA-Funded Extramural Research; Research Misconduct”).
United States Department of Agriculture  
2016 Presidential Transition  
Office of the Chief Scientist

- **Executive Office of the President (EOP):** OCS frequently engages on numerous international and domestic agricultural science and technology issues with entities within the EOP, including:
  - National Security Council (NSC)
  - Office of the United States Trade Representative (USTR)
  - Office of Science and Technology Policy (OSTP)
    - President's Council of Advisors on Science and Technology (PCAST)
    - National Science and Technology Council (NSTC)

- **U.S. CODEX Office**
- **General Services Administration (GSA)** – primarily data.gov
- **National Aeronautics and Space Administration (NASA)**
- **Department of State (DOS)**
  - Office of the Science and Technology Advisor (STAS), Economic and Business Affairs (EB), Bureau of Oceans and International Environmental and Scientific Affairs (OES), Bureau of International Organization Affairs (IO), Office of Global Food Security (GFS) and various country desks as necessary
- **U.S. Agency for International Development (USAID)**
  - Bureau for Food Security (BFS), Bureau for Policy, Planning and Learning (PPL), Global Development Lab (GDL), and other various bureaus as necessary
- **Millennium Challenge Corporation (MCC)**

Stakeholder group overview

- **The National Agricultural Research, Extension, Education, and Economics Advisory Board (NAREEEAB):** NAREEEAB provides advice to the Secretary of Agriculture and land-grant colleges and universities on top priorities and policies for food and agricultural research, education, extension and economics. The Board is made up of 25 members, each of which represents a specific category of U.S. agricultural stakeholders, as mandated by Congress. OCS is the conduit to the Relevance & Adequacy (R&A) Committee which evaluates the relevance and adequacy of REE research as specified in the REE Action Plan. OCS serves as experts, and advises on USDA policy to the NAREEEAB, as requested.
- **Biomass Research and Development Board (BRDB):** BRDB is an interagency collaborative composed of senior decision-makers from federal agencies and the White House, co-chaired by USDA and DOE. USDA and DOE annually implement the Biomass Research and Development Initiative (BRDi).
  - Biomass Research and Development Initiative Technical Advisory Committee (BRDi TAC): TAC is an independent body that provides input to agencies regarding the technical focus and direction of the Biomass Research and Development Initiative. The TAC is made up of approximately 30 volunteers from industry, academia, nonprofits, and local government. TAC advises DOE, USDA, others concerning the technical focus and direction of requests for proposals issued under the Initiative, procedures for reviewing and evaluating the proposals, and facilitates consultations and partnerships among federal and state agencies, agricultural producers, industry, consumers, the research community, and other interested groups to carry out program activities.
relating to the Initiative. OCS, as co-chair of the Biomass Research and Development Board, works closely with the BRDi TAC to set annual priorities.

- **Presidential Advisory Council on Combating Antibiotic Resistant Bacteria (PACCARB):** Executive Order 13676 required that the HHS Secretary, in consultation with the Secretaries of Agriculture and Defense, establish the PACCARB, which was stood up in September 2015. The PACCARB [charter](#) describes its role to provide advice, information, and recommendations regarding programs and policies intended to support and evaluate the implementation of the CARB Executive Order 13676, including the CARB National Strategy and the CARB National Action Plan. OCS works with HHS, DoD and the PACCARB co-chairs supporting interagency meetings, coordinating USDA participation and inputs to PACCARB, and serving as Alternate Ex-Officio.

- **U.S. Group on Earth Observations Global Agricultural Monitoring Initiative (US GEOGLAM):** GEOGLAM provides coordinated crop monitoring information from all G20 countries using satellites. OCS coordinates the US component.

- **Keep Antibiotics Working (KAW), Pew, Infectious Disease Society of America, Consumers Union, Consumer Federation of America, Center for Food Safety, Food and Water Watch, George Washington University Antibiotic Resistance Action Center, Center for Science in the Public Interest, U.S. Public Interest Research Groups:** These groups have a strong interest in contributing to USDA priorities for research, surveillance, and education and outreach activities regarding AMR. OCS meets with these groups, or arranges meetings with appropriate USDA experts, several times per year to inform them on USDA activities and receive their input on their priorities.

- **National Pork Producers Council, National Pork Board, National Cattlemen’s Beef Association, National Turkey Federation, National Chicken Council, National American Meat Institute, Animal Health Institute:** These groups have an interest in contributing to USDA priorities for research, surveillance, and education and outreach activities regarding animal health issues including AMR. OCS meets with these groups along with other USDA technical experts several times a year to understand their positions and help inform science-based strategies.

- **Foundation for Food and Agricultural Research (FFAR):** The Foundation for Food and Agriculture Research brings together leading experts to identify and investigate the researchable questions whose answers have the potential to enhance the economic and environmental resilience of our food supply. OCS and REE leaders and scientists work with FFAR to identify areas of research that would be of benefit to solving the world’s food and natural resource challenges.

- **Association of Public and Land-grant Universities (APLU):** OCS collaborates with APLU and many universities directly on various agricultural science and technology issues including open data and AMR. Academic organizations are interested in coordinating with USDA.

- **Global Open Data for Agriculture and Nutrition (GODAN):** GODAN is a partnership of over 370 organizations from national governments and nongovernmental, international, and private sector organizations seeking to make data on agriculture and nutrition open: available, useable, and accessible for unrestricted use worldwide. The USG was a founding partner of the GODAN initiative. OCS coordinates USG participation in the GODAN initiative.
OCS coordinates with numerous stakeholder groups on international agricultural science and technology activities. The primary stakeholder categories include: foreign governments and organizations thereof (bilateral and multilateral) and consortia of governments, non-governments and non-profits.

- The primary multilateral engagement entities are: the Group of 7 (G7); the Group of Twenty (G20) (note: OCS is lead for the USG on the annual meeting of the G20 Meeting of Agricultural Chief Scientists (G20 MACS)); the United Nations and relevant offices thereof, including: the Food and Agriculture Organization (FAO), the World Food Programme (WFP), the Global Pulse; the World Bank; and the European Union (EU, via European Commission).
- Bilateral engagement occurs through two primary mechanisms: directly between the USDA and foreign government ministries and via Joint Commission Meetings (JCMs) facilitated by State Department and/or the Office of Science and Technology Policy. Primary USDA bilateral S&T engagement countries: Canada, Mexico, China, India, and Brazil. State Department manages over 50 binding bilateral and multilateral Science and Technology Agreements and many have Joint Commission Meetings that serve as the coordination mechanism of the agreements. JCMs rotate on annual and/or biannual basis and therefore the bilateral meetings that occur from year to year vary. USDA is involved in numerous JCMs and OCS coordinates USDA participation in the JCMs.

Recent engagements with stakeholder groups

- **NAREEEAB:** OCS meets with NAREEEAB at least twice a year formally. OCS and other REE Mission Area agency representatives met with the board in October 2016.
- **GODAN Summit 2016:** The GODAN Summit 2016 was held September 15-16, 2016 in New York City. GODAN Summit 2016 has been hailed by many as a great success with over 800 registered attendees representing over 45 countries, 40 exhibitors, over 100 speakers, 12 concurrent sessions, a Hackathon, the GODAN High-Level Forum at the United Nations, delivery of the GODAN Petition and 140 global publications reaching over 2.7 billion online readers. GODAN Summit 2016 was the largest event ever planned for open data in agriculture and nutrition. The goals of the Summit were to illustrate the opening, the use, and the importance of agriculture and nutrition data. The USG was one of five visionaries responsible for planning the event. OCS led the USG participation in planning the Summit and chaired the GODAN Summit Executive Planning Committee comprised of the visionaries and other GODAN partner organizations.
- **AMR-related Engagements:**
  - June 1: OCS hosted a meeting to discuss AMR issues with several advocacy groups at the request of Keep Antibiotics Working (KAW). USDA representatives discussed antibiotic use data collection and alternatives to antibiotics research with attendees. Attendees generally were supportive of USDA’s planned work, and USDA requested input for a Federal Register Notice request for information from the Combating Antibiotic Resistant Bacteria Presidential Advisory Council and to contribute their thoughts on priorities for AMR research for an upcoming USDA stakeholder webinar.
  - June 21-22; September 20-OCS helped plan and participated in Presidential Advisory Council on Combating Antibiotic Resistant Bacteria public meetings regarding
incentivizing antibiotics and alternatives to antibiotics, environmental aspects to AMR, and antibiotic stewardship.

- July 22 and September 9: OCS participated in meetings with the National Pork Producers Council, National Cattlemen’s Beef Association, National Turkey Federation, and National Chicken Council to consider development of metrics for antibiotic stewardship. Two working groups were formed (quantitative metrics and qualitative metrics) to consider pros and cons of different approaches and to consider development of metrics for antibiotic stewardship.

- September 21: OCS participated in the Elanco Animal Health Antibiotic Stewardship Summit. The Summit is follow-up to the White House Stewardship Forum held in 2015 to engage the industry to come together in addressing challenges in implementing new antibiotic use policies.

- September 23: OCS to hold a call for interested internal USG and external (industry and advocacy) stakeholders to inform the USG position for the upcoming Codex Physical Working Group on AMR November 2016.

- **Bioenergy-related Engagements:**
  - August 23-24: OCS coordinated and attended the First annual National Laboratory/Research Center Collaboration meeting. The meeting was attended the National Laboratories funded by DOE and the Research Centers and Stations funded by USDA to baseline core competencies and learn more about the successes from each lab. The meeting initiated discussions on better collaboration between these research entities in overcoming barriers to the Bioeconomy.

- September 16, 29 and October 3, 18: OCS coordinated USDA and DOE participation in the Agricultural Technology Innovation Partnership (ATIP) Regional Bioeconomy Forums, including the South East, Texas, Pacific North West, and East forums. Discussions also included regional, state and local stakeholders and focused on developing bioeconomies within those regions.

- **Water-related Engagements:**
  - June 28-30, 2016: OCS served on the planning committee and represented USDA at the International Groundwater Conference entitled “Toward Sustainable Groundwater in Agriculture – 2nd International Conference Linking Science and Policy”. The conference was organized by the University of California Davis and the Water Education Foundation and brought together scientists and policymakers from across the United States and many other countries.

- July 12-14, 2016: USDA Led Discussions on new opportunities for water data integration and accessibility. With 70% of U.S. water consumption relating to agriculture, USDA participation in discussions addressing water-related issues is vital. OCS, together with OCE, served on the planning committee for the “National Conversation on Integrated Water Information for the 21st Century” sponsored by National Oceanic and Atmospheric Administration (NOAA), Department of Interior (DOI), and U.S. Water Partnership. The event brought more than 250 leaders and experts from across the public and private sectors to discuss challenges and opportunities to transform how various water data can be integrated and accessed. Dr. Ann Bartuska, Deputy Under Secretary, REE, participated in the Roundtable Panel on Actionable Analytics to Address Water-Energy-Food Nexus. USDA will participate
in follow up efforts to the meeting to advance and integrate USDA efforts related to water.
  o August 9, 2016: OCS engaged with the Soil and Water Conservation Society providing a featured speaker at the National Capital Chapter of the Soil and Water Conservation Society meeting on Drought, Climate Change, and Food Security. The presentation addressed variations in water supply geographically and over time, the importance of the water supply to the agricultural sector, and actual U.S. conditions through July 2016.

V. Top Issues

Hot Topics

Antimicrobial Resistance: Antimicrobial resistance (AMR) has been an area of focus during the past two decades as USDA\(^4\) plays a dual role in protecting animal agriculture and public health. The USG has been working to address AMR domestically and internationally in support of implementation of the World Health Organization (WHO) Global Action Plan to promote judicious use and adoption of equivalent standards throughout the world. USDA has been limited in its ability to implement a comprehensive AMR strategy due to limited funding. Congress did not appropriate FY16 funding USDA requested to measure changes in antibiotic use, understand impacts for public health, and identify measures to foster stewardship activities identified in the CARB NAP. For FY17, USDA requested an increase of $35M to seek answers to key questions regarding the relationships among microbes, livestock, the environment and human health and finding effective alternatives to antibiotics including vaccines and alternate therapies and an increase of $10M to monitor antimicrobial use and resistance among livestock. USDA intends to provide science-based, quantitative information about antibiotic drug use and resistance in food animals and their relationship to livestock management practices through a voluntary, comprehensive, systems approach for surveillance, research, education, and outreach. USDA will further refine plans for on-farm antibiotic use data collection by working with federal partners and stakeholders. Full funding of USDA’s CARB initiatives would allow the Department to comprehensive address the threat antimicrobial resistant bacteria pose to animal and human health.

Global Open Data for Agriculture and Nutrition Initiative (GODAN): The GODAN initiative is a partnership of over 370 partners from national governments and nongovernmental, international, and private sector organizations seeking to make data on agriculture and nutrition open: available, useable, and accessible for unrestricted use worldwide. GODAN advocates for adoption of open data policies and once adopted, focus by the adopting organizations on opening agriculture and nutrition data first. By building high-level public and private support for open data, GODAN brings together all stakeholders to solve longstanding global food security and nutrition problems utilizing open data. The USG was a founding partner of the GODAN initiative, launched at the Open Government Partnership meeting in 2013. GODAN related commitments have been included in the USG Open Government National Action Plans 1.0-3.0 and OCS has served as the coordinator and responsible entity for the commitments. It is anticipated that both the chairs of the 2017 G7 and the G20, Italy

and Germany respectively, will take up the open data for agriculture and nutrition topic as a priority for their terms.

**Zika:** Since May 2015, when locally acquired Zika virus detection was reported in Brazil, Zika activity has spread steadily to additional countries throughout the region. Vectors for Zika include mosquitoes that are endemic in the southern United States. The U.S. Centers for Disease Control and Prevention (CDC) expected and confirmed localized Zika transmission in the continental United States in 2016. USDA has been actively involved in discussions surrounding vector control due to research and surveillance activities concerning integrated vector management surveillance and control technology. Through aircraft and maritime disinsection (spraying of insecticide), USDA supports the CDC statement that an infected person is the most common source for imported mosquito-borne viruses with a human-mosquito-human transmission cycle, not by mosquitoes stowed away on aircrafts or ships. USDA also supports efforts pertaining to rural community outreach plans, the USG response plan, and requests from CDC for additional assistance as needed.

**Group of 20 (G20) Meeting of Agricultural Chief Scientists (MACS):** In 2012, Mexico as the then G20 Chair, launched the annual G20 MACS. The G20 MACS was a commitment endorsed by G20 Leaders: “[We support] meetings of G20 Agricultural Chief Scientists (MACS) or high-level agricultural research officials from G20 member countries, other interested countries, and International Research Organizations such as CGIAR, with the goal of identifying global research priorities and targets, facilitating collaboration between public and private sector organizations in the key areas, most likely to drive sustainable productivity gains, and tracking progress on established goals over time.” G20 MACS has met annually, hosted by the G20 Chair, since its launch and is attended by G20 Agricultural Chief Scientists. The USDA Chief Scientist has traditionally led the USG delegation to the G20 MACS and the USG delegation is typically comprised of USDA and USAID delegates. Over the last few years, the G20 MACS has adopted the concept of establishing MACS Global Research Collaboration Platforms (GRCPs) to promote global collective action involving national agricultural research for global development strategies and capacities. In 2016, China as G20 Chair, launched two working groups under MACS, one focused on defining the parameters and qualifications to enable future establishment of MACS GRCPs and a second to evaluate the merit of a proposal from the Chinese to establish the first GRCP on Agricultural Technology Sharing (ATS). OCS leads USG participation in the G20 MACS and subsequent working groups. In 2017, Germany will chair the G20. Preliminary schedule from the Germans has identified January 22, 2017, as the tentative date for the G20 Agricultural Ministers Meeting. Traditionally, the G20 MACS is held before the Ministers meeting to enable priorities identified by the MACS to be adopted, as appropriate, by the Ministers.

**Bioeconomy Initiative:** The Renewable Fuel Standard (RFS) is a national policy passed into law in 2005 that requires a certain volume of renewable fuel to replace or reduce the quantity of petroleum-based transportation fuel, heating oil, or jet fuel. To help meet the mandates, OCS has assisted with the design of the Bioeconomy Initiative with a goal of utilizing a billion tons of sustainably produced biomass to produce biofuels, bioproducts and biopower, helping to reduce greenhouse gases while improving water and soil quality, and creating jobs while reducing the need for imported petroleum.
In late 2013, the seven agencies and the Office of the President that constitute the Biomass Research and Development Board (BDB), began development of a vision to promote the expansion of the bioeconomy. With the projection that this nation, by 2030, will sustainably produce a billion tons of biomass annually, the “Vision” was published as the "Federal Activities Report on the Bioeconomy," released by USDA in 2016. The goal of the Billion Ton Bioeconomy Vision is to develop and implement innovative approaches to remove barriers to expanding the sustainable use of America’s abundant biomass resources. Expanding the bioeconomy in a sustainable manner will increase energy diversity and long-term security. In 2015, President Obama along with leaders from 20 other countries announced “Mission Innovation” for clean energy which is an initiative to dramatically accelerate public and private global clean energy innovation to address global climate change, provide affordable clean energy to consumers, including in the developing world, and create additional commercial opportunities in clean energy. This announcement indicates a sustained commitment to unlock clean energy R&D funding and call on the private sector to do its part. USDA along with other agencies engaged in clean energy research and development are working to find innovative ways to accelerate results. It is anticipated that the Interagency Billion Ton Bioeconomy Implementation Strategy will be released on or before March 31, 2017. The BRDi board meets quarterly and is attended by Senate-confirmed members from Federal Agencies and is co-chaired by the Secretaries of USDA and DOE. In recent history, the Secretary has delegated this responsibility to the REE Under Secretary/Chief Scientist.

Pollinators/Honey Bee Populations: In 2014, President Obama issued a Presidential Memorandum on Pollinator Health. The memorandum noted that “Over the past few decades, there has been a significant loss of pollinators, including honey bees, native bees, birds, bats, and butterflies, from the environment. The problem is serious and requires immediate attention to ensure the sustainability of our food production systems, avoid additional economic impact on the agricultural sector, and protect the health of the environment.” The Memorandum established a Pollinator Health Task Force, directed the development of a National Pollinator Health Strategy and Pollinator Research Action Plan. The National Strategy to Promote the Health of Honey Bees and Other Pollinators (strategy) and Pollinator Research Action Plan (PRAP) were prepared and released in May 2015. The Strategy identified 3 goals: reduce honey bee overwintering mortality to no more than 15 percent within 10 years, increase the eastern population of the monarch butterfly to 225 million butterflies, and restore or enhance 7 million acres of land for pollinators over the next 5 years. USDA will be releasing the Honey Report in March 2017, which will provide the first estimate of the number of 2016 colonies producing honey. This report is generated from data collected by the NASS Honey Bee Inquiry Survey. In May 2017 Bee Informed Partnership will release the Partnership’s National Survey of Managed Honey Bee 2015-2016 Annual Colony Losses Report. In May-June 2017 NASS will release Honey Bee Colonies Report. This report is generated from data collected by the NASS Bee and Honey Inquiry. The Chief Scientist will be expected to respond to the honey bee mortality estimate following releases of these reports.

Foundation for Food and Agriculture Research (FFAR): Authorized by Congress as part of the 2014 Farm Bill, the Foundation for Food and Agriculture Research (FFAR) operates as a non-profit corporation leveraging public and private resources to increase the scientific and technological research, innovation, and partnerships critical to boosting America’s agricultural economy. Congress provided $200 million for FFAR which must be matched by non-federal funds as FFAR identifies and approves projects. The Farm Bill indicated that the funds
Congress appropriated remain available until expended. Despite early delays in identifying agricultural research activities to support, FFAR intends to accelerate allocation of funds to ensure all $200 million are obligated by 2018. Such expenditures present significant challenges including management of funds and oversight of spending. FFAR leadership is pursuing support for an infusion of additional funding in the next Farm Bill expected in 2019.

Legislatively mandated, non-voting, ex officio, USDA members of the Board of Directors include: Secretary, Under Secretary of Agriculture for Research, Education, and Economics (REE), Administrator of the Agricultural Research Service (ARS), and the Director of the National Institute of Food and Agriculture (NIFA). The 2014 Farm Bill requires FFAR to consult with the Secretary and other ex officio members of the Board when establishing priorities and evaluating proposed projects to assure that they are complementary and supplementary and not duplicative, advance the research mission of the USDA, foster collaboration, and consider USDA priorities as identified in the Roadmap for Science and mission area and agency strategic plans. The REE Under Secretary, with the support of the Office of the Chief Scientist, is delegated by the Secretary to lead the USDA review of proposed FFAR activities to ensure that the Foundation’s work complements USDA activities.

**Gene Editing:** Gene editing, or genome editing, is a new breeding method that uses biological processes to permit precise changes of DNA of plant or animal species. There has been growing interest in gene editing across academia, industry, the federal government, as well as within Congress. In agriculture, gene editing has the potential to be used with crops and livestock for research and for breeding to improve food availability, through pest resistance or tolerances to other environmental stresses, and food nutritional value. USDA intramural and extramural research projects utilizing gene editing methods are based on objectives for productivity, health, and value to farmers and consumers, of food animals and field crops.

Emerging biotechnology approaches, such as gene editing using CRISPR-CAS9, have the potential to impact nearly every aspect of biological research within the Department, including the development of new gene-edited crops and livestock with improved performance for food, fiber, and fuel production. Alternatively, these approaches could be used in the development of insects, pathogens, and microbes with reduced fitness as a means to control the spread of disease in animals, plants, and humans. The Chief Scientist plays a leadership role in building scientific consensus, generating awareness, and establishing positions along with the Secretary on these issue.

Appendix A: Acronyms
Appendix B: State Fact Sheets
WHAT WE DO: OUR MISSION

USDA Rural Development provides both direct financial assistance and public-private financial partnership opportunities with more than 40 programs focused on rural economic growth, to assist rural communities in creating the prosperity they need to become self-sustaining, re-populating, and economically thriving. USDA Rural Development provides grants, loan guarantees, and affordable direct credit, when private loans are unavailable or impractical, creating opportunities in housing, business, and infrastructure and serving as a catalyst to improve conditions in rural America by offering technical assistance and increasing the flow of capital through leveraged partnerships.

WHO WE ARE: OUR WORKFORCE

Rural Development employs over 4,700 people across the country with offices located in every state, the Customer Service Center (CSC), the Chief Information Office, and the National Finance Accounting and Operations Center (NFAOC) in St. Louis, MO, and Headquarters in Washington, DC.

WHO WE SERVE: OUR CONSTITUENTS

Rural Development provides direct service to individuals, businesses, and other public and private entities, that reside in rural areas through a network of more than 400 offices nationwide allowing RD to connect to and provide services to constituents at a local level, serving communities where they live.

KEY UPCOMING DECISIONS

- Implementation of Comprehensive Loan Program technology system enhancements
- Rural Housing Service
- Upcoming funds management decisions for oversubscribed programs including Section 502 Direct Loans, MPR Section 515, and Community Facilities Direct Loans.
- Rural Business Cooperative Service
- Rural Energy for America program rule adjustments to include New Market Tax Credits and update definition of small business.
- Business and Industry loan guarantee program fee change in Fiscal Year 2018.
- Rural Utilities Service
- Strategic plan for FCC Broadband rule compliance.
- Resolution of issues with Puerto Rico Aqueduct and Sewer Authority (PRASA) water loan portfolio

BUDGET HIGHLIGHTS FY 2016

FY 2016 RD budget authority of $3.25 billion (2.95 billion in discretionary and $118 million in mandatory funds) supporting a program level of $39.5 billion and $489 million respectively, for a total of $40 billion in available resources for both accounts.

As of FY 2016-Q3 the RD portfolio totals 1.3 million loans valued at over $216 billion.

Discretionary budget growth in the last 2-4 years has been generally flat at the agency level with some variation at the program level:

FY 2013 $2.4 billion/$38 billion
FY 2014 $2.6 billion/$38 billion
FY 2015 $2.6 billion/$38 billion
WHAT WE DO: OUR MISSION

USDA’s Rural Business-Cooperative Service (RBS) administers programs to support business development and job training opportunities for rural residents, supporting business growth and development, facilitating sustainable renewable energy development, and developing regional food systems. RBS also leads cooperative development and capacity building in high-poverty rural communities through regional planning and place-based initiatives. Our programs help provide the capital, technical support, educational opportunities and entrepreneurial skills that can help rural residents start and grow businesses or access jobs in agricultural markets and in the bio-based economy.

WHO WE ARE: OUR WORKFORCE

Rural Business-Cooperative Service employs 99 staff at Headquarters in Washington D.C.

WHO WE SERVE: OUR CONSTITUENTS

Rural Business-Cooperative Service provides direct service to individuals, municipalities, rural businesses, agricultural producers and other public and private entities that reside in rural areas delivering most programs through RD’s large nationwide field network and guaranteed products through partner financial institutions nationwide.

KEY UPCOMING DECISIONS

- Rural Energy for America program rule adjustments to include New Market Tax Credits and update definition of small business.
- Business and Industry loan guarantee program fee change in Fiscal Year 2018.

BUDGET HIGHLIGHTS FY 2016

In FY 2016 RBS budget authority was $90.45 million in discretionary program funding, $133.3 million in mandatory program funding and $4.46 million for Salaries and Expenses, supporting a program level of $1.35 billion.

As of FY 2015-Q4 the RBS loan portfolio totaled $6.73 billion of which $635 million is held directly and $6 billion represents outstanding loan guarantees.

RBS budget growth in the last 2-4 years has had a moderate downward trend with a spike in 2014 due primarily to an increase in mandatory program funding authorized in the 2014 Farm Bill:

FY 2013 $274 million/$1.09 billion
FY 2014 $385 million/$1.37 billion
FY 2015 $234 million/$1.20 billion
WHAT WE DO: OUR MISSION

USDA’s Rural Housing Service (RHS) offers a variety of programs to build or improve housing and essential community facilities in rural areas. RHS provides loans, grants and loan guarantees for single- and multifamily housing, housing for farm laborers, and community facilities such as: child care centers, fire and police stations, hospitals, libraries, nursing homes, schools, first responder vehicles and equipment, and more. RHS also provides technical assistance loans and grants in partnership with non-profit organizations, Indian tribes, state and federal government agencies, and local communities.

WHO WE ARE: OUR WORKFORCE

Rural Housing Service employs 108 staff at Headquarters in Washington D.C. and 478 staff at the Customer Service Center (CSC) in St. Louis MO. Many other headquarters staff that serve all of RD’s headquarters and field staff are funded through the RHS Salaries and Expenses (S&E), which contributes to RHS’ artificially high S&E to program fund ratio compared to other agencies in RD.

WHO WE SERVE: OUR CONSTITUENTS

Rural Housing Service provides direct service to individuals, municipalities, and other public and private entities residing in rural areas. The Agency delivers most programs through RD’s large nationwide field network and its guaranteed products through partner financial institutions nationwide. Some larger projects are approved in the National Office, and direct mortgage loan servicing is handled at the CSC one year after origination.

KEY UPCOMING DECISIONS

- Upcoming funds management decisions for oversubscribed programs including Section 502 Direct Loans, MPR Section 515, and Community Facilities Direct Loans.
- Single Family Direct loan origination system (UniFi) replacement: The replacement system is scheduled to deploy October 2017. The key decision to be made is on the best approach to replace UniFi.

BUDGET HIGHLIGHTS FY 2016

In FY 2016 RHS budget authority was $1.62 billion in discretionary program funding and $417.8 million for Salaries and Expenses, supporting a program level of $27.5 billion.

As of FY 2015 Q4 the RHS loan portfolio totaled $145.8 billion of which $331 billion is held directly and $114 billion represents outstanding loan guarantees.

RHS budget growth in the last 2-4 years has had a slight upward trend with the growth in program funds outpacing S&E funds by more than double and a generally flat program level:

FY 2013 $1.41 billion/$27.3 billion
FY 2014 $1.69 billion/$27.3 billion
FY 2015 $1.73 billion/$27.4 billion

The S&E budget for RHS includes support for the other RD agencies.
WHAT WE DO: OUR MISSION

USDA’s Rural Utilities Service (RUS) administers programs designed to provide new or improved infrastructure to rural communities by increasing access to broadband and 21st century telecommunications services; funding sustainable renewable energy development and conservation; financing reliable and affordable electric systems; working to integrate electric smart grid technologies; and developing reliable and affordable rural water and wastewater systems.

WHO WE ARE: OUR WORKFORCE

Rural Utilities Service employs a combined 271 staff at Headquarters in Washington D.C., and field offices throughout the US.

WHO WE SERVE: OUR CONSTITUENTS

RUS’ three program areas offer a range of products tailored to meet the diverse financing needs of rural America. As a result, our eligible borrowers and grantees vary depending on the program. They include rural electric cooperatives, rural telecommunications cooperatives, and rural water districts; utility producers, suppliers and distributors; not-for-profit utilities and for-profit investor-owned utilities; state and local governments and tribal communities; and more.

KEY UPCOMING DECISIONS

- Strategic plan for FCC Broadband rule compliance.
- Full implementation of Rural Energy Savings Program (RESP)
- Resolution of issues with Puerto Rico Aqueduct and Sewer Authority (PRASA) water loan portfolio

BUDGET HIGHLIGHTS FY 2016

In FY 2016 RUS budget authority was $567 million in discretionary program funding and $34 million for Salaries and Expenses, supporting a program level of $8.21 billion.

As of FY 2015-Q4 the RUS loan portfolio totaled $60.36 billion of which $60.03 billion is held directly and $327 million represents outstanding loan guarantees.

RUS budget growth in the last 2-4 years has had a slight upward trend with a spike in 2014 due primarily to an increase in mandatory program funding authorized in the 2014 Farm Bill:

FY 2013 $554 million/$7.2 billion
FY 2014 $686 million/$7.51 billion
FY 2015 $556 million/$7.46 billion
I. **Organizational Overview**

**Mission**

Rural Development’s (RD) mission is to increase economic opportunity and improve the quality of life for all rural Americans. That mission touches every facet of Rural America throughout the country, and through our three agencies and State and local offices of Rural Development we provide financial and technical assistance to rural residents, businesses, and private and public entities. RD uses more than 40 loan and grant programs to create opportunities in housing, business, and infrastructure and serves as a catalyst to improve conditions in rural America by offering technical assistance and increasing the flow of capital through leveraged partnerships that help make prosperity and better living a reality in Rural America.

Rural Development’s programs are grouped within its three agencies: (1) the Rural Business-Cooperative Service (RBS), which implements regional planning and place-based approaches with technical assistance and financing tools to develop and expand cooperatives, business, and industry, including small businesses, and renewable energy and value added agriculture projects; (2) the Rural Utilities Service (RUS), which provides assistance for water and waste disposal, rural electric and telecommunications, including broadband access; and (3) the Rural Housing Service (RHS), which provides assistance for home ownership, multi-family housing, and essential community facilities such as health and public safety infrastructure.

The type of assistance offered includes direct and guaranteed loans, grants, cooperative agreements, technical assistance, and other payments. Some programs provide assistance to intermediaries that make loans or provide technical assistance to the ultimate beneficiaries. Several programs require or encourage recipients to contribute their own resources or obtain third-party financing to support the total cost of projects, thereby leveraging Government support with private sector financing.

RD delivers these programs through a network of more than 400 area offices and 47 State offices, a customer service center and finance office in St. Louis, Missouri, and a headquarters in Washington, DC. RD’s Operations and Management Division, located in Washington, DC and St. Louis, MO, manages all administrative areas for RD, including human resources, civil rights, legislative and public affairs, Information Technology (IT), and procurement.
**United States Department of Agriculture**

2016 Presidential Transition

Rural Development (RD)

**Strategic Plan**

The following objectives guide the investment strategy of Rural Development, supporting the USDA goal to: Assist Rural Communities to Create Prosperity so They Are Self-sustaining, Repopulating, and Economically Thriving (Strategic Goal 1):

**Objective:** Enhance Rural Prosperity, Including Leveraging Capital Markets to Increase Government’s Investment in Rural America

Number of Jobs created or Saved through investments in business entrepreneurship, cooperatives, and industry. (2009 baseline: 68,000) (2018: 53,000)¹

Percentage of targeted RD investments in high-poverty areas that leverage private-sector funding. (2013 baseline: 4.5%) (2018: 10.0%)

Percentage of rural residents who are provided access to new or improved services resulting from RD investments. (2013 baseline: 46.7%) (2018: 51.4%)

**Objective:** Increase Agricultural Opportunities by ensuring a robust safety net, creating new markets, and supporting a competitive agricultural system

Percentage of beginning; racial and ethnic minority; and women farmers financed by USDA. (2012 baseline: 36%) (2018: 41%)

Number of local and regional food systems supported annually through USDA investment. (2013 baseline: 170) (2018: 423)

**Objective:** Contribute to the Expansion of the Bioeconomy by Supporting Development, Production, and Consumption of Renewable Energy and Biobased Products

Millions of kilowatt hours (mkWh) generated in rural America from alternative energy sources. (2009 baseline: 2,304 mkWh) (2018: 1,070 mkWh)²

Number of jobs created and/or retained through USDA investments supporting production of renewable energy and Biobased products, and renewable energy measures. (2012 baseline: 1,300 jobs) (2018: 1,500 jobs)

---

¹ Reduction in target due to current services budget restrictions

² Reduction in target due to current services budget restrictions
Overview of Agency Programs and Operations

**Rural Housing Service (RHS)** administers Housing and Community Facilities Programs. RHS provides funding for single family housing, apartments for low-income persons or the elderly, housing for farm laborers, childcare centers, fire and police stations, hospitals, libraries, nursing homes, schools, and much more. In partnership with non-profits, Indian tribes, state and federal government agencies, and local communities, RHS creates packages of technical assistance and loan and grant funds to assist rural communities, and individuals with access to these programs.

*Click on a link below for more detailed RHS Housing and Community Facilities Loan and Grant information and contacts or visit [http://www.rd.usda.gov/programs-services/all-programs](http://www.rd.usda.gov/programs-services/all-programs):*

- **Single Family Housing Direct Home Loans**
  Single Family Housing provides direct, means tested loans for the purpose of purchasing a home in an eligible area, with an interest rate based on the borrower’s income and fluctuates with the current Treasury rate and may be subsidized down to one percent interest. Direct loans are limited to families with incomes less than 80 percent of area median income.

- **Single Family Housing Home Loan Guarantees**
  Single Family Housing provides guarantees on home loans in eligible areas though a network of approved lenders that are means tested limited to families with incomes less than 115 percent of area median income.

- **Mutual Self-Help Housing Technical Assistance Grants**
  Provides grants to qualified organizations to help them carry out local self-help housing construction projects. Grant recipients supervise groups of very-low- and low-income individuals and families as they construct their own homes in rural areas. The group members provide most of the construction labor on each other’s homes, with technical assistance from the organization overseeing the project.

- **Rural Housing Site Loans**
  Rural Housing site loans provide two types of loans to purchase and develop housing sites for low- and moderate-income families:
  - Section 523 loans are used to acquire and develop sites only for housing to be constructed by the “Self-Help” method.
  - Section 524 loans are made to acquire and develop sites for low- or moderate-income families, with no restriction as to the method of construction.
United States Department of Agriculture
2016 Presidential Transition
Rural Development (RD)

- **Farm Labor Direct Loans & Grants**
  Provides affordable financing to develop housing for year-round and migrant or seasonal domestic farm laborers.

- **Housing Preservation & Revitalization Demonstration Loans & Grants**
  Restructures loans for existing Rural Rental Housing and Off-Farm Labor Housing projects to help improve and preserve the availability of safe affordable rental housing for low income residents.

- **Housing Preservation Grants**
  Provides grants to sponsoring organizations for the repair or rehabilitation of housing occupied by low and very low-income individuals.

- **Multi-Family Housing Direct Loans**
  Assists qualified applicants that cannot obtain commercial credit on terms that will allow them to charge rents that are affordable to low-income tenants.

- **Multi-Family Housing Loan Guarantees**
  Works with qualified private-sector lenders to provide financing to qualified borrowers to increase the supply of affordable rental housing for low and moderate-income individuals and families in eligible rural areas and towns.

- **Multi-Family Housing Rental Assistance**
  Provides payments to owners of USDA-financed Rural Rental Housing or Farm Labor Housing projects on behalf of low-income tenants unable to pay their full rent.

- **Community Facilities Direct Loans & Grants**
  Provides affordable funding to develop essential community facilities in rural areas. An essential community facility is defined as a facility that provides an essential service to the local community for the orderly development of the community in a primarily rural area, and does not include private, commercial or business undertakings.

- **Community Facilities Loan Guarantees**
  Provides loan guarantees to eligible private lenders to help build essential community facilities in rural areas.

- **Community Facilities Technical Assistance and Training Grant**
  Provides grants to public bodies and private nonprofit corporations, to provide associations Technical Assistance and/or training to identify and plan for community facility needs that exist in their area.

- **Economic Impact Initiative Grants**
  Provides funding to assist in the development of essential community facilities in rural communities with extreme unemployment and severe economic depression.
United States Department of Agriculture  
2016 Presidential Transition  
Rural Development (RD)

- **Rural Community Development Initiative Grants**
  Provides funding to help non-profit housing and community development organizations support housing, community facilities, and community and economic development projects in rural areas.

- **Tribal College Initiative Grants**
  Provides funding to [1994 Land Grant Institutions](#) (Tribal Colleges) to make capital improvements to their educational facilities and to purchase equipment.
United States Department of Agriculture  
2016 Presidential Transition  
Rural Development (RD)

*Rural Business-Cooperative Service (RBS)* administers job training, energy, and business development programs, including cooperative and business development, community economic development, regional planning and financing, rural and Tribal place-based approaches and other self-help initiatives. RBS also offers programs to provide the educational opportunities, training, technical support, and tools for rural residents to start small businesses and to access jobs in agricultural markets, the green economy, and other emerging markets, as well as acquire training in vocational and entrepreneurship skills they can use in the marketplace and business sector.

RBS also leads the coordination and implementation of community economic development-related activities in high poverty rural communities such as regional planning, place-based initiatives, local and regional food systems, and cooperative development. These activities enable high poverty rural areas to increase local capacity, increase their readiness for accessing RD’s financing tools, and capitalize greater access to partners and other federal resources to improve conditions and opportunities for historically unserved and underserved groups.

*Click on a link below for more detailed RBS Business and Cooperative Loan and Grant information and contacts or visit* [http://www.rd.usda.gov/programs-services/all-programs](http://www.rd.usda.gov/programs-services/all-programs):

- **Business and Industry Loan Guarantees (B&I)**
  Provides protection against loan losses so that lenders are willing to extend credit to establish, expand, or modernize rural businesses through loan guarantees for rural businesses, allowing private lenders to extend more credit to eligible entities.

- **Intermediary Relending Program (IRP)**
  Provides 1% interest direct loans to local intermediaries that relend to businesses for community development projects in rural communities at a higher interest rate and use their interest earnings to pay for their administrative expenses and develop capital reserves.

- **Rural Business Investment Program (RBIP)**
  This program provides loan guarantees to establish equity funds to support business development in rural areas. This funding provides additional access to venture capital type funding. These for-profit investment fund entities use equity raised in capitalizing their funds to make equity investments in small enterprises located in rural areas.

- **Rural Business Development Grants (RBDG)**
  RBDG is a competitive grant designed to fund training, technical assistance, construction, land development, equipment, and capitalization of revolving loan funds leading to the development or expansion of small and emerging private businesses in rural areas that have fewer than 50 employees and less than $1 million in gross revenues. Programmatic activities are separated into enterprise or opportunity type grant activities.
• **Rural Economic Development Loan and Grant (REDLG)**
  This program provides zero interest loans to local utilities which, in turn, pass through to local businesses for projects that will create and retain employment in rural areas. The utility is responsible for repayment to the agency. Grant funds are provided to local utility organizations which use the funding to establish revolving loan funds. Loans are made from the revolving loan fund to projects that will create or retain rural jobs. When the revolving loan fund is terminated, the grant is repaid to the Agency.

• **Rural Microentrepreneur Assistance Program (RMAP)**
  This program provides one percent direct loans and grants to microenterprise development organizations (MDOs). The loans will be used to establish reserves for relending to microentrepreneurs, and the grants are made to the MDOs which may relend a portion to provide training, operational support, business planning, and market development assistance to microloan borrowers and micro entrepreneurs.

• **Value Added Producer Grants (VAPG)**
  The VAPG program provides grants to help agricultural producers enter into value-added activities related to the processing and/or marketing of bio-based, value-added products with an emphasis on generating new products, creating and expanding marketing opportunities, and increasing producer income.

• **Advanced Biofuel Payment Program**
  Supports expanding production of advanced biofuels by paying advanced biofuel producers for finished advanced biofuel products.

• **Biorefinery, Renewable Chemical, and Biobased Product Manufacturing Assistance Program**
  Provides loan guarantees to assist in the development, construction, and retrofitting of new and emerging technologies for the development of Advanced Biofuels, Renewable Chemicals, and Biobased Product Manufacturing.

• **Repowering Assistance Program**
  Provides funding for up to 50% of the total eligible project costs for bio refineries to install renewable biomass systems for heating and power at their facilities; or, to produce new energy from renewable biomass.

• **Rural Energy for America Program Energy Audits & Renewable Energy Development Grants**
  Provides grants to assist rural small businesses and agricultural producers by conducting and promoting energy audits, and providing renewable energy development assistance.
• **Community Economic Development**
  Leads USDA’s cooperative development research, training, and technical assistance; provides capacity building, training, and technical assistance to high poverty rural communities; manages rural and Tribal place-based and local and regional food systems initiatives; and implements cross-cutting 2014 Farm Bill requirements such as Strategic Economic and Community Development, Healthy Food Financing Initiative, and Performance Impact Evaluation.

• **Cooperative Grants**
  Provides competitive grants to eligible individuals and organizations, producers, and other businesses to support cooperatives and cooperative development.

• **Rural Energy for America Program Renewable Energy Systems & Energy Efficiency Improvement Loans & Grants**
  Provides guaranteed loan financing and grant funding to agricultural producers and rural small businesses for renewable energy systems or to make energy efficiency improvements.

• **Cooperative Programs**
  Provides information on financial assistance opportunities to assist rural businesses, including cooperatives, and agricultural producers in conjunction with other Rural Development program areas as well as educational reports and programs that promote the understanding of cooperative principles and practices, research and statistics.

United States Department of Agriculture  
2016 Presidential Transition  
Rural Development (RD)

**Rural Utilities Service (RUS)** provides funding opportunities in the form of grants, loans, and loan guarantees, for the development and commercialization of Electric, Telecommunications, and Water and Waste utility services.

*Click on a link below for more detailed RUS Loan and Grant information and contacts or visit* [http://www.rd.usda.gov/programs-services/all-programs](http://www.rd.usda.gov/programs-services/all-programs):

- **Community Connect Grants**
  Provides grants to help fund broadband deployment into rural communities where it is not yet economically viable for private sector providers to deliver service.

- **Broadband Loan Program**
  Furnishes loans and loan guarantees to provide funds for the costs of construction, improvement, or acquisition of facilities and equipment needed to provide service at the broadband lending speed in eligible rural areas.

- **Distance Learning and Telemedicine Loan and Grant Program**
  Provides grant funds to help rural communities use the unique capabilities of telecommunications to connect to each other and to the world, overcoming the effects of remoteness and low population density. For example, this program can link teachers and medical service providers in one area to students and patients in another.

- **Electric Loan and Loan Guarantee Program**
  Provides insured loans and loan guarantees to nonprofit and cooperative associations, public bodies, and other utilities. Insured loans primarily finance the construction of electric distribution facilities in rural areas. The guaranteed loan program has been expanded and is now available to finance generation, transmission, and distribution facilities. The loans and loan guarantees finance the construction of electric distribution, transmission, and generation facilities, including system improvements and replacement required to furnish and improve electric service in rural areas, as well as demand side management, energy conservation programs, and on-grid and off-grid renewable energy systems.

- **Telecommunications Loan Program**
  Provides financing for the construction, maintenance, improvement and expansion of telephone service and broadband in rural areas.

- **Circuit Rider Program**
  Provides technical assistance to rural water systems having day-to-day operation, financial or management issues.

- **Emergency Community Water Assistance Grants**
  Provides grant funds to help eligible communities prepare for, or recover from, an emergency that threatens the availability of safe, reliable drinking water for households and businesses.
• **Grants for Rural and Native Alaskan Villages**
  Provides grant funds to help remote Alaskan Villages provide safe, reliable drinking water and waste disposal systems for households and businesses.

• **Household Water Well System Grants**
  Provides grant funds to help qualified non-profits and Tribes create a revolving loan fund to extend access to clean, reliable water to households in eligible rural areas.

• **Individual Water & Wastewater Grants**
  Provides grant funds to households residing in an area recognized as a Colonia before October 1, 1989, to connect service lines to a residence, pay utility hook-up fees, install plumbing and related fixtures, i.e. bathroom sink, bathtub or shower, commode, kitchen sink, water heater, outside spigot, or bathroom.

• **SEARCH - Special Evaluation Assistance for Rural Communities and Households**
  Provides funding to help very small, financially distressed rural communities with predevelopment feasibility studies, design assistance, and technical assistance on proposed water and waste disposal projects.

• **Solid Waste Management Grants**
  Provides funding for organizations that provide technical assistance or training to improve the planning and management of solid waste sites.

• **Water & Waste Disposal Grants to Alleviate Health Risks on Tribal Lands and Colonias**
  Provides funding to facilitate access to safe reliable drinking water and waste disposal facilities and services to low-income communities that face significant health risks.

• **Water & Waste Disposal Loans & Grants**
  Provides funding for clean and reliable drinking water systems, sanitary sewage disposal, sanitary solid waste disposal, and storm water drainage to households and businesses in eligible rural areas.

• **Water & Waste Disposal Loan Guarantees**
  Provides up to a 90% guarantee on loans from private lenders that provide affordable financing to qualified borrowers to improve access to clean, reliable water and waste disposal systems for households and businesses in rural areas.

• **Water & Waste Disposal Predevelopment Planning Grants**
  Provides funding to assist low-income communities with the initial planning and development of an application for USDA Rural Development Water and Waste Disposal direct loan, grant, and loan guarantee programs.
United States Department of Agriculture
2016 Presidential Transition
Rural Development (RD)

- **Water & Waste Disposal Revolving Loan Funds**
  Provides grant funding to help qualified non-profits create a revolving loan fund that can provide financing for the extension and improvement of water and waste disposal systems in rural areas.

- **Water & Waste Disposal Technical Assistance & Training Grants**
  Provides funding to qualified, private non-profits that provide technical assistance and training to (a) identify and evaluate solutions to water and waste problems; (b) assist applicants in preparing applications for water and waste disposal loans and grants; and (c) assist associations in improving operation and maintenance of existing water and waste facilities in eligible rural areas.

- **Rural Energy Savings Program (RESP)**
  RESP was established to help rural families and small businesses achieve cost savings by providing loans to qualified consumers to implement durable cost-effective energy efficiency measures. RESP authorizes the RUS Administrator to make loans to utilities, and similar entities, that agree to use the loan funds to relend those funds to their consumers for the purpose of implementing energy efficiency measures.
Office of Operations and Management (O&M) performs numerous administrative services for the three agencies (RHS, RBS, and RUS), the Department, Congress, and other agencies. This shared services model makes RD unique within USDA and helps RD function more like one cohesive agency. In some cases portions of these services have been outsourced by agreement to the Department such as Schedule C and SES HR support to the Office of Human Resources Management, and certain aspects of IT support to the USDA CIO. In those instances O&M staff may either provide direct support or act as liaison to contracted service providers. In other cases O&M directorates complement Departmental functions, providing support to RD at the agency level in areas like civil rights, procurement, and Legislative and Public Affairs. Find contact information here for services provided in the following areas:

- Alternative Dispute Resolution
- Chief Information Officer
- Civil Rights
- Cultural Transformation
- Emergency Preparedness
- Human Resources
- Legislative and Public Affairs (LAPAS)
- Native American Coordination
- Outreach & Community Engagement
- Procurement and Administrative Services

Office of the Chief Financial Officer (CFO) is responsible for the full cycle of financial operations from formulation to execution, associated with Rural Development direct and guaranteed loan, grant, and administrative activities through the Budget Division, and oversees the mission area’s financial and program performance through the Financial Management, and the Policy and Analysis Divisions.

National Financial and Accounting Operations Center (NFAOC) is organized under the RD Office of the Chief Financial Officer and provides expert financial management, accounting, and portfolio management for Direct and Guaranteed Credit Reform Loans and Grants for both Farm Service Agency (FSA) and RD. The NFAOC is divided into two main operational units: Portfolio Management, which oversees all loan and grant servicing functions of both RD and FSA; and Financial Management, which oversees all financial operations and reporting functions related to the Chief Financial Officer Act, as well as the reporting requirements imposed by the Office of Management and Budget (OMB) and U.S. Department of Treasury.

Customer Service Center (CSC), formerly known as the Centralized Servicing Center, is organized under the Rural Housing Service and provides a complete servicing solution for all Single Family Housing Direct loans as well as processing services for Single Family Housing Guaranteed loan loss claims, Multi-Family Housing loan payments, and management of the foreclosure process and Real Estate Owned (REO) property. Assistance is available for both external customers and RD employees.

Organizational History

The official lineage of Rural Development goes back to 1935, when President Franklin D. Roosevelt signed Executive Orders 7027 and 7037 as part of his “New Deal.” These orders established the Resettlement Administration and Rural Electrification Administration (REA) (respectively), in order to relocate destitute families stricken by the Depression, restore soil-eroded areas, and provide modest emergency loans to farmers for land and equipment and electricity to rural areas.

Over time, Congress has expanded REA’s role to oversee a rural telephone program (in 1949), authorized the Rural Telephone Bank and use of revolving loan funds to finance the agency’s telecommunications programs (in the 1970’s), and most recently tasked the agency with delivery of Internet-based telecommunication programs, including distance learning and broadband.

Meanwhile, the Resettlement Administration was transferred to the U.S. Department of Agriculture in 1937 and renamed the Farm Security Administration, expanding its role beyond short-term resettlement loans to farm land ownership supervised credit programs. In 1946, Resettlement programs were eliminated and the organization was again renamed as Farmers Home Administration (FmHA). In 1949, rural housing programs were added. In 1954, clean drinking water programs were added. In 1961, the housing programs were expanded to include all rural residential communities with populations less than 2,500. In 1965, grants became available through the agency to finance water and sewer projects. Population limits continued to rise through the years for eligibility of RD programs and in 1968, a revision to the Housing Act of 1949 established the Interest-Credit program.

In October, 1994, President Clinton signed the Department of Agriculture Reorganization Act of 1994. That law split the programs administered by the FmHA among several new agencies. Farm loan programs moved to the Farm Service Agency, which had formerly been known as the Agricultural Stabilization and Conservation Service. FmHA’s housing and community facilities programs were moved to the Rural Housing Service. FmHA’s water and sewer loans were moved to the Rural Utilities Service, which also took on the rural electric and telephone programs that had formerly been administered by the Rural Electrification Administration. FmHA’s business and industry programs were moved to the Rural Business and Cooperative Service, which also incorporated the cooperative education, statistics, and technical assistance programs which had formerly been administered by the Agricultural Cooperative Service. The Rural Housing Service, Rural Utilities Service and the Rural Business and Cooperative Service were all organized under a “mission area,” which soon became known as Rural Development, the financier for rural America -- built on the legacy of these Depression-era agencies begun over 79 years ago.
Organizational Chart

The Office of the Under Secretary

The Office of the Under Secretary for the Rural Development Mission Area, located in the Whitten Building in Washington, DC, consists of the Under Secretary, Deputy Under Secretary for Policy and Planning, Deputy Under Secretary for Operations and Management, and the Chief of Staff, Senior Advisor, and Confidential Assistant to the Under Secretary, supported by career staff consisting of one advisor, Special Project Manager, and NFAC Liaison, one Administrative Office Manager, and three Administrative Specialists, along with one contracted Policy Advisor and the Office of the Chief Risk Officer.

Agency leadership report directly to the Under Secretary, while the Chief Financial Officer, Deputy Administrator for Operations and Management, and all State Directors report to the Deputy Under Secretary for Operations and Management, with exceptions for the Offices of Civil Rights and Legislative and Public Affairs who also report directly to the Under Secretary on select issues.

2016 Presidential Transition  
Rural Development (RD)

Biographies of career staff in key leadership positions  

Operations and Management

Edna Primrose  
Deputy Administrator  
202-692-0207, Edna.Primrose@wdc.usda.gov

Edna Primrose was named Deputy Administrator for Operations and Management in December 2012. As Deputy Administrator, Ms. Primrose is responsible for providing executive leadership in planning, developing, and administering all administrative management program policies and operational support for RD.

Ms. Primrose previously served as the National Director for the Office of Job Corps at the Department of Labor. In 1984, Ms. Primrose began her professional career with the International Union of Operating Engineers (IUOE). In 2002, she served as the Job Corps Chief Performance Officer. Ms. Primrose earned a Bachelor’s degree from Towson University.

Francisco Salguero  
Chief Information Officer  
202-692-0212, Francisco.Salguero@wdc.usda.gov

Francisco Salguero is currently the Chief Information Officer for RD and has successfully led the administration of RD's IT portfolio management and service delivery activities for over 40 RD loan, grant, and loan guarantee programs. He also participates in agency budget formulation and oversees an IT investment management process for selecting, controlling, and evaluating IT investments.

Mr. Salguero started his career in the private sector and began his federal service in 2005 at USDA Food Safety Inspection Service. Prior to joining RD, Mr. Salguero served as the Associate CIO for the Client Technology Service formerly the International Technology Service, the USDA Office of the Chief Information Office organization that provides end-user technology support to RD, USDA agencies, and other federal agencies.

Anita Adkins  
Director, Human Resources  
202-260-8689, Anita.R.Adkins@wdc.usda.gov

Anita R. Adkins serves as RD's Human Resources Director. Ms. Adkins started her career with RD in August 2013 and is responsible for leading and directing all HR services and programs.

She previously served as the Senior Advisor to USDA's Chief Human Capital Officer and Director and Deputy Director, Departmental Management, Office of Human Resources Management (OHRM). She also worked with the USDA Forest Service, Department of the Army, Defense Logistics Agency, and the Veterans Administration, serving in various senior manager and HR roles at the George Washington and Jefferson National Forest in Roanoke, VA and later at Headquarters in Washington, D.C.
Angilla Denton
Director, Civil Rights
202-692-4109, Angilla.Denton@wdc.usda.gov

Angilla Denton serves Rural Development as the Civil Rights Director and has responsibility and oversight of Rural Development’s nationwide Civil Rights programs and Equal Employment Opportunity programs.

Ms. Denton has over 20 years of management experience in both the public and private sector. Since her arrival at Rural Development in 2002, Ms. Denton has served as a Loan Specialist, Area Director, and Administrative Program Director. She has also led multiple committees and special initiatives, including training under StrikeForce, EEO Committee advisor, Nevada RD Affordable Housing Chair, Cultural Transformation activities, and Special Emphasis Programs.

John Pavek
Director, Emergency Preparedness
202-720-2078, John.Pavek@wdc.usda.gov

In January 2007, John Pavek was selected as the Director, Emergency Preparedness Program for RD. He is also RD's Informational Security Officer and principal liaison to the U.S. Department of Agriculture's Office of Homeland Security and Emergency Coordination. Further, Mr. Pavek serves as USDA's Recovery Action Officer and Coordinator, a USDA member of the United States Government Radiological Advisory Team for Environment, Food, and Health.

Mr. Pavek's previous USDA appointment was with Rural Utilities Service in the Electrical Staff Division. Prior to joining RD in 1998, Mr. Pavek worked in the electric utility industry. Prior to working in the electric utility industry, he sailed as First and Chief Engineer and served as an Officer in the United States Navy Reserve from 1985 until 1994.

Sharon Randolph
Director, Procurement and Administrative Services
202-720-0736, Sharon.Randolph@wdc.usda.gov

Sharon Randolph joined Rural Development as the Assistant Administrator for Procurement and Administrative Services (PAS) in December 2000, which is comprised of three divisions: Procurement Management Division (Washington, DC); Property and Supply Management Division (St. Louis, MO); and the Support Services Division (Washington, DC). Ms. Randolph provides leadership and oversight for procurement and contracting activities, and several critical support services programs in support of Rural Development nationwide.

Prior to December 2000, she served as the Customer Service Division Director, in RD's Office of the Chief Information Officer. She also served three years with the Bureau of Labor Statistics, at the Department of Labor, and as a computer programmer, where she was responsible for developing various components of the 1990 U.S. Census data collection statistical model.
Gail Lacey  
**Director, Cultural Transformation**  
202-692-0118, Gail.Lacey@wdc.usda.gov

Gail Lacey is responsible for implementing Senior Leadership's vision and goals for cultural transformation within the Mission Area, while providing guidance to the agencies and states regarding implementation of Cultural Transformation Action Plans.

Ms. Lacey's entire federal career has been with the U.S. Department of Agriculture, Rural Development, including the former Farmers Home Administration (FmHA). Her career started as a temporary emergency loan program employee with FmHA in Idaho. She served in several positions while in Idaho and accepted a position in the National Office in 1990. Prior to serving as the Rural Development Cultural Transformation Program Manager, Ms. Lacey served as the Assistant to the Deputy Administrator for Operations and Management from 2001 to 2011.

**Office of the Chief Financial Officer**

Roger Glendenning  
**Chief Financial Officer**  
202-692-0145, Roger.Glendenning@wdc.usda.gov

Roger Glendenning is the Chief Financial Officer for Rural Development. Mr. Glendenning started his career in housing and farm related programs in 1987 with the Farmers Home Administration in Delaware and Maryland before moving to the Washington, DC headquarters office in 1996. He has worked at Headquarters in the capacity of Director of the Single Family Housing Guaranteed Loan Division (2001-2006), Chief Budget Officer (2007-2009), Budget Division Director (2010-2012) and Chief Financial Officer (2013 – present).

Tony Bainbridge  
**Director, National Financial and Accounting Operations Center**  
314-457-4150, Tony.Bainbridge@stl.usda.gov

Tony Bainbridge is the Director of the National Financial and Accounting Operations Center (NFAOC) for Rural Development. Mr. Bainbridge started his career in the Finance Office covering all Rural Development programs in 1989 with the Farmers Home Administration in St. Louis, MO. He has worked in various capacities in the newly named NFAOC, covering Program Loan Cost Expenses (1990-1995), Electronic Funds Transfers (1996-1999), and Direct Loan and Grant Branch providing loan servicing for all Rural Development loan and grant programs (2000-2010), Deputy Chief Financial Officer (2010 – 2014), and Director NFAOC (2014 - present).
Leslie Barrack  
Director, Budget Division  
202-401-2718, Leslie.Barrack@wdc.usda.gov

Leslie Barrack is the Budget Director for RD. Ms. Barrack started her career in the Rural Development Budget office in 1992 as a Budget Technician and then Budget Analyst through 2003, including a one-year detail to the House Appropriations Subcommittee on Agriculture. She worked in the Veterans Affairs Department Budget office as a Budget Analyst (2003), the House Appropriations Subcommittee on Agriculture as Professional Staff (2004-2010), the USDA Office of Budget and Program Analysis as a Program Analyst (2011-2014), including a six-month detail to the Office of Management and Budget, and back to Rural Development as the Budget Director (2014-present).

John Dunsmuir  
Director, Financial Management Division  
202-692-0082, John.Dunsmuir@wdc.usda.gov

John Dunsmuir is the Director of RD’s Financial Management Division (FMD). In this position he oversees all of the Management/Internal Controls for RD nationwide, including Office of Inspector General (OIG) Audits, Investigations, and Hotlines, Government Accountability Office (GAO) Audits, Management Control Reviews (MCR), and State Internal Reviews (SIR).

Mr. Dunsmuir served as the Deputy Director of FMD for over 10 years and began his career with RD as an Accountant with the Rural Utilities Service (RUS). Mr. Dunsmuir’s other federal career includes positions as an Accountant/Auditor with the Federal Energy Regulatory Commission, and the Department of Health and Human Services’ Office of Inspector General. His career in private industry includes serving as the Controller for a wholesale and retail paint and glass company, a nuclear fuel accountant for a major public utility, and a department manager for a trucking company with over 1,000 tractors and trailers on the road.

Mr. Dunsmuir received his Bachelor of Science degree from King’s College, Wilkes-Barre, PA and practiced as a Certified Public Accountant for several years.
Joyce Allen
Deputy Administrator, Single Family Housing
202-205-4996, Joyce.Allen@wdc.usda.gov

Joyce Allen is the Deputy Administrator of the Rural Housing Service Single Family Housing Programs. Ms. Allen joined USDA in 1991, as an Assistant County Supervisor for the Farmer’s Home Administration in a county office in Berlin, New Jersey. She accepted an assignment in 1994 to Washington DC, where she developed policy and regulation for the Section 538 Guaranteed Rural Rental Housing Program. Ms. Allen has also worked at the U.S. Department of Housing and Urban Development (HUD), where she served as the Director of Multifamily Housing Development and oversaw the FHA multifamily mortgage insurance programs.

Bryan Hooper
Deputy Administrator, Multi-Family Housing
202-720-9739, Bryan.Hooper@wdc.usda.gov

Bryan Hooper is the Deputy Administrator for Multi-Family Housing in the Rural Housing Service of the U.S. Department of Agriculture. He manages USDA’s nationwide portfolio of approximately 15,000 multi-family properties, representing more than 470,000 units of affordable rental housing and a federal government investment of $11 billion. Mr. Hooper also manages over $1.1 billion in rental assistance and housing voucher payments to more than 280,000 low- and very-low income tenants.

Bryan holds Bachelor’s and Master’s Degrees from The American University in Washington D.C., and a J.D. from the George Washington University.

Rich Davis
Deputy Administrator, Community Facilities
202-720-1500, Rich.Davis@wdc.usda.gov

Rich Davis has been serving as the Deputy Administrator for Community Facilities Programs in Rural Development since August 2010. RD Community Programs provide direct and guaranteed loans and grants to help rural communities develop or improve their essential community facilities for public use in rural areas. Previously, Mr. Davis served as the Acting Deputy Administrator for Single Family Housing from August 2009 to August 2010. Prior to that assignment, he served as Director of the Program Support Staff for 13 years, in which he was responsible for overseeing all architectural, environmental and other technical support to Rural Development’s business, housing and community facilities programs.
Christine Mechtly  
**Deputy Administrator, Customer Service Center**
314-457-5970, Christine.Mechtly@stl.usda.gov

Christine Mechtly started her career with the Farmers Home Administration as an accountant in 1991. Ms. Mechtly served as Assistant Chief, Direct Loan and Grant Branch (2002-2010), Director, Policy and Internal Review Division (2010-2012), and Director, Financial Analysis and Control Division (2012-2014) in the Office of the Deputy Chief Financial Officer. She also served as the Deputy Director of Portfolio Management for the National Financial and Accounting Operations Center (NFAOC) (2014-2015). Ms. Mechtly was selected as the Deputy Administrator of the Customer Service Center in October 2015.

Edward Duval  
**Director, Program Support Services Branch**
202-690-1370, Ed.Duval@wdc.usda.gov

Edward Duval currently serves as the Director of Rural Development’s Program Support Staff (PSS), a division within the Rural Housing Service. He currently leads numerous Risk Management initiatives such as oversight of appraisals, environmental and architectural reviews. These activities serve to mitigate the risk to the over $200Bil Rural Development portfolio. Lean Six Sigma, project management, SharePoint and dashboard development are also expertise possessed by the PSS.

Mr. Duval has over 30 years of business experience in both the private and public sectors. The first 15 years of his career were spent as a small business owner developing and marketing medical accounting systems for the Nursing Home Industry. Since 1994 he has worked almost exclusively with Rural Development programs as a contractor and USDA employee, of which he came on board in March, 2004. He is very familiar with all aspects of RD programs including systems, data, and the personnel making up Rural Development.
Claudette Fernandez
Deputy Administrator, Business Programs, Acting
202-245-1175, Claudette.Fernandez@wdc.usda.gov

Claudette Fernandez currently serves as Acting Deputy Administrator for RBS’ Business Programs. Previously, Ms. Fernandez has served as Acting Chief of Staff for the RBS Administrator and Director for RBS’ Business Programs Specialty Programs Division and Cooperative Programs Grants Division.

Prior to joining USDA in 2012, she served as a Senior Program Manager for FEMA’s multi-hazard mitigation and preparedness programs, South Georgia Regional Development Center, Prince George’s County Department of Housing & Community Development as a community planner and supported African and Middle-Eastern humanitarian affairs at the United Nations Secretariat.

Originally from the Philippines, Claudette has a Bachelor of Arts Degree in Political Science and a Master of Public Administration from Valdosta State University, a Master of Engineering Science from George Washington University and a Graduate Certificate in International Business Management from Georgetown University.

Chad Parker
Deputy Administrator, Cooperative Programs
202-720-7287, Chad.Parker@wdc.usda.gov

Chad Parker leads teams that administer the Cooperative Grant Programs, the Community Economic Development initiative, and the cooperative education, research, statistics, and outreach activities. Mr. Parker has previously served as Deputy Administrator, Business Programs (2014); Deputy Administrator, Cooperative Programs (2012-2013); Acting Deputy Administrator, Single Family Housing (2010 and 2011); Acting Deputy Administrator, Community Programs (2009); and in various other positions in USDA Rural Development and the Rural Electrification Administration since 1991. He has also previously worked as a pig farmer, bag boy, bell hop, assistant mechanic, welder, gravel pit water truck driver, and printer shop apprentice. Mr. Parker holds a M.B.A. and B.S. from Virginia Tech’s Pamplin School of Business.

Mark Brodziski
Deputy Administrator, Energy Programs
202-205-0903, Mark.Brodziski@wdc.usda.gov

Mark Brodziski is the Acting Deputy Administrator of RBS Energy Programs, which supports energy efficiency improvement projects and renewable energy systems for rural small businesses and farmers and ranchers, and the Biorefinery, Renewable Chemical and Biobased Product Manufacturing Assistance Program.

Mr. Brodziski has worked with USDA since 1983 including serving as the Director of the Specialty Lenders Division, Wisconsin Rural Development, Business and Community Programs Director.

2016 Presidential Transition
Rural Development (RD)

Rural Utilities Service

Christopher McLean
Assistant Administrator, Electric Programs
202-720-6285, Christopher.McLean@wdc.usda.gov

Christopher A. McLean is the Assistant Administrator, Electric Programs at the Rural Utilities Service. This is Mr. McLean’s third time at RUS. In 2014, Mr. McLean was an Acting Director in USDA’s Office of the Assistant Secretary for Civil Rights (OASCR) and, in 2013, was a civil rights fellow in OASCR’s Policy Office.

Previously, Mr. McLean was a senior advisor to the RUS Administrator; co-owned e-Copernicus (a consulting firm); and was the Executive Director of the Consumer Electronics Retailers Coalition. He also served as RUS Deputy Administrator, Administrator and worked as a Senate staffer.

Jacki Ponti-Lazaruk
Assistant Administrator, Water Programs
202-720-1172, Jacki.Ponti@wdc.usda.gov

Jacqueline M. Ponti-Lazaruk has served as Assistant Administrator for USDA Rural Development’s Water and Environmental Programs (WEP) since January 2008. During her tenure in WEP, nearly $15 billion has been invested in new and improved water and waste infrastructure benefitting more than 20 million rural residents. She has also been called upon to lead agency-wide efforts, such as the implementation of more than $20 billion in Recovery Act funding received by RD, and has served as the RUS Chief of Staff and as Acting Administrator. Ms. Ponti-Lazaruk served as the RD Assistant Administrator for Telecommunications Program from 2006 to 2008.

Keith Adams
Assistant Administrator, Telecom Programs
202-720-9556, Keith.Adams@wdc.usda.gov

James Murray
Assistant Administrator, Program Accounting and Regulatory Analysis, Acting
202-720-0799, James.Murray@wdc.usda.gov

James J. Murray started his career with the Rural Utilities Service (then called the Rural Electrification Administration) in 1978 as a staff accountant and has subsequently served as an accounting Branch Chief, and Deputy Assistant Administrator of Program Accounting and Regulatory Analysis (PARA) and is currently Acting Assistant Administrator for PARA.
Mr. Murray is a certified public accountant in the state of Virginia and a member of the Accounting and Finance Subcommittee of the National Association of Regulatory Utility Commissioners and a member of the Society of Depreciation Professionals.
Biographies of political staff in key leadership positions

Lisa Afua Serwah Mensah
Under Secretary
202-720-4581, Lisa.Mensah@osec.usda.gov

Lisa Afua Serwah Mensah was nominated by President Obama for the position of Under Secretary of USDA Rural Development and was confirmed by the U.S. Senate in November of 2014. An expert in using financial tools to improve the economic security of the working poor, Ms. Mensah has experience in the private financial sector and has worked extensively on small and micro business development, housing, financial and savings policy.

Prior to joining USDA, she was the founding Executive Director of the Initiative on Financial Security at the Aspen Institute. In that role she led a national bi-partisan effort with leaders of financial institutions, non-profit executives and experts to promote solutions to the complex problems of helping more Americans save money, buy homes, and finance retirement. Ms. Mensah began her career in commercial banking at Citibank before joining the Ford Foundation where she was responsible for the country’s largest philanthropic grant and loan portfolio of investments in rural America.

Ms. Mensah holds an M.A. from the Paul H. Nitze School of Advanced International Studies of The Johns Hopkins University and a B.A. from Harvard University. Born and raised in Oregon, she is the daughter of an immigrant from Ghana and of a former Iowa farm girl. She resides in Maryland with her husband and two children.

Lillian Salerno
Deputy Under Secretary for Policy
202-720-4581, Lillian.Salerno@osec.usda.gov

Lillian Salerno was appointed by President Obama as Deputy Under Secretary (DUSEC) on August 7, 2015. As DUSEC for the Rural Development Mission Area, she oversees the development of strategies and policy initiatives. A former entrepreneur, business owner, and small town lawyer, she understands the unique challenges facing our food systems, the Bioeconomy, and capital investments that are critical in supporting and strengthening America's rural communities. Before her appointment she also served as Administrator of Rural Business-Cooperative Service.

Ms. Salerno has an extensive work history in the private sector, both in the U.S. and abroad. Prior to her service in the federal government, Ms. Salerno successfully founded an advanced manufacturing company and served as the Executive Director for the Safe Healthcare International Institute.
Vernita Dore
Deputy Under Secretary for Operations & Management
202-720-4581, VernitaF.Dore@osec.usda.gov

Vernita Dore serves as Deputy Under Secretary of the USDA Rural Development Mission Area. As Deputy Under Secretary, Ms. Dore's responsibilities include overseeing Operations and Management, the Office of the Chief Financial Officer, Office of Civil Rights, and forty-seven State Directors across the nation. Additionally, Ms. Dore served as Senior Advisor to the Under Secretary for Rural Development, and has held management positions throughout the agency, building a wealth of experience during her thirty years of with Rural Development. Ms. Dore was appointed by President Barack Obama as USDA’s Rural Development State Director of South Carolina in August 2009.

Ms. Dore has dedicated her professional career to improving the quality of life in rural communities. She has been especially impactful in educating and empowering our children; she has elevated the quality of life for rural youth and their families by securing financial resources to re-build and renovate schools, children’s hospitals and new libraries equipped with state-of-the-art technology. She has also been a consistent leader in Rural Development's efforts to create jobs and economic opportunities for rural citizens across our nation.

A native of Beaufort, South Carolina, Ms. Dore earned a Bachelor of Arts degree in Journalism from the University of South Carolina. She has received additional professional development from Harvard's John F. Kennedy School of Government, the University of South Carolina's Darla Moore School of Business, the Federal Executive Institute, and USDA Graduate School. Ms. Dore is a fellow of the Diversity Leadership Institute at Furman University.

Andrew Givens
Chief of Staff
202-720-4581, Andrew.Givens@osec.usda.gov

Andrew Givens serves as the Chief of Staff to the USDA Rural Development Under Secretary. Previously, he served as Vice President, Government Affairs at the Public Broadcasting Service. Prior to PBS, he was a Special Counsel at Covington and Burling. On the Senate Appropriations Committee, Mr. Givens spent six years as General Counsel and also served as Minority Staff Director for the VA/HUD Subcommittee. Prior to the Senate, he practiced law at Dow, Lohnes and Albertson. Mr. Givens has a J.D. from University of Virginia Law School, M.P.A. from Princeton University and a B.A. from Harvard College.
Tony Hernandez
Administrator, Rural Housing Service
202-692-0268, Tony.Hernandez@wdc.usda.gov

Tony Hernandez was sworn in as the Rural Housing Service Administrator on December 16, 2013. Prior to being appointed, Mr. Hernandez served as Director of the Division of Local Government within the Colorado Department of Local Affairs, Director of the Colorado Business Center with the Fannie Mae Corporation, and HUD Region 8 Administrator with the Clinton Administration.

Mr. Hernandez was a business planner and senior marketing representative for the IBM Corporation for 13 years and a Colorado State Representative for nine years. Mr. Hernandez has a Master’s Degree in Management and Public Policy from Carnegie-Mellon; Master’s Degree in Community Organizing and Social Planning from University of Denver; and Bachelor of Social Work from Colorado State University.

David Lipsetz
Associate Administrator, Rural Housing Service
202-692-2732, David.Lipsetz@wdc.usda.gov

David Lipsetz is the Associate Administrator for USDA’s Rural Housing Service, having started at USDA in 2014 as the RHS Chief of Staff. He is a recognized authority on affordable housing policy who draws on experience as a federal official and local program administrator to help communities develop in a more equitable and sustainable manner.

Mr. Lipsetz came to USDA from HUD, where he served as a Deputy Assistant Secretary and Senior Advisor for Public and Indian Housing. Prior to HUD, David worked for housing agencies in New York City and Oakland, CA. He also spent several years on Capitol Hill, most notably as a Legislative Assistant to Congressman John Dingell. As an Ohio native, Mr. Lipsetz earned graduate degrees in City & Regional Planning and Sociology from Ohio State and a Bachelor’s degree from Michigan State.

Sam Rikkers
Administrator, Rural Business-Cooperative Service
202-690-4730, Samuel.Rikkers@wdc.usda.gov

Sam Rikkers was appointed Rural Business-Cooperative Service Deputy Administrator in December 2014. He joined USDA after serving as Director of the Energy and Environment Team with the White House’s Presidential Personnel Office.

Prior to this position, Mr. Rikkers served as Regional Field Director in Wisconsin on President Obama’s re-election campaign. From 2007 to 2012, he was an attorney with a commercial litigation firm in New York City specializing in antitrust and First Amendment law. Before practicing law, Mr. Rikkers spent years working as a community and political organizer nationally and internationally. He earned a J.D. from the University of Wisconsin, a Master of International Affairs from Columbia University and a B.A. in Political Science and Philosophy from Macalester College in St. Paul, Minnesota. He also served as a volunteer with the U.S. Peace Corps in rural Zambia. Mr. Rikkers is from a small town in Southern Wisconsin.
Brandon McBride  
**Administrator, Rural Utilities Service**  
202-720-9541, Brandon.McBride@wdc.usda.gov

In March of 2015, Brandon McBride was appointed by President Obama to serve as the 19th Administrator of USDA’s Rural Utilities Service. Mr. McBride’s appointment follows his role as a senior staff member for the United States Senate Committee on Agriculture, Nutrition and Forestry. Mr. McBride, a lifelong public servant, has dedicated his career to fighting for rural America.

Before working for the Senate Committee on Agriculture, Nutrition and Forestry under the leadership of Chairwoman Debbie Stabenow, Mr. McBride served for several years as a senior legislative assistant for United States Senator Blanche L. Lincoln. As a member of Senator Lincoln’s staff, he handled appropriations and economic development issues. Mr. McBride earned his undergraduate degrees as well as his Master’s degree in Public Administration from Arkansas State University.

Joshua Cohen  
**Deputy Administrator, Rural Utilities Service**  
202-720-6285, Joshua.Cohen@wdc.usda.gov

Joshua Cohen was appointed Deputy Administrator of USDA’s Rural Utilities Service in October 2015. Before coming to USDA, he served for 14 years in state and local government, including as Chief Administrative Officer of the Maryland Department of General Services and as the Mayor of Annapolis, Maryland. Before working in Rural Development he was in the criminal justice field, working as a Parole and Probation Agent, as a trainer for police and correctional officers, and as a grant director for a crime victims’ resource center.

Mr. Cohen earned a degree in Economics from the University of Maryland, and is pursuing a Master’s in Public Administration from the University of Baltimore. He lives in Annapolis with his wife Lesley, an oncology research nurse, and their two daughters.

David Sandretti  
**Director, Legislative and Public Affairs**  
202-720-1019, David.Sandretti@oc.usda.gov

David Sandretti is a seasoned communications professional who, prior to USDA, worked on Capitol Hill, in the non-profit advocacy arena, and the private sector. He served as communications director for the Senate Environment and Public Works Committee under Senator Jim Jeffords for two years and as communications director and chief spokesperson for Senator Barbara Boxer for 10 years. He also served as press secretary for Senator Russ Feingold for two years. He worked for the firm of Fingerhut Powers and Smith as a senior associate serving a variety of political and labor clients. Mr. Sandretti grew up on his family’s dairy farm in southeastern Wisconsin.
Rural Development has historically operated with approximately 6,200 employees. Currently the agency is operating with an on-board staff of less than 5,000. At the same time staff levels decreased, Appropriations Act's increased the amount of available program level for negative subsidy rate programs with no additional administrative funding. Further, Rural Development is provided with significant amounts of mandatory funding through the Farm Bill and must absorb the cost of implementing these authorities through existing resources. These actions further hamper the agency's ability to provide service to the rural residents and effectively manage the portfolio of programs provided by Congress. Additionally, recent Appropriations Acts have transferred costs of approximately $20 million for GSA rent from the Department to the agency further restraining the S&E account from supporting the existing mission.

---

3 The amount for mandatory programs reflect the amounts in the Farm Bill less CHIMP and Sequester.
4 Comprehensive Loan Program spending prior to 2014 was not specifically called out in appropriations language, however spending did occur as a percentage of recovery act funds available, as explained later in this document through annual and supplemental Appropriations Act's from FY 2009 to FY 2013. The 2014 Appropriations Act was the first time Congress designated the amount of funding that was to be expended on CLP development within a fiscal year.
The reduction in the cost of money from the Treasury has reduced or eliminated the operational cost of the 502 direct and 502 guaranteed (respectively) during the Obama Administration. Lower interest rates coupled with increased fees have eliminated the need for budget authority to support a robust $24 billion loan program for single family guaranteed housing. Further, increases in Rental Assistance Payments have significantly increased the need for budget authority requirement, as a result operational hurdles exist, due to lack of staff and underwriting larger projects while still ensuring the integrity of the portfolio is maintained.

</tbody>
</table>

RBS receives significant amounts of mandatory funding with no additional administrative support. The reduction in discretionary budget authority represents lower levels of grant funding across small business and cooperative development programs.
The most significant trend to highlight in RUS is the change in subsidy cost associated with the Water and Waste Disposal Service. The cost of money to the Treasury was reduced annually during the Obama Administration, this had a direct impact on some key loan programs within Rural Development. This one change significantly reduced the operational cost of several programs. The water and waste disposal loan program operated at a negative subsidy rate in FY 2014 and 2015. The electric and telecommunications program operate at negative subsidy rates as well. This table is displayed in budget authority terms.

Rural Development (RD)

Loan Program Level Growth FY 2009-2016

Loan Portfolio Growth FY 2009-2015
Enterprise Workforce Data
As of September 30, 2016, Rural Development has a workforce of 4,818 employees, of which the following are:

- **Full-time:** 4,777 employees
  - Schedule A: Of the 4,777 employees, 9 are Schedule A
  - Pathways: Of the 4,777 employees, 153 are Pathways
- **Part-time:** 41 employees
  - Schedule A: Of the 41 employees, 0 are Schedule A
  - Pathways: Of the 41 employees, 12 are Pathways
- 1,486 employees are unionized
- Of RD’s total workforce, 27% are eligible to retire within the next year
Approximately 68 occupations are represented across RD. Of those, the five most populated occupations include:

1165- Loan Specialist (1,970 employees)
1101- General Business and Industry (Loan Tech) (1,353 employees)
0301- Miscellaneous Administration and Program (321 employees)
0343- Management and Program Analysis (124 employees)
2210- IT Management (108 employees)

There are 2,597 (54 percent) permanent employees in mission critical occupations (MCO) reported, to USDA, for RD. For purposes of workforce reporting, a mission critical occupation is defined by the Office of Personnel Management (OPM), as “Occupations agencies consider core to carrying out their missions. Such occupations usually reflect the primary mission of the organization without which mission-critical work cannot be completed.” RD’s MCO’s are:

1165- Loan Specialist (1,970 employees)
0301- Miscellaneous Administration and Program (321 employees)
0343- Management and Program Analysis (124 employees)
2210- Information Technology Management (108 employees)
0201- Human Resources Management (74 employees)

106 Sub-Area Offices
47 Local Offices
34 Satellite Offices
7 Part-Time Offices

482 Total Office Locations
II. Policies and Regulations

Statutory Authorities

A number of statutes have authorities over rural development programs. In addition to periodic Omnibus Farm Bills, new RD legislation generally amends three major authorizing statutes:

(1) Consolidated Farm and Rural Development Act;
(2) Food, Agriculture, Conservation, and Trade Act of 1990;
(3) Housing Act of 1949; and
(4) Rural Electrification Act of 1936.

Cooperative Marketing Act of 1926 (7 U.S.C. 451 et seq.)

The Cooperative Marketing Act established the Division of Cooperative Marketing within the United States Department of Agriculture to assist agricultural cooperatives in gathering and sharing data and the Cooperative Research and Service Division which conducted agricultural cooperative research and service activities.

Rural Electrification Act of 1936 (7 U.S.C. 901 et seq.)

The act established the Rural Electrification Administration during the Great Depression to create jobs and electrify rural areas by providing subsidized loans and grants to rural electric cooperatives. The 1994 USDA reorganization eliminated REA and incorporated its functions under the Rural Utilities Service. This act authorizes RUS electric, telephone, and broadband programs.

Title V of this act gave authorization to the Farmers Home Administration to grant mortgages for the purchase or repair of rural single-family houses. Title V authorized financial assistance in rural areas to farmers, owners, developers, and elderly persons for the purchase of rural property and construction of adequate facilities, insurance on various loans, and financial assistance for rental housing for farm workers. The USDA Rural Housing Service today, as with the Farmers Home Administration in the past, ensures and guarantees a variety of housing loans for home purchases, repair, and rental housing development.

The legislation was originally enacted as the Consolidated Farmers Home Administration Act of 1961. In 1972, Title V was changed to the Consolidated Farm and Rural Development Act, and is often referred to as the ConAct. The ConAct, as amended, currently serves as the authorizing statute for most USDA Rural Development lending and grant programs.

This legislation affirmed USDA as the lead agency for rural development and named USDA as the lead federal coordinator for rural policy. The act also added minor reporting responsibilities to the 1972 Rural Development Act.
Food Agriculture, Conservation and Trade Act of 1990 (P.L. 101-624)

The Federal Agricultural Improvement and Reform Act of 1996 amended the Food Agriculture, Conservation and Trade Act of 1990 to authorize the USDA to establish what is now the Rural Utilities Service Distance Learning and Telemedicine Grant Program. This program provides grants to communities to support the construction of projects that will establish broadband to provide distance learning and telemedicine opportunities in rural communities.

Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994 (P.L. 103-354)

Title II authorized reorganization of the Department of Agriculture. It authorized the Secretary to establish the position of Under Secretary of Agriculture for Rural Economic and Community Development to succeed the Under Secretary of Agriculture for Small Community and Rural Development. The act further organized Rural Development into the Rural Housing Service (community facilities, technical assistance, and outreach), Rural Business-Cooperative Service (cooperatives, business and industry loans), and the Rural Utilities Service (electric, telecommunications, water). The legislation also abolished the Rural Electrification Administration established under the Rural Electrification Act of 1936 establishing the Rural Utilities Service as its successor.

The Agriculture Risk Protection Act of 2000 (P.L. 106-224)

This Act established the RBS Value Added Producer Grant program.

The Food, Conservation and Energy Act of 2008 (P.L. 110-246)

Title VI of this act reauthorized various RD programs and authorized loans and guarantees to support locally or regionally produced agricultural food products. The act also established the Rural Microentrepreneur Assistance Program and Delta Regional health care grant program. Title IX continued RBS Energy Programs from the 2002 Farm Bill for Biorefinery assistance, repowering assistance, the bioenergy program for advanced biofuels, and the Rural Energy for America program.

The Agricultural Act of 2014 (P.L. 113-79)

The Rural Development title of the 2014 Farm Bill reauthorized most existing RD programs through FY 2018. The bill amended the water and waste water direct and guaranteed loan programs to encourage financing by private or cooperative lenders to the maximum extent possible. The law also provided a 3%-5% carve-out of the Community Facilities appropriation for technical assistance, and encouraged the use of loan guarantees where possible. This law included a new provision directing the Secretary of Agriculture to begin collecting data on the economic effects of the projects that USDA Rural Development funds to assess their long- and short-term viability, and directed the Secretary to develop simplified applications for funding.

The 2014 Farm Bill eliminated several business programs, but consolidated many of their objectives into a broader program of Business Development grants. The law also provided $150 million in mandatory spending for pending rural development loans and grants and $63 million in mandatory spending for the Value-Added Product Grants program.

The law retained the 2008 Farm Bill provision permitting communities that might otherwise be ineligible for USDA funding to petition USDA to designate their communities as “rural in
character,” thereby making them eligible for program support. The law also amended the definition of rural area in the 1949 Housing Act so that areas deemed rural between 2000 and 2010 would retain that designation until USDA receives data from the 2020 decennial census. The provision also raised the population threshold for eligibility from 25,000 to 35,000.

Further, the law reauthorized funding for programs under the Rural Electrification Act of 1936, including the Access to Broadband Telecommunications Services in Rural Areas Program and the Distance Learning and Telemedicine Program under the Food Agriculture, Conservation and Trade Act of 1990. For Access to Broadband Telecommunication Services in Rural Areas, the law also established new procedures to compare applications and to set funding priorities. Additionally, a new Gigabit Network Pilot Program for high-speed broadband service was authorized at $10 million for each fiscal year FY 2014-FY 2018. The law also authorized a new Rural Energy Savings Program to fund loans to qualified consumers to implement energy efficiency measures.

Important Policies and Regulations

Rural Development releases an average of approximately 10 new regulations per year. Of those, approximately 20% are deemed significant and/or economically significant by the Office of Information and Regulatory Affairs.5

The following are the significant RD regulations that were finalized within the last year:

- **Community Facility Loans** - Interim Rule published July 6, 2016, and made effective the same date, amending regulations on Community Facility Direct Loans to enable RHS to make loans to eligible lenders who would then in turn re-loan those funds to applicants for projects that are eligible under the Community Facilities Direct Loan program.

- **Business and Industry Guaranteed Loan Program - Guaranteed Loanmaking and Servicing Regulations** – Final rule published June 3, 2016, and made effective August 2, 2016, strengthening criteria for non-regulated lender participation, provisions for New Markets Tax Credits and Cooperative Stock Purchase Program, and modified loan scoring criteria.

- **Rural Broadband Access Loans and Loan Guarantees** – Final Rule confirmation published June 9, 2016 and made effective the same date, addressing the topics of broadband service and lending speed definitions, eligibility criteria, rate affordability, affiliated companies, usage restrictions, and wireless broadband service. Specifically, Section 6104 of the Agricultural Act of 2014 (the 2014 Farm Bill) adjusted certain service area eligibility criteria, established new priority considerations and introduced new reporting sections which required more detailed information gathering and publishing for both the Agency and awardees.

---

5 Number of new regulations released per year (on average): (these include both significant and not significant regulations based on the total number of proposed RD regulations identified in the fall regulatory agenda from years 2012 through 2016 – 5 year avg. 53 proposed RD regulations appeared.) Based on 53 proposed rules appearing in the 5 year regulatory agenda, 13 were deemed significant/economically significant or 18.87% of the total.
Overview of the policy/regulation review process

Rural Development promulgates regulations in Title 7 of the Code of Federal Regulations, Parts 1600 through 1999, 3500 through 3599, and 4200 through 4299. In accordance with Executive Order 12866 and Departmental Regulation 1512-1, subject matter experts in each program area prepare rulemakings and work in conjunction with staff from the Office of General Counsel (OGC) and either Regulations and Paperwork Management Branch (RPMB) for non-RUS programs, or Program Development and Regulations Analysis (PDRA) for RUS programs. RPMB and PDRA are responsible for ensuring that Departmental and Federal requirements are followed for clearance and issuance of regulations, including implementation of the Paperwork Reduction Act of 1995.

RD policy and regulatory actions generally originate from the Program Branch Chief, Division Director, or Agency Assistant Administrator level and are then reviewed and cleared within the Agency through the same channels. The action is then provided to all affected RD Headquarters offices. For RHS and RBS, this includes Civil Rights, Program Support Services, the Faith-Based Coordinator, and Native American Coordinator, for review and comment prior to analysis by PDRA/RPMB. OGC then reviews and provides legal guidance, opinions, and edits as appropriate before PDRA/RPMB final clearance. Once cleared by PDRA/RPMB and subsequently signed by the Administrator, the action leaves the Agency for review and approval to publish provided by the USDA Office of Budget and Program Analysis (OBPA). Once approved, the action receives its final approvals from the Under Secretary before it is returned to PDRA/RPMB for publication. Regulatory actions deemed Significant by Office of Management and Budget (OMB) Under Executive Order 12866, need further clearance by the USDA Secretary and OMB.

2016 Presidential Transition
Rural Development (RD)

GAO and OIG Audits

Open OIG Audits

**Rural Business Programs Intermediary Relending Program (IRP) – JUN 25, 2010**
In this report OIG examined the agency’s controls over IRP to determine if they adequately ensure that program funds go to whom and for what they are intended. One recommendation related to recovery of funds made to borrowers for ineligible purposes remains open. Partial restitution has been received on the sole account in question and RD is seeking closure of the audit based on this disposition.

**American Recovery and Reinvestment Act (ARRA) B&I Loans – Phase II – FEB 13, 2012**
OIG initiated this audit to assess the effectiveness of Rural Development’s internal B&I guaranteed controls over loan prioritization, financial reviews, and eligibility, and whether the agency’s outreach program was effective in ensuring that Recovery Act funds were obligated. Two recommendations related to final rule publication and training remain open. Initial training and publication of the enhanced B&I rule is complete and RD is seeking closure of the audit based on this disposition.

**Rural Rental Housing Program Project Costs and Inspection Procedures – SEP 27, 2012**
The purpose of this audit was to evaluate the agency’s internal controls designed to ensure that owners accurately report the financial operations, and maintain the physical condition, of properties participating in the RRH Program. Six recommendations related to the ability of agency controls to detect any misuse of RRH Program funds by borrowers and their management agents remain open. Closure of this audit is expected later this calendar year and depends on the publication of several revised rules and a new handbook.

**ARRA Broadband Initiatives Program (BIP) – MAR 29, 2013**
This audit was commissioned to assess RUS’ internal controls over the approval of BIP loan and grant applications, including, adequacy to ensure projects were eligible and whether RUS took actions to mitigate the risks of overbuilding in service areas. One recommendation related to production of service area maps in the Broadband Program Mapping Tool remains open.

**ARRA - B&I Guaranteed Loans - Phase III – MAR 29, 2013**
Audit objectives were to assess the servicing of Recovery Act-funded B&I guaranteed loans, if Recovery Act funds were used properly, and whether the program was effective in terms of its performance measures. One recommendation, assigning lenders responsibility for balance sheet equity certification at closing remains open. A revised procedural notice has been published pending audit closure.

**ARRA Broadband Initiatives Program (BIP) Post-Award Controls – AUG 22, 2013**
This audit assessed RUS’ controls over BIP awardees’ fulfillment of their grant and loan/grant agreements (post-award controls) and evaluated the effectiveness of BIP in meeting and attaining Recovery Act goals. One recommendation requiring capture and analysis of post award performance remains open. The agency is currently seeking revision of the recommendation based on data collection challenges related to comingling of public and private funds by awardees, obfuscating performance results.
United States Department of Agriculture  
2016 Presidential Transition  
Rural Development (RD)

Rural Business - Cooperative Service Grant Programs Duplication – MAR 25, 2014  
This audit’s objective was to determine if there is duplication, overlap, or fragmentation of program objectives, goals, and/or funding in RBS grant and loan programs. Two recommendations related to program consolidation and duplication prevention remain open. Consolidation of four grant programs and revision of the RD Instruction related to Loan and Grant fund allocation is expected to be completed by end of calendar year closing this audit.

Single Family Housing Direct Loan Servicing and Payment Assistance Recapture (Centralized Servicing Center) – JUL 18, 2014  
In this audit, OIG reviewed how RHS services SFH direct loans to determine if CSC performs yearly reviews of borrower income, if the borrower is eligible for payment subsidy, and if payment subsidy is accurately calculated and repaid. Two recommendations related to receivable recapture and master death file debarment procedures remain open and are being addressed under the Do-Not-Pay initiative.

Review of Rural Rental Housing's Tenant and Owner Information – SEP 24, 2015  
This audit attempted to determine whether owners of RRH projects, or their management agents, report reasonable and accurate project operation information, and whether tenants report eligibility information accurately. Nine recommendations related to the automation of multiple program controls, payment recapture and project review remain open. Project reviews for anomalous payments are currently in progress, automation solutions are in the design phase, and fulfillment of repayment demand letters are under review by the National Appeals Division.

Rural Development Single Family Housing Direct Loan Credit Reporting – MAR 28, 2016  
This audit examined whether Rural Development accurately reported borrower repayment statuses in a timely manner to credit reporting bureaus and appropriate databases. Nine recommendations related to reporting deficiencies, data gaps, data accuracy, Debt Collection Improvement Act compliance, and Interagency Servicing Agreements are expected to remain open until mid-2017.

Rural Energy for America Program (REAP) – AUG 8, 2016  
The objective of this audit was to determine whether REAP loan and grant recipients and projects met eligibility requirements and whether appropriate project performance measures were established and achieved.
Significant Closed OIG Audits

This audit was commissioned to determine if Rural Development field personnel complied with the agency’s established internal control procedures at loan origination and closing that ensure homes and program participants who received Recovery Act funds met eligibility guidelines.

ARRA Rural Business Enterprise Grants – SEP 5, 2012
In this audit, OIG assessed the controls used for determining eligibility and servicing of Recovery Act-funded RBEGs including evidence used in determining eligibility and ranking at the state and national level.

Rural Development's Controls over Eligibility Determinations for the Rural Community Facilities Program's Direct Loan and Grant Recovery Act Activities – SEP 28, 2012
OIG initiated this audit to determine if program participants and project purposes met eligibility requirements and if RHS properly monitored Recovery Act funds, ensuring that they were disbursed and used in accordance with project specifications.

Recovery Act Single Family Housing Direct and Guaranteed Loans – DEC 12, 2012
This audit was to determine if Rural Development’s SFH Direct and Guaranteed Loan Programs met the performance goals established to measure their effectiveness in meeting the purposes of the American Recovery and Reinvestment Act.

This audit was to determine if RBS internal controls were functioning as intended to ensure grant recipients used funds for authorized purposes, met grant objectives in a timely manner, and provided the required matching funds, where applicable.

OIG conducted this audit to evaluate Rural Development’s internal controls that evaluate the issuance of loss claim payments to lenders.

OIG reviewed the effectiveness of RUS’ Recovery Act-specific performance measures for the Water and Waste Direct Program (WWD) including whether controls over WWD expenditures were adequate to ensure RUS spent Recovery Act funds as intended.

Rural Development Procurement Controls – MAR 24, 2014
In this audit, OIG assessed whether RD selected contractors and prepared procurement contracts in accordance with Federal Acquisition Regulations, ensured funds were correctly accounted for and used in the proper period, adequately monitored contract funding and unliquidated balances, and verified that deliverables were met in accordance with contract terms and provisions.
Open GAO Audits

RURAL HOUSING SERVICE: Opportunities Exist to Strengthen Farm Labor Housing Program Management and Oversight – JUL 13, 2011
GAO examined the demand for the FLH program; RHS’s processes for ensuring that the program is providing decent housing for eligible farmworkers; and the financial status and financial management of FLH properties.

FORECLOSURE MITIGATION: Agencies Could Improve Effectiveness of Federal Efforts with Additional Data Collection and Analysis – JUN 1, 2012
GAO examined the federal and nonfederal response to the housing crisis, the current condition of the U.S. housing market, and opportunities to enhance federal efforts.

RURAL HOUSING SERVICE: Efforts to Identify and Reduce Improper Rental Assistance Payments Could Be Enhanced – JUL 3, 2012
GAO reviewed the extent to which RHS has examined the sources and magnitude of improper rental assistance payments, RHS’s compliance with requirements and guidance concerning improper payments, and potential lessons RHS could learn from HUD efforts to identify and reduce improper rental assistance payments.

HOUSING ASSISTANCE: Opportunities Exist to Increase Collaboration and Consider Consolidation – AUG 16, 2012
GAO assessed the extent to which there is overlap or fragmentation in selected housing programs, federal collaborative efforts, and implications of consolidating selected housing programs.

ENTREPRENEURIAL ASSISTANCE: Opportunities Exist to Improve Programs' Collaboration, Data-Tracking, and Performance Management – AUG 23, 2012
In response to a statutory requirement, this report discusses the extent of program overlap and fragmentation, the effects on entrepreneurs, and agencies’ actions to address them; and the extent of tracked program information and whether these programs have met their performance goals and been evaluated.

This report examines how the workforces of USDA’s service center agencies changed from fiscal year 2003 to fiscal year 2012, the extent to which USDA’s policy on supervisory ratios aligned with OPM guidance in fiscal year 2012, and the extent to which USDA’s service center agencies followed leading practices when closing offices and reducing staff in fiscal year 2012.

TELECOMMUNICATIONS: USDA Should Evaluate the Performance of the Rural Broadband Loan Program – MAY 23, 2014
This report assessed issues related to the loan program geographic distribution and financial performance of loans and the relationship between loans, broadband deployment, and economic development, and how USDA evaluates progress towards these outcomes.
RECOVERY ACT: USDA Should Include Broadband Program's Impact in Annual Performance Reports – JUN 17, 2014
This report addresses how RUS ensures that projects are approved, completed by the deadline, and the extent to which RUS provides information that shows broadband program impact.

This report examines USDA’s climate change priorities and how these align with national priorities, the status of USDA’s climate change efforts, and the challenges USDA faces in implementing its climate efforts and the steps it has taken to overcome these challenges.

WATER INFRASTRUCTURE: EPA and USDA are Helping Small Utilities with Asset Management; Opportunities Exist to Better Track Results – JAN 4, 2016
This report examines what is known about the use of asset management among the nation’s water utilities, particularly small water utilities including the benefits, challenges, and steps EPA and USDA are taking to help small water utilities implement asset management.

This report discusses recent trends in the credit subsidy costs of the RHS Single Family Housing Guarantee program, the process for estimating those costs, and the extent to which RHS policies and procedures for the program are consistent with federal standards for managing credit programs.

This report describes USDA efforts to streamline and improve administrative services since 2011 and examines opportunities that may exist to strengthen these efforts.

This report assesses federal agency Information Technology spending, including the oversight of at-risk legacy investments and the overall age and obsolescence of federal IT.
Significant Closed GAO Audits

This report examines federal wind-related initiative programs or groups of agency activities that promoted wind energy through a specific emphasis or focus, wind-related initiatives implemented by federal agencies in fiscal year 2011, and their key characteristics. Assessments included the extent of fragmentation, overlap, and duplication, if any, among these initiatives, and the extent to which they were coordinated, along with how agencies allocate support to projects through their initiatives and the extent to which they assess applicant need for support.

**Improving Disposition and Oversight Practices May Increase Returns on Foreclosed Property Sales** – JUN 20, 2013
This report examined disposition goals, strategies, practices, and effectiveness in disposing of properties compared with those of the private sector; and FHA oversight of contractors that maintained and marketed their Real Estate Owned properties.

**TELECOMMUNICATIONS: Federal Broadband Deployment Programs and Small Business** – FEB 7, 2014
This report addresses the federal government’s efforts to ensure the availability of broadband services for small businesses, and the effect of selected federally funded and municipal networks on broadband service and small businesses.

**MANAGING FOR RESULTS: Implementation Approaches Used to Enhance Collaboration in Interagency Groups** – FEB 14, 2014
This report assessed how interagency groups responded to the central collaboration challenges identified in its prior work of defining outcomes; measuring performance and ensuring accountability; establishing leadership approaches; and using resources, such as funding, staff, and technology including those groups related to federal housing finance.

**NATIVE AMERICAN HOUSING: Additional Actions Needed to Better Support Tribal Efforts** – MAR 27, 2014
This report examines common housing challenges tribes face and actions that could be taken to address them.

This report examines the role of the federal government in the development and use of alternative jet fuels, key challenges to developing and using alternative jet fuels, and actions that the federal government plans to or could take to help address those challenges.

**USDA FARM PROGRAMS: Farmers Have Been Eligible for Multiple Programs and Further Efforts Could Help Prevent Duplicative Payments** – JUL 8, 2014
This report examines USDA programs that provided financial assistance to farms during the effective period of the 2008 farm bill (2008 through 2013), the potential for overlap and duplication among these programs; the extent that farms received payments from farm programs and the amount of these payments; and the internal controls USDA has designed to help prevent duplicate payments for the same crop losses to the same farms.
NATIONAL FLOOD INSURANCE PROGRAM: Additional Guidance on Building Requirements to Mitigate Agricultural Structures' Damage in High-Risk Areas Is Needed – JUL 29, 2014
This report evaluates the possible effects of NFIP, including its building requirements, on farmers in riverine areas that have a high risk of flooding and examines, among other things, the effects of building requirements on farmers in high-risk areas, and options for addressing any challenges farmers face.

This report describes the market developments since 2000 that have led to changes in the federal government’s role in the single-family housing finance system, analyzes whether and how these developments have challenged the housing finance system, and presents an evaluation framework for assessing potential changes to the system.

This report addresses federal programs that fund these services and supports for older adults, how these services and supports are planned and delivered in selected localities, and agency efforts to promote a coordinated federal system of these services and supports, including those related to affordable housing and community facilities.

ELECTRICITY GENERATION PROJECTS: Additional Data Could Improve Understanding of the Effectiveness of Tax Expenditures – MAY 28, 2015
GAO examined state and federal supports for the development of utility-scale electricity generation projects—power plants with generating capacities of at least 1 MW that are connected to the grid and intend to sell electricity—for fiscal years 2004 through 2013. This report identifies key state supports for these projects; examines key federal support provided through outlays, loan programs, and tax expenditures for these projects; and examines how state and federal supports affect the development of new renewable projects.

FEDERAL LOW-INCOME PROGRAMS: Multiple Programs Target Diverse Populations and Needs – JUL 31, 2015
This report describes federal programs (including tax expenditures) for low income recipients, identifies the number and characteristics of impoverished households, identifies the number, poverty status, and household characteristics of select program recipients, and examines research on how certain programs may affect incentives to work.

TELECOMMUNICATIONS: Additional Coordination and Performance Measurement Needed for High-speed Internet Access Programs on Tribal Lands – DEC 18, 2015
The report examines the perspectives of tribes and providers on high-speed Internet access and barriers to increasing this access; the level of interrelation and coordination between federal programs that promote high-speed Internet access on tribal lands; and existing data and performance measures related to high-speed Internet on tribal lands.
INNOVATIVE MANUFACTURING: Commerce Should Target Program Outreach to Address Capital Access Gaps – FEB 4, 2016
This report assesses the status of the Economic Development Administration’s (EDA) implementation of the Innovative Technologies in Manufacturing (ITM) program and the extent to which EDA has coordinated with other agencies to ensure that ITM program activities do not duplicate the efforts of other federal loan guarantee programs.

NONBANK MORTGAGE SERVICERS: Existing Regulatory Oversight Could be Strengthened – APR 11, 2016
This report examines, among other factors, recent trends in mortgage servicing and the oversight framework in which non-bank servicers operate.

MUNICIPAL FRESHWATER SCARCITY: Using technology to improve distribution system efficiency and tap nontraditional water sources – APR 29, 2016
This report examines technologies that could reduce demand on freshwater supplies by improving distribution system efficiency; technologies that could increase water supply by using nontraditional water sources; and locations and types of water utilities where these technologies are most commonly adopted.

This report examines community lender participation in the mortgage servicing market and potential effects of CFPB’s Mortgage Servicing Rules (MSR) on them, potential effects of MSR capital rules on holding or selling by community lenders, and the process regulators used to consider impacts of these new rules on mortgage servicing and the capital treatment of MSRs.

Other Significant Audits
OIG Federal Managers Financial Integrity Act (FMFIA) Audits

85401-17-FM – Findings: RD will accelerate the conversion from the federally non-compliant RUS Legacy system to the compliant RULSS.

04601-0001-31 – Findings: OIG found issues with the methodology the Centralized Servicing Center applied to determining payment subsidy eligibility and recapture.

85401-0005-11 – Findings: RD will develop and implement a formal review and evaluation process to assess results from the current SFH subsidy models, explaining and documenting any adjustments needed in the methodology.

04601-0002-31 – Findings: Rural Development was not compliant with the Debt Collection Improvement Act and the Fair Credit Reporting Act.
III. Congressional Relations and Issues

Overview

RD programs are generally supported throughout Congress and are a point of interest to many members due to the potential impact programs have on their constituents. The RD legislative team has continuous interaction with staff and members of the following Committees: House Agriculture, House Appropriations Subcommittee on Agriculture, House Finance Services, Senate Agriculture, Senate Appropriations Subcommittee on Agriculture, Senate Banking, and Senate Indian Affairs. The following is a compilation of RD related issues regularly raised by Congressional leaders over the past two years at Congressional hearings or through direct inquiries.

RD Wide

Chief Risk Officer (CRO) - Congressional leaders have a regular interest in the creation of a CRO within RD. RD has been working to implement a CRO function within the RD USEC office. This action is consistent with direction provided by Congress in the FY 2015 House of Representatives Agriculture Appropriations Report. The position was posted at the end of July 2016. Congressional notification and candidate selection is expected in October 2016. The anticipated start date of the CRO is late November 2016.

Tribal Relations – Members of Congress with tribal or native communities have an interest in how RD programs are being utilized in Indian Country. Agency outreach and funding levels are at the center of many issues raised by members including most recently at a hearing of the Indian Affairs Committee on June 22, 2016. Many members of the Senate Indian Affairs Committee are also members of the Agriculture, Appropriations, and Banking Committees.

IT Infrastructure – While generally an issue of importance to many in Congress, IT infrastructure inquiries regularly come from Appropriators specifically requesting information on how RD is utilizing funding provided for IT upgrades or program delivery.

Program Duplication – During Congressional hearings some members will regularly ask about program duplication and why RD administers programs similar to other programs within the federal government. This issue is normally raised when discussing housing, energy, and broadband programs and their relationship to DOE, HUD, and SBA programs. GAO also issues a regular report on duplication of programs throughout the federal government that members often reference.

Rural Poverty - Congressional leaders have a regular interest in what RD is doing to combat rural poverty. Questions can touch on any area of the RD mission such as economic development, affordable housing, critical infrastructure, and broadband access. A number of members have been advocating for a “10-20-30” plan to address persistent poverty counties across the United States. This plan would require at least 10 percent of federal funds in certain accounts be directed to counties with a 20 percent poverty rate for the last 30 years. In response to this, USDA has launched several place based initiatives that span Federal Agencies precisely for the specific purpose of focusing on those rural communities such as StrikeForce and Promise Zone initiatives.
Rural Definition - The House Appropriations Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies directed RHS to submit a report listing the criteria used to define the “rural in character” standard used in determining program eligibility. The Agency was also instructed to explain how it accounts for incarcerated populations and students of colleges and universities in its population counts. Due to the suspension of eligibility determinations made solely on the basis of Rural in Character designations, the Agency has not responded to this request (House Report 114-205).

Similarly, the Agency has not responded to House Report 113-468, in which the same Congressional subcommittee directed them to provide a report on its implementation of the three-part test to determine a community’s eligibility to participate in rural housing programs as required by the Housing Act of 1949, as amended. The requested report was expected to include information on the factors the Agency uses to determine whether a community is “rural in character” and when a serious lack of mortgage credit exists, along with a history of the agency's actions using this three-part test since the 2000 U.S. Census, and implementation of changes made by the Agricultural Act of 2014.
Rural Housing Service

502 Direct Single Family Housing Loan Program – USDA’s main housing loan program, 502 Direct loans are designed to help low-income individuals purchase houses in rural areas. Funds can also be used to build, repair, or renovate a house, including providing water and sewage facilities. The program provides fixed-interest mortgage financing to low-income families who are unable to obtain credit elsewhere. While this program falls under the jurisdiction of the House Financial Services and Senate Banking Committees, it is a regular point of interest and inquiry in the Senate and House Agriculture Committees due to the importance of affordable housing in rural America.

Community Facilities Program (CF) – The CF loan and grant program, administered by RHS, supports essential community facilities in rural areas with a population of 20,000 or less and has the strong support of many members of Congress. Most recently, the 2014 Farm Bill authorized the addition of a technical assistance and training component to the CF program designed assist communities in identifying and planning community facility needs. The provision authorizes use of not less than 3% or more than 5% of the total CF appropriation for this technical assistance component.

Consumer Financial Protection Bureau (CFPB) – In accordance with the Dodd-Frank Act arising from the financial crisis of 2008 and related Mortgage Servicing issues, CFPB was created to provide accurate, consistent, and transparent information to borrowers relative to mortgage debt owed. Even though the regulation does not specifically pertain to government loans Congress has asked whether the Customer Service Center is in compliance with CFPB and what resources are needed to attain compliance. RHS is striving to comply with the Act when servicing Single Family Housing loans.

RHS Multi-Family Housing Program (MFH) – The MFH program is of great interest to many members of Congress as it funds the construction, acquisition, and rehabilitation of Multi-Family housing for low to moderate income residents by providing 90% loan guarantees to certified lenders to make rental housing affordable to those residents. Most recently members have been concerned with how RHS will address the number of properties exiting the program, which potentially leaves constituents without affordable housing. RHS has been working to provide more data to MFH customers to improve their understanding of properties at risk of exiting and to encourage transfers of those properties to owners interested in retaining affordable housing. An exit tool has been developed to provide the public with portfolio data and RD has been increasing outreach through buyers, sellers, and industry meetings.

RHS is also working to incentivize nonprofit, mission-based organizations to acquire at-risk Section 515 housing through a demonstration program. Under this program, Section 515 loan transfers to program eligible non-profit entities will be able to earn a return on their own resources initially invested in the property when the property is estimated to leave the Section 515 program as a result of the natural maturity or final payment of the loan. By allowing non-profit organizations to earn on their initial investment, RD anticipates an increase in non-profit organization participation in multi-family housing portfolio preservation efforts.
RHS Multi-Family Housing Program Funding – In FY 2016, MFH used all funding in its Rental Assistance, Voucher, Multi-family Direct (Section 515), Multi-family Guaranteed (Section 538), and Multi-family Preservation and Revitalization (MPR) programs. The Section 538 program had the authority to increase its guarantee authority up to 25% above its budgeted level. RHS exercised that authority and used the additional $37.5 million. The MPR program used all FY 2016 budget authority, prior year carryover, and has conditionally approved (subject to available funding) enough transactions through September 2016 to use nearly all of its expected FY 2017 budget authority. The Section 515 program also used its budget authority on portfolio revitalization, leaving no money for new construction of affordable housing needed to offset the loss of housing by older properties exiting the program.

RHS Rental Assistance (RA) – RA is project-based assistance used in conjunction with RHS Section 515 and Section 514/516 Farm Labor Housing loan/grant programs. The program provides rental assistance directly to the owners of some RHS-financed projects under contracts specifying that beneficiaries will generally pay no more than 30% of their income for rent. The program makes up the difference between the tenant’s contribution and the rental charge. Congressional leaders are interested in participation rates of the program and whether current appropriated dollars are sufficient to cover demand.

In FY 2016, Congress requested quarterly reports on the status of funding in the RA program. This was as a result of MFH running out of RA funds in FY 2015. In addition, in FY 2016 Congress asked GAO to perform a review of the RA program and RD’s efforts relating to maturing mortgages. These reviews are expected to remain ongoing through at least early calendar year 2017.
Rural Business-Cooperative Service

Biorefinery, Renewable Chemical, and Biobased Product Manufacturing Assistance Program (Section 9003) – The 2014 Farm Bill expanded the scope of renewable energy programs within RBS to include the development of new and emerging technologies for advanced biofuels. Members have been particularly interested in mandatory spending and CHIMPS related to this program.

Healthy Food Financing Initiative (HFFI) – The 2014 Farm Bill authorized $125 million for HFFI and laid out several priorities including projects that use local foods as a strategy to increase healthy food access. The Department of Treasury and the Department of Health and Human Services also support HFFI through existing programs. While a number of members support this program, others have raised questions about how the program would be structured and operate.

Rural Energy for America Program – This program provides funding to eligible farmers, ranchers, and small businesses for purchasing renewable energy systems and making existing energy systems more efficient.

Value-Added Producer Grant Program (VAPG) – VAPG is supported by many in Congress. The 2014 Farm Bill added two new priorities to the VAPG program: one for Veteran farmers and ranchers and one for projects that best contribute to creating or increasing marketing opportunities for operators of small and medium-sized farms and ranches structured as Family Farms, Beginning Farmers and Ranchers, Socially-Disadvantaged Farmers and Ranchers, and Veteran Farmers and Ranchers.
United States Department of Agriculture
2016 Presidential Transition
Rural Development (RD)

Rural Utilities Service

Broadband – Access to broadband in rural America is a high priority to many members of Congress. RD broadband programs are strongly supported by both the authorizing and appropriations committees. The 2014 Farm Bill amended the Farm Bill Broadband program in order to strengthen the evaluation of applicants, increase transparency, and more effectively target resources to areas lacking broadband. As a result, RUS published an interim final rule in July 2015 to further define underserved areas, prioritize applications that offer service to the greatest proportion of unserved households, and outline the minimum acceptable level of broadband service. Hearing questions or inquiries from members traditionally revolve around RD efforts to expand access to areas of most need and how RD coordinates with other federal agencies such as the Federal Communications Commission.

Water and Environmental Program (WEP) Open and Free Competition Policy – Senator Shelby and Representative Aderholt of Alabama have inquired about the RUS, WEP open and free competition policy guidance issued to staff in FY 2012. They have raised specific concerns of ductile iron manufacturers who believe the policy dictates that PVC pipe be used, or preferred, on WEP projects. These concerns have led to language being included in the most recent appropriations bill regarding this issue.

Clean Power Plan (CPP) – On August 3, 2015, the CPP Final Rule was issued by the Environmental Protection Agency. RUS has heard concerns from law makers on how the final rule will impact RUS power supply borrowers that own coal generation assets and the subsequent risk to the RUS loan portfolio and in turn to U.S. taxpayers. Many rural electric cooperatives invested in coal-fired generation facilities with loan funds from and with the support of RUS. The current RUS loan portfolio for power supply borrowers is approximately $20 billion of which 35% or $7 billion are secured by coal-fired generation assets. Fifty four coal-fired plants in 21 states are financed with RUS loan funds.

Rural Water and Waste Disposal Program (WWD) – The Rural Water and Waste Disposal Program, a popular program among many members, supports construction and improvements to rural community water systems unable to get reasonable credit in the private market. The Water and Waste loan and grant programs assist eligible applicants in rural areas and cities and towns of up to 10,000 residents. Drinking water, sanitary sewerage, solid waste disposal, and storm drainage facilities may be financed with direct and guaranteed loans and grants. This program is also extremely popular with customers and is oversubscribed. The 2014 Farm Bill provided $150,000,000 in mandatory funding to address the backlog of pending applications in the RD/RUS Water and Waste Disposal Loan and Grant Program.

Rural Energy Savings Program (RESP) – RESP authorizes the RUS Administrator to make loans to utilities, and similar entities, that agree to use the loan funds to relend those funds to their consumers for the purpose of implementing energy efficiency measures. RESP also requires RUS to establish a plan for measurement and verification training, and technical assistance of the program. Sen. Merkley has been interested and involved in this program since its development.
IV. Internal and External Stakeholders

Important relationships with other Federal Departments or organizations

Appalachian Regional Commission (ARC): ARC is a regional economic development agency that represents a partnership of federal, state, and local government. Established by an act of Congress in 1965, ARC is composed of the governors of the 13 Appalachian states and a federal co-chair, who is appointed by the president. ARC is an additional source of funding and technical assistance for many of RD’s customers, and has partnered with RD on many projects and initiatives.

Delta Regional Authority (DRA): Established in 2000 by Congress, the Delta Regional Authority makes strategic investments of federal appropriations into the physical and human infrastructure of the 252 counties and parishes that make up the most distressed areas of the country’s Delta Region communities. Through the States’ Economic Development Assistance Program, these investments help to improve transportation and basic public infrastructure and to strengthen our workforce development system and local business environments for some of the same constituents served by RD. DRA is also another source of funding and technical assistance for many of RD’s customers, and has partnered with RD on many projects and initiatives.

Department of Commerce, Economic Development Administration (EDA): The EDA’s mission is to lead the federal economic development agenda by promoting innovation and competitiveness, preparing American regions for growth and success in the worldwide economy by encouraging its partners around the country to develop initiatives that advance new ideas and creative approaches to address rapidly evolving economic conditions. EDA currently partners with USDA RD and a number of other agencies on the “Build America” initiative, and has provided valuable data, technical assistance and funding to a number of rural economic development efforts that involved RD.

Department of Energy, Loan Programs Office (LPO): LPO investments are designed to accelerate the deployment of innovative clean energy projects and advanced technology vehicle manufacturing facilities across the United States. Some recent partnerships between LPO and RD have involved Bioeconomy projects.

Farm Credit Administration (FCA): FCA is an independent Federal agency that regulates and examines the banks, associations, and related entities of the Farm Credit System (FCS), including the Federal Agricultural Mortgage Corporation (Farmer Mac). The FCS is the largest agricultural lender in the United States. It is a nationwide network of lending institutions that are owned by their borrowers. It serves all 50 States and Puerto Rico and works with nearly every RD program area.

Federal Emergency Management Agency (FEMA): RD activities intersect with FEMA through a number of Disaster Assistance Programs for emergency water assistance, home owners, Community Facilities program borrowers, and business owners and that may be administered in conjunction with FEMA activities, as well as a continuing partnership of cross-agency referral.
Government Contact Center Council: The RD CSC has a contact center where homeowners can call to receive various types of information and services. To ensure consistency throughout the administration IRS, Social Security, and others with call centers developed this partnership to discuss challenges, successes, and directions related to managing government call centers.

Joint Federal Housing Agency Group: RHS is a member of this Joint Federal Housing Agencies task force, along with Housing and Urban Development, Veteran Administration (VA), Ginnie Mae, the Federal Housing Finance Agency, and the Consumer Financial Protection Bureau. The purpose of the task force is to increase cooperation among Federal housing agencies, to pool resources, and to achieve uniform housing regulations, policies, and practices whenever possible.

National Endowment for the Arts (NEA): RHS works with NEA to provide, coordinate, and implement technical assistance on place-based and arts-focused economic development in rural communities, through programs such as Our Town.

National Food and Agriculture Council (NFAC): The NFAC was established in 1982 as a governing body for Departmental policies and directives within the USDA with the primary purpose of coordinating all activities that require cooperative involvement across agencies in the field. The NFAC has representation from every Agency and management entity within the Department of Agriculture and is replicated at the State and Local level through similar bodies known as State FACs and Local FACs. Rural Development, Natural Resources Conservation Service, and Farm Service Agency (also known as the “Service Center Agencies”) share the leadership role as chair of the council on an annually rotating basis. The NFAC uses its network of SFACs and LFACs to disseminate USDA directives, coordinate intra-agency efforts, and to reduce costs through shared space and other resources both at headquarters and in the field. Every three years the RD Deputy Under Secretary for Operations and Management chairs this council with support from the RD Special Projects Manager/NFAC Liaison, which will occur again January 2018.

The Organization for Economic Cooperation and Development (OECD): OECD is a 35 member institution based in Paris, France. This international agency works with governments to understand what drives economic, social and environmental change. They measure productivity and global flows of trade and investment and analyze and compare data to predict future trends. They also set international standards on a wide range of topics, from agriculture and taxes to the safety of chemicals. The common thread of their work is a shared commitment to market economies backed by democratic institutions and focused on the wellbeing of all citizens. USDA, Rural Development holds a dedicated seat as a Vice-Chair and is a voting delegate to the OECD Working Party on Rural Development. This committee shapes and provides guidance to the OECD Rural Secretariat on rural development policy work at the OECD.

RD Employee Associations – National Association of Credit Specialists (NACS) and National Association of Support Personnel (NASP): NACS and NASP were both founded in 1973 under the former Farmers Home Administration. They were subsequently recognized as a consultative body and an association in 1974 and 1978, respectively. NACS and NASP members are all current or former RD employees who meet and work together to find ways to expand and improve the services provided to rural America.
Working hand-in-hand with RD senior leadership and agency managers, their accomplishments have been demonstrated in numerous process improvements and positive changes over the past 40 years.

Both associations have National Officers that serve as their Executive Board, Zone Representatives that speak for their zone (region), and committees that focus on specific programs and areas, and often provide input and participation in National Office taskforces and working groups. Both associations hold joint Zone meetings and an annual conference, which are attended by RD National Office representatives. NACS and NASP are funded through member dues and additional funds requested and provided by the RD Deputy Administrator for Operations and Management each year.

**RD Enterprise Governance Group Participation within USDA:** To support collaborative efforts within the USDA and manage overlapping interests and responsibilities, the Department has established standing councils with Department and Agency membership. RD leaders serve on these councils, which include, but are not limited to:

- CFO Council
- CIO Council
- Management Council
- Civil Rights Director Council
- Strategic Sourcing Council
- Homeland Security Council
- Cultural Transformation Taskforce
- Mission Area Human Resources Directors Council
- Labor-Management Forum

**RD Labor Organizations:** RD adheres to Departmental Regulation DR-4070-711, Labor Relations, to administer the Agency’s Labor Relations program. Labor relations essentially involves vesting management, employees, and unions with certain rights, as follows:

a. **Employee Rights** - To organize, bargain collectively, and participate through labor organizations in employment decisions affecting them.

b. **Management Rights** - To determine mission, budget, organization, number of employees, internal security practices; hire, assign work, direct, layoff, and retain employees, or to suspend, remove, reduce in grade or pay, or take other disciplinary action, and make determinations regarding contracting out.

c. **Union Rights** – Exclusively represent and act on behalf of its bargaining unit employees on matters pertaining to personnel policies, practices, and working conditions.

The Federal Labor Relations Authority (FLRA) certified the American Federation of State, County and Municipal Employees (AFSCME), Local 3870, as the exclusive representative for bargaining unit employees (BUEs) in Rural Housing Service, Rural Utilities Service, and Rural Business Service in Washington, D.C. Its purpose is to deal with Agency management regarding conditions of employment affecting employees, including
collective bargaining. The unit includes 267 BUEs, 64 of whom are dues paying members, occupying varying positions and grades. All are non-supervisory positions.

The American Federation of Government Employees (AFGE) Local 3354 was certified as the exclusive representative of the CSC’s Bargaining Unit Employees in 1997. The unit includes 485 BUEs, 278 of whom are dues paying members.

A list of the Agency’s bargaining unions and units is provided below:

Rental Policy Working Group: Multi-Family Housing is a member of the Rental Policy Working Group, which includes FHA, Treasury and OMB. The objective of the group is to better align rental housing policy across the federal government. Ongoing work is being done in the areas of physical property inspections, property financial reporting, Capital Needs Assessments, and energy conservation.

U.S. Department of Health and Human Services (HHS): RHS and HHS have a strong history of collaborating to help meet the health care needs of rural communities. RHS and the HHS Office of the National Coordinator for Health Information Technology and Health Resources and Services partner to leverage their resources to increase the availability of capital for health care facilities and health information technology, with the goal of improving the accessibility and quality of medical services in rural communities. This collaboration is further outlined in a Memorandum of Understanding between the two agencies.

U.S. Department of Housing and Urban Development (HUD): RHS and HUD work together to share information, coordinate programs and policies, leverage resources, and more. Partners within HUD include the Federal Housing Administration, Community Planning and Development, and Rural Housing and Economic Development. HUD also directly assists RHS with the following:

- **Single Family Housing Income Limits**: Single Family Housing programs are means-tested. Before assistance can be provided, the applicant’s income must not exceed prescribed thresholds. The thresholds (50%, 80% or 115% of area median income) are determined by the Secretary of HUD in cooperation with the Secretary of Agriculture. HUD determines the limits and provides the income data to USDA on an annual basis.

- **FHA TOTAL Scorecard**: Through an interagency agreement, HUD allows USDA to use the FHA TOTAL Scorecard tool as the decision component in the RD Guaranteed Underwriting System (GUS).

U.S. Environmental Protection Agency (EPA): RHS works closely with various offices within EPA, including the Office of Sustainable Communities, to provide and coordinate technical assistance on community planning and economic development in rural places, promote energy efficiency in federally-funded housing, and more.

U.S. Department of Justice, Civil Rights Division: The Civil Rights Division of the Department of Justice provides a wide array of legal services designed to protect the civil rights of all individuals. As such, RD is routinely engaged with this Division both to protect the rights of our employees as part of the Equal Employment Opportunity Act and to protect the rights of our customers related to topics like Environmental Justice, the Fair Housing Act, and the Equal Credit Opportunity Act.

U.S. Department of Treasury: Both directly and through the Department of Treasury’s Federal Financing Bank (FFB), RD utilizes various authorities to obtain, guarantee, and lend funds administered by the Department of Treasury to support RD’s substantial number of Federal Credit Programs. The FFB also holds several unique authorities that allow them to serve more directly as a lender with USDA RD as guarantor in certain Business and Utilities programs, and in some cases repurchase government backed securities at its discretion. The current RD Under Secretary is also a Federal Representative of the Community Development Advisory Board organized in Treasury’s Community Development Financial Institutions Fund.
U.S. Small Business Administration (SBA): The SBA and RD collaborate across multiple programs and projects, most notably the SBA 7(a) loan program and the RD RBS Business & Industry Loan Program. At multiple levels of both organizations, leadership has recently noted other opportunities for SBA and RD to leverage programs such as Rural Business Development Grants with existing SBA loan program customers. Some of this work is also conducted at the state and local level through community development organizations.

U.S. Department of Veterans Affairs (VA): CSC has an ongoing pilot project with VA for the sale of RD’s Real Estate Owned properties for a portion of the states. Upon obtaining title to properties in designated states, RD transfers securitization, maintenance, and marketing of properties to VA. VA has a contract vehicle for the sale of their properties and includes the RD properties in the disposition of both sets of properties. The Economy Act agreement has been in place for one year, is set to expire in April of 2017, and will be extended in the near future. The cost of agreement services is $10 Million annually.

White House Rural Council (WHRC): The White House Rural Council was established by Presidential Executive Order in June 2011 with the goals of improving coordination among federal agencies and deepening partnerships with external stakeholders. The council is chaired by the Secretary of Agriculture with membership comprised of the heads of 25 federal agencies and supported by the U.S. Department of Agriculture. RD has worked closely with WHRC since its inception on multiple cross agency initiatives designed to leverage resources across the federal government to combat rural poverty, improve rural infrastructure, grow regional economies, and enhance the overall quality of life in rural America.
Stakeholder group overview

**American Bankers Association:** National trade association established over 140 years ago that represents financial institutions of various sizes and charters. The majority of member banks have less than $250 million in assets. RD meets with the organization each year at their annual conference.

**American Biogas Council:** The mission of the American Biogas Council is to create jobs, environmental sustainability and energy independence by growing the American biogas industry. Primary focus is on anaerobic digesters, food waste, manure, and distributed energy.

**American Council on Renewable Energy (ACORE):** ACORE is a national non-profit organization dedicated to advancing the renewable energy sector through market development, policy changes, and financial innovation. ACORE is a strong advocate for the Rural Energy for America Program.

**American Farm Bureau:** The American Farm Bureau Federation, commonly referred to as the Farm Bureau, is a nonprofit organization and describes itself as the largest general farm organization in the United States. Their primary communication has recently focused on the Rural Cooperative Development Grant program.

**Association of Communication Engineers (ACE):** The Telecommunications Program works with ACE members on issues related to our loan and grant programs. We participate in their annual Board meeting by presenting update and technical information to them. We also collaborate on an ACE/RUS School which is a three-day training program coordinated by ACE to facilitate new information and updates about our program. ACE educates their members on how to assist RUS grantees and borrowers in project implementation.

**Association of Cooperative Educators:** This association provides members a forum to highlight programs and practices that increase understanding, innovation and professionalism in cooperative education. Their primary communication has focused on the Rural Cooperative Development Grant program and Cooperative Agreements.

**Bank of America:** Bank of America is the lender of record to Fulcrum Sierra Biofuels. Bank of America and Fulcrum are preparing for a financial close of their Section 9003 loan in December of 2016 and to start construction of their Biorefinery. This will be the first Section 9003 loan closed since January, 2011.

**Bank of Montgomery:** Top lender under the B&I program for three of the last five years. Mr. Vansickle is also the Chairman of the NRLA Board. RD meets regularly with this stakeholder regarding various projects throughout the year.

**Biofuels Digest:** The Digest is the world’s most widely distributed daily electronic biofuels (Bioeconomy) newsletter. The Digest also sponsors weekly webinars and biofuels-related conferences.

**Biomass Thermal Energy Council (BTEC):** BTEC is an association of biomass fuel producers, appliance manufacturers and distributors, supply chain companies and non-profit organizations that view biomass thermal energy as a renewable, responsible, clean and energy-efficient pathway to meeting America’s energy needs. BTEC engages in research, education,
United States Department of Agriculture
2016 Presidential Transition
Rural Development (RD)

and public advocacy for the fast growing biomass thermal energy industry. BTEC is a strong advocate for the Rural Energy for America Program.

**Biotechnology Innovation Organization (BIO):** BIO is the world's largest trade association representing biotechnology companies, academic institutions, state biotechnology centers and related organizations across the United States and in more than 30 other nations. BIO members are involved in the research and development of innovative healthcare, agricultural, industrial and environmental biotechnology products. BIO is a strong advocate of expanding the Biorefinery Assistance Program (9003) to provide more opportunities to biorefineries that produce renewable chemicals and other Biobased products.

**Cedar Rapids Bank and Trust:** Top lender under the B&I program for two of the last five years. RD meets regularly with this stakeholder regarding various projects throughout the year.

**Center for Budget & Policy Priorities:** Center for Budget & Policy Priorities is a nonpartisan research and policy institute that focuses on federal and state policies on poverty and inequality and fiscal responsibility.

**Citibank:** Citi is the lender of record to Ensyn Georgia Biorefinery. Citi and Ensyn are preparing for a financial close of their Section 9003 loan in early 2017 and to start construction of their Biorefinery.

**Coleman Publishing:** Publishes the Coleman Report as well as various small business loan underwriting guides. RD meets annually with this stakeholder at a lender roundtable they host each December.

**Cooperation Works!:** CooperationWorks! is a network of organizations promoting rural development through the formation of cooperatives in the United States. Their primary communication has recently focused on the Rural Cooperative Development Grant program.

**Corinne Young LLC:** is a strong advocate of expanding the Biorefinery Assistance Program (9003) in order to provide more opportunities to biorefineries that produce renewable chemicals and other Biobased products.

**Council for Affordable and Rural Housing (CARH):** CARH is a major stakeholder of Rural Housing Service. The Administrator and Deputy Administrator of Multi-Family Housing often engage with CARH by attending major meetings and inviting CARH to provide input on Multi-Family Housing Programs in writing and in person at RHS Headquarters. CARH’s national membership is comprised of large housing development organizations, multi-family housing property owners, and multi-family housing management companies. CARH has regional committees focused on local multi-family housing development and preservation.

**Credit Union National Association:** The Credit Union National Association (CUNA) is the largest national trade association in the United States serving America's credit unions. With its network of affiliated state credit union associations, CUNA serves America's nearly 7,000 credit unions, which are owned by more than 100 million consumer members. Their primary communication has recently focused on the RBS lending programs and RD cooperative development activities.
Distributed Wind Energy Association (DWEA): The Distributed Wind Energy Association (DWEA) is a collaborative group comprised of manufacturers, distributors, project developers, dealers, installers, and advocates, whose primary mission is to promote and foster all aspects of the distributed wind energy industry. Distributed wind, commonly referred to as small and community wind, is the use of typically smaller wind turbines at homes, farms, businesses, and public facilities to offset all or a portion of on-site energy consumption. DWEA is a strong proponent of the REAP program.

Education Partners and Stakeholders: The CF Program remains engaged in strengthening investments in rural education through outreach activities with targeted participants such as Board of Regents, Independent Colleges and University Associations, State Departments of Education, Charter School Associations and private school associations.

Enterprise Community Partners: Leverages resources to create affordable housing in strong neighborhoods. Within Enterprise are entities that lend funds, finance development and manage and build affordable housing. To date, Enterprise has invested $18.6 billion, helped create nearly 340,000 homes.

Environmental Law and Policy Center: The Environmental Law & Policy Center is the Midwest’s leading public interest environmental legal advocacy and eco-business innovation organization, and among the nation’s leaders. ELPC led the charge to create the Farm Bill’s first-ever clean energy programs in 2002 focusing on the Rural Energy for America Program. ELPC is a strong advocate of the REAP program including energy efficiency and energy in agriculture.

Farm Credit System – CoBank: CoBank is a national cooperative bank serving vital industries across rural America. The bank provides loans, leases, export financing and other financial services to agribusinesses and rural power, water and communications providers in all 50 states. Their primary communication has recently focused on the RBS lending programs, the Rural Cooperative Development Program and RD cooperative development activities.

Federation of Southern Cooperatives: There are three major themes of the Federation’s mission, work and accomplishments over the past forty years: to develop cooperatives and credit unions as a means for people to enhance the quality of their lives and improve their communities; to save, protect and expand the landholdings of Black family farmers in the South; and to develop, advocate, and support public policies to benefit membership of Black and other family farmers and low income rural communities. Their primary communication has recently focused on the Rural Cooperative Development Program, the Socially Disadvantaged Group Grant Program and Cooperative Agreements.

Greater Nevada Credit Union: B&I lender of the year for FY2016 and very active with energy programs. The lender is also a cooperative. RD meets regularly with this stakeholder regarding various projects throughout the year.

Holland & Knight: Works with energy and clean technology companies to develop and execute strategies for access to government grants, loans and contracts across multiple states and federal agencies, including the U.S. Department of Energy, U.S. Department of Agriculture (9003, Biorefinery Assistance Program) and U.S. Department of Defense.
Housing Assistance Council (HAC): HAC is an organization dedicated to affordable housing advocacy. HAC leadership engages with Rural Housing Service leadership on a regular basis. HAC leadership often speaks at the same conferences RHS leadership participates in, and helps RHS promote major program changes and improvements in their weekly email blasts and in their quarterly publication *Rural Voices Magazine*.

Independent Community Bankers of America: Primary national trade association for small US banks, representing more than 6,000 community banks of all sizes and charter types. RD meets with this organization each year at their annual conference in March.

Institutional Investors and Accounting Firms: RD has ongoing relationships with a wide variety of outside stakeholder groups, including accounting firms, institutional investors in the capital credit markets, and association groups, which help to market and leverage RD programs.

Institute of Real Estate Management (IREM): IREM is an international community of real estate managers dedicated to ethical business practices, maximizing the value of investment real estate, and promoting superior management through education and information sharing.

Kentucky Highlands Investment Corporation: Kentucky Highlands is a venture capital and private equity firm that also assists businesses with developing financing packages and is one of the leading nonregulated lenders under the RBS B&I program. RD communicates regularly with this group at various events hosted by other stakeholders.

Kilpatrick, Townsend & Stockton, LLP: focuses on U.S. and international project development finance and private placement representation of renewable and conventional energy, clean technology, environmental and infrastructure clients including a focus on USDA 9003 program and DOE programs. Clients represent developers, lenders, EPCs, O&Ms, equipment providers, private equity, venture capital and infrastructure funds.

Live Oak Bank: Live Oak Bank is one of the top lenders in the REAP guaranteed loan program.

National Affordable Housing Management Association (NAHMA): NAHMA is an organization made up of hundreds of multi-family housing property managers and management companies. NAHMA membership and CARH membership often overlap. RHS interacts with NAHMA by attending and speaking at major events and conferences they host as well as inviting feedback about RHS Multi-Family Housing Programs.

National Association of Affordable Housing Lenders (NAAHL): NAAHL represents organizations committed to increasing private lending and investing in low- and moderate-income communities. Members consist of private sector lenders and investors in affordable housing and community economic development: banks, loan consortia, financial intermediaries, local and national nonprofits, and public agencies.

National Association of Counties (NACO): NACO is an organization focused on researching and publishing data broken down by counties. NACO’s data helps USDA Rural Development explain the differences in needs between urban and rural areas. Rural Housing Service invites NACO to major Rural Housing events and will refer parties interested in learning more about the needs of rural America to NACO to get an in-depth understanding.
National Association of Development Organizations: The National Association of Development Organizations provides advocacy, education, research, and training for the nation’s regional development organizations. The association and its members promote regional strategies, partnerships, and solutions to strengthen the economic competitiveness and quality of life across America’s local communities. Their primary communication has recently focused on Promise Zones, Farm Bill Section 6025, and regional strategic planning activities.

National Association of Realtors (NAR): NAR helps Rural Housing Service promote Single Family Home Loan Programs to their national network of realtors. Realtors are often the first person potential homeowners interact with when trying to find an affordable way to purchase a home which makes this a key audience expanding RHS program awareness. Rural Housing Service invites NAR to come to USDA headquarters at least once a year to network with RHS leadership and learn more about RHS programs.

National Association of State Departments of Agriculture (NASDA): NASDA grows and enhances agriculture by forging partnerships and creating consensus to achieve sound policy outcomes between state departments of agriculture, the federal government, and stakeholders. NASDA has strong interest in the REAP program.

National Association of State Energy Offices (NASEO): NASEO is the only national non-profit association for the governor-designated energy officials from each of the 56 states and territories. Formed by the states in 1986, NASEO facilitates peer learning among state energy officials, serves as a resource for and about state energy offices, and advocates the interests of the state energy offices to Congress and federal agencies like USDA RD.

National Council of State Housing Agencies (NCSHA): NCSHA is made up of a large network of State Housing Finance Association leadership. NCSHA is a one stop shop for RHS to promote and publicize major program changes, needs, and improvements to a national stakeholder audience. Every year RHS leadership has a speaking role at NCSHA’s annual conference.

National Bankers Association: National trade organization representing minority and women owned financial institutions. RD meets at least twice per year with this organization and also attends their annual convention in October.

National Biodiesel Board: The National Biodiesel Board (NBB) is the national trade association representing the biodiesel industry in the United States. NBB is a strong advocate of the REAP program and the Advanced Biofuels Payment Program (Section 9005).

National Center for Appropriate Technology (NCAT): NCAT runs the Appropriate Technology Transfer for Rural Areas (ATTRA) program that supports data, information, and technical assistance focused on sustainable agriculture for farmers. Their primary communication has recently focused on the beginning and veteran farmer activities and Cooperative Agreements.

National Cooperative Bank (NCB): Is a leading financial services company dedicated to serving cooperatives and socially responsible organizations nationwide. Their primary communication has recently focused on RBS lending programs and cooperative development activities.
National Cooperative Business Association (NCBA): NCBA is the oldest not-for-profit cooperative development and trade association in the United States, fostering cooperative and international economic and social development in the United States and abroad. Their primary communication has recently focused on the Rural Cooperative Development Program, the Socially Disadvantaged Group Grant Program and Cooperative Agreements.

National Council of Farmer Cooperatives (NCFC): NCFC works on a wide range of legislative and regulatory issues of interest to agricultural cooperatives and their farmer and rancher owners. This includes cooperative tax issues, antitrust issues, energy, international trade, conservation and many others. Their primary communication has recently focused on the Value Added Producer Grant Program and agricultural cooperative development activities.

National Farmers Union (NFU): NFU represents family farmers, fishers, and ranchers across the country with formally organized divisions in 33 states. The National Farmers Union believes that good opportunities in production agriculture are the foundation of strong farm and ranch families, and strong farm and ranch families are the basis for thriving rural communities. Their primary communication has recently focused on the Rural Cooperative Development Program and agricultural cooperative development activities.

National Housing Conference (NHC) – NHC is an independent organization that hosts a large event in Washington, D.C. every year. In 2016 NHC’s conference focused specifically on rural housing needs for the first time in 30 years which brought much needed attention to the subject. Regardless of the focus, USDA Rural Development has a speaking role in the conference every year.

National Housing Law Project (NHLP): NHLP is a nonprofit national housing and legal advocacy center that works with a nationwide network of low-income housing advocates to increase and preserve the supply of decent, affordable housing, improve existing housing conditions, including physical conditions and management practices, expand and enforce low-income tenants' and homeowners' rights, and, increase housing opportunities for racial and ethnic minorities.

National Housing Trust: The National Housing Trust is focused on bringing together federal, state and local policymakers, private owners and investors, affordable housing practitioners, and the public to support quality, healthy neighborhoods with a range of housing options so that families of all income levels have an opportunity to thrive.

National Low Income Housing Coalition: The National Low Income Housing Coalition focuses on policy advocacy, research, and intervention efforts designed to preserve existing federally assisted homes and housing resources, expand the supply of low income housing, and establish housing stability as the primary purpose of federal low income housing policy.

National Partnership of Farmworker and Rural Organizations (MAFO): MAFO is a farmworker advocacy organization. MAFO invites RHS leadership to participate in and speak at their major meetings to discuss RHS’ Farmworker Housing Programs. MAFO often provides written feedback about how RHS can improve farmworker housing programs.

National Rural Electric Cooperative Association (NRECA): NRECA is the national service organization for more than 900 nonprofit rural electric cooperatives and public power districts providing retail electric service to more than 42 million consumers in 47 states, and whose
retail sales account for approximately 12 percent of total electricity sales in the United States. Their primary communication has recently focused on the RBS lending programs and cooperative development activities. RUS meets often with NRECA representatives and attends annual, regional, and occasionally board meetings. RUS’ relationship with NRECA and rural electric cooperatives has helped improve RD’s regulations and requirements and increased awareness of additional RD funding opportunities in rural areas.

**NTCA–The Rural Broadband Association:** NTCA is the association representing nearly 900 independent, community-based telecommunications companies that are leading innovation in rural and small-town America. Their primary communication has recently focused on the RBS lending programs and cooperative development activities. The Electric Program has had a strong partnership with the National Rural Electric Cooperative Association, which was created during the establishment of the Rural Electrification Administration, to help deliver electric service to rural areas 80 years ago.

**National Rural Housing Coalition (NRHC):** NRHC is a major stakeholder of RHS’ Mutual Self-Help Housing programs. RHS interacts with NRHC by participating and speaking at their annual meetings and conferences, and during Homeownership Month (June) to publicize and promote self-help housing.

**National Rural Lenders Association (NRLA):** NRLA is a national association representing banks and financial institutions. Their mission is to advocate for USDA Guaranteed Lending programs to support rural economic development. RD meets twice per year with the organization and also attends their annual conference in October.

**National Rural Utilities Cooperative Finance Corporation (NRUCFC):** The Electric Program has had a strong partnership with the NRUCFC, which was incorporated in 1969 to supplement RUS lending to rural electric cooperatives. RUS provides loan guarantees to NRUCFC, which has over $20 billion in loans. This relationship with NRUCFC and rural electric cooperatives has strengthened funding opportunities for rural electric cooperative utilities.

**National Rural Water Association (NRWA):** RUS has a long partnership with NRWA, which is the nation’s largest water and wastewater utility organization, and actively participates in NRWA conferences and training. RD Water and Environmental Programs staff partner with NRWA to provide critical training and technical assistance to rural water and waste utilities. NRWA provides training and on-site technical assistance to rural utility operators through its Circuit Rider program, conducts energy audits of water and wastewater systems, and provides sustainability training to utility operators. In addition, NRWA conferences and in-service training provide a wealth of information and training on utility management, operations, and governance. In the past year, WEP has worked with NRWA to promote RD Apply, (a new online application system) and has provided RD Apply training at nearly all NRWA national and state conferences.

**National Sustainable Agriculture Coalition:** The National Sustainable Agriculture Coalition is an alliance of grassroots organizations that advocates for federal policy reform to advance the sustainability of agriculture, food systems, natural resources, and rural communities. Their primary communication has recently focused on the Value Added Producer Grant Programs, the Rural Energy for America Program and the B&I Guaranteed Loan Program.
NeighborWorks America: NeighborWorks is a national organization that works with communities in need to improve housing and community economic development. NeighborWorks funds often leverage USDA investment dollars across several Rural Housing Service programs.

Opportunity Finance Network: The Opportunity Finance Network (OFN) is made up of hundreds of Community Development Finance Institutions (CDFIs). USDA has many programs rural CDFI’s qualify for, and OFN can help USDA promote those programs to their membership. Every October OFN hosts an annual meeting in Washington D.C., where USDA often participates and occasionally has a speaking role.

Orion Advocates: Orion Advocates is a full service government relations consulting firm. Patrick Rita focuses on the paper and forest products industry including the wood pellet industry and wood pellet manufacturers interests’ in the Advanced Biofuels Payment Program.

Renewable Fuels Association (RFA): RFA’s mission is to drive expanded production and use of American-made renewable fuels and bio-products worldwide.

Rural Community Assistance Corporation (RCAC): RCAC plays a major technical and management assistance role in the RHS Mutual Self Help Program every year. RCAC also recently received several million dollar Community Facilities Re-lending loan to reinvest in rural community facilities nationwide.

Rural Community Assistance Partnership (RCAP): RD Water and Environmental Program staff partner with RCAP, a federally-funded national nonprofit comprised of six regional partners, to provide training and on-site technical assistance to WEP borrowers that are financially unsustainable to help them achieve sustainability. WEP also partners with RCAP on special initiatives such as the Colonias project, which will help the poorest Colonias communities obtain financing and technical assistance to support water and wastewater infrastructure.

Rural LISC: Rural LISC works with USDA Rural Development to promote advocacy for investment in rural America. Rural Housing Service is often invited to have a speaking role at major Rural LISC meetings and conferences.

Self Help Bank: Self Help Bank is one of the top lenders in the REAP guaranteed loan program.

Smart Growth America (SGA): USDA works with SGA to bring innovative solutions, funding ideas, and insights from years of community development experience to small towns experiencing slow or nonexistent growth. In 2016 USDA Rural Development worked with SGA through a cooperative agreement to host workshop events in rural towns. USDA and SGA also completed financial analysis of each one of these communities so the town leadership could create an informed community economic development plan.

The Mortgage Bankers Association of America (MBA) – MBA is an organization made up of thousands of mortgage lending professionals across the country. RHS invites MBA leadership to many events at headquarters to network with RHS leadership and major stakeholders. MBA’s major publication (News Link) has featured many Single Family Housing program improvements over the years, and the editors/reporters are always open to working with RHS to publicize major achievements and changes.
Western Telecom Association (WTA): The RUS Telecommunications Program works with WTA members on issues related to our loan and grant programs. We participate in their spring and fall meetings by holding office hours to interact with current and potential borrowers. We also meet with them and their members upon request. WTA advocates for rural Telephone and Cooperatives relative to access for federal resources and favorable policies for their members.

a. Recent engagements with stakeholder groups

The O&M Division’s Office of Outreach and Community Engagement (OCE) includes a team of four Outreach Coordinators in the National Office. The team regularly collaborates with a diverse range of partners and stakeholders to extend RD’s reach to populations in rural areas that have been historically underserved. These partners and stakeholders include organizations that serve minority groups, federally recognized tribes, faith based organizations, Veterans, and new and beginning farmers. Some issues include lack of information about RD’s programs, lack of credit being available through traditional lenders, lack of culturally appropriate program information, and lack of capacity to access RD’s programs. Additionally, the Outreach Team helps to facilitate economic development roundtables with rural communities, connect partners that assist with developing regional plans, host Community College seminars to assist community colleges with economic development, and provide training to staff to help deliver RD’s programs more effectively in underserved communities. A sample of activities is included below.

V. **Top Issues**

**Hot Topics**

The following are a collection of hot topics issues within the Rural Development mission. Some have received limited inquiries by Congress, but mostly are of high importance within USDA and for RD stakeholders.

**RD Wide**

**Continued Labor Negotiations in Washington, DC and St. Louis, MO**

**Washington, DC** – Working conditions are governed by a Collective Bargaining Agreement (CBA) between the Agency and the Union. The current CBA was enacted on July 16, 2010, and expired on July 15, 2015, but continues to be operational until completion of existing negotiations. Negotiations with the union began on August 17, 2015 and continue to date.

**St. Louis, MO** – The current CBA began on November 5, 2009, and November 24, 2012, and expired most recently on November 24, 2015, but continues to be operational until completion of existing negotiations. Negotiations with the union began in January 2015 and negotiations continue to date.

**Contract Procurements** – Provided below is a list of National Office contracts that are due to expire in the first quarter of FY 2017 (October 1 – December 31, 2016).

</table>
Federal Employee Viewpoint Survey – In 2012, OPM administered a census survey to all federal employees to measure employees' perceptions of whether, and to what extent, conditions characterizing successful organizations are present in their agencies. Since then these surveys have continued annually as a random sampling of a percentage of employees based on the population of each organization within an agency or mission area. In 2012-2013, RD experienced a reduction of staff and budget that may account for the decrease in employee satisfaction and reduced positive scores in 2013. At the beginning of FY 2014, efforts were directed toward areas with low positive scores from the 2013 FEVS results through listening sessions, increased funding for training needs, IT equipment upgrades, and enhanced communication efforts. These efforts have been continuing through 2015 and 2016 and have made a positive impact on the scores.

Information Technology Investments – RD has made a considerable investment of time and resources to modernize and streamline the systems used to deliver and manage RD’s housing, business, and utilities loan and grant programs. These investments include new software platforms, enhanced cyber security measures, updated end-user and enterprise hardware, and the consolidation of recurrent cost items such as managed print services. The largest investment in those systems, otherwise known as the Comprehensive Loan Program (CLP), is focused on developing a more agile Enterprise wide IT platform for program delivery that condenses and optimizes systems, enables a more rapid rollout of new or changed business requirements, improves data transparency and reporting capability to support executive decision-making, and modernizes technologies, increasing the availability of support and longevity of future systems.

Information Technology, Comprehensive Loan Program – CLP’s more than $100 million Information Technology development effort originated in 2009 with initial funding from the American Recovery and Reinvestment Act. Because of the size and scope of this investment CLP is categorized as a “Major Investment” by the USDA subjecting the effort to continuous monitoring for compliance and progress milestones by OMB using the Federal IT Dashboard. After the investment planning stage of this effort, progress was initially delayed due to Sequestration spending cuts. CLP fully resumed work in FY 2014 with $21 million in appropriated funds, followed by another break in development in June 2015, due to multiple vendor contract protests re: its major support services contract vehicle award. RD successfully awarded a new contract in July 2016 and is moving forward with the remaining $34 million necessary to complete CLP’s modernization mission. Thanks to a favorable cost variance and CIO rating, CLP is currently reported as Green by OMB.

Leasing Shared Services Model with RD, Farm Service Agency (FSA) and Natural Resources Conservation Service (NRCS) – In 2014, the USDA Office of Procurement and Property Management and the three Service Center Agencies – FSA, NRCS, and RD – initiated efforts to collectively resolve leasing challenges through the establishment of a USDA Center of Excellence (COE) for Leasing. In FY 2016 the USDA established the Lease Accountability and Strategy Division (LASD) to manage this new Leasing Shared Services Model. At the same time, RD established a Leasing Shared Services Lead position to serve as the primary conduit to the Department, RD Real Property Leasing Specialists, and the agencies. Realignment of lease portfolio workloads and other collaborative efforts needed to fully implement the Leasing Shared Services Model will continue into FY 2017.
Program Metrics (Section 6209) – Section 6209 of the 2014 Farm Bill requires several RD programs to incorporate program metrics in program evaluation. This section is of high importance to OMB. OBPA and the RD Special Projects Manager are currently leading the effort to determine how we might best consider program metrics for the affected RD programs. This remains a critical issue as we move forward on future regulatory actions.

Regionalization of Administrative and Program Support Services – Over the past five years, RD has examined its administrative and support functions to identify potential areas to more effectively leverage these services to achieve cost efficiencies, savings and/or avoidance. In Fiscal Years 2011-12, RD experienced severe staff losses of over 1,000 personnel primarily due to the Voluntary Early Retirement Authority (VERA) and Voluntary Separation Incentive Payment (VSIP) exercises brought on by significant budget reductions. Two particularly hard-hit areas in the RD Mission Area were Real Estate Appraisal Services and Human Resources Management. In 2012, the RD Office of the Under Secretary directed the State Directors to establish plans responding to the reductions in Program Support functions (i.e. Appraisals, Architecture, and Engineering) and Administrative functions (i.e. HR, Procurement, and Budget) on a regional basis. With a nationwide portfolio that grows by $1 billion per month, states needed to streamline administrative functions to support the Agency’s programmatic demands without sacrificing business needs and customer service.

The result was Regionalization, which generally left the existing field organizational structure in place and left the employees performing these functions assigned to their current state organizations while performing the work for the region. Regional Administrative Program Manager (RAPM) and Regional Program Support Manager (RPSM) Positions, one per region and functional area, were created to manage the workflow of the virtual, regional teams. The structure, processes, and procedures implemented have begun to institutionalize Regionalization as RD’s way of doing business and generated multiple benefits in standardization, maximizing resources, increased accountability and customer service.

Rural Infrastructure Opportunity Fund – In 2014, USDA launched a public-private partnership with Capitol Peak Asset Management and CoBank, a national cooperative bank and member of the Farm Credit System. Designed to facilitate the flow of capital to infrastructure projects in rural America, the U.S. Rural Infrastructure Opportunity Fund included a commitment by CoBank to use up to $10 billion of its balance sheet capacity to lend and co-lend in support of fund-related projects. Since the fund’s inception, CoBank has lent more than $3 billion to over 400 financings of projects in the power, water, communications and community facilities industries.

Rural Opportunity Investment initiative (ROI) – In 2014, USDA launched ROI to expand private sector investment in rural communities. Rural communities have significant infrastructure needs, limited access to credit, and an abundance of investment opportunities. ROI is working to identify incremental opportunities for investment in rural water, energy, and broadband projects, reduce barriers to investment, and connect projects with investors. RD has recently hired four new career staff members to augment the current team. These Financial Investment Specialists will work directly with the Rural Development mission area’s program agencies while also reporting directly to the office of the Under Secretary for Rural Development. Their mission will be to build and expand on the work of ROI by engaging with the private sector to recruit investment to rural America.
Small Business Program – RD’s 2016 Vendor Communication Plan, approved by the USDA Office of Small Disadvantaged Business Utilization (OSDBU), increased RD’s engagement with small businesses in FY 2016 by promoting effective communication between RD representatives and industry partners. Already, in FY 2016 RD obligated $15 million to Small Businesses, $4 million to Small Disadvantaged Businesses, $2 million to Women Owned Small Business, $609,000 to Service Disabled Veteran Owned Small Businesses and Veteran Owned Small Businesses, and $798,000 to Historically Underutilized Business Zone Small Businesses. The final FY 2016 totals will be updated by November 2016. In FY 2015, four small businesses received USDA OSDBU Small Business Awards, and RD’s Rural Housing Service Single Family Housing Program contracting staff were recipients of the Small Business Program Special Achievement Award.
Rural Housing Service

Community Facilities Portfolio Management – The CF direct loan program has seen a seven-fold increase from a program level of $300 million in FY 2011 to $2.2 billion in FY 2016. This surge in funding has resulted in the CF loan portfolio doubling in size since FY 2011 increasing the workload of managing this rapidly increasing portfolio.

Community Facilities Relending Program - In September 2016 RD announced that it was making funds available to community lending institutions that qualify as eligible lenders through a new program called the Community Facilities Relending Program. This program allows RD to make direct loans to community lending institutions, referred to as “re-lenders,” who then re-loan the funds to eligible applicants to acquire, maintain, build, or renovate essential community facilities. The Community Facilities Relending Program targets community lending institutions working in high poverty and persistent poverty areas. This change to the CF rule is intended to increase RD’s impact in high need areas and empower experienced community-based organizations. The community lenders that receive CF funds through this relending program will have to hold their borrowers to the same rules and regulations current Community Facilities Direct Loan program borrowers follow.

Community Facilities Technical Assistance and Training Grants – CF is implementing a Technical Assistance and Training (TAT) Grant Program. A final rule with comments was published in the Federal Register on January 14, 2016. However, subsequent delays did not allow adequate time for applicants to submit applications or for funds to be obligated prior to the end of FY16. RHS plans to implement this program in the first quarter of FY17 by publishing a Notice in the Federal Register. In the absence of delays, RHS should be able to make announcements within 5 months of the date the Notice is published.

RHS Centralization initiative / Foreclosures and Real Estate Owned (REO) properties – For the small percentage of cases where RD properties are taken into receivership, RD began the effort of consolidating the management of foreclosures and REO properties function at CSC. Historically, RHS has struggled to manage and dispose of these properties efficiently, however a new MOU with the Veteran’s Administration has centralized the process for a limited number of states.

RHS Comprehensive Property Assessment – In 2015, RHS conducted a physical assessment on a sample of properties from across the spectrum of MFH programs. The assessment concluded that there was a shortfall of approximately $5.6 billion in funds needed to modernize and maintain the utility of our portfolio over 20 years. The bulk of the $4.7 billion cost was to preserve the Section 515 portfolio.

RHS Efforts to Address the Rural Opioid Epidemic – In 2016, USDA announced steps RHS is taking to help fill the need for transitional housing for people in recovery from substance use disorders. These steps included guidance to field staff that: encourages the use of Community Facilities financing for transitional housing projects; makes vacant USDA-owned properties in 22 states available for lease or sale to non-profits to convert into transitional housing; and outlines a pilot in four states (Missouri, Nevada, New Hampshire, and Vermont) to make vacant multi-family rental housing units available to tenants participating in drug court programs. In 2014 and 2015, RHS also provided more than $213 million to 80 projects in 34 States to develop or improve mental health facilities in rural areas.
RHS Loss Claims Project – The Customer Service Center approves all payments for losses experienced by partner mortgage servicers participating in the Guaranteed Rural Housing program. Due to program growth (over 400% since 2007), insufficient automation, limited staff, and fiscal resource limitations, the process of paying loss claims needed a complete analysis and overhaul. This project is designed to establish efficient, cost-effective, automated solutions to pay loss claims timely thereby minimizing costs of interest, penalties, and administration resulting from delays in loss claim payments. The project is fully funded and on track for completion by the end of FY 2017.

RHS Section 502 Direct Funding – In the last two Fiscal Years Borrower demand for Section 502 Direct loans has historically exceeded the program’s funding capacity, inviting questions from stakeholders about the sufficiency of the program’s funding level. In years prior to FY 2012, the Section 502 Direct program level often fluctuated between $1.1 billion and $1.2 billion, and the program fully used both its low and very low income funding. For example, obligations in FY 2010 exceeded the total program level ($2.1 billion), despite being more than double current program authority. However, while the FY 2010 obligation level is a better proxy for demand than current program levels, that obligation level cannot be supported by current staffing resources.

RHS Single Family Guarantee / User Fee and Delegated Authority – New authority granted by the Housing Opportunity through the Modernization Act of 2016 authorized RHS to collect a user fee of no more than $50 from guaranteed lenders. This new funding source is estimated to provide approximately $4 million annually for use in funding system enhancements to housing loan servicing systems. However, funding necessary for implementation of the User Fee and Delegated Authority regulation has not yet been identified. Initial implementation is planned for FY 2019 and 2020, with full implementation in 2021. Attention to securing the resources necessary for this implementation may be required.
United States Department of Agriculture
2016 Presidential Transition
Rural Development (RD)

Rural Business- Cooperative Service

Advanced Biofuel Producer Payments (Section 9005) – Producers of advanced biofuels are eligible for payments based on the amount of advanced biofuels they produce. Last year Senator Collins and the Biomass Thermal Energy Council, expressed concerns to Secretary Vilsack over the 85 percent discount on BTU value for solid advanced biofuels produced from forest biomass and the 5 percent cap on payments to producers of such fuels. The Secretary indicated that RBS will re-evaluate these factors. RBS has completed this evaluation and is in the process of developing a work plan and revised regulation addressing these concerns. RBS expects to revise the regulation to be effective later in FY 2017.

Business and Industry Guaranteed Loans & First Farmer’s Bancorp – First Farmer’s Bancorp, LLC, dba First Farmers Financial, headquartered in Orlando, Florida, was approved as an eligible non-traditional lender for the Business and Industry Guaranteed Loan (B&I) Program in seven states. Nikesh Patel, the founder and CEO of First Farmers Financial, was arrested by federal authorities on fraud charges, accused of fabricating loan-guarantee forms by forging the signatures of government officials and inventing borrowers. First Farmers Financial is alleged to have sold into the secondary market approximately 25 B&I loans that were never received or approved by the Agency. Nikesh Patel has plead not guilty to the charges. The Agency has determined that there were only 4 valid loans totaling $22.9 million made to First Farmer’s Financial (three loans in Georgia and one loan in Florida). Two of these loans have now been sold to an eligible lender, Northeast Bank, and the Agency is recommending a promissory note sale of Lancaster Energy Partners, LLC.

On August 31, 2016, a complaint was filed against the United States in Florida alleging a FTCA claim based on allegations that the USDA was negligent in certifying First Farmers as a non-traditional lender under the B&I loan guarantee program. The complaint was filed by a number of individual banks and investments funds.

In media reports, there has been some confusion about the significance that First Farmers Financial, LLC was an approved lender in the B&I Program. Approved lender status merely authorizes the lender to request that USDA guarantee a loan under the program. Approved lenders do not have authority to guarantee private loans on behalf of USDA. Instead, USDA reviews each and every loan submitted for the program to determine if the loan meets the requirements of the B&I Program before USDA guarantees the loan.

Business and Industry Guaranteed Loans, Guarantee Fee Rate – Since authorization was received in the FY 2012 Appropriations Act, this program has been charging an initial guarantee fee equal to 3% of the guaranteed amount of the loan, primarily to cover potential portfolio delinquencies. However, from 2012 to present the program has made significant strides in reducing delinquencies and improving portfolio performance.

A significant number of stakeholders and potential clients have recommended that the Agency return its guarantee fee to 2%, indicating that such a change would make the program much more competitive in the marketplace. Given the circumstances, RBS may need to discuss rate changes in the future.
Local and Regional Food Systems – RBS provides substantial funding for local and regional food projects and actively promotes local and regional food investments as important tools for rural economic development. These RBS efforts contribute to the Know Your Farmer, Know Your Food initiative, which coordinates local and regional food systems efforts across the Department. The following items are examples of the activities taking place at RBS:

- In FY 2015, RBS funded 311 local food project grants through RBDG, RCDG, SDGG, ARC, VAPG, B&I, REAP, and RMAP, totaling $91.6 million.

- In partnership with Wholesome Wave, RBS developed an AgLearn online training course for regional food system funders and investors on how to assess and finance local and regional food enterprises. With support from RBS staff, the training will be utilized by RD field staff and made available to the public.

- Creating new markets by linking rural producers to urban markets where local food demand is high. USDA’s Food LINC initiative (launched in March 2016) is leveraging over $2.4 million in both USDA and philanthropic funds and by working directly with its local Value Chain Coordinator and Community Development Financial Institution (CDFI), Communities Unlimited, Inc. (Fayetteville, AR), RBS is connecting small scale and minority farmers in the Arkansas-Mississippi Delta to consumers in Memphis, Tennessee, with the goals of increasing revenue to local producers, creating jobs along the value chain, and increasing access to healthy food.

- RBS developed a multi-volume technical report series called “Running a Food Hub.” The report series offers food hubs valuable information on how to plan for success, address challenges, and achieve viability.

- Staff have participated and presented in over 30 food systems conferences, webinars, and workshops – directly reaching well over 3,000 stakeholders with information and resources for developing local and regional food systems.

- RBS has supported the development of the organic sector through about $50 million in loans and Value Added Producer Grant funding, supporting producers entering new markets and diversifying production.

New and Beginning Farmers and Ranchers – USDA recognizes that the rapid aging of the American farmer is an emerging challenge. The average age of the American farmer now exceeds 58 years, and 2014 data shows that almost 10% of farmland in the continental United States will change hands in the next five years. This recognition has evolved into a robust, transparent, tech-based strategy to recruit the farmers of tomorrow. RBS has played a central role in these efforts by:

- Launching the first comprehensive, interactive online tool for new and beginning farmers, www.usda.gov/newfarmers.

- Supporting new and beginning farmers through its Value-Added Producer Grants and the Rural Energy for America Program, RBS is helping family farmers innovate and strengthen their operations. In doing so, these programs help family farmers stay on their farms.
Place-Based Initiatives – RBS is the primary lead on two cross agency place based initiatives; Rural and Tribal Promise Zones and Stronger Economies Together.

Rural and Tribal Promise Zones: Promise Zones is a White House initiative announced by President Obama in his 2013 State of the Union. Through three rounds of designations, we have a total of four rural and four tribal Promise Zones. The four rural Promise Zones are Southeastern Kentucky (since April 2014), South Carolina Low Country (since April 2015), Southwest Florida (since April 2016) and Eastern Puerto Rico (since April 2016). The four tribal Promise Zones are Choctaw Nation of Oklahoma (since April 2014), Pine Ridge Indian Reservation in South Dakota (since April 2015), Spokane Tribe in Washington State (since April 2016) and Pride of the Great Plains in North Dakota (comprising Turtle Mountain Band of Chippewa Indians and Spirit Lake Nation, since April 2016). RBS’s Community Economic Development (CED) team directly supports the rural and tribal Promise Zones economic activities.

Stronger Economies Together (SET): The SET Initiative is a cooperative agreement award with the Southern Rural Development Center (SRDC) which provides training and technical assistance to identified rural communities to assist with developing their regional economic development plan. Initiated in 2010, SRDC serves as a conduit for allocating training and technical assistance resources to appropriate land-grant co-op extension (including partnership with 1890 universities) to target SET Regions that are selected competitively. The plan increases the ability of isolated communities such as those in the Colonias, Appalachia, Delta, and Tribal regions to engage, identify their challenges and opportunities, capitalize on their regional assets, and increase their readiness to compete for Rural Development and other federal funds. Since completion of the first training in 2012, over $588 million in investments were received by SET regions, of which, 48% were from Rural Development.

Rural Business Investment Program (RBIP) – Existing and prospective Rural Business Investment Companies have recommended that RBS amend certain regulatory requirements. RBS is exploring updated program regulations to: Enable a Rural Business Investment Company (RBIC) to invest in an enterprise that is primarily located in a rural community, but may have a headquarters in a non-rural area; make the small business test equal to at least 25% of all investments, rather than the current two-pronged test which requires 50% investments in smaller enterprises, and 50% of those in small businesses; and change testing schedules for rural/metro and size of portfolio companies investments over a grace period of two to five years, as opposed to the end of each fiscal year.

In 2014, USDA licensed a $154.5 million Rural Business Investment Company (RBIC) that has been making private equity investments in agriculture-related businesses including bio-manufacturing and advanced farming technologies. This RBIC, managed by Advantage Capital Agribusiness Partners, has made 12 investments to-date, totaling $41 million.

Since 2015, an additional four funds have been conditionally licensed and two more are currently under RBS and Farm Credit Administration review. These conditional RBICs have a combined goal of raising approximately $335 million to invest into rural businesses. It is anticipated that Innova and Open Prairie will close in December 2016, with Meritus Kirchner and McLarty to close in 2017.
Value-Added Producer Grant Program (VAPG) – The VAPG, is a grant program within RBS. While effective in delivering grants that help agriculture producers in rural America expand their opportunities in the marketplace, stakeholders hold conflicting interests as they relate to the program. The National Sustainable Agriculture Coalition is actively pursuing both regulatory and legislative modifications to the VAPG program that would provide additional priority to specific categories like beginning farmers and ranchers and socially disadvantaged farmers and ranchers. The National Council of Farmer Cooperatives appears comfortable with the present priorities, but opposes modifications that will impact priority for agricultural cooperatives.

Modifying the VAPG scoring priorities to significantly enhance any one of the priority categories will likely reduce applications funded for larger cooperatives or other priority areas. RBS feels the present distribution of awards adequately meets the needs in a fair manner.
Rural Utilities Service

Rural Energy Savings Program (RESP) – Authorized in the 2014 Farm Bill, RESP was established to help rural families and small businesses achieve cost savings by providing loans to qualified consumers to implement durable cost-effective energy efficiency measures. RESP authorizes the RUS Administrator to make loans to utilities, and similar entities, that agree to use the loan funds to relend those funds to their consumers for the purpose of implementing energy efficiency measures. RESP also requires RUS to establish a plan for measurement and verification training, and technical assistance of the program. A NOSA was published on June 21, 2016 announcing the availability of $52 million in loans for FY16.

Rural Water Fund – USDA is working to leverage its existing Water and Environmental Programs portfolio which provides loans, grants and loan guarantees for drinking water, sanitary sewer, solid waste and storm drainage facilities in rural areas and cities and towns of 10,000 people or less. The policy goal of this pilot is to bring institutional investors into the market for rural water infrastructure lending by selling a participation interest in a bundle of USDA’s existing water loan assets to a private counterparty. In exchange for the sale, the counterparty would make a forward commitment for a certain amount of rural water lending within a specified period of time. The counterparty would target rural communities with populations greater than 10,000 people because they are not eligible for USDA’s grants and low interest rate loans for water infrastructure. The sales plan is expected to be sent to OMB before the end of 2016.
Timeline

January
CSC Support Services contract with Task Source for $3.3 Million expires January 17, 2017

CF Technical Assistance and Training Grants: target implementation in early FY17 - CF Technical Assistance and Training Grant Program implementation. A Final Rule with Comments was published in the Federal Register on January 14, 2016. However, subsequent delays did not allow adequate time for applicants to prepare and submit applications or for funds to be obligated prior to the end of FY16. The Agency plans to implement this program in the first quarter of FY17 by publishing a Notice in the Federal Register. In the absence of unplanned delays, the Agency should be able to make announcements within 5 months of the date the Notice is published.

March

RD Instruction 3570-A, Community Facilities Direct Loan and Grant Regulation: anticipate needing clearance of interim/final rule in the second half of FY17 - Consolidating the CF Direct Loan and Grant Regulations into one single regulation. Also included in this consolidation will be the inclusion of broadband projects as an eligible purpose for the CF Program.

RD Instruction 3570-E, Servicing Community Facilities Loans and Grants: anticipate needing clearance of interim/final rule in the second half of FY17 - The CF Program currently uses 7 different regulations to service CF loans and grants, this would consolidate the applicable parts of all 7 regulations into one servicing regulation.

The extension of the CSC Real Estate Tax Services contract with Corelogic for $1.3 Million annually expires March 2017

The CSC Property Preservation contract with Corelogic/MCS for $21 Million annually expires March 2017

The CSC Skip Trace Contract for finding address and occupant information with Experian for $35,000 expires March 2017

June

Single Family Guarantee – Regulation 7 CFR 3555: User Fee and Delegated Authority – Final Rule June 2017 - The Housing Opportunity through Modernization Act of 2016 authorizes the Secretary to (1) allow preferred lenders to issue loan guarantees without involving agency staff, and (2) require users of the Guaranteed Underwriting System to pay a user fee that will support the enhancement and maintenance costs of GUS and supporting systems. The fee will enable the agency to effectively administer the program and better manage portfolio risk. RHS is in the process of revising the regulation to add new sections pertaining to 1) the delegation of guarantee issuance authority (“delegated authority”), and 2) the remittance of the GUS user fees.

RHS needs approximately $1 million upfront for system enhancements to implement the User Fee and Delegated Authority regulation. The source of these funds have not yet been identified. This cost would be spread over a two-year period for system development and user
acceptance testing (FY 2017 and FY 2018). An additional $450,000 would be necessary to
ensure minor changes to the system can be made following the initial implementation (FY
2019, 2020, and 2021), as is customary with any major system enhancement. Full
implementation would occur in FY 2021.

Single Family Direct – Regulation 7 CFR 3550: Limitation on Seller Concessions and
Repayment Ratios – Final Rule by August 2017 - This rule will also revise the way in which
the Agency calculates the repayment ratios for applicants by including homeowner association
dues and other recurring, property-related assessments in the calculations.

STATE PROFILE

Alaska is a vast, economically, ecologically and culturally diverse state. Outside of Anchorage the state is sparsely populated, with few roads, a challenging climate and other challenges unlike any other part of rural America. Alaska has by far the largest percentage of indigenous people compared to other states. Alaska’s economy has been largely dependent on oil revenues, but with lower production and prices the state is facing a fiscal crisis.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 800 West Evergreen Avenue, Suite 201 Palmer, AK 99645-6539
- **Number of other offices:** Five Area Offices
- **Total workforce:** 32 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed and Direct Programs
  - Business and Industry Loan Guarantee Program
  - Water and Waste Disposal Loan and Grant Program
  - Community Facility Direct Loan Program
  - Rural Energy for America Program
- **List of programs centralized within the state:** Single-Family Housing Guaranteed and Direct Programs; Mutual Self-Help Housing Program; Housing Preservation Grants; 515 and 538 Multi-Family Housing Programs; Solid Waste Management Grant Program; Rural Alaska Village Grant Program; WEP Technical Assistance and Training Grants; WEP Direct Loans; Community Facilities Grants and Loans; Rural Community Development Initiative; Business & Industry Guaranteed Loan Program; Rural Business Development Grant Program; Intermediary Relending Program; Rural Energy for America Loan and Grant Programs; Value-Added Producer Grant Program; Advanced Biofuel Producer Payment Program

HOT TOPICS

Since 2009 three offices in the West area have closed due to budget cuts and office viability. This area is larger than California, without roads, a harsh climate, facing persistent poverty with high cost of living, and a largely Native Eskimo population many of whom speak in their native tongue. The challenge of serving this area has not been met by conventional means. In response, Cooperative Agreements have been established with four regional Native non-profit organizations to do outreach and deliver RD services. This nascent approach holds great promise, but the funding source of these agreements is not reliable.

There has been very little penetration of RD housing programs in Indian Country in Alaska and across the U.S. There are institutional, historic and economic reasons that have led to little appetite for debt in Native areas. The housing needs are great, and RD’s single family housing programs are powerful tools to contribute to this effort.

The U.S. Chairmanship of the Arctic Council has brought increased focus to America’s only Arctic state: Alaska. The economy and quality of life of Arctic residents internationally is part of the discussion and RD has many assets to help. The leading edge of climate change is happening in the Arctic and RD should remain in the forefront of village relocation and other efforts to sustain the well-being of Arctic residents.
Jim Nordlund, Director

Jim Nordlund was appointed by President Obama to the position of Alaska State Director for USDA Rural Development in August 2009. Since that time USDA-RD has invested over $2 billion in Alaska’s rural communities via electric, telecom, and sanitation projects; community facilities; housing, energy and business development. Jim has lived in Alaska more than 30 years and was previously the owner of Nordlund Carpentry LLC, a residential building contractor in Anchorage. Jim’s work in Alaska includes seven years as the state’s Director of Public Assistance where he managed 500 employees and a $250 million budget; he served in the Alaska State House of Representatives, was Chairman of the Chugach Electric Association, and he’s been a commercial fisherman. Jim has a bachelor’s degree from St. John’s University in Minnesota and a Master’s in Public Administration from the University of Colorado. He is married with one child and lives in Anchorage.

STATE PROFILE

Over 95% percent of the land area of Alabama has rural status, but, most of the people live in our urban areas. Approximately 59% of the population of Alabama lives in urban settings, and 41% lives in a rural area. Each city and town has their own unique characteristics and similarities, but are as diverse as the state’s landscape, encompassing rolling hills and mountains to the north, white sandy beaches to the south, and infiltrated east to west with acres of farm, pasture, and timber lands. Even with USDA Rural Development’s history of investment in rural communities, and thousands of success stories, adequate housing, infrastructure and community services in addition to outmigration are challenges encountered.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 4121 Carmichael Road, Suite 601, Montgomery, Alabama 36106
- **Number of other offices:** Eight Area Offices
- **Total Workforce:** 88 Full Time Staff
- **Top 5 most used programs:**
  - Single Family Housing – Guaranteed Loan Program
  - Water & Environmental Program
  - Business & Industry Guaranteed Loan Program
  - Multi-Family Housing Rental Assistance
  - Single Family Direct Loan & Grant Program
- **List of programs centralized within the state:**
  - Guaranteed Rural Housing (GRH)
  - Business & Industry Loan Guarantee (B&I)
  - Value-Added Producer Grant Program, REDLG & IRP (under consideration)

HOT TOPICS

Overall evaluation of Alabama structure and portfolio (loan making/servicing) to develop statewide plan and goals for next four years. To include, evaluating workloads and time spent making loans and servicing across programs and develop creative solutions to meet goals.

Update plan of operation and state program supplements outlining responsibilities of state and area staff (must be joint effort between program directors and area directors).

Develop written training plan for new hires (<3 years), and continuing education training on monthly/quarterly basis for all staff, and estimated costs, prior to beginning of each fiscal year.
Ronald W. Davis, Director

Prior to his appointment on November 23, 2009, Mr. Davis served as County Executive Director for Farm Service Agency, as well as Chief Program Specialist, and County Executive Director for several FSA Alabama offices. Prior to his FSA employment, Mr. Davis worked as a Conservation Technician for the Natural Resources and Conservation Service. With his appointment as State Director of USDA Rural Development, he has work experience with three USDA agencies—Rural Development, Farm Service Agency, and Natural Resources and Conservation Service, for a total of 38 years of Federal service.

STATE PROFILE

Although Arkansas ranks as the 20th best state for business, with the 2nd-lowest cost of doing business, 5th-lowest cost of living, Arkansas ranks among the ten states with the highest poverty rate in the country. The loss of manufacturing jobs has greatly affected the economic base of rural areas of the state with urban counties faring better than rural counties. Pockets of extreme poverty still remain with 19 counties having rates of 25 percent or greater.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 700 West Capitol Avenue, Room 3416, Little Rock, AR 72201
- **Number of other offices:** six area offices and three sub-area offices
- **Total workforce:** 71 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Direct and Guaranteed Home Loan Programs
  - Community Facilities Loan Grant Programs/ CF Guarantee Loan Program
  - Water and Waste Disposal Loan and Grant Programs
  - Business and Industries Loan Guarantees
  - Multi-Family Housing Guaranteed Loan and Farm Labor Housing Direct Loan Programs.

- **List of programs centralized within the state:** The Business and Industry Loan Programs, Single Family Housing Guaranteed Loan Program and the Multi-Family Direct and Guaranteed Loan Programs are centralized in Arkansas. These loans area processed in the Little Rock State Office.

HOT TOPICS

Employee retirements at the end of the calendar year/filling these critical positions in a timely manner.

RD will assume leadership responsibility for the State Administrative Committee Effective January 2017.

Eligible area determination for Single Family Housing and its adverse impact on North West Arkansas.
Lawrence McCullough was appointed State Director of Arkansas USDA Rural Development on August 24, 2009. Prior to this appointment he retired January 3rd, 2009 with 39 years at USDA. McCullough was Director, Single Family Housing (SFH) for 14 years. Prior to becoming Director, SFH, he served as Assistant to FmHA State Director, District Director, Farmer Program Specialist, Assistant District Director, County Supervisor, and Assistant County Supervisor. McCullough has a Bachelor of Science Degree in Agriculture Education from Arkansas AM&N College (currently UAPB). McCullough received an army commission and served in the Army Reserve for twenty-one (21) years retiring with the rank of Major. McCullough proudly serves on the Arkansas Weatherization Policy Advisory Council. Mr. McCullough and his wife, Joyce, have four children.

STATE PROFILE
Arizona is the sixth largest state in the Union. It is home to 23 Native American tribes, including a portion of the Navajo Nation, the largest reservation in the U.S. We share our southern border with Mexico and have a Hispanic population of 30%. 12.5% of our population live in rural areas. RD has targeted both the border region and the Navajo Nation’s Former Bennett Freeze Area and have been successful in bringing additional services and infrastructure to those areas. The border town of San Luis, AZ, is a good example of how effective our programs have been. Through our self-help housing program, we have built hundreds of homes over the past years. That town now has a homeownership rate 71% higher than the rest of the state and the nation.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 230 N. 1st Avenue, Suite 206, Phoenix, AZ 85003
- **Number of other offices:** eight field offices
- **Total workforce:** 52 Full Time Staff

STATE PROFILE

Rural Development in California has invested nearly one billion dollars each fiscal year since 2009 to support our mission, with rural housing programs serving as the primary driver. Much of this total is credited to the high caliber employees and outstanding partners and stakeholders throughout the state committed to improving rural California. Despite the state’s size, and lack of persistent poverty counties, there remains significant rural regions of high poverty where California RD continues to target it’s programs.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 430 G Street, Agency 4169, Davis, CA 95616
- **Number of other offices:** [17 field offices](#)

HOT TOPICS

Approx. $110 million backlog of CF loan projects ready to be funded within the first 60 days.

Potential displacement of 700 low-income households at 39 agency properties with state funded rental subsidies.

Need for additional staff to adequately deliver programs, including backfilling retiring employees prior to retirement for training purposes.

Bioenergy: [REAP](#) is oversubscribed, and challenge to get banks to use guarantee on their deals.

Healthcare: $20+ million in backlog for rural healthcare projects
Janice Waddell, Director

Janice Waddell has 35 years of experience with USDA Rural Development and its predecessor agencies. Prior to her appointment as state director in December 2015 she concurrently served as Assistant to the State Director and California Native American Coordinator where she was actively engaged in the Public Private Partnership Initiative as well as border initiatives. Previously, Waddell spent 19 years as the state’s Community Programs Director where she delivered more than $1.2 billion in funding to improve infrastructure and various community facilities throughout rural California.

KEY STAKEHOLDERS

Sacramento Municipal Utility District (SMUD) (partner in biodigester projects)  
California Federal Dairy Digester Work Group (partner)  
Live Oak Bank (national partner for energy project out of NC)  
CA Council for Affordable Housing  
CA Coalition for Rural Housing (partner)  
Housing Community, Dept. of Housing and Community Development

STATE PROFILE

In FY 2015, Colorado RD invested nearly $645,000,000 in rural Colorado through the affordable housing, business development, and community infrastructure programs. We are a small agency and most of us live in the communities where we work.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** Denver Federal Office, Building 56, Room 2300, PO Box 25426, Denver, CO 80225-0426
- **Number of other offices:** Six Field Offices
- **Total workforce:** 49 Full Time Staff
- **Most used programs:**
  - Single Family Housing Guaranteed Loan Program
  - Community Facility Program
  - WEP Direct Program
- **List of programs centralized within the state:** Single Family Housing Guaranteed and Direct Loan Programs. All program staff are directly supervised by Program Directors.

HOT TOPICS

Colorado RD is poised to be one of the top five states in terms of production and performance in each of the program areas and it’s important that the landing team provides the tools and the leadership necessary to ensure that Team RD Colorado has what it needs to meet and exceed our FY 17 goals.

Colorado RD must continue to provide additional focus to certain segments of the population and certain areas of the state (which will be outlined and discussed in the State Director exit memo) and it’s important the work continues unabated in these areas as the Administration changes.

The Union Agreement at Colorado RD has not been updated in decades and management and the union are in agreement that a new contract is needed.
Trudy Kareus, Director

Ms. Kareus came to USDA Colorado Rural Development after nearly 40 years of service working for Members of Congress as well as serving both the Clinton and the Obama Administrations in various management capacities at USDA. Kareus was previously the State Executive Director (SED) of the USDA Colorado Farm Service Agency. For much of her career she worked for Members of the Colorado Congressional delegation, both in Colorado and in Washington DC.

KEY STAKEHOLDERS

Rural Community Assistance Corporation (RCAC) (funded and partner)

(970) 290-6467
STATE PROFILE

The largest DE & MD programs are Housing and Community programs including WEP and Community facilities. Multiple partnerships expand our fiscal and community reach. We are geographically unique covering “Mountain Maryland” (Appalachia), Southern Maryland formerly tobacco country, Maryland’s Eastern Shore and Delaware’s two rural Counties constituting 2 of the three States of the Delmarva Peninsula. The large Washington-Baltimore metropolitan that divides rural Maryland areas and retiree destinations (Proximity to Ocean and Bay) disguises the rural nature and need of many communities in our bi-state service rea. The increasing MHI in many counties distorts the lower tier of those most in need. Our focus is to return growth and prosperity to rural Delaware and Maryland.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1221 College Park Dr., Suite 200, Dover, DE 19904
- **Number of other offices:** 3 (1 Area office in Hagerstown and 2 employees work from an FSA office in La Plata and Upper Marlboro)
- **Total workforce:** 43 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Loan Program
  - Single Family Housing Direct Loan Program
  - Community Facility Grant Program
  - Water and Waste Water Grant Program
  - Water and Waste Water Direct Loan Program
- **List of programs centralized within the state:** All (Although employees are located in 4 locations, all the program staff report to one of four Program Directors)

HOT TOPICS

DE/MD is understaffed; the FTE ratio to dollar volume and number of loans and grants worked is staggering. It is a continual struggle to match FTE’s to workload; e.g. - CF servicing, an expected increase workload in SFHG due to the upcoming reduction in interest rate and guarantee fee and continual demand for water and wastewater infrastructure..

Continue to focus on CED. We do not simply make loans and grants, we engage deeply with communities by turning outward and understanding the communities’ aspirations. We strive to leverage resources to not only create economic opportunity, but strengthen the conditions that actually make communities work and thrive. CED efforts in DE/MD should continue the Delmarva Prosperity initiative and the 501c-3 committee for unincorporated communities who own wastewater infrastructure and are struggling to operate and maintain them.

A much more systemic issue that directly impacts our credibility in our communities is the lack of Contracting Assistance and 448 homes that are custodial properties; some date back to 2010 when foreclosure action was started. Need private attorney to carry legal action forward.
Dr. William A. McGowan, Director

Bill has been a leader in rural communities for over 35 years. He was appointed by the Obama Administration in November, 2014 as State Director. His diverse background includes 12 years of management in the agriculture supply and horticulture industry. In 1989 he joined the University of Delaware as a Cooperative Extension agent. His 24 year extension career focused on helping people work through complex public issues. He believes that lasting solutions emerge from the community and guides the development and implementation of a path forward accordingly.

STATE PROFILE

Georgia is the largest state, geographically, east of the Mississippi River and is the ninth most populous state, with a population of 9,687,653. The 2010 census estimated 24.93 percent of Georgia’s population is rural. Georgia Rural Development invests nearly $1 Billion annually in direct loans, guaranteed loans, and grants. We have a superb working relationship with key state agencies that partner with RD on many rural issues such as housing, water and environmental issues, renewable energy, broadband expansion, economic development, education, leadership development and community healthcare.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** Stephens Federal Building, 355 East Hancock Avenue, Room 300, Athens, Ga 30601
- **Number of other offices:** 14 Field Offices
- **Total workforce:** 103 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Loan Program
  - Single Family Housing Direct Home Loans
  - Single Family Housing Repair Loans and Grants
  - Community Facilities Direct Loan and Grant Program
  - Rural Energy For America Programs
- **List of programs centralized within the state:** B&I Loan Guarantee, Intermediary Relending Program, Multi-Family Housing Guaranteed Loans, Rural Energy for America Programs, Rural Micro-entrepreneur Assistance Program, Socially Disadvantaged Groups Grant, Value Added Producer Grant

HOT TOPICS

Strengthen and multiply partnerships with Single Family Housing Direct loan packagers and continue field office outreach efforts to increase Georgia’s Single Family Housing Direct Home Loan (Section 502) loan making.

Increase Water and Waste Water Loan and Grant Program obligations by fortifying the pipeline of applicants. Improve training, communication and follow up with engineering firms and eligible communities, increase WEP outreach.

The national B&I Guaranteed Loan delinquency rate is 4.31%. Georgia’s B&I delinquency rate is approx. 13%. Every effort is being made with the assistance of the National Office to reduce Georgia’s delinquency rate. Accounts are being serviced intensely and this will need to continue into FY 2017 & 2018.
Jill P. Stuckey, Director

Jill Stuckey was appointed as State Director of Georgia Rural Development in April 2016. In her prior work with the State of Georgia Environmental Protection Division and as Director of The Center of Innovation for Energy, her ideas saved Georgia more than $100 million dollars in remediation and capital costs and helped bring over $1 billion of energy infrastructure in new industries to the state. She serves on many nonprofit boards including Georgia Women of Achievement, Friends of Jimmy Carter National Historic Site, Plains Better Hometown Association, the Federal Reserve Bank’s Ag Advisory Council, and Southern States Energy Board-Governor’s Alternate.

STATE PROFILE

The Hawaii State Office oversees the State of Hawaii, 2 U.S. Territories of Guam and American Samoa, 1 U.S. Commonwealth of the Northern Mariana Islands, and 3 foreign countries of The Republic of Palau, The Federated States of Micronesia, and The Republic of the Marshall Islands. With a region comprised of isolated island communities, many with high poverty and limited financial and technical capacity, Rural Development programs provide an invaluable resource to local community, business, and public stakeholders. Affordable housing, quality health care and public services, and access to capital are essential Rural Development deliverables that contribute to improving the quality of life and increasing economic opportunities for the families and communities we serve in the region.

STATE PROGRAM DELIVERY STRUCTURE

- State Office Location: 154 Waianuenue Ave., Rm. 311, Hilo, Hawaii 96720
- Number of other offices: 2 Area Offices (Oahu & Guam) and 7 Satellite Offices (Maui, Kauai, Molokai, Pago Pago American Samoa, Pohnpei FM, Majuro RMI, and Koror Palau)
- Total workforce: 43 Full Time Staff
- Top 5 Most used programs:
  - Single Family RHS Direct Housing Loan Program
  - Single Family RHS Guaranteed Housing Loan Program
  - Grant Programs – Community Facilities, Rural Business, and Housing Rehabilitation
  - Community Facilities Direct Loan Program
  - Relending Programs – Intermediary Relending Programs, Rural Microentrepreneur Assistance Program, Rural Economic Development Loan & Grant Program.
- List of programs centralized within the state: Single Family RHS Guaranteed and Direct Housing Loan Programs, Rural Business Programs, Community Facilities Programs, and Water & Environmental Programs.

HOT TOPICS

Due to the region’s geographic expanse and obligations to deliver programs (Compact Agreement of Freely Associated States), the cost of program delivery, operational costs, and staffing requirements requires annual supplemental funding allotments in order to achieve expected level of Program delivery and servicing, performance of Administrative functions, and to cover extraordinary State Department charges for activities in foreign countries. Reorganization of operations under consideration to reduce cost of operation.

Needed evaluation of the formula utilized in determining the allocation of various Program loan and grant funding to each state.

Question on the legality of the Chamorro Land Trust and whether the communities on Chamorro Land Trust lands are eligible to access Rural Development program assistance. Issue before the Office of General Counsel and Department of Justice.
Chris J. Kanazawa, Director

Mr. Kanazawa was appointed as Hawaii State Director in February 2010. Prior to this appointment, he spent his entire business career in the private sector with over 23 years of real estate development experience. During this period, held positions as CEO of Amfac/JMB Hawaii, CEO of Coldwell Banker Properties, and CEO of Parker Ranch, Inc. Holds a Bachelor of Arts degree in Economics from the University of Hawaii and a MBA in Accounting and Finance from the University of Southern California, Marshall Graduate School of Business.

  - Business & Industry Guaranteed Loan Program

HOT TOPICS

Demand for the Rural Economic Development Loan and Grant (REDLG) program nationwide has soared forcing us to lower expectations among rural electric cooperatives, telcos and municipal utilities in Iowa. It is a valuable program and Iowa partners have high expectations. Ongoing moderation of what the program can sustain is required.

Community and Economic Development (CED) is being incorporated into the way we do business. But it requires ongoing attention, encouragement, and training. The CED team is asked to do a lot, and needs to be reinforced and supported.

Our outreach to Spanish-speaking audiences has improved dramatically with the hiring of bilingual employees. It is something that can be expanded even further, but will require the cooperation of the two Spanish-speaking employees (and their direct supervisors).
Bill Menner, Director

Bill Menner was selected by the Obama Administration in July 2009 to serve as the USDA Rural Development State Director in Iowa. Prior to his appointment, Menner was the executive director of Poweshiek Iowa Development, a county-wide economic development organization based in Grinnell. In addition to acting as the county economic development director, he led downtown development and tourism efforts in the City of Grinnell.

STATE PROFILE

Idaho covers 82,747 square miles and has a population of over 1.6 million people, with one-third of them living in rural Idaho. Idaho’s rural areas cover 88.3% of the State. Since FY2009, Idaho Rural Development has invested over 2.4 billion dollars in rural Idaho. The money invested in rural Idaho consisted of over 14,000 awards. Approximately 90% of Idaho’s investments are loans to be repaid over time.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 9173 West Barnes Drive, Suite A1, Boise, Idaho 83709
- **Number of other offices:** Four Area Offices and two Satellite Offices

  - Single Family Housing Loan Guarantees
  - Single Family Housing Direct Loans
  - Business and Industry (B&I) Loan Guarantees
  - Rural Business Development Grants (RBDG)
  - Water and Environmental Loan and Grant Program (WEP)
- **List of programs centralized within the state:** Single Family Housing Loan Guarantees and Single Family Housing Direct Loans

HOT TOPICS

Between the years of 2011-2013 Idaho lost 21 employees due to the VERA/VSSIP buyout offered to employees, which is a 27.25% reduction, one of the largest losses in the region and 11th largest loss in the Nation. This resulted in a huge shift of workload to the remaining staff. Idaho’s current FTE is 30% below 2011 FTE ceiling.

Since General Support funding is based on the number of authorized FTE, Idaho also has suffered a significant loss of funds to support travel expenses necessary for employees to target minority and low income populations located throughout rural Idaho.

Idaho is home to five Indian Reservations. Due to our limited resources tribal service delivery is challenged.
Wally Hedrick, Director

Wally was appointed State Director of RD on July 6, 2009. A third generation Idahoan, growing up in Twin Falls helping with the family farm and small dairy operation. He holds a Bachelors and Master’s degree and served in the U.S. Army out of college. He served on a variety of educational boards including the Meridian School District, Board of Trustees for 15 years and the Meridian Technical Charter High Board of Directors since 1999. He also served as the first Executive Director of the Idaho Lottery from 1989 to 1995.

STATE PROFILE

Illinois has a total population of 12,830,632, most of whom reside in the Chicagoland area. Of that total, approximately 2.5 million live in urban clusters or rural areas as defined by the US Census Bureau which are potentially eligible for or impacted by one or more Rural Development programs. Since the beginning of FY 2009, Illinois has obligated $4,378,854,310 within the state administered Single/Multi-Family Housing, Community Facility, Water & Environmental and Business programs. Illinois staff currently services a total loan portfolio of $4.2 billion with a direct loan portfolio of $1.4 billion and a guaranteed loan portfolio of $2.8 billion.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location**: 2118 West Park Ct. Suite A Champaign, IL 61821
- **Number of other offices**: Eleven Area Offices and one Satellite Office
- **Total workforce**: 91 Full Time Staff
- **Top 5 Most used programs**:
  - Single Family Housing Guaranteed Loans
  - Water & Waste Disposal Loans/Grants
  - Business & Industry Guaranteed Loans
  - Single Family Housing Direct 502 Loans
  - Community Facility Direct Loans.
- **List of programs centralized within the state**: Single Family Housing Guaranteed Loan Program and all Business Programs with the exception of Business & Industry Guaranteed Loans and Rural Business Development Grants.

HOT TOPICS

IL staff has reduced by 1/3 from 125 Full Time Employees (FTE) in 2009 to 93 at the end of FY 16. Due to reduced and uncertain budgets and execution of VERA/VSEP, the foundation of the delivery of our programs has been compromised. Compared to the field structure of other government agencies, with a regional organization, our ‘boots on the ground’ presence is core to the mission serving Rural Communities.

After unexpectedly running out of Community Facility Direct Loan funds nationally before the end of FY 16, we had a $115 million loan project that did not get funded. Moreover, this situation exists in more than one program.
Colleen Callahan, Director

Colleen received her bachelor’s degree in agricultural communications from the University of Illinois. After 30 years in radio and television broadcasting, Colleen started her own communications firm coaching individuals and organizations in public speaking. Colleen was appointed State Director in 2009. She oversees the agency’s 12 offices and a $4.2 billion loan portfolio with investments in housing, business and community development in rural Illinois. In September 2012, Colleen was named the Federal Disaster Recovery Coordinator for Drought and led the national efforts in drought recovery.

STATE PROFILE

USDA Rural Development has invested over $5.8 Billion in rural communities throughout Indiana during the past 7 years.

The population of Indiana according to the 2010 census is 6.48 million, and less than 14% (891,906) of the residents are considered rural. Between 2000 and 2010, urban areas grew by 9% in Indiana while the rural areas grew at only 1.9%. During this same period, the state’s minority population grew by 39% while the state’s white non-Hispanic population grew by 1.3%.

STATE PROFILE

Since 2009, USDA Rural Development has invested $3.1 billion in rural Kansas communities. This funding represents partnership with rural communities, rural citizens, rural businesses and organizations that support rural Kansas, as well as financial institutions. Three years ago, 20 rural Kansas counties had fewer than 3,000 population – by 2044, predictions are 31 rural Kansas counties will have fewer than 3,000 population. In the past five years, 78 rural counties lost population.

STATE PROFILE
Kentucky Rural Development utilizes housing, community facilities, and business programs to stimulate economic growth and improve quality of life throughout the state. Our Promise Zone and Strike Force communities are located in high poverty areas, and RD places a strong focus on assisting these areas whenever possible.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 771 Corporate Drive Suite 200, Lexington, KY 40503
- **Number of other offices:** 12 Local Offices
- **Total workforce:** 90 Full Time Staff
- **Top 5 Most used programs:**
  - Single family housing
  - Community facilities
  - Water and waste disposal
  - Business
  - Utilities

HOT TOPICS
With the loss of over 11,000 coal related jobs in Appalachia, StrikeForce and Promise Zone areas and special initiatives such as SOAR (Shaping Our Appalachian Region) and SET (Stronger Economies Together) have relied upon RD to assist in alleviating poverty and stimulating the economy for creating jobs and improving the quality of life.

There has been a significant increase in RD program activity during recent years which has also increased loan and grant servicing needs. Kentucky FTE ceiling has been reduced since November 2009 from 118 to 98, resulting in dire need for FTE increase to carry out program activities.

Expecting 40 or more Multi-family Preservation and Revitalization Program applications, group portfolios, consolidations and transfers. This includes application processing, underwriting, loan closing, and actual unit rehabilitation. RD inspects monthly rehab work and issues pay requests. Also anticipating 8 maturing mortgages, 4 prepayment requests, and 4 guaranteed loans. Multi-family section should be considered for a new FTE slot to manage workload which has increased steadily over the past few years.
Thomas G. Fern, Director

Thomas G. Fern was appointed on Nov. 25, 2009, by President Barack Obama to serve as USDA Rural Development State Director for Kentucky. Fern graduated from Morehead State University with a Bachelor of Arts degree in General Agriculture, Economics and Sociology. Fern was first appointed State Director in 1993 during the Clinton Administration and served in that position until 2001. Throughout a career that has spanned more than 40 years, Fern has been involved in issues related to agriculture and rural development.

STATE PROFILE

With rural poverty in Louisiana exceeding 30% and a large percentage of the population being unbanked and underbanked, Rural Development fills an important role to create ladders of opportunity for economic advancement in rural areas. RD Louisiana is successful in filling this need because we have passionate employees that call the places we assist home and the people we serve family. We understand the needs and respond accordingly because it is what rural America deserves.

HOT TOPICS

Staff utilization under the specter of potential retirements – several current staff members have inquired about retirement. If they follow through, the landing team could be faced with the prospect of assessing the best usage of current staff and the most optimal placement of replacement staff.

Enhanced performance measures emphasizing mid-year indicators – Performance plans are being enhanced in a number of ways, including enhanced mid-year indicators. The landing team, depending on duration of stay, could be faced with addressing mid-year progress under new standards.

Continued response and recovery from 2016 flooding disasters in Louisiana ([DR 4263](#) and [4277](#)) – USDA RD is playing a vital role in the recovery from two major flooding events across the state.
Clarence W. Hawkins has served Louisiana throughout his life. Born and raised in small towns in Louisiana and Mississippi, he began his professional career as a public school teacher and administrator. He went on to serve 20 years as mayor of Bastrop, LA. In 2009, Mr. Hawkins was appointed by President Obama to serve as State Director for USDA Rural Development in Louisiana, a position he has held since that time. Mr. Hawkins has truly made public service a part of his life, dedicating nearly 50 years of his life to serving others.

STATE PROFILE

USDA Rural Development Southern New England (SNE) is the only three-state jurisdiction in the country. Services are delivered through grants, direct loans, and guaranteed loans in three principle program areas of housing (multi and single family), community infrastructure and business programs. Although “rurality” is defined differently depending on program area, well over 90% of the municipalities and/or their residents across SNE are eligible for some form of RD support. From 2009-2016 USDA RD investments in SNE exceeded 15,000 projects and more than $3.5 billion.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 451 West Street, Suite 2, Amherst, MA 01002
- **Number of other offices:** 3 MA; 2 CT; 1 RI
- **Total workforce:** 48 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Loan
  - Community Programs (CF and WEP)
  - Multi-Family Housing Rental Assistance
  - Single Family Housing Direct Loan
  - Business Cooperative Programs
- **List of programs centralized within the state:** Programs centralized (either physically in the State Office or by staff specialization) in the SNE jurisdiction include those within the Business & Cooperative Services.

HOT TOPICS

**STAFFING** — Although state allocations, various program funding levels and the volume of special initiatives have increased, staffing levels have been reduced to historic lows. As a result of program complexities, application windows, and delayed funding cycles, program delivery and outreach have been confounded by staff capacity limitations. Production numbers from 2009 to present, total over $3.4 billion which translates to an average of over $9.5 million per year per FTE. Re-examination and/or redistribution of field staff allocation nationally could help alleviate mounting pressure and program execution challenges that have occurred in the field.

Improvements in coordination and communication relative to priorities within and between RD administrative divisions as it relates to expectations for field execution coupled with meaningful National Office support driven by field staff need would help with addressing staffing concerns.
Scott J. Soares, Director

After 17 yrs. working in various program development and oversight capacities within the MA Department of Agricultural Resources that culminated as a Gubernatorial appointment as the Agency’s 18th Commissioner 2009-2012. Soares also served 3 years as Executive Director of the U.S. Cranberry Marketing Committee where he led the organization through a critical period of transition and modernization of programs and services. A US Army Veteran with a B.S. Degree in biology & marine biology, Soares was appointed State Director USDA Rural Development for Southern New England June 28, 2015.

STATE PROFILE

In 2010, the U.S. Census Bureau showed that Maine was the most rural state in the country, with 61.3% of its population living in rural areas. Maine has a population of 1.33 million people spread out over an area larger than the other five New England states combined (35,385 sq. miles). The agency invests between $350 and $450 million dollars ($376.1 million in Fiscal Year 2015) each year to support economic, community, and business development in Maine’s rural communities. Since Fiscal Year 2009, USDA Rural Development has invested $3.26 billion in Maine’s economy, assisting 16,300 Maine families/individuals buys homes, helping to build over 300 essential community facilities, and assisting 3,100 Maine businesses, impacting 9,300 jobs.

HOT TOPICS

Automation for all housing programs is planned. Direct US (Direct SFH), UNIFI Replacement (Direct SFH), MFIS Enhancements for Performance Based Management Fees, ECF, ECM VAWs, etc. It is crucial to see continuing progress on automation and systems in order to enhance program delivery and streamline processes and procedures in our Housing Programs’ area.

There is a $50 million bond issue being pursued by the State that could generate sizeable wastewater projects to be funded jointly. This could potentially generate significant other grant funding dollars with our State Revolving Fund and Community Development Block Grant funding partners. Historically, when this occurs, Maine Rural Development partners with other funders in a strategic manner. This is particularly important in that it would target Rural Development loan funds towards larger projects that have been dormant due to lack of funding, and which need to be addressed.

Both the Business & Industry Loan Guaranteed Program and Rural Energy for America Program (Guaranteed Loans) need enhancement in order to better support rural lenders and improve access to capital for Maine small businesses. During the past two fiscal years using these programs has been severely challenging. The challenges lenders see are multiple and varied and include: (1) Our statutory requirement for tangible balance-sheet equity has been a longstanding hindrance for lenders. (2) Our fees - particularly for B&I (currently at 3%, initially, and 0.5% for the annual renewal) are very expensive. (3) The arduous paper application process, collateral requirements that compare extremely unfavorably to other guarantee agencies, and the fact that the agency’s internal process and documentation requirements in many ways demand the time and effort to essentially “re-underwrite” the lender’s loan.
Virginia Manuel, Director

Virginia Manuel has served as State Director of USDA Rural Development in Maine since being appointed by President Obama on September 21, 2009. She has over thirty years of experience in business, economic development, and international trade in both government and the private sector. Prior to assuming her position, she founded Manuel & Associates (2001-2009), providing strategic planning and development services to Maine local government, business, research organizations, and Northern Ireland/Ireland organizations. She served in the Clinton Administration as a Senior Advisor and Special Assistant (1994-2001) in the International Trade Administration, U.S. Department of Commerce, in Washington, D.C., promoting U.S. exports and community and economic development initiatives on the U.S. – Mexican Border and between Northern Ireland and the U.S. Ms. Manuel holds a B.S. degree in Education and Sociology from the University of Maine and a Graduate Certificate in Marketing and Fundraising Administration from George Washington University in Washington, D.C. She also attended Oxford University in England. She grew up in Aroostook County, in northern Maine on a still active potato and small grains farm.

KEY STAKEHOLDERS

**Maine Affordable Housing Coalition**: This is a diverse coalition of more than 125 private and public sector organizations with which Rural Development collaborates.

**Maine Housing**: The State of Maine’s Housing Agency is a close funding partner in multi and single-family housing.

**Maine Rural Water Association (MRWA)**: MRWA is funded through Rural Development and provides outreach, technical assistance, and program implementation with community water and wastewater systems.

**Rural Community Assistance Provider (RCAP)**: RCAP is funded by Rural Development and plays a critical role in providing outreach, technical assistance, and program implementation with water and wastewater systems.

**Maine Bankers Association**: Rural Development partners with many of its members on Business & Industry Loan Guarantees for Maine businesses.

**Community Development Financial Institutions (CDFIs)**: Rural Development works with many through its Relending Programs to assist Maine businesses.

**Economic Development Districts**: Rural Development funds these Economic Development Administration designated organizations throughout the state.

**Maine’s Native American Tribes**: Maine has four Native American Tribes: Aroostook Band of Micmac Indians; Houlton Band of Maliseet Indians; Penobscot Nation; and Passamaquoddy Tribe. The Tribes utilize many of Rural Development’s programs.

**Maine Municipal Association (MMA)**: MMA is the primary professional organization representing Maine’s municipalities with which Rural Development partners on outreach activities.

STATE PROFILE
Michigan consists of 96,716 sq. miles containing 9.91 million people. It is a rural state geographically and an urban state demographically. Only 25% (2.48 million) of the population live in rural locations. During the Obama administration, Rural Development invested over $8 billion dollars in rural Michigan. During that time Michigan RD has led the nation in WEP investments, totaling over $500 million. Over 50,000 families have received assistance in purchasing a home. We provide financing and oversee for close to 600 multi-family facilities. We made loans and grants to the small business sector totaling over $300 million.

STATE PROGRAM DELIVERY STRUCTURE

- State Office Location: 3001 Coolidge St., Ste 200, East Lansing, MI 48823
- Number of other offices: Five Area Offices and Four Sub-Area Offices
- Total workforce: 116 Full Time Staff
- Top 5 Most used programs:
  - Single Family Housing Guaranteed Program
  - Water and Waste Disposal Loan and Grant Program
  - Community Facility Direct Loan Program
  - Single Family Housing Direct Program
  - Business and Industry Loan Guarantee Program

HOT TOPICS
RD MI has approximately 20 MFH properties that are working through the foreclosure, auction redemption process. Some of those properties will probably be at some point in the process during the first two months of the new administration.

RD MI is currently working with the Institute for Research on Labor, Employment and the Economy at the University of Michigan on a Rural Development Cooperative Research and Development program. The program that is being developed would create a process and channel for rural manufacturers and firms in other industry sectors to access cutting-edge intellectual property from major research institutions and other sources, strengthening rural industries and improving economic conditions in rural areas.

Rural Development is participating with the State of Michigan and a host of stakeholders in a state-wide infrastructure needs assessment.
James Turner, Director

Jim Turner was appointed State Director for USDA Rural Development by President Obama in 2009. Prior to that he served on then Senator Carl Levin’s staff in a number of communities and positions. His tenure with Senator Levin spanned over 30 years, including Levin’s first election to the US Senate. In his tenure at USDA, Mr. Turner has overseen the investment of over $8 billion in Michigan projects. USDA’s portfolio of programs is designed to improve the economic stability of rural communities, businesses, residents, farmers and ranchers and improve the quality of life in rural America.

  - Single Family Housing (SFH)
  - Multi-Family Housing (MFH)
  - Water & Environmental Programs (WEP)
  - Community Facilities (CF)
  - Rural Business-Cooperative Service (RBS)
- **List of programs centralized within the state**: MN has centralized Guaranteed Single Family Housing within the state

HOT TOPICS

Maturing mortgages – Of the 273 MFH properties nationwide with mortgages reaching maturity over next 5 years, 57 (21%) are in Minnesota; 10 expected in 2016 alone.

FTE allocation – The reduction in MN’s FTE allocation has surpassed our ability to continue to do more with less. It must also be taken into account the number of staff eligible for retirement in the near future.

Broadband regulation change – address eligibility challenges for returning applicants.
Colleen Landkamer, Director

Colleen Landkamer was appointed by President Obama to serve as USDA Rural Development State Director in Minnesota on July 13, 2009. Since then, Rural Development has invested nearly $7 billion throughout rural Minnesota. Before her service as State Director, Colleen was elected to the Blue Earth County Board of Commissioners in 1988 and worked tirelessly for 21 years representing residents at the local, state, national and international level. Prior to that, she served as Congressional staff.

STATE PROFILE

Missouri ranks 18th in population with approximately 6 million residents, with a majority of that population eligible for our programs and a state rural poverty rate of 20%. From 2009-2015, RD MO has invested $7,641,434,541 into the state. These investments have resulted in 2,037 agencies, businesses, cooperatives, districts, foundations, not-for-profits, and organizations completing projects, retaining or creating jobs, providing utility services, increasing energy efficiency, protecting life and property, advancing education and improving quality of life. Housing investments meant 110,502 families and individuals had a place to call home.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 601 Business Loop 70 West, Parkade Center, Suite 235, Columbia, MO 65203
- **Number of other offices:** 4 Area Offices and 20 Sub-Area Offices

- **List of programs centralized within the state:** SFH Guaranteed Loan Program & Business and Industry Guaranteed Program

HOT TOPIC

Administrative – we are below our ceiling due to VERA/VSIP and the high number of retirements that have occurred in the last 12 months. The restraints of hiring practices have hampered our ability to backfill and replace these positions with good, qualified applicants that can perform the work needed.

Program – identifying appropriate approaches, programs, and funding to respond to:

- Poverty (investing in areas of highest need)
- Aging or absent infrastructure, including broadband access and housing stock
- Continued decline in the ability of rural communities to sustain and thrive
Janie Dunning, Director

Janie Dunning was appointed Missouri’s State Director of USDA Rural Development by the White House in July 2009. Ms. Dunning’s distinguished federal service career began in 1968 in the community of Kahoka in northeast Missouri Rural Development. She has since held a variety of positions in the agency during her career including: Director of Program Support, Director of Community Development, and immediately prior to her appointment to State Director, as Director of the Multi-family Housing Program. Throughout her career, Ms. Dunning has been firmly committed to the mission of the agency – enhancing economic opportunity and improving the quality of life in rural Missouri.

STATE PROFILE
There is a lot to be proud of in Montana’s economy today, the investments made by Rural Development have been instrumental in the success of the state’s growing economy. In 2016, USDA has invested more than 229 million dollars in Montana communities through our various Rural Development programs. Montana continues to have record job growth, personal income growth and the state is among the fastest growing in the nation. Montana’s wage growth is well above the national average. These indicators show Montana’s economy is strong and growing, that’s why it is so important that we continue to target USDA investments in rural America.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 2229 Boot Hill Court, Bozeman, Montana 59715
- **Number of other offices:** Five Area Offices
- **Total workforce:** 41 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Loan program
  - Single Family Housing Direct Loan Program
  - Rental Assistance Program
  - Rural Energy for America Program (REAP)
  - Water and Wastewater Disposal Program
- **List of programs centralized within the state:** All administrative functions are centralized at the state office in Bozeman. All other programs are decentralized.

HOT TOPICS

Older Multi Family projects are in need of major rehabilitation. Some owners are older and do not have the ability to fund from personal resources nor does the project provide sufficient profit to fund from rental income. These owners want to sell but have difficulty finding a buyer who wants to remain in the MFH program.

Persistent poverty continues to exist on the majority of Montana’s Indian reservations. Economic development has lagged on most reservations, leaving them as pockets of extreme rural poverty and underdevelopment.

Lack of Business throughout Indian Country - Once there are a sufficient number of tribal and privately owned businesses operating on a reservation, a functioning economy can develop from the effects of money circulating and recirculating between reservation consumers.
John E. Walsh, Director

Born and raised in Butte, MT, John was appointed by Governor Brian Schweitzer to serve as the Adjutant General of Montana’s National Guard 2008-2012. In 2004 and 2005 John led over 700 Soldiers into combat in Iraq – the largest deployment of Montana Soldiers since World War II. In 2012 John was elected as Montana’s 30th Lieutenant Governor. John was appointed by Governor Steve Bullock and was sworn into the United States Senate on February 11, 2014, and served in the 113th Congress from February 11, 2014, to January 3, 2015. John holds the distinction of being the first Iraq war veteran to serve in the U.S. Senate.

KEY STAKEHOLDERS

Montana Economic Developers Association (MEDA): Statewide Economic Development organization (all partners are members of this organization).

State of Montana DEQ (Renewable Energy Office): Champions for the REAP program

Montana Board of Housing: Partner in lender training, Provides Low Income Tax Credits for Rehab of MFH projects.

NeighborWorks Montana: Partner in many SFH programs for down payment assistance, silent second mortgage loans, first time homebuyer Education classes, 523 Mutual Self Help

National Affordable Housing, Inc.: 523 Mutual Self Help Grantee for many years, Habitat for Humanity Program for Butte Area, down payment assistance provider and great referral for our 502 Direct and 504 Loans and Grants.

WASACT: Water, Wastewater and Solid Waste Action Coordinating Team Stakeholder/Statewide Partner.

Montana Hospital Association: Recent Partner in telehealth.

Indian Health Service: Funding partner for Tribal Health Care Projects.

STATE PROFILE

North Dakota has a population of 756,927 people spread across 69,000 square miles. Of its 53 counties, 81 percent are defined as rural, but just 27 percent of North Dakotans live in those rural counties. The economy revolves around energy and agriculture, with tourism in third place. The state is home to five culturally vibrant, economically challenged tribal nations. Rural Development’s programs are a critical funding piece for every rural community in the state. Since 2010, $2.8 billion has been invested in North Dakota to build vibrant, sustainable communities by supporting business development, essential community facilities, utility infrastructure and affordable housing.

  - Rural Energy for America Program
  - Rural Business Development Grant Program
  - Water and Waste Disposal Loan and Grant Program
  - Business and Industry Loan Guarantee Program
- **List of programs centralized within the state:** All Rural Development programs in North Dakota are centralized out of the state office

HOT TOPICS

- Preserving affordable rural housing and cracking the code for SFH lending in Tribal communities
- Developing the local food infrastructure
- Alleviating statewide childcare shortage with Community Facility assistance
- Delivering mental health counseling services into remote areas with Tele-Health grant assistance
Ryan Taylor, Director

Taylor was appointed by the President to serve as State Director for USDA Rural Development in North Dakota. Prior to joining USDA, Taylor served in the North Dakota Senate for 10 years and was the former minority leader. Taylor also started his own business, Sandhill Communications, which offered marketing services for agriculture clients across the U.S. and Canada. Throughout his career, Taylor has continued to run his family’s fourth-generation ranch. He is widely known for his syndicated column, “Cowboy Logic” and has also authored three books.

STATE PROFILE
In its 20 year history, USDA Rural Development has provided $3 billion to rural Nebraska. Nebraska has 77,000 square miles with a population (2010 census) of 1.8 million, with 500,000 in rural areas. It is a rural state geographically and an urban state demographically. The state has an increasing minority population, with the majority (72 percent of Limited English Proficiency) Spanish speaking. The state has only one persistent poverty county, Thurston, which is home to two of Nebraska’s four federally recognized tribes. Challenges facing rural Nebraska are unemployment and lack of housing.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** Federal Building 100 Centennial Mall North Lincoln, Nebraska 68508
- **Number of other offices:** Four Local Offices
- **Total workforce:** 48 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Single Family Housing Direct Program
  - Community Facility Direct Program
  - Community Facility Guaranteed Program
  - Water and Waste Disposal Loan and Grant Program
- **List of programs centralized within the state:** All programs are centralized. In addition, Civil Rights, Human Resources, Appraisal Services and Management Control are part of the Midwest Regionalization.

HOT TOPICS
The agency in Nebraska will need to continue to right-size the staff in field offices and at the state office. If regionalization does not continue, Nebraska will need to hire a management control officer and an appraiser. Several of the programs are also short-staffed and 17 of the 48 employees on board September 30, 2016 are retirement eligible. Thirteen of the staff are new hires since 2015.

Nebraska is facing serious housing shortages in its rural communities, particularly in workforce housing. We have greatly increased our outreach to communities on our rural housing programs in the last six months and will need to continue to do so.

Current partnerships with non-profits, federal, state and local governments are crucial to the continued success of USDA Rural Development in Nebraska and will need to be maintained and enhanced.
Maxine Moul, Director

Ms. Moul is a journalist and was publisher and CEO of Maverick Media, Inc. in Syracuse, NE from 1971 to 1990. In 1990, she was elected Lt. Governor of Nebraska. From 1993 to 1999, she was Director of the Nebraska Department of Economic Development. She then served as President of the Nebraska Community Foundation and was Coordinator of EndowNebraska from 2007 to 2009. She was appointed Nebraska State Director by President Obama on June 29, 2009.

STATE PROFILE

New Jersey is a small state geographically with significant housing and economic development challenges in our rural communities. Rural Development programs continue to help almost any rural need; from housing to agriculture, improvements in infrastructure, support for public health and safety, or promoting economic development throughout the Garden State.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 8000 Midlantic Dr., Ste. 500N, Mt. Laurel, NJ 08054
- **Number of other offices:** Four Area Offices
- **Total workforce:** 36 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed and Direct Programs
  - Rental Assistance for MFH
  - Water and Waste Disposal Loan and Grant Program
  - Intermediate Relending Program
  - Community Facility Direct Loan Program
  - Rural Energy for America Program
- **List of programs centralized within the state:** Single Family Housing Guaranteed & Business Programs

HOT TOPICS

Significant demand for WEP programs which will far exceed our state allocation.

Lengthy foreclosure process in NJ (3-4 years) creates public concern with vacant properties.
Howard Henderson, Director

In August 2009, Howard Henderson was appointed by President Obama to serve as New Jersey State Director for USDA Rural Development. He has held multiple positions throughout Rural Development since 1974, including Acting Chief of Staff for Rural Housing Service from November 2013 to July 2014. Henderson earned his Master’s in Public Financial Management from American University in Washington, D.C. and his bachelor’s degree in Agricultural Economics from Rutgers University.

STATE PROFILE

New Mexico maintains the highest poverty rate in the nation and an economy that has grown at an anemic rate since the Great Recession. New Mexico Rural Development maintains a vital role in supporting that economic recovery by funding crucial projects in housing, business, and utilities programs. The state’s large size and high needs requires high-cost, labor-intensive work. During the Obama Administration, our investments exceeded $2 billion in the state. On two occasions our total program output was larger than the State of New Mexico’s entire capital outlay budget.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 6200 Jefferson, NE Albuquerque, NM 87122
- **Number of other offices:** Four Area Offices

STATE PROFILE

Nevada is the 7th largest state in the nation, and the most mountainous state on the continental U.S., with over 85% of it under federal land management, and with 27 federally recognized tribal governments. Our geography and demography result in a widely dispersed set of communities, tribal colonies, and reservations, eagerly served by Nevada’s RD workforce of 27 mighty souls. We actively use the three legs of the RD stool – Affordable Housing, Business Development, and Community Infrastructure - throughout our state, guided by the “seat of our stool”, the Community and Economic Development Approach.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1390 S. Curry Street, Carson City, Nevada 89705
- **Number of other offices:** Four Field Offices
- **Total workforce:** 27 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Single Family Housing Direct Program
  - Community Facility Program
  - Business and Industry Loan Guarantee Program
  - Water and Waste Disposal Loan and Grant Program (dependent on SEARCH grants)
- **List of programs centralized within the state:** All programs are centralized, with the caveat that our three field offices have specialists with Direct 502/504 loan approval authority

HOT TOPICS

The Housing Team has experience a great deal of personnel changes within the last two years. As of 9/24/16, the Housing Program Director position is not filled; however, strong individuals fill the Single Family and Multi-Family Coordinator positions. It will be necessary to check in soon and see where team formation is in terms of training, outreach, Partnership Initiative.

RD Nevada has done in depth work with Nevada’s tribes across all/most programs and through our Community Economic Development work. It will be essential to check in with staff on tribal projects and initiatives, as well as meet the leadership of the Intertribal Council of Nevada.

The Nevada RD Team engaged in an in-depth strategic planning process and produced an FY 16 & 17 State Strategic Plan – it is a great roadmap for RD in Nevada.
Sarah Adler, Director

Born and raised in Grand Rapids, Michigan, educated at Williams College in Massachusetts, Sarah Mersereau came west to Carson City, Nevada, as a VISTA volunteer in 1980. She received her Masters’ in Public Administration from the University of Nevada, Reno. She co-directed the Rural Office of the Nevada Commission on Economic Development until 1993, when she became the first ever Nevada State Director for the then Farmers Home Administration. From 2000-2008, she served as a high school English teacher and administrator in the Carson City School District.

STATE PROFILE

New York Rural Development serves a large, diverse geography that encompasses nearly all of New York outside of the New York City metro area. Approximately 40,000 of New York’s more than 47,000 square miles of land area is considered rural, and roughly 6 million people reside in rural New York. Upstate New York is home to major population centers, large tracts of very rural, isolated areas with high levels of poverty and limited employment opportunities, and a broad range of settlement densities between those extremes. Agriculture, forests, and the Adirondack Park are the major land uses in New York.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 441 South Salina Street, Syracuse NY 13202
- **Number of other offices:** Ten Area Offices
- **Total workforce:** 100 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Single Family Housing Direct Program
  - Single Family Home Repair Program
  - Water and Waste Disposal Loan and Grant Program
  - Community Facility Direct Loan Program
- **List of programs centralized within the state:** Business & Industry loan guarantee program, Rural Energy for America Program, Value-Added Producer Grant program, Intermediary Relending Program, and the Rural Microentrepreneur Assistance Program.

HOT TOPICS

The steady loss of highly experienced career staff and their institutional knowledge, primarily to retirements, with limited ability to fill vacant positions timely and proactively.
Stanley (Lee) Telega, Director

Stanley “Lee” Telega brings more than 35 years of agricultural experience to USDA Rural Development. Lee holds a B.S. in animal science from The Pennsylvania State University and a M.S. in dairy cattle nutrition from the University of Tennessee. He dairy farmed in West Virginia, and later managed the University of Missouri research & teaching dairy operation prior to moving to New York. Lee served for 24 years as a Senior Extension Associate at Cornell University, fostering cooperation among farmers, rural residents and community leaders to implement best practices and generate prosperity for New Yorkers. He also served as senior agricultural and rural policy advisor to then-Senator Hillary Clinton.

STATE PROFILE

In Fiscal Year 2016, USDA Rural Development invested nearly $684 million to support affordable housing, create jobs and promote economic opportunity in rural Ohio. The Buckeye State is among 10 states with a rural population of nearly 30 percent. Ohio agriculture contributes to a sector that supports one in 11 jobs nationwide, provides American consumers with more than 80 percent of the food we consume, ensures that Americans spend less of their paychecks at the grocery store than most people in other countries, and supports markets for homegrown renewable energy and materials. This past year, we’ve obligated nearly $51 million in Rural Business and Cooperatives program funding, more than $72 million in Community Programs funding, about $13.4 million in Water and Environmental funding, and more than $547 million in Rural Housing Service program funds.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 200 North High Street, Room 507, Columbus, Ohio 43215
- **Number of other offices:** Four Area Offices
- **Total workforce:** 99 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Single Family Housing Direct Program
  - Water and Waste Disposal Loan and Grant Program
  - Community Facility Direct Loan Program
  - Business and Industry Loan Guarantee Program
- **List of programs centralized within the state:** With the exception of the 9003 Program (Bio-refinery, BioChemical and Biobased Product Manufacturing Assistance Program), all Business & Cooperative Programs are centralized at the state level. Within Community Programs, Community Facilities and Water and Environmental Programs are state-centralized. Rural Community Development Initiative (RCDI), Solid Waste Management Grants (SWMG), Distance Learning and Telemedicine Grants (DLT) and Broadband programs are managed from the national office. All Housing Programs are centralized within the state.

HOT TOPICS

Business and Cooperative Programs: [Unrestricted REAP applications](#) (more than $20,000 but less than $500,000) must be received by March 31, 2017. The State Director will need to determine if he/she intends to award additional points to applicants in the following categories: projects in under-represented technologies; projects which promote geographic diversity; projects which promote members of un-served or underserved communities; projects that help implement a priority of the President or Secretary of Agriculture, and/or those which support applications from U.S. military veterans.

Rural Housing Service: No specific Ohio-centric key issues are identified. However, on a national level, work continues on changes to the [Single Family Housing Guaranteed Loan program](#) to charge lenders a fee to use the Guaranteed Underwriting System (GUS) to offset the cost of program enhancements.
J. Anthony (Tony) Logan, Director

Tony Logan was appointed state director for USDA Ohio Rural Development in November 2009. Logan formerly served as chief legal counsel for the Ohio Department of Natural Resources, where he managed the legal affairs of 11 ODNR divisions. In partnership with the governor’s energy advisor, the Ohio Energy Office and the Ohio Power Siting Board, Logan also oversaw ODNR’s wind policy initiatives. He began his career in state government as an assistant attorney general in the Division of Criminal Activities. He migrated to the state Department of Agriculture as deputy director for Legal and Legislative Affairs and later, as assistant director. Logan is a native of Trumbull County, where his family continues to farm.

STATE PROFILE

Oklahoma is one of the ten “most rural” states in the nation. Rural Oklahoma is home to the state’s top economic industries: energy and agriculture. However not all regions of rural Oklahoma have benefited from these job-creating and wealth-producing industries. Nearly half of Oklahoma was designated as persistent poverty USDA StrikeForce Counties. These economically distressed counties are generally home to the highest percentages of American Indians of any counties in the nation. Oklahoma ranks second nationally in American Indian population. Oklahoma’s USDA Rural Development team invests enormous resources and time in seeking to better serve such historically underserved populations.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 100 USDA, Suite 108, Stillwater, OK 74074
- **Number of other offices:** Nine Field Offices
- **Total workforce:** 67 Full Time Staff

  - Single Family Housing Guaranteed Program
  - Business and Industry Loan Guarantee Program
  - Water and Waste Disposal Loan and Grant Program
  - Community Facility Re-Lending Program
  - Community Facilities Loan and Grant Programs

HOT TOPICS

It is highly likely that the Administrative Program Director will retire in January 2017. This, in combination with a State Director vacancy, will lead to significant instability and potentially unchecked performance and disciplinary problems with several employees. Three of the other five supervisors (Program Directors) are also seriously considering retirement this January. This looming leadership vacuum is already leading to an uptick in performance and disciplinary incidents. If the Administrative Program Director retires as is highly anticipated, the remaining supervisors are unlikely to be able to capably serve as Acting State Director, understand the disciplinary procedures available to them as a supervisor, and exercise the strength necessary to carry through with disciplinary actions. It may be essential to detail a very assertive, experienced supervisor to serve as Acting State Director for out-of-state. Without a detail of a strong-willed supervisor, RD OK will spiral into dysfunction and dueling complaints and grievances among coworkers.
Ryan McMullen, DIRECTOR

McMullen’s appointment as State Director made him the nation’s youngest Presidential appointee to such a post within USDA. During his tenure, McMullen oversaw the investment of $5 billion to RD customers. McMullen previously served in the State Legislature, where he became the youngest legislator in Oklahoma history ever elected to House leadership. McMullen is a sixth generation Oklahoman, raised on the family farm outside the town of Burns Flat. He graduated from Oklahoma State University as a Top Ten Senior Man with a degree in Agricultural Economics.

STATE PROFILE

Oregon is the ninth largest state in the U.S., yet it is only the 27th most populous. Outside of a handful of urban centers, the majority of the state is rural. Poverty is a significant issue with the state ranking 34th in household income. Rural economies have been significantly impacted by the recent precipitous drop in logging, one of the state’s primary industries. Agriculture, tourism, and technology are also major contributors to the state economy. More than half of all land is publicly owned, creating unique challenges for rural economic development. Much of the state is also experiencing a critical housing shortage. A variety of public and private partners are actively engaged in improving rural economic prosperity.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1220 SW 3rd Avenue, Suite 1801, Portland, OR 97204
- **Number of other offices:** Five Area Offices
- **Total workforce:** 51 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Business and Industry Loan Guarantee Program
  - Single Family Housing Direct Program
  - Water and Waste Disposal Loan and Grant Program
  - Multi-Family Housing Rental Assistance program

HOT TOPICS

Portland State University will use Rural Development funds and assistance to assess what is working and what needs to be developed for public-private collaboration in rural communities facing economic issues/conflict in areas dominated by federal land ownership. Rural Development is also aligning partners and funding to build local capacity to develop affordable and workforce housing plans in areas with low housing stock, poverty, and complex development issues.

Rural Development has provided $50,000 for Oregon Rural Development Council (ORDC) to support a multi-entity, cross-sector rural partnership that interfaces frequently with active leadership from the State Director. ORDC is working with the Idaho and Washington Councils to develop a regional strategy for the Pacific Northwest for fiscal year 2017.

Oregon is developing processes to lend on new manufactured homes in mobile home co-ops to address the health and financial burdens of high-poverty homeowners.
Vicki L. Walker, Director

Vicki Walker was appointed the Oregon State Director for USDA Rural Development by President Obama in November 2009. Prior to her appointment, Ms. Walker served for ten years in the Oregon State Legislature, in both the House and the Senate. She also operated her own court reporting firm for 25 years. Ms. Walker attended Lane Community College and has a B.S. degree from the University of Oregon. She currently lives in Eugene, Oregon, with her husband, Steve.

KEY STAKEHOLDERS

STATE PROFILE

Rural Development in Pennsylvania is a catalyst for real change in the hundreds of diverse rural communities throughout the state. Rural Development has a program for anyone inhabiting rural Pennsylvania—whether they be a community developer looking to usher in alternative energy solutions to their constituents in the coal region, an agricultural producer looking to take advantage of the famous and fertile Lancaster farmland, or simply a would-be homebuyer determined to make the American dream a reality.

STATE PROGRAM DELIVERY STRUCTURE

• **State Office Location:** 359 East Park Drive, Harrisburg, PA 17111-2747
• **Number of other offices:** Nine Area Offices
• **Total workforce:** 87 Full Time Staff
• **Top 5 Most used programs:**
  - Single Family Housing Direct Program
  - Single Family Housing Guaranteed Program
  - Community Facility Loan and Grant Program
  - Rural Business Development Grant program
  - Rural Energy for America Program
• **List of programs centralized within the state:** Single-Family Housing Guaranteed Loan Program & Single-Family Housing Direct Loan Program

HOT TOPICS

Existing Multi-Family Housing projects will continue to be repaired utilizing the programs MFH Revitalization Demonstration Program in combination the programs 538 Guaranteed loan program and the state funded Low Income Housing Tax Credit program. Substantially more Pennsylvania properties qualify for this program over the Revitalization Demonstration Program and the availability of private funds for such projects are significantly greater.

There are two delinquent properties in PA – Berlin Manor and Salisbury Manor, and both have already been recommended to OGC and DOJ for foreclosure actions. RD PA also has one REO property (Edgewood Apartments) which we are working to sell within the program by year end.

From FY 2012 through FY 2016, RD PA has done 5 Community Facility - university projects (Mansfield, West Chester, Clarion, East Stroudsburg and Slippery Rock) with combined obligations totaling $266,595,000 in Direct Loans and $31,783,600 in Guaranteed Loans. We are currently processing for FY2017 and expect the Indiana University of PA to total $176,000,000 in Direct Loans and $30,000,000 in Guaranteed Loans.
Tom Williams, Director

Thomas (Tom) Williams was appointed in July, 2009 by the Obama Administration as State Director of USDA Rural Development-Pennsylvania. Mr. Williams previously served as a congressional aide to former U. S. Congressman Paul Kanjorski (PA-11th) for 13 years. Mr. Williams received his B.A. from Wilkes University, and his M. A. degree from Bloomsburg University.

STATE PROFILE

South Carolina is still a largely rural state with more than 44% of population living in rural and small cities. This represents many opportunities that can be brought about through RD investments. In fact, since 2009, RD has invested nearly $7 billion in South Carolina’s rural communities. Our investments improved infrastructure, hospitals, schools, public safety, businesses and created many jobs, however, more work needs to be done due to these SC’s statistics: Poverty rate-24.5% (14.8% USA); education ranking- #43; health ranking- #39; unemployment rate for rural areas -7.8% (5.7% urban)

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1835 Assembly Street, suite 1007, Columbia, SC 29201
- **Number of other offices:** Four Area Offices and Four Local Offices

HOT TOPICS

1. Education, schools and workforce development in rural counties
2. Unemployment rate and job creation in rural areas
3. Access to health care facilities and broadband in rural South Carolina

South Carolina’s most significant initiatives are: Promise Zone, StrikeForce and the development of I-95 Corridor. The I-95 Corridor in SC consists of 17 counties. Although presently undeveloped, the region has opportunities for economic development and job growth through the development of bioenergy, agriculture and forestry. Southern Carolina Alliance is a lead agency for the PZ and since 2015 our agency invested more than $115 million in the PZ region. These investments created jobs and improved economic conditions of the region. SC StrikeForce Team works continuously with organizations located in the StrikeForce counties to increase partnership and participation in all USDA programs.
Michele J. Cardwell, Director

Michelle Cardwell joined USDA, Rural Development in 1991 following a career in the banking industry. Ms. Cardwell was named Acting State Director for Rural Development in 2015 and also serves as the Community Programs Director for Community Facilities (CF) and Water and Environmental Programs (WEP). Under her leadership as Community Programs Director, South Carolina consistently ranked high nationally in terms of CF and WEP loans and grants invested. Ms. Cardwell has more than 24 years of service with the Rural Development.

STATE PROFILE

USDA Rural Development is the grantor, lender and guarantor of more than half a billion dollars of investment in rural Utah annually. We typically finance over 2500 single-family home purchases each year. Utah RD produces about 10% of the nation's Self-Help housing. The vast majority of land in our rural counties is federally managed. This produces unique economic development opportunities as well as challenges. The counties that depend upon oil, gas, and mining leases suffer boom and bust cycles that are a barrier to creating resilient, locally controlled business. RD faces the challenge of assisting rural counties in transitioning to more sustainable economic options.

STATE PROFILE

Virginia’s rural and remote regions stretch from coalfields in the southwest part of the state to oyster farms on the Eastern Shore and Chesapeake Bay. The state is more suburban and affluent in its northern regions. Industries that once supported Virginia’s rural and overall economies – tobacco, coal, textiles, manufacturing – have left the state or are shrinking exponentially. Virginia’s statewide poverty rate is 11.5% versus an 18.8% rate for its Appalachian region, and nearly 1 in 4 people in a dozen rural Virginia counties live in poverty.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1606 Santa Rosa Road, Suite 238, Richmond, VA 23229

  - Community Facility Direct Loan Program
  - Stronger Economies Together (SET): 3 SET Phase V regions; 2 SET Phase III regions
- **List of programs centralized within the state:** All Business Programs and the Single Family Housing Guaranteed Loan Program

HOT TOPICS

Three key career leadership positions are currently vacant: Area Director, Area 4; Program Director, Community Programs; and Program Director, Single Family Housing and need to be filled soon.

We are in early stages of securing a $182 million community facilities loan for upgrades and construction at a Virginia Hospital. If obligated, it will be the largest community facilities loan ever originated in Virginia.

After hiring or promoting 26 employees in FY16, it will be essential to continue to communicate training, development and support opportunities as well as succession planning.
Janice Stroud-Bickes, Acting Director

Janice Stroud-Bickes has worked in civil service for nearly 30 years and served USDA Rural Development as an Area Director, Community Programs Director and Assistant to the State Director. As an Area Director in southeastern Virginia, she tripled the loan and grant origination of that area. As a Community Programs director in Virginia, she nearly doubled the program’s investments from $23.6 million in 2014 to $45.4 million in FY2015. She became Acting State Director in September 2016.

KEY STAKEHOLDERS

**Va. Housing Development Authority** *(Largest partner, SFH & MFH programs)*

**Habitat for Humanity Virginia** *(502 loan packager; bulk REO property purchase)*

STATE PROFILE

Rural Development plays a large role in most community and economic development projects in Vermont and New Hampshire. Both states have limited state and philanthropic resources to invest in innovative new approaches to rural housing, job creation, energy and agricultural challenges, making RD a necessary player in all deals. The states have the second and third oldest populations in the country, and rural Vermont and New Hampshire incomes have underperformed even comparable rural incomes nationwide.

STATE PROGRAM DELIVERY STRUCTURE

- State Office Location: 87 State Street, Suite 324, PO Box 249, Montpelier, VT 05601
- Number of other offices: Six Field Offices
- Total workforce: 51 Full Time Staff
- Top 5 Most used programs:
  - Single Family Housing Guaranteed and Direct Loan Programs
  - Water and Waste Disposal Loan and Grant Program
  - Rural Business Development Grant Program
  - Multi-Family Rental Assistance Program
  - Community Facility Direct and Guaranteed Loan Programs
- List of programs centralized within the state: Business, Multi-Family, and Single Family Guaranteed Programs.

HOT TOPICS

RUS recently obligated a $46 million Energy Efficiency and Conservation Loan Program loan to Vermont Energy Investment Corp in FY15. The State of Vermont Public Service Board, Vermont Energy Investment Corporation and RUS continue to negotiate final loan documents and work plans. The State Director must remain actively engaged as an advocate for the loan’s success.

A $150 million redevelopment of the century-old Balsams hotel in Dixville Notch, NH may hinge on a $20 million B&I deal that the State Director has been developing for two years. The project is in the final stages, but due to complexity needs State Director involvement.

Approved in FY16 in VT/NH, a Section 515 Opioid Pilot Program will begin housing people right about the transition. The State Director must help maintain relationships and ensure success.
Ted Brady, Director

Ted Brady was appointed as State Director in September of 2013 and also serves as the chair of the Vermont Council on Rural Development. Mr. Brady previously served as Sen. Patrick Leahy’s senior economic development, community development, and housing and transportation field representative for 7 years. He has a degree in Journalism and Political Science from St. Michael’s College in Colchester, Vermont, where he was a volunteer EMT and captain of St. Michael’s Fire and Rescue -- Vermont’s busiest volunteer ambulance service. Brady lives with his wife and two sons in Williston, Vermont.

STATE PROFILE

WA State RD serves over 78 rural communities, all 49 counties and approximately 4 million rural residents within the State by consistently deploying $800 million to a $1 billion in loans, guarantees, grants and technical assistance each year in rural areas to help customers meet their goals. We do our Community and Economic Development (CED) work in a way that works with stakeholders, leverages resources and looks to do this in a holistic manner. We use our resources as a catalyst to align our efforts with local needs and priorities.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1835 Black Lake Blvd., SW Olympia WA 98512
- **Number of other offices:** Seven Area Offices
- **Total workforce:** 68 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Single Family Housing Direct Program
  - Multi-family Housing Programs
  - Business and Industry Loan Guarantee Program
  - Community Facility Programs
- **List of programs centralized within the state:** SFH Guaranteed Loan Program, Community Programs, and Business Programs,

HOT TOPICS

WA RD is understaffed. Current positions not filled include the SFH Program Director, one Business & Community Programs Specialist, One Community Programs Specialist, One Single Family Housing Specialist – and we are at our FTE Ceiling. Architect services also need to be closely managed.

Three hospital projects are under development in our CF program. These are large projects and need to be managed in an efficient way with proficient expertise.

Large numbers of senior staff are nearing retirement within the next 2 - 3 years.
Mario Villanueva, Director

Mr. Villanueva has served the Obama Administration as Washington RD State Director since August 2009 and has over 37 years of private business, nonprofit and federal service experience all involved in community and economic development work in rural communities. Mr. Villanueva has served on numerous state and national task forces, stakeholder boards and rural working groups including the MFH Partnership Alliance, the Regionalization Governance Board and helping establish the Partners for Rural WA rural development council in WA State.

STATE PROFILE

Wisconsin is a consistent National pace-setter for the delivery of funding for rural business, housing, community facilities, water and waste, and community economic development. We have capable and experienced career employees dedicated to the mission of Rural Development. Program delinquency rates are below average and we regularly exceed National Office program allocations. Our State Office is located in the geographical center of the State, we have six area offices, eighty two full time staff, and invest nearly three quarters of a billion dollars annually in rural Wisconsin.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 5417 Clem’s Way, Stevens Point, WI 54482
- **Number of other offices:** Six Area Offices
- **Total workforce:** 82 Full Time Staff
- **Top 5 Most used programs:**
  - Business and Industry Loan Guarantee Program
  - Single Family Housing Guaranteed Program
  - Community Facility Direct Loan Program
  - Water and Waste Disposal Loan and Grant Program
  - Multi-Family Housing Rental Assistance
- **List of programs centralized within the state:** Community Programs (Community Facilities and WEP), Single Family Housing Guaranteed Loan Program, and all Business Programs.

HOT TOPICS

Due to changing economic currents and rural demographics, there is economic disparity across the rural landscape. The greatest needs in Wisconsin include:

- More broadband services and state of the art technologies.
- More diversified economies.
- Improved rural transportation.
- Better access to rural health care facilities.

More Staff will be needed soon to replace an aging workforce.
Stan Gruszynski, Director

Stan Gruszynski was appointed Wisconsin State Director in August of 2009. Prior to his appointment he directed the Rural Leadership and Community Development program at the University of Wisconsin-Stevens Point College of Natural Resources. From 1996 to 2003 he served as the Director of Public Affairs for USDA Rural Development in WI, and from 1984 to 1994, he represented the 71st District in the WI State Assembly. Mr. Gruszynski has served as a board member on several State-wide conservation, environmental, and citizen organizations. He holds a bachelor’s degree in sociology/political science from Northland College in Ashland, WI.

KEY STAKEHOLDERS

Community Action Agencies (Both funding recipients and partners, across all program levels. RD attends meetings as needed and the annual meeting.)

Community Economic Development Associations (Both funding recipients and partners, across all program levels. RD attends meetings as needed and the annual meeting.)

Regional Planning Commissions (Partners across all program levels. RD attends meetings as needed and the annual meeting.)

Housing Associations (Both funding recipients and partners. RD attends meetings as needed and the annual meeting.)

Lenders - Both Business and Housing Partners. (RD also hosts webinars and workshops to provide education and training on our Guarantee programs. RD also attends annual meetings for WI Bankers Association and WI League of Credit Unions.)

Rural Town and Municipal bodies (Partners across all program levels. RD attends meetings as needed and the annual meetings for related groups.)

WI Rural Water Association (Partner in our WEP Programs. RD meets with WRWA monthly and participates in annual meeting.)

STATE PROFILE

USDA Rural Development in West Virginia is a dynamic agency charged with delivering more than 40 Federal programs through the Rural Housing Service, Rural Utilities Service and the Rural Business-Cooperative Service. Our investments, which totaled more than $303 million in Fiscal Year 2016, are made in an effort to improve the quality of life for the residents of rural West Virginia. Our employees work diligently to manage resources effectively and efficiently for the benefit of our customers.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 1550 Earl Core Road, Suite 101, Morgantown, WV 26505
- **Number of other offices:** Ten Field Offices
- **Total workforce:** 54 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Water and Waste Disposal Loan and Grant Program
  - Business and Industry Loan Guarantee Program
  - Single Family Housing Direct Program
  - Community Facility Direct Loan Program
- **List of programs centralized within the state:** Single Family Housing Direct & Guaranteed Programs, Community Facilities, and Business and Industry Loan Programs.

HOT TOPICS

West Virginia has realized significant job loss in coal mining jobs and associated supporting industries in the recent past. The agency has engaged with various State and Federal partners to work cooperatively and collaboratively with local communities, specifically in southern West Virginia to identify opportunities for diversification.

USDA Rural Development in West Virginia has been actively engaged with State and Federal partners on flood recovery efforts in the counties impacted by the June 2016 floods. Our staff has been engaged in meetings with the Joint Field Office in Charleston, West Virginia as well as a team organized by the U.S. EDA. In both instances, State and Federal partners are working with local communities to identify needs and match available resources, whether it be technical or financial.

In celebration of National Homeownership Month in June 2016, USDA Rural Development announced a new initiative that will help West Virginia’s low-income residents turn their dreams of homeownership into a reality. Through a memorandum of understanding, the Federation of Appalachian Housing Enterprises (FAHE), a Kentucky-based non-profit that serves Appalachia through affordable housing, community development and job creation, the West Virginia Housing Development Fund and USDA, the Fund became the country’s only state housing finance agency to offer the United States’ Department of Agriculture’s Section 502 Direct Loan Program.
Bobby Lewis, Director

Bobby Lewis is originally from Welch, McDowell County, West Virginia. He attended West Virginia State University, where he earned a Bachelor of Science degree in Business Administration and later a Master of Business Administration degree from West Virginia University. He served as the Mayor of Welch and later as a County Commissioner in McDowell County in the late 1970s, 1980s and early 1990s before accepting an appointment as a State Director in the Farmers Home Administration (FmHA) in 1993. He served in this capacity until 2001 when he left to become the Director of Community Development for the West Virginia Development Office. In September 2009, Bobby was asked by President Obama to return to the position of State Director of USDA Rural Development in West Virginia.

STATE PROFILE

Wyoming is a large, very rural state with a population of just under 600,000 that is known for its natural resources, abundant wildlife, and Yellowstone National Park. The state has been hit particularly hard by low prices and reduced demand for oil, coal, and gas. This has resulted in business layoffs, shrinking state revenues and budget shortfalls. As a result, Rural Development has had an opportunity to fund more water, wastewater and solid waste projects, along with new small business development and expansion opportunities. Alternative energy and related products provide further opportunities as many companies are seeking to minimize impact and job loss. Rural Development has focused its efforts on the Wind River Reservation, home of the Northern Arapaho and the Eastern Shoshone Native Americans; Campbell County (coal) and Niobrara County, which FEMA declared a Disaster Area in 2015 due to flooding.

STATE PROGRAM DELIVERY STRUCTURE

- **State Office Location:** 100 East B St. Room 1005, Casper, Wyoming, 82601
- **Number of other offices:** Four Field Offices
- **Total workforce:** 30 Full Time Staff
- **Top 5 Most used programs:**
  - Single Family Housing Guaranteed Program
  - Single Family Housing Direct Program
  - Water and Waste Disposal Loan and Grant Program
  - Business and Industry Loan Guarantee Program
  - Community Facility Direct Loan Program
- **List of programs centralized within the state:** Single Family Housing programs are centralized in the Riverton office.

HOT TOPICS

The Downturn in energy prices for oil, coal and gas has led to layoffs and shrinking state revenues and budget shortfalls. A $465 million revenue shortfall for the upcoming two-year period has been forecast by the state. Over 12,000 documented jobs were lost in 2016.

The Wind River Reservation is the largest poverty region in the state and has been a major priority for RD WY funding this year. The reservation is the home of two tribes who historically do not get along, and are unwilling to agree on joint projects that would benefit both tribes.

Wyoming Constitution prevents cities and towns from encumbering debt, as well as prohibits communities from offering incentives or waiving fees to help offset costs that would make projects more affordable as well as demonstrate community buy-in. This Strong resistance to federal funding and any government intervention or assistance coupled with Low population, large distance between communities, and lack of leadership in our small communities are challenges for RD WY.
Wyoming, Director

Connie Baker Wolfe was appointed to her position by President Obama in July 2014. She has more than 30 years of experience working with nonprofit organizations to address affordable housing, community and economic development needs in rural areas and urban neighborhoods. She has demonstrated exceptional leadership and management practices, working with a variety of organizations at regional, state, city and neighborhood levels.
